PROFILE OF THE ECONOMY

Both real disposable personal income and real consumer spending were soft in the final months of 1991. After-tax income rose at an annual rate of .5 percent in the 4th quarter, contributing to a narrow .4 percent increase in real spendable income for all of 1991. Meanwhile, real consumer spending fell at a 1.1 percent annual rate in the 4th quarter as a moderate increase in spending for services was offset by a sharp decline in purchases of goods. For all of 1991, spending was up by just 0.3 percent.

TREASURY ISSUES

Treasury Official Tells Congress Dropping Japanese Market Will Not Significantly Affect Independent U.S. Stock Market

The following addresses the recent economic and financial developments in Japan and the effect those developments might ultimately have on our own economy. It was excerpted from a statement given by then Assistant Secretary of the Treasury for Domestic Finance Jerome H. Powell.

The increasing internationalization of national economies and financial markets is a fact of life. On balance, it is a positive trend, full of benefits for each and every nation.

Globalization allows the world to mobilize its savings more effectively, drawing funds to those investment projects that offer the best returns, wherever they may be located. It allows the world economy to produce at the lowest possible cost in terms of resources, directing demands for products to wherever the most efficient sources of supply are located. At times of economic adversity abroad, however, increased international ties can become a source of concern.

The economic links between the United States and Japan are many, and they cover a broad range of areas, from finance to farming. The concern that has been expressed about the possible spillover effects of the sharp decline in Japanese stock prices is, therefore, an understandable one.

I will review some of the particular areas in which one might expect to see those effects—for example, in Japanese banks' activities in this country, in Japan's investments in our securities and real assets, and in Japan's exports to and imports from the United States.

To summarize my conclusion: while the links between the two nations' economies are undeniable, it is our view that the spillover onto our economy of the recent stock market developments in Japan is likely to be limited.

Background on Developments in Japan's Stock Market

I would like to begin by reviewing briefly the path Japan's stock market has taken in recent years. Buoyed in part by an expansionary monetary policy, the market soared during the last half of the 1980s. The Nikkei index tripled from 1985 to its peak at just below 39,000 at yearend 1989.

That rapid rise, however, was followed by an even more rapid decline. The Nikkei, now at roughly 17,500, has fallen by more than one-half from its high and is back to levels not seen since 1986.

Land prices, too, skyrocketed in the late 1980s and have retreated since. The Ministry of Finance's imposition of restrictions on real estate lending by commercial banks between April 1990 and December 1991 was undoubtedly

Then Assistant Secretary for Domestic Finance, Jerome H. Powell spoke before the Senate Committee on Banking, Housing and Urban Affairs on April 30. On May 17, Powell was named Under Secretary of the Treasury for Finance.

a key factor in this development. Property prices in the three largest metropolitan areas of Japan fell 13 percent last year, and for the nation as a whole, they declined about 5 percent on average.

In evaluating the likely international effects of these declines in the Japanese stock market and in real estate values, it is essential to identify their sources. I would point to two in particular. First, during 1990 and the first half of 1991, the Bank of Japan progressively tightened monetary policy, with the explicit intention of deflating their so-called "bubble economy" of inflated stock and property prices.

The Bank of Japan's success in deflating the bubble economy, however, has contributed to a considerable slowdown in Japanese economic growth and, with it, a decline

in business and consumer confidence. Highly leveraged investors have been especially hard-hit, and bankruptcies have increased sharply.

Although real Gross National Product growth in Japan for 1991 as a whole was 4.5 percent, there was a sharp deceleration over the 4 quarters, with a small decline in output registered in the final quarter. A second factor behind the drop in stock prices is a general erosion in investor confidence. The scandals that have surfaced in that market in recent years contributed to this development.

Since investors began to lose money in the market and then were confronted with evidence that the playing field might be less than level, they appear increasingly to have withdrawn. Indeed, liquidity in Japan's stock market is greatly reduced, with turnover running at perhaps a quarter of its earlier rate. This in turn has produced more volatility in share prices, which makes the needed recovery in confidence that much more difficult. We are watching the situation in Japan carefully. But we believe that the decline to date, which has occurred over a 28-month period, essentially constitutes a major correction of what was widely acknowledged to be a distorted and inflated market.

With respect to our own market, there is little evidence of any direct or important effects of the drop in Japanese share prices.

In fact, U.S. stock indexes have tended to rise during the period of decline in the Nikkei, hitting new highs within the last month. In general, the relationship between price movements in the U.S. and Japanese stock markets has been fairly weak, as analyzed exhaustively in Securities and Exchange Commission Chairman Breiden's testimony be-

U.S.-based banks have improved their balance sheets over the last year and are better positioned to take advantage of lending opportunities that may arise from a retrenchment by Japanese banks.

fore this Committee 2 weeks ago.

Japanese Banks' Ability to Meet International Capital Standards

The reduction in stock and property prices in Japan has generated questions about the capital positions of Japanese banks and their ability to meet international standards

for capital adequacy. In order to address these concerns, it is useful to make some general observations about capital adequacy and profitability in Japan's banking system.

The sharp rise of stock prices over the 4-year period through 1989 contributed to a lower cost of capital for Japanese banks by enabling them to raise equity at very low cost and also by increasing the value of the stock holdings that constitute part of their reserves. Correspondingly, the Nikkei's subsequent decline both has increased the cost of raising new capital and has eroded capital adequacy. In addition, Japanese banks are suffering from reduced profits as the quality of their loan portfolios is impaired by the weaker economy, rising bankruptcies, and declines in real estate values.

But Japan's banks have been adjusting to the adverse developments, as evidenced in part by less aggressive lending patterns in various markets. According to the Ministry of Finance, the average ratio of risk-weighted assets to capital for the major Japanese banks was just above 8 percent at the end of March 1992.

How these banks reinforce their capital positions--in terms of raising capital or restraining asset growth--ahead of the full phase-in of the BIS international capital standards next year will have consequences for the rest of the world, but we expect these effects to be relatively small.

Effects of Japanese Financial Market Developments on Japanese Bank Lending in the United States

Concerns also have surfaced as to the likelihood that the U.S. agencies, branches, and subsidiaries of Japanese banks will curtail lending in the United States, and about the impact this development might have on commercial real estate markets, U.S. banks, and the California economy, where their market share is especially high. To address these concerns, it is useful to review the pattern of lending by Japanese banks in the United States in recent years.

In a nutshell, after growing at an average annual rate of 24 percent from 1985 through 1989, assets of Japanese banks in this country have been about flat.

The dramatic growth in the last half of the 1980s was spurred by several factors. First, Japan was running a substantial current account surplus, with a corresponding net outflow of capital, a major share of which found its way into the United States--a portion of that through banks. Second, the yen was relatively strong versus the dollar, making direct investment in the United States attractive to many Japanese investors. This took many forms, including investments in real estate, in manufacturing facilities, and in financial and banking operations, the latter notably in California. Third, the cost of capital to Japanese banks was

very low, enabling them to finance rapid growth in their assets both at home and abroad.

During this period, the share of Japanese bank assets in the U.S. market grew significantly, particularly in California. At the end of 1990, the Japanese share of commercial bank assets reached over 11 percent nationally and over 26 percent in the State of California. The Japanese share of business loans was even higher, and it continued to grow in 1991 as U.S. banks pulled back from this type of lending.

This year, Japanese banks are expected to reduce their worldwide growth in order to reach and maintain their capital at the levels required by the BIS standards. They may be expected to give greater precedence to their customers in Japan, resulting in some further retrenchment of lending overseas, including in the United States. Therefore, it is unlikely that Japanese bank lending in the United States and California will be particularly strong in the near term.

Nevertheless, this trend does not necessarily portend more constrained borrowing conditions in California. U.S.-based banks have improved their balance sheets over the last year and are better positioned to take advantage of lending opportunities that may arise from a retrenchment by the Japanese banks. U.S. banks have built up a considerable stock of liquid securities that can be replaced with loans as private credit demands pick up in a strengthening economy. Banks based in other foreign countries have lending capacity as well.

For example, although Japanese bank assets in the United States declined by \$7 billion in 1991, foreign-based banks as a group expanded their assets in the United States by \$79 billion. Therefore, the overall effect on the California economy of a diminished presence by Japanese banks should not be disruptive.

Effects on U.S. Economy, Long-Term Interest Rates, and U.S. Budget Financing

While accurate figures on total Japanese investment in U.S. Treasury securities do not exist, the downward trend since the middle of 1989 is clear. According to the best figures currently available, Japanese holdings of U.S. Treasury securities are estimated to have decreased \$47 billion from mid-1989 to February 1992. This represented a decline from about 5 percent to 2 percent of outstanding privately-held Treasury securities (based on the 1984 Foreign Portfolio Investment Survey benchmark).

As significant as that decrease may seem, I would point out that total foreign investment in U.S. Treasury securities increased by approximately \$100 billion over the same period. In other words, the drop in Japanese holdings has been more than offset by increases in the holdings by other countries. This pattern of decreases in the holdings of

We believe that the view that the Government or the U.S. economy as a whole is "hostage" to particular investor groups or foreign countries is mistaken.

particular countries being more than offset by increases in the holdings of other countries is a typical one. The result has been that the percentage of the public debt held by foreigners has remained remarkably constant over the years. Foreign demand for Treasury debt has grown at very close to the same rate as Treasury debt itself has grown.

In December 1982, the share of the total public debt held by foreign and international accounts was 12.5 percent, and in February 1992 it was 12.2 percent. This constancy is also evident when the public debt held by U.S. Government accounts and Federal Reserve banks is excluded from the calculation. By that accounting, at the end of 1982, the percentage of this debt held by foreigners was 17.6 percent, and in February 1992, 17.9 percent.

Turning to Japanese holdings of private sector U.S. securities, the size of these holdings would not appear to be a great concern.

While Japanese investments in U.S. corporate debt and U.S. equities--\$18 billion and \$20 billion, respectively, at the end of 1991--are large in absolute amounts, they represent only a small fraction of the total market. These figures translate into Japanese ownership of slightly over 1 percent of U.S. corporate debt and approximately .5 percent of the total market value of U.S. equities at the end of 1991.

From a broader perspective, the amount the U.S. economy as a whole is dependent on capital inflows can be determined by looking at the U.S. balance of payments. Since the United States has been running a current account deficit, this means that there has been a net capital inflow into this country.

However, the current account deficit has been declining, which means, in effect, that the U.S. economy as a whole is depending less on foreign capital inflows. At the same time, interest rates here have declined.

Despite the size of the U.S. Government's budget deficit and the sometimes very large U.S. current account deficit, we believe that the view that the Government or the U.S. economy as a whole is "hostage" to particular investor groups or foreign countries is mistaken.

The Treasury's debt is too widely distributed and international capital markets are too well developed for that to be the case. Consequently, we do not believe that Japanese

disinvestment in Treasury securities or other capital flows resulting from current Japanese financial market difficulties will have any perceptible effect on long-term interest rates in this country.

U.S. Bilateral Trade Deficit with Japan: U.S. Manufacturing Base

Next I would like to turn to the question of the U.S. bilateral trade deficit with Japan, the likelihood that it will worsen, and the effects of this on the U.S. manufacturing base. First, I should say that the Treasury Department does not attempt to make forecasts of bilateral balances. That said, we do expect much larger Japanese trade and current account surpluses this year than last, and there are some reasons to think that our bilateral deficit with Japan will also increase this year.

