PPI Detailed Report (ISSN 1099-2855; USPS 485-050) is a monthly report on producer price movements including text, tables, and technical notes. An annual supplement contains monthly data for the calendar year, annual averages, and information on weights.

To order this periodical for 1 year, cite *PPI Detailed Report* (WPPI) and send your check for \$55 (\$77 foreign) or provide your VISA or MasterCard number and expiration date to Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15220-7954. Cost of the supplement only is \$40 domestic (\$56 foreign).

Subscribers will receive the next available subscription issue after their order is received. An acknowledgement card is sent to all customers after their subscription order is processed to let them know that they will receive the next available issue.

Please wait at least 6 weeks before inquiring about your order. Then, write to Subscription Service Section, U.S. Government Printing Office, Stop: SSOM, Washington, DC 20402; telephone (202) 512-1800; or fax (202) 512-2168.

Price Highlights, 2004

Finished goods

The Producer Price Index for Finished Goods advanced 4.2 percent in 2004, after rising 4.0 percent in the preceding year. Approximately half of the increase in 2004 can be traced to rising prices for energy goods. The indexes for finished goods other than foods and energy and for finished consumer foods also went up in 2004. (See table A.)

Prices for finished energy goods jumped 13.4 percent in 2004, compared with an 11.4-percent gain in 2003. In 2004, price increases were reported for gasoline, residential natural gas, home heating oil, residential electric power, liquefied petroleum gas, and diesel fuel.

The index for finished consumer goods other than foods and energy rose 2.2 percent in 2004, after moving up 1.1 percent in the prior year. Prices for mobile homes advanced 12.6 percent, following a 3.8-percent increase in 2003. Also rising at quicker rates in 2004 than in the previous year were the indexes for household furniture; pet food; tires, tubes, and tread; and book publishing. Prices for cigarettes, sporting and athletic goods, and sanitary papers and health products turned up, following declines in 2003. Conversely, the rate of increase in the light motor trucks index slowed from 2.3 percent in 2003 to 1.0 percent in 2004. Prices for alcoholic beverages, passenger cars, pharmaceutical preparations, and periodical circulation also rose less than they had in 2003, while the index for home electronic equipment fell more in 2004 than it had a year earlier.

Price increases for finished consumer foods decelerated from 7.7 percent in 2003 to 3.1 percent in 2004. The index for beef and veal turned down 3.8 percent, compared with a 27.1-percent jump in 2003. Prices for fresh and dry vegetables, eggs for fresh use, processed young chickens, and milled rice also fell in 2004, after posting gains in the preceding year. The indexes for fresh fruits and melons and for shortening and cooking oils rose less than in the preceding year. By contrast, pork prices surged 22.1 percent in 2004, following a 6.8-percent advance in the previous year. The indexes for dairy products, soft drinks, processed fruits and vegetables, finfish and shellfish, and confectionery end products also increased at quicker rates than they had in 2003.

Capital equipment prices advanced 2.4 percent in 2004, after edging up 0.8 percent a year earlier. The index for heavy motor trucks turned up 3.4 percent, following

a 1.9-percent decline in the preceding year. Prices for commercial furniture, construction machinery and equipment, industrial material handling equipment, truck trailers, and railroad equipment rose more than they had in 2003. Alternatively, the communication and related equipment index fell 2.1 percent in 2004, after declining 0.9 percent in the preceding year. Prices for x-ray and electromedical equipment also fell more than in 2003, while the indexes for light motor trucks and for passenger cars advanced less in 2004 than they had in the prior year.

Intermediate goods

The Producer Price Index for Intermediate Materials, Supplies, and Components advanced 9.2 percent in 2004, after rising 3.9 percent in the previous year. Prices for materials for durable manufacturing, materials for nondurable manufacturing, materials and components for construction, and intermediate energy goods increased more than they had in 2003. In contrast, the index for intermediate foods and feeds turned down in 2004, following an increase in the preceding year. Prices for intermediate goods less foods and energy rose 8.3 percent in 2004, compared with a 2.1-percent gain in the prior year.

