

Supplement to Producer Prices and Price Indexes Data for 1983

U.S. Department of Labor
Bureau of Labor Statistics
October 1984

Producer Prices and Price Indexes is a monthly report on producer price movements including text, tables, and technical notes. An annual supplement contains monthly data for the calendar year, annual averages, and information on weights. A subscription may be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

The Secretary of Labor has determined that the publication of this periodical is necessary in the transaction of the public business required by law of this Department. Use of funds for printing this periodical has been approved by the Director of the Office of Management and Budget through July 31, 1987. Second-class postage paid at Laurel, Md. Material in this publication is in the public domain and may be reproduced without permission of the Federal Government. Please credit the Bureau of Labor Statistics.

Supplement to Producer Prices and Price Indexes Data for 1983

U.S. Department of Labor
Raymond J. Donovan, Secretary

Bureau of Labor Statistics
Janet L. Norwood, Commissioner

October 1984

Preface

This annual supplement to *Producer Prices and Price Indexes* presents monthly indexes and annual averages for 1983, including price indexes for the net output of selected industries and their products, as calculated with the methodology of the Producer Price Index Revision (PPIR). In most cases, data in this supplement are the same as revised data published in successive monthly

issues of this periodical. This supplement also provides information on the relative importance of index components at the end of the year.

Information on changes in the sample for Producer Price Indexes is no longer being published in the annual supplement. Such information can be found in the July 1983, January 1984, and February 1984 issues.

Monthly Indexes and Annual Averages for Producer Price Indexes, 1983

Tables 1 through 11 present 1983 monthly indexes and annual averages for all categories covered under the Producer Price Index program, including series calculated under the survey for the Producer Price Index Revision program. Data shown are the revised data published in successive monthly issues of *Producer Prices and Price Indexes*. (All monthly data are subject to revision 4 months after original publication.) Data are not seasonally adjusted.

The PPIR indexes reflected in supplement table 3 are designed as an improvement of, and replacement for, the Industry-Sector Price Indexes (ISPI's) in supplement tables 7 and 8. The supplement table 3 indexes are based on a large probability sample of producers and products within the specified industries, while

the indexes in supplement tables 7 and 8 are based on smaller, judgmental, commodity-oriented samples which are not restricted to the specified industry. ISPI's will be dropped from these tables as improved data become available. Supplement tables 7 and 8 will eventually be discontinued; table 3 will be the primary vehicle for presenting industry-oriented price data in the supplement.

As indexes are deleted from supplement tables 7 and 8, the affected historical data will be incorporated into the PPIR system. This will be accomplished by rebasing the old indexes to the base period of the corresponding PPIR indexes.

Table 1. Producer Price Indexes for stage-of-processing groupings, 1983¹

(1967 = 100)

Grouping	Ann. Avg.	Jan.	Feb.	Mar.	Apr.	May	Jun.	Jul.	Aug.	Sep.	Oct.	Nov.	Dec.

¹ Monthly data and annual averages have been revised to reflect the availability of late reports and corrections by respondents.

² Industry and product class indexes may include products not shown separately.

³ This index was introduced in midyear, and has been linked backward with a rebased PPI series. The annual average is computed from both the PPIR series and the corresponding rebased indexes for the PPI series.

⁴ Not available.

n.e.c. = Not elsewhere classified.

m/p.m. = Made from purchased materials.

n.s.k. = Not specified by kind.

Note: Indexes in this table are calculated by a revised methodology. See "Technical Note on Data from the Producer Price Index Revision" at the back of this publication. The annual average calculation method for the PPIR differs from that of the PPI (table 4). The PPIR method averages the unrounded monthly indexes, and also includes unpublished monthly data. Therefore, the annual averages may not agree with those computed by averaging the monthly indexes as shown above.

¹ Monthly data and annual averages have been revised to reflect the availability of late reports and corrections by respondents.

² Seasonal commodity—no price available this month.

³ Not available.

⁴ Prices for all items in this grouping are lagged 1 month.

⁵ Regional refined petroleum product prices and price indexes are presented in table 5.

⁶ Prices for some items in this grouping are lagged 1 month.

⁷ This grouping includes fabricated wire products, which had been included in the discontinued code 10-13 and which are now grouped in code 10-88.
n.e.c. = Not elsewhere classified.

NOTE: Titles of some commodities are not shown in this table because they fail to meet our publication criteria.