By way of background, Japan's current account surplus actually declined sharply from a peak of \$87 billion in 1987 to \$36 billion in 1990. However, last year, the surplus more than doubled to \$73 billion. For 1992, the International Monetary Fund forecasts Japan's current account surplus at about \$93 billion.

The reasons behind the recent rise in Japan's external surplus are clear: Both the Japanese yen and Japan's domestic demand growth have weakened. These developments tend to make imports into Japan more expensive, tend to make Japan's demand for imports fall, and tend to divert more of Japanese production toward export markets.

Nevertheless, the U.S.-Japan bilateral trade deficit has widened only slightly, from \$42 billion in 1990 to \$44 billion last year. In the first 2 months of this year, the deficit ran a bit above last year's pace.

Most of the increase in Japan's current account surplus was registered with countries other than the United States, particularly some Asian nations and the countries of the European Community. However, if signs of economic recovery in the United States are borne out and the slowdown in Japan's economy is not soon arrested, the bilateral imbalance between us could worsen further.

With respect to the effect of trade with Japan on the U.S. manufacturing base, the numbers do not support the view that the United States is able to export only agricultural products and unsophisticated manufactures to Japan. For example, over the last 4 years, the value of U.S. exports to Japan has grown by 70 percent, whereas imports from Japan have grown much less rapidly, by only 8 percent.

Looking behind these numbers, one notes that U.S. export growth has been strong in sophisticated and high-technology goods. For example, U.S. exports to Japan of industrial and service machinery grew 93 percent, telecommunications equipment exports increased by 148 percent,

... the risk of contagion is quite small, as our stock market has remained robust, moving in the opposite direction of the Nikkei in recent years.

and exports of scientific and medical machinery grew 129 percent. Civilian aircraft and engine exports increased by 60 percent, and exports of computers, peripherals, and semi-conductors increased by 124 percent.

The United States also does well on service transactions. In fact, in finance-related service transactions, such as royalties and license fees, financial services and insurance, the United States has a surplus with Japan.

To sum up, Japan's trade and current account surpluses have risen dramatically, primarily reflecting a decline in the level of imports, which in turn has been a function of a weaker yen and slower growth in Japan. So far, the U.S. bilateral trade deficit with Japan has not borne the brunt of this decline, but there is a possibility that our deficit will grow this year.

Cross-Ownership of Japanese Stock (Keiretsu)

Finally, I would like to respond to your question about the possibility that the Japanese practice of corporate cross-ownership of stock, an aspect of the keiretsu system, will unravel as a result of the decline in the Japanese stock market. First, some basic facts about cross-ownership of stock in Japan. About 70 percent of Japanese stocks are held in the form of long-term stable shareholdings. One-third of this amount is held in "cross-shareholdings" between business corporations, and the other two-thirds is held by institutional investors, such as banks, pension funds, and insurance companies.

During the bull market of the 1980s, these share holdings could be justified on the basis of large capital gains. However, since the average dividend yield on Japanese equities has been meager, in the absence of capital gains, corporations and financial institutions may well re-evaluate their holdings. In addition, some corporations could be forced to divest stocks held in a cross-shareholding arrangement in order to meet their investment financing needs in the face of reduced credit availability.

These market pressures will probably reduce the proportion of stable shareholdings and erode the cross-shareholding system to some extent, but it certainly does not spell the end of the keiretsu system.

Cross-share holding is only one, albeit the most visible, aspect of the keiretsu system. While the decline in share prices may cause companies, especially investment institutions, to re-evaluate their share holdings and divest those that are nonperforming, in many instances the financial aspects of cross-shareholdings are secondary to their role in cementing the long-term relationships among corporate business partners that are central to the keiretsu system. Therefore, there will continue to be strong institutional and business pressures to hold onto shares of "group" members and of companies that are major suppliers or customers.

Conclusion

I do not wish to minimize the impact of the sharp decline in Japanese stock prices over the past 28 months.

The capitalization of Japan's stock market has declined by about one half, and a drop of that magnitude cannot occur without notable repercussions on Japan's wealth, the health of its financial sector, and its economy generally.

But one mitigating factor has been the extended period over which that decline has taken place, thereby allowing businesses to adjust to their changed circumstances and reducing the risk of damage to the economy.

From the United States' perspective, the drop in the Japanese stock market is likely to have limited effects. As noted, the risk of contagion is quite small, as our stock market has remained robust, moving in the opposite direction of the Nikkei in recent years.

While world economies are increasingly interdependent, we do not expect the decline in stock prices in Japan will translate into substantial consequences for our economy. ◇

THE DEBT DEBATE

In recent months, the issue of Federal debt management has become a topic of great interest. The following, featuring an interview with Treasury Assistant Secretary for Domestic Finance Jerome H. Powell, continues to expand on debt issues brought to the forefront in recent issues of the Treasury Bulletin. Excerpted with permission of Government Executive magazine, it first appeared in that publication in April 1992.

Paul Starobin is a correspondent for National Journal.

Many people think the Federal Government relies too heavily on long-term securities to finance its debt. But Treasury's debt managers oppose a change.

...a number of analysts believe that flaws in the Government's debt-management strategy are adding hundreds of millions of dollars annually to the cost of servicing the public debt.

The Federal Government may justifiably be criticized for many shortcomings, but there is at least one task that it appears to perform exceedingly well--with almost frightening proficiency, in fact. That's the job of raising money to finance the public debt.

The era of hundred-billion-dollar-plus deficits, which began in the 1980s and which the House Budget Committee recently predicted could last into the next century, has posed something of a challenge to the Treasury Department team responsible for meeting the Government's cash needs. After all, every dollar of spending the Government can't cover with a dollar of revenue has to be borrowed from private investors and paid back, of course, with interest.

But no amount of fiscal excess has proven too big for Treasury's debt managers to handle. In 1980, investors held a mere \$709.3 billion in Federal debt; 1992 debt holdings will likely breach the \$3 trillion mark. Last year, Treasury issued \$1.7 trillion in marketable securities--\$1.4 trillion of the proceeds went toward retiring maturing debt and the rest toward financing the budget deficit. Meanwhile, the Office of Management and Budget (OMB) projects that the deficit for the current fiscal year will be a record \$399.1 billion.

Not to worry: The hole is being filled by the mountain of cash raised in the auctions of Treasury securities held by the debt-management squad 160 times annually. Week after

week, these auctions attract flocks of investors from Wall Street to Tokyo. (Foreigners hold about 18 percent of the public debt; the Japanese alone account for about 3 percent.) All of the buyers are eager to lend Uncle Sam money, all of them are sure this is one loan that won't go sour.

"Borrowing money is one of the things the Government does really well," says Jerome H. Powell, Treasury's Assistant Secretary for Domestic Finance. "Debt management is basically a success story."

Or is it? Sure, the Government has been able to finance its deficits. But has it done so at the lowest possible cost to the taxpayer? With interest-rate payments on Treasury securities exceeding \$200 billion annually--an expenditure that now outstrips every component of the budget, except for Defense and Social Security--this is not an idle question. An increase of a mere one-hundredth of one percentage point (one basis point) in the interest rate paid on Treasury paper costs taxpayers an extra \$250 million or so a year in debt-service costs.

Powell's assessment notwithstanding, a number of analysts believe that flaws in the Government's debt-management strategy are adding hundreds of millions of dollars annually to the cost of servicing the public debt and thereby depriving the budget of scarce funds. The criticism boils down to this: Treasury's debt managers, either because they tend to be captives of the big Government bond dealers on Wall Street or simply because they are afflicted with bureaucratic inertia, have their heads in the sand.

Enormous deficits beg for an aggressive, entrepreneurial approach to managing the public debt, critics say, but Treasury's posture tends to be cautious and unimaginative.

Passing the Long Bond

A prime example of Treasury short-sightedness that critics cite is the department's reluctance to shift away from sales of 30-year Treasury bonds--the so called long bond--toward sales of shorter-term Treasury securities.

Advocates of such a shift, including Nobel laureate economist James Tobin of Yale University and Stephen H. Axilrod, formerly a top staffer at the Federal Reserve Board, note that the prevailing market interest rate on the long bond is much higher than the rate on short-term securities, such as

the 3-month and 6-month bills and the 2-year and 5-year notes. In fact, the spread between short-term and long-bond rates has never been higher. The Congressional Budget Office said in a recent report on the economic and budget outlook that shifting the \$50 billion or so that Treasury now sells each year in long bonds into short-term maturities would save about \$1 billion in interest payments annually.

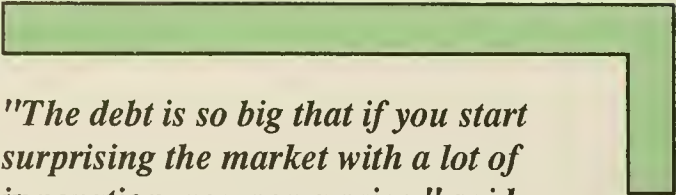

For many economists, the logic is simple and compelling. "Interest-rate restructuring is taking place at the consumer level, through a refinancing of mortgages at lower rates, and at the corporate level, through the plethora of new corporate bond issues at lower rates," says Kathleen M. Camilli, an economist for Maria Ramirez Capital Consultants Inc. on Wall Street. "The only place it is not taking place is at the Federal Government level. I think we could find some more creative ways of saving the taxpayer money."

What's more, many who advocate shifting away from long bonds also predict a side benefit to the economy: a further reduction in mortgage and corporate-bond rates. If the Treasury makes long bonds scarce, this argument goes, they will become more valuable, and investors who still want them will have to bid a higher price and settle for a lower rate of return. Because mortgage and corporate rates tend to move in the credit markets in tandem with long-bond rates, their interest rates too would decrease.

Last December, Treasury Secretary Nicholas F. Brady revealed that the Government was reviewing its borrowing strategy with an eye toward reducing reliance on the long bond. But his comment sparked opposition within the financial community, particularly among Wall Street Government bond dealers who buy and actively trade Treasury securities. For dealers and investors, the long bond is by far the most popular and most profitable of all U.S. Government securities--In fact, it is the most actively traded security in the world.

On February 5, Powell declared at a press conference attended by a packed house of financial journalists that, aside from making a modest, one-time-only reduction in its quarterly long-bond issues, Treasury would not depart from its traditional debt-management strategy, after all. "Over time, the cost of financing the debt is minimized by a stable, predictable pattern of Treasury financing," he said. In an interview in his office a few days later, he insisted that neither concerns about upsetting the bond dealers nor a commitment to bureaucratic routine played any role in the decision.

Francis X. Cavanaugh, an ex-Treasury aide who until 1986 was the top career official advising political appointees on debt-management policy, also defends Treasury's traditional debt-management approach. "The debt is so big, so enormous, that if you start surprising the market with a lot of innovation, then you pay a price for it," says Cavanaugh, now head of the Federal Retirement Thrift Investment Board. "This is business--it's not alry macro economics."

"The debt is so big that if you start surprising the market with a lot of innovation, you pay a price," said Frank X. Cavanaugh, a former Treasury aide.

Inside the Treasury

Although it is just one decision, the debate over whether to curtail long bonds offers a window into the little-understood world of how the Government makes and carries out debt-management policy.

The first thing to grasp is that debt management, notwithstanding its implications for the economy and the Federal budget, is virtually the sole province of the Treasury Department. Although advice is often sought from the Federal Reserve Board and occasionally from other quarters of Government, Treasury feels free to ignore it.

