Note,--Outlays consist of disbursements less proprietary receipts from the public and certain intrabudgetary transactions. Budget estimates are based on the midsession review of the fiscal 1984 budget released Aug. 15, 1984, by the Office of Management and Budget.

"Obligations" are the basis on which the use of funds is controlled in the Federal Government. They are recorded at the point at which the Government makes a firm commitment to acquire goods or services and are the first of the four key events--order, delivery, payment, and consumption--which characterize the acquisition and use of resources. In general, they consist of orders placed, contracts awarded, services received, and similar transactions requiring the disbursement of money.

The obligational stage of Government transactions is a strategic point in gauging the impact of the Government's operations on the national economy, since it frequently represents for business firms the Government commitment which stimulates business investment, including inventory purchases and employment of labor. Disbursements may not occur for months after the Government places its order, but the order itself usually causes immediate pressure on the private economy.

Obligations are classified according to a uniform set of categories

based upon the nature of the transaction without regard to its ultimate purpose. All payments for salaries and wages, for example, are reported as personnel compensation, whether the personal services are used in current operations or in the construction of capital items.

Federal agencies often do business with one another; in doing so, the "buying" agency records obligations, and the "performing" agency records reimbursements, in table Fo-1, obligations incurred within the Government are distinguished from those incurred outside the Government. Table FiO-2 shows only those incurred outside.

Obligation data for the administrative budget fund accounts were from published in the September 1967 Treasury Bulletin, and the trust fund accounts were first published in the October 1967 Bulletin. Beginning with the April 1968 Bulletin, the data are on the basis of the budget concepts adopted pursuant to the recommendations of the President's Commission on Budget Concepts.

Table FO-1. - Gross Obligations Incurred Within and Outside the Federal Government by Object Class, as of Mar. 31, 1984

		Gross obligations incurred	
Object class	Outside	Within	Total

undistributed U.S. obligations	1,103	5,550	4,515
Gross obligations incurred 1/	479.805	85,210	565,015

<sup>1/</sup> For Federal budget presentation a concept of "net obligations" incurred" is generally used. This concept eliminates transactions within the Government and revenue and reinbursements from the public which by statute may be used by Government agencies without appropriation action by the Congress. Summary figures on this basis follow. (Data are on the basis of Reports on Obligations

Net obligations incurred...... 413,758

Gross obligations incurred 1/	734,636	124,765	859,400

1/	For Federal budget presentation a concept of "net obligations"
-	incurred" is generally used. This concept eliminates transactions
	within the Government and revenue and reimbursements from the public
	which by statute may be used by Government agencies without appro-
	priation action by the Congress. Summary figures on this basis
	follow. (Oata are on the basis of Reports on Obligations

<sup>\*</sup> Less than \$500,000.

Note.—Agency shifts are shown in this table beginning with the periods of such shifts. The amounts for the complete fiscal year are adjusted at that time.

Less than \$500,000.
 I/ Includes reports for Library of Congress, Government Printing Office, and General Accounting Office only.
 If his fund was reclassified from an off-budget to a budgetary account pursuant to an act approved Oct. 4, 1977.

<sup>3/</sup> Postal Service since July 1, 1973, Rural Electrification Administration revolving funds since May 12, 1973, and strategic petroleum reserve account since 1981.

The operating cash of the Treasury is maintained in Treasury's accounts with the Federal Reserve banks and branches and in tax and loan accounts. Major information sources include the Daily Balance Wire received from the Federal Reserve banks and branches, and electronic transfers through the Treasury Financial Communications System. As the balances in the accounts at the Federal Reserve banks become depleted, they are restored by calling in (withdrawing) funds from thousands of financial institutions throughout the country authorized to maintain tax and loan accounts.

Under authority of Public Law 95-147, the Treasury implemented a program on Nov. 2, 1978, to invest a portion of its operating cash in obligations of depositaries maintaining tax and loan accounts. Under the Treasury tax and loan investment program, depositary financial institutions select the menner in which they will participate in the program. Depositaries that wish to retain funds deposited in their tax. program. Depositeries that wish to retail duiss deposited under the and loan accounts in interest-bearing obligations participate under the Note Option; depositaries that wish to remit the funds to the Treasury's account at Federal Reserve banks participate under the Remittance Option.

Oeposits to tax and loan accounts occur in the normal course of business under a uniform procedure applicable to all financial institutions whereby customers of financial institutions deposit with them tax payments and funds for the purchase of Government securities, In most cases the transaction involves merely the transfer of funds from In most cases me transaction that was observed the translet of louis principle as customer's necessary to the extent authorized by the Treasury, intended in institution. On occasions, to the extent authorized by the Treasury, intended institutions are permitted to deposit in these accounts proceeds from subscriptions to public debt securities entered for their own account as well as for the accounts of their outsimers.

The tax and loan system permits the Treasury to collect funds through financial institutions and to leave the funds in Note Option depositaries and in the financial communities in which they arise until such time as the Treasury needs the funds for its operations. In this way the Treasury is able to neutralize the effect of its fluctuation operations on Note Option financial institution reserves and the есопоту.

### SEPTEMBER

### Auction of 2-Year Notes

On September 12 the Treasury announced that it would auction \$6,500 million of "2-ver notes to refund \$10,044 million of publicly held 4-year notes, originally issued on September 30, 1980, and reopered on September 30, 1982, maturing September 30, 1984, of the pay down \$1,550 million. The notes offered were Treasury Notes of Series Y-1986, dated October 1, 1984, due September 30, 1986, with interest payable on March 31 and September 30 in each year until maturity. At the same time, it was announced that the auction of the 4-year note, which would have normally been issued on September 30, was being postponed. An interest rate of 11-7/8 percent was set after the determination as to which tenders were accepted on a yield auction basis.

Tenders for the notes were received until 1 p.m. EDST, September 19, and totaled \$18,159 million, of which \$8,510 million was accepted at yields ranging from 11.91 percent, price 99,339, up to 11.97 percent, price 99,836. Moncompetitive tenders were accepted in full at the average yield of accepted tenders, 11.94 percent, price 99.887. These totaled \$1,192 million. Competitive tenders accepted from private investors totaled \$7,138 million.

In addition to the \$8,510 million of tenders accepted in the auction process, \$370 million was accepted at the average price from Federal Reserve banks as agents for foreign and international monetary authorities, and \$668 million was accepted at the average price from Government accounts and Federal Reserve banks for their own account in exchange for maturing securities.

An additional \$300 million of maturing notes held by Federal Reserve banks was refunded by the issuance of short-term Treasury bills, which were later exchanged for a like amount of 3-year 11-month domestic notes.

### 52-Week 8111s

On August 24 tenders were invited for approximately \$8,250 million of 364-day Treasury bills to be dated September 6, 1984, and to mature September 5, 1985. The Issue was to refund 37,73 million of 364-day bills maturing September 6 and to provide about \$475 million new cash. Tenders were opened on August 30. They totaled \$20,007 million, or which \$3,267 million was accepted, including \$490 million of moncompetitive tenders from the public and \$1,975 million of the bills issued at the average price to Federal Reserve banks for themselves and as agents for foreign and international mometary authorities. The average bank discount rate was 10.84 percent.

