AREA, NATURAL RESOURCES, AND POPULATION.

EXPLANATION OF TERMS.

General imports.—Tables Nos. 214 and 215 embrace imported articles entered at the customhouses for immediate consumption and imported articles entered for warehouse. The statements of *imports entered for consumption*, Tables Nos. 224 and 225, embrace imported articles entered for immediate consumption and imported articles withdrawn from warehouse for consumption. The statement of *general imports* and the statement of *imports entered for consumption* for any period will always differ to the extent that the value of *entries for warehouse* for the period differs from the value of *withdrawals from warehouse for consumption*. The term "entry for consumption" is the technical name of the import entry made at the customhouse, and does not imply that the goods have been actually consumed, but simply that they have been delivered into the custody of the importer and that the duties have been paid on the dutiable portion. Some of them may be afterwards exported.

The values of all imported articles subject to specific duties are ascertained in the manner in which the values of imports subject to duties ad valorem are ascertained.

The value of merchandise imported subject to ad valorem rates of duty and duty imposed upon and regulated in any manner by the value thereof is "the actual market value or wholesale price thereof, at the time of exportation to the United States, in the principal markets of the country from whence exported; that such actual market value shall be held to be the price at which such merchandise is freely offered for sale to all purchasers in said markets, in the usual wholesale quantities, and the price which the manufacturer or owner would have received, and was willing to receive, for such merchandise when sold in the ordinary course of trade in the usual wholesale quantities, including the value of all cartons, cases, crates, boxes, sacks, casks, barrels, hogsheds, bottles, jars, demijohns, carboys, and other containers or coverings, whether holding liquids or solids, and all other costs, charges, and expenses incident to placing the merchandise in condition, packed ready for shipment to the United States." (Rev. Stats. 336, secs. 18 and 11 of the act of June 10, 1890, as amended by act of August 5, 1903, sec. 28, and Customs Regs., 1903, art. 1604.)

Domestic export values.—Tables Nos. 216 and 217 exhibit the exports of domestic products or manufactures, also exports of commodities of foreign origin which have been changed from the form in which they were imported, or enhanced in value by further manufacture in the United States, such as sugar refined in this country from imported raw sugar, flour ground from imported wheat, and articles and utensils made from imported metals, etc. The value of exports of domestic merchandise is their value at the time of exportation in the ports of the United States whence they are exported.

Foreign export values.—Table No. 218, called "foreign exports," or "reexports," exhibits exports of foreign merchandise which had been imported. The value of such commodities exported from "warehouse" is their import value. The value of such commodities exported "not from warehouse," comprising free goods mainly, is the value at the ports of the United States whence they are exported.

Values of foreign merchandise in transit or transhipped.—Table No. 228 exhibits foreign merchandise brought to the United States for immediate transit across the territory of the United States to a foreign country, or for transshipment in the ports of the United States to a foreign country. The value of the commodities returned in this table is determined in a similar manner to that of imports.

Values of warehoused merchandise.—Table No. 227 exhibits imported merchandise in warehouse. This merchandise has already appeared in the statement of *general imports*, Tables Nos. 214 and 215, for the year in which it was imported. The official values of the articles therein represented are the same as the *import values*.

Ton.—The term "ton" used in this volume, as applied to weight, is specified "long" (2,240 pounds) or "short" (2,000 pounds). The term "ton" as applied to vessel measurement is specified as "net," equal to 100 cubic feet of carrying capacity exclusive of deductions for space occupied by cabins, machinery, etc., or "gross," equal to 100 cubic feet of the entire carrying capacity inclusive of such deductions. The term "M feet" used in connection with the measure of lumber, etc., signifies 1,000 feet, board measure, a "foot" of such measure being 1 foot long, 1 foot wide, and 1 inch or less in thickness. "Cubic feet" or "cords," as applied to the measurement of lumber, pulp wood, etc., signifies cubic contents. According to section 3249, Revised Statutes, "Proof spirits shall be held to be that alcoholic liquor which contains one-half its volume of alcohol of a specific gravity of 0.7939 at 60° Fahrenheit." The official gallon prescribed is one containing 231 cubic inches, or 85872.2 grains, equal to 8.3389 pounds of distilled water at its maximum density, weighed in air of a temperature of 62° Fahrenheit and barometric pressure of 30 inches. The taxable gallon differs from the proof gallon by reason of the fact that in computing taxable gallons under section 8251, Revised Statutes, all fractional parts of a gallon less than one-tenth are excluded.