During the Reagan Administration, for instance, Council of Economic Advisers member William A. Niskanen says he tried without success to sell Treasury on issuing a so-called index bond that Niskanen thought could signal the Government's commitment to lowering inflation. "The Treasury debt-management people are a world unto themselves and are basically unresponsive to outside advice," Niskanen says.

Today, even Richard Darman, the powerful and often-imperious chief of OMB, is quick to defer to Treasury's supremacy on debt-management decisions. At a late January hearing, Darman told House Budget Committee lawmakers that he personally favored "a sensible shift out of long into short maturities," but added, "We don't control that.... That's a Treasury decision."

And though the top dog at Treasury, the Secretary, is nominally responsible for debt policy, the key players are deeper within the bureaucracy. The two most important slots are the one occupied by Powell, Assistant Secretary for Domestic Finance, and a perch immediately below his, the Deputy Assistant Secretary for Federal Finance.

These officials meet regularly with the Treasury Borrowing Advisory Committee, a group of senior officials at important bond dealerships and investment houses who make recommendations on debt-management strategy and tactics. The atmosphere has tended to be clubby. In fact, the Deputy Assistant Secretary for Federal Finance, Treasury's front-line contact with Wall Street, traditionally has been a political appointee drawn from the bond-dealer community.

But a change occurred recently following Salomon Brothers Inc.'s admission last summer that it had repeatedly cheated in Treasury's bond auctions. Faced with widespread perceptions on Capitol Hill and elsewhere of incestuous links between the dealers and Treasury, Powell filled the Federal-finance slot with a career economist at the Fed, Deborah J. Danker. The 38-year-old Danker has a high-powered academic background that includes a doctorate in international economics from Yale University, but she has never traded a bond on Wall Street or anywhere else. (Nor, for that matter, has Powell; he previously worked as an investment banker at Secretary Brady's old firm, Dillon, Read & Co. Inc.)

Danker says her toughest challenge in her new job probably will be establishing herself as an effective liaison with the dealer community. She's been making the rounds on Wall Street to introduce herself to the important players in the bond market.

A non-player at Treasury when it comes to the making of debt-management policy is the Bureau of the Public Debt.

The Bureau handles administrative tasks, including conducting auctions of Treasury securities and accounting for debt holdings in the market. Bureau commissioner Richard L. Gregg, who joined Treasury in 1970, gets a bit testy when a reporter tries to draw him out on the policy question of whether Treasury should shift to short-term maturities.

"No matter what I thought or said, the decision is with the Undersecretary [for Finance] or Assistant Secretary for Domestic Finance," Gregg says. "That's not my job."

Market Jitters

Gregg's reluctance to talk about policy is understandable. Just as financial markets can be rolled by seemingly benign remarks by the chairman of the Fed, comments made by Treasury or other officials on debt-management matters can send shivers through Wall Street.

Consider Brady's revelation that Treasury was considering a shift away from borrowing long bonds. It came in

response to a single question posed by a lawmaker in the middle of a House Ways and Means hearing on middle-class tax proposals, and all Brady said was that a change in strategy was "something we're taking a look at." Nevertheless, the comment was pounced on by financial wire service journalists covering the hearing; split-second transmission to Wall Street sent the prices of short-term securities down (on the guess that Treasury would make more of them available) and long bonds up (on the guess that they would become scarce). But

before the day was out, other Treasury officials played down Brady's remarks, and long-bond prices retreated.

It is just this sort of episode that makes debt-management professionals nervous. At a February press conference, Powell said big shifts in the mix of securities offered by Treasury would ultimately cost the Government in interest payments because, lacking a predictable pattern of financing, the market would charge an "uncertainty premium" for holding bonds.

The market's big players certainly aren't asking for changes in the status quo. The Brady trial balloon, if that's what it was, triggered a 16-page report by Goldman Sachs & Co. entitled "The Misguided Movement to Abandon Treasury Bond Sales."

Many of the report's arguments made sense, such as the observation that a few years of taxpayer savings achieved by curbing long-bond purchases could ultimately be negated if the debt had to be refinanced at higher interest rates later. Gold-

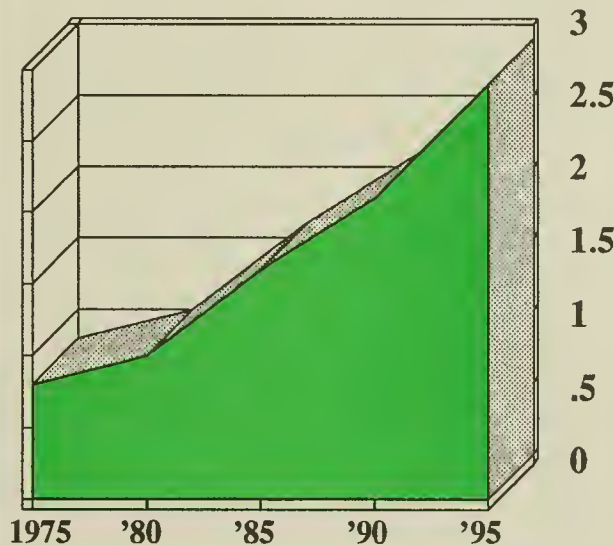

man also noted that the long bond was not, by any means, the dominant security in Treasury's arsenal: It currently comprises only about 11 percent of outstanding public debt, and more than half of Treasury's marketable debt comes due within 2 years. Goldman Sachs did not mention that the company is one of Wall Street's biggest dealers in the high profit sales of long bonds.

Also weighing in against curtailment of long bonds was the politically powerful Chicago Board of Trade, the world's largest commodity futures exchange. Just as traders buy pork-belly futures to protect against swings in pork prices,

THE SPIRALING PUBLIC DEBT

As Federal debt held by the public skyrocketed from \$395 billion in 1975 to \$2.4 trillion in 1990, interest on that debt grew from 7.5 percent of Federal outlays to 16.1 percent. From 1991-95, the debt is expected to grow by 1.4 trillion.

The graph shows growth of the debt in trillions of constant 1987 dollars. By this inflation-adjusted measurement, the debt is expected to grow by 350 percent between 1975 and 1995.

Source: Budget of the United States Government, Fiscal 1993

holders of Treasury securities buy Treasury futures to hedge against movements in bond prices. In fact, futures and options contracts based on the long bond accounted for a whopping three-fourths of the exchange's trading volume in 1991.

The price of a seat on the exchange plummeted in the wake of Brady's remarks, and Board of Trade President Thomas R. Donovan dashed off a letter to Brady protesting that a curb on long bonds "would cripple" the exchange. He wrote a similar letter to the board's long-time protector on Capitol Hill, Democrat Dan Rostenkowski of Chicago, the powerful chairman of House Ways and Means.

Powell says Treasury has received inquiries about its review of the long bond from Capitol Hill but refuses to name specific sources; he also says congressional pressure did not influence Treasury's decision.

Serving Constituents

Analysts disagree on the extent to which Treasury debt managers should cater to the demands of the market. Treasury orthodoxy holds that, just as Detroit should make the kinds of cars that consumers want to buy, debt managers should sell the kinds of securities that the market wants to purchase. And nobody should object to dealers making money on Treasury securities, this logic goes: If the business weren't profitable, then the Government would run into trouble financing its debt.

But many economists say this sort of conservative approach underestimates the market's ability to adapt to change. Even as Chicago's Donovan was writing to warn Brady of the dangers of cutting back on long bonds, Richard L. Sandor, the board of trade's former chief economist, was telling reporters that a move toward shorter maturities wouldn't be a big deal. Hedgers and speculators would simply shift their trading into futures based on two-year notes and other short-term Treasury securities, Sandor said.

Other analysts say that Treasury's recent overhaul of auction procedures--spurred by the Salomon scandal--provides fresh opportunities for debt managers to operate in a more freewheeling fashion. Under the old rules, only a small circle of Government bond dealers--so-called primary dealers--and commercial banks were allowed to submit bids on behalf of customers.

Under the new rules, aimed at broadening participation in auctions, all Government securities brokers and dealers

Powell was quick to say that Treasury was not trying to signal any basic change in debt-management strategy. He said shortage-averting injections of securities would be offered in only "rare cases" and emphasized, "It is not our intention to micro manage the Treasury market--at all."

registered with the Securities and Exchange Commission are allowed to submit bids for customers. What's more, the Treasury is installing a system that will allow firms to submit bids by computer.

"What you're doing is breaking down that clubby little relationship between Treasury and the primary dealer community," says a veteran Wall Street analyst, and "giving the Treasury more flexibility than they might have had in the past because they had to depend on the 30 or so primary dealers."

Economist Camilli suggests that Treasury hire a special group of whiz-kid traders to handle debt management--the sorts of people who would work in Government for maybe a year or two after graduate school and then go on to make big bucks on Wall Street. Agencies, such as the International Monetary Fund, the Fed, and the Federal Home Loan Mortgage Corp. (Freddie Mac) hire many such people, she notes. For example, Freddie Mac has a cadre of savvy debt-marketing specialists who sell mortgage-backed securities to investors in New York, Tokyo, and other global centers of finance.

Treasury's auction reforms also contained a policy that some on Wall Street took as a harbinger of a newly aggressive stance toward the bond markets: providing additional quantities of a security to the market when an acute, protracted shortage develops. The idea is to prevent any one firm from cornering the market on a new issue. But in the interview, Powell was quick to say that Treasury was not trying to signal any basic change in debt-management strategy. He said shortage-averting injections of securities would be offered in only "rare cases" and emphasized, "It is not our intention to micro manage the Treasury market--at all." ◇

Recent Reports and Studies

Economic Developments and Reforms in the Former Soviet Union

The GDP for the former Soviet Union fell by as much as 12 percent in 1991, and the IMF estimated inflation of 140 percent for the same year, according to David C. Mulford, Under Secretary of the Treasury for International Affairs. The Under Secretary spoke to the House Committee on Banking, Finance, and Urban Affairs, and the Subcommittee on International Development, Finance, Trade, and Monetary Policy on February 5, 1992, regarding economic reform measures in the former Soviet Union.

According to the Under Secretary, the budget deficit increased to more than 22 percent of GDP. However, a trade surplus was the result of declines in both imports and exports. In January of this year, the Russian government introduced a 28 percent value added tax, a 32 percent profits tax, and a 37 percent wage tax. Overall consumer prices have roughly doubled since January.

The Russian Federation is working in cooperation with the IMF to pursue economic reform. Plans include changes in fiscal and monetary policies, the foreign exchange system, price liberalization, and privatization. Russia has cut both domestic and military spending substantially. Several other former re-

publics are also working with the IMF and other international institutions. Secretary of State James Brady announced U.S. support for early consideration of IMF and World Bank membership for new states establishing diplomatic relations with the United States.

The exchange rate for commercial transactions is 110 rubles to the dollar. Russian authorities expect the value of the ruble to strengthen as confidence in the reform program increases. However, a proposal by the Central Bank for a "foreign investment" rate of 8-10 rubles to the dollar could have a substantial negative impact on foreign investment.

The Western response to the reforms taking place includes debt deferral by leading creditor countries, humanitarian and food aid, technical assistance, and nuclear risk reduction.

Contrasting the current situation with the rebuilding of Europe following World War II, the Under Secretary said "the process in the new states requires creation of institutions and systems for a market-based economy, which has not existed in these countries during much of the present century."

