# Statement by Secretary Vinson on the Extension of the Stabilization Act, before the House Banking and Currency Committee, March 27, 1946 

I all always very pleased to appar before thia able Committea of the Congresa. Before thie Committee comes some of the moat 1 mportant legialation considered by the Congreas. I have ever found your work to be painataking and thorough and all of the members of the Committee have a high devotion to duty and honesty of purpose.

Of all the 1 mportant subjeots you are called upon to conalder, none, in my judgment, outranka the prevention of inflation. The extension of the Stabllization Act, without crippling amendmenta, la the blggest aingla aapeot of our battla against inflation. We won this battle year after year during the war, and I am confldent that now we are not going to walk off the fleld and loae by default.

The battle againat inflation was my direct asalgnment from our great prasident, Franklin D. Roosevelt, for nearly two years. Later in the offlce of War Mobilization and Reconveraion, I had a no leas vital intereat in economio atabllization mhlle William H. Davia was the fleld general in the offlce of Economic stabllization. At all times both of us had the courageous and able help of Choster Bowlea, the Adminiatrator of the offlce of PriceAdminiatration. I should like to report also that Paul Porter was one of my aealetanta while I was in the offloa of Eoonomic stabllization. He did a fine job for ue there, and I have full confidenoe in his ability to adminiater with sucoesa the oflioe of Prioe Administration while Cheater Bowles 18 carrying out the over-all program of eonomic atabllization. Wa ware all fortunate to be working under a law that gave us full opportunity to acoomplish the resulte that were desired and expeoted. We had a good team to adminiater the law. And my brief summary shows that the team, while having some ohengea, 1 s still intact.

It 18, I belleve, a part of our oommon knowledge that war brings powerful inflationary preserures to bear on the economy. This is beoause a large proportion of the population ia removed from 1 te normal taske of making goods and rendering aervicas for the olvilian population, and is placed, instead, in the buainess of making the goode and rendering the services of war. The product of the pereons in the armed foroes and in
the war induatriea 18 not of a type whioh can be sold to the civilian population; but the parsons producing it continus to recalve incomes, and thase inoomes will be spent, in large part, on the producte of the persona still in the civilian industrias. During war, all of the population 1a living on the produot of only part of it.

An upward pressure on prices is inevitable, therefore, and can only be counteracted by vigoroue measures on the part of the Government. In the case of the war whioh we have just finlahed, theae upward pressures ware the most powerful whioh have yet bean generated in the Amerloan economy; but the American people, acting through their Government, combattad them so vigoroualy that the riae in prices during the war which has juat ended was leas than in any previous major war in which the United States has been engaged.

For a oonalderable period during World War II, ebout half of the national product was going for war purposes. Thia compares with a maximum of only about one-fourth of the national product going for war purposes in World war I - and then for a mach shorter period. Yet, retall pricea pald by consumers, as meaaurad in each case by the indax number of the Bureau of Labor Statiatlos, advanced only 31 percent between the outbreak of the war in Europe in 1939 and VJ-Day, as compared with a rise of 62 percent between the outbreak of the war in Europe in 1914 and Arm1etioe Day.

What were the meaaures by which pricea were thus held down during World War II? They may be grouped into threa major olasese: taxation, the atimulation of avinga, and direct controla over prices and the physioal allocation of goode.

All three of these methods were applied also in World War I; yet prices rose much mora, although in response to weaker preasurea. Why, then, were we so much more guocesaful in world War II?

In the firet place, we applied all of the wethods in a more vigorous fashion. This was made possible, in large part, beoause we etartad sooner. We took our flrst etep toward the war-
time level of taxation with the enectment of the firet Revenue Act of 1940 in June 1940; we formed the Advieory Commiesion to the Council of National Defense in May 1940, and so oommenoed the organization of the aliooation of goode on the physioal lavel; we formed the Defense Savinge Staff in March 1941, and so oommenoed the organization of war asvinge. In world War I, all of the corresponding eteps wore taken efter we had entered the wer.

As a consequence, in part, of starting earlier, we have eohleved better resulta on the 118cal front in world War II. From July 1, 1940, ebout the beginning of the program of defense Pinance, to the present time, 4 percent of the expenditurea of the Federal Government have been covered by texation and other nonborrowing receipts. Thie compares with 33 percent for the World War I period beginning with the outbreak of the war in Europe and continuing to June 30, 1919.

The moet important difference between World War I and World War II, however, $1 \theta$ the difference in emphasis on the different types of controla. We learnad a great deal from experience. In world wer $I$, very little emphasis was placed on direct controla. There was no rationing at the retall level; and no publle announcement of fized prices, even of war gooda, until September 1917. Furthermore, such price oontrol and allocation as exleted were removed almoat 1 mediately after the Armistice.

The inflationary pressures generated by a war continue for some time after it has been concluded on the battleironte. In World War I, retall prices rose 62 percent in the 52 monthe between the outbreak of the war in Europe in 1914 and Armistice Day. From Armiatice Day untll June 1920, retall prices rose another 46 pointe, making a total of 108 percent above the 1914 lavel. On the other hand, retall prices have rieen only 0.5 percent between VJ-Day and January $15,1946$.

The problem before us 1 e to prevent a repetition of the experience efter world War I. We oan prevent it 11 wa try; and one of the moet $10-$ portant things to do 1 e to extend the stabilization act with as little delay ae poesible.

The task ahead of us does not appear ao dilflcult 11 we remember the work that we have done. During the fight againet the armed enemy abroad and the insidious enery of inflation at home, we had our headaohes and our heartaches. There were ahortagea of raw materiale. There were great transfara of manpower from peacetime purauite to
war production, and from the homea to the factorlee. There were kinke in the production ilne and in the transportation ayetem. In large part we had to prepare for war after the battle had etarted. And we were ilghting enemiee who had prepared for years. Yat we overwhelmed the onemy With our armed might, had more than enough to live on at home, and kept our eoonomy on even keel.

