Financing the War and the Post-War Readjustment

An address delivered by Daniel W. Bell, Under Secretary of the Treasury, before the Worcester Economic Club, Worcester, Massachusette, December 16, 1943.

I welcome the opportunity to discuss with you this evening the problems of financing the war and the postwar readjustment. It is because we feel that these two problems are so closely tied together that I have chosen to discuss some aspects of each in the same address.

War Finance

It has come to be generally recognized that the real cost of a war must be paid for while it is being fought. This real cost consists in the labor put forth and the sacrifices endured in order to produce and to use the goods of war. Guns cannot be fired until they and their shells have been made, nor can they be fired with time borrowed from tomorrow. The labor and sacrifice involved in these things must be made today and cannot be postponed.

There are, of course, some exceptions to this rule. A war may be fought, in small part, by the use of stocks of goods accumulated before it begins; and, to a much larger extent, by postponing the replacement of capital goods wearing out during its course. With these exceptions, the whole physical cost of a war must be paid for while it is being fought.

What then, it may be asked, is the role of war borrowing. The answer must be that war borrowing is a method of postponing, not the cost itself, but the final allocation of the total burden of the war to some future date, when the costs now paid for through the sale of bonds are finally assessed in the form of taxes —at which time it is inevitable that a much larger portion of them will be paid by the persons now in the armed forces than if they were assessed today.

Taxation vs. Borrowing

When this fact is seen in its stark reality, it is clear that the money cost of the war should be met as far as possible by taxes, and so be paid for once and for all by today's civilians at the same time that the men in the services are paying their much higher price in human cost on the fighting fronts. Exceptions from this rule should be permitted only when clearly justified by special circumstances.

There are a number of these special circumstances, and it is because of them that the Treasury Department has never recommended to Congress that the whole cost of the war should be paid for out of current taxation. But it is these exceptions, and not the general ruls, which need special justification; and I should like to explain to you tonight, not why the Treasury has recommended to Congress additional taxes, which if snacted would only provide sufficient revenue to cover about one-half of total Federal expenditures, but rather why it has not asked for taxes to cover the full cost.

The use of borrowing, to the extent that it is justified by special circumstances, makes for a smoother working of our war economy than would the exclusive use of taxation. What are these circumstances under which borrowing is thus the superior instrument of war finance?

In the first place, the burden of a tax--or of any other compulsory lavy, even if it is subsequently reimbursable--must be levied according to fixed rules. These rules can take but little account of individual circumstances. It requires considerable time for many individuals to adjust their living standards and commitments to the new and lower levels which would be dictated by all-out wartime taxation.

While some individuals are revising their living standards downward, other individuals, whose incomes have been increased by the war to levels considerably above those required to meet their former standards of living, are ready and willing to lend a substantial proportion of their increased incomes to the Government in order to insure their future security.

Ultimately, if the war should last long enough, these adjustments might be continued under a steadily increasing burden of taxation until each person's stendard of living and financial commitments had become adjusted to his place in the war economy. This is unlikely to occur, except in a very long war; and, in the meantime, a considerable proportion of the total war cost must be borrowed in order to avoid unnecessary disruption in the economy.

In the next place, the magnitude of our war effort is fixed by our full gross product, rather than by our net national income. This means that during wartime replacements and repairs on plant and equipment must be postponed, as far as possible, so that the manpower and materials which they would otherwise have absorbed can be thrown into the war effort. Producers, as well as consumers, are asked by their Government to "Use it up, Wsar it out, Make it do, or Do without."

This means that during the war period, the capital assets of most business firms are wearing out more rapidly than they are being replaced, and the depreciation reserves set aside to offset this wear and tear are piling up in cash. At the same time, the accounts receivable of these firms are running down, which results also in piling up cash. These funds are all available to be lent to the Government; but they are not available to be taxed since they represent capital, rather than income, of the firms possessing them, and represent very different proportions of the total capital of different firms, depending upon the type of business. A policy of borrowing these funds, rather than taxing them away, is, therefore, clearly indicated.

In the third place, the great wartime expansion in the economy requires—even at a constant price level—a great increase in the available supply of currency and bank deposits; and this increase, under our existing institutions and under wartime conditions, can be supplied only by an increase in Government borrowing.

Finally, it is necessary that some financial incentive be supplied to individuals to work long hours, and to corporations to operate with the utmost efficiency. If the whole of the extra incomes resulting from the overtime pay of individuals and the efficient

management of business enterprises were taxed away, there would be no aconomic incentive to call forth these exertions.

The borrowing which is justified entirely by the epecial considerations which I have just enumerated would have to take place for our wartime economy to operate smoothly, no matter how willing Congress might be to levy additional taxes or the people to bear them. This borrowing alone would amount to a great deal of money by peacetime standards; but it would certainly be much less than the nearly fifty billion dollars a year which we should have to borrow even if the Treasury tax proposals were granted in full.

An additional amount of borrowing -- over and above the minimum required on economic grounds -- can also be accomplished without danger of inflation to the extent that individuals can be induced, for patriotic reasons, to increase their savings. This the Treasury is endeavoring to do by means of the payroll savings plan and the War Loan campaigns.

The volume of total savings required is dictated by the size of the deficit and may differ materially from the sum total of savings which would occur from economic and patrictic motives. At the present time the Federal Government is purchasing about one-half of the total volume of goods and services being produced, while the remaining 50 percent is being purchased for private use. Federal taxes, however, are bringing in only about 20 percent of the gross income generated by production, leaving about 80 percent in private hands. There is, thus, a discrepancy equivalent to about 30 percent of the value of total output which makes up the Federal deficit on the one hand and the corresponding necessary private savings on the other hand.

To the extent that total borrowing exceeds the aggregate amount of savings consciously and intentionally undertaken, we are placing liquid assets in the hands of persons who may use them to put added pressure on price ceilings. It is to aid in immobilizing such unstable accumulations, as well as for fiscal and equitable reasons, that the Treasury considers the need for additional taxes so urgent.

Types of Wartime Taxes

I do not desire to go into the matter of particular types of wartime taxes at any length this evening, but I should like to make some general observations.

First, there can be no doubt of the ability of the people of the United States to pay taxes much higher than those now levied. Of course, it would be hard because war itself is hard. But the very fact that we are threatened with inflation is evidence of our ability to pay higher taxes, for it means that we have more dollars to spend than things to buy with them.

Second, the view is sometimes voiced that, while we have exhausted our ability to pay some kinds of taxes, such as income taxes, we have not exhausted our ability to pay other kinds of taxes, such as sales taxes. I can see no merit in this view. Ability to pay resides in persons, rather than in kinds of taxes—both income and sales taxes must be met from the same pay envelopes; and if we have the ability to pay one, we have the ability to pay the other.