The materials for durable manufacturing index went up 18.3 percent in 2004, after moving up 4.0 percent in the previous year. More than three-fourths of this acceleration was due to prices for steel mill products, which advanced 48.8 percent, following a 1.7-percent rise in 2003. The indexes for primary nonferrous metals and for copper and brass mill shapes also increased at faster rates than they had in the preceding year, while prices for aluminum mill shapes, cement, and titanium mill shapes turned up in 2004, after falling in the preceding year. By contrast, the building paper and board index edged down 1.0 percent, after jumping 38.6 percent in the prior year. Plywood prices also turned down in 2004, and the index for hardwood lumber rose less than it had a year earlier.

Subsequent to a 4.9-percent gain in 2003, the index for materials for nondurable manufacturing advanced 13.7 percent in 2004. Leading this acceleration, prices for industrial chemicals climbed 24.6 percent, after increasing 8.1 percent in the preceding year. The indexes for plastic resins and materials, paper, and synthetic rubber also rose more than in 2003, while paperboard prices turned up in 2004, after falling in the prior year. Alternatively, the inedible fats and oils index dropped 15.6 percent, following a 29.4-percent advance in 2003. The index for medicinal and botanical chemicals also turned down in 2004, after posting a gain a year earlier. The rates of increase in prices for nitrogenates, leather, and stemmed and redried tobacco decelerated from 2003 to 2004.

The index for materials and components for construction rose 10.1 percent in 2004, following a 3.0-percent gain in the previous year. Prices for fabricated structural metal products jumped 17.6 percent in 2004, after inching up 0.6 percent in the prior year. The indexes for steel mill products, concrete products, wiring devices,

millwork, plastic construction products, nonferrous wire and cable, fabricated ferrous wire products, and gypsum products also rose more than they had in 2003. By contrast, plywood prices fell 3.4 percent in 2004, compared with a 31.3-percent upsurge in the preceding year. The index for building paper and board also turned down in 2004, and prices for treated wood, hardwood lumber, and asphalt felts and coatings increased less than in the previous year.

The intermediate energy goods index advanced 15.8 percent in 2004, following a 10.9-percent increase in the prior year. Prices for jet fuels soared 45.5 percent, after rising 10.2 percent a year earlier. The indexes for diesel fuel, gasoline, home heating oil, natural gas to electric utilities, liquefied petroleum gas, and commercial electric power also increased at quicker rates in 2004 than they had in 2003. Alternatively, residual fuel prices inched up 1.0 percent in 2004, after jumping 39.1 percent in the preceding year. The indexes for commercial natural gas, industrial natural gas, and industrial electric power also increased less than in 2003.

Prices for intermediate foods and feeds turned down 2.3 percent in 2004, after rising 12.9 percent in the previous year. Accounting for approximately half of this downturn, the prepared animal feeds index fell 11.1 percent, following a 14.7-percent rise in 2003. Prices for beef and veal, processed young chickens, and refined sugar and byproducts also decreased, after increasing in the preceding year, while the indexes for shortening and cooking oils and for fluid milk products rose less than they had in 2003. By contrast, the pork index moved up 22.1 percent in 2004, following a 6.8-percent gain in the prior year. Prices for natural, processed, and imitation cheese also rose more than in the preceding year. The indexes for dry, condensed, and evaporated milk products and for confectionery materials turned up in 2004.

Crude goods

The index for crude materials for further processing rose 17.4 percent in 2004, after increasing 19.5 percent in the prior year. In 2004, rising prices were reported for crude energy materials and crude nonfood materials less energy. By contrast, the index for crude foodstuffs and feedstuffs moved down in 2004.

