1. Geographical Drstribution of Population.
2. Quantity of Cotton Ginned in the United States (Crops of 1899 to 1902, inclusive).
3. Street and Electric Railways.
4. A Discussion of Increase of Population.
5. Central Electric Light and Power Stations.
6. Mineral Industries of Porto Rico.
7. Estimates of Population of the Larger Cities of the United States for 1901, 1902, and 1903.
8. Negroes in the United States.
9. Mines and Quarries.
10. Quantity of Cotton Ginned in the United States (Crops of 1899 to 1903, inclusive).
11. Municipal Electric Fire Alarm and Police Patrol Systems.
12. Tere Executive Civil Service of the United States.
13. A Discussion of Age Statistics.
14. Proportion of the Sexes in the United States.
15. A Discussion of the Vital Statistics of the Twelfth Census.
16. Irrigation in the United States: 1902.
17. Telephones and Telegraphs: 1902.
18. Census of Manufactures: 1904. Michigan.
19. Quantity of Cotton Ginned in the United States (Crops of 1900 to 1904, inclusive).
20. Statistics of Cities having a Population of over 25,000: 1902 and 1903.
21. Commercial Valuation of Rarlway Operating Property in the United States: 1904.
22. Proportion of Children in the United States.
23. Census Statistics of Teachers.
24. Insular and Municipal Finances in Porto Rico for the Fiscal Year 1902-3.
25. American Cotton Supply and its Distribution for the Year ending August 31, 1905.
26. Illiteracy in the United States.
27. Census of Manufactures: 1905. Maryland and District of Columbia.
28. Census of Manufactures: 1905. Kansas.
29. Census of Manufactures: 1905. Nerraska.
30. Census of Manufactures: 1905. Arizona, Indian Territory, New Mexico, and Oklahoma.
31. Census of Manufactures: 1905. Delaware.
32. Census of Manufactures: 1905. Iowa.
33. Census of Manufactures: 1905. Florida.
34. Census of Manufactures: 1905. Montana, North Dakota, South Dakota, and Wyoming.
35. Census of Manufactures: 1905. Mrssouri and Arkansas.
36. Census of Manufactures: 1905. Rhode Island.
37. Census of Manufactures: 1905. Colorado, Idaho, Nevada, and Utah.
38. Census of Manufactures: 1905. Indiana.
39. Census of Manufactures: 1905. North Carolina and South Carolina.
40. Cotton Production and Statistics of Cottonseed Products: 1905.
41. Census of Manufactures: 1905. New Hampshire and Vermont.
42. Census of Manufactures: 1905. Connecticut.
43. Census of Manufactures: 1905. Ay abama.
44. Census of Manufactures: 1905. Virginia and West Virginia.
45. Statistics of Cities having a Population of 8,000 to 25,000: 1908.

Note--Bulletins in this list may be obtained upon application to the Director of the Census.

## LETTER OF TRANSMITTAL.

I have the honor to transmit herewith a bulletin presenting financial and other official statistics for cities having a population of from 8,000 to 25,000 . Similar statistics for cities having a population of over 25,000 were presented and published in Census Bulletin 20. These two bulletins constitute one of the decennial reports authorized by section 7 of the act of March 6, 1902, establishing a permanent Census Office.

The statistics for this report were collected by agents of the Bureau of the Census, who visited the various cities covered by the investigation, obtaining the required data from official records or by personal inquiry of city officials. The financial statistics were collected and tabulated under the supervision of Mr. Le Grand Powers, chief statistician for agriculture. The collection of the other statistics, which cover a variety of subjects, was under the charge of Mr. William C. Hunt, chief statistician for population.

The diversity of the systems of accounting followed in different cities makes it very difficult to classify and tabulate properly the financial data collected by the inquiries. In deciding upon the scheme of classification and terminology here presented, the Bureau of the Census sought the advice and criticism of the National Municipal League, the American Economic Association, and the Federation of Societies of Public Accountants. All of these organizations appointed committees to cooperate with the officials of the Bureau in this branch of the work. It is hoped and believed that as a result of this coope $九 t i o n$ the accompanying report presents all the salient facts relating to municipal finance in a form which makes the figures fairly comparable for the several cities and which permits of the proper study of the most important problems of municipal revenues and expenditures.

The officials of the cities visited by our agents have uniformly manifested the utmost interest in the inquiry, and by their courtesy and friendly cooperation have contributed in no small degree to the progress and success of the work.

Very respectfully,

[^0] Director.

# STATISTICS OF CITIES HAVING A POPULATION OF 8,000 TO 25,000. 

## INTRODUCTION.

The statistics presented in this bulletin for cities having a population of 8,000 to 25,000 correspond in character to those presented for larger cities in Census Bulletin 20. The one bulletin supplements the other, and taken together they constitute the decennial report of the Census Office on statistics of cities. The origin, development, and scope of this branch of census work are explained at length in the introductory text to Bulletin 20.

The greater part of the data included in this report relates to municipal finance, comprising tabulated statements of the receipts, payments, public debt, and funds of each city. The other subjects covered by this inquiry are somewhat miscellaneous in character but might appropriately be described as being for the most part an inventory of municipal property, resource, and equipment. They include statistical data in regard to the police and fire departments; public schools and libraries; almshouses and hospitals; municipal waterworks; gas and electric light plants; paved streets; street lighting; street railways; public parks; building permits; street cleaning, sanitary inspection, and sewers; and liquor saloors and licenses. Certain classes of data presented for the larger cities in Bulletin 20 have not been included in the present bulletin because these data in relation to smaller cities had not sufficient significance and reliability or were too incomplete and fragmentary to be tabulated and published.

Finance statistics.-The object of the Census investigation relating to municipal finance is to secure and present the principal data with respect thereto in a form which will admit of comparisons between the several cities. These statistics are presented in a series of bulletins, of which the first was Bulletin 20, for cities containing over 25,000 inhabitants. In the explanatory text which follows, relating to the finance tables of the present bulletin, there will be found a few definitions of financial terms employed here as well as in Bulletin 20. Readers who desire a fuller explanation of the basis of the Census classification and ter-
minology relating to municipal finance are referred to Bulletin 20. The introduction to that bulletin describes the classification adopted by the Bureau of the Census, and the basis therefor, and defines all the financial terms employed; and it also gives at length a statement of the sources and character of the data used in tabulating the statistics of cities large and small.

In this report the general tables relating to municipal finance are thirteen in number, comprising Tables 14 to 26 , inclusive. In preparing these tables, two objects were kept constantly in view-to provide the maximum of information to students of municipal finance, and to present the data in a form that will enable local officials to detect error. Tables 14 and 15 are summaries of transactions and balances; Tables 16 and 17 furnish exhibits of payments for expenses and outlays, respectively; Table 18 summarizes transactions on account of the public debt; Table 19 gives a classified exhibit of the receipts from revenues, together with certain temporary receipts; Table 20 is an exhibit of the payments and receipts of interest; Table 21 furnishes information relating to the payments, receipts, and balances of private trust funds and accounts, and also exhibits of certain other temporary transactions; Table 22 is a classified exhibit of debt obligations outstanding at the close of the fiscal year; Table 23 gives the value, at the close of the year, of the principal salable possessions of the cities; Table 24 presents the most important facts relating to assessed valuation for taxation and to general property taxes; Tables 25 and 26 contain summaries of the most important payments and receipts, respectively, with per capita averages.

Fiscal years.-According to the Bureau of the Census the fiscal year 1903 is, in general, the one having six or nore months in the calendar year 1903, and thus most nearly coincident therewith. The data secured by the Bureau of the Census for each department and branch of municipal government are for a fiscal year shown as such in the local reports and records. Hence, although the data obtained are always for the fiscal year 1903, as
defined by the Bureau of the Census, they may be for a period otherwise referred to in local reports. For cities with a fiscal year ending on June 30 -that is, having six months in each of the two calendar yearsthe fiscal year taken is that ending on June 30, 1904.

For municipalities whose functions are performed by two or more independent branches or departments having different fiscal years, the foregoing rule is observed for the general city government, while for the auxiliary or coordinate branches the fiscal year chosen is that most nearly coincident with the fiscal year of the general city government. To this last rule, however, one exception is noted: Where the close of the fiscal
year of the general city government falls between January 1 and June 30, 1904, the fiscal years closing next prior to June 30, 1904, are chosen for the subordinate branches. Where the fiscal year of any department of a municipality differs just six months from that of the general city government, the fiscal year chosen for that department is the one closing six months prior to the end of the fiscal year of the general city government.

Table 15 gives the date of the close of the fiscal year 1903, as adopted for this report, for all branches or departments of each of the cities in continental United States which on June 1, 1903, contained a population of 8,000 to 25,000 inhabitants.

## DESCRIPTION OF GENERAL TABLES.

## Table 1.

Population and area, with date of latest incorpora-tion.-This table gives for each city the population enumerated at the Federal censuses of 1890 and 1900 and the estimated population for 1901, 1902, and 1903. The estimates are those adopted and used by the Bureau of the Census whenever it is necessary to compare data collected in intercensal years with the contemporary population, as in the computation of death rates or of per capita statistics. For this purpose it is assumed, in the absence of any state census, that the annual increase of population since the last Federal census is equal to one-tenth the decennial increase between the last two Federal censuses.