The income tax can be adjusted, and is adjusted to the personal circumstances of those upon whom it is

levied. Exemptions are granted commensurate with family atatus, so that the tax does not fall with merciless brutality upon those with small incomes and large families. No such adjustment mechanism is customary or practicable for the sales tax. The view that we have exhausted our ability to pay additional income taxes, but still have the ability to pay a sales tax, logically reduces itself to the view that the principal additional ability to pay in the economy resides in that portion of incomes falling within the exemptions from the individual income tax -- that is, five hundred dollars for a single person, twelve hundred dollars for a married couple, and three hundred fifty dollars for each dependent. I cannot accept this view; and I do not believe that the advocates of the sales tax would, if they realized the full implications of the proposal.

Third, it is often proposed that we should place a special tax on increases in individual incomes; that is, tex a man with an income of, say, three thousand dollars more heavily if he has recently come up from one thousand dollars than if he had been receiving three thousand dollars for some time. This proposal seems to me to be wrong on a number of counts.

It is unfair. It seems to me that, consciously or unconsciously, it is besed in part on the feudal concept that every man should stay in his place, and it strikes at the root of the principle that every man may rise according to his worth--a principle which has given so much life and hope to the American scene for generations past.

It is unsconomic. It would undermine the incentive of workers to transfer to war industries located in inconvenient places and to work long hours at hard jobs. Particularly, it would strike at the incentive for wives to sater war plants in order to earn incomes supplementary to those of their husbands. It would, therefore, aggravate the labor shortage.

It would be very difficult to administer. This would be true, not only for the Treasury, but also for the taxpayers, as it would require the use of forms and questionnaires far more complex than any involved in the administration of the individual income tax.

It seems to me that the basic problem of the taxation of individuals in wartime is really not very complex. Aggregate individual income is higher, end the Government must tax a portion of it away. There may be a great deal of dispute as to which income brackets should be drawn upon the most heavily, but any reasonable pattern of withdrawal can be effected by means of the individual income tax.

I think it is a good rule when any other tax is proposed, that you first express the distribution of its burden in terms of the individual income tax, and then ask yourself whether you would consider it reasonable that the burden of the individual income tax itself should be so altered. If the answer is "No," then the other tax should be placed on the defensive and ite proponents made to justify it by reasons of strong public policy. Sometimes this can be done -- for example, I believe that the luxury excises proposed by the Treasury this year and the spendings tax proposed last year are cases in point. The test should be rigid, however, and the considerations of public policy should be important before a tax is placed on the statute books, the burden of which is distributed in a manner other than that in which we would be willing to distribute the burden of an increase in the individual income tax.

Principles of War Borrowing

I turn now to our policies with respect to wartime borrowing. These have been dominated by the following considerations.

First, we have tried to borrow as much as possible from investors other than commercial banks. This principle must be stated subject to some qualification. It would neither be possible nor desirable to do all of our borrowing outside of the banking system. I have already explained that one of the reasons for borrowing at all, rather than relying exclusively upon taxation, is that an expanding wartime economy needs -- even at a constant price level -- a greatly increased amount of currency and bank deposits. These can be obtained. under existing institutions and in wartime, only by a corresponding increase in the Government security holdings of commercial and Federal Reserve Banks; and a sufficient amount of securities have to be sold to the banks to provide this necessary circulating medium. even if adequate markets exist for them elsewhere.

The amount of Government securities which would thue have to be sold to the banks in any event is substantial; but, in practice, I must admit that this has proved little of a problem, since it has taken care of itself by the rapid expansion of the borrowing needs of the Federal Government and the slower development of nonbanking sources for Federal borrowing.

For this reason, we have directed our main effort to the sale of securities to nonbanking investors. During the past year, we have sold to such investore, net after all switches and redemptions, about forty billion dollars of Government securities, as compared with about thirty billions absorbed by the banks.

Second, we have tried to make the securities sold to the small investor as riskless as possible. The Treasury has considered itself the trustee of the inexperienced investor. It is with this in view that the Department's appeal to small investors has been confined to Series E bonds which are non-negotiable, payable on demand and hence are guaranteed against fluctuations in market values.

The Treasury is less concerned with the large volume of demand obligations which is being built up by the sale of savings bonds to small investors than it would be with the only practicable alternative to this course. This alternative would be the sale to small investors of marketable securities payable by the Treasury only after the expiration of a fixed term of years.

The fixing of a definite term on securities sold to small investors by no means insures that they will be held by these investors for the full term. By and large, the holders of marketable securities would sell them on the same occasions when holders of redeemable securities would redeem theirs. Indeed, there is one important occasion upon which marketable securities would be sold, but redeemable securities would not be redeemed—that is, the fear of a decline in price, from which the non-negotiable securities are immune.

Now it may appear, at first glance, that while the Treasury should be properly concerned with redemptions, it should not be concerned with market sales, since it must meet the redemptions out of its own pocket; while

the market sales will be taken up by somebody else. This type of reasoning would suffice for a private borrower, but it is entirely inadequate for the Treasury eince it overlooks the real problem which the holdings of Government securities—whether radeemable or marketable—hy emall investors will present in the post-war period.

This problem is that the holders of these securities may dispose of them and spend the proceede on consumers' goods at a time when the supply of such goods will be scarce; and the spending can result only in price rises. This problem would exist, however, whether the securities were payable on demand or were negotiable and payable at the close of a fixed term, and will be somewhat less troublesome for demand securities, bacause, as I have already pointed out, the liquidation of this type of security will never be precipitated by the fear of a fall in the price of the security itself.

The other problems which will be caused by holdings of Government debt by small investors in the postwar period are minor, relative to the major problem which I have just mentioned; and will be less serious with demand obligations than with negotiable obligations of fixed term.

When eavings bonds are presented for redemption to the Treasury and it is necessary to refund them, the Treasury offers the type and maturity of new securities beat suited to the market at the time, and offers these securities for distribution through the regular channels of the Government security market.

Marketable securities, by contrast, would be offered in small blooks, oftentimes through irregular channels where the original holders may not receive full value, and might dribble into the market in such a way as to keep it continually disturbed. They might not be fitted by coupon rate, maturity, or other characteristics for the predominant demand then existing in the market, but they would have been cast in whatever mold they were, once and for all, and the market would have to make the best of it.

To the extent that the refunding of demand obligations would have been accomplished by the sale of securities to banks, so also would the marketable securities find their ultimate lodgment in banks, but only after a roundabout journey, probably involving both loss to their original purchasers and a higher interest cost to the Treasury.

It seems clear, therefore, that the Treasury is in a much better position to refund the non-negotiable securities than the individual would be to refund negotiable securities through the market.