Prices for crude energy materials increased 35.9 percent in 2004, following a 14.4-percent advance in the preceding year. More than two-thirds of this acceleration can be traced to the index for natural gas, which jumped 44.3 percent after moving up 17.2 percent in 2003. Additionally, crude petroleum prices rose 30.5 percent, following a 14.3-percent gain in the previous year, while the rate of increase in the coal index accelerated from 2.1 percent in 2003 to 10.0 percent in 2004.

Prices for crude nonfood materials less energy moved up 20.5 percent in 2004, after rising 21.6 percent in the prior year. Over half of the 2004 increase in crude nonfood materials less energy prices can be attributed to a 50.8-percent advance in the index for iron and steel scrap. Also increasing in 2004 were prices for nonferrous metal ores; copper base scrap; wastepaper; aluminum base scrap; construction

sand, gravel, and crushed stone; phosphates; and softwood logs, bolts, and timber. In contrast, price declines were reported for raw cotton and pulpwood.

The crude foodstuffs and feedstuffs index turned down 2.6 percent in 2004, after climbing 24.1 percent in the previous year. Leading this downturn, slaughter cattle prices declined 10.9 percent, after rising 35.4 percent in 2003. The indexes for soybeans, corn, fresh vegetables (except potatoes), and wheat also decreased in 2004, following gains in the prior year. Prices for slaughter broilers and fryers and for fresh fruits and melons rose less than they had in 2003. By contrast, prices for slaughter hogs went up 48.7 percent in 2004, compared with a 20.7-percent advance in the previous year. The indexes for slaughter turkeys and fluid milk also rose more than in the preceding year, while prices for alfalfa hay and Irish potatoes for processing turned up in 2004.

Net output price indexes for selected services industries

In 2004, increases were reported in the industry indexes for general medical and surgical hospitals, direct property and casualty insurance carriers, offices of lawyers, investment banking and securities dealing, portfolio management, direct life insurance carriers, couriers, offices of real estate agents and brokers, lessors of nonresidential buildings (excluding miniwarehouses), long-distance general freight trucking (less than truckload), and nursing care facilities. Alternatively, prices received by the following industries decreased in 2004: Scheduled passenger air transportation; wired telecommunications carriers; cellular and other wireless carriers; data processing and related services; travel agencies; software publishers; and truck, utility trailer, and RV rental and leasing. ¹ Monthly data and annual averages have been revised to reflect the availability of late reports and corrections by respondents. Industry and product class indexes may include products not shown separately.

² Not available.

³ The special index for 924126, in which prices reflect premiums only, contrasts with the index shown elsewhere in this table for NAICS 524126, where prices reflect premiums plus the amount of investment income earned on the invested portion of the premium.
n.e.c. = Not elsewhere classified.

mfpn = Made from purchased materials.

Note: The annual average calculation method uses unrounded monthly indexes and unpublished monthly data. Therefore, the annual averages may not agree with those computed by averaging the monthly indexes as shown here.

Note: NAICS 2002 replaced the SIC system beginning with the release of PPI data for January 2004. See <http://www.bls.gov/ppi/ppinaics.htm> for details.

¹ Monthly data and annual averages have been recalculated to incorporate late reports and corrections by respondents. Indexes in this table are derived from the primary product indexes in table 3 that are weighted using 1997 input/output relationships. These indexes only include inputs to construction which are produced by the mining and manufacturing

sectors of the economy, excluding capital equipment. Because they do not include labor or capital costs, these indexes should not be regarded as comprehensive measures of changes in construction costs. See note on page 190 of *Producer Price Indexes* for July 1986.

¹ The relative importance of a component of the PPI represents its value weight that is allocated to a particular stage-of-processing (SOP) category—Finished Goods, Intermediate Goods, or Crude Materials. This value is expressed as a percentage of the total weight of the SOP category. The "Revised" column shows the relative importance figures for December 2004, based on 1997 shipment values from the *Census of Manufactures* and other sources, and reflects all sample revisions effective January 2005. The "Former" column provides relative

importance figures for the same month, before any sample revisions. Groupings and subtotals may not add exactly to totals because of rounding. A dash in the "Former" column indicates that the series was introduced in January 2005, and a dash in the "Revised" column indicates that the series was discontinued as of January 2005. The value "0.000" represents any percentage less than 0.0005.