### Auctions of 7-Year Notes and 20-Year 1-Month Bonds

On September 18 the Treasury announced that the auctions of 7-year notes and 20-year 1-month bonds, which normally would have been held the following week, were being postponed pending congressional action on legislation to raise the statutory debt limit.

On October 4 the Treasury announced that it would sell to the public at auction, under competitive and noncompetitive bidding, up to \$5,500 million of 7-view, notes of Series 6-1991 and \$4,000 million of 20-year 1-month bonds of 2002 to raise new cash,

The auction of the 7-year notes was originally scheduled for October 10 with sttlement to be made on October 17. The auction of the 20-year 1-month bonds was originally scheduled for October 11 with settlement to be made on October 18. On October 10 the auction of the 7-year notes was rescheduled for October 18 with settlement to be made on October 23. On October 11 the auction of the 20-year 1-month bonds was rescheduled for October 23 with settlement to be made on October 30. The postponements were made necessary by the failure of Congress to raise the debt limit.

An interest rate of 12-1/4 percent was set on the notes of Series G-1991 after the determination as to which tenders were accepted on a yield auction basis. The notes of Series G-1991 were dated October 23, 1984, due October 15, 1991, with interest payable on April 15 and October 15 in each year until maturity.

Tenders for the notes of Series 6-1991 were received until 1 p.m. EDST, October 16, and totaled \$11,537 million, of which \$5,513 million was accepted at yields ranging from 12,30 percent, price 99,770, up to 12,35 percent, price 99,541. Noncompetitive tenders were accepted in full at the average yield of accepted tenders, 12,34 percent, price 99,567. These totaled \$516 million. Competitive tenders accepted from private investors totaled \$4,997 million.

An interest rate of 11-5/8 percent was set on the bonds of 2004 after the determination as to which tenders were accepted on a yield auction basis. The bonds of 2004 were dated October 30, 1984, due Rowenber 15, 2004, with interest payable on May 15 and November 15 in each year until maturity.

Tenders for the bonds of 2004 were received until 1 p.m. 605T, October 23, and totaled 58,260 million, of which \$4,005 million was accepted at yields ranging from II.55 percent, price 100.556, up to 11.75 percent, price 99,016. Noncompetitive tenders were accepted in full at the average yield of accepted tenders, II.69 percent, price 99,473. These totaled 186 million. Competitive tenders accepted from private investors totaled \$3,221 million.

### Auction of 3-Year 11-Month Notes

On August 16 Secretary Regan announced that the Treasury would, in conjunction with regularly scheduled securities auctions, provide for additional amounts of certain issues of Treasury notes or bonds that would be targeted to foreign purchasers. He said that the initial sale of such securities could take place in conjunction with the auction of regular (domestic) 4-year notes scheduled for September. The purpose of the new issue was to reduce financing costs and to expand the market for Treasury securities, On September 12 the Treasury announced that the auction and issue of the regular 4-year notes were being postponed.

On October 12 the Treasury announced that it would auction \$6,000 million of 3-year 11-month domestic notes and \$1,000 million of 3-year 11-month foreign-targeted notes to raise new cash.

The domestic notes were Treasury Notes of Series N-1988, dated October 31, 1984, due September 30, 1988, with interest payable on March 31 and September 30 in each year until maturity. The foreign-targeted notes were Treasury Notes of Series P-1988, dated October 31, 1984, due September 30, 1988, with interest payable on September 30 in each year until maturity. An interest rate of 11-3/8 percent was set on both issues after the determination as to which tenders were accepted on a yield auction basis.

The foreign-targeted notes were sold, under competitive bidding only, to foreign institutions or to foreign branches of U.S. financial institutions. The notes were issued in book-entry form and were eligible for exchange into registered notes of the companion domestic issue, Series N-1988, or for conversion into registered foreign-targeted notes after December 8, 1984.

Tenders for the domestic notes were received until 1 p.m. EOST, October 24, and totaled \$15,962 million, of which \$6,015 million was accepted at yields ranging from 11.38 percent, price 99,985, up to 11.44 percent, price 99,799. Noncompetitive tenders were accepted in full at the average yield, 11.42 percent, price 99,861. These totaled \$625 million. Competitive tenders accepted from private investors totaled \$5,390 million.

In addition to the \$6,015 million of tenders accepted in the auction process, \$220 million was awarded at the average price to Federal Reserve banks as agents for foreign and international monetary authorities. An additional 3000 million was also accepted at the average price from Federal Reserve banks for their own account in exchange for special issue Treasury bills issued to refund notes that had matured September 30, 1984.

Tenders for the foreign-targeted notes were received until 1 p.m. EDST, Observed at the Federal Reserve Bank of New York and totaled \$3,996 million, of which \$1,001 million was accepted. The interest rate of 11-36 percent was established in the auction of the companion domestic issue. Accepted yields, based on an annual interest payment, ranged from 11.30 percent, price 100,271, up to 11.46 percent, price 99,788. The average yield of the accepted competitive tenders was 11.41 percent, price 99.939. Noncompetitive tenders were not accepted.

### Public Debt Limit

Public Law 98-475, signed by the President on October 13, raised the public debt limit to 51.823% billion. The auctions of 7-year notes and 20-year |-month bonds were originally postponed and twice rescheduled to avoid exceeding the previous debt ceiling of 51.573 billion. Also, the offering amount for the weekly Treasury bill issues auctioned October 9 was reduced by \$800 million for the same reason.

 $<sup>\</sup>frac{1}{2}/$  Includes trust funds and accounts that comprise Government accounts under the unified budget concept.  $\frac{2}{2}/$  Exclusive of banks and insurance companies.

Note. -- For detail of offerings see table POO-3.

<sup>3/</sup> Included with all other investors are certain Government deposit accounts and Government-sponsored agencies, formerly included with Government accounts.

Series EE bonds, on sale since Jan. 1, 1980, are the only savings bonds currently sold. Series HH bonds are issued in exchange for series E and EE savings bonds and savings notes. Series A-0 were sold from Mar. 1, 1935, through Apr. 30, 1941. Series E was on sale from May 1, 1941, through Gec. 31, 1959 (through June 1980 to payroll savers on the series of the savers of the save

U.S. savings notes were on sale May 1, 1967, through June 30, 1970. The notes were eligible for purchase by individuals with the simultaneous purchase of series E savings bonds. The principal terms and conditions for purchase and redemption and information on investment yields of savings notes appear in the Treasury Bulletins of March 1967 and June 1968; and the Annual Report of the Secretary of the Treasury for fiscal year 1974.

Securities Industries Association. Since then, the series has been compiled by Treasury.

<sup>1</sup>/ Treasury series is the 20-year constant maturity rate read from daily

<sup>11</sup> Treasury yerles is the compart constant maturity rate read from daily 7 Treasury yield curves and averaged for the month of reoffering yields of new 21 Treasury series based on 3-week moving average of reoffering yields of new comporate bonds rated Ab by Moody's Investors Service and having an original maturity of at least 20 years. Prior to June 1973, this series reflected bonds without call protection. From June 1973 to July 1976, the

International Statistics

The tables in this section are designed to provide data on U.S. reserve assets and liabilities and other statistics related to the U.S. balance of payments and international financial position.