Total tractors.....	369.7	365.6	365.6	365.7	366.1	370.5	370.6	370.7	370.0	372.5	372.6	373.1	373.8
Construction materials.....	297.7	290.3	294.6	295.0	296.1	296.8	298.6	299.3	299.8	299.9	300.4	300.4	301.3
Agr. machinery & equip., less parts....	330.0	325.9	326.6	326.8	327.1	330.1	330.2	331.0	331.2	332.6	331.8	332.2	334.2
Farm & garden tractors, less parts....	347.2	342.2	342.2	342.2	342.2	348.8	348.8	348.8	347.5	350.6	350.7	350.9	352.0
Agr. mach. ex. tractors, less parts....	337.1	333.1	334.4	334.5	335.2	336.2	336.4	338.0	339.2	338.9	338.2	338.7	342.2

¹ These indexes are calculated by combining indexes listed below by commodity code after each special commodity grouping (titles in table 4). Weights are those used for the comprehensive All Commodities Index.

² Monthly data and annual averages have been revised to reflect the availability of the late reports and corrections by respondents.

All commodities except farm products: 02 through 15

All foods: 01-1, 01-7, and 02 less 02-61, 02-62, and 02-9

Processed foods: 02 less 02-61, 02-62 and 02-9

Industrial commodities less fuels and related products and power: 03, 04, and 06 through 15

Selected textile mill products: 03-27, 03-37-01-05, 03-37-01-07, 03-37-01-09, 03-37-01-11, 03-4, 03-81-01-55, 03-81-01-72, 03-81-01-73, 03-81-02-39, 03-81-02-72, 03-81-02-74, 03-81-03-62, 03-81-03-64, 03-82-01, 03-82-02, 03-83-03-22, 03-83-03-42 and 12-31

Hosiery: 03-81-01-72, 03-81-01-73, 03-81-02-72 and 03-81-03-64

Underwear and nightwear: 03-81-01-74, 03-81-01-75, 03-81-01-76, 03-81-01-77, 03-81-01-78, 03-81-02-74, 03-81-02-75, 03-81-02-78, and 03-81-03-62

Chemicals and allied products, including synthetic rubber and synthetic fibers: 03-1, 06 less 06-4, and 07-11-02

Pharmaceutical preparations: 06-34, 06-35 and 06-36

Lumber and plywood:² 08-1 and 08-3

Steel mill products, including fabricated wire products: 1017 and 1088

Finished steel mill products, excluding fabricated wire products: 1017 less 101701 and 101702

Finished steel mill products, including fabricated wire products 1017 and 1088 less 101701 and 101702

Special metals products: 10, 111 and 141

Fabricated metal products: 103, 104, 105, 106, 107, and 108

Copper and copper products: 10-22-01-23, 10-22-01-24, 10-22-01-25, 10-22-01-61, 10-22-01-62, 10-23-01, 10-24-03-01, 10-24-03-02, 10-24-03-04, 10-24-03-05, 10-25-02, 10-26-03-15, 10-26-03-16, 10-26-03-17, 10-26-03-19, 10-26-03-25, 10-28-03-01, 10-28-03-02, and 10-28-03-03

Machinery and motive products: 11 and 14

Machinery and equipment, except electrical: 11-1, 11-2, 11-3, 11-4, 11-6, 11-8, and 11-9

Agricultural machinery, including tractors: 11-11 and 11-12 less 11-11-52-11 and 11-12-51

Metalworking machinery: 11-3A, 11-32, 11-33-04, 11-37, and 11-38

Total tractors: 11-11 and 11-28 less 11-11-52-11, 11-28-02, and 11-28-03

Agricultural machinery and equipment, less parts (old commodity code 11-1): 11-1 less 11-11-52-11 and 11-12-51

Farm and garden tractors, less parts (old commodity code 11-11): 11-11 less 11-11-52-11

Agricultural machinery excluding tractors, less parts (old commodity code 11-12): 11-12 less 11-12-51