¹ The relative importance of a commodity grouping in a particular stage-of-processing (SOP) index—finished goods, intermediate materials, or crude materials—is its value weight expressed as a percentage of the total value weight of the SOP index. Information for setting value weights comes from the 1997 *Census of Manufactures* and other sources. The "REVISED" column shows relative importance figures for December 2004 and reflects all commodity grouping revisions becoming

effective January 2005. The "FORMER" columns shows relative importance figures for December 2004 before the grouping revisions. Values may not add exactly to totals because of independent roundings. The value 0.000 represents either a percentage less than 0.0005 or a grouping newly introduced or deleted in January 2005.

¹ All relative importance figures in this table are expressed as a percentage of the All Commodities index. The "Revised" column shows relative importance figures for December 2004 based on 1997 shipment values from the *Census of Manufactures* and other sources, and reflects all sample revisions effective January 2005. The "Former" column provides relative importance figures for the same month, but before any sample revisions. A dash in the "Former" column indicates that the series was introduced in January 2005 and a dash in the "Revised" column indicates that the series was

discontinued as of January 2005. Individual items and subtotals may not add exactly to totals because of rounding differences. The value 0.000 represents a percentage less than 0.0005.

² The relative importance data for the three major SOP groupings—finished goods, intermediate materials, and crude materials—do not add up to 100.000 because they exclude the portion of goods allocated to government purchases and exports.

Technical Note

The Producer Price Index (PPI) of the Bureau of Labor Statistics (BLS) is a family of indexes that measure the average change over time in the prices received by domestic producers of goods and services. PPIs measure price change from the perspective of the seller. This contrasts with other measures, such as the Consumer Price Index (CPI). CPIs measure price change from the purchaser's perspective. Sellers' and purchasers' prices can differ due to government subsidies, sales and excise taxes, and distribution costs.

More than 8,000 PPIs for individual products and groups of products are released each month. PPIs are available for the products of virtually every industry in the mining and manufacturing sectors of the U.S. economy. New PPIs are gradually being introduced for the products of industries in the trade, finance, and services sectors of the economy.

More than 100,000 price quotations per month are organized into three sets of PPIs: (1) Stage-of-processing indexes; (2) commodity indexes; and (3) indexes for the net output of industries and their products. The stage-of-processing structure organizes products by class of buyer and degree of fabrication. The commodity structure organizes products by similarity of end use or material composition. The entire output of various industries is sampled to derive price indexes for the net output of industries and their products.

Stage-of-Processing Indexes

Within the stage-of-processing system, finished goods are commodities that will not undergo further processing and are ready for sale to the final-demand user, either an individual consumer or business firm. Consumer foods include unprocessed foods such as eggs and fresh vegetables, as well as processed foods such as bakery products and meats. Other finished consumer goods include durable goods such as automobiles, household furniture, and appliances, as well as nondurable goods such as apparel and home heating oil. Capital equipment includes producer durable goods such as heavy motor trucks, tractors, and machine tools.

The stage-of-processing category for intermediate materials, supplies, and components consists partly of commodities that have been processed but require fur-

ther processing. Examples of such semifinished goods include flour, cotton yarn, steel mill products, and lumber. The intermediate goods category also encompasses nondurable, physically complete items purchased by business firms as inputs for their operations. Examples include diesel fuel, belts and belting, paper boxes, and fertilizers.

The illustration shows how products are classified by stage of processing.

| Crude goods | Intermediate goods | Finished goods |
|---|---|---|
|  |  |  |
|  |  |  |
|  |  |  |

Crude materials for further processing are products entering the market for the first time that have not been manufactured or fabricated and that are not sold directly to consumers. Crude foodstuffs and feedstuffs include items such as grains and live-stock. Examples of crude nonfood materials include raw cotton, crude petroleum, coal, hides and skins, and iron and steel scrap.