Table 1F5-1 shows the reserve assets of the United States, including its gold stock, special drawing rights held in the Special Orawing Account in the International Monetary Fund, holdings of convertible foreign currenc

Table IFS-2 brings together statistics on liabilities to foreign official institutions, and selected liabilities to all other foreigners, which are used in the U.S. balance of payments statistics.

Table 1FS-3 shows U.S. Treasury nonmarketable bonds and notes issued to afficial institutions and other residents of foreign countries.

Table 1FS-4 presents a measure of weighted-average changes in exchange rates between the U.S. dollar and the currencies of certain other countries.

Table IFS-1. - U.S. Reserve Assets

<sup>1/</sup> Reginning July 1974, the International Monetary Fund (IMF) adopted a technique for valuing the special drawing right (SDR) seed on a seighted-average of exchange rates for the Government of selected member countries. The U.S. SOR holdings and reserve position in the IMF are also valued on this basis beginning July 1974.

2/ Includes gold held by the Exchange Stabilization Fund.

3/ Treasury values its gold stock at \$42,2222 per fine troy ownce and pursuant to 31 U.S.C. \$117(b) issues gold crificates to the Federal Reserve at the same rate against all gold held.

4/ Includes allocations of SDR's in the Special Grawing Account in the International Monetary Fund, plus or minus transactions in SDR's.

Allocations of SOR's on Jan. 1 of respective years are as follows: 1970, 867 million; 1971, 717 million; 1972, 710 million; 1979, 874 million; 1971, 717 million; 1972, 710 million; 1979, 874 million (in SOR terms); 874 million (in SOR terms); Includes holdings of Treasury and Federal Reserve System; beginning November 1978, these are valued at current market exchange rates or, where appropriate, as such other rates as may be agreed upon by the parties to the transactions. The United States has the right to purchase foreign currencies equivalent to its reserve position in the Fund automatically if needed. Under appropriate conditions the United States could purchase additional amounts related to the U.S. quota.

1/ This table presents calculations of weighted average percentage changes in the rates of exchange between the doller and certain foreign currencies, in order to provide a measure of changes in the dollar's general foreign exchange value broader than a measure provided by any single exchange rate change. Calculations are provided for two sets of countries that account for a major share of U.S. foreign trade, U.S. bilateral trade patterns in 1972 are used as a convenient, readily available proxy for the assignment of relative weights to individual exchange rate changes, although such weights do not provide a full measure of individual currencies' relativent of factors other than trade. The calculations do not purport to represent a guide to measuring the impact of exchange rate changes on U.S. international transactions.

Exchange rate data used in constructing the indices reported here differ somewhat from those used in earlier calculations to more accurately reflect end-of-period currency values.

The equations used are as follows:

Equation one is used to calculate a trade-weighted average of changes in the dollar cost of foreign currencies:

(EQ1) 
$$E_m = \Sigma(\Delta S/fc_1 * M_1/\Sigma H)$$

Where: E<sub>m</sub> is the weighted average of percentage changes in the dollar cost of individual foreign currencies;

 $\Delta$ \$/fc; is the percent change in the dollar cost of foreign currency 1; and

 $\rm M_{1}/\Sigma M$  is U.S. imports from country i, as a proportion of total U.S. imports from all countries in the set.

Equation two is used to calculate a trade-weighted average of changes in the foreign exchange cost of dollars:

(EQ2) 
$$E_x = \Sigma(\Delta f c_i / S = X_i / \Sigma X)$$

Where: E<sub>x</sub> is the weighted average of percentage changes in the foreign currency cost of dollars;

Δfc<sub>i</sub>/\$ is the percent change in the foreign currency i cost of dollars; and

X4/EX is U.S. exports to country i, as a proportion of total U.S. exports to all countries in the set.

Equation three combines the above export-weighted and import-weighted averages to provide an overall measure of exchange rate change:

(EQ3) 
$$E = [(E_m * m/m+x)*(-1)] + [E_x * x/m+x]$$

Where: m/m+x is U.S. imports as a proportion of its total trade with all countries in the set; and

> x/m+x is U.S. exports as a proportion of its total trade with all countries in the set.

- 2/ Australia, Austría, 8elgium-Luxembourg, Canada, Denmark, Finland, France, Gernany, Greece, Iceland, Ireland, Italy, Japan, the Netherlands, New Zealand, Norway, Portugai, Spain, Sweden, Switzerland, Turkey, and United
- Kingdom.

  3/ The currencies of 46 IMF member countries which account for approximately 90 percent of U.5. total trade.

#### 8ackground

Data relating to capital movements between the United States and foreign contries have been collected in some form since 1935. Peoprts are filed with district Federal Reserve banks by banks, bank holding companies, securities brokers and dealers, and nonbanking enterprises in the United States. Statistics on the principal types of data by country or geographical area are then consolidated and are published in the Treasury Bulletin.

The reporting forms and instructions J/ used in the Treasury International Capital (TIC) Reporting System have been revised a number of times to meet changing conditions and to increase the usefulness of the published statistics. The most recent, general revision of the report forms became effective with the banking reports as of April 30, 1978, and with the nombanking reports as of December 31, 1978. Revised forms and instructions are developed with the cooperation of other Government agencies and the Federal Reserve System and in consultations with representatives of banks, securities firms, and nombanking enterprises,

#### Basic Definitions

The term "foreigner" as used in the Treasury reports covers all institutions and individuals domiciled outside the United States, including U.S. citizens domiciled abroad, and the foreign branches, subsidiaries, and other affiliates abroad of U.S. banks and business concerns, the central governments, central banks, and other official institutions of foreign countries, wherever located; and international and regional organisms of the States to the extent that they agree also includes persons the United States to the extent that they agree "also includes persons the United acting on behalf of foreigners."

In general, data are reported opposite the foreign country or geographical area in which the foreigner is domiciled, as shown on the records of reporting institutions. For a number of reasons, the geographical breakdown of the reported data may not in all cases reflect the ultimate ownership of the assets. Reporting institutions are not expected to go beyond the addresses shown on their records, and so may not be aware of the country of domicile of the ultimate beneficiary. Furthermore, U.S. liabilities arising from deposits of dollars with foreign banks are reported in the Treasury statistics as ilabilities to foreign banks, whereas the liability of the foreign bank receiving the deposit may be to foreign official institutions or to residents of another country.

Oate pertaining to branches or agencies of foreign official institutions are reported opposite the country to which the official institution belongs. Data pertaining to international and regional organizations are reported opposite the appropriate international or regional classification except for the Bank for International Settlements which is included in the classification "Other Europe".

#### Reporting Coverage

Reports are required from banks, bank holding companies, International Banking Facilities (18F's), securities brokers and dealers, and nonbanking enterprises in the United States, including the branches, agencies, subsidiaries, and other affiliates in the United States of foreign banking and nonbanking firms. Entities that have reportable liabilities, claims, or securities transactions below specified exemption levels are exempt from reporting.