The third of the principles governing our borrowing policy has been the maintenance of the liquidity of the banking system. We have laid down the policy that no securities will be offered to commercial banks for the investment of their demand deposits with a maturity at time of issuance of over ten years. The great majority of the securities sold to commercial banks have had maturities far shorter than this. Indeed, more than half of the total increase in the portfolice of commercial banks since Pearl Harbor has been in the form of three-month Treasury bills and one-year certificates of indebtedness. This concentration of sales to commercial banks in short securities insures that our banking system will be in a strong and liquid posi-

Finally, we have financed this war at an average rate of elightly less than 1-3/4 percent. This compares with an average rate of about 4-1/4 percent on the securities issued to finance the last World War.

Interest rates have remained stable during the wartime period and confidence in the continuation of this stability has been and is widespread and well justified, and has caused investors to subscribe to new issues of Government escurities in successive war loans without any sign of holding book in anticipation of higher rates.

I think it can be fairly eaid of the United States, as the late Chancellor of the Exchequer, Sir Kingeley Wood, recently eaid of Great Britain, that "... we have revolutionized public opinion as to what are fair rates for Government war borrowing." I believe that this revolution in opinion has a sound basic in underlying economic realities, and is applicable to the coming times of peace also. I hope that the policies of the Government will be directed to this end.

Financing the Post-War Readjustment

I come now to the second major division of my topic, that is, the problems of the post-war readjustment period.

I approach this subject with some trepidation. No post-wer plan will be of any value unless we win the war and are in a position to put it into effect. The war is not yet in the bag. Hitler's post-war plan is elavery, and there will not be room for both his plan and our own.

You all remember the recipe for rabbit stew which begine "First catch the rabbit." So it is with postwar planning. We must first win the war; and we must not let anything, even post-war planning, distract our minds from this for an instant.

Immediately following the close of the war, we will be confronted with the problem of reconversion. The period of reconversion will be a time fraught with exceptional hazard to our economic structure.

During normal times, most of our people are engaged in producing goods which they and their fellow workers can buy with their wages. During wartime, they are largely engaged in producing war goods which they cannot purchase with their incomes, but the excess purchasing power which is thereby created is hald in check by direct controls, by personal taxation and by Government borrowing from individuals. The people are willing to accept and cooperate with these measures because of patriotism and the all-perveding spirit of eacrifice which exists during wartimes. During the reconversion period, however, while the tools of production for peace goods are being made ready, purchasing power may outrun the goods available for purchase, while wartime measures of control may be relaxed if the people do not recognize the need for continued restraint.

A price inflation is, consequently, one of the hazards of the reconversion period. Stalking hand-in-hand with it goes the hazard of unemployment. Normally, these two are never seen together, since unemployment usually rises from a lack of demand for goods and inflation from a shortage of goods. The unemployment of

the reconversion period will be caused, however, not by a lack of demand for the finished products, but because the plants are not yet ready for mass recaployment, and so may go hand-in-hand with inflation.

Once the period of reconversion is over and the tremendous potentialities of the American economy which have been demonstrated during the war period are directed to the production of the goods of peace, the main hazard of inflation will be over.

The task of statesmanship in the period ismediately following the war will be to hasten the reconversion process while mitigating its hardships and reducing its human costs. This task will, of course, be easier if a termination of the war on one front before the other should make it possible to complete part of the reconversion process under a wartime environment. But we must press for victory against Japan as well as Germany without regard for the economics of reconversion.

This evening I shall discuss only three aspects of fiscal planning for the reconversion period, and these briefly. They are, first, the cancellation of war contracts; second, the adequacy of corporate financial resources to carry on the work of reconversion; and, third, the control of individual epending during the reconversion period.

Cancellation of War Contracts

If the war should end today on all fronts, there would be outstanding more than 75 billion dollars of war contracts on which deliveries had not yet been made. Much of the meterial covered by these contracts would be of no use to the Government if it were delivered after the immediate emergency of this war had passed. This is because there are no goods with respect to which obsciescence runs faster than it does for the goods of war; so the best preparation for future wars consists in maintaining the skills and plant deposity necessary for the development, production, and use of new war goods rather than in hoarding vast quantities of old ones.

Part of the undelivered contracts would still exist merely in blue-prints in the hands of the contractors, while part would be represented by goods in process, some of which in turn could be converted into peacetime goods.

In my opinion, all war contracts should be canceled immediately upon the passing of the military need for the goods contracted for. This is desirable for two important reasons. First, it avoids the tremendous waste of human and material resources involved in making goods which we will never use; and, second, it gives the maximum stimulation to the men and management released from making such goods to seek employment in the production of goods for which there is a human need, and so hastens the process of reconversion.

The abrupt cancellation of war contracts will give rise to two problems. These are: First, provision for the labor thrown out of employment; and second, compensation for the contractors.

The first of these problems should be settled with liberality; the second, with the utmost of speed.

A generous treatment of the labor displaced by contract cancellation is required, not merely by considerations of common humanity and fair dealing, but also by considerations of sconomy; for without it, we are unlikely to secure abrupt cancellation at all, and there is no form of relief more expensive than the production of unneeded tools of war. We should be sure, however, that the treatment accorded labor displaced from war production is of such a character that it encourages, rather than alows down, its quest for peacetime employment.

Payments to contractors should be just in accordance with a fixed standard of equity; that is, they should be enough to make the contractors and their subcontractors whole for the losses they have sustained as the result of the contract cancellations.

It is important also, that payments to contractors should be prompt. This is not primarily for the benefit of the contractors themselves -- although I have no doubt that they will appreciate it--but for the benefit of the country as a whole. A dollar paid out in the settlement of war contracts during the early reconversion period may--in terms of national well-being -- be worth several dollars paid out a year or so later. It is far more important, therefore, that the settlements be prompt than that they be accurate to the last dollar according to some accounting concept, which may itself be open to question.

The settlement of war contracts along the lines which I have just outlined will involve a beavy outflow of funds from the Treasury in the few months immediately following the end of the war. We are prepared for this outflow, and we feel that there will be few occasions when a disbursement of funds may be made with so little real cost to the Government and so much benefit to the economy.

Corporate Financial Resources

for Reconversion

My second point with respect to the reconversion period relates to the adequacy of corporate financial resources to carry on the work of reconversion. The adequacy of these resources is important, not merely or even principally from the point of view of the corporations involved, but from the point of view of the whole economic system.

We in the Treasury have given careful consideration to this matter, and believe that funds for the reconversion of war industry will be ample, provided that a-prompt settlement is made of canceled war contracts. Our reasons for believing this are as follows:

First, the wartime period has been a profitable one for American corporations as a whole. Net corporate profits, after taxes, have averaged about twice as much per year during the wartime period as they did in the years 1935 through 1939 (the base period for the FRB index of industrial production); and, by and large, the greatest increases have gone to those firms whose problems of reconversion will be greatest. Corporate dividend policy, furthermore, has been so conservative that most of the increase in corporate earnings has been added to surplus.