Construction materials: 06-21, 07-21, 08-11, 08-2, 08-3, 09-2, 10-15-02, 10-17-03-99, 10-17-04-99, 10-17-06-11, 10-17-06-27, 10-25-01-01, 10-25-01-03, 10-25-01-04, 10-25-01-21, 10-25-01-23, 10-25-01-55, 10-25-02-54, 10-25-19-93, 10-26-03-07, 10-41-01, 10-5, 10-6, 10-71, 10-73-01-01, 10-73-01-06, 10-73-01-09, 10-73-01-15, 10-73-01-45, 10-73-01-46, 10-73-01-64, 10-73-01-65, 10-74-02, 10-74-03, 10-74-04, 10-74-05-01, 10-74-07-31, 10-74-07-81, 10-74-07-82, 10-74-07-81, 10-81-02-46, 10-83-02-01, 10-83-02-03, 10-83-02-05, 10-83-02-07, 10-83-02-09, 10-83-02-11, 10-83-03-01, 10-83-03-21, 10-83-03-23, 10-83-03-25, 10-83-03-29, 10-83-03-51, 10-83-03-61, 10-88-02-11, 10-88-02-13, 10-88-07-21, 10-88-09-61, 10-89-05-33, 11-42, 11-47, 11-49-02-05, 11-71-01-09, 11-71-01-11, 11-71-01-12, 11-71-01-13, 11-71-01-15, 11-71-01-16, 11-71-01-17, 11-71-01-18, 11-71-01-19, 11-71-01-21, 11-71-02-65, 11-71-02-66, 11-71-02-67, 11-71-02-72, 11-71-02-73, 11-71-02-74, 11-71-02-82, 11-73-01-07, 11-73-01-08, 11-73-01-16, 11-73-01-18, 11-73-01-19, 11-73-01-21, 11-73-01-47, 12-31-01, 12-32, 13-11-05, 13-2, 13-3, 13-4, 13-6, 13-7, 13-91, 13-92, and 13-93

³ Formerly entitled: Lumber and wood products, excluding millwork.

¹ Monthly data and annual averages have been revised to reflect the availability of late reports and corrections by respondents.

² Postal service prices contained in the Consumer Price Index are from first class and fourth class mail.

Relative Importance

Tables 12 and 13 contain relative importance data as of December 1983 by stage of processing as well as by commodity groups, subgroups, product classes, and individual items.

The relative importance of a category on a specific date represents the value of shipments for that category plus the value of unpriced commodities assumed to have price movements similar to those of the priced items. Relative importance data are generally expressed as a percentage of the total weight of some composite grouping. Data in table 12 are expressed as a percentage of

one of the three major stage-of-processing indexes, i.e., Finished Goods, Intermediate Goods, or Crude Goods. All data in table 13 are expressed as a percentage of the All Commodities index.

For a description of the procedures for calculating relative importance data, see *Producer Prices and Price Indexes, Supplement 1979, Data for 1978*. Guidelines for combining components to construct special indexes are presented in *Supplement to Producer Prices and Price Indexes, Data for 1981*.

Table 12. Relative importance of component series in Producer Price Indexes by stage of processing, December 1983¹

¹ The relative importance of a component represents its value weight that is allocated to a particular stage-of-processing (SOP) category—finished goods, intermediate materials, or crude materials—expressed as a percentage of the total weight of the SOP category. See note on relative importance on page 181.

NOTE: Individual items and subtotals may not add exactly to totals because of rounding differences. The value 0.000 represents a percentage less than 0.0005. A dash in the "Former" column indicated a new SOP allocation effective January 1984; a dash in the "Revised" column indicated that the series is no longer included in the indicated SOP category.

	Nonmanufacturing industries	5.598	5.667		NONDURABLE	14.947	14.917
	Manufactured animal feeds	0.764	0.764				
	Other supplies	4.834	4.903				

¹ Comprehensive relative importance figures are computed once each year in December. See note on page 181. The "Revised" column shows relative importance figures for December 1983 based on 1972 shipment values from the Census of Manufactures and other sources, after the sample revision effective January 1984; the "Former" relative importance figures are for the same month before the revision of the index sample. Except for recodes, a dash in the "Former" column indicates the series was introduced in January 1984, and a dash

in the "Revised" column indicates that the series was discontinued as of January 1984.

² The relative importance data for the three major SOP groupings—Finished Goods, Intermediate Materials, and Crude Materials—do not add up to 100.000 because they exclude the portion of goods which are allocated to government purchases and exports.

Technical Notes

Brief Explanation of Producer Price Indexes

Producer price indexes measure average changes in prices received in primary markets of the United States by producers of commodities in all stages of processing. These data were previously presented as the Wholesale Price Index. The name "Producer Price Indexes" is now being used to reflect more accurately the coverage of the data. The sample used for calculating these indexes continues to contain about 3,200 commodities and about 43,000 quotations selected to represent the movement of prices of all commodities produced in the manufacturing, agriculture, forestry, fishing, mining, gas and electricity, and public utilities sectors. The universe includes all commodities produced or imported for sale in commercial transactions in primary markets in the United States.

Producer price indexes can be organized by stage of processing or by commodity. The stage-of-processing structure organizes products by degree of fabrication (i.e., finished goods, intermediate or semifinished goods, and crude materials). The commodity structure organizes products by similarity of end-use or material composition.