Banks and some brokers and dealers file reports monthly covering their dollar liabilities to, and dollar claims on, foreigners in a number of countries. Nuce a year, as of June 30 and December 31, they also report the same liabilities and claims items with respect to foreigners in countries not shown separately on the monthly reports. Beginning with reports due as of June 30, 1978, quarterly reports are filed with respect to liabilities and claims denominated in foreign currencies vis-a-vis foreigners. Effective January 31, 1982, the specified exemption level applicable to the monthly and quarterly banking reports was raised from \$2\text{ million to \$10\text{ million and \$10\text{ million to \$

Banks, securities brokers and dealers, and in some instances nonbanking enterprises report monthly their transactions in securities with foreigners; the applicable exemption level is \$500,000 on the grand total of pruchases and on the grand total of sales during the month covered by the report.

Quarterly reports are filed by exporters, importers, industrial and commercial concerns, financial institutions other than banks and brokers, and other nonbanking enterprises if their liabilities to, or claims on, unaffiliated foreigners exceed a specified exemption level on a two quarter-end average basis. Effective March 31, 1982, this exemption level was set at \$10 million, up from \$2 million. Nonbanking enterprises also report for each monthend their U.S. dollar-denominated deposit and certificates of deposit claims of \$10 million or more on banks abroad.

#### Description of Statistics

Section I presents data on liabilities to foreigners reported by banks, brokers, and dealers in the United States. Beginning April 1978, the following major changes were made in the reporting coverage: Amounts due to banks' own foreign offices are reported separately; a previous distinction between short-term and long-term liabilities was eliminated; a separation was

provided of the liabilities of the respondents themselves from their custody liabilities to foreigners; and foreign currency liabilities are only available complete by extending to securities brokers and deletes the requirement. Or report certain of their own liabilities and all of their custody liabilities to foreigness.

Section II presents the claims on foreigners reported by banks in the United States. Beginning with data reported as of the end of April 1978, a distinction was made between banks' claims held for their own account and claims held for their domestic customers. The former are available in a monthly series whereas the latter data are collected on a quarterly basis only. Also, the distinction in reporting of long-term and short-term components of banks' claims was discontinued. Maturity data began to be considered to the control of the control

Another important change in the claims reporting, beginning with new quarterly data as of June 30, 1978, was the adoption of a broadened concept of "foreign public borrower," which replaced the previous category of "foreign official institution" to produce more meaningful information on lending to the public sector of foreign countries. The term "foreign public borrower" encompasses central governments and departments of central governments of foreign countries and of their possessions; foreign central banks, stabilization funds, and exchange authorities; corporation and other species of central species of central

Section III includes supplementary statistics on U.S. banks' liabilities to, and claims on, foreigners. The supplementary data on banks' loans and credits to nonbank foreigners combine selected information from the IIC reports with data from the monthly federal Reserve 2502 reports submitted for major foreign branches of U.S. banks, Other supplementary data on U.S. banks' dollar liabilities to, and banks' own dollar claims on, countries not regularly reported separately are available semiannually in the May and November issues of the Treasury Bulletin.

Section IV shows the liabilities to, and claims on, unaffiliated foreigners by exporters, importers, industrial and commercial concerns, financial institutions other than banks and brokers, and other nonbanking enterprises in the United States. The data exclude the intercompany accounts of nonbanking enterprises in the United States with their own branches and subsidiaries abroad or with their foreign parent companies, (Such transactions are reported by business enterprises to the Department of Commerce on its direct investment forms.) The data also exclude claims held through banks in the United States, Beginning with data reported as of Occember 31, 1978, there is separation of the financial liabilities and claims of reporting enterprises from their commercial liabilities and claims and items are collected on a time-remaining basis instead of the prior original maturity basis,

Section V contains data on transactions in all types of long-term domestic and foreign securities by foreigners as reported by banks and brokers in the United States (except nonmarketable U.S. Treasury bonds and notes, foreign series; and nonmarketable U.S. Treasury bonds and notes, foreign currency series; which are shown in the "International Financial Statistics" section, table IFS-3). The data cover new issues of securities, transactions in outstanding issues, and redemptions of securities, They include transactions executed in the United States for the account of foreigners, and their domestic customers, The data include some transactions which are classified as direct investments in the balance of payments accounts.

The geographical breakdown of the data on securities transactions shows the country of domicile of the foreign buyers and sellers of the securities; in the case of outstanding issues, this may differ from the country of the original issuer. The gross figures contain some offsetting transactions between foreigners. The net figures for total transactions represent transactions by foreigners with U.S. residents; but the net figures for transactions of individual countries and areas may include some transactions between foreigners of different countries.

The data published in these sections do not cover all types of reported capital movements between the United States and foreign countries. The principal exclusions are the intercompany capital transactions of nonbanking business enterprises in the United States with their own branches and subsidiaries abroad or with their foreign parent companies, and capital transactions of the U.S. Government. Consolidated data on all types of international capital transactions are published by the Department of Commerce in its regular reports on the U.S. balance of payments.

I/ Copies of the reporting forms and instructions may be obtained from the Office of Data Management, Office of the Assistant Secretary for International Affairs, Department of the Treasury, Washington, D.C. 20220, or from district Federal Reserve banks.

### Background

Data have been collected since 1974 on the foreign currency positions of banks and nonbanking firms in the United States, and on those of foreign branches, majority-owned foreign partnerships, and majority-owned foreign partnerships, and majority-owned foreign subsidiaries of U.S. banks and nonbanking firms. Reports cover five major foreign exchange market currencies and U.S. dollars held abroad. Reporting has been required pursuant to title II of Public Law 93-IIO, an amendment to the Par Value Modification Act of September 21, 1973, and implementing Treasury regulations. Statistics on the positions have been published since March 1977 beginning with data for December 1975.

The report forms and instructions used in the collection of bank data revised effective with reports as of March 16, 1983, for the weekly reports. The most recent revision of the nonbank foreign currency forms (see below) became effective as of the last business day of March 1983.

#### Common Definitions and Concepts

The term "United States" means the States of the United States, the District of Columbia, the Commonwealth of Puerto Rico, American Samoa, Midway Island, the Virgin Islands, and Wake Island. The term "Foreign" means locations other than the "United States." The term "worldwide" is used to describe the sum of "United States" and "foreign" dato.

Data for the United States include amounts reported by sole proprietorships, partnerships, and corporations in the United States including the U.S. branches and subsidiaries of foreign nonbanking concerns, in the case of "monbanking firms" positions," and the agencies, branches, and subsidiaries located in the United States of foreign banks and banking institutions, in the case of the weekly "bank positions."

Data for "foreign branches" and "abroad" include amounts reported by the branches, majority-owned partnerships, and majority-owned subsidiaries of U.S. banking and nonbanking concerns. In general, these data do not reflect the positions of foreign parents or foreign parents' subsidiaries located abroad except through intercompany accounts. The data include the foreign subsidiaries of a few foreign-owned U.S.-based corporations.

Assets, liabilities, and foreign exchange contract data are reported on the basis of time remaining to maturity as of the date of the report, regardless of the original maturity of the temperature of the reservation of the report. The remaining in 1 year or less from the date of the report.

"Majority-owned foreign partnerships" are those organized under the laws of foreign country in which one or more nonbanking concerns or nonprofit institutions in the United States, directly or indirectly, own more than SD percent profit interest. "Majority-owned foreign subsidiaries" are foreign corporations in which one or more nonbanking business concerns or nonprofit institutions located in the United States, directly or indirectly, own stock with more than SD percent of the total combined voting power of all classes of stock entitled to vote, or more than 5D percent of the total value of all classes of stock.