Changing Economic and Financial Relationships Between the United States and Pacific Region

The nature of relationships Between the United States and Taiwan and Korea has changed as Asian economies have grown and prospered, according to Treasury's Deputy Assistant Secretary for Developing Nations, who spoke to the Bankers' Association for Foreign Trade on January 23.

The first objective in consultations with Korea and Taiwan is to improve treatment of U.S. financial firms, ensuring them equality of competitive opportunity with domestic counterparts. The United States is also seeking broader liberalization of financial markets to include interest deregulation, elimination of capital controls, and changes to exchange rate policies.

In both Korea and Taiwan, policies exist that discriminate against foreign institutions. Taiwan strictly limits foreign banks' access to domestic funding resources and restricts foreign exchange activities. Korea offers a "closed, protected, unfair, and discriminatory environment for foreign institutions," and strictly controls and directs foreign exchange activities. Banks must adhere to a long list of prohibited activities. A regulatory system is used in Korea with minimal written implementation.

The Deputy Assistant Secretary concluded that the newly industrializing economies must "take up the challenge of liberalization and opening markets" if more equitable financial markets are to be established.

Deputy Secretary Robson Addresses the Mortgage Bankers Association

Deputy Secretary of the Treasury John E. Robson described the economy as "unsatisfactorily sluggish" due to "forces in the business cycle" while addressing the Mortgage Bankers' Association. The Deputy Secretary spoke February 3, 1992, to discuss the Administration's proposals for bank reforms aimed in part at strengthening the real estate industry. He referred to the President's economic growth plan that includes passive loss relief, using pension funds for real estate investment, extending tax credits to stimulate construction and refurbish low income rental housing, and cutting the capital gains tax.

The plan also incorporates a \$5,000 credit and penalty free withdrawal from Individual Retirement Accounts (IRAs) for first time buyers, and other tax incentives. The plan is intended to result in increased real estate values and a stronger market.

Concerning the present "credit crunch," the Deputy Secretary said that too little credit has been available to fuel the real estate industry, and called on banks to "come out of hibernation and start lending."

"Banking," he said, "is not risk free and not intended to be so. And bankers should be stepping forward now to make loans to sound borrowers." Credit crunch guidelines were created by

the four bank regulatory agencies to ensure "balance and good judgment" in bank and thrift examinations. They instruct examiners to view real estate values in the long term.

"We cannot have examiners hanging a scarlet letter on real estate," Deputy Secretary Robson said. The Administration supports changes in regulatory law, including flexibility for the Office of Thrift Supervision (OTS) in granting extensions to thrifts that must set aside capital against real estate invest-

ments, as well as a reduction in the amount of capital that must be set aside.

Deputy Secretary Robson blamed the weak banking system on antiquated laws that prevent financial health and reduce international competitiveness. In his argument for fundamental bank reform, he said that rather than adopting the Administration's bank reforms Congress has passed "flawed legislation that imposes more regulation, higher costs, and offers no opportunity for the banks to strengthen themselves financially."

The Administration's Views on Thrift Institutions' Deductions of Reimbursed Losses

Under capital loss protection provisions, the Federal Savings and Loan Insurance Corporation (FSLIC) agreed to protect resolved institutions against losses realized on the sale of or write down on designated assets. Institutions were generally reimbursed for the difference between the book value of an asset and the selling price or the write down value.

Under guaranteed yield maintenance, institutions were guaranteed a minimum yield or return on covered assets. Assistance agreements made in 1988 and 1989 obligated the FSLIC to make ongoing assistance payments to 91 remaining institutions resolved in 1988 and 1989 transactions. Those institutions take the position that the Government assistance is deductible for income tax purposes.

February 11, 1992, Terrill A. Hyde, Deputy Tax Legislative Counsel for Regulatory Affairs, presented to the House Com-

mittee on Ways and Means the Administration's views on the extent to which thrift institutions should be permitted to deduct losses reimbursed with tax free Government assistance. Treasury's *Report on Tax Issues Relating to the 1988/89 Federal Savings and Loan Insurance Corporation Assisted Transactions* concludes that reimbursed losses should not be deductible and that the issue is governed by principles of tax law precluding deduction of compensation by insurance.

The report recommends legislation to clarify deductibility to avoid the delay and cost of litigation on this issue by the Internal Revenue Service (IRS). The report determines that the potential cost to the taxpayer of continuing the incentives to hold covered assets and to minimize the value of assets when sold would outweigh the cost of "creating the perception that the Government is not adhering to its bargain."

Report to Congress on the Request for Additional Funding for the Resolution Trust Corporation

The Resolution Trust Corporation (RTC) Oversight Board requested additional funds to cover losses as well as working capital to finance RTC's acquisition of failed thrifts. September 12, 1991, Deputy Secretary of the Treasury John E. Robson spoke to the House Subcommittee on Financial Institutions Supervision, Regulation and Insurance, in support of additional funding for RTC, RTC asset disposition, and RTC restructuring. (The bill has since been passed to the full committee.)

The Board estimated that another \$80 billion in loss funds would be needed, doubling the amount already authorized. It also requested that RTC's borrowing limit be raised from \$125 billion to \$160 billion. Also, RTC is requesting an extension of Office of Thrift Supervision transfer authority until September 30, 1993, citing a larger than expected case load. Deputy Secretary Robson said RTC is "making progress" in meeting clean-up goals, and that mandated improvements in RTC

management include a uniform Conservatorship Operations Manual, a soon-to-be-operational computerized securities portfolio management system, an assets tracking system, and standardized contracting policies and procedures.

As of June 30, 1991, RTC had sold 51 percent of seized assets, netting \$168.2 billion. Also, 73 percent of RTC's book value of securities has been sold with only a 3 percent loss. Through August of 1991, RTC has sold \$2.5 billion of its mortgage-backed securities and is considering securing commercial loans.

The RTC has introduced a portfolio sales program to increase asset sales due to growing inventories of hard-to-sell assets and is promoting the sale of single- and multi-family homes. As of June 30, 1991, 22 percent of its single-family homes; 10 percent of the multi-family homes had been sold.

Report to Congress on Tax Simplification, Employee Benefits; Proposals Concerning Tax Deposits, Earned Income Tax Credit, and Pension Coverage and Portability

The Tax Simplification Act of 1991 (S. 1394) is estimated by the Office of Tax Analysis to be "nearly revenue neutral, with a loss of \$89 million in fiscal 1992 and \$47 million over the 5-year budget period," according to Kenneth W. Gideon, Assistant Secretary of the Treasury for Tax Policy, who addressed the Senate Subcommittee on Taxation and the

Committee on Finance on tax simplification proposals pending (S. 1394 and S. 1364) and related proposals September 10, 1991. The Employee Benefits Simplification and Expansion Act of 1991 (S. 1364), according to the Administration, would lose approximately \$16 billion in its current form.

Although the Administration believes that simplification of benefit provisions "can be achieved within the parameters of the budget agreement," it opposes legislation that loses revenue. Proposed simplification of the employment tax deposit system (H.R. 2775) would require semi-weekly deposits instead of the eight monthly deposits required by the current system. Also proposed are repeals of "interaction rules" preventing taxpayers from receiving full benefit of health insurance

credit, the young child credit, and other provisions, and the simplification of tax laws to expand pension coverage and enhance pension portability. The proposals also include simplifying and encouraging tax free roll-overs, establishing a simplified employee pension program, simplifying the administration of 401(k) and other plans, extending 401(k) plans to Government employees and employees of tax-exempt organizations, and adopting a uniform vesting standard.

The Administration's Views on a Proposal To Allow U.S.-Controlled Foreign Corporations To Elect To Be Taxed as Domestic Corporations

The Administration opposes H.R. 2889, which would eliminate deferral on income from property imported into the United States, including profits, commissions, and fees, according to Philip D. Morrison, International Tax Counsel, Department of the Treasury. He presented to the House Committee on Ways and Means the Administration's views on H.R. 2889 and on the proposed taxing of U.S.-controlled foreign corporations on October 3, 1991.

The Administration's opposition stems from the difficulty in enforcement, the fact that the proposal differs significantly from the traditional focus, and the lack of impact, due in part to excess foreign tax credits.

Under the bill, the IRS would be required to trace indirect sales, as well as determine whether a U.S.-controlled corporation should have "... expected at the time of the initial sale that the property would ultimately be imported into the United States." Adding to the complexity of these tasks is the fact that

the bill also applies to components incorporated into other products, which are subsequently imported. Further complicating enforcement would be the importation of components used in U.S. manufacturing of products to be exported.

Another concern is that the bill would increase taxes for U.S.-controlled agricultural or mineral companies that, due to geographical limitations, must operate abroad. The Administration also expresses reservations concerning the impact of the bill for companies who import from both high-tax and low-tax countries.

The Administration also opposes U.S. shareholders being allowed to treat U.S.-controlled foreign corporations as U.S. corporations. It is the Administration's view that, without safeguards, a reduction in tax liabilities would result in approximately \$1.5 billion in revenue losses over the 5-year budget window.

Copies of the preceding statements are available through the U.S. Department of the Treasury, 1500 Pennsylvania Ave., NW., Office of Public Affairs, Room 2315, Washington, D.C. 20220, phone (202) 566-2041.

Integration of the Corporate and Individual Tax Systems

The current tax system taxes corporate profits distributed to shareholders at least twice--once at the corporate level and once at the shareholder level. On January 6, 1992, Treasury released the *Report of the Department of the Treasury on Integration of the Individual and Corporate Tax Systems: Taxing Business Income Once*, which documents distortions created by the double tax and describes several integration prototypes for taxing corporate income once.

The Report does not contain any legislative recommendations, but rather is intended to stimulate discussion of the prototypes and encourage serious consideration of proposals for integrating the individual and corporate tax systems in the United States. The report is available from the Government Printing Office, GPO Stock Number 048-000-00430-0, at a cost of \$14.00.

Tax Treatment of Deferred Compensation Under Section 457

Section 457 of the Internal Revenue Code limits the amount of deferred compensation provided to employees of tax-exempt organizations and State or local governments, according to the *Report to the Congress on the Tax Treatment of Deferred Compensation Under Section 457*, released on January 7, 1992.

The report summarizes the legislative history and the underlying policies of section 457, regarding tax-exempt organizations and concludes that statutory limits are appropriate

because, unlike taxable employers, employers that are exempt from income taxation have no tax incentive to limit deferred compensation. Moreover, section 457 serves as an incentive for tax-exempt employers to provide greater benefits through tax-qualified plans.

The report recommends section 401 (k) cash or deferred arrangements be extended to nongovernmental, tax-exempt employers, as current law does not allow certain tax-exempt employers to offer salary reduction plans to their employees.

Allocation of Excess Pension Plan Assets in the Case of Bridge Banks

In response to the requirements of Section 6067(b) of the Technical and Miscellaneous Revenue Act of 1988, Treasury released its "Study on the Allocation of Excess Pension Plan Assets in the Case of Bridge Banks" January 7, 1992. The study examines conflicting goals of pension policy and bank insurance policy in an over-funded defined benefit pension plan sponsored by a bank holding company for the joint benefit of

the employees of the bank holding company and a failing subsidiary bank. According to the study, the current provision in the Internal Revenue Code should be amended to require an equitable allocation of the full amount of excess pension assets whenever a bridge bank receives assets and liabilities of an insured bank closed by regulations.