No. 22.—DENSITY OF POPULATION PER SQUARE MILE AT EACH CENSUS, 1790 TO 1910: BY STATES AND TERRITORIES.

[From reports of the Bureau of the Census, Department of Commerce and Labor.]

[NOTE.—In computing density of population for the United States, the areas and population of Alaska and Hawaii in 1900, of Alaska in 1890, and of Indian Territory in 1860, 1870, and 1880 are not considered. The area of Indian reservations, outside of Indian Territory, is included in the area of the States and Territories in which they are severally situated, and in that of the United States prior to 1890, although the population of these Indian reservations was not ascertained, and for this reason can not be considered in figuring density of population at the censuses prior to 1890.]

¹ The act of May 2, 1890, creating the Territory of Oklahoma, gave the United States courts in Indian Territory jurisdiction over divorces; prior to that date there is no record of divorces.

² These States were organized from part of Dakota Territory, November 2, 1889. The divorces granted in the counties then comprising Dakota Territory are distributed between North Dakota and South Dakota in accordance with the present division of those counties between the two States.

³ Less than 1 in 100,000.

⁴ Includes population of Indian Territory and Indian reservations.

⁵ For States and Territories included in each division, see note 5, p. 43.

¹ Census statistics of acreage prior to 1879 are not available. The statistics of acreage and production for census years and for production since 1898 are census figures, while the others are as published by the United States Department of Agriculture.

² The statistics of bales for 1849, 1859, and 1869 are in equivalent bales of 400 pounds each, as expressed in the census reports for those years; those for 1889 are in equivalent bales of 393 pounds net weight, and for other years the figures represent running bales, counting round as half bales.

⁵ Fragmentary statistics of copper and lead smelting were shown in "Mining industries" of 1890 and "Mineral industries" of 1890, but were not included in statistics of manufactures.

⁶ Statistics for "Zinc" in 1890 and 1880 differ in several particulars from those for "Smelting and refining, zinc," in 1905 and for "Zinc, smelting and refining," in 1900; a comparison with the earlier years is therefore impracticable. The figures for 1890 and 1880 are given in this table under "Zinc."

⁷ Reported as "Smelting and refining (base scrap metal not from the ore)" in 1880 and as "Smelting and refining" in 1890.

¹ The gross value of manufactures as reported by the Census contains many duplications because the finished products of some factories frequently become the material for other factories. In this way not only one but several duplications of the cost of materials often occur. The net value of productions eliminates these duplications by deducting from the gross value the cost of all materials which have undergone any process of manufacture covered by the census reports on manufactures.

² The figures of production for 1900 differ from those shown in other portions of this volume for that year by reason of the fact that they exclude 10 lumber establishments reported for Alaska with products valued at \$4,250,984.

³ "Hand trades" not included in the census of 1905.

¹ By purity coefficient is meant the percentage of sugar in the total solids of the substance tested, whether it be beets, juice, or sirup. In this table it represents the average percentage of sugar in the total solids of the beets as determined by tests made at the factories.

² Based on reports from 27 factories and careful estimates for 14 others.

³ These averages are not based on data for all the factories, as some of them failed to report results of tests, but it is believed that they fairly represent the character of the total beet crops.

⁴ No data reported.

⁵ Grouped together to avoid giving publicity to data relating to individual factories.

⁶ The average yield of beets per acre is found by dividing the total beets worked by the total acreage harvested; the average extraction of sugar by dividing the total sugar produced by the total beets worked; the average contents of sugar, coefficients of purity, and length of campaign by adding the figures reported by the different factories and dividing by the number of reporting factories.

RAILROADS.

¹ The figures given for the years ending June 30, 1908 and 1909, are not fully comparable with those shown for previous years, chiefly for the reason that they do not include data for roads classed as switching and terminal.

² Includes an estimate for certain roads, as their records for this item were destroyed in the San Francisco fire of April, 1906.

³ Figures include an apportionment of unclassified tonnage.

⁴ Includes 25 per cent of the total mileage of revenue mixed trains.

⁵ For the years 1890 to 1899, 25 per cent of the mixed-train mileage was apportioned to passenger-train mileage and 75 per cent to freight-train mileage; but in computations for subsequent years the total mixed-train mileage was used both with passenger-train mileage and with freight-train mileage.