Commodity Indexes

The commodity classification structure of the PPI organizes products by similarity of end use or material composition, disregarding industry of origin. Fifteen major commodity groupings (2-digit commodity codes) make up the All Commodities Index. Each major commodity grouping includes (in descending order of aggregation) subgroups (3-digit), product classes (4-digit), subproduct classes (6-digit), and individual items (8-digit). Nearly all 8-digit commodities under the traditional commodity coding system are now derived from corresponding industry-classified product indexes. In such instances, movements in the traditional commodity price indexes and corresponding percent changes will be virtually identical to those in their industry-based counterparts, even if the index levels differ.

Industry Net-Output Price Indexes

PPIs for the net output of industries and their products are grouped according to the North American Industry Classification System (NAICS). Prior to the release of January 2004, industry-based PPIs were published according to the Standard Industrial Classification (SIC) system. Industry price indexes are compatible with other economic time series organized by industry, such as data on employment, wages, and productivity. Table 5 of the *PPI Detailed Report* includes data for NAICS industries and industry groups (3-, 4-, 5-, and 6-digit codes); Census product classes (7- and 8-digits), products (9-digits), and more detailed subproducts (11-digits); and, for some industries, indexes for other sources of revenue.

Indexes may represent one of three kinds of product indexes. Every industry has primary product indexes to show changes in prices received by establishments classified in the industry for products made primarily, but not necessarily exclusively, by that industry. The industry classification of an establishment is determined by which products comprise a plurality of its total shipment value. In addition, most industries have secondary product indexes that show changes in prices received by establishments classified in the industry for products chiefly made in some other industry. Finally, some industries have miscellaneous receipts indexes to show price changes in other sources of revenue received by establishments within the industry that are not derived from sales of their products—for example, resales of purchased materials, or revenues from parking lots owned by a manufacturing plant.

Data Collection

PPIs are based on selling prices reported by establishments of all sizes selected by probability sampling, with the probability of selection proportionate to size. Individual items and transaction terms from these firms also are chosen by probability proportionate to size. BLS strongly encourages cooperating companies to supply actual transaction prices at the time of shipment to minimize the use of list prices. Prices submitted by survey respondents are effective on the Tuesday of the week containing the 13th day of the month. This survey is conducted primarily through the mail.

Price data are provided on a voluntary and confidential basis; only sworn BLS employees are allowed access to individual company price reports. BLS publishes price indexes instead of unit dollar prices. All PPIs are subject to revision 4 months after original publication to reflect the availability of late reports and corrections by respondents.

BLS periodically updates the PPI sample of survey respondents to better reflect current conditions when the structure, membership, technology, or product mix of an industry shifts significantly and to spread reporting burden among smaller firms. Results of these resampling efforts are incorporated into the PPI with the release of data for January and July.

As part of an ongoing effort to expand coverage to sectors of the economy other than mining and manufacturing, an increasing number of service sector industries have been introduced into the PPI. The following list of recently introduced industries includes the month and year in which an article describing the industry's content appeared in the *PPI Detailed Report*.

Weights for most traditional commodity groupings of the PPI, as well as weights for commodity-based aggregate indexes calculated using traditional commodity groupings, such as stage-of-processing indexes, currently reflect 1997 values of shipments as reported in the *Census of Manufactures* and other sources. From January 1996 through December 2001, PPI weights were derived from 1992 shipment values. Industry indexes also are now calculated with 1997 net output weights. This periodic update of the value weights used to calculate the PPI is done to more accurately reflect changes in production and marketing patterns in the economy. Net output values of shipments are used as weights for industry indexes. Net output values refer to the value of shipments from establishments within the industry to buyers outside the industry. However, weights for commodity price indexes are based on gross shipment values, including shipment values between establishments within the same industry. As a result, broad commodity grouping indexes, such as the PPI for All Commodities, are affected by the multiple counting of price change at successive stages of processing, which can lead to exaggerated or misleading signals about inflation. Stage-of-processing indexes partially correct this defect, but industry indexes consistently correct for this at all levels of aggregation. Therefore, industry and stage-of-processing indexes are more appropriate than broad commodity groupings for economic analysis of general price trends.