When there has been a state census the returns of that census are accepted for the year to which it relates, and estimates for other years are made by applying the average annual increase as determined by a comparison with the Federal census of 1900.

Allowance is made for the changes in population produced by the inclusion of new territory in the corporate limits of the municipality, or by the detachment of territory formerly included, and the area of the territory so included or detached is also given when the data can be obtained.

The area, as given in Table 1, is the number of acres included within the limits of the city on June 1, 1903, subdivided, wherever possible, into land and water area.
"The date of the latest incorporation" is the date of the charter under which the affairs of the city were administered at the time to which this inquiry relates.

## Table 2.

Police and arrests.-This table shows the number of employees in the police department and the number of arrests. The employees are classified according to the character of their work. Patrolmen and officers, as the expression implies, include roundsmen, sergeants, lieutenants, etc. Park policemen, special policemen,
watchmen, etc., include park policemen, night watchmen, bank watchmen, cemetery police, private detectives, market policemen, Sunday officers, truant officers, etc. "Other employees" include substitutes, supernumeraries, reserves, janitors, drivers, matrons, clerks, police telegraph operators, etc.

The arrests are classified as to the causes for which persons were arrested, as drunkenness, including all arrests for drunkenness; disturbing the peace, including all cases of disorderly conduct not attributable to drunkenness; assault and battery, including all cases of assault; homicide, including murder, manslaughter, etc., or complicity in the same; vagrancy, including arrests of beggars, tramps, loafers, and all persons without visible means of support; housebreaking, including burglary and all kinds of breaking and entering; larceny, including both grand and petty larceny, pocket picking, robbery, etc.; and "all other offenses," including arrests that can not be classified under any one of the preceding heads.

## Table 3.

Nurber of retail liquor saloons and amount and apportionment of license fee. -This table gives the number of retail liquor saloons, with the total amount of the license fee, if any, and the amount or proportion paid to the city, county, or state.

## Table 4.

Firemen, fire equipment, and property loss from fires.The number of employees in the fire department of each city is given in this table. The firemen, including the officers in the different grades, are classified as regulars, callmen, volunteers, and substitutes, supernumeraries, etc. The details relative to the equipment of the fire department, as given in this table, include the number of steam (including fire boats), chemical, and hand engines, and combination chemical engines; the number of hook and ladder trucks, hose reels, and hose wagons, with the length of the ladders and the length
of the hose in feet; the number of hand fire extinguishers; the number of fire hydrants, and cisterns (comprising reservoirs, cisterns, tanks, and wells used for fire purposes only); the number of horses; and the number of fire alarm boxes. Finally, the table gives the number of fire alarms and fires, and the property loss. The number of fire alarms includes second, third, general, and special alarms. Each of these alarms calls out a separate or additional portion of the fire department, and in the printed city reports is usually included in the total number of alarms. In ascertaining the number of fires, however, the second, third, general, and special alarms are not counted, nor are any additions made because of the number of buildings burned, each fire, no matter how great its extent, counting as one fire only.

## Table 5.

Public schools and teachers.-This table shows the number of buildings and rooms used for public school purposes, distinguishing the buildings and rooms owned by the city from those rented. The number of public high schools includes those occupying rooms in the same building with a grammar school as well as those occupying separate buildings. These data are followed by the number of teachers in each class of schools. Care has been taken to eliminate from this report denominational or parochial schools and all other schools that are not strictly public schools. "Other regular day schools" not only include grammar schools, primary schools, and all other regular divisions of public schools not specifically designated as high schools or kindergartens, but also schools for the deaf and blind, teachers' training schools, etc. No attempt has been made to include summer schools and vacation schools in any class, as the reports for such schools are very incomplete.

## Table 6.

Pupils in public schools.-This table shows the number of pupils and the average daily attendance in the public schools of each kind. The number of pupils as shown in the table is the total number of different pupils registered during the year. Pupils who have been transferred from one school to another, and whose names consequently appear on the rolls of two or more schools, have been counted but once, so far as it has been possible to eliminate such duplications. The classification of the public schools is the same as that in Table 5.

## Table 7.

Public libraries.-In this table are presented statistics relating to public libraries, the number of such libraries, the number of volumes in the same, the number of volumes added during the year, the number of volumes withdrawn for home use, and the number of
volumes withdrawn for use in the reading rooms of the library during the period covered by this report. Although municipal public libraries, strictly speaking, should include only those that are owned and controlled by the city, yet many libraries that were created by endowment or gift and are supported either by voluntary subscriptions or by funds provided by the donor subserve the same purpose as public libraries proper, being in all respects free libraries, open to all residents of the city. Therefore such libraries are included in this report, on the assumption that in many cities they take the place of the municipal libraries. School libraries that are open to the general public are considered as municipal libraries. So far as possible the number of volumes added during the year shows the aggregate accessions to the library without reference to the books withdrawn, lost, or destroyed. The returns for the number of volumes withdrawn for use in the reading rooms are unsatisfactory, as many libraries report the open-shelf system and others kept no records.

## Table 8.

Almishouses and hospitals.-This table shows for 71 cities the number of municipal almshouses, with the average number of inmates, and for 105 cities the number of municipal hospitals, with the number of different patients treated. Although in the past the statistics have not always been confined to strictly municipal institutions, they are limited in this table as far as possible to charitable institutions, strictly municipal in character. It is probable that some institutions are reported that do not exactly conform to the requirements of a strictly municipal institution, and it is equally probable that some strictly municipal institutions are omitted. Among institutions most likely to be omitted are hospitals, particularly pesthouses, not in operation during the year. The hospitals for contagious diseases include snallpox hospitals, pesthouses, isolation hospitals, and detention hospitals.

## Table 9.

Water, gas, and electric light plants.-This table includes only those waterworks, gas works, and electric light plants which are owned or controlled by the city. Municipal gas works were reported by only 6 cities, municipal electric light plants by 58 cities, and municipal waterworks by 187 cities. Where these public utilities are owned or operated by the municipality, the table gives the year in which they were built, and also the year in which they were acquired by the city in case they were not built by the city, and the cost of the same. The figures for cost represent the cost up to the end of the fiscal year covered by the reports, and include the amounts expended for extensions, etc., in addition to the original cost of building and equipping the plants. The returns as to cost, however, are not altogether satisfactory, as in some cases no records
could be found showing the primary cost of the plant, which was probably built originally by a private corporation, and in other instances no records are kept of the extensions and improvements. Therefore, in some cases, the figures represent the present estimated value instead of the cost, the depreciation of the plant having been deducted and interest charges and maintenance having been considered. The number of miles of mains for water, gas, and electric lights is also shown in the table.

## Table 10.

Street lighting.-Table 10 gives the number of arc and incandescent electric lights, the number of Welsbach and other gas lights, and the number of oil lamps (including vapor lamps) in use in the streets, alleys, and public parks of each city. Lights inside public buildings are not included.

## Table 11.

Area and length of paved streets, length of unpaved streets, area of public parks, and length of street rail-ways.-This table shows the total area, in square yards, of the paved streets, and the total length, in miles, of the paved and of the unpaved streets. It shows also the area and length of streets paved with each of the specified kinds of paving, including cobblestone, granite and Belgian block, brick, wooden block, asphalt and asphalt block, macadam, gravel, and "all other."

The returns as to the area of paved streets are far from satisfactory. Comparatively few cities keep records giving this information. Therefore the figures presented are estimated largely, but it is believed that by continuing the inquiry in future years more complete and satisfactory data can be collected.

Table 12.
Cleaning of streets, sanitary inspection, and sewers.As presented in this table, the data relative to the care of streets show the means by which the streets are swept, the average number of yards swept per week, and the average number of persons employed in the work. In most cities many of the streets are swept more than once during the week, and in all such cases the total number of yards swept per week exceeds the total area of the streets swept. In the more northern cities snow or bad weather naturally interrupts the work of street sweeping during a portion of the winter months, thus reducing the averages for the year.

The data concerning sanitary inspection and sewers give the number of food and sanitary inspectors and the miles of sewers. In some of the cities for which no sanitary inspectors are given in the table, the work of sanitary inspection is performed by regular policemen. The total length of municipal sewers as given in this
table includes main sewers and cross-street connections, but not house connections. The different materials of which the sewers are constructed are specified wherever possible.

Table 13.
Building permits.-This table shows for 137 cities the number of permits granted for the construction of new buildings, with the total amount of the proposed expenditures, and the number granted for repairs or extensions to old buildings, with the proposed expenditures. Because of the lax methods of keeping such records in some of these cities the statistics collected are necessarily incomplete.

## Tables 14 and 15.

Summaries of transactions and balances.-Tables 14 and 15 present summaries of all transactions reported in Tables 16 to 21, inclusive, and also show the cash on hand at the beginning and at the close of the year. In both tables the payments and receipts are divided into those to and from the public and those to and from departments, offices, industries, and funds. In Table 14 the transactions with the public are subdivided into corporate and temporary, and those with departments, offices, industries, and funds are subdivided into service transfers, interest and loan transfers, and general transfers; in Table 15 all transactions and balances are given by independent divisions and funds of the municipality.