After the ahooting etopped we had to change over again, thia time from war to the pursulte of peace. Again we have had our probleme. By and large, however, the job 1 s done, and we can eay it wae well done.

Today we oan be more optimiatio about the future than ever before. It would be pathetio if .wo muffed thie grend opportunity. We must maintain our controle over inflation a little longer.

In view of the work I have had in the pleld of atablilzation, I have, of courae, a strong personal interest in the gubjeot. Of mach more importanoe, however, 18 the faot that as Secretary of the Treasury I have a vital official intereet in the prevention of inflation.

Two of the most 1 mportant aubjeote in the Treasury Department are taxes and the management of the publio debt. Inflation, or ite prevention, hae a direot effect on both probleme.

At present we are travelling a ound and pleaeant road. Our recelpte are larger than the estimates made at the time of the presidentis Budget Message. In fact, our net reoelpta from July 1, 1945, through Laroh 22, 1946, have been only 2 peroent leas than during the corresponding period of the previous ifeoel year. Our revenues have been larga because our national income has stayed at a hlgh level. Meanwhlle, expenditures are amaller than the estimates made at the time of the Budget Yeasage. In faot, our expenditures in February were $\$ 3,500$ million againet the high of $\$ 9,700$ million leet June. This decline of nearly two-thirde in elght montha $1 e$ becauee wo have all made a wholehearted effort to leave the wartime basia and edopt the peacetime course. The two together mean that we are well on the way to a balanced budget. That has a novel sound, but it io a happy altuation which I am glad to report to this Committee, to the Congrese, and to all the people of the country who have the same problem in their dally lives.

With our current expenditures much lower, the cash balance of the Treasury can be lese.

Chlefly by this means wo have been able to make two substantial reduotions in the public debt. That, too, has a novel sound. In faot, they are the firgt substantial reductions in 16 years.

In apite of this genarally good altuation, taxes must remain high and the burden of oarrying the nublic debt 1 s still elgnifloant. The raising of gubstantial revenues and the carrying of the public debt can both be done without undue burden to our economy. Can be done, that $1 \mathrm{~s}, 11$ our economy 18 maintained at a high level.

The only desirable, sound, long-terll solution to the problems of revenue and debt management is high-level produotion, employment, and national income. With our eoonomy in high gear the burden will be much 11ghter. The war has demonstrated that we have a $\$ 200$ billion nation.

As Secretary of the Treasury I want a sound and expanaive economy. And on that point the prevention of inllation bas its all important 1 mpact. We cannot have that atable, high-level economy with full production, full employmant, and high national income, nor can wo meet auoceasfully our revenue and dabt management problems, $1 f$ we have the dislocation of all valuea and relationships throughout our economy that comes with a bad case of inflation.

We have built up a tremendous demand for most consumer goods. This demand 18 baoked up by large avings. The amount of aurrency, bank deposita, and Unitad states securities owned by all non-bank investors has inoreased from about $\$ 82$ bllison at the end of 1939 to about $\$ 300$ billion today. Our wante, fortified by these liquid reserves, can give us the 1 mpetus to begin a volume of peacetime produotion far greater than we have ever seen. Moreover, these savings can be the Ilywher for our economy for a long time to come. This can give us the future that all Amarioans want. It oan be the pleasant aftermath of war.

This result, however, is not an inevitable one. We could quickly spend ourselves in the diseipation of spiraliing prioes and speculative markets. We have the heart and the mind to avoid thia catastrophe. Let ua have the fortitude and the wit to carry out the decision that we know 18 right. Our ohildren would look back and oonsider it the moat pathetio thing our generation did, 11, after thwarting the inflation ogre all through the war, we gave up jugt before the job was Iniahed.

Production to meet the demand is the insal
answer. Some quarters, taking advantage of the appeal of this end, have suggeated that the removal of priae controls is the beat way to stimulate production and 18 therefore the best way to beat the inflation danger. Theas people, consolously or unconsciously, overlook the neede of the interim period. Although we are well on our way of peacetime production, we cannot produce enough tomorrow or the next day to moet the demand that has accumulated over months. During that period, the removal of price control would be stimulating - stimulating in a fancical, dizzy sort of way. In my judgment, there mould be go much effort spent in beating the market, in buying and selling materials and inventories, in conoentrating on the speculative gain, that we would find total produotion decreased rather than inoreased.

I therefore take 18 sue with those who gay that removal of prioe control. W111 stimulata and inoresse produotion. This sounds 11 ke the 1946 veralon of the old argument that price control has stilled production. Prioe control did not stille produotion during the war and in spite of the obataclea wa bave had, the expansion of peacetime produotion in the period since VJ-Day as a whol has been more rapld than in any other period of our history. The present phyaical level of produotion in the whole economy ia now above the average of the year 1941, despite the tremendous probleme which have been presented to induatry in the past year by the change-over from a wartime to a peaoetime demand. When the pipeInes are full, most types of consumers goods Wll be on the market in volume. But the extension of the Stabllization Act 18 necessary to hold the 11ne until supply onoe more matches demand.

When are aerved up tompting departures from our present program, lat us romember that the record under prioe control 18 remarkably good. Let us recall again and again that the best index of retall prioes we have showed an inorease in the 72 months of this war of one-half what it did in the 52 months during World War $I$. Let us reoall that after November 11, 1918. prices continued to increase rapidiy until June 1920 whan they reached a point double what they ware at the start of the war. Then came the orash. This time prices have been relatively stable sinoe the end of the war. Fo are in a good position to avoid an inseoure boom followad by a terrible oollapse. Let us not undo what we have done. I fully endoras the axtension of the Stabllization Act.