⁶ Includes 75 per cent of the total mileage of revenue mixed trains.

⁷ Includes a small amount of unclassified train mileage.

⁸ Includes a small amount of special-train mileage formerly not separately reported.

² Figures of 1899 cover the period from Aug. 20, 1898, to June 30, 1899, and subsequent figures cover fiscal years.

³ The marked discrepancy between the United States figures of exports to the Philippine Islands and the Philippine figures of imports from the United States in corresponding periods is due chiefly to the fact that the Philippine import figures omit merchandise imported free of duty for the use of the Government or for use in construction and equipment of railways in the islands, under the act of Feb. 6, 1905, while the United States returns omit only government supplies carried by government vessels.

NOTE BY MESSRS. MAUGER & AVERY.—This table exhibits in a concise form the prices of the three grades of a standard domestic fleece wool in the seaboard markets at the beginning of each quarter. In its present shape it is deemed to be intelligible to all interested in wool. In the special features of character and condition, "washed Ohio fleece wool" is less subject to variation than any other description, and thus is more a basis of value than any other class. Wool, owing to its wide variety, difference in character and condition, and liability to shrink in cleaning, is precluded from speculative operations which are applicable to products which may be dealt in as "futures." For these reasons the prices of wool are not liable to the same changes as cotton, wheat, etc.

¹ The price on board fixed at Baltimore by the Seaboard Coal Association. ² Price of soft-coal pool. ³ Owing to unusual conditions in the coal market the association price for 1902 is not a correct guide as to the actual selling price, Clearfield coal selling as high as \$7 at the mines and as high as \$9 in New York Harbor. Unsettled conditions lasted until Mar. 1, 1903, or nearly so; then, on Apr. 1, prices were made \$3.30 at Baltimore; later on in the year this price was discounted from 10 to 15 per cent. ⁴ Shipments nominal. No sales made in 1909 or 1910. ⁵ Cumberland coal now includes "thin seam" as well as "big vein" coal, the former selling about 25 cents per ton lower than the latter. ⁶ Freight on "big vein" coal to Baltimore having been reduced 15 cents in 1909 or 1910, \$2.60 is equivalent to \$2.75 in 1908 and previous years.

No. 257.—RELATIVE WHOLESALE PRICES OF RAW AND OF MANUFACTURED COMMODITIES, 1890 TO 1909, AND PER CENT OF INCREASE IN PRICES FOR 1909 OVER PRICES FOR EACH PRECEDING YEAR.

[From reports of the Bureau of Labor, Department of Commerce and Labor. This table summarizes wholesale prices of 257 staple commodities. The commodities designated as "Raw" are such as are marketed in their natural state, and also such as have been subjected to only a preliminary manufacturing process; this group includes 50 articles from 1890 to 1907 and 64 articles in 1908 and 1909. The commodities designated as "Manufactured" are such as have been subjected to more than a preliminary factory manipulation and in which the manufacturing labor cost constitutes an important element in the price; this group includes 208 articles from 1890 to 1907, 204 articles in 1908, and 208 articles in 1909. A relative price, or index number, as it is technically called, of any article is the per cent which the price of that article at any date is of the price of the same article at a date or period which has been selected as the base or standard. The base selected by the Bureau of Labor for this compilation is the average price for the ten-year period 1890 to 1899. The relative prices shown under each group are simple averages of the relatives of all articles included within the group. Average price for 1890-1899=100.]

**No. 259.—RELATIVE RETAIL PRICES OF THE PRINCIPAL ARTICLES OF FOOD:
1890 to 1907.**

[From reports of the Bureau of Labor, Department of Commerce and Labor. The statements of prices collected by the Bureau of Labor in 1907 were from 1,014 retail merchants. The number has varied somewhat from year to year. The 1,014 merchants were located in 63 principal industrial centers. For each of the 30 articles the prevailing price each month was secured. As previously explained under the title of wholesale prices, the relative price of any article is the per cent which the price of that article at any date is of the price of the same article at a date or period which has been selected as the base or standard. The base selected by the Bureau of Labor for retail as well as for wholesale prices is the average price for the ten-year period 1890 to 1899. Average price for 1890-1899=100.]

No. 262.—AVERAGE FOOD COST PER WORKINGMAN'S FAMILY: BY GEOGRAPHICAL DIVISIONS,¹ 1890 TO 1907.