Report to the Congress on the Tax Treatment of Bad Debts by Financial Institutions

Recently proposed regulations generally allow banks and thrifts to conform their tax and regulatory accounting for the charge-off of bad debts, according to Treasury's "Report to the Congress on the Tax Treatment of Bad Debts by Financial Institutions," released on September 16, 1991.

The report studies the criteria to be used in determining whether a debt is worthless for Federal tax purposes and specifically considers circumstances under which a conclusive or rebuttable presumption of worthlessness is appropriate.

The report concludes that conformity of tax and regulatory treatment should not apply to accrued but unpaid interest on loans that are placed in nonaccrual status for regulatory purposes.

The report further states that extension of the conformity rules to unregulated lenders would be a significant departure from settled policy and practice that should be left to Congress to consider.

Copies of these reports may be purchased from the National Technical Information Service, 5285 Port Royal Road, Springfield, VA 22161; phone (703) 487-4660.

Revenue Impact of Proposed Capital Gains Tax Reductions

In recent years, a considerable amount of debate has centered on the likely effect of a decrease in the capital gains tax. While analysis of the issue has been split between two approaches--estimating aggregate responsiveness of capital gains realizations, as well as focusing on individual taxpayer responsiveness--neither has provided conclusive evidence to decide the issue.

Research Paper No. 9003, "The effect of Marginal Tax Rates on Capital Gains Revenue: Another Look at the Evidence," by Robert Gillingham and John S. Greenlees (Office of Economic Policy, Department of the Treasury), focuses on aspects of the debate. The authors define the responsiveness of revenue to tax rates at the individual and aggregate levels.

Citing an analysis by the Congressional Budget Office they present an econometric data analysis procedure.

The study also includes time-series evidence incorporating revisions in the National Accounts and Flow of Funds data to demonstrate the effect of the Tax Reform Act of 1986 on the estimated relationship.

The aim of the paper is to give a better understanding of the relationship among capital gains tax realizations, revenues, and tax rates. And although analyses do not give conclusive evidence on the effect of proposed tax rate changes, the authors conclude that the evidence does not suggest that a tax reduction would decrease tax revenues.

* * * * *

A related study concludes that a capital gains tax reduction would increase the number and amounts of such gains declared by taxpayers. And it would do so in sufficient amounts to increase tax revenues. Research Paper No. 9004, "An Econometric Model of Capital Gains Realization Behavior," by Robert Gillingham, John S. Greenlees, and Kimberly D. Zieschang (Office of Prices, Bureau of Labor Statistics), explores the revenue impact of proposed reductions in capital gains taxation, as well as the expected response of taxpayers.

The marginal tax rate on long-term gains has a negative impact on both the proportion of taxpayers realizing capital gains and on the value of those gains declared, according to the study. The researchers further stated that there was no evidence that income switching as a result of the reductions

would offset expected tax revenue increases. The study includes taxpayer data covering three historical tax policy regimes that varied widely in their treatment of capital gains.

The authors supported their predictions by citing a 1988 study finding, in the past, the majority of capital gains were never realized for tax purposes. That 1988 study found only 3.1 percent of the stock of accrued gains realized each year between 1960-84. This large flow of unrealized gains, according to the authors, supports their conclusion that a reduction in the capital gains tax would yield a permanent increase in government revenues.

(For related studies on the capital gains tax issue, see Research Paper Nos. 8801 and 9002.)

Report on Social Security and the Public Debt

For the next 25 years, the social security program is expected to have average surpluses of .6 percent of Gross National Product (GNP), according to James E. Duggan's Research Paper No. 9102. After that, the senior economist says, deficits will reach 1.7 percent of GNP (4 percent after the addition of health care). These deficits could result in large,

unstable debt ratios and may affect future U.S. debt policy. The study stresses the public debt implications of the long-run financial status of the program and presents three alternatives, or combinations thereof, for financing Social Security obligations. James E. Duggan is a senior economist, Office of Economic Policy, U.S. Department of the Treasury.

Copies of these research papers may be obtained by writing to Shirley Bryant, U.S. Department of the Treasury, 15th & Pennsylvania Avenue, NW., Room 4422, Washington, D.C. 20220; phone (202) 566-6600

Powell Talks About the Latest Developments in the Government Securities Market;" "Recent Changes to Treasury Auctions and Rules;" and "Auction Violations Lead to Closer Scrutiny of the Government Securities Market." Powell, Jerome H. December, 1991, pp. 3-13.

Exclusive interview in which the Assistant Secretary for Domestic Finance expands on the Salomon Brothers' auction violations and their effects; recent auction changes; a summary of Powell's September statement to Congress.

ECONOMIC POLICY

"Secretary of the Treasury Discusses the President's Economic Proposals, The." Brady, Nicholas F. March 1992, pp. 12-17

A summary of Secretary Brady's address to the House Committee on Ways and Means concerning the economic proposals announced by President Bush in his State of the Union address and detailed in the President's budget for fiscal 1993.

"Moderate Growth Projected for U.S. Economy." Jones, Sidney L. September 1991, pp. 3-4.

An article by the Assistant Secretary of the Treasury for Economic Policy on projected economic growth and recovery from the ninth postwar recession.

INTERNATIONAL AFFAIRS

"New OECD Tied Aid Agreement Expected to Benefit U.S. Exporters Says Deputy Assistant Secretary For Trade and Investment Policy William E. Barreda." Barreda, William E. March 1992, pp. 3.

Interview summarizing the tied aid rules recently agreed to by the Organization for Economic Cooperation and Development designed to reduce trade distortions.

"Foreign Participation in U.S. Futures Markets Grows." Cayton, Michael. March 1992, pp. 7-11

This first of a kind Treasury report on the scope of foreign participation in the U.S. futures market previews some of the information included in the upcoming release of the Foreign Investment Portfolio Survey.

"Director of the Office for Trade Finance William L. McCamey Explains New OECD Agreement to Congress." McCamey, William L. March 1992, pp.4-6.

Summary of statement to Congress by the Director of the Office of Trade Finance detailing the tied aid agreement.

FINANCIAL OPERATIONS

Profile of the Economy

Quarterly Annual Rate

CHART POE-A.--

Growth of Real Gross Domestic Product

Real GDP grew at a 2 percent annual rate in the first quarter of 1992, the strongest showing in 3 years and up from .4 percent in the fourth quarter of 1991. Real final sales jumped at a 4.8 percent rate reflecting a 5.3 percent rise in consumer spending and a 15.8 percent increase in homebuilding. Many of the final purchases were made from existing inventories rather than increased domestic production, which resulted in large inventory drawdowns. Inflation rose to a 3.1 percent annual rate in the first quarter of 1992.

Percent Change--4th qtr. to 4th qtr.

CHART POE-B.--

Federal Outlays and Receipts As a Percent of Gross Domestic Product

The new budget projects fiscal year 1992 outlays at 25.2 percent of GDP--a post-war high. Excluding deposit insurance outlays, outlays still are expected to climb to a near-record 23.9 percent. That figure is projected to fall to 21.6 percent by fiscal 1997, mostly because of defense cutbacks. Also, the receipts share of GDP is expected to fall to 18.4 percent this year, before leveling off at 19 percent through fiscal 1997. The projected gap between receipts and outlays in fiscal 1997 represents a structural deficit of about 2-3/4 percent of GDP.

* Data for 1992 through 1997 are based on projections from the fiscal 1993 budget, figured on a cash basis of accounting.

PROFILE OF THE ECONOMY

CHART POE-C.--Personal Saving

Household Saving as a Percent of After-Tax Income Through March 1992

The personal saving rate fell to 4.7 percent in the first quarter of 1992, from 5.2 percent in 1991. The decline in saving reflected a sharp increase in spending, which outpaced a moderate increase in disposable incomes. The saving rate dropped to 4.3 percent in January and edged up only slightly to 4.5 percent in February. During March, spending slowed significantly (and was down in real terms) and much of that money was funneled into savings. The March saving rate improved significantly to 5.3 percent. Although the current rate is well above the 1987 low of 4.3 percent, it is far lower than the historical high of 9.0 percent and well below the long-term average of 6.9 percent

* Note: The rate for 1992 is based on first quarter figures.

Sum Over the Latest 12 Months
(In billions of dollars)

CHART POE-D.--
Federal Deficit

The Federal budget was in deficit by \$49.4 billion in March, compared with \$41.2 billion a year earlier. For the first 6 months of fiscal 1992, the deficit totaled \$196.9 billion while the deficit for the same period last year was \$152.2 billion. After adjustments for this year's drop in Resolution Trust Corporation and other deposit insurance outlays as well as Desert Storm contributions, the 1992 deficit widened by \$33 billion. Forecasters now expect the total deficit for 1992 to come in well below the Administration's \$400 billion estimate, mainly due to lower deposit insurance spending than originally anticipated and the possibility of shortfalls elsewhere.

PROFILE OF THE ECONOMY

CHARTS POE-E.--

Real consumer spending was up by a strong 5.3 percent annual rate in the first quarter of 1992, after very little growth over the past 2 years. Most of that spending took place in January and February; purchases dipped in March. Meanwhile, first-quarter growth of after-tax income grew at a smaller, yet sizable, annual rate of 3 percent with private sector wage and salary payments up strongly in February and March.

Real Disposable Personal Income

Percent Change--4th qtr. to 4th qtr.

Real Personal Spending

Percent Change--4th qtr. to 4th qtr.

* First quarter at an annual rate.

CHART POE-F.--Merchandise Trade Deficit

The trade deficit narrowed sharply to \$3.4 billion in February from a slightly revised \$5.9 billion now posted for January. The February figure is the smallest since March 1983. The February drop was supported by a significant increase in exports--6.8 percent-- as well as a drop in imports of 0.4 percent, attributed to a reduced volume of oil imports combined with lower oil prices. Translated to an annual rate, the trade deficit for the first 2 months of 1992 was \$56 billion, which compares with a 1991 annual rate of \$66 billion. Figures for the first 2 months of this year imply that the trade component made a positive contribution to the real Gross Domestic Product in the first quarter of this year.

INTRODUCTION: Federal Fiscal Operations

Budget authority usually takes the form of appropriations that allow *obligations* to be incurred and payments to be made. Reappropriations are Congressional actions that extend the availability of unobligated amounts that have expired or would otherwise expire. These are counted as new budget authority in the fiscal year of the legislation in which the reappropriation act is included, regardless of when the amounts were originally appropriated or when they would otherwise lapse.

Obligations generally are liquidated by the issuance of checks or the disbursement of cash—*outlays*. Obligations may also be liquidated (and outlays recorded) by the accrual of interest on public issues of Treasury debt securities (including an increase in redemption value of bonds outstanding); or by the issuance of bonds, debentures, notes, monetary credits, or electronic payments.

Refunds of collections generally are treated as reductions of collections, whereas payments for earned-income tax credits in excess of tax liabilities are treated as outlays. Outlays during a fiscal year may be for payment of obligations incurred in prior years or in the same year. Outlays, therefore, flow in part from unexpended balances of prior year budget authority and from budget authority provided for the year in which the money is spent. Total outlays include both budget and off-budget outlays and are stated net of offsetting collections.

Receipts are reported in the tables as either budget receipts or offsetting collections. They are collections from the public, excluding receipts offset against outlays. These, also called governmental receipts, consist mainly of tax receipts (including social insurance taxes), receipts from court fines, certain licenses, and deposits of earnings by the Federal Reserve system. Refunds of receipts are treated as deductions from gross receipts.