#### Reporting Threshold

The exemption level applicable to banks and banking institutions was \$10 million equivalent through January 1982, when it was raised to \$10D million. The exemption level applicable to nonbanking business concerns and nonprofit institutions was \$1 million equivalent on all nonbank forms from March 1975 through November 1976. It was raised to \$2 million equivalent on the monthly reports of positions held in the United States from November 1976 through September 1978. The exemption level was raised to \$3 million on foreign subsidiary positions on June 30, 1977, and for positions held in the United States of Spetember 30, 1978. The exemption level for nonbanking firms was raised to \$100 million on positions in the United States in January 1982 and on foreign branch and subsidiaries positions in March 1982.

Firms must report their entire foreign currency position in a specified foreign currency if a specified U.S. dollar equivalent value is reached in any category of assets, liabilities, exchange contracts bought and sold, or the net position in the currency. In general, exemption even both contracts and partnerships, and majority-owned foreign subsidiaries, U.S. banks and nonbanks are required to report the U.S. dollar-denominated assets, liabilities, exchange contracts bought and sold, and net positions of those branches, partnerships, and subsidiaries with reportable positions in the specified foreign currencies.

### Description of Statistics

Data collected on the Treasury foreign currency forms are published in the Treasury Bulletin in seven sections. The first section presents a summary of worlowide net positions in all of the currencies reported. Sections III through YI each present data on a specified foreign currency. Section VII presents the U.S. dollar positions of the foreign branches and subsidiaries of U.S. firms which are required to report in one or more of the specified foreign currencies.

<sup>1/</sup> Beginning July 1974, the International Monetary Fund (IMF) adopted a technique for valuing the special drawing rights (SQR's) based on a weighted average of exchange rates for the currencies of selected member countries. The U.S. 50K holdings and allocations are valued on this basis beginning July 1974.

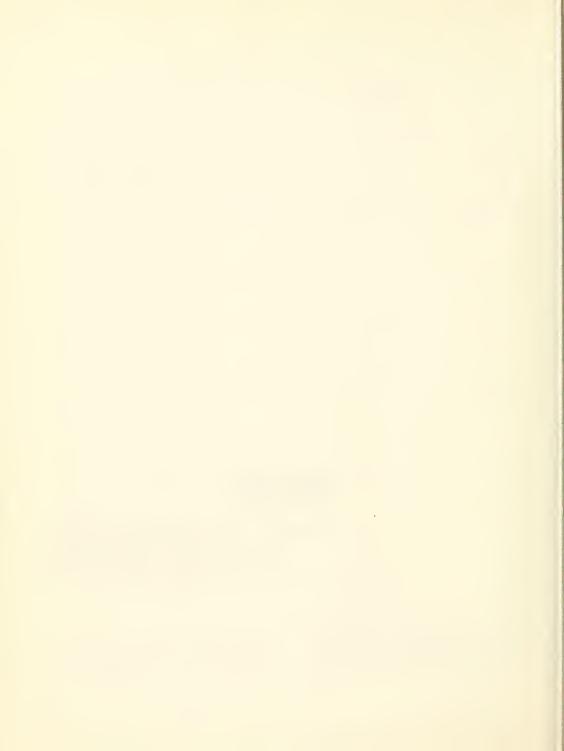

2/ Excludes foreign exchange transactions for future and spot delivery.

the transfer to the Exchange Stabilization Fund of foreign currencies drawn from the IMF by the United States.

Note,—Annual balance sheets for fiscal years 1934 through 1940 appear in the 1940 Annual Report of the Secretary of the Treasury and those for succeeding years appear in subsequent reports through 1980, Quarterly balance sheets beginning with Dec. 31, 1938, have been published in the Treasury Bulletin. Data from inception to Sept. 30, 1978, may be found on the statements published in the January 1979 Treasury Bulletin.

Cash Management/ Debt Collection

CASH MANAGEMENT INITIATIVES

On July 18, 1984, President Reagan signed into law the Deficit Reduction Act of 1984 (Public Law 98-369). This legislation was enacted to amend tax laws and make management improvements to reduce the deficit. Section 2652 of this act, entitled "Collection and Deposit of Payments to Executive Agencies," gives the Secretary of the Treasury the authority to prescribe the timing and the methods by which agencies will collect and deposit money to the Treasury. It also gives the Secretary the authority to impose charges for noncompliance in the amount determined to be the loss to the general fund. These charges will be deposited into the cash management improvements fund, which is a revolving fund established by the act. Monies in the fund will be available without fiscal year limitation for the payment of expenses incurred in developing and carrying out improved methods of collection and deposit.

Treasury's Fiscal Assistant Secretary, Carole Jones Dineen, has delegated all responsibility and authority under this legislation to the Commissioner, Financial Management Service (formerly the Bureau of Government Financial Operations), In addition to issuing regulations to implement the act, the Financial Management Service plans to substantially revise Yolume I of the

Treasury Fiscal Requirements Manual (TFRM), Chapter 6-8000 (Cash Management), and to publish a "Cash Management Guidebook." Executive agencies, the Office of Management and Budget, and the General Accounting Office will be given the opportunity to comment on the regulations, the revision of I TFRM 6-8000, and the guidebook during the drafting phase

From a cash management perspective, utilization of state-of-the-art collection mechanisms will improve the Government's cash position by avoiding unnecessary borrowing, decreasing direct outlays for interest on the public debt, and maximizing amounts available for investment. Efficient collection mechanisms will benefit the eggence of the collection of

### Cash Management Information System

In October 1983, the Financial Management Service initiated the Cash Management Information System (CMIS) project. The system began its developmental stage in September 1984, and is expected to be fully operational by late 1986.

The intent of CMIS is to improve the Government's cash management process by developing Treasury's ability to forecast and manage cash-flows and cash balances, and to effectively process and analyze cash management information. Additionally, CMIS will enhance the Financial Management Service's ability to regulate and monitor both Federal agency and financial institution cash management practices.

CMIS will be a computer-based system designed to meet the current and future information processing requirements of the Treasury staffs directly involved in cash management programs. This system will:

- \* Establish a technical framework supporting cash management initiatives and information needs.
- Provide the ability to relate and analyze data originating from diverse sources and systems.
- \* Simplify the design and development of software to monitor new payment and collection mechanisms.

\* Eliminate duplicate processing of collection and payment data within the Service.

The system will consist of three functions or modules. The Cash Forecasting Module will address the issue of improvements in the facilities and methodology used by the Office of the Fiscal Assistant Secretary, Department of the Treasury, to estimate the Treasury's daily cash position and to prepare long-term cash forecasts. The Agency Monthering Module will enable the Service's Cash Management Division (CMO) to improve its ability to monitor Federal agency cash-flows through attended means. Information provided by CMIS will assist the CMO in ensuring agency cash amagement provided by CMIS will assist the CMO in ensuring agency cash management provided in a cash cash and a contract of the contr

CHIS will also provide information required to effectively manage the Government's cash resources and will provide a significant contribution towards institutionalizing cash management throughout the Federal Government.

### Reform '88 Cash Management

Treasury's Financial Management Service/Federal Finance has lead agency repossibility for monitoring and reporting progress on Reform '88 cash management initiatives undertaken by 20 Federal departments and agencies. The overall goal of the project is to improve Government's payments and collections systems, with special attention being directed toward identifying additional applications for state-of-the-art technology and expanding the use of other mechanisms, such as lockbocks.