Finished goods are commodities that will not undergo further processing and are ready for sale to the ultimate user, either an individual consumer or a business firm. Capital equipment (formerly called producer finished goods) includes commodities such as motor trucks, farm equipment, and machine tools. Finished consumer goods include foods and other types of goods eventually purchased by retailers and used by consumers. Consumer foods include unprocessed foods such as eggs and fresh vegetables, as well as processed foods such as bakery products and meats. Other finished consumer goods include durables such as automobiles, household furniture, and jewelry, and non-durables such as apparel and gasoline.

Intermediate materials, supplies, and components are commodities that have been processed but require further processing before they become finished goods. Examples of such semifinished goods include flour, cotton yarns, steel mill products, belts and belting, lumber, liquefied petroleum gas,

paper boxes, and motor vehicle parts.

Crude materials for further processing include products entering the market for the first time which have not been manufactured or fabricated but will be processed before becoming finished goods. Scrap materials are also included. Crude foodstuffs and feedstuffs include items such as grains and livestock. Examples of crude nonfood materials include raw cotton, crude petroleum, natural gas, hides and skins, and iron and steel scrap.

For analysis of general price trends, stage-of-processing indexes are more useful than commodity grouping indexes. This is because commodity grouping indexes sometimes produce exaggerated or misleading signals of price changes by reflecting the same price movement through various stages of processing. For example, suppose that a price rise for steel scrap results in an increase in the price of steel sheet and then an advance in prices of automobiles produced from that steel. The All Commodities Price Index and the Industrial Commodities Price Index would reflect the same price movement three times—once for the steel scrap, once for the steel sheet, and once for the automobiles. This multiple counting occurs because the weighting structure for the All Commodities Index uses the total shipment values of all commodities at all stages of processing. On the other hand, the Finished Goods Price Index would reflect the change in automobile prices, the Intermediate Materials Price Index would reflect the steel sheet price change, and the Crude Materials Price Index would reflect the rise in the price of steel scrap. (See illustration.)

To the extent possible, prices used in calculating producer price indexes apply to the first significant commercial transaction in the United States, from the production or central marketing point. Price data are generally collected monthly, primarily by mail questionnaire. Respondents are asked to provide net prices or to provide all applicable discounts. BLS attempts to base producer price indexes on actual transaction prices; however, list or book prices are used if transaction prices are not available. Most prices are obtained directly from producing companies on a voluntary and confidential basis, but some prices are taken from trade publications or from other Government agencies. Prices generally are reported for the Tuesday of the week containing the 13th day of the month.

In calculating producer price indexes, price changes for the various commodities are averaged together with weights representing their importance in the total net selling value of all commodities as of 1972. The detailed data are aggregated to obtain indexes for stage-of-processing groupings, commodity groupings, durability of product groupings, and a number of special composite groupings. Each index measures price changes

from a reference period which equals 100.0 (usually 1967). An increase of 125 percent from the reference period in the Finished Goods Price Index, for example, is shown as 225.0. This change can also be expressed in dollars, as follows: "The price of a representative sample of finished goods sold in primary markets in the United States has risen from \$100 in 1967 to \$225."

Calculating Index Changes

Movements of price indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period, while percent changes are not. The box shows the computation of index point and percent changes.

Index Point Change	
Finished Goods Price Index	185.5
less previous index	184.5
equals index point change	1.0
Index Percent Change	
Index point change	1.0
divided by the previous index	184.5
equals	0.005
result multiplied by 100	0.005×100
equals index percent change	0.5

Percent changes for 3-month and 6-month periods are expressed as annual rates that are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics published seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted data usually are preferred because they eliminate the effect of changes that normally occur at about the same time and in about the same magnitude every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays.

For this reason, seasonally adjusted data more clearly reveal the underlying cyclical trends. Seasonally adjusted data are subject to revision when seasonal factors are revised each year.

The unadjusted data are of primary interest to users who need information which can be related to the actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. Unadjusted data generally are used in escalating contracts such as purchase agreements or real estate leases.

Data from the Producer Price Index Revision

Data from the Producer Price Index (PPI) Revision are presented in table 3 of this supplement and in the monthly issues of this report in table 4, "Producer price indexes for the net output of selected industries and their products." Table 4 of the monthly issues of this report includes data for additional Standard Industrial Classification (SIC) industries (4-digit level) and Census products (7-digit level); indexes for Census product classes (5- and 6-digit levels) and more detailed subproducts (9-digit level); and, for some industries, indexes for other sources of revenue. Thus, table 4 shows all official indexes arising from the ongoing PPI revision. By 1986, table 4 will cover nearly all 493 SIC mining and manufacturing industries.