Offsetting collections from other Government accounts or the public are of a business-type or market-oriented nature. They are classified as either collections credited to appropriations or fund accounts, or offsetting receipts (i.e., amounts deposited in receipt accounts). The former normally can be used without appropriation act by Congress. These occur in two instances: (1) when authorized by law, amounts collected for materials or services are treated as reimbursements to appropriations, and (2) in the three types of revolving funds (public enterprise, intragovernmental, and trust); collections are netted against spending, and outlays are reported as the net amount.

Offsetting receipts in receipt accounts cannot be used without appropriation. They are subdivided into two categories: (1) proprietary receipts, or collections from the public, offset against outlays by agency and by function, and (2) intra-governmental funds, or payments into receipt accounts from governmental appropriation or fund accounts. They finance operations within and between Government agencies and are credited with collections from other Government accounts.

Intrabudgetary transactions are subdivided into three categories: (1) interfund transactions—payments are from one fund group (either Federal funds or trust funds) to a receipt account in the other fund group; (2) Federal intrafund transactions—payments and receipts both occur within the Federal fund group; and (3) trust intrafund transactions—payments and receipts both occur within the trust fund group.

Offsetting receipts are generally deducted from budget authority and outlays by function, subfunction, or agency. There are four types of receipts, however, that are deducted from budget totals as undistributed offsetting receipts. They are: (1) agencies' payments (including payments by *off-budget Federal entities*) as employers into

employees' retirement funds; (2) interest received by trust funds; (3) rents and royalties on the Outer Continental Shelf lands; and (4) other interest (i.e., that collected on Outer Continental Shelf money in deposit funds when such money is transferred into the budget).

The Government has used the unified budget concept as a foundation for its budgetary analysis and presentation since 1969. The concept calls for the budget to include all of the Government's fiscal transactions with the public. Since 1971, however, various laws have been enacted removing several Federal entities from (or creating them outside of) the budget. Other laws have moved certain off-budget Federal entities onto the budget. Under current law, the off-budget Federal entities consist of the two Social Security trust funds, Federal old-age and survivors insurance, and Federal disability insurance.

Although an off-budget Federal entity's receipts, outlays, and surplus or deficit ordinarily are not subject to targets set by the congressional resolution, the Balanced Budget and Emergency Deficit Control Act of 1985 (commonly known as the Gramm-Rudman-Hollings Act) included off-budget surplus or deficit in calculating deficit targets under that act and in calculating excess deficit. Partly for this reason, attention has focused on both on- and off-budget receipts, outlays, and deficit of the Government.

Tables **FFO-1**, **FFO-2**, and **FFO-3** are published quarterly and cover 5 years of data, estimates for 2 years, detail for 13 months, and fiscal year-to-date data. They provide a summary of data relating to Federal fiscal operations reported by Federal entities and disbursing officers, and daily reports from the Federal Reserve banks. They also detail accounting transactions affecting receipts and outlays of the Government and off-budget Federal entities and their related effect on assets and liabilities of the Government. Data are derived from the Monthly Treasury Statement of Receipts and Outlays of the United States Government.

- Table **FFO-1** summarizes the amount of total receipts, outlays, and surplus or deficit, as well as transactions in Federal securities, monetary assets, and balances in Treasury operating cash.

- Table **FFO-2** includes on- and off-budget receipts by source. Amounts represent income taxes, social insurance taxes, net contributions for other insurance and retirement, excise taxes, estate and gift taxes, customs duties, and net miscellaneous receipts.

- Table **FFO-3** details on- and off-budget outlays by agency.

- Table **FFO-4** (Fall issue) summarizes internal revenue collections by States and other areas and by type of tax. Amounts reported are collections made in a fiscal year. They span several tax liability years because they consist of prepayments (i.e., estimated tax payments and taxes withheld by employers for individual income and Social Security taxes), of payments made with tax returns, and of subsequent payments made after tax returns are due or are filed (i.e., payments with delinquent returns or on delinquent accounts).

It is important to note that these data do not necessarily reflect the Federal tax burden of individual States. Amounts are reported based on the primary filing address provided by each taxpayer or reporting entity. For multistate corporations, the address may reflect only the State where such a corporation reported its taxes from a principal office rather than other States where income was earned or where individual income and Social Security taxes were withheld. In addition, an individual may reside in one State and work in another.

Budget Results for the Second Quarter, Fiscal 1992

Summary

The budget deficit was \$113.8 billion in the second quarter of fiscal 1992, or roughly \$48 billion wider than the \$65.7 billion in the corresponding quarter a year earlier. A better measure of underlying trends in the deficit might be obtained by excluding some of the special factors that affected the figures. Among these, foreign contributions to Desert Storm dwindled to \$0.5 billion in the second quarter of fiscal 1992 from \$22.6 billion a year earlier. (The deficit was not reduced in the second quarter of fiscal 1991 by the full \$22.6 billion, because actual Defense outlays were boosted by the effort. However, the major portion of the cash outlays associated with Desert Storm were spread out over a much longer period of time.) An additional special factor was a 1992 increase in deposit insurance outlays (by the RTC, FDIC, etc.) of \$8.2 billion from last year's fiscal second quarter. Excluding these factors, the deficit was wider by about \$18 billion than in the second quarter of fiscal 1991.

For the first 6 months of fiscal 1992, the deficit was \$196.9 billion, or \$44.7 billion more than the \$152.2 billion in the corresponding months of 1991. That difference narrows to about \$33 billion after adjustments for the above factors.

Receipts increased by 2.5 percent in the second quarter from a year earlier and by a similar 2.4 percent for the entire first 6 months of the current fiscal year. Fiscal year-to-date withheld income and employment taxes rose by 4.3 percent, or about 1 percentage point faster than growth of the underlying wage and salary tax base. Nonwithheld individual payments on both income and employment tax liability were up by only 1.1 percent. (The largest portion of such receipts typically is received in the third fiscal quarter.) Individual tax refunds rose by a sharp 16.3 percent, reflecting the more expeditious handling of returns. Corporate income tax

payments fell by 7.5 percent, including a 5.5 percent decline in the March payment when corporations made final settlements on liability for the previous fiscal year. An improvement in profits that appeared to emerge during the second fiscal quarter will not show up in payments until later.

Total budget outlays increased from a year earlier by 18.1 percent in the second fiscal quarter and by 8.8 percent for the first half of fiscal 1992. While deposit insurance outlays were up significantly in the March quarter, year-to-date they were down by nearly \$11 billion to a total of only \$5.5 billion, with more than all of the decline accounted for by the RTC. In the January budget, deposit insurance outlays were projected at \$80 billion for the entire fiscal year. The slow rate of spending in the first half may indicate that outlays for all of fiscal 1992 will fall short of projections.

Excluding deposit insurance and Desert Storm/Shield contributions, outlays during the first half of fiscal 1992 were 6.8 percent ahead of a year earlier. The largest increases have been for such social spending categories as Medicare (up 17.2 percent), other health (up 30.8 percent including an increase of 36.5 percent for Medicaid), and income security (up 15.6 percent, including a rise of 48 percent for unemployment insurance benefits). Net interest outlays rose by 3.9 percent, as a decline in the effective interest rate partly offset an increase of nearly 9 percent in average public debt outstanding. Defense spending fell by 4 percent (excluding Desert Storm contributions).

A somewhat different perspective on budget trends may be obtained from 12-month cumulative totals of the deficit, as shown in Profile of the Economy Chart D (see page 24) For the 12 months through March, the total deficit was \$314 billion, and excluding deposit insurance outlays, it was \$267 billion. The latter represented a widening of more than \$100 billion from the corresponding figure for March 1991.

[In millions of dollars]			
	January-March	Actual fiscal year to date	Budget estimates (February 1992) full fiscal 1992

First-Quarter Receipts

The following capsule analysis of budget receipts, by source, for the first quarter of fiscal 1992 supplements fiscal data earlier reported in the fall issue of the *Treasury Bulletin*. At the time of that issue's release, not enough data was available to analyze adequately collections for the quarter.

Individual income taxes.--Individual income tax receipts were \$113.0 billion for the first quarter of fiscal 1992. This represents a decrease of \$1.3 billion over the comparable quarter for fiscal 1991. Withheld receipts were down \$0.2 billion for this period. Nonwithheld receipts were nearly unchanged from the comparable quarter of fiscal 1991, while refunds increased by \$1.1 billion.

Corporate income taxes.--Corporate income tax receipts in the first quarter of fiscal 1992 were \$24.4 billion. This was \$1.0 billion lower than the first quarter of fiscal 1991. The \$1.0 billion decrease was comprised of a \$0.7 billion decrease in estimated and final payments, and an increase in refunds of \$0.3 billion.

Employment taxes and contributions.--Employment taxes and contributions receipts for the October-December 1991 quarter were \$86.3 billion, an increase of \$5.0 billion over the comparable prior year quarter. Receipts to the Old-Age Survivors Insurance, the Disability Insurance, and the Hospital Insurance trust funds increased by \$1.7 billion, \$0.2 billion, and \$3.1 billion, respectively. The increase from the prior year is due entirely to an increase in estimated liability for the October-December quarter.

Unemployment insurance.--Unemployment insurance receipts for the October-December quarter were \$3.5 billion compared with \$3.4 billion for the comparable prior year quarter. Federal Unemployment Tax Act receipts increased by \$0.1 billion.

Contributions for other insurance and retirement.--Contributions for other retirement were \$1.2 billion for the first quarter of fiscal 1992. This represents less than a \$0.1

billion change from the first quarter of fiscal 1991. The growth in contributions will remain flat over the next few years as the number of employees covered by the Federal employees' retirement system (FERS) grows slowly relative to those covered under the civil service retirement system (CSRS).

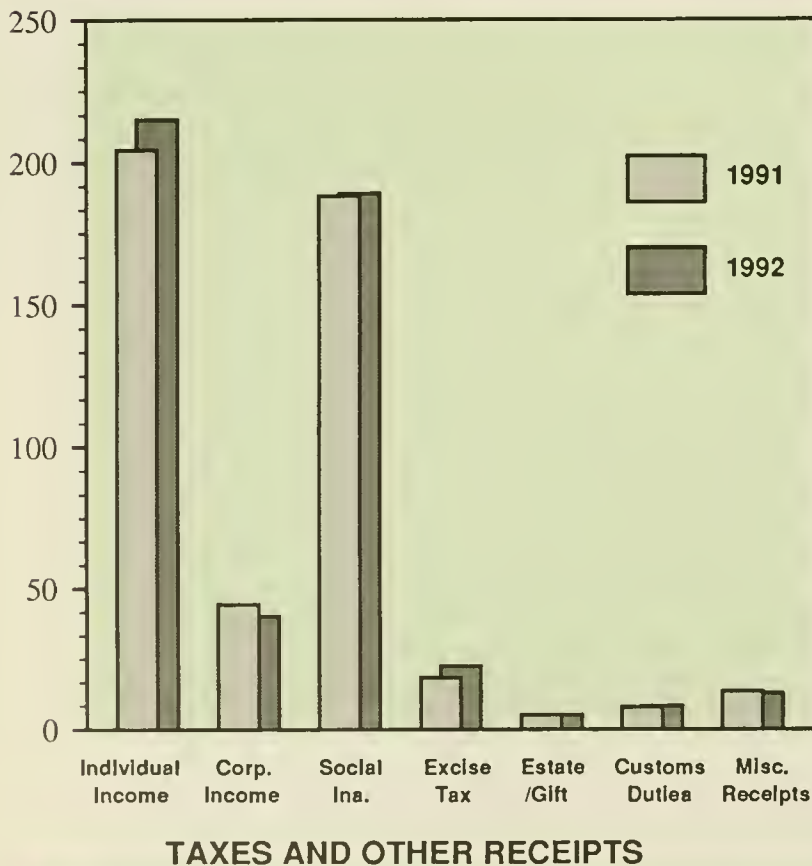

Excise taxes.--Excise tax receipts for the October-December 1991 quarter were \$11.8 billion compared to \$8.9 billion for the comparable quarter of fiscal 1991. The increase of \$2.8 billion (32 percent) over the prior year level is primarily the result of the increase in excise tax rates and broadened tax base enacted as part of the Omnibus Budget Reconciliation Act of 1990. In addition, business activity in the October-December quarter of fiscal 1992 improved from the depressed levels of a year earlier. This recovery resulted in an increased excise tax base.