# Statenent by Secretary Vinson on the Reduction of the Debt Limitation, before the Senate Comnittee on Finance, April 23, 1946 

I am apnearine here today to five you my v1ems on S. 1760 , \& blll to decrease the debt limit of the United states irom $\$ 300$ dillion to $\$ 275$ blllion.

I am in complete accord with the purpose of this bill, and I wish to say so clearly at the beginning of my statement. Not only do I think that the public debt should be reduced, but I also think that it should be reduced as rapidiy as noasible consistent with the maintenance of maximum erployment and production in the economy; and as Secretary of the Treasury I am here to tell you that it 18 the Administration's objective to do so.

However, I feel I ahould mention at the outset that the debt limit should not be viewed apart from all of the factors that cause the debt to po up or one occssion and go down on another. The amount of the public debt is a residual ilgure. Chanfes in it come about only after the Treasury has taken into eccount all of the Government's recelots from taxes and other sources in relstion to the volume of expenditures that have been authorlzed by Congress.

If there ars not enough fund a avallable from recelpts, money must be borrowed by the Treasury to augment its oash balance so that the expenditure checke can be paid as they are preaented. Under the circumstances, the public debt nust, of necessity, go up. If, on the other hand, there are more than enough funds avallable from taxes and recelpts to meet the expendituras authorized by Congress, then the Treasury is able to take some of this surplus and use it to pay off some of ita securities. Under thase circumstances, the nublic debt 1111 go down.

In the inal analysia, therefore, it should be clearly understood that the amount of the pub110 dett is determined by Congreas and is the end resul: at the Treasury of the appropriation and the revenue legislation.
mhore may, it 18 true, oe some Iluctuation in the volume of the public debt in extraordinary rerlods of short duration when the size of the Trcasury's cash balarce 1 b belne increased or is
being decreased significantly. But, in the final analysis and for periods of extended duration, the debt w111 decrease $1 f$ revenues exceed expenditures; and, conversely, the debt will ircrease if expenditures exceed revenues. The debt limit 1日, therefore, not the controlling factor. The existing limitation has not meant that the public dabt is a penny higher today than it otherwise would have been; nelther is it a penny lower.

This does not mean to bay that I am agalnst having a debt limit. On the oontrary, the Treasury has alwaya belleved - and I too have belleved both when I've been In and out of the Treasiry that a debt limit 13 a good thing to have. Its existence requires the officials of the Treasury to come to the Congress from time to time, particularly, as 'In the past, wher findamental changes in the debt structure are going on, an: to set forth before Congressional committees the detall of the public debt pleture. In mopinion, the review of the situation that results 18 beneficlal.

The point that $I$ want to make $1 s$ only that the limit in itself does not reduce the debt, and that the ligit ahould not be set so low that it wlll remove frox the Irasury aome of the flexibillty that it needs in current public debt management operationa. I belleve the present bill seta the limit a little too low; and I shall give you some flgures on this in a fev minutes. Before I do so, however, I should like to make a few coments on the subject of public debt management. Debt management is a subject that many reopie are just beginning to think about, but it is a subject that the Treasury has been doing something about since the very beginning of the war.

You can't defer tre planning of post-war public debt management until the debt has grown from $\$ 48$ billion to $\$ 280$ bllilon. You have to plan that management as and when the debt 18 ac tually incurred.

At the outset, for example, it was decided that the various classes of investors should be sold securlties which fltted thelr requirementa. This meant that they should have the narticular
tynes of securities that would best suit them and that they should have the particular length of maturitles that they needed.

To give the various classea of Investore the various securitiea required, a broad liat of issues was offered by the Treasury. Some of theas securities were of the savings bond type that were not transferable, and were redeenable on demand. Some of these securities were transferable in the market, but were restricted as to bank ownership for a period of years. More than half of the total increase in the public debt, that occurred in the lsat six years represented theas typea of securlities. Today, those securitios cannot move into bank portfollos.

This was planning on the part of the Treasury, and I belleve $1 t$ was wise planning. Today, holders of Savings Bonds who need money can come directly to the Treasury and get it through the facllitles of the Savinga Bond redemption agenta. That was nlanning too; and there ia no aelling of securities on the market by amall investora. There ls no repetition of the praasure on bond prices that occurred after the flrat World War. Prices of Liberty Bonds fell to a low of 82 in the 5prine of 1920. As this occurred, many people sold thelr securities in the fear of further loases; whlle others found it neceaary to get their money, regardless of price. Now, the amall holders of Savings Bonds are protected agalnat price risks because the bonds are redeemable according to the values aet forth on their face.

There was also planning by the Treaaury with respect to the narticular length of maturity of the laaues that were sold to the varlous clasaes of investora. A conscioua effort was made to fit the dobt to the needs of those inveator clasea. Accordingly, about 90 percent of the securities held by commercial and Federal Reserve Banks mature within ten yeara; almilarly, about 80 percent of securities held by norifinancial corporationa mature within thia period of time.

On the other hand, in the case of Inaurance companies and savings banka, long-term securities predominate. About 75 percent of the holdinge of these two groupa of investors do not mature untll after ten yeara. The amount of the debt held by the different claasea of 1 nveatora and the compoaltion of their holdinga will, naturally, shift with the pasaage of time and the changling character of our economy. This maans that the debt w111 have to be tallored to meet theae ahlfting
demanda. Thia la part of the pollcy of flexible debt management.

I have gone into these mattera in aome detall because I want to make clear that the Treasury planned ita poat-war managemant of the debt from the beginning. The Treasury is now reducing the debt; and $1 t$ has so managed its debt operations that the eritire reduction haa been effected In banix holdinga. In fact, the reports of leading commercial banks and of the Federal Reaerve Banka following our April 1 debt payoff indicated a combined reduction in holdings of Government socurities in exceas of the total debt reduction since the end of lat year.