Under the term "corporate" are included those payments to and receipts from the public which are vitally connected with the activities of the various divisions, departments, and funds of the municipality; under the term "temporary," those which are not connected in a vital way with the maintenance of such activities. Service transfers are transactions between two divisions, departments, offices, or industries, in which one performs some service for another and receives pay or credit therefor. Interest and loan transfers include the sale, by the city government or one of its divisions, of municipal securities to the sinking, investment, or public trust funds; the redemption or purchase by the city government, or by one of its divisions or funds, of such securities held by the sinking, investment, or public trust funds; and the payment to those funds of interest on city debt obligations held by them as investments. General transfers include the transfer of cash or credit, and the sale or transfer of property other than city securities, from one division or fund of the government to another.

Of the grand total of payments and receipts for the 369 cities, the greater portion involves transactions with the public; of the payments 94.1 per cent were of this character, while the corresponding percentage of
receipts was 93.9 . Of the transactions with the public, somewhat more than three-fourths were classed as corporate, or vital to the activities of the municipality, the percentage of payments being 75.2 , and of receipts 76.3. The receipts exceeded the payments by a slight amount, and the cash balances were correspondingly greater at the close than at the beginning of the year.

As stated in footnotes to Table 14, "corporate payments" are the sum of the "payments other than those for service transfers" given in Tables 16 and 17, and the "net or corporate payments" given in column 8 of Table 18, minus the sum of "receipts from sale of real property" and "refund receipts" presented in Table 21. In like manner, "corporate receipts" are the sum of "all revenue receipts exclusive of service transfer receipts" in Table 19, and the "net or corporate receipts" shown in column 8 of Table 18, minus "refund payments" in Table 21. In computing corporate payments and receipts for the grand total, however, the total given for column 8 of Table 18 is not to be used. For that line of the table there should be used the totals for "payments for decrease of indebtedness," in Table 25, and "receipts from loans increasing indebtedness," in Table 26. These totals are the sum of those items in column 8 of Table 18 which constitute, respectively, corporate payments and corporate receipts of the specified cities on account of municipal indebtedness.

An examination of the items included in Tables 16 to 20 will disclose the essential character of the payments and receipts classified by the Bureau of the Census as corporate.

The temporary payments and receipts summarized in Table 14 are included in Tables 16 to 21 under the heads stated in Table i. The numbers included in brackets refer to those tables in which the figures for the several cities are found.

Table I.-Summary of temporary payments and receipts.

| CHARACTER OF PAYMENTS AND RECEIPTS. | Payments. | Receipts. |
| :---: | :---: | :---: |
| Total | \$25, 543, 285 | \%24,537,442 |
| On account of municipal debt (Table 18) . . | 18,799, 901 | 18,799,901 |
| Taxes, etc., for othercivil divisions (Tables 19 and 21). | 4, 421, 863 | 4,406,666 |
| Bond transactions (Table 21).......................... | 1,727, 078 | 727,051 |
| Refunds (Table 21).-...--... | 417, 301 | 417,301 |
| Real estate transactions (Table 21) | 91, 350 | 91, 350 |
| Acerued interest (Table 20) | 45,537 | 45,537 |
| Private trust accounts (Table 21) | 40,255 | 49,636 |

The total of temporary payments and receipts on account of municipal indebtedness, given in the foregoing summary, is the aggregate of payments to the public given in Table 18, less those corporate payments on account of municipal indebtedness which are included therein and are shown separately in Table 25; or, the aggregate of receipts from the public given in Table 18, less those corporate receipts from loans increasing indebtedness which are contained therein and are shown separately in Table 26.

The total given in Table I as temporary payments and receipts of refunds includes both payments to correct receipts in error, and receipts to correct payments in error, and therefore is the sum of columns 9 and 10 of Table 21.

The service transfer payments given in Table 14 are shown in detail in Tables 16 and 17. In Table 16 they are presented under two divisions-those paid by departments, offices, and funds, and included with general and municipal service expenses, and those paid by the municipal industries, and classed as municipal industrial expenses; in Table 17 are given the service transfers paid in connection with outlays. The corresponding receipts, given in Table 14, are the same in all cases, and therefore are not shown separately in Table 19.

The interest and loan transfer payments given in Table 14 are shown in detail in column 3 of Table 18 and column 3 of Table 20; the corresponding receipts, in column 6 of Table 18 and column 3 of Table 20. General transfers are given separately in Table 14 only. The totals of all transfer payments and receipts are shown by independent divisions, departments, and funds in Table 15.

In Table 15 the transactions and balances of private trust funds and accounts are as a rule included in the line "city government." For each city separate lines are given for the transactions and the balances of sinking, investment, and public trust funds, and for all divisions of the government whose finances are under the supervision of different fiscal officers. All funds and accounts directed by a single auditor or clerk, other than sinking, investment, and public trust funds, are treated as a unit.

## Table 16.

Payments for expenses.-Under the designation "expenses" the Bureau of the Census includes the costs, paid or payable, of services, rents, and materials purchased or otherwise obtained, for the corporate maintenance of cities and for the conduct of the business undertakings for which they have corporate authority.

Table 16 presents an exhibit of the expenses of the 369 cities for the fiscal year 1903. The total payments for expenses, amounting to $\$ 54,594,628$, include $\$ 389,286$ for service transfers-payments by one department or office for work performed by another. Exclusive of these service transfers, the payments for expenses were $\$ 28,759,638$ for salaries and wages and $\$ 25,445,704$ for miscellaneous objects. Payments for salaries and wages constituted, therefore, a little more than one-half the total payments for municipal expenses.
The figures given in Table 16 represent the payments shown on the books of the several cities, and therefore include a few erroneous payments later corrected by refund receipts. The total amount of refund
receipts of the cities is given in Table 21. It is impossible to state what portion was received for correction of errors in payments for expenses and what for correction of errors connected with outlays, but it is probable that the larger share of these refunds was for correction of errors in payments for expenses.

General expenses are those incurred in connection with the exercise of governmental functions. Municipal investment expenses are the total costs of the administration of sinking, investment, and public trust funds. Municipal industrial expenses are the costs of operating and maintaining municipal industries. Municipal service expenses are those incurred in connection with services performed or provided by any department or office of a municipality other than a municipal industry.

In Table 16 municipal service expenses are included with general expenses, because they could not be separated therefrom. In like manner, and for a like reason, all interest payments are included with general expenses, although a portion is properly chargeable to municipal industrial expenses.

General and municipal service expenses.-Of the total payments for expenses, 92.4 per cent were for general and municipal service expenses. Payments of this class are grouped substantially as for the larger cities given in Bulletin 20, in eight principal divisions, as follows: (1) General administration, (2) public safety, (3) charities and corrections, (4) highways and sanitation, (5) education, (6) recreation, (7) interest, and (8) miscellaneous. The offices and accounts grouped in these several divisions are shown in the table, and in general explain themselves.

Municipal industrial expenses.-Of the payments for municipal industrial expenses, about two-thirds were for the operation of waterworks. The remainder were connected with the management of markets and public scales, and of a number of other municipal industriessuch as cemeteries, crematories, electric light works, and docks, wharves, and landings-of which the most important were cemeteries and crematories. The industries for which expenses are here included are shown separately in the box heads and footnotes of Table 23, under the head "properties of municipal industries."

Special payments in Massachusetts.-Among the payments of Massachusetts cities included in Table 16 are certain ones made to the commonwealth, which, by reason of their exceptional nature, deserve to be specifically mentioned. In and around Boston thestate has established, for the benefit of a number of cities and towns, certain metropolitan districts for the purchase and improvement of parks, the construction of sewers, and the establishment of waterworks. The cities and
towns benefited are charged with the cost of maintaining these metropolitan systems, including the interest on loans made for original outlays, and with the sinking fund payments for the ultimate liquidation of such loans. These loans in reality form part of the debt of the several municipalities in the districts; but as the exact amount chargeable to each city or town was not ascertained, these obligations to the state could not be included in Table 22.

The payments for the maintenance of parks, sewers, and waterworks of the metropolitan systems are included with those for other parks, sewers, and waterworks, with the exception of those for a few waterworks in the district which are under private control; in such cases the payments are included in miscellaneous general expenses. All interest payments to the commonwealth on these metropolitan district and allied loans, are included in general and municipal service expenses, in the column of interest. The sinking fund payments are reported in Table 18, among the payments on account of municipal indebtedness. Other payments to the commonwealth treated in the same general manner are those for the abolition of grade crossings and for the maintenance of state highways. Table II gives in detail the amounts paid by Massachusetts cities to the state, in the fiscal year 1903, on account of metropolitan parks, sewers, and waterworks, and for the abolition of grade crossings.

Table II.-Payments of Massachusetts cities to the commonwealth on account of metropolitan park, sewer, and water districts, and for the abolition of grade crossings.

1 Included in Table 16 with miscellaneous general expenses, as the waterworks
are under private control. are under private control.
${ }^{2}$ Payment of 1902 assessment.
Payments for schools.-Table 16 does not include any payments for schools for Cripple Creek, Colo., Macon, Ga., or the cities of Florida or Maryland. The schools of Cripple Creek are under the direction of a school district which includes the city of Cripple Creek and a number of adjoining municipalities; no figures were obtainable for Cripple Creek alone, and the inclusion of the data for the other cities would have made the statistics noncomparable. In the case of all the other cities referred to above schools are under county control, and no information relating to school expenses was procured, except for Macon, Ga., and Tampa, Fla. The school payments of Macon were: For supervision, $\$ 4,899$; for salaries of teachers in elementary schools, $\$ 45,313$; for miscellaneous expenses of elementary schools, $\$ 11,351$; for salaries of teachers in high schools, $\$ 8,302$; and for miscellaneous expenses of higher education, $\$ 904$. The total payments for all school expenses of Tampa, Fla., were $\$ 25,687$.