Price Index Reference Base

Effective with publication of January 1988 data, many important PPI series (including stage-of-processing groupings and most commodity groups and individual items) were placed on a new reference base, 1982 = 100. From 1971 through 1987, the standard reference base for most PPI series was 1967 = 100. Except for rounding differences, the shift to the new reference base did not alter any previously published percent changes for affected PPI series. (See "Calculating Index Changes," below.) The 1982 reference base is not used for commodity indexes with a base later than December 1981 or for industry net output indexes and their products.

For further information on the underlying concepts and methodology of the Producer Price Index, see chapter 14, "Producer Prices," in *BLS Handbook of Methods* (April 1997), Bulletin 2490. This document can be downloaded from the BLS Web site at www.bls.gov/opub/hom/homch14_etc.htm. Reprints are available on request.

Calculating Index Changes

Each PPI measures price changes from a reference period that equals 100.0. An increase of 5.5 percent from the reference period in the Finished Goods Price Index, for example, is shown as 105.5. This change also can be expressed in dollars, as follows: Prices received by domestic producers of a sample of finished goods have risen from \$100 in 1982 to \$105.50. Likewise, a current index of 90.0 would indicate that prices received by producers of finished goods are 10 percent lower than they were in 1982.

Movements of price indexes from one month to another are usually expressed as percent changes, rather than as changes in index points. Index point changes are affected by the level of the index in relation to its base period, whereas percent changes are not. The following example shows the computation of index point and percent changes.

Index point change

| | |
|----------------------------|-------|
| Finished Goods Price Index | 107.5 |
| Less previous index | 104.0 |
| Equals index point change | 3.5 |

Index percent change

| | |
|-------------------------------|-------------|
| Index point change | 3.5 |
| Divided by the previous index | 104.0 |
| Equals | 0.034 |
| Result multiplied by 100 | 0.034 x 100 |
| Equals percent change | 3.4 |

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, BLS publishes seasonally adjusted and unadjusted changes each month. Seasonally adjusted data are preferred for analyzing general price trends in the economy, because these data eliminate the effect of changes that normally occur at about the same time, and in about the same magnitude, every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For these reasons, seasonally adjusted data more clearly reveal underlying cyclical trends. Unadjusted data are of primary interest to users who need information that can be related to actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchas-

ing agents, budget and cost analysts, contract specialists, and commodity traders. It is generally the unadjusted data that are cited when long-term contracts such as purchasing agreements or real estate leases, are being escalated. (See *Escalation and Producer Price Indexes: A Guide for Contracting Parties*, BLS Report 807, September 1991, available on request from BLS.)

In 1998, the PPI implemented the X-12-ARIMA Seasonal Adjustment Method; prior to that year the PPI employed the X-11 method. Each year, the seasonal status of most commodity indexes is reevaluated to reflect more recent price behavior. Industry net output indexes are not seasonally adjusted. For time series that exhibit seasonal pricing patterns, new seasonal factors are estimated and applied to the unadjusted data for the previous 5 years. These updated seasonally adjusted indexes replace the most recent 5 years of seasonal data.

Seasonal factors may be applied to series using either a direct or aggregative method. Generally, commodity indexes are seasonally adjusted using direct seasonal adjustment, which produces a more complete elimination of seasonal movements than the aggregative method. However, the direct seasonal adjustment process may not yield figures that possess additive consistency. Thus, a seasonally adjusted index for a broad category that is directly adjusted may not be logically consistent with all seasonally adjusted indexes for its components. Seasonal movements for stage-of-processing indexes are derived indirectly through an aggregative method that combines movements of a wide variety of subproduct class (6-digit) series.