The reduction of the bank-held debt has come about directly as a result of the applisation to debt repayment of a part of the caah balance that was left over from the Victory Loan. Since that Loan closed, the Government has not sold any securltiea to the public in order to ralse new money (except Savinga Bonds which have been on continuous ale for over ten yeara, and Savings Notes which are used primarlly as tax anticipation instrumenta).

The Government has, inatead, been paying off maturing aecurities with a conalderable degree of repldity. On Narch 1 , the Treasury pald off $\$ 1$ blllion of maturing certificatea. On March 15 , it paid off $\$ 1.5$ billion of maturing bonda and notes. On April 1, it paid off $\$ 2$ blllion of maturing certiflcatea. He have already ennounced that on May 1 , the Treasury $w 111$ pay off an edi.tional $\$ 1.6$ billion of certificatea.

After these tranaactions have been completed, and after allowing for such other public debt tranactiona as have occurred during this period, the public debt will ahow an aggregate reduction of $\$ 7$ billion in the ehort period of two months between February 28 - the date on which the laat of the Victory Loan money was pald into the Treasury - and liay 1.

The alze of the Treaaury's caah balance will Deralt ua to pay off other meturinf securitiea from time to time as we flnd it convenient and desirable. Every movement on this account has lts effect on the flnancial marketa, becaure the public debt is so intimately woven into the entire financial strusture of our country. On the occasion of each maturity of a nublic debt obllEation, I have found it necessary, therefore, to go over in detall the information in the Treasury
on a number of factors. First of all, there are matters with respect to the ownership of the securities and the effect that repayment of these obligations would have on the money markets. I al so have to go over the Treasury's current oash position and investigate the prospective cash outlook before determining how much of the maturity, if any, should be pald off.

In this connection, I have been very much pleased - EB I know you have been - by the oontinued improvement in the Federal budgetary eituation. Revenues for the flacal year 1946 have proved to be considerably higher than we had originally anticipated. This has oocurred because the reconversion of our economy from war to peace was more rapid than even our most optimistic hopes.

On the expenditure side of the picture, the Government has been reducing its expenditures as rapidly as possible, and more rapldiy than originally expected. The expenditures of the Government reached a high of $\$ 9.7$ billion last June. By March of this year, they had fallen to under \$4 billion and the decresse is continuing, so that average monthly expenditures in the fisoal year 1947 will be quite a bit lower than the March level.

As the President announced ten days ago, we are well on the way toward a balanced budget because of the strides we have made toward full pescetime production.
"It is the alm of our fiscal polioy", the President sa1d, "to balance the budget for 1947 and to retire national debt in boom times such as these. In our present ifght againct inflation, fiscal policy has a vital role to play. A continuation of our present policy, which is to malntain the existing tax structure for the present, and to avold nonessential expenditures, is the best fiscal contribution we can make to eco-

1/ The regular "Bulletin" table on page 28 prosente all of the data in the oumary and reconoiliation rem ferred to, although in a comewhat differant arrangoment.
2) Secretary pinson suggestod in tho sbove atatement that the limit on the face anount of Covernment obilgatione be reduced from $\$ 300$ blllion to $\$ 285$ bll110n. At the conclueion of the etatement Senator
nomio stabillty."

The resson I have diecussed these matters in detall today $I_{\text {e }}$ that $I$ want to make a particular point to you; that 1s, the Government's f1scal outlook is good at this time, its debt is in good shape, and we are managing it well.

In setting a figure for the debt limitation, an adjustment must be made between the present outstanding debt and the amount of the statutory debt limitation. The principal item relates to the unearned discount of anproximately $\$ 11$ billion on United States Sevings Bonds. The law requires the inclusion of United States Sevinge Bonds at full maturity value for debt limitation purposes; whereas, the debt itself includes these bonds at any given time at their current redemption value.

On the other hand, there 1 a about $\$ 1$ billion of debt items which are not subject to the statutory debt limitation. The attached summary and reconclilation may be helpful in this connection. It ahows the exact relationship on March 31 between the grose public debt of $\$ 276.6$ b11110n and $\$ 286.3$ billion under the statutory debt limitation.1/

In view of these facts, therefore, I should like to suggest to your committee that the blll provide for a reduction in the debt limit to $\$ 285$ blllion from the present level of $\$ 300$ blllion. I should like to suggest further that we take this matter up again sometime next year. ?/

In closing, I should like to emphasize the importanoe of maintaining a strong tax stmucture in order to pay off debt as rapldiy as poesible at the present time. This has the sdded advantage of combating inflationary preserures and will help us stabilize the economy at the present high level of produotion and employment.

[^0]
# American Prosperity and World Prosperity Are Interlinked 

The folloring addrens was dellvered by secretary Tineon before the Buffalo Chember of Commerce at Buefalo. How Yort on March 29, 2946.

I am happy to vieit the great state of New York. I am particularly pleased to be in Buffalo and to meet you folks. You know, I come here with a derinite preconception. I belleve that you folks are like my folks in Kentucky, and whether you belleve it or not, I can assure you that most of the people in Washington are just folke too, doing their work the beat they know how. And by and laree they are doing a good job.

What the future holda for us 18 always an interesting queation. I wish to discusa some of our economic policiea which $I$ am convinced will help us to have a future of peace and proeperity.

Baalcally we have a twofold job. We muat bulld a strong and sound economy in America. You have heard many timea of late, I am aure, that the economy of the world muet be etable or we cannot have an expanding economy at home. With that I do not disagree, but I wish to emphasize, In turn, that the world does not atand a chance of having a etable economy unleas thle country hae a sound, high-level economy. Other countries recognize the major 1 mpact that our domeetic pollcies and achievements have upon the condition of the world. Let us recognize their importance at least as much and put our domestio economy into h1gh gear.