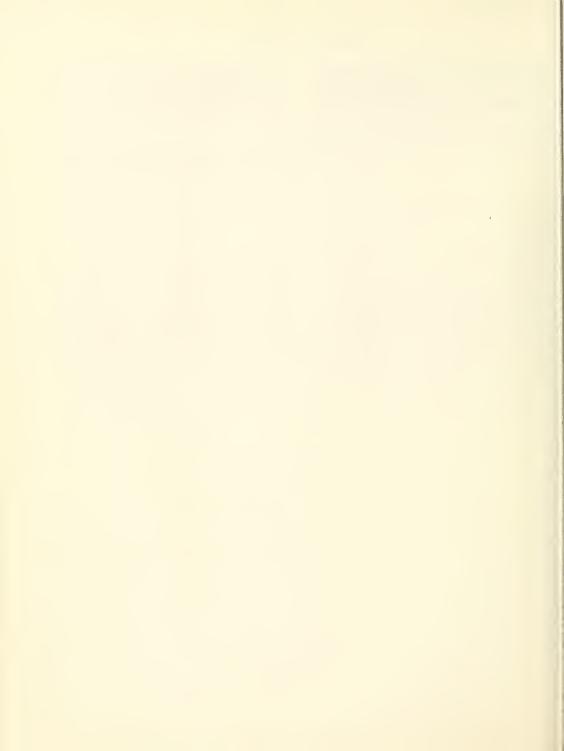

Agencies are providing monthly reports to Treasury on the status of approximately 340 initiatives. For fiscal 1983, interest savings totaled \$176 million while acceleration/deferral amounts totaled \$879 million.

Projected and actual figures for fiscal 1984 for each of the participating agencies are shown below.  $\,$

CONSOLIDATED FINANCIAL STATEMENTS OF THE UNITED STATES GOVERNMENT FISCAL YEAR 1983/PROTOTYPE

# THE SECRETARY OF THE TREASURY WASHINGTON

August 27, 1984

Statement of the Secretary of the Treasury

The Department of the Treasury is continuing its effort to improve financial reporting with the publication of these consolidated financial statements. This report is not meant to compete with the budget of the U.S. Government. Rather, it is an attempt to improve financial reporting and decision making information. The Bureau of Government Financial Operations (BGFO) is currently working with the General Accounting Office (GAO) to assess the need for changes consistent with their recent revision of accounting principles and standards.

At the same time, we are planning future improvement efforts to enhance the effectiveness of financial management in Government. These efforts will focus on development of a new Governmentwide consolidated financial accounting and reporting system. With more effective information systems to support central management functions, we expect to manage the Government's assets and liabilities in a more efficient manner. Treasury efforts in this area will be coordinated with OMB and GAO initiatives directed towards our common goal of managing the taxpayer's dollar wisely.

Reader reactions and comments on this prototype report are welcome.

Donald T. Regan

# COMPTROLLER GENERAL OF THE UNITED STATES WASHINGTON D.C. 20548

August 27, 1984

### STATEMENT OF THE UNITED STATES

### GENERAL ACCOUNTING OFFICE

This consolidated financial report for fiscal year 1983 provides useful information about the financial condition of the federal government as a whole. The federal government's activities are vast in scope and have a significant impact on the Nation. The consolidated financial statements provide the full scope of those activities and present the magnitude and distribution of assets and future claims on resources. This information is essential to understanding the overall federal government's financial situation. Although this report is a prototype, it demonstrates the value of a goal we strongly support—the annual publication of formal consolidated financial statements of the United States government.

Many organizations, such as publicly owned corporations, are required to present comprehensive financial reports to the public. Additionally, many state and local governments have already published formal annual financial reports containing audited financial statements for a number of years. Just as share holders expect management to report on the financial condition of such companies, taxpayers should also have access to information about the financial condition of the federal government.

Consolidated financial statements of the United States government present a picture of the government's overall financial condition that is not available elsewhere. For example, consolidated financial statements disclose the magnitude of the government's pension liabilities, public debt, and estimated losses on guarantee and insurance programs.

Consolidated financial statements are important not only because of the usefulness of the information contained in them but also because of the discipline required of the accounting systems necessary to compile them. Agencies' accounting systems must have effective internal controls to ensure reliable information is captured, maintained, and reported. Since the enactment of the Federal Managers' Financial Integrity Act of 1982, improvements have been made. Agencies are implementing stronger internal controls and more reliable accounting systems.

The General Accounting Office will soon issue new requirements for federal agencies to refine their accounting and financial reporting practices. Since the agencies' statements form the basis for preparing the consolidated financial statements of the United States government, these improvements are a critical step towards enhancing the integrity and creditability of federal financial management.

We did not audit the accompanying consolidated financial statements for the fiscal years ended September 30, 1982 and 1983; accordingly, we do not express an opinion on them. In the near future, however, the General Accounting Office hopes to begin auditing federal agency financial statements and eventually the consolidated financial statements to determine whether they are reliable and in compliance with generally accepted accounting principles for federal agencies.

Charles A. Bowsher Comptroller General of the United States

### Introduction

During the past year, one schedule was added to the Consolidated Financial Statements of the U.S. Government: Schedule IX entitled "Reconciliation Schedule of Accrual Operating Results to the Cash Basis Budget as of September 30, 1983 and 1982."

To support Schedule VII entitled "Analysis of Pension and Retirement Plans as of September 30, 1983," two line graphs have been added depicting the number, in thousands, receiving benefits and the average yearly dollar benefits per person, segregated by social security, military personnel and civilian employees.

This year's report discontinues the presentation of alternative financial statements. The experimental set of summary-level statements was first introduced in 1978. The significant feature of these statements was to focus on selected current assets and liabilities of the Government.

### **ANNOUNCEMENT**

Due to the amount of interest shown after last year's announcement, the CFS will remain a separate publication in addition to being published in the Treasury Bulletin.

Cash and monetary reserves end of period	\$79.7	\$71.2

The accompanying notes are an integral part of this statement.

### Notes to Financial Statements

### 1. Summary of general accounting policies

Principal financial statements.—These consist of a statement of financial position, a statement of operations, and a statement of changes in financial position. Because of their developmental nature, only the most significant changes in format are disclosed in the Notes.

Principles of consolidation.—The statements include the accounts of all significant agencies and funds included in the budget of the U.S. Government. Agencies such as the U.S. Postal Service and the Federal Financing Bank, classified as off-budget (not included in calculating the budget surplus or deficit), have also been included in the statements because they are wholly owned and are clearly within the scope of Government operations. Government-sponsored enterprises such as the Federal land banks are excluded because they are privately owned. Intragovernmental transactions were eliminated in consolidation.

Fiscal year.—The fiscal year of the U.S. Government ends on September 30.

Reclassification and adjustment.—For comparability, certain fiscal 1982 data are reclassified where appropriate to conform to the financial statement presentation for fiscal 1983.