Estate and gift taxes.--Estate and gift tax receipts were \$2.7 billion in the October-December quarter of 1991. This represents a decrease of less than \$0.2 billion over the previous quarter and is virtually unchanged from tax receipts over the same quarter in the previous year.

Customs duties.--Customs receipts net of refunds were \$4.4 billion for the first quarter of fiscal 1992. This is an increase of \$0.2 billion from the comparable prior year quarter. It is due to an increase in imports.

Miscellaneous receipts.--Net miscellaneous receipts for the first quarter of fiscal 1992 were \$7.8 billion, a decrease of \$0.3 billion from the comparable prior year quarter. Most of this decline is due to lower Federal Reserve earnings. ◇

¹ Data do not reflect postyear adjustments published in the Monthly Treasury Statement of Receipts and Outlays of the United States Government, the source for this table.

² Adjusted, as shown in the Monthly Treasury Statement of Receipts and Outlays of the United States Government.

Note.--Outlays consist of disbursements less proprietary receipts from the public and certain intrabudgetary transactions. On-budget and off-budget estimates are based on the 1993 Budget Supplement provided by the Office of Management and Budget and released on February 18, 1992.

INTRODUCTION: Federal Obligations

The Federal Government controls the use of funds through *obligations*. Obligations are recorded when the Government makes a commitment to acquire goods or services. Obligations are the first of four key events that characterize the acquisition and use of resources: order, payment, delivery, and consumption. In general, they consist of orders placed, contracts awarded, services received, and similar transactions requiring the disbursement of money.

The obligational stage of a Government transaction is a strategic point in gauging the impact of the Government's operations on the national economy because it frequently represents a Government commitment that stimulates business investments, such as inventory purchases and employment. Though payment may not occur for

months after the Government places its order, the order itself can cause immediate pressure on the private economy.

An obligation is classified by the nature of the transaction, without regard to its ultimate purpose. For example, all salaries and wages are reported as personnel compensation, whether the services are used in current operations or in the construction of capital items.

Federal agencies often do business with one another. In doing so, the "buying" agency records obligations and the "performing" agency records reimbursements. In table FO-1, these transactions are presented. Conversely, table FO-2 shows only those transactions incurred outside the Federal Government.

FEDERAL OBLIGATIONS

**TABLE FO-1.--Gross Obligations Incurred Within and Outside the Federal Government
By Object Class, Dec. 31, 1991**

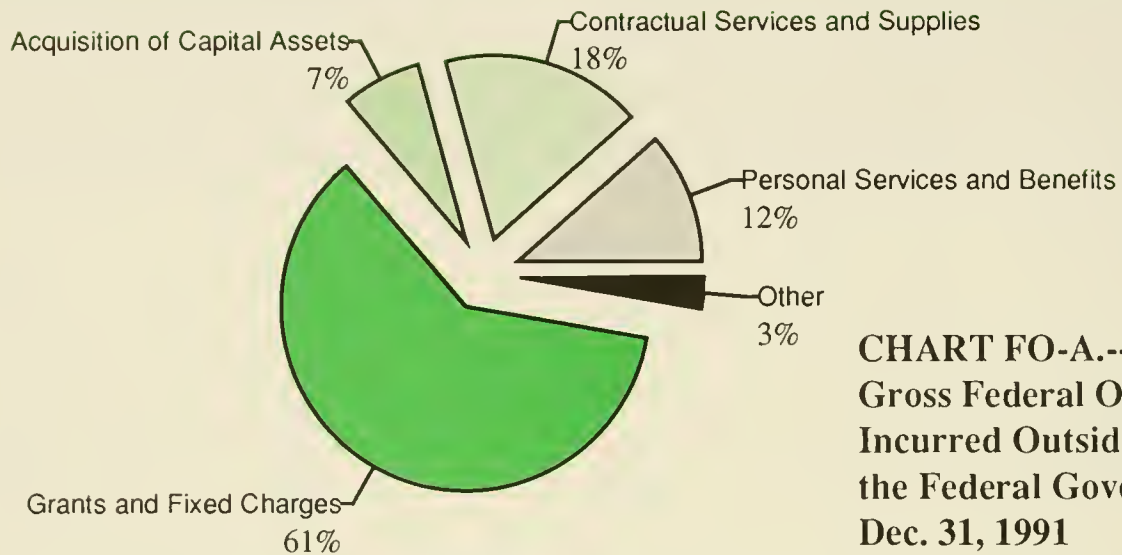

[In millions of dollars. Source: Standard Form 225, Report on Obligations, from agencies]

Object class	Gross obligations incurred		
	Outside	Within	Total
Personal services and benefits:			
Personnel compensation	44,628	-	44,628
Personnel benefits	3,031	10,756	13,787
Benefits for former personnel	183	-	183
Contractual services and supplies:			
Travel and transportation of persons	1,458	159	1,617
Transportation of things	2,853	528	3,381
Rent, communications, and utilities	3,909	1,050	4,959
Printing and reproduction	619	550	1,169
Other services	50,656	9,772	60,428
Supplies and materials	13,712	5,083	18,795
Acquisition of capital assets:			
Equipment	15,796	2,149	17,945
Lands and structures	5,018	61	5,079
Investments and loans	9,004	268	9,272
Grants and fixed charges:			
Grants, subsidies, and contributions	64,110	11,925	76,035
Insurance claims and indemnities	130,929	50	130,979
Interest and dividends	57,674	44,808	102,482
Refunds	458	-	458
Other:			
Unvouchered	28	-	28
Undistributed U.S. obligations	11,399	929	12,328
Gross obligations incurred ¹	415,465	88,088	503,553
Gross obligations incurred (as above)			503,553
Deduct:			
Advances, reimbursements, other income, etc.			-56,875
Offsetting receipts			-88,387
Net obligations incurred			358,291

¹ For Federal budget presentation a concept of "net obligations incurred" is generally used. This concept eliminates transactions within the Government and revenue and reimbursements from the public which by statute may be used by Government agencies without

appropriation action by the Congress. Summary figures on this basis follow. (Data are on the basis of Reports on Obligations presentation and therefore may differ somewhat from the Budget of the U.S. Government.)

INTRODUCTION: Source and Availability of the Balance in the Account of the U.S. Treasury

The Treasury's operating cash is maintained in accounts with the Federal Reserve banks (FRBs) and branches, as well as in tax and loan accounts in other financial institutions. Major information sources include the Daily Balance Wire received from the FRBs and branches, and electronic transfers through the Letter of Credit Payment, Fedline Payment, and Fedwire Deposit Systems. As the FRB accounts are depleted, funds are called in (withdrawn) from thousands of tax and loan accounts at financial institutions throughout the country.

Under authority of Public Law 95-147, Treasury implemented a program on November 2, 1978, to invest a portion of its operating cash in obligations of depositaries maintaining tax and loan accounts. Under the Treasury tax and loan investment program, depository financial institutions select the manner in which they will participate. Financial institutions wishing to retain funds deposited into their tax and loan accounts in interest-bearing obligations participate under the Note

Option. The program permits Treasury to collect funds through financial institutions and to leave the funds in Note Option depositories and in the financial communities in which they arise until Treasury needs the funds for its operations. In this way, Treasury is able to neutralize the effect of its fluctuating operations on Note Option financial institution reserves and on the economy. Likewise, those institutions wishing to remit the funds to the Treasury's account at FRBs do so under the Remittance Option.

Deposits to tax and loan accounts occur as customers of financial institutions deposit tax payments, which the financial institutions use to purchase Government securities. In most cases, this involves a transfer of funds from a customer's account to the tax and loan account in the same financial institution. Also, Treasury can direct the FRBs to invest excess funds in tax and loan accounts directly from the Treasury account at the FRBs.

* Less than \$500,000.

¹ Represents transfers from tax and loan note accounts, proceeds from sales of securities other than Government account series, and taxes.

² Represents checks paid, wire transfer payments, drawdowns on letters of credit, redemptions of securities other than Government account series, and investment (transfer) of excess funds out of this account to the tax and loan note accounts.

³ Special depositories are permitted to make payment in the form of a deposit credit for the purchase price of U.S. Government securities purchased by them for their own account, or for the account of their customers who enter subscriptions through them, when this method of payment is permitted under the terms of the circulars inviting subscriptions to the issues. Effective Oct. 1, 1989, public debt securities, including U.S. savings bonds, will no longer be settled through the tax and loan note accounts.

⁴ Includes U.S. savings bonds, savings notes, retirement plan and tax and loss bonds. U.S. savings notes first offered for sale as of May 1, 1967, and were discontinued after June 30, 1970. Retirement plan bonds first offered for sale as of Jan. 1, 1963; tax and loss bonds first issued in March 1968.

⁵ Taxes eligible for credit consist of those deposited by taxpayers in the tax and loan depositories as follows: Withheld income taxes beginning March 1948; taxes on employers and employees under the Federal Insurance Contributions Act beginning January 1950, and under the Railroad Retirement Tax Act beginning July 1951; a number of excise taxes beginning July 1953; estimated corporation income taxes beginning April 1967; all corporation income taxes due on or after Mar. 15, 1968; FUTA taxes beginning April 1970, and individual estimated income taxes beginning October 1988.

INTRODUCTION: Federal Debt

Treasury securities (i.e., public debt securities) comprise most of the Federal debt, with securities issued by other Federal agencies accounting for the rest. Tables in this section of the *Treasury Bulletin* reflect the total. Further detailed information is published in the Monthly Statement of the Public Debt of the United States. Likewise, information on agency securities and on investments of Federal Government accounts in Federal securities is published in the Monthly Treasury Statement of Receipts and Outlays of the United States Government.

- Table **FD-1** summarizes the Federal debt by listing public debt and agency securities held by the public, including the Federal Reserve. It also includes debt held by Federal agencies, largely by the Social Security and other Federal retirement trust funds. (For greater detail on holdings of Federal securities by particular classes of investors, see the ownership tables, OFS-1 and OFS-2.)

- Table **FD-2** categorizes by type interest-bearing marketable and nonmarketable Treasury securities. The difference between interest-bearing and total public debt securities reflects outstanding matured Treasury securities—that is, unredeemed securities that have matured and are no longer accruing interest. Because the Federal Financing Bank is under the supervision of Treasury, its securities are held by a U.S. Government account.