Table 17.
Payments for outlays.-In Table 17 are presented what are designated by the Bureau of the Census as "payments for outlays"-the payments by citiesfor the costs incurred by them in the purchase of land, and in the purchase or construction of buildings and other structures, equipment, improvements, and additions which are more or less permanent in character. These payments are divided into those for salaries and wages, for miscellaneous objects, and for service transfers. They are also grouped-in accordance with the scheme adopted by the National Municipal League-under the seven general heads of outlays for general administration, public safety, charities and corrections, highways and sanitation, education, recreation, and municipal industries.

An examination of the table discloses many instances in which the payments by a group of departments of a city aggregate less than $\$ 200$. Such small amounts were undoubtedly expended for equipment, and their number may be taken as a fair index of the character of the payments included in the columns other than those for highways and sanitation and for education.

Of the total outlay for equipment and permanent improvements included in Table 17, 47.3 per cent was for highways and sanitation, 18.9 per cent for education (school buildings, etc.), and 26.3 per cent for municipal industries, the most important of which are waterworks. In the order of their magnitude, the other outlays-which constitute only 7.5 per cent of the total-are those for public safety, recreation (including public parks), general administration, and charities and corrections.

The fact that only 5.4 per cent of the payments for outlays were for salaries and wages proves that the cities made the greater part of their public improvements through contract rather than by day labor. The exceptions to this rule can readily be determined from the figures of the table. Similarly, the small proportion of cities reporting service transfers, as compared with the total number reporting outlays, indicates that but few utilize one department of service in the construction of public improvements under the supervision of other departments.

## Table 18.

Payments and receipts on account of the principal of the public debt.-Table 18 separates the payments and receipts on account of the public debt into two general classes-those involving transactions with the public and those resulting from transactions with sinking, investment, and public trust funds. The payments and receipts of the latter class are included in Table 14 as "loan transfers." The amount is relatively small, because in but few of the smaller cities are city debt obligations included among the assets of the permanent funds.

The total amount received by the 369 cities on account of debt obligations issued to the public was $\$ 28,750,413$, and the total amount paid to the public for the liquidation of the principal of municipal debtincluding payments of Massachusetts cities to the state sinking funds for the metropolitan park, sewer, and water loans and loans for the abolition of grade cross-ings-was $\$ 21,120,043$; thus the receipts exceeded the payments by $\$ 7,630,370$. Of the 369 cities, 204 received from the public more than they paid, and 163 paid more than they received, while the payments and receipts of the other two balanced. For the 204 cities the excess of receipts over payments, i. e., the net or corporate receipts on account of debt obligations, was $\$ 9,950,512$; the net or corporate payments of the 163 cities aggregated $\$ 2,320,142$.

No statistics of the increase or decrease in the par value of outstanding debt obligations are presented in this bulletin. For the great majority of cities this differs from the net or corporate receipts or payments on account of debt obligations by the amount of premiums received or discounts allowed at the issue of such obligations during the year. For Massachusetts cities it further differs from such receipts or payments by an amount equal to the difference between the sinking fund payments to the commonwealth on account of metropolitan loans and loans for the abolition of grade crossings and the assumption of new loans of the same character.

A comparison of Tables 17 and 18 indicates that as a rule the minor cities are governed by very conservative principles with reference to their methods of paying for permanent improvements. The improvements paid for by these cities in the fiscal year 1903 had a value, as given in Table 17, of $\$ 21,492,546$; the net addition to the indebtedness of the same cities to the public was $\$ 7,630,370$, or only 35.5 . per cent of the value of these improvements. Hence these cities, as a whole, paid for 64.5 per cent of their permanent improvements from their annual revenues. In the majority of British cities the cost of such improvements is met from the proceeds of loans.

The above-mentioned facts-that the 369 cities paid for 64.5 per cent of their permanent improvements from their ordinary revenue, and that 163 of the cities reduced their aggregate indebtedness, in addition to meeting all costs of permanent improvements from current revenue-emphasize the general soundness of the financial policy of most of these cities.

## Table 19.

Receipts from revenues.-The revenues of a municipality, in the Census classification and nomenclature, are the amounts received or receivable, in cash or other form, for meeting its expenses and outlays, from the exercise of its corporate powers of taxation and police control and its corporate authority to conduct business undertakings. Of the total gross revenue receipts, 79.6 per cent were from general revenues, i. e., revenues consisting of compulsory or voluntary contributions levied, collected, or received to defray the general costs of government, and not conditional upon the performance of any specific service for the contributors. The remainder was derived from commercial revenues, i. e., from municipal investment, industrial, and service income.

General revenue receipts.-Of the aggregate general revenue receipts, 76.4 per cent were derived from general property taxes; 8.8 per cent from contribu-
tions and gifts from other civil divisions and from private individuals and corporations; 7.5 per cent from liquor licenses; 2.6 per cent from special property and business taxes; 2 per cent from licenses other than $l_{\text {iquor }}$ licenses, and from permits; 1.6 per cent from fines and forfeits; and 1 per cent from poll taxes and miscellaneous general revenues.
-General property taxes.-General property taxes are direct taxes levied upon property in general, in proportion to its assessed or appraised valuation. They are the most important single source of revenue of the cities containing 8,000 to 25,000 inhabitants. Many of these cities have one rate of levy for such taxes in the business portion and another rate in the outlying sections, and some have one rate for a specific class of property and a different rate for other classes. But as the schedules returned do not furnish information sufficiently accurate to permit the separate tabulation of the receipts from specific levies, all general property taxes are presented in a single column. In this column are included also the penalties collected on delinquent general property taxes.

Special property and business taxes.-Under the designation "special property taxes" the Bureau of the Census has included all property taxes assessed and collected by methods not applied to property in general. Among such taxes are those popularly referred to as corporation taxes, bank taxes, security taxes, mortgage taxes, frontage taxes, tonnage taxes, insurance taxes, merchants' taxes, manufacturers' taxes, etc. .Where collected for the municipality, these taxes are included in the column of revenue receipts from "special property and business taxes;" where collected for the state or some other civil division, they are included together with any general property taxes similarly collected in the column" "temporary receipts from taxes for other civil divisions." The special business taxes reported with special property taxes include all so-called taxes collected from persons, natural or corporate, by reason of the business in which they are engaged, where such collection is not associated with the granting of a license or permit to engage therein, and does not constitute a receipt from privileges in the street in the nature of a rental, which is tabulated as from privileges. The general classes of taxes included in the column "special property and business taxes" are described at length in Bulletin 20, pages 35 and 36 .

Of the special property and business taxes, 60.3 per cent were reported by Massachusetts cities, and 11.4 per cent by New York cities. In Tables III and iv these taxes are shown in detail for the minor cities in the two states mentioned.

In Massachusetts the reports for all classes of special property and business taxes were fairly complete. In New York, however, the reports of taxes on fire insurance companies were very incomplete; frequently these taxes do not pass through the city treasury, but are
paid by the state to independent fire companies, and in such cases no report was secured. Frontage taxes, at so much per front foot on streets for which water mains have been constructed, were reported separately by only one city, although they were undoubtedly collected in other cities; where not given separately, such taxes are probably included with general property taxes. For the general character of special property and business taxes in other states, the reader is referred to Bulletin 20, pages 57 to 59 , inclusive. The character of the taxes reported is in all cases the same for the cities containing less than 25,000 inhabitants as it is for the cities of larger size, considered in Bulletin 20.

Poll taxes.-Poll taxes amounting to $\$ 204,946$, or 39.1 per cent of the total reported by the 369 cities, were collected in Massachusetts. Other states reporting considerable amounts of such taxes are, in the order of their magnitude, Maine, Pennsylvania, North Carolina, Vermont, Mississippi, New Jersey, Montana, Virginia, Texas, and Georgia. In some of these states the assessment of polls at so much per capita is included in the grand lists of assessed valuation; in others, poll taxes are levied as a specific amount against persons subject thereto.

Fines and forfeits.--Receipts from fines and forfeits were reported by the great majority of cities, but the amounts varied greatly. In states where the greater portion of petty criminal cases is tried in justices' courts instead of in municipal courts, only the excess of fines over costs of prosecutions passes to the city or the school fund; hence the figures given are but an imperfect index to the actual penalties enforced in criminal proceedings. The largest amounts were reported by cities which practically treat fines imposed upon gambling and other disorderly houses as equivalent to licenses.

Licenses and permits.-Of the general revenue receipts, 9.6 per cent were derived from licenses and permits; the greater portion were derived from liquor licenses, and only a very insignificant amount was derived from departmental permits. Cities in the Southern states report the largest collections, relatively, from licenses other than liquor licenses. The absence of receipts from liquor licenses, which may be noticed in the case of many cities, results sometimes from the action of local or state prohibition laws, and sometimes from the fact that revenue from liquor licenses accrues to civil divisions other than the city, such as the state or county.