### 2. International monetary reserves

This category, as of September 30, 1983, comprises the following items: \$11.1 billion in gold, recorded at \$42.22 per ounce, the statutory price at which gold is monetized by the issuance of gold certificates to the Federal Reserve System; \$5.6 billion of special drawing rights, an international reserve asset; and \$9.4 billion representing the U.S. reserve position in the International Monetary Fund.

### 3. Other cash

This category, as of September 30, 1983, comprises the following items: Other U.S. Treasury monetary assets, \$1.6 billion; accountability for cash and other assets held outside the Treasury by disbursing, collecting, and other fiscal officers, \$7.0 billion; convertible foreign currencies, at market value, \$6.9 billion, and balances of nonpurchased foreign currencies, \$1.0 billion. The amounts as of September 30, 1982, were \$1.4 billion, \$8.7 billion, \$8.6 billion, and \$1.0 billion, respectively.

### 4. Accrued taxes receivable

The September 30, 1983, total for taxes receivable represents \$20.3 billion (net) for delinquent taxes and \$4.4 billion of accrued corporate taxes.

### 5. Loans receivable

Outstanding loans and allowances for losses have been recorded as reported by the various lending agencies. The allowances for losses are presumed to be understated and they are under study. Interest rates and loan repayment terms vary considerably for outstanding loans, with terms from as short as 90 days to well over 40 years.

### 6. Inventories

Inventories include nondepreciable personal property and are generally stated at cost. The September 30, 1983, total for inventories comprises \$101.9 bilion for the Department of Defense and \$41.6 billion for other agencies. The amounts as of September 30, 1982, were \$91.4 billion and \$33.1 billion, respectively. The inventory accounts do not include the weapons stockpile since the extent of this inventory is classified information.

### 7. Land

Land is valued at the cost paid by the Government. The cost of land acquired through donation, exchange, bequest, forfeiture, or judicial process is estimated by the General Services Administration at amounts the Government would have paid if purchased at the date of acquisition. Pending study of valuation methods, the Outer Continental Shelf and other offshore land, and the 672.4 million acres of public domain land, have not been included. In 1972 a committee of the House of Representatives estimated the value of public domain land (92 percent of the total onshore acreage owned by the Federal Government) to be \$29.9 billion.

### 8. Buildings, structures, and facilities

This category consists of all real property owned by the Federal Government except land. The total reflects the acquisition cost of buildings and the cost of acquiring or erecting dams, utility systems, monuments, roads, and bridges. The September 30, 1983, total represents \$56.5 billion for the Department of Defense and \$83.1 billion for other agencies. The amounts as of September 30, 1982, were \$55.6 billion and \$83.2 billion, respectively.

### 9. Accumulated depreciation

Most Government agencies do not calculate depreciation on property and equipment; therefore, accumulated depreciation is estimated on a straightline basis, from available information. The useful lives applied to each classification of asset are as follows: Buildings, structures, and facilities—50 years; ships and service craft—30 years; industrial plant equipment—20 years; all other depreciable assets—10 years.

### 10. Borrowing from the public

As of September 30, 1983, the gross amount of Federal debt outstanding net of unamortized premiums and discounts was \$1,371,2 billion. This amount was reduced by \$240.8 billion for intragovernmental holdings. The amount of Federal debt outstanding net of unamortized premiums and discounts, as of September 30, 1982, was \$1,136.8 billion. This amount was reduced by \$218.0 billion for intragovernmental holdings. As of September 30, 1983, foreign and international investors held approximately \$160.0 billion of the debt outstanding with the public. The amount as of September 30. 1982, was \$146.4 billion. For additional information on borrowing from the public, see the Federal Debt Maturity schedule in the supplemental section (page 101).

## 11. Accrued pension, retirement, and disability plans

The accounting for accrued pension, retirement, and disability plans is subject to several different assumptions, definitions, and methods of calculation. Each of the major plans is summarized below.

Military personnel and civilian employees: Accrued pension liabilities for September 30, 1983, represent the actuarial present value of accumulated plan benefits under the two plans and were calculated in accordance with instructions developed jointly by the General Accounting Office and the Office of Management and Budget under the provisions of Public Law 95–595. The liabilities under these two plans represent a major portion of the total unfunded liability which is to be reported under Public Law 95–595.

Social security: Based on the present value of the projected excess of benefits over contributions for present participants for the next 75 years.

It has not yet been determined whether the requirements for Federal pension plans, established as a result of Public Law 95–595, should be applied to the

Social Security System due to the uniqueness of the actuarial cost methods used for measuring benefits under the system.

Veterans compensation: Represents the present value of projected annual benefit payments.

Federal employees compensation: Represents estimated future costs for approved Federal Employees Compensation Act cases.

Other annual pension reports received from plans covered by Public Law 95–595 are reported in the same manner as military personnel and civilian employees described above.

For additional information on accrued pensions, see Analysis of Pension and Retirement Plans schedule in the supplemental section (page 102).

# 12. Contingent liabilities for guarantee and insurance programs

A number of agencies do not make any provision for estimated losses on loan guarantees and insurance, while others do not provide reasonable estimates of losses.

For additional information on estimated losses for guarantee and insurance programs, see the Commitments and Contingencies of the U.S. Government schedule in the supplemental section (page 100).

# 13. Current noncash provision for social security

The noncash provision for social security represents changes in the social security accrued liability between periods based on a 30-year amortization of the actuarial deficit. Accounting methods for this provision require additional study.

The noncash amount is not included in the Statement of Operations because a substantial but indeterminate portion is not applicable to the current period. The Statement of Operations does include cash benefit payments. The current noncash provision for social security is \$161.7 billion in 1983.

### 14. Contingencies

Several Government agencies insure businesses and individuals against various types of risks. The amount of insurance coverage in force, representing the maximum risk exposure to the Government, is \$2,330.6 billion as of September 30, 1983.

The Government also guarantees loans by non-Government enterprises to businesses and individuals. These guarantees become liabilities of the Government only when it is required to honor its guarantees. Loan guarantees in force at September 30, 1983, are \$556.2 billion. For further information on contingencies, see the Commitments and Contingencies of the U.S. Government schedule in the supplemental section (page 100).

### 15. Open-ended programs and fixed costs

The Government commits itself to provide services by passing laws that make spending mandatory. Since a significant amount of future spending is fixed by law, it is very probable that the Government will pay for these programs in future years. Listed below are the programs for fiscal 1983 that can be terminated only if the laws are changed.

	1983 [In billions]
Payments for individuals	
Social security and railroad	
retirement	\$171.8
Federal employees retirement	
and insurance	47.3
Unemployment assistance	29.7
Assistance to students	4.4
Food and nutrition assistance	3.3
All other	2.9
Medicare and Medicaid	73.5
Public-assistance-related	
programs	20.9
	353.8
Net interest	89.8
General revenue sharing	4.6
Other open-ended programs and	
fixed costs	16.6
Total	\$464.8

### Introductory Statement to the Supplemental Schedules

The following schedules present information which in some cases is unique to the Federal Government or is not generally shown as a part of published financial statements. The information in the schedules reflects various operations of the Government under laws passed by the Congress, and in some cases shows the financial costs to the Government of providing benefits through the tax system or through other indirect means as opposed to direct Federal revenue collection or spending.