Second, in addition to their savings from undistributed earnings, American corporations have piled up a large volume of liquid assets as a result of repayment of receivables, and in some cases reduction in inventories, and the general inability to expend depreciation and depletion reserves which has been brought about by wartime conditions. According to the esti-

mates of the Federal Reserve Board, the demand deposits of nonfinancial businesses, including unincorporated enterprises, amounted to over 30 billion dollars at the and of last July; and, according to Treasury estimates, the holdings of Government securities -- payable for the moet part on demand or at very short term--by nonfinancial corporations alone, amount at the present time to about 20 billion dollars. Each of these figures is far above any peacetime precedent; but, to make the picture brighter, American business, during the same time it has been acquiring them, has reduced the amount of both its bank loans and its bonded debt.

Third, generous carry-back and carry-forward provisions included in the corporation tax laws insure that corporations suffering losses during the reconversion period, or even earning incomes of less than their excess profits credit, will receive substantial refunds of the taxes paid in their prosperous years. These refunds — for the expediting of which the Treasury has made recommendations to the Congressional committees — will be available to carry on the work of reconversion. In addition, there is provided in the present law a post-war refund, irrespective of future tax status, of ten percent of the excess profits tax paid in the war period.

For the reasons given, I do not believe that the adequacy of business funds for reconversion purposes will present a major problem. But I cannot speak with equal assurance with respect to the prospects for the control of individual spending during the reconversion period -- the third post-war problem to be discussed.

Control of Post-War Spending

Immediately following the end of the actual fighting, we can probably expect a let-down in the willingness of people to submit from patriotic motives to a continued reduction in their consumption. There is likely to be a demand for an immediate end of the direct controls; and this demand may, to some extent, succeed. For some time, however, while industry is being reconverted and the war effort demobilized, there will be only a very gradual increase in the supply of consumers' goods. When it is considered that there will be available to be spent currently, in addition to the incomes being received for the production of consumers' goods, not merely the incomes from work in demobilizing the war effort and reconverting private industry, but also the large liquid resources piled up during wartime, it is easy to conjure up the specter of a post-war inflation.

Against this must be set the powerful force of human foresight and sobriety. The reconversion period is bound to be attended by considerable unemployment, and each individual will naturally ask himself how he is going to come out in the swirl of readjustments he sees around him. His natural tendency will be to "play it close to the chest" and handle his reserve funds as carefully as possible. This human tendency alone may maintain a high rate of saving during the reconversion period, and so forestall the possibility of a post-war inflation.

We hope that this will be so; but counting on it would be as improvident as counting on an internal smash-up in Germany to win the war. We must consequently lay our plans to prevent a post-war inflation from occurring, but stand ready to adjust any such plans on short notice to conditions as they actually develop during the reconversion period.

What should these plans be? It seems to me that the direct controls, such as price ceilings, priorities, and rationing, should be kept in effect as long as necessary; and high income taxes, as long as possible.

Let me explain the difference between "necessary" and "possible" in the statement which I have just made.

While I believe that we should keep the direct controls as long after the war as necessary, I do not believe that this will be very long. I feel certain that the last of them can be done away with as soon as the reconverted plants commence to pour their flood of consumers' goods on the market.

I have said, however, that the high rates of taxation should be kept as long as possible. I think that the case here is very different. High personal taxes serve the anti-inflationary purpose of absorbing surplus purchasing power; and this may be very useful and necessary in the reconversion period. But they also serve the purpose of helping to pay off the national debt; and this purpose is also useful and necessary.

It seems to me, therefore, that, while the criterion with respect to the removal of the controls should be "How soon can we remove them without risking inflation?"; the criterion with respect to wartime rates of taxation should be "How long can we keep them without risking unemployment?" Perhaps for a long time to come, if the post-war period lives up to our hopes and expectations.

But this would take me into new vistas beyond the scope of tonight's address for I have no intention of discussing the broader phases of fiscal policy beyond the reconversion period.

I would like to make, however, a few general observations. The war has opened the eyes of the American people to the tremendous productivity of industrial and agricultural America. The shortages of peacetime goods and services that exist now have not blinded us to the enormous potentialities for abundance inherent in our productive mechanism. It is precisely this unexampled capacity to produce upon which the future prosperity and welfare of our people ultimately depend.

To help society achieve more fully the promise of abundance implicit in our capacity to produce; to help maintain output and employment at a level more nearly corresponding to our true productive potential; and to secure this at a price that a peaceful democracy can pay; -- that will constitute the greatest task of economic statesmanship in the post-war world.

I do not believe that the glory of America belonge only to the past. I believe that the real promise of America belongs to the future. Between the goal of securing maximum utilization of our resources and the goal of achieving a more equitable distribution of wealth, there need be no conflict. Our history has been testimony to that fact, and our future will be the record of its fulfillment.

Treasury Market Financing

On November 22, 1943, an exchange offering of one-year certificates of indebtedness was made to holders of \$3,800 millions of 7/8% certificates of indebtedness due December 1, 1943, the certificates which were originally sold during the First War Loan in December 1942. The books were open three days, November 22 through 24. The new certificates were offered in exchange for the old issue, par for par, and no cash offering was made. The new issue is dated December 1, 1943 and will mature December 1, 1944. Of the \$3,800 millions of the maturing issue, \$3,540 millions were exchanged for the new

issue and \$260 millions were turned in for cash.

On December 15, 1943 there was a maturity of \$421 millions of 1-1/8% Treasury notes originally issued on December 15, 1938. These notes were paid off in cash.

Announcement was made on December 13, 1943 that the 3-1/4% Treasury bonds due April 15, 1946, and callable two years earlier, were called for redemption on April 15, 1944. Approximately \$1,519 millions of these bonds are now outstanding.

Plans for the Fourth War Loan

The Fourth War Loan campaign will open on January 18, 1944, and will continue through February 15. The goal of this drive will be \$14 billions, of which \$5.5 billions are to be raised directly from individuals. In the Third War Loan, the goal for individuals was \$5.0 billions out of a total goal of \$15.0 billions.

The major emphasis throughout the Fourth War Loan will be on sales to individuals and the general outlines of the drive have been formulated accordingly. Only sales to individuals will be reported up to February 1, although subscriptions will be accepted from other nonbank investors during the whole period. It is hoped by the delayed reporting of these other subscriptions to concentrate attention on sales to individuals. The success of war financing depends very largely upon the response of individuals, if Treasury berrowing is to be effective not only in raising the necessary funds but alse in helping to check the pressure on prices of excess funds in the hands of individuals. All subscriptions for savings bonds and savings notes cleared through the Federal Reserve Banks during January and February will be counted toward the goal of the drive.