Contributions and gifts.-In most states, contributions and gifts from other civil divisions are payments made by the state and county for the support of public schools. In some, as in Massachusetts, the contribution is in part for the support of libraries; in others there are special contributions for roads, bridges, and
sundry other objects. Contributions from private individuals are of two general types-contributions for the construction of libraries, and minor contributions of policemen and firemen for the support of policemen's and firemen's pension funds. In addition there are minor contributions for other purposes.

Miscellaneous general revenues.-Under this head are included, for a few cities, sundry amounts which could not be assigned to the appropriate subdivisions because their exact character was not ascertained.

Specified temporary receipts.-These receipts were from taxes, licenses, fines, etc., collected by the cities for other civil divisions. In most cities these receipts are identical in amount with the corresponding payments in Table 21. The taxes thus collected were usually general property taxes, although in Massachusetts and some other states bank and other special property and business taxes were included. No special tabulation of the temporary tax receipts for these states has been prepared, as the subject was not deemed of suffcient importance.

Commercial revenue receipts.-Of the aggregate commercial revenue receipts, 50 per cent were derived from municipal industrial income, 47.1 per cent from municipal service income, and the remainder from interest, i. e., municipal investment income.

Municipal service income.-Municipalservice income is the income derived by cities from municipal services performed or provided by departments or offices other than municipal industries. The greatest municipal service income secured from any one source was from special assessments, which were reported by the majority of cities. The most insignificant was that from privileges, which were reported by only a small proportion of the cities. The amounts reported as receipts from privileges are those collected from street railway, telegraph, telephone, and electric light companies, for the use of streets. "Franchise taxes," so called, are reported sometimes in the column of privileges, and sometimes as special property and business taxes. When these so-called "franchise taxes" are levied in lieu of all other taxes, and thus appear to be taxes proper, they are classed as taxes and not as privileges. Only those receipts are reported as from privileges which are in addition to such taxes as those last mentioned, and are in reality rentals paid for the use of streets. In this connection mention should be made of the fact that amounts paid to the city by any of these public service corporations as licenses are reported in the column "other licenses," under " general revenue receipts;" and that amounts paid to the city by these corporations for repairing the streets, furnishing lights at street car crossings, providing special policemen, etc., are included among departmental receipts from fees and charges.

The principal departmental receipts were those from fees and charges, which are compulsory contributions exacted from persons, natural or corporate, to defray a part or all of the expenses involved in services rendered by the government. Under "sundries" are included receipts from rent and other allied services. For some cities the amounts reported as sundries would, under a proper classification made possible by greater accuracy in the returns, be classed as receipts from fees and charges.

Municipal investment income.-Only a portion of the cities reported receipts from interest, i. e., municipal investment income. The greater part of the interest reported is that earned by sinking, investment, and public trust funds; in the majority of the minor cities interest is not allowed on the current cash balances deposited in banks, or where allowed is a perquisite of the city treasurer, he being paid by such interest rather than by a salary.

Municipal industrial income.-Municipal industrial income is the total gross income of municipal industries, or that derived from municipal activities, such as waterworks, gas and electric light works, street railways, etc., which are organized as more or less complete departments or offices, for the purpose of furnishing economic utilities to individual citizens or to other civil divisions, on such terms involving a compensation as may be determined by considerations of public policy. The greater part of the municipal industrial income of the 369 cities was derived from waterworks. The industries whose receipts are included in the column "all other industries" are mentioned specifically in the box heads and footnotes of Table 23, under the head "properties of municipal industries."

## Table 20.

Payments and receipts of interest.-Table 20 presents a condensed summary of the ordinary interest transactions of the 369 cities. First are given the gross payments of interest on public indebtedness and the gross amount of ordinary receipts of interest. Then follow exhibits of interest duplications, i. e., amounts entered among both the payments and the receipts of the municipality. Table 20 also gives the corporate payments and receipts of interest, i. e., the net amounts remaining after deducting from the gross interest payments and receipts the duplications above mentioned.

Gross interest receipts include all interest income of the sinking, investment, and public trust funds; all interest on current cash balances; accrued interest received on municipal bonds sold by the general city government or by independent divisions and funds of the municipality, and interest on deferred payments of taxes. So-called interest on delinquent taxes, which
is of the nature of penalties, is not reported in Table 20, but is tabulated in Table 19 with general property taxes. In the latter table are tabulated also interest and penalties on special assessments. A portion of such interest and penalties, under an absolutely correct classification, should be included in Table 20. It was not possible, however, to separate the interest on deferred special assessments, properly classed as interest, from allied receipts in the nature of penalties, and for this reason all so-called interest on special assessments is included in Table 19.

The most important duplications are "interest transfers." These are (1) amounts which are paid by the general city government, or by one of the independent divisions of the municipality, as interest on the city's debt obligations held by the city sinking, investment, or public trust funds, and which are therefore reported among the gross interest payments of the general city government or the independent division, and also among the gross interest receipts of the funds holding such obligations; and (2) amounts which are paid by the permanent funds as accrued interest on the city's debt obligations purchased from the city, and which belong to the first of the three kinds of transactions described in the following paragraph.

The duplications included in gross interest payments and receipts, other than those of the first class referred to above, arise in connection with the payment and receipt of accrued interest. The transactions of cities involving such payments and receipts are of three kinds: (1) Purchases by the permanent funds, either from the city or from the public, of the city's debt obligations for investment; (2) sales to the public of the city's debt obligations, either newly issued by the general city government or an independent division of the municipality or previously held by the permanent funds as investments; and (3) purchases by the permanent funds of securities other than the city's debt obligations.

All accrued interest involved in transactions of the first class is paid by the fund at the time of purchase, and is received by the fund at the time of the first interest collection thereafter. In the case of purchases from the city there are two transfers-one at the time of purchase, and the other at the first collection of interest thereafter; in the case of purchases from the public there is but one transfer, which is made at the collection of interest. These transfers are all included in the column designated "interest transfers," and also among the gross payments and receipts. The accrued interest of the second class is received by the city government, independent division, or fund at the time of sale, and is repaid at the first interest payment thereafter; it is thus included among the gross interest payments and receipts. Accrued interest of the third class is paid by the permanent funds at the purchase of
the investment, and is received by such funds at the first interest collection. It is included among the gross interest receipts of Table 20, but as a payment it is given only in the column "accrued interest on other securities."

The amount of interest paid to the sinking, investment, and public trust funds on city obligations held by them as investments aggregated $\$ 225,755$, and of this amount the funds had paid as accrued interest $\$ 2,376$; the net interest received by these funds on their investments in city securities therefore aggregated $\$ 223,379$. The amount of these investments at the close of the year was $\$ 5,970,552$, but the average amount held for the whole year was only $\$ 5,830,516$; hence the interest earnings on these city securities averaged 3.8 per cent. This per cent may be compared with that of the average interest payment by the cities on all their debt obligations outstanding which is shown in the text relating to Table 22 to have been 4.4. The lower rate of earnings of the sinking and other funds is due largely to the fact that the cities with such funds usually pay a lower rate of interest on their debt obligations than do those without the same.

Table 21.
Private trust funds and accounts.-The payments, receipts, and balances of private trust funds and accounts as reported to the Bureau of the Census are given in Table 21. These funds and accounts are few in number, and the amounts involved in the transactions are relatively unimportant.

Miscellaneous temporary payments and receipts.These are given in Table 21 under a number of heads, for which, as a rule, the titles and notes of the table furnish complete explanation. The receipts from taxes, licenses, fines, etc., for other civil divisions, corresponding to the payments given in column 5, are shown in Table 19. Other columns calling for special comment are those giving the payments and receipts on account of the bond transactions of the sinking, investment, and public trust funds. The amounts reported in these columns represent the purchases from and sales to the public. The corresponding purchases from and sales to the city funds are included in the column "interest and loan transfers," in Table 14, and are shown separately in columns 3 and 6 , respectively, of Table 18.

Table 22.
Debt outstanding at close of year.-The debt obligations outstanding at the close of the year are classified in Table 22 according to the division of government issuing the same, and also according to character.

Of the total amount of debt outstanding, 92.6 per cent was issued by the general city government, 7.2 per cent by independent school districts whose transactions are consolidated with those of the cities, and
the remainder by other independent organizations similarly consolidated. A comparison of Table 22 with Table 15 will disclose the fact that in many cities the school districts, while independent as to their general financial transactions, are not given the power of incurring indebtedness without the authority of the city council, and thus their debt becomes the debt of the city and is certified to the Bureau of the Census by the city comptroller or city clerk, rather than by the clerk of the school board.

The classification of debt obligations by character is shown under the five heads "general bonds," "revenue and tax loans," "special assessment loans," "outstanding warrants," and "other debt obligations." Under the designation "general bonds" are tabulated all long-term obligations-whether known as "bonds," "corporation stock," or by any other designationexcept such as were issued under conditions or for purposes that call for their report as revenue and tax loans or special assessment loans. Under "revenue and tax loans" are tabulated all debt obligations popularly known as "revenue bonds or loans," "anticipation tax loans or warrants," "temporary loans," or by any other designation, provided such obligations were issued with the distinct pledge or general understanding that they be met from the proceeds of a specific tax levy, either of the fiscal year of issue or of some other year. "Special assessment loans" include all bonds, tax certificates, warrants, or orders in the nature of debt obligations which are issued with the distinct understanding that they are to be paid for from the proceeds of special assessments. All warrants, or orders in the nature of warrants, outstanding at the close of the fiscal year are tabulated as "outstanding warrants," with the exception of those above mentioned in connection with revenue and tax loans and special assessment loans. Under "other obligations" are included (1) judgments outstanding; (2) obligations to public trust funds, which arise when cities accept gifts in trust and convert the receipts to current uses, paying annual interest upon the principal so received and used; and (3) any other debt obligations which do not readily fall into one of the other classes here mentioned.