There are certain schedules that are incomplete. As a prototype, this report attempts to show what is planned with regard to providing a comprehensive overview of Federal financial operations. In some cases, the schedules support the financial results shown in the consolidated financial statements; in others, there is little relationship between the schedules and the statements. Consequently, each of the tables should be considered individually as a specialized information source.

The following schedules are presented in this section:

### I Flow of Funds Projections

The information in this schedule was obtained from the 1985 Budget of the U.S. Government prepared by the Office of Management and Budget. It presents actual and projected 1984–87 cash receipts and outlays. Although the consolidated financial statements are prepared on an accrual basis and reflect historical financial data, no attempt has been made here to develop projections on an accrual basis. The data presented here also differ from the statements in that certain receipts are treated as reductions of outlays, according to conventions adopted for budgeting purposes.

These projections are not forecasts of future receipts and outlays, nor are they recommendations for policy-setting purposes. They simply reflect what may happen to cash basis revenues and expenditures considering certain basic assumptions reflected in the budget. The receipts projections are consistent with the continuation of current tax laws as modified in the 1985 Budget. Outlay estimates indicate the degree to which resources would be committed by the continuation of existing and currently proposed programs through fiscal 1987

### II Financial Statements of the U.S. Government Restated for General Price-Level Changes

This schedule is developed from the Statement of Financial Position and Statement of Operations. Historical values have been restated to account for changes in the general purchasing power of the dollar. Accounting for inflation by this method provides comparability between years, since all dollars are equivalent to the current level of purchasing power. This restatement generally follows the Financial Accounting Standards Board Statement No. 33, "Financial Reporting and Changing Prices."

Derived from the Consumer Price Index for All Urban Consumers (CPI–U), the average conversion factors used here are: fiscal 1983—1.011 and fiscal 1982—1.034. Monetary assets and liabilities as of September 30, 1983, are not restated because they already represent dollars of current general purchasing power.

### III Effect of Individual and Corporate Tax Benefits on Federal Revenues

The Effect of Individual and Corporate Tax Benefits on Federal Revenues schedule is designed to show the revenue losses attributable to tax law provisions that allow special

exclusions, exemptions, or deductions from gross income or provide special credits, tax rates, or deferrals. The schedule shows the approximate cost of tax benefits.

It should be noted that the effect on revenues of adding or deleting a particular tax benefit would not be the same as the dollar amount currently associated with the benefit. Consequently, it is not possible to say what the effects of increasing or decreasing selected benefits would be without considering a number of variables.

Some minor distortions may have occurred since data presented have been condensed for purposes of this report.

### IV Commitments and Contingencies of the U.S. Government

The Commitments and Contingencies schedule is designed to show two basic types of financial information. These are the maximum potential liabilities and the anticipated liabilities which it is reasonably certain, based on experience and other factors, will occur. The anticipated liabilities are the equivalent to allowance for losses.

As used in commercial accounting, a commitment represents an obligation to pay for goods or services upon delivery under a contractual arrangement. Commitments shown here are represented by long-term contracts for which appropriations have not yet been provided by the Congress, and undelivered orders representing obligations of currently available appropriations.

A contingency represents a possible exposure to a liability depending upon the outcome of uncertain future events or circumstances. Contingencies are stated in terms of the maximum risk exposure without regard to existing contingent assets which would be available to offset potential losses. The "ratio of losses incurred to premiums written" represents the probability of incurring those losses. "Contingent liabilities" supports the balance sheet liability "contingent liabilities for guarantee and insurance programs" and represents the anticipated liability.

### V Federal Debt Maturity

The Federal Debt Maturity schedule reflects information on the borrowing of the Federal Government needed to finance the Government's operations.

Information on the debt is provided by type of debt instrument, average interest rate charged for each type, and maturity. This schedule directly supports the balance sheet caption, "Borrowing from the public," which is shown net of intragovernmental holdings and unamortized premium or discount. Intragovernmental holdings represent that portion of the total Federal debt held by Federal entities, including the major trust funds.

### VI Additions to Non-Federal Economic Resources

This schedule indicates the ways in which the Government uses its resources to add to the physical and human resources of the Nation without acquiring physical assets. Some of these investment-type expenditures, while not adding to the Federal assets, add to the assets of State and local governments or private institutions, and all enhance the future productivity of the Nation.

While this schedule does not provide a precise measure of the difference between capital and current items, it does indicate a useful general magnitude.

Additions to State, local, and private assets include construction grants for highways, hospitals, and airports, subsidies to the merchant fleet, and conservation projects, which increase the value of private farmland and water resources. Other developmental expenditures reflect current Federal expenditures and grants which will benefit the Nation in future years by increasing productivity or well-being. These include research and development costs and education and training.

### VII Analysis of Pension and Retirement Plans

The Analysis of Pension and Retirement Plans schedule is designed to provide an insight into the size of these programs and associated future financing requirements as of September 30, 1983, for all plans for which the Government may have a contingent liability. Amounts for social security, military personnel, civilian employees, and other plans support the liabilities on the Consolidated Statement of Financial Position. The graph depicts a 10-year comparison of beneficiaries and average benefits..

To the extent that information for this schedule was available, it was obtained from direct contact with actuaries for the respective agencies, from published Department of the Treasury reports, and from annual reports filed under Public Law 95–595. The schedule is incomplete in that the number of plans ultimately to be included in the schedule is not yet resolved—as many as 38 separate plans might be included. GAO has developed instructions regarding the information to be contained, and the format to be used, in the annual reports. Figures developed under the GAO guidelines have been used in this schedule for 1983.

### VIII Summary of Accounts and Loans Receivable Due from the Public

The Debt Collection Act of 1982 (Public Law 97–365) requires the Director of the Office of Management and Budget (OMB), in consultation with the Secretary of the Treasury and the Comptroller General of the United States, to establish regulations requiring each agency with outstanding debts to prepare and transmit to OMB and the Treasury a report which summarizes the status of accounts and loans receivable managed by each agency. These receivables result from a wide range of Federal activities including tax assessments; sale of Government services such as satellite launchings; sale of Government goods such as natural resources from Federal lands; overpayments to people like annuitants; and various loan programs such as student and housing loans. The data in the reports will enable the Federal Government to improve collection activity.

This schedule supports the balance sheet receivables, "Accounts receivable" and "Loans receivable" which are shown net of allowances, taxes receivable and intragovernmental holdings. The information in this schedule is based on data submitted by Federal agencies to the Treasury and published annually in the Treasury Bulletin.

### IX Reconciliation Schedule of Accrual Operating Results to the Cash Basis Budget

The Reconciliation Schedule of Accrual Operating Results to the Cash Basis Budget deficit reflects the separate bases used to prepare each (accrual vs. cash). The Consolidated Financial Statements are prepared on the accrual basis and, accordingly, are more comprehensive because they recognize revenues and expenses in the accounting period to which they relate rather than when the receipts or outlays take place. The Budget of the United States Government reflects only cash received or spent.

The items shown as additions represent additional expenses not recognized under the budget concept, while deductions are adjustments for redistribution items.

### X Federal Facts and Figures

The schedule is designed to provide readers of the financial statements and schedules a set of recognizable benchmarks to use in making comparisons and identifying any relationships. Major emphasis has been given to providing information on the gross national product, the Consumer Price Index, employment, Federal debt, Federal expenses, and personal income taxes. In all cases, the most current data available have been provided.