Seasonally adjusted indexes can become problematic when previously stable and predictable price patterns abruptly change. If the new pattern persists, the seasonal adjustment method will eventually reflect it adequately; if these patterns keep shifting, however, seasonally adjusted data will become chronically troublesome. This problem occurs relatively infrequently for farm and food-related products but has more often affected manufactured products such as automobiles and steel.

Since January 1988, the PPI has used Intervention Analysis Seasonal Adjustment methods to enhance the calculation of seasonal factors. With this technique, outlier values that may distort the seasonal pattern are removed from the data prior to applying the standard seasonal factor estimation procedure. For example, a possible economic cause for large price movements for petroleum-based products might have been the Persian Gulf War. In this case, intervention techniques allowed for better estimates of seasonally adjusted data. On the whole, very few series have required intervention. Out of nearly 900 seasonally adjusted series, only 16 interventions were performed in 1997.

For more information relating to seasonal adjustment methods, see (1) "Appendix A: Seasonal Adjustment Methodology at BLS," in the *BLS Handbook of Methods* (April 1997), Bulletin 2490 and (2) "Summary of Changes to the PPI's Seasonal Adjustment Methodology" in the January 1995 issue of *Producer Price Indexes*.

Producer Price Index Data Via the Internet

In 1995, BLS began posting PPI series, news releases, and technical information to both a World Wide Web (WWW) site and a file transfer protocol (FTP) site. During the years following the introduction of PPI Internet services, usage of these sites has eclipsed more traditional methods of data dissemination, such as subscriptions to the *PPI Detailed Report*. (There were more than 2.4 million downloads of PPI series over the Internet during the 12 months ended December 31, 2004.)

PPI data can be obtained from the WWW address at www.bls.gov/ppi. Scrolling down the page to the "Get Detailed PPI Statistics" header reveals the following five methods of data retrieval:

- **Most Requested Series** is a form-based application that allows the user to quickly obtain PPI time series data by selecting from two separate lists (commodity and industry) of the most commonly requested time series, including the All Commodities Index and the stage-of-processing indexes (for example, Finished Goods). Within each list, any one—or all—of the time series shown can be selected. A user can modify the date range and output options after executing the query, using the reformat button above the data output table.
- **Create Customized Tables** (one screen or multiple screens) is a form-based query application designed for users unfamiliar with the PPI coding structure. It guides a user through the PPI classification system by listing index titles and does not require knowledge of commodity or industry codes. Data retrieved are based on a query formulated by selecting data characteristics from lists provided. Two options are available to create customized tables, depending on a user's browser capability. The one-screen option is a JavaScript application that uses a single screen to guide a user through the available time series data. The second option is a multiple-screen, non-Java-based application. Both methods allow a user to browse the PPI coding structure and select multiple series codes. Using the one-screen option, users can modify the date range and output options after executing the query using the reformat button above the data output table.
- **Series Report** is a form-based application that uses formatted PPI time series identifiers (commodity or industry codes) as input in extracting data according to a specified set of date ranges and output options. This application provides the most efficient path for those users who are familiar with the format of PPI time series identifiers. Up to 300 indexes can be extracted at one time.

There are three basic formats for creating a unique PPI time series identifier. For commodity and stage-of-processing indexes, enter a "wpu" prefix (not seasonally adjusted) or a "wps" prefix (seasonally adjusted) in combination with a commodity-based code to create a series identifier.