The aecond basic part of our job le to cooperate with other nations in bulldine a cound world economy. We mat do our part or more in making international cooperation work and in eatablishing healthy economic relationehips among nations. Such a course $w 111$ mean much to other peoples, but it is not simply, or even primarily, a matter of altmism. Aseisting in the building of a eound world economy is in our own selfinterest. A world economically healthy meame that all nations can produce more. It means also a large llow of trade amone nations. That aeans more markete for American producta. That meane we can buy more goods to improve our atandard of living. A high level of forelgn trade is a vital and integral part of our domestic program of full production and employment, with a higher national

income and a better standard of 11 ving.

Our basic aconomio objectives can be atated almply; vast production, a good job for every man aeeking employment, a high national income, and a full Amarioan atandard of living. To ind and carry out all of the ways and means to theae s1mply atated but most important objectivea $w 111$ require attention and aotion on many fronts.

During the war our people learned what it is like for the job to seek the man, and they also learned what a terrifio productive capacity thio nation has. Our people want this high-level economy duplicated in peacetime. They will feel that something is wrong, as indeed it will be, if it takes war to make a full economy.

Cur people wioh to reach these economic objeotives under the syatem that bullt ua a great nation and will build us a greater nation - the ayetem of free enterprise. Again they are right, for the aystem of free enterpriae not only preservee the human values we hold dear, but it affords the beet opportunity of material progreas. There are, of course, threata to the syatem of free enterpriae. The blggeat threat 1 a maes unemployment.

The grest depression proved that mass unemployment could topple our system. The pleas of the false prophets were atrong. It 1 e ever to the credit of the American people that they did not succumb to the etarry-eyed plane of men with liquid promiaes. Strong ae we are, it is the wiger course to avold the danger of overtemptation.

Today we have the beet opportunity that we have ever had for mase production and employment. During the war a tremendous demand was bullt up for moet coneumers' gooda. At the asme tima a large reaervoir of asvings to back up that demand was created. Induatry 18 eager to match that demand with production and it is eager to try out ita newly learnad production know-how. We certainly have a made-to-order opportunity to reach
a hizh level of production and employment. This can be one aftermath of war that is pleasant.

This good fortune, however, is not inevitable. We could diasipate quickly our energy and our reservea in apiralling prices and speculative marketa. We muat continue the pight against inplation. All through the war we beated this inaldioua enamy. Let us win the tenth and final round.

We muat maintain our program of praventing inflation not only tirough direct controls such as orice cellings but also through less direct deterrents like taxation. We need large revenues not only to help the battle againat inflation, but al so for the very practical purpose of meeting our expenditures.

Our nation should strive to make both anda meet just as every famlly that composea that nation must do. The post-war budget will be large. The legacy of the war - in debt, obligatione to vetarana, and maintenance of auficient armed strength - accounts for moat of the increase in our expenaea.

We mean to balance the budget as soon as possible. We mean to reduce the publlo debt whenever posalble and as much as we can. On both scores I can report we are well on our way.

Since the President transmitted the budget to Congress in January, experience has ahown our recelpts to be higher and our expenditures to be lower than was eatimatad at that t!̣m. Our receinta have been greater than estimated because our national income has remalned at a very high level. Our expenditures have been'less than estimated because all of Warhington is working to cut back to a peacetima basis. In the elght months between June 1945 and February 1946, the rate of our expendituras was decreased nearly two-thirds. We are on the road to a balanced budget. In view of the fact that our current expenditures are much leas, the Treasury does not need to maintain as large a cash balance, and we have twice made substantial reductions in the public debt. Each reduction of the debt means the carrying charge is leas and our expenditurea in turn go down. Yes, the different factors of a sound, prosnerous economy can influence and
atrengthen each other for good just as during a depresaion general contration can lead ua into a violoua downward cycle.

The only desirable and long-term aolution of our tax problem and our debt problem is a high lavel of production, employment, and national income. A large tax from a high level of income is less burdenaome than a amall tax from a low level of income. We can have that high level of income. The war has demonstrated that this is a $\$ 200$ billion nation. It has also been demonstrated that we can have mass employment. We are on the road to a aound, expansive economy under the syatem of free enterprise.

Our foreign economic policy goes hand-in-hand with our domestic program. For some time this country has stood for international economic cooperation. It is a good thing to learn from experience. No one will gainsay that, but people and nations have been known to fall in the practice of it. The policy of cooperation among the nations is in large part a Prank recognition that the breakdown in world economic relations was an important faotor in intensifying, here as well aa abroad, the great depression.

There 1s, as well, a irank recognition that the economic warfare of the 1930's was part of the master plan for aggression by Germany and Japan. The United Statea wants the United Nationa to adopt a comprehensive policy of international economic cooperation to reatore world trade and to establish standards of fair currency and trade practice.

We have made much progress. At Bretton Hoods representatives of 44 countries agreed on the eatabliahment and principles of two great institutions, the International Bank for Reconstruction and Development and the International Nonetary Fund. These two institutions were concelved to halp promote good economic relations among nations, and to remove as far as possible the eoonomic and financial irritationa that feed the greedy god of war.

Bretton woods is perhaps the beat example this old world has seen of so many nations rutting their heads together to solve their common problems in the interest of economic peace among
nations and in their own self-intereat. The repreaentatives of 44 countries not only agreed on the fsct that these economic problems ahould be met but also agreed on a complete and basic constitution of principlea for the two novel inatitutions. By the end of 1945 more than enough countriea ratified thia work so that it could become effective. We have juat been to savannah, Georgia, and there we established the World Bank and Fund aa living organiama. Again at thia meeting there was a re-dedication to the efficacy of effort and again there was solemn reaolve to make the diacuaaion process work. Again, as at Bretton Wooda, there was not only a meeting of the minde, but also a meeting of our hearta. The spirit of these meetings builds a firm foundation for faith in the future.