[From reports of the Bureau of Labor, Department of Commerce and Labor. This table is based on the average food cost per family in 1901, as reported by the workingmen's families investigated in each geographical division, and the course of retail prices of food as indicated by the relative prices, weighted according to family consumption in that division. In each of the geographical divisions and in the United States as a whole it is considered in this table that the expenditure for each of the various articles bore the same relation to the total expenditure for food in each of the other years of the seventeen-year period covered by this investigation as in 1901.]

¹ From 1865 to 1897 the figures are those of A. Bouchereau, New Orleans; for subsequent years they are as stated in the Weekly Sugar Statistical of Messrs. Willett & Gray, New York, N. Y., which, from 1897 to 1905, include, with respect to British India, exports only, and subsequently the product of that country consumed. The product of British India, according to the British Statistical Abstract, averages about 40,000,000 hundredweight of 112 pounds each. ² Figures of production and those based thereon are somewhat preliminary and are subject to correction.

¹ The production statistics relate, when possible, to the year of growth, but when figures for the growth year are wanting, a commercial crop which represents the trade movement is taken. The statistics of production have been compiled from publications of the United States Department of Agriculture for 1860 to 1893. Census figures have, however, been used when available, including those for 1899 to date.

² The value of lint per pound shown since 1902 relates to the average grade of upland cotton marketed prior to April 1 of the following year; from 1890 to 1901, the average price of middling cotton on the New Orleans Cotton Exchange; and from 1860 to 1889, as published in reports of the United States Department of Agriculture.

³ Compiled from publications of the United States Department of Agriculture for 1860 to 1894; from the reports of Latham, Alexander & Co., for 1895 to 1903. Census figures have been taken when available. Discrepancies in the figures for census years as compared with those of the table entitled "Statistical Record of the Progress of the United States" are caused mainly by difference of method in the making up of the respective tables.

⁴ Compiled from "Commerce and Navigation of the United States," 1860 to date. The export year begins July 1, 1860 to 1866, and Sept. 1 for 1867 to date. The period for consumption, exports, and imports is designated by the year in which the record begins rather than that in which it ends.

⁵ Equivalent bales of 400 pounds.

No. 278.—DISTILLED SPIRITS, WINES, AND MALT LIQUORS: QUANTITIES CONSUMED AND AVERAGE ANNUAL CONSUMPTION PER CAPITA IN THE UNITED STATES, 1840 TO 1910.¹

Notes.—The production of domestic wines was estimated by the Department of Agriculture, by Mr. Charles McK. Looser, president of the Wine and Spirit Traders' Society of New York, and other well-informed persons, except that the production for 1889 (opposite the year 1890) is that officially reported by the Bureau of the Census, Department of Commerce and Labor. The consumption of domestic spirituous and malt liquors derived from reports of the Commissioner of Internal Revenue. The above table does not include for any year withdrawals of distilled spirits for scientific purposes and for use of the United States, or since 1906 withdrawals of alcohol for denaturation, free of tax. For 1910, these amounts were 2,008,197 and 10,606,871 tax gallons, respectively.

CIRCULATION.

¹ Gold coin became available for circulation Jan. 1, 1879, as a result of the resumption act of Jan. 14, 1875.
² Silver certificates were authorized by acts of Feb. 28, 1873, and Aug. 4, 1886.
³ Subsidiary silver, which disappeared from circulation in 1862, was reintroduced under operation of the act of Jan. 14, 1875.
⁴ As the result of special investigation by the Director of the Mint, a reduction of \$135,000,000 was made in the estimate of gold coin in circulation on July 1, 1907, as compared with the basis of previous years.
⁵ The Director of the Mint recently made a revised estimate of the stock of subsidiary silver coin; as a consequence of such revision there has been a reduction of \$9,700,000.
NOTE 1.—For redemption of outstanding certificates an exact equivalent in amount of the appropriate kinds of money is held in the Treasury, and is not included in the account of money held as assets of the Government.
NOTE 2.—This table has been revised and shows slight changes from previous figures in some of the items.

¹ The law provides for a tax on wine made in imitation of champagne, etc., but no internal revenue was derived from the same during the fiscal years 1883-1898. The amounts thus received in some of the subsequent years are so small as to be negligible in the following table, except in 1905, when they amounted to nearly \$700.