Of the debt obligations included in Table 22, 86.1 per cent are classified as general bonds, 6 per cent as revenue and tax loans, 5.2 per cent as special assessment loans, 2.1 per cent as outstanding warrants, and 0.6 per cent as other debt obligations.

The exhibit of general bonds is believed to be fairly correct. The relative importance of revenue and tax loans in the fiscal administration of cities is much greater than the small percentage which such loans formed of the total debt at the close of the year would indicate. From their nature, the greater number are paid in the year of issue. Such loans constitute the greater portion of those whose payments and receipts are given in Table 18.

The actual amounts of special assessment loans and outstanding warrants were probably a trifle greater than the amounts reported. Doubtless some special
assessment loans were omitted for a few cities in which such loans are not taken into consideration in determining whether the statutory limit of borrowing power has been reached, and outstanding warrants were omitted for a few cities which have such obligations at the close of the year, but never include them in any of their financial reports.
Among other debt obligations omitted from Table 22 , special mention should be made of the obligations of Massachusetts cities to the commonwealth on account of the metropolitan park, sewer, and water loans, and loans for the abolition of grade crossings. No exact statement of the amount of obligations of this character chargeable to each city was obtained. The payments made by the several cities to the state on account of such loans are shown, however, in Table II, in the text relating to Table 16 . To the extent of these payments to the state, the outstanding debt reported in Table 22 would not correspond with that similarly reported for 1902 plus the corporate receipts or minus the corporate payments on account of the debt obligations reported in Table 18.
Municipal debt obligations to the value of $\$ 5,970,552$, or 3.8 per cent of the total outstanding at the close of the fiscal year, were held by the permanent funds. Of this amount, $\$ 4,212,861$ was held by sinking funds, $\$ 269,944$ by investment funds, and $\$ 1,487,747$ by public trust funds.

In any study of either the aggregate or the per capita debt of the several cities, consideration should be given to a number of facts in addition to the figures presented in Table 22. One of these facts is that in some cities within township organizations many municipal functions are under the supervision and control of the government of the township in which the city is located and the township government has power to create debts for which the taxpayers of the city are liable. The possible relation of this township debt to the total burden of debt resting upon the people for local government must in all cases be considered, especially in such states as Connecticut and New York.

Other facts that must be taken into consideration are the relation which the time of tax collection bears to the fiscal year for which the tax is levied, and the character of the revenue loans and other debt obligations issued. Some cities report no revenue loans outstanding, while others report large amounts. As a rule, the cities reporting no loans of this class collect taxes in the same year in which the levy is made, while those with large revenue loans outstanding collect their taxes in part or wholly in the fiscal year next succeeding the one in which they are levied. Outstanding revenue loans are always balanced by assets in the form of uncollected taxes, and special assessment loans by assets in the form of liens against the benefited property. These facts have led nearly every state to exclude all such loans from the list of debt obligations to be considered in calculations to determine whether a city has reached the limit of its borrowing power. The amount of these two classes of loans must be deducted. thero-
fore, in order to arrive at any sound judgment concerning the relative burden of indebtedness resting upon the different cities.

Sinking funds.--Of the 369 cities, 174, or less than one-half, reported sinking fund assets; of these, 95 had no assets other than cash, and 79 had investments of various kinds. In addition, 4 cities reported sinking funds, whose transactions are summarized in Table 15, with no cash or other assets at the close of the year. Of the other 191 cities, the greater number had funds known as "interest and loan funds," which are purely administrative funds, without cash balances in addition to general city balances.

The total sinking-fund assets aggregated \$9,311,063, distributed as follows: City debt obligations held by the funds of the city issuing the same, $\$ 4,212,861$; cash, $\$ 2,977,294$; miscellaneous securities, $\$ 2,111,708$; and real property, $\$ 9,200$. Debt obligations of the city whose funds hold the same were reported by 72 cities, cash by 169 , miscellaneous securities by 33 , and real property by 2 . The sinking fund assets equaled 6 per cent of the total debt. The debt less sinking fund assets aggregated $\$ 145,961,181$, or $\$ 27.85$ per capita, the amounts for individual cities varying from nothing to $\$ 107.15$ per capita.

Purpose of issue.-The purpose of issue was ascertained for general bonds and special assessment loans aggregating $\$ 137,398,917$, or 96.9 per cent of the total amount of such obligations outstanding. The facts for these two classes of obligations are shown in detail in Table $v$.

Table V.-General bonds and special assessment loans, classified by purpose of issue.

It is to be noted that bonds issued for refunding purposes aggregated $\$ 19,942,601$. Wherever practicable, refunding bonds were classified according to the original purpose of their issue, and this item includes only those cases in which it was impossible to ascertain the original purpose for which the debt represented by these bonds was incurred.

Rate of interest.-Of the municipal debt obligations which were tabulated as general bonds, revenue and tax loans, and special assessment loans, the rate of interest was reported for all but $\$ 12,629,368$, or 8.4 per cent. The amounts and specified rates are given in Table vi.
Table Vl.-General bonds, revenue and tax loans, and special assessment loans, classified by rate of interest.
Total.......................................................... 8151,015,632

| 7.0 | 1,600, 394,608 |
| 10.0 | 6,875 |
| Not reported | 12,629,368 |

The total amount of interest paid during the year on the $\$ 138,386,264$ of debt obligations for which the rates were ascertained was approximately on a 4.4 per cent basis. Allowing that rate for the $\$ 12,629,368$ of obligations with rate of interest unreported, it is found that the totalinterest on the $\$ 151,015,632$ of obligations shown in Table vi would have been $\$ 6,645,442$. But the gross interest payments made by the cities during the year, as shown in Table 20, aggregated $\$ 6,827,349$.

The difference between these two a mounts, $\$ 181,907$, represents the combined influence of a number of factors. In the gross interest payments of Table 20 were included payments of interest on a number of debt obligations not included in Table 22, and consequently not in Table va, or the computations based thereon. Among these, mention is made of the following: (1) Interest payments to the Commonwealth of Massachusetts on account of metropolitan park, sewer, and water loans and loans connected with the abolition of grade crossings, to which attention was called in the text relating to Table 16, on page 9 , the aggregate amount of interest of that kind, given in Table ir, being $\$ 150,916$; and (2) interest on temporary loans, warrants, and other short-term obligations issued and paid
during the fiscal year; the amount of such interest payments was not ascertained separately. Other interest, not included in the computations based upon Table vi but included in the actual payments of the cities in 1903, was that upon warrants and other obligations given in Table 22 but not included in Table vi; some of these warrants drew interest and some did not. As a partial offset to these payments, mention should be made of the fact that during the fiscal year the amount of municipal debt of the classes included in Table 22 increased over $\$ 7,500,000$, the interest actually paid on that sum being no more than one-third or one-half of the annual interest charge thereon. If allowance is made for all these factors, it is seen that the interest actually paid on obligations not included either in Table 22 or Table vi was approximately from $\$ 150,000$ to $\$ 200,000$, or from 2 to 3 per cent of the aggregate interest payments.

Year of issue.-Table vil presents an exhibit of general bonds and special assessment loans, classified by the reported year of issue so far as the same was ascertained.

Table VII.-General bonds and special assessment loans, classified by reported year of issue.

Year of maturity.-Table viri presents an exhibit of general bonds and special assessment loans grouped according to the reported year of maturity so far as the same was ascertained. The table gives calendar years, which do not always coincide with the fiscal year; accordingly the obligations shown as due in the calendar year 1903 are those which did not mature until after the close of that fiscal year.

Table VIII.-General bonds and special assessment loans, classified by reported year of maturity.

Table 23.
Value at close of year of principal salable possessions, exclusive of sinking fund assets.-Table 23 gives the value of the principal salable possessions of cities containing over 8,000 but less than 25,000 inhabitants. As stated in Bulletin 20, for cities containing over 25,000 inhabitants, very few American cities give in their financial reports or upon their books of record any correct statement of the value of these possessions, or of the amount of the outlays for the various objects connected with municipal activities. As a result, the Bureau of the Census, being obliged often to depend upon estimates furnished by city officials, has been unable to secure accurate reports of the value even of the principal salable possessions. The most that can be said is that the agents of the Bureau have used their best endeavors to secure an approximately correct exhibit. Hence, the results presented in Table 23 should be used with a liberal margin for possible and probable errors. Small as well as large cities should see the importance and value of carefully prepared statements of the original cost of their salable and unsalable possessions, or of estimates of the present cost to reproduce the same.
At the close of 1903 the value of the salable but unproductive possessions of the 369 minor cities was one and one-half times as great as that of their salable and productive possessions. The aggregate, $\$ 210,428,875$, may fittingly be compared with the indebtedness of the same cities. This latter, exclusive of sinking fund assets, is given in Table 22 as $\$ 145,956,181$. The total value of salable possessions therefore exceeded the indebtedness by $\$ 64,472,694$.