The table which follows presents the chief characteristics of the securities to be offered during the Fourth War Loan. The list of securities is similar to that offered in previous war loans, except that the marketable intermediate-term bond has been changed in maturity and coupon rate, and the issue has been made unavailable to commercial banks (except for the limited investment of savings deposits), until September 15, 1946, at which time the period to first call by the Treasury will have been reduced to 10 years. The seven securities to be offered are as follows:

Savings bonds, Series E, F, and G
Savings notes, Series C
7/8% certificates of indebtedness, due
February 1, 1945
2-1/4% Treasury bonds due September 15,
1959, callable September 15, 1956
2-1/2% Treasury bonds due March 15, 1970,
callable March 15, 1965

As in the Third War Loan, commercial banks are excluded from direct participation in the drive, except

that they will be given concurrent opportunity for the limited investment of savings deposits outside the drive as discussed below. In order to minimize the amount of indirect participation by commercial banks in the Fourth War Loan, the Treasury has asked the cooperation of all banks in declining to make speculative loans for the purchase of Government securities. This policy, however, is not intended to imply any disapproval of loans which fit the requirements set forth in the joint statement by national and State bank supervisory authorities on November 23, 1942, namely that the loans be made to enable investors to purchase bonds in anticipation of income, and that they be made on a short-term or amortization basis and be fully repaid within six months.

In order to avoid unnecessary transfers of funds from one locality to another during the Fourth War Loan, the Treasury has requested that all subscriptions by corporations and firms be entered and paid for through the banking institutions where the funds are located. The Treasury will undertake to see that statistical credit for such subscriptions is given to any locality that the subscribing corporations and firms may designate, except that subscriptions from insurance companies will be credited to the State of the home office as in the paet.

Concurrently with the Fourth War Loan, commercial banks helding savings deposits will be permitted to subscribe to the 2-1/4 percent and the 2-1/2 percent bends. Such banks will also be permitted to subscribe to Series F and Series G savings bonds on and after January 1, 1944. The fermula for commercial bank participation in these securities is that any such bank holding savings deposits as defined in Regulation Q of the Beard of Governors of the Federal Reserve System may subscribe to any or all of the four bonds in an amount not to exceed, in the aggregate, 10 percent of its savings deposits as shown on the bank's books as of the date of the most recent call statement required by the supervising authorities prior to the date of subscribing for such bonds, or \$200,000, whichever is less. Under no circumstances, however, will a bank be allowed to hold more than \$100,000 (issue price) of Series F and Series G savings bonds (Series 1944), combined.

Source: Daily Treasury Statemente, except as noted.

Less than \$500,000. Rased upon Budget estimates revised so of November 28, 1943. Budget estimates of post-war credits for excess profits tax, victory tax, etc., are excluded in order to make the estimates comparable with Daily Treasury Statement figures.

Includes unjust enrichment tax and victory tax. Beginning July, 1943, includes collections of taxes withheld by employers under the Current Tax Payment Act of 1943. For details see following chapter on Receipts and Expenditures and Appropriations, Table 2. Details not available.

Includes chiefly alcoholic beverage taxes, tobacco taxes, manufacturers' and retailers' excise taxes, and estate taxes.

- 5/ Includes deposits by the War and Navy Department and the U. S. Maritime Commission on account of rangotistion of war contracts, such amounts on the basis of covering warrants totaling \$558 millions. Also includes \$10 millions representing repayment of amounts paid to Commedity Credit Corporation for capital impairment.
- 6/ For explanation, see tables in next chapter on Social Security program.
- Excludes expenditures for public debt retirements which are charge-able to the sinking fund, etc. under special provisions of law.
 Includes expenditures classified as transfers to trust accounts, etc., for the Adjusted Service Certificate Fund and the National

- Service Life Incuranc Fund.
- Includes Public Works transactions classified as Revolving Funds (net).
- Includes Aid to agriculture transactions classified as Revolving Funds (net); expenditures of the Department of Agriculture classified as Departmental in the Daily Treasury Statement; and Agricultural Marketing Administration trans-actions classified as transfers to trust accounts, etc. Represents gross expenditures of \$1.252 millions less repay
 - ments of U. S. investments in capital funds aggregating \$315 millione.
 Includes expanditures classified as transfers to trust ac-
- counts, etc. for the Railroad Retirement Account and the Railroad Unemployment Insurance Administration Fund. Ex-Excludes expenditures ands by Offics for Emergency Management, War Manpower Commission (U. S. Employment Service) under authority of the Social Socurity Act. Beginning July 1942 expenditures for Mational Touth Admin-
- istration are shown under War activities.
 Includes departmental expenditures not otherwise classified
- and expenditures classified as transfers to trust accounts. etc., for Government suployee retirement and insurance funds.

Concists of appropriations and net contract mithorizations evailable on and after July 1, 1940. Excludes: (1) authorizations of the Reconstruction Finance Corporation and its affiliates for war purposes, and (2) unexpended balances of appropriations on June 30, 1940 (except immediately evallable funds from fiscal year 1941 appropriations) evallable for expenditure in the fiscal year 1941.

Contract authorizations have been reduced by later appropriations

which were earmarked in authorizing acts for this purpose.

Public resolution number. Represents the net amount of contractual anthority that the President may muthorize the heed of any department or agency of the Government to enter into for the procurement of defence articles, information or services for the government of any country whose defense the President deems vital to the defense of the United States. Includes 19,693,525,500 appropriated for the fiscal year 1942. Unappropriated contract anthorizations for the naval expansion

program are es follows;

Date approved	Public Law No.	Amount
Feb. 7, 1942 Oct. 26, 1942	կկ <u>յ</u> 763	\$ 2,400,000,000 (Estimated by Nevy
June 26, 1943	92	Department) 7.861.648.696: (Zetimated by Navy
		Department) 3,389,000,000 Total

Includes \$550,000 for the fiscal year 1941 and \$209,440,000 for the

fiscal year 19^{4} 3, of which $\44 0,000 wes made immediately available. Includes $\$7.851,^{4}$ 60 appropriated for the fiscal year 19^{42} . Includes \$30,000,000 for the fiscal year 19^{42} and $\$172,^{4}$ 39,000 for the fiscal year 1943.