Through the International Bank, countries w111 find it poasible to reconstruct and develop their economies. They, then, can produce mora. Through the International Fund, they will remove monetary reatrictions and aubatitute fair atandarda of currency exchange. All countrias, then, can trade more. And the united statea has proposed that an International Trade Organization be established to reduce other barriers and diacriminations that hamper the growth of trade.

Through this orogram, the United Nationa can put into effect the fair currency and trade practices which will be conducive to a full flow of trade among the nations. The expanaion of world trade will benelit all countrias. It will maka 1t poaaible to maintain high levala of production and employment, and to raise atandarda of living. The adoption of fair currency and trade practicaa will give all countriea access to world marketa on fair and equal teras.

We belleve that such a program is necasaary for world reoovery. We know that it is good for American buaineas. It 1 a because of no sordid motive, however, that we urge thia program on the United Nations. We want a proaperous world, not Juat for the reaultinp matarial benefita, 1 mportant though they are, but even more becauae a prosperous world 18 likely to be a peaceful world. In contrast, a world raked with economic warfare and depreasion cannot de a world of security and stable enduring neace.

We have reached the stage where much of our
international economic program can be, and ia being, nut into effect. The big danger 18 delay. If we wait too long, continuad reliance on wartime currency and trade reatrictions may make it much more diffioult to remove those restriotions later. That $1 a$ why the auccesa of our program dapends in large part on securing prompt adherence to these falr currency and trade practicea. Unfortunataly, England will not be able to put theas principles into effect until she is asaured, in one way or another, of necesaary food and raw materiala to feed her people and her factoriea.

England'a international economic position was diarupted by the war. In 1944 her exporta were only 40 percent of her pre-war volume. Her production was diverted from goods for export trade to the materiel of war. England sold many of her foreign investments. She has loat the income from these. Similarly ahe has lost much of her income from shipping, inaurance, banking and other aervices. In addition to this ahe incurred a tremendous forelgn debt among the sterling area countries amounting to some $\$ 13,000$ million measured in our money. For some time what England aelle will be far short of what she mut buy, nor w1ll sha have sufflcient income from other sourcea to make up the differance. That creatas a difficult problem for the people of England. It $1 a$ an urgent problem that they cannot decide on the baaia of abatract principles. To asaure the flow of earertial imports during the next few yeara, they must have some help from abroad. To restore their wartime economy to high standarda of efflciency they muat increase their export trade. The pollcy that England chooses muat have the very practical effect of asauring har people that they can eat and work in the plve critical years ahead. It must offer the opportunity of axpanding England's export trade to the leval neceagary to mairitain the living atandard of her people and the operation of her industriea.

One cholce 18 for Enfland to accept fully the program of the United Nations. Sha would do this by cooperating promptly with the fair currency princinlas of the Intarnational Honetary Fund and with the fair trade principles of the proposed International Trade Organization. This would mean that England would remove her wartise currency controla without waitine for the end of the noat-war transition period. Then as rorld
trade growg England would ghare in thia growth and her increased exports would in time pay for her essential importa.

This ia the choice that the people of England would prefer. England'a economio and political traditions and intereata argue for her to ind a solution to her problam within the framework of a world economy. The difficulty is that the effect of expanding world trade on her exporta may not come for a few yeara. In the meantime, ahe mat find some means for continuing her asaential importa. She needa help to follow thia course.

The aecond choice ia for England to continue and even extend her wartime currency and trade controls. She would form a British economic bloc. Countries that wish to aell to England would ba compelled to take payment in Britiah exporta. The countries to whom ahe owes \$13.000 million in blocked aterling would be compelled to take British pooda in payment of the debts. Our trade with England would be a trickle under auch conditions. In lact the formation of a Britiah eoonomic bloc might excluda us from trade with most of the Britiah Empire, the sterling area, and the oountries with which England has established trade and paymenta agreementa.

England's choice 1 a very 1 mportant to us. Our program for international economic cooperation depende on having England adopt the fair trade and currency practices for which we atand. Eneland'a action will get the pattern for the whole British Emnire and the aterling area and for many countries in Europe. Theae countries account for nearly one-half of tha international trade of the entire world. The continuation of currency and trade restrictions in England will necessitgte their continuation in large areas of the world. Their practical effect would be to 1solate the United states from an enormous tradinp area. Our position in world trade would be threatened. He would have to defend curselves. We would retaliate.

That would be economic warfare. Probably wa would win, but it would be a Pyrrhic victory. World trade would be destroyed, and all countriea would auffer. If England anc the United statea should drift into auch a policy it would be a tragedy for all. He would find our trade decreased and our people unemployed. England would
find her atandard of living deteriorated and her people impoveriahed. And other countries would be unable to reconstrict their bombed and wrecked economies. The hope for international econcmic cooperation might be loat forerer. The consequences to world proaperity, and even to world peace, would be disastrous. That is not the kind of morld our people want.

Our basic goal ia to eatablish a world in which countries can liva and work together in pease and prosperity. International economic problems can no more be solved by economic force than political probleas can be solved by war.

Out of discugsion and agreement between the rapresentatives of the United Statea and of England came the proposed financial agreement now before Congress for approval. We found a way to help England meet her problem within the framework of the fair currency and trade principles that have been accepted by the United Nations.

Our representatives agreed that subject to the approval of Congress we would open a line of credit of $\$ 3,750$ million to be uaed by England to pay for her moat easential imports. Their representativea agreed, in turn, that subject to the approval of Parliament they would commit themselves to remove various wartime reatrictions and diacriminations.