Investment funds were reported by 26 cities, with assets aggregating $\$ 983,265$, divided as follows: Cash, $\$ 4,678$; appraised value of real property, $\$ 51,337$; par value of city debt obligations held by the funds of the city issuing the same, $\$ 269,944$; and par value of other investments, $\$ 657,306$.

Public trust funds were reported by 102 cities. They were most common in the North Atlantic states, and were reported by nearly all of the cities of Massachusetts. They had assets aggregating $\$ 3,835,584$, distributed as follows: Cash, $\$ 840,333$; appraised value of real property, $\$ 210,213$; par value of city debt obligations held by the funds of the city issuing the same, $\$ 1,148,747$; and par value of other investments, \$1,636,291.

The most important productive public works were waterworks, reported by 189 cities, or a little more than one-half of the total number. Their assets were reported as $\$ 66,241,783$, and Table v gives the outstanding indebtedness directly chargeable to them as $\$ 33,353,910$, or about half the reported valuation.

Electric light works (together with gas works for those cities reporting them) had a value of $\$ 5,429,747$, with an indebtedness of $\$ 1,389,400$ incurred in their erection or purchase. The electric light and gas works whose aggregate value is given in Table 23 include certain ones, marked by footnotes, that are operated wholly for municipal purposes and might properly be classed as nonproductive; they are given with the productive possessions for the more convenient study of the data relating to municipal lighting plants.

The value of markets and public scales, so far as reported separately, was $\$ 593,770$; the debt specifically chargeable to market houses was $\$ 60,444$.

Docks, wharves, and landings (together with ferries for those cities reporting them) had a value of $\$ 1,718,969$, with a debt, chargeable to purchase or improvement, of $\$ 65,000$ for wharves and $\$ 40,000$ for ferries.

Cemeteries had a reported value of $\$ 3,277,485$ and a debt of $\$ 119,700$.

In the case of municipai enterprises tabulated in the "all other" column, footnotes state the class of industry this reported.

The most important single item among unproductive possessions is schools; then follow, in order, parks, city halls, fire departments, and libraries. The form of the inquiry called for the valuation of art galleries and museums, but none was reported. The greater portion of the items reported under the head "miscellaneous unproductive possessions" represented the equipment of the street and other departments not specifically mentioned. In the case of cities for which very large valuations are given in this column, the character of the property so reported is stated specifically in footnotes.

It should be noted that many of the cities reported values for city halls and small amounts for fire departments, while some reported very large amounts for fire departments and nothing for city halls. Cities of the latter class construct a large building the first floor of which is an engine house, while the upper part contains offices and a room in which are held all the meetings usually held in a city hall; this building is reported as an engine house, and the value is accordingly shown, in Table 23, in the column "fire department." Other cities erect buildings to which they give the designation "city hall," but in which provision is made for the fire department, city lockup, and police station. The differences in the heads under which a given fact is reported by different cities explain the marked variations in the assets given in this table under the heads specificallymentioned above, and also under "markets" and public "scales" and a number of other designations.

## Table 24.

Assessed valuation of property, basis of assessment, and general property taxes collected.-The assessed valuation given in Table 24 is the estimated value, for purposes of taxation, of the property in the territory embraced by the general city government, exclusive of that property assessed by a different method, or taxed at a different rate or in a different manner, from that employed in the case of general property taxes. The taxes shown were levied on the property reported in columns 1 to 4, and are included in Table 19 as "general property taxes."

For a few cities it was impossible to secure separate reports of real and personal property assessments; in such cases all isincluded under "real property." Inlike manner, in some cities the railroad and kindred property that should be given in the column "other property" is included with "personal property."

The property included in the column "other property," which is described by footnotes in all cases, is largely classed by state statutes as personal property, though the "special franchises" of New York cities are legally classed as real property. The valuations included in the column "other property" are made on the same basis as those of real and personal property, and the taxes levied thereon are therefore included as "general property taxes."

In Pennsylvania most of the personal property is subject to taxation for state purposes only, and this explains in large measure the absence of figures in the columns "personal property" and "other property." The railroad property in Carbondale is that used by mining companies in connection with their mining operations. The personal property in some towns in Pennsylvania and other states undoubtedly includes the valuation of polls and occupations for taxation purposes.

The valuation of bank stock in Massachusetts and New York cities, and also the taxes upon the same, to which attention is called in the text for Table 19, are excluded from Table 24 wherever possible; the valuations shown in this table therefore differ from those given in the publications of the cities by the amount of the bank stock excluded. The Bureau of the Census secured separate exhibits of the valuation of bank stock for only a few New York cities. For Massachusetts cities the valuations reported were as follows:

| CISY. | Amount. | CITY. | Amount. |
| :---: | :---: | :---: | :---: |
| Adams. | \$85, 308 | Natick | 8104,760 |
| Amesbury | 103, 198 | Newburyport. | 294, 829 |
| Arlington | 50,000 | Northampton | 226,401 |
| Attleboro. | 105,300 | Peabody | 109,000 |
| Beverly. | 130,875 | Pittsfield. | 580,820 |
| Brookline | 41,510 | Plymouth | 199,849 |
| Chicopee | 46,410 | Revere. |  |
| Clinton. | 71,253 | Southbridge | 105,280 |
| Danvers | 79,560 | Wakefield | 90,720 |
| Framinghan | 87,290 | Waltham | 94,248 |
| Gardner... | 130,155 | Ware. | 108,465 |
| Hyde Park |  | Watertown | 49,046 |
| Leominster | 86,020 | Webster | 62,000 |
| Marlboro. | 206, 210 | Westfield | 267,385 |
| Medford | 95, 800 | Weymouth | 135,291 |
| Melrose. | 64,680 | W oburn . | 196,375 |
| Milford. | 272,335 |  |  |

The reported basis of assessment in practice is the per cent of the true value stated by the city officials to have been used in assessing property. A slight study of the figures will, however, satisfy anyone familiar with the subject that as a rule the percentages in practice are much less than those given in the table.

In many cities the tax rate differs in different sections. This makes it difficult to give a common rate for the whole city, other than the average rate computed from taxes actually collected, and the rates given in Table 24 are accordingly based on such a computation. These averages are fairly representative of the facts, except for a few cities in which the territory covered by the school districts undoubtedly differs somewhat from that of the city government, so that there are differences in the total assessed valuation of property; in all such cases the average tax rate per $\$ 1,000$ of assessed valuation and of true value differs slightly from that which actually existed in 1903.

$$
\text { Tables } 25 \text { and } 26 .
$$

Payments and receipts, total and per capita.-Tables 25 and 26 present summaries of some of the data given in Tables 16 to 20, inclusive, together with per capita averages based upon the Census estimates of population for June 1, 1903. In computing the per capita payments for schools the population employed for the total is that of cities from which reports were received relating to schools; in all other cases the population used in computing the per capita averages for the total is that of the 369 cities.

With the exception of the columns of "corporate payments" and "corporate receipts," the figures of

Tables 25 and 26 include service transfer payments and receipts, payments and receipts in correction of errors, and in the case of Table 25 the amounts which represent the proper accounting deductions for receipts from sales of real property; the temporary payments and receipts thus included can not readily be separated save in the case of the two columns mentioned.

The most important feature of these tables consists in the great differences shown by different cities in the amounts of total and per capita payments and receipts of the several classes. The causes of many such variations were pointed out in a general way on page 21 of Bulletin 20; but no special investigation has been made for any particular city or group of cities given in this bulletin. In the case of most of the cities the variations in per capita payments and receipts reflect differences in municipal organization or administration; for a few they unquestionably result from imperfections of the Census report, due to a faulty presentation of data, or to an inaccurate estimate of population by the Census Office. To refer all variations found in the tables to any one single factor or cause would inevitably be unjust to many cities; the figures of the tables can be correctly used only in connection with some knowledge of the local conditions or circumstances affecting any class of data to be compared by per capita averages.

In computing the per capita averages given in this bulletin the population of all Kansas cities except Atchison was taken from the state census report for 1903. For all other cities the population was estimated, the estimates being of two classes: (1) Those based wholly upon the data of the United States censuses of 1890 and 1900; and (2) those based upon such data combined with data derived from state census reports-for 1904 in the case of Atchison, Kans., and all Michigan cities, and for 1905 in the case of the cities of Iowa, Massachusetts, Minnesota, New Jersey, New York, Rhode Island, South Dakota, Wisconsin, and Wyoming.

The estimates of the first class are all given in Bulletin 7, together with detailed information relating to the methods of computing the same. The estimates of the second class are in reality interpolations of a series, and involve a much smaller margin of possible and probable error than do the estimates of the first class.
The estimates of the first class and the per capita averages based thereon are fairly correct for groups of cities, and for most individual cities, but are doubtless more or less defective in a few instances. Tables Ix and x illustrate such possible imperfections by presenting, for all New York cities for which statistics are given in this bulletin or in Bulletin 20, a comparison of the per capita corporate payments and the per
capita payments for all school purposes, computed from population estimates based, first, on the United States census of 1900 and the state census of 1905, and second, on the United States censuses of 1890 and 1900. As stated above, the former estimates are correct for all practical purposes, and the variations between them and the latter illustrate the possible and probable margin of error in those per capita averages of Tables 25 and 26 for which the population estimates are not corrected by the data of state censuses.