Pending appropriations, as used herein, represent appropriation bills reported from the Committee on Appropriations to the House, or in subsequent stages of Congressional action before Presidential approval. Estimates of appropriations for war purposes for the fiscal year 19¹¹ reported by the President to Congress and submitted to the Committee on Appropriations, amounting to \$35,000,000, are not included. In addition, the Committee on Neval Affairs has reported favorably (Report No. 922, dated December 2, 1943) on further authorisations for the naval expansion program amounting to 3,500,000 tone of landing craft and fleet auxiliary vessels.

and fleet auxiliary vessels. Includes actual transfer of balances of the Bureau of Mariae Inspection and Nevigation from the Department of Commerce to Coast Ouard, Navy, in the amount of \$1,153,802 in accordance with Executive Order 9083, dated February 28, 1942. Also includes \$3,993,766 received as war contributions under authority of the Second War Powers Act and deposits of advance payments made by foreign governments to the Defense Aid Special Fund for the procurement of defense articles amounting to \$40,511.161.

Daily Treasury Statements.

In the fiscal years 1935 and 1936, \$91 millions and \$554 millions, respectively, were transferred from increment on gold to the working balance for retirement of national bank notes. In this statement, however, charges for retirement of national

bank notes are reflected directly against increment on gold in the years during which the retirements were antually made. Inactive gold in the amount of \$1,087 millions for the fiscal year 1937 is considered as a part of the working balance.

- Back Figures: For period between July 1, 1932 and December 31, 1939 see
 Annual Report of the Secretary of the Treesury for 1940, pp. 53-54.

 T Taxeble issues.

 p Preliciosry.

 1/ A complete record of market financing operations conducted by the Treesury for agencies issuing securities guaranteed by the United States may be found in the July 1942 issue of the "Treesury Bulletin", page 64.

- College otherwise indicated, each offering was at par.
 The amounts shown in this column were sold to Government investment accounts direct free amounts set selds for this purpose.

 Additional offering at par of security already outstanding.

 Proceeds of payment of refunded security applied to payment for new issue in effect an exchange and so treated in this etstessot.

 Certificates of indebtsdoess.

 I seem primarily for refunding maturing security.

Source: Daily Treasury Statements and reports of gross sales.

p Preliminary.

Less than \$50,000.

1/ At current redemption values except Series G, which is stated at par. Unclassified sales shown in the Daily Treasury Statement have been classified by series.

2/ Series A-D data are shown only on a funds received basis. Series E data are not available on a sales reported basis prior to July 1941; consequently data for the fiscal year 1941 are on a funds received basis.

5/ Estimated, except for Series G.

3/ Setimated, except for Series G. // Series A-D, the sale of which commenced in March 1935 and continued through April 1941, are 10 year discount bonds which were sold at 75% of maturity walue, yielding 2.90% r r annum if held to maturity; purchesse were limited to \$7.500 issue price in any one calendar year and from April 1, 1940, could be made only by individuals. Series E. 7, and G have been on sale since May 1, 1941. Series Z is a 10 year discount bond cold at 75% of maturity value, yielding 2,90% per annum if held to maturity; purchases are limited to \$3,750 issue price in any one calendar year and may be made only by individuals. Series T is a 12 year discount bond sold at 74% of maturity value, yielding 2.53% per annum if held to maturity. Series G is a 12 year current income bond, sold at par, bearing interest at the rate of 2-1/2% per annum, redeemable at par on maturity, or at stated prices less than par before maturity. Purchases of Series F and G in any one calendar year are limited to \$100,000 issue price for the two series combined (\$50,000 in the calendar year 1941) and may be made by any investors other than commercial hanks. For further details concerning redemption values and investment yields, see "Treasury Fulletin" for August

Daily Treasury Statements. Less than \$50,000. Source:

These notes were originally designed to help taxpayers set 1/ aside funds with which to pay taxes and were known as Treasury tax savings notes. Series A notes were designed for the small and moderate taxpayer; series B and series C notes were in-tended for the large taxpayer. When the collection of taxes through withholding at the source commenced, the need for series A tax sewings notes disappeared and their cale was discontinued. Esdemption provisions on series A notes were re-laxed to provide for the payment of interest on notes there-after redeemed for cash (see footnote 2/). Sale of series C notes which were designed for the investment of idle cash reserves as well as the accumulation of tax reserves was con-

tinued and the notes were designated Treasury savings notes. Ssries A notes, which were sold from August 1, 1941 through June 22, 1943, yield approximately 1.92 percent per annum. Through June 22, 1943 the notes could be redeemed for cash only at the original purchase price; since that date, the notes have been redeemed for each at the tax payment value

current at the time of presentation. (See also footnots 1/.) Prior to October 1, 1943, the maximum amount which could be used in payment of each class of tax (income, estete, or gift) by each taxpayer during each taxable year was limited to \$5,000 par value; thie limitation was removed as of that date.

Series B notes were sold from August 1, 1941 through September 12, 1942, to yield approximately .48 percent per annum. The amount which may be turned in on taxes is unlimited. The notes may be redeemed for cash only at the original purchase price.

price.
Series C notes went on sale September 14, 1942. Interest accrues each month on a graduated scale (see "Treasury Bulletin" for August 1943, page 4) to yield approximately 1.07 percent per annum if held to maturity. The amount which may be turned in on taxes is unlimited. The notes may be redeemed for cash six months after the date of issue at the tax payment value current at the time of presentation. Prior to July 27, 1041 and 1940 of 30 days was remissed for cash redeemed. 1943, notice of 30 days was required for each redemption. See also footnote 1/.

Daily Tressury Statements commencing November 1, 1942; prior Source:

thereto, Post Office Department.

| Tigures for November 1942 and following months are not etrictly comparable with earlier months because of the shift to a Dally Treasury Statement basis. Stamps sold prior to October 1, 1942 were known as postal savings stamps and were obligations of the Postal Savings System but subsequently became public debt obligetions. Estimated on the basic of samples conducted by the Post Office

Department.

3/ Includes minor amounts which were exchanged for postal savings

certificates prior to November 1, 1942. These did not aggregate in any one month more than \$26 thousands nor more than 0.9 percent of total redemptions.

total redemptions.

Sales and redemptions commence with May 1, 1941 when the special defence ceries of stamps went on sale. The amount of the old series of postal carings stamps outstanding on April 30, 1941 was \$150 thousands.

Details not evaluable for May, June, and July 1941.

Net of sales less redemptions. See footnote 1/.

Does not include amounts transferred from Postal Savings System to the Treasury to cover outstanding stamps.

Source: (1) Total amounts outstanding: Daily Treasury Statements;
(2) Securities held by U. S. Government agencies and trust funds:
reports of the agencies and accounts with the Treesury; (3) Securities held by Federal Reserve Banks: Federal Reserve System.

Preliminary. Less than \$500,000.

Excludes matured securities and obligations cold directly to the

Treasury.
Excludes Exchange Stabilization Fund.