In brief, this is what England undertakes to do under the innancial agreement:

1. Within a year, unlese we agree to a temporary extenaion, England will make all aterling arlalng from current trade convertible. England will thua return to the free use of sterling in international trade that ane permitted before the war. If Mexico and Egypt export to England they will be able to use the money they receive in any country. That means they could convert the aterling into dollars and buy radioa or refrigeratora in the United Statea.
2. Within a year, unless we agree to a temporary extension, Britain will diasolve the aterling area dollar pool. During the war, under the dollar pool, when a sterling area country received dollars
they were pooled in London. These dollars could be uasd only if allocated, and London did not allocate unlasa the goods wanted could not be obtained in any atarling area country. American producers lose markets, and fast, under that aystem. Under the provisions of the financial agreement, every country in the sterling area will have complete ireedom to use its dollars as it whes. All dollars that the sterling aras countries receive for their exports could be apent in the United States whout obtaining an allocation from England. That means India could use dollars to buy Amerioan machinery instead of being forced to buy Engliah machinery.
3. Current exporta of gooda and services from the United States to England will be paid for in dollars, or il paid in pounds, the money can be converted into dollars by American exporters. That meana that American companies which in the past have experienced conalderable difficulty in getting their earnings out of England will now be pald in dollara. For all practical purpoasa American buaineaamen can be juat as aure of payment for their aales in England as they were before the war.
4. The blocked aterling balances wlll be aettled by England and the countries ooncerned. Any payments on these balancas, made now or later, will be fres for making purahasea in any country, including the United statea. That means England w1ll not force these countriea holding more than $\$ 13,000$ million in aterling to buy Britiah inatead of American gooda. This large debt will not be used to exclude Amarican producta from the sterling area, or to put our axporters at a diaadvantage in competition with British exporters.
5. England's 1 mport controla inill be administered in a manner which does not diacriminate against Amarican producta. That means Encland will not keep out American cotton, tobacco, graina, frulta and nuts,
or our induatrial products in order to buy these aame gooda in other countries. Any quantitative Ilmitation that England pinda it neceaary to impose on her 1mports will be applied on an equal basia toward all countries.
6. England will support the American proposal for an International Trade Organization to reduce trade barriers and ellminate trade reatrictiona. In thia way, England supports our policy of expanded trade, with all countries having access to world markets on fair tarma. England's support of our proposal augura well for the succesa of the United Nations Trade Conference to be held later thls year.

We have asked England to adopt these principlea becauae they wlll help world trade and Amarlcan trade. In the lone run, these falr trade and currency practices will help England, too. With expanded world trade, British exportera 111 find better markets. But it will take several years before Br 1 ti sh exports are increased aufficlently to make good her havv foreign exchange losaea during the war. In the meantime, Encland needa credit if she is to secure the importa eaaential to har people and to her sconomy.

Part of the credit England neads ahs will get from other countries. Canada has a vital interest in securing Britiah agreement to these princlplea and she will holp England adhere to them. Much of the credit England can get only from us.

Under the financial agreement, Encland can draw upon the line of credit of $\$ 3,750$ million unt11 1951. The money 18 to be used to pay for her 1 mporta and other current needa. Any nart of the credit not uaed by then wlll reduce the amount owed by England. Beginning in 1951, England is to repay the credit with interest at 2 parcent. She will do thia in 50 equal annual paymenta.

The principal of the credit due each year must be repald without qualiflcation. Under conditions of severe depression in world trade, and under objective standarda written in the agreement, the interest due in any given year would be
walved, but payment of intereat would be resumed as soon as trade recovers. Such a provialon to take care of an emergency altuation is certainly preferable to forcing a default.

The greater part of the creait will be used to Day for exports from the United States. Directly and indireotly nearly all of the money will uitimately be spent in the United States. The credit to England will enable her to malntain her essential lmports on modest level. I should like to emphasize that England will atill have to enforce an austera atandard of concumption, little different from that of the war years.

This credit is not a gift. It is a loan, a Ioen which England 1 is to repay. It bears interest at 2 percent, a rate comparable to the Covernment's cost of borrowing money. It is not an unconditional credit - it is a credit which must be used only to meet Britain's current payments and to enable her to remove her wartime currency and trade restrictions.

This financial agreement is good business for the United States. The credit we extend may prove to be one of the most important investments we have yet made in world peace and prosperity. Not only is the $\$ 3.750$ million to be repald, but American business will reap rich dividende through 1 ts access to world markets on a fair and equal basis.

The expansion of international trade will be a great help to this country in carrying out our own policy of maintalnine high levels of produc-
tion and employment. Forelen trade 1 s an important factor in our national economy.

I suppose all of us, at one time or another, have thought of the great turning points of history and wondered. Did people know then that what they were dolng would decide the fate of nations? We live in just such a critical time. The decisions we make now may shape the destiny of the world for generations.

We have one more chance to bulld a world in which countries can live and work together in peace and prosperity. We are determined that the United Natione ahall do everythine in their power to build such a world.

We have started with the proposition that if conflicte between nations are not to be settled again by fire and aword, aome other way muat be found to deal with international problems. The common-sense way is to deal with such problems through diacussion and agreement - through international cooperation. Cooperation on political probleme that affect world security $1 \theta$ essential But it is not enough. We must provide a sound economic foundation for peace.

We have made good progress on the road of international economic cooperation. We have made good progress in building a sound and expansive economy at home. If we continue to apply ouraelvea, if we exercise the aame intelifgence and unity of purpose that we did during the war, we can look forward with full faith to a bright future.

## Treasury Market Financing During March

#### Abstract

Eletorioal detaile of Treacury mariget ilnancing operatione involving bonds, notes, and cartificates of indebtednese, beginning with the Fourth War Joan, are published in the tablee on pases 32 and 33. Detall of roekly Treacury 6111 offoringe are shom on pages 34 and 35 .