Table IX.-Per capita corporate payments of New York cities in 1903, as computed from population estimates based on the United States census of 1900, and the state census of 1905, and on the United States censuses of 1890 and 1900.

If the cities were arranged in the order of the per capita averages computed from population estimates based on the United States censuses of 1890 and 1900, 22 of the 46 cities in Table ix and 28 cities in Table x would have a different rank from that given them by the corrected population estimates. In Table ix, 3 cities would rise one place in rank, 5 would rise two places, 1 three places, and 1 five places; while 7 cities would fall one place, 4 two places, and 1 six places. In Table $\mathbf{x}, 9$ cities would rise one place, 1 three places, 1
four places, 1 twelve places, and 1 thirteen places; while 6 cities would fall one place, 3 two places, 3 four places, 1 five places, and 2 six places. The averages, based upon the United States census estimates, are materially defective for only 3 of the 46 cities in Table Ix and for 10 of those in Table $x$.

The averages in Table ix reflect more or less the influence of factors operative in practically all cities, while those in Table x are more strongly influenced by local conditions; moreover, the amounts on which the averages are based are larger for Table ix than for Table $x$, so that a slight change in the estimated population of a city would be likely to have a more marked effect on its rank in the latter table. In Tables 25 and 26 , therefore, the averages with the greatest relative 'variations for the several cities will be the most affected by the possible errors resulting from imperfect estimates of population, and those of the greatest uniformity will involve the least possible and probable error due to similar imperfections.

Upon considering the figures of Tables 25 and 26 in connection with those given for cities of over 25,000 in Bulletin 20, it will be found that the per capita payments and receipts, with the exception of payments for decrease of indebtedness, still show the same tendency to increase with the size of cities that was shown in Bulletin 20 for the larger cities only. This tendency is illustrated in Tables XI and xıI, which present summaries of the per capita averages of Bulletin 20 and of Tables 25 and 26. The cities are here divided, according to population, into six groups, as follows: I. Cities having a population of 550,000 or over; II. Cities having a population of 300,000 to 550,000 ; III. Cities having a population of 100,000 to 300,000 ; IV. Cities having a population of 50,000 to 100,000 ; V. Cities having a population of 25,000 to 50,000 ; and VI. Cities having a population of 8,000 to 25,000 .

The principal per capita payments for 1903 of cities of the six groups above specified are given in Table xı.

Table XI.—Summary of specified per capita payments for six groups of cities.

| GROUP. | Corporate payments. | Payments for general and municipal service expenses. | Payments for municipal investment and municipal industrial expenses. | Payments for outlays. | Payments for decrease of indebtedness. |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1. | \$33.44 | \$19.23 | \$1.49 | \$12.51 | \$0.21 |
| 11. | 20.68 | 13.83 | 0.92 | 5.70 | 0.24 |
| 111 | 21.32 | 13.96 | 0.92 | 6.03 | 0.41 |
| IV | 18.54 | 12.24 | 0.88 | 5.04 | 0.38 |
| V | 17.20 | 11.01 | 0.92 | 4.96 | 0.31 |
| VI. | 14.78 | 9.61 | 0.79 | 4.09 | 0.44 |

It will be noticed that of the classes of per capita payments given in Table xi the corresponding ones of Table 25 exhibiting the fewest marked variations are those for general and municipal service expenses. Per capita payments for expenses may be considered es furnishing a fairly correct indication of the relative cost of specified services, subject only to the correctness of the Census estimates of population employed in the computations. Payments for outlays and for decrease of indebtedness, however, are as a rule more or less exceptional and extraordinary in their nature, and for that reason the averages of the table throw but little light on the relative cost of government and economy of administration.

The principal per capita receipts of the major and minor cities in 1903 are given in Table xir, grouped as in Table a.

Table XII.-Summary of specified per capita receipts for six groups of cities.

| GROUP. | Corporate receipts. | Receipts from general revenues. | Receipts from commercial revenues. | Receipts from loans increasing indebtedness. |
| :---: | :---: | :---: | :---: | :---: |
| I | \$33.66 | \$19.68 | \$6.03 | \$7.95 |
| I1 | 20.84 | 14.63 | 4.69 | 1,52 |
| 111. | 21.91 | 15.38 | 4.62 | 1.91 |
| IV | 19.04 | 12.82 | 4.27 | 1.95 |
| V | 17.58 | 11.51 | 3.46 | 2.61 |
| VI. | 15.04 | 10.54 | 2.70 | 1.90 |

The general tendency of receipts from every source to increase with the size of cities is here plainly disclosed. Of the columns of Table 26, the most trustworthy as tests of the relative burden of cost of government upon the several cities are those showing receipts from general revenues, from taxes, and from licenses and permits.

## YEARS COVERED BY THE INVESTIGATION.

The general principles followed in determining the fiscal year covered by this investigation have already been explained (see page 5). The same principles were followed in selecting the administrative years for which statistics are given in Tables 1 to 13.

The date of the close of the fiscal years covered by the financial statistics presented in Tables 14 to 26 is given for each of the branches or departments of the several cities in Table 15. The date of the close of the administrative years covered by Tables 1 to 13 is given in the following statement: ${ }^{1}$

[^1]| municipality. | Date of ending of year covered by investigation. |

${ }^{5}$ Exclusive of general transfers hetween minor offices and accounts.
${ }^{6}$ The same as the aggregate of cash on hand at beginning of year and all receipts during, year. Table 18, minus "refund payments" in Table 21.

Table 14.-TOTAL PAYMENTS AND RECEIPTS, Classified AS CORPORATE, TEMPORARY,

${ }^{1}$ "Corporate payments" equal "payments other than those for service transfers" in Tables 16 and 17, plus the "net or corporate payments" shown in column 8
Table 18, minus the sum of "receipts from sales of real property" and "refund receipts" in Table 21.
${ }^{2}$ For details of temporary payments and receipts see page 9 .
a For details of "service transfer payments" see Tables i6 and 17

- For details of interest and loan transfers sce Tables 18 and 20.

AND TRANSFER, TOGETHER WITH CASH BALANCES AND AGGREGATES: 1903-Continued.

EExclusive of general transfers between minor offices and accounts.
5 "The same a s the aggregate of cash on hand at beginning of year and all receipts during year. Table 18, minus 'refund payments" in Table 21 .
${ }_{8}$ Report includes only the transactions from March to December, 1903, except in the case of schools and libraries.

Table 14.-TOTAL PAYMENTS AND RECEIPTS, CLASSIFIED AS CORPORATE, TEMPORARY,

1 "Corporate payments" equal "payments other than those for service transfers" in Tables 16 and 17 , plus the "net or corporate payments" shown in column 8 of Table 18 , minus the sum of "receipts from sales of real property" and "refund receipts" in Table 21.

For details of temporary payments and receipts see page 9.
8 For details of "service transfer payments" see Tables 16 and 17
4 For details of interest and Ioan transfers'see Tables 18 and 20.

Table 19.-RECEIPTS ${ }^{1}$ FROM REVENUES, AND

1 Including certain erronsous receipts subsequently corrected by " refund payments" reported in Table 21.
${ }^{2}$ Tbs amount of ssrvics transfor receipts is given in Table 14.
${ }^{2}$ Divided in Table 24 into those for general city government and those for independent taxing districts.

ACCOMPANYING TEMPORARY RECEIPTS: 1903-Continued.

Table 19.--RECEIPTS ${ }^{1}$ from Revenues, and

${ }^{1}$ Including certain erroneous receipts subsequently corrected by " refund payments" reported in Table 21. ${ }^{2}$ Divided in Table 24 into those for general city government and those for independent taxing districts.
${ }^{1}$ Net or corporate interest receipts. For details of all interest transactions see Table 20.

ACCOMPANYING TEMPORARY RECEIPTS: 1903-Continued.

${ }_{6}$ Including $\$ 10,299$ received from New York city for the redemption of school bonds of the town of Eastchester, of which Mt. Vernon was once a part.
${ }^{6}$ Examination fees collected by city for county.

Table 19.-RECEIPTS ${ }^{1}$ FROM REVENUES, AND

1 Including certain erroneous receipts subsequently corrected by "refund payments" reported in Table 21.
: Divided in Table 24 in transier receipts is given in Table 14.
Divided in Table 24 into those for general city government and those for independent taxing districts.

ACCOMPANYING TEMPORARY RECEIPTS: 1903-Continued.

4 Net or corporate interest receipts. For details of all interest transactions see Table 20.
© Report includes only the transactions from March to December, 1903, except in the case of schools and libraries.

Table 19.- RECEIPTS $^{1}$ FROM REVENUES, AND

${ }^{1}$ Including certain erroneous reccipts aubsequently cerrected by "refund payments" reported in Table 21.
The amount of service transfer receipts is given in Table 14
${ }^{8}$ Divided in Table 24 into those for general city government and those for independent taxing districte.

1 The sum of the amounts given in columns $3,5,7$, and 9 , less the service transfers and refunds included therein, and with deductions for amounts received from the sale of real property.

2 Municipal investment and municipal industrial expenses for interest are included with general and municipal service expenses. For details see Table 16 .
${ }^{8}$ For details see Table 17.