² From 1884 to 1890, inclusive, year ended April 30.

³ Fourteen months ended June 30.

No. 321.—CIVIL SERVICE: NUMBER OF POSITIONS, BY STATUS, ON JULY 1, 1909, ADDITIONS BY APPOINTMENTS, ETC., AND SUBTRACTIONS BY SEPARATIONS DURING THE FISCAL YEAR, AND NUMBER OF POSITIONS ON JUNE 30, 1910.

[Prepared in the office of the Civil Service Commission.]

[This table is based upon the number of positions shown in the Official Register of 1903, and changes in the service since reported by the departments and offices. Some of the reports were not made in such manner as to permit of a definite distinction as to employment in Washington and elsewhere. The figures are therefore to be regarded as approximate only. Omissions to report certain changes, as explained in the detailed tables, and neglect of details necessary only for statistical purposes also contribute to making the figures approximate only.]

¹ By the revision of the rules of May 6, 1896, the Indian Service was made a part of the Departmental Service, but for the purpose of comparison with previous years the Commission has, in its annual reports, kept separate statistics for this service. Only about one-half of the appointments in the Indian Service since July 1, 1900, have been made from examinations for positions belonging exclusively to the Indian Service, the remainder being made from examinations for positions in the Departmental Service generally. Percentages relating exclusively to the Indian Service can not, therefore, be given.

² On account of abundance of eligibles few examinations were held; percentage upon the basis of these figures would therefore be deceptive.

‡ Gold and silver can not be stated separately prior to 1876. From 1862 to 1875, inclusive, gold and silver were not in circulation except on the Pacific coast, where it is estimated that the average specie circulation was about \$25,000,000, and this estimate is continued for the three following years under the head of gold. After that period gold was available for circulation.

§ Total specie in circulation; gold and silver were not separately stated prior to 1876.

* Estimated.

† As the result of special investigation by the Director of the Mint a reduction of \$185,000,000 was made in the estimate of gold coin in circulation on July 1, 1907, as compared with the basis of previous years, and on September 1, 1910, a reduction of \$9,700,000 was made in the estimate of silver coin.

*Fiscal years.

¹ "Ordinary expenses" include disbursements for War, Navy, Indians, pensions, payments for interest, and "Miscellaneous" but do not include payments for premiums, principal of public debt, or disbursements for postal service paid from revenues thereof.² Figures cover the military and naval establishments and differ from those of Table 312, because the latter include the items "Salaries and expenses" and "Public buildings and grounds" from disbursements of the civil establishment.

* Fiscal years.

¹ Based on total exports prior to 1866, after that on domestic exports only.

* Gold and silver can not be separately stated in domestic exports prior to 1864, but it is probable that the greater portion of the exports was gold, under which head the exports in question are included. Gold and silver contained in ore are included under gold and silver since 1894.

* Calendar years.

† The production statistics relate, when possible, to the year of growth, but when figures for the growth year are wanting, a commercial crop which represents the trade movement is taken. The statistics of production have been compiled from the publications of the United States Department of Agriculture for 1859 to 1898. Census figures have, however, been used when available, including those for 1899 to date.

1 Cleared rice—1800 to 1903, commercial movement, as given by Dan Talmage's Sons Co.; 1904 to date, as reported by the Department of Agriculture.

2 Commercial value. To ascertain in coin value multiply number of fine ounces as shown in Tables Nos. 116 and 117 by \$1.2929+.

* Fiscal years.

¹ For census years and for years intermediate between those of the census subsequent to 1904, the figures are those of the Bureau of the Census, and represent "Cotton-growing States," "All other States," and "Total United States," respectively. Other figures are those of Mr. Alfred B. Shepper-son, New York, N. Y., and cover years ended Aug. 31. Discrepancies in the figures of consumption for census years as compared with those of the table showing production, imports, exports, and consumption of cotton manufactures by specified industries, are caused mainly by difference of method in the making up of the respective tables, for explanation of which see census reports.

¹ Includes data for government savings banks in the Australian and the Federated Malay States. It has been thought proper to include among the postal savings banks also those savings banks in the Australian States which prior to the transfer of the state post offices to the federal government were operated by the respective state post offices. All these banks continue at present to be operated as government savings banks.

² Including the value of accrued interest on the securities held to the credit of the depositors since 1902.