The total amount of securities held by private investors is calculated by deducting from the total amount of securities outstanding, the securities held by U. S. Government agencies and trust funde and by Federal Reserve Banks.

Net Market Purchases or Sales of Government Securities for Treasury Investment Accounts 1 (In millions of dollars)

Less than \$50,000.

U. S. Government agencies whose investments are handled through the facilities of the Treesury Department. This table also includes purchases under Section 19 of the Second Liberty Bond Act, as amended, and excludes the Exchange Stabilisation Fund.

^[1] Consists of purchases or sales made by the Treasury. Treasury investment accounts comprise (1) trust funds which by law are under the control of the Secretary of the Treasury or of the Treasure of the United States, and (2) accounts under the control of certain

The following tables present summary data from the Treasury survey, as of October 31, 1943, of the ownership of securities issued or guaranteed by the United States. The large commercial and savings banks and insurance companies covered in the survey account for approximately 95 percent of the holdings of United States Government and Government-guaranteed securities held by all banks and insurance companies in the United States.

Note: Revisions of previously published data on life insurance companies and on fire, casualty, and marine insurance companies appear on pages 52-63 of the November issue of the "Treasury Bulletin". These revisions have been made quarterly from March 1941 through March 1943 and also for April 30 and May 31, 1943.

- yield, the excess of price over zero yield is given in the yield columns in thirty-seconds.
- Prices represent the mean of closing bid and ask quotations in the Mortgage Corporation, and Home Cwners' Loan Corporation bonds for the period prior to October 1, 1939 represent closing prices on the New York Stock Exchange. "When issued prices are included beginning October 1, 1939. Dates of highe and lows, in case of recurrence, are
- Computed on mean price to call date when mean price is above par and to maturity date when mean price is below par.
 Included in average of long-term taxable Treasury boads shown later
- in this chapter.
- after issue date.

- efter issue date.

 Quoted on yield basis.

 This sacurity was issued in the amount of \$3,520 millions on December 1, 1943.

 Excludes Federal Housing Administration debentures and issues held entirely by Government agencies.

 This security was issued in the amount of \$1,006 millions on December 2, 1943.

 It Included in average of long-term partially tax-exempt Treasury bonds shown later in this chepter.

 Excludes postal savings bonds.

3/ Computed on mean price to call date when mean price is above par and to maturity date when mean price is below par.

1/ Excludes issues completely held by Farm Credit Administration agencies.

5/ Taxable issues.

5/ This security was issued in the amount of \$64 millions on December 1, 101x

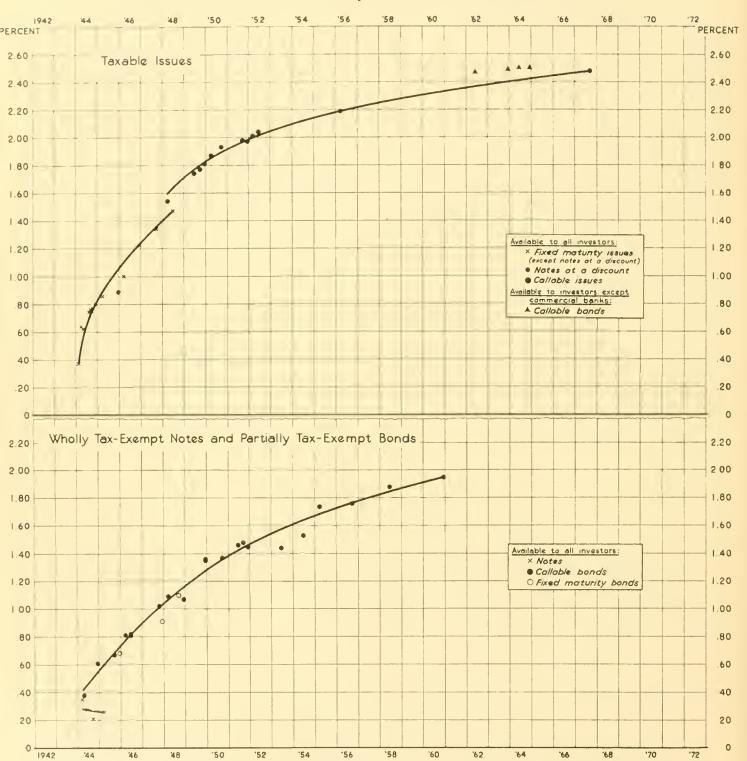

7/ Not quoted.

When the price of a security is such as to result in a negative yield, the excess of price over zero yield is given in the yield columns in thirty-seconds.
 Prices represent the mean of closing bid and ask quotations in the over-the-counter market. "When issued" prices ere included beginning November 1, 1941. Dates of highs and lows, in case of recurrence, are the latest dates.

Taxable issues. This security was issued in the amount of \$64 millions on December 1, 1943.

YIELDS OF TREASURY SECURITIES NOV. 30, 1943

Based on Mean of Closing Bid and Asked Quotations

Explanation: The points represent yields to call date when prices are above par, and to maturity date when prices are at par or below. The smooth curves for the various classes of points are fitted by eye. Issues for which an exchange offer has been made or which are due or callable in less than 3 months are excluded.

Basis of Computation: (1) Treasury bond yields are computed on the basis of the mean of bid and sek quotations in the over-the-counter market, beginning September 2, 1941; previously, closing prices on the New York Stock Exchange were used on days when sales took place on the Exchange in a particular issue and the mean of closing bid and sek quotations on the New York Stock Exchange on days when no sales took plane. (2) Corporate bond yields are computed on the basis of closing prices on the New York Stock Exchange and the New York Curb Exchange; on days when an issue does not sell, the price of the last preceding sale is used. does not sell, the price of the last preceding sale is used.
Back Figures: See "Treasury Bulletin" for July 1941, pages 21-26, and

1/ Average of partially tax-axempt Treasury bonds seither due nor average of partially tax-axempt freesury come netter one nor callable for twelve years. Partially tax-exempt bonds are those the interest on which is exempt from the normal rates of the Federal income tax. (In addition, interest derived from \$5,000 aggregate principal amount of partially tax-exempt Treasury