Example:

| <i>Commodity code</i> | <i>Will provide data for:</i> |
|-----------------------|--|
| wps063 | Drugs and pharmaceuticals, seasonally adjusted |
| wpu063803 | Pharmaceutical preparations, cardiovascular system |
| wpusop3000 | Finished goods, not seasonally adjusted |

For a current industry-based price index organized according to the North American Industry Classification System (NAICS), enter the prefix "pcu" followed by the industry-product code. The series identifier for products primary to an industry includes 12 numeric digits (the 6-digit industry code is repeated) and up to 7 additional digits of product detail. Dashes are used as placeholders for higher level industry group codes.

| <i>Industry-product code, Current NAICS series</i> | <i>Will provide data for:</i> |
|--|---|
| pcu325 --- 325 --- | Chemical manufacturing, not seasonally adjusted |
| pcu336110336110 | Automobile and light duty motor vehicle manufacturing |
| pcu621111621111411 | Offices of physicians: One- and two-physician practices and single specialty group practices, general/family practice |

To identify a discontinued industry-product code based on the Standard Industrial Classification (SIC), enter a "pdu" prefix and "#" between the fourth and fifth characters of the product code. A series identifier for the discontinued dataset uses underscores as placeholders to complete a reference to an SIC industry group code of fewer than four digits. (All PPI industry-based indexes organized by SIC were discontinued with the introduction of the NAICS.) In all cases, no spaces are permitted.

| <i>Industry-product code, Discontinued SIC series</i> | <i>Will provide data for:</i> |
|---|--|
| pdu28_ _# | Chemicals and allied products |
| pdu331_ # | Blast furnaces, steel works, and rolling and finishing mills |
| pdu3711#111 | Passenger cars |

- **Flat Files** and the FTP server are best suited for those users requiring access to either a large volume of time series data or other PPI-related documentation (such as seasonal factor and relative importance tables). The FTP site can be accessed at <ftp://ftp.bls.gov> or directly from the links on the "Get Detailed Statistics" page or the

PPI homepage. Data and documentation available for download include:

- | | <i>Directory:</i> |
|---------------------------|----------------------------------|
| • NAICS Current Series | /pub/time.series/pc |
| • SIC Discontinued Series | /pub/time.series/pd |
| • Commodity Series | /pub/time.series/wp |
| • Special Requests | /pub/special.requests/ppi |
| • Latest News Release | /pub/news.release/ppi.txt |

The FTP site maintains files to help with searches and downloads. These files are centrally located in the **/pub/doc** directory. Within this directory, go to the **overview.txt** file for an overview relating to all BLS data available through the FTP site. For commodity-based PPI data (which appear in tables 1, 2, 3, 6, 7, and 8 of the PPI monthly detailed report; tables 1, 2, 4, and 5 of the annual supplement; and tables 1, 2, 3, and 5 of the monthly news release), the program help file is **wp.txt**. For *current* industry-based PPI data based on the NAICS (which appear in tables 4, 5, and 9 of the monthly PPI report; tables 3 and 6 of the annual supplement; and table 4 of the monthly news release), the file is **pc.txt**. For industry-based SIC time series that have been *discontinued*, go to **pd.txt**. (These and other help files also are maintained within each of the five directories listed above.)

Other sources of PPI data

PPI data also can be accessed via the BLS homepage (**www.bls.gov**). After clicking the “Get Detailed Statistics” link at the top of the homepage, the user will see a chart listing all available BLS programs. The following four methods are available for PPI data: Most requested statistics, create customized tables (one screen or multiple screens), and flat files. Additional sources of BLS data also are accessible from this page, including: Economic news releases, series report, and economy at a glance.

Additional information

The PPI homepage (**www.bls.gov/ppi**) contains additional information regarding PPI data and methodology. The top section of the homepage provides PPI news releases, both current and archived, as well as general PPI information. The “Tables Created by BLS” section found beneath the statistics section provides relative importance and seasonal factor tables. The remaining sections offer special notices and publications pertaining to PPI methodology and applications.

For questions or comments regarding PPI data classification, methodology, or data availability on the Internet, call or e-mail the Section of Index Analysis and Public Information directly at (202) 691-7705 or ppi-info@bls.gov. Data also can be obtained by calling the national fax-on-demand service at (202) 691-6325. This service enables customers to request faxes of BLS data 24 hours a day, 7 days a week.