Kinds of product indexes

Industries listed monthly in table 4 may be represented by one to three kinds of product indexes. Every industry has *primary product indexes* to show changes in prices received by establishments classified in the industry for products made primarily, but not exclusively, within that industry. To be classified in an industry, an establishment must have a plurality of its total shipment value accounted for by primary products. In addition, some industries also may have *secondary product indexes* to show changes in prices received by establishments classified in the industry for products primary to some other industry. Finally, some industries have *miscellaneous receipts indexes* to show price changes in other sources of revenue received by establishments within the industry which are not derived from the sale of their products. Because of the distinction between primary and secondary products, an index for a product made in one industry may differ from the index for the same product made in another industry.

Phase-out of ISPI's

Effective with the introduction of data for January 1983 from the Producer Price Index Revision (PPIR), selected Industry Sector Price Indexes (ISPI's) were dropped from publication for those industries which also appear in table 4 in monthly issues of this report, "Producer price indexes for the net output of selected industries and their products."

The PPIR indexes reflected in table 4 (supplement table 3) are designed as an improvement of, and replacement for, the ISPI's in tables 9 and 10 (supplement tables 7 and 8). Table 4 indexes are based on a large probability sample of producers and products within the specified industries, while the indexes in tables 9 and 10 were based on smaller, judgmental, commodity-oriented samples which were not restricted to the specified industry.

ISPI's whose movements had been determined by corresponding series from the Producer Price Index Revision system (as indicated by an appropriate footnote after their titles in table 9 or 10) have not been published since December 1982. Remaining ISPI's will be dropped from these tables as improved data become available. Tables 9 and 10 will eventually be discontinued; table 4 will be the primary vehicle for presenting industry-oriented price data in the monthly report.

As indexes are deleted from tables 9 and 10, the affected historical data will be incorporated into the PPIR system. This will be accomplished by rebasing the old indexes to the base period of the corresponding PPIR indexes.

How new indexes differ from traditional commodity indexes

New indexes differ from traditional commodity indexes in a number of respects:

(1) New indexes are *industry-based*. The entire output of each industry is sampled, including primary and secondary production and miscellaneous receipts. Traditional commodity indexes are based on a selection of the most important commodities, and most Industry-Sector Price Indexes continue to be calculated from these traditional commodity indexes. In addition, traditional ISPI's do not cover miscellaneous receipts, and prices of products are included without systematic regard for the industry classification of the producer. New indexes, on the other hand, are based on prices of primary and secondary products made by producers classified in the specified industry; as a result, new indexes apply to production within the specified industry. As data from more mining and manufacturing industries become available, additional indexes will be constructed to cover each product regardless of the industry of origin.

(2) New indexes are easier to use with other industry-oriented economic data because they are *classified according to the SIC* and incorporate most features of the Census of Manufactures product code extensions of the SIC.

(3) New indexes use *net output values of shipments as weights*. Net output values refer to the value of shipments leaving the industry and exclude intra-industry shipments. In contrast, weights in traditional commodity price indexes and ISPI's include shipments within an industry. The resulting multiple-counting of price changes at successive stages of processing is one major defect of the traditional commodity grouping indexes. Stage-of-processing indexes partially correct this defect, but new indexes consistently correct it at all levels of aggregation. (Net output weights are not used, however, for traditional commodity indexes whose movements are based on corresponding new indexes.)

In the revision program, the relative importance of items within a product is based upon shipment value data and sampling weights from the revision survey itself. When detailed products are aggregated to the 5-digit product class and 4-digit industry levels, however, weights are taken from Census of Manufactures data, along with estimates of intra-industry shipments from input-output tables produced by the Bureau of Economic Analysis of the U.S. Department of Commerce.

(4) New indexes emphasize *actual transaction prices at the time of shipment* to minimize the use of list prices and order prices, which occasionally have been used in traditional commodity price indexes and ISPI's. In addition, some traditional indexes have been calculated intentionally from order prices rather than from shipment prices.

(5) New indexes are based on prices reported by companies of all sizes and locations selected by *probability sampling*. In addition, individual items and transaction terms from these firms are chosen by probability techniques. (Estimates of sampling error will be published later.) In the traditional PPI program, major companies selected on a judgment basis have been asked to report prices for volume-selling items under "typical" transaction terms.

For further information on the underlying concepts and methodology of the PPI revision, see "The Producer Price Index Revision: Overview and Pilot Survey Results," by John F. Early, in the December 1979 issue of the *Monthly Labor Review*, and chapter 7, "Producer Prices," in the *BLS Handbook of Methods, Volume I*, Bulletin 2134-1 (1982). Reprints are available from the Bureau of Labor Statistics on request.