## Repayment and Refunding

On April 1, 1946, there was a maturity of $7 / \% \%$ certifioates of indebtednase in the amount of $\$ 4,811$ million. The Secretary of the Treasury announced on March 20, 1946 that about $\$ 2$ billion of this would be paid off in caeh with a new certificate of indebtedness offered in exchange for the remainder. The new certificate was also a $7 / 8 \%$ one-year issue. Exchange subscriptions were recelved subject to allotment to all holders on an equal percentage basis. Subacriptions in the smounts of $\$ 25,000$ and lese, howevar, were allotted in full. Cash subscriptions were not accepted.

The Treasury reports on the ownership of Government seourities indicate that on February 28,1946 about $85 \%$ of the $\$ 4.5$ billion of maturing certificatea was owned by reporting commercial banks and Federal Reserve Banke.

The new certiflcates were dated April 1 , 1946 and $w 111$ mature April 1, 1947. Interest at the rate of $7 / 8 \%$ per annum is payable on Octo-
ber 1, 1946 and April 1, 1947 and is subject to Federal income taxes.

The certificates were issued in bearer form only, in denominations of $\$ 1,000, \$ 5,000, \$ 10,000$, $\$ 100,000$, and $\$ 1,000,000$. The exchange was on a par for par basis. Subscription books were open from March 20 through Maroh 22, exoept for recelpt of subscriptions from holders of $\$ 25,000$ or less of the maturing certilicates, for which the books remalned open through March 25.

On March 29, Secretary Vinson announced that subecriptions for the new issue aggregated $\$ 4,742$ million. Subsoriptions of $\$ 25,000$ or less were allotted in full in the amount of $\$ 46$ million. Subscriptions in amounts over $\$ 25,000$ were allotted 59\% on a straight percentage basis, but not lese than $\$ 25,000$ to any one subscriber and with adjustmente up to the next highest thousand, where necessary. Total allotments amounted to $\$ 2,820$ million, leaving $\$ 1,991$ million to be paid off in cesh.

## Sales and Redemptions of United States Savings Bonds

United States savinge bonds were ifrst offered for eale in Karch 1935. Bonds of series A-D were sold between March 1935 and April 1941. Seriea E, F, and $G$ bonds have been on aale aince May 1, 1941.

Series $A-E$ bonds are loyear discount bonde sold at $75 \%$ of maturity value, and yield $2.90 \%$ per annum 11 held to maturity. Seriea $F$ bonds are l2-year discount bonds sold at $74 \%$ of maturity value, and yield $2.53 \%$ per annum if held to maturity. Series $G$ bonde are 12year current income bonds, sold at par, bearing interest at $2-1 / 2 \%$ per annum, and redeemable at par at maturity or at stated prices less than par before maturlty.

Purchases of serles A-D bonds were 11 mited to \$7,500 1 ssue price in any one calendar year. These bonds were avallable to all subsoribere prior to April 1, 1940 , and to individuale only after that date. Purchases of series $E$ bonds are 11 mited to $\$ 3,750$ 1ssue price in any one calendar year, and may be made only by individuals (deifned as natural persons only). The 11 mit for series $F$ and 0 combined $1 s \$ 100,000$ issue price in any one calendar year ( $\$ 50,000$ in calendar year 1941). Serles $F$ and $G$ bonda are avallable to all
aubscribers except oomercial banks. Commercial banke, however, were permitted to purchase theae bonds during certain periode and with certain restrictions. For dotalle concerning these periods and restrictions ese "Tressury Bulletin" for December 1944 , page 36, footnots 9, and "Treasury Bulletin" for February 1946 , page 37. Lootnote 9, and page A-22. For details concerning features, investment ylelds, and redemption values see "Treseury Bulletin" for October 1945, pares A-4 and A-5.

Seriee A bonde matured in 1945, and bonds of serlee $B$ began to mature in January 1946. Matured bonde turned in for redemption are included in the figures on redsmptione. Maturei bonde outstanding are reflected in the interest-bearing debt until all bonds of the eerles have matured, when they are traneferred to matured debt upon which interest has ceased, in accordance with the praotice of the Dally Treasury Statement.

In the following tables sales flgures are quoted at iesue prioe, and redemptions and amounte outstending at current redemption values. Amounts of serles outstanding are quoted at par.

## Sales and Redemptions of Treasury Savings Notes

Treasury savings notes were lesued in three series, series A from August 1, 1941 through June 22, 1943. seriee B from Auguet 1, 1941 through September 12, 1942, and seriee $C$ whioh have been on continuous sale since September 14, 1942. All of aeries A and B and some of seriee $C$ notes have matured.

Series $C$ notes are eold at par, and aocrue in value each month, yielding $1.07 \%$ par annum if held to maturity (3 yeara from date of lasua). Theae notae may be used in payment of taxes any time after 2 montha after iseue, or may be redeemed for oash any time after 6 months after lasue. For detalla concerning features, investment yields, and tax payment or rodemption values, eee "Treasury Bulletin" for October 1945, pagea A-4 and A-5. For detalla concerning the featurea of seriea A
and B note日, see Mnnual Report of the Secretary of the Treasury" for 1942, page e 207 and 220.

In the following tables sales and redamptione of Treasury eavinga notes are shown at par value. Matured notes turned in for redemption (either for cash os for tax paymant) are included in the ilgures on redemptions. Matured notas outatanding are reflected in the interest-bearing debt until all notes of the aeriea have matured, when they are traneferred to matured debt upon which interest has ceased, in aocordance with the practice of the Dally Treasury Statement. For eales and redemptione of seriea $A$ and $B$ notes by ilacel yeara and montha, eee "Treasury Bulletin" for February 1946, pagea 42 and 43.