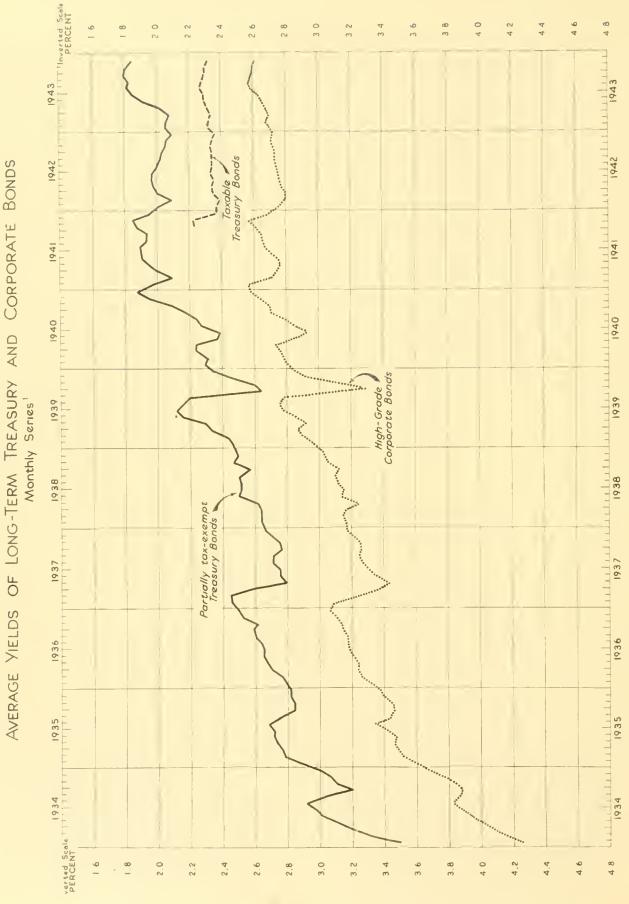

bonds and United States savings bonds issued before March 1, 1941 is exempt from the surtax rates of the Federal income tax.) 2/ Average of taxable Treesury bonds neither due nor callable for Average of taxable treasury bonds heither due nor callable it twelve years. Bonds which may not be held by all classes of investors (the 2-1/2's of 6/15/62-67, the 2-1/2's of 12/15/63-68, the 2-1/2's of 6/15/64-69, and the 2-1/2's of 12/15/64-69), are excluded from the average. Taxable bonds are those the interest on which is subject to both the normal and surtax rates of the Federal income tax. This aver-

- ags commenced October 20, 1941.

 Jero discussion of composition of high-grade corporate bond everage, see "Troacury Bulletin" for April 1943, page 51.

 Monthly everages of daily figures. Prior to April 1, 1938, corporate bonds are everages of Saturday figures.
- 5/ On days when the axchanges are closed, the date and prices of the previous day are used.

 6/ Holiday.

Reporte received from the corporations and agencies. It is in this column are the only ones in this statement which constitute a charge against the Federal Budget. They represent

constitute a charge against the Federal Budget. They represent amounts of funds drawn against available appropriations. Except for the H.O.L.C., sales of obligations in the market, as shown in this column, are reduced by the amount of obligations which have been retired (including those which have in effect been refunded through the sale of obligations to the Treasury). In the case of the H.O.L.C., the original amount of obligations sold in the market is shown in this column and the retirement and refunding of these obligations are shown as "Retirement of obligations issued in exchange for mortgages" in the statement of uses of funds.

of asse of funds. Includes \$3,000,000 M.I.R.A.; \$97,000,000 R.F.C. included in notes canceled by the Tressury (See footnote 4/); and \$143,950.524 restoration of cepital impairment, which is not of repayments to the Treasury of \$43,756.731 on the basis of March 31, 1940 appraisal, and \$27,815,514 on the basis of Warch 31, 1942 appraisal of the corporation, pursuant to Public No. 442 - 75th Congress, approved March 8, 1938.

These funds were furnished by the R.F.C. from the proceeds of its notes cold to the Treasury, such amounts being included in

the total of obligations of the corporation canceled by the Secretary of the Treeeury pursuant to the Act of February 24,

The R.F.C. purchased the etock of the Federal home loan banks The R.F.C. purchased the etock of the Federal home loan banks from the Treasury Department on February 20, 1941. The net effect of this transaction is the same as a sale of stock to other agencies, and is chown ac such for purposes of this report. Includes the Electric Home and Farm Authority which was transferred for purposes of liquidation to the R.F.C. by Executive order effective October 31, 1942.
Comprises Cargoes, Incorporated, Defense Homes Corporation, Defense Supplies Corporation.

Defense Plant Corporation, Defense Supplies Corporation, Institute of Inter-American Affairs, Institute of Inter-American Transportation, Inter-American Navigation Corpora tion, Metals Reserve Company, Petroleum Reserves Corporation, Rubber Development Corporation, Bubber Reserve Company, Smaller War Plante Corporation, U. S. Commercial Company and War Damage Corporation.

8/ Receipts from the sale of property acquired in liquidation of loans are shown as "Sale of other property acquired".
 2/ Includes \$56,783,100 paid-in capital stock held by member io-

stitutions.

Source: Reports of collections.

ce: Reports of collections.

Less than \$500.

1/ Excludes collections for credit to certain trust accounts for territories and insular possessions, etc.

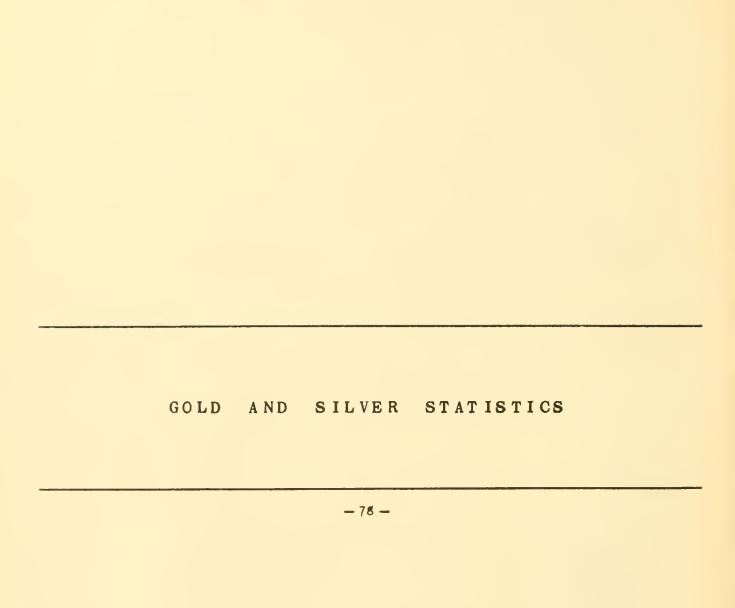

2/ Consists only of tax collections under the Current Tax Payment Act of 1943 for which returns have been filed with the Collector of Internal Revenue. Collections as shown in Daily Treasury Statements consist of withholdings deposited in Government depositaries in

addition to payments accompanying returns filed with the Collector of Internal Revenue.

Current collections consist in general of taxes paid within twelve months after the close of the taxable year for which the return was

filed.

4/ Tax imposed upon the manufacture and sale of, and the occupational tax on, mixed flour repealed as of November 1, 1942.