- In table **FD-3**, nonmarketable Treasury securities held by U.S. Government accounts are summarized by issues to particular funds within Government. Many of the funds invest in *par value* special series nonmarketables at interest rates determined by law. Others invest in market-based special Treasury securities whose terms mirror those of marketable securities.

- Table **FD-4** presents interest-bearing securities issued by Government agencies. Federal agency borrowing has declined in recent years, in part because the Federal Financing Bank has provided financing to other Federal agencies. Meanwhile, Government-sponsored entities whose securities are presented are not Federal agencies, and their securities are not guaranteed by the Federal

Government. (Federal agency borrowing from Treasury is presented in the Monthly Treasury Statement of Receipts and Outlays of the United States Government.)

- Table **FD-5** illustrates the average length of marketable interest-bearing public debt held by private investors and the maturity distribution of that debt. Average maturity has increased gradually since it hit a low of 2 years, 5 months, in December 1975. In March 1971, Congress enacted a limited exception to the 4-1/4-percent interest rate ceiling on Treasury bonds. This permitted Treasury to offer securities maturing in more than 7 years at current market rates of interest for the first time since 1965. This exception has expanded since 1971 authorizing Treasury to continue to issue long-term securities, and the ceiling on Treasury bonds was repealed on November 10, 1988. The volume of privately held Treasury marketable securities by maturity class reflects the remaining period to maturity of Treasury bills, notes, and bonds. The average length is comprised of an average of remaining periods to maturity, weighted by the amount of each security held by private investors. In other words, computations of average length exclude Government accounts and the Federal Reserve banks.

- In table **FD-6**, the debt ceiling is compared with the outstanding debt subject to limitation by law. The other debt category includes Federal debt Congress has designated as being subject to the debt ceiling. Changes in the non-interest-bearing debt shown in the last column reflect maturities of Treasury securities on nonbusiness days, which can be redeemed on the next business day.

- Table **FD-7** details Treasury holdings of securities issued by Government corporations and other agencies. Certain Federal agencies are authorized to borrow money from the Treasury, largely to finance direct loan programs. In addition, agencies such as the Bonneville Power Administration are authorized to borrow from the Treasury to finance capital projects. Treasury, in turn, finances these loans by selling Treasury securities to the public.

INTRODUCTION: Public Debt Operations

The Second Liberty Bond Act (31 U.S.C. 3101, et seq.) allows the Secretary of the Treasury to borrow money by issuing Treasury securities. The Secretary determines the terms and conditions of issue, conversion, maturity, payment, and interest rate. New issues of Treasury notes mature in 2 to 10 years. Bonds mature in more than 10 years from the issue date. Each marketable security is listed in the Monthly Statement of the Public Debt of the United States. The information in this section of the *Treasury Bulletin* pertains only to marketable Treasury securities, current bills, notes, and bonds.

- Table **PDO-1** provides a maturity schedule of interest-bearing marketable public debt securities other than regular weekly and 52-week bills. All unmatured Treasury notes and bonds are listed in maturity order, from earliest to latest. A separate breakout is provided for the combined holdings of the Government accounts and Federal Reserve banks, so that the "all other investors" category includes all private holdings.

- Table **PDO-2** presents the results of weekly auctions of 13- and 26-week bills, as well as auctions of 52-week bills, which are held every fourth week. Treasury bills mature each Thursday. New issues of 13-week bills are *reopenings* of 26-week bills. The 26-week bill issued

every fourth week to mature on the same Thursday as an existing 52-week bill is a reopening of the existing 52-week bill. New issues of *cash management bills* are also presented. High, low, and average yields on accepted tenders and the dollar value of total bids are presented, with the dollar value of awards made on both competitive and noncompetitive basis.

Treasury accepts noncompetitive tenders of up to \$1 million for bills and \$5 million for notes and bonds in each auction of securities to encourage participation of individuals and smaller institutions.

- Table **PDO-3** lists the results of auctions of marketable securities, other than weekly bills, in chronological order over the past 2 years. Included are: notes and bonds from table PDO-1; 52-week bills from table PDO-2; and data for cash management bills. The maturities of cash management bills coincide with those of regular issues of Treasury bills.

- Table **PDO-4** indicates the total amount of marketable securities allotted to each class of investor. The Federal Reserve banks tally into investor classes the tenders in each auction of marketable securities other than weekly auctions of 13- and 26-week bills.

TREASURY FINANCING: January-March

JANUARY

Auction of 7-Year Notes

December 31 Treasury announced it would auction \$9,500 million of 7-year notes to refund \$5,308 million of notes maturing January 15, 1992, and to raise about \$4,200 million of new cash. The notes offered were Treasury Notes of Series E-1999, dated January 15, 1992, due January 15, 1999, with interest payable July 15 and January 15 until maturity. An interest rate of 6-3/8 percent was set after the determination of which tenders were accepted on a yield auction basis.

Tenders were received prior to 12:00 noon, EST, for noncompetitive tenders and prior to 1:00 p.m., EST, for competitive tenders January 8, 1992, and totaled \$18,315 million, of which \$9,507 million was accepted at yields ranging from 6.38 percent, price 99.972, up to 6.41 percent, price 99.805. Tenders at the high yield were allotted 77 percent.

Noncompetitive tenders were accepted in full at the average yield, 6.40 percent, price 99.861. These totaled \$772 million. Accepted private investors' competitive tenders totaled \$8,735 million.

In addition to the \$9,507 million of tenders accepted in the auction process, \$588 million was accepted from Federal Reserve banks as agents for foreign and international monetary authorities, and \$451 million was accepted from Federal Reserve banks for their own account.

Auction of 2-Year and 5-Year Notes

January 15 Treasury announced it would auction \$13,750 million of 2-year notes of Series V-1994 and \$9,250 million of 5-year notes of Series H-1997 to refund \$10,772 million of securities maturing January 31, 1992, and to raise about \$12,225 million of new cash.

The notes of Series V-1994 were dated January 31, 1992, due January 31, 1994, with interest payable July 31 and January 31 until maturity. An interest rate of 4-7/8 percent was set after the determination of which tenders were accepted on a yield auction basis.

Tenders were received prior to 12:00 noon, EST, for noncompetitive tenders and prior to 1:00 p.m., EST, for competitive tenders January 22, and totaled \$42,670 million, of which \$13,766 million was accepted at yields ranging from 4.98 percent, price 99.802, up

to 5 percent, price 99.765. Tenders at the high yield were allotted 25 percent.

Noncompetitive tenders were accepted in full at the average yield, 4.99 percent, price 99.784. These totaled \$1,140 million. Competitive tenders accepted from private investors totaled \$12,626 million.

In addition to the \$13,766 million of tenders accepted in the auction process, \$898 million was accepted from Federal Reserve banks as agents for foreign and international monetary authorities, and \$439 million was accepted from Federal Reserve banks for their own account.

The notes of Series H-1997 were dated January 31, 1992, due January 31, 1997, with interest payable July 31 and January 31 until maturity. An interest rate of 6-1/4 percent was set after the determination of which tenders were accepted on a yield auction basis.

Tenders for the notes were received prior to 12:00 noon, EST, for noncompetitive tenders and prior to 1:00 p.m., EST, for competitive tenders January 23, and totaled \$20,514 million, of which \$9,271 million was accepted at yields ranging from 6.26 percent, price 99.958, up to 6.29 percent, price 99.831. Tenders at the high yield were allotted 73 percent.

Noncompetitive tenders were accepted in full at the average yield, 6.28 percent, price 99.873. These totaled \$768 million. Accepted private investors' competitive tenders totaled \$8,503 million.

In addition to the \$9,271 million of tenders accepted in the auction process, \$70 million was accepted from Federal Reserve banks as agents for foreign and international monetary authorities, and \$100 million was accepted from Federal Reserve banks for their own account.

52-Week Bills

January 3 tenders were invited for approximately \$12,500 million of 364-day Treasury bills to be dated January 16, 1992, and to mature January 14, 1993. The issue was to refund \$11,803 million of maturing 52-week bills and to raise about \$700 million of new cash.

Tenders were opened January 9. They totaled \$37,121 million, of which \$12,526 million was accepted, including \$697 million of noncompetitive tenders from the public and \$3,130 million of the bills issued to Federal Reserve banks for themselves and as agents for foreign and international monetary authorities.

TREASURY FINANCING: January-March, Con.

An additional \$300 million was issued to Federal Reserve banks as agents for foreign and international monetary authorities for new cash. The average bank discount rate was 3.84 percent.

FEBRUARY

February Quarterly Financing

February 5 Treasury announced it would auction \$15,000 million of 3-year notes of Series N-1995, \$11,000 million of 9-3/4-year 7-1/2 percent notes of Series D-2001, and \$10,000 million of 29-3/4-year 8 percent bonds of November 2021 to refund \$21,032 million of Treasury securities maturing February 15 and to raise about \$14,975 million of new cash.

The notes of Series N-1995 were dated February 18, 1992, due February 15, 1995, with interest payable August 15 and February 15 until maturity. An interest rate of 5-1/2 percent was set after the determination of which tenders were accepted on a yield auction basis.

Tenders for the notes were received prior to 12:00 noon, EST, for noncompetitive tenders and prior to 1:00 p.m., EST, for competitive tenders February 11, and totaled \$29,425 million, of which \$15,016 million was accepted at yields ranging from 5.51 percent, price 99.973, up to 5.55 percent, price 99.864. Tenders at the high yield were allotted 32 percent.

Noncompetitive tenders were accepted in full at the average yield, 5.54 percent, price 99.891, totaling \$839 million. Accepted private investors' competitive tenders totaled \$14,177 million.

In addition to the \$15,016 million of tenders accepted in the auction process, \$894 million was accepted from Federal Reserve banks as agents for foreign and international monetary authorities, and \$1,818 million was accepted from Federal Reserve banks for their own account.

The 7-1/2 percent notes of Series D-2001 were an additional issue of notes dated November 15, 1991, due November 15, 2001, with interest payable May 15 and November 15 until maturity. Accrued interest of \$19.57418 per \$1,000, covering the period from November 15, 1991, to February 18, 1992, was payable with each accepted tender.

Tenders for the notes were received prior to 12:00 noon, EST, for noncompetitive tenders and prior to 1:00 p.m., EST, for competitive tenders February 12, and totaled \$25,425 million, of which \$11,033 million was accepted at yields ranging from 7.29 percent, price 101.413, up to 7.30 percent, price 101.344. Tenders at the

high yield were allotted 38 percent. Noncompetitive tenders were accepted in full at the average yield, 7.29 percent, price 101.413. These totaled \$652 million. Competitive tenders accepted from private investors totaled \$10,381 million.

In addition to the \$11,033 million of tenders accepted in the auction process, \$118 million was accepted from Federal Reserve banks as agents for foreign and international monetary authorities, and \$300 million was accepted from Federal Reserve banks for their own account.

The notes of Series D-2001 may be held in STRIPS form. The minimum par amount required is \$80,000.

The 8 percent bonds of November 2021 were an additional issue of bonds dated November 15, 1991, due November 15, 2021, with interest payable May 15 and November 15 until maturity. Accrued interest of \$20.87912 per \$1,000, covering the period from November 15, 1991, to February 18, 1992, was payable with each accepted tender.

Tenders for the bonds were received prior to 12:00 noon, EST, for noncompetitive tenders and prior to 1:00 p.m., EST, for competitive tenders February 13, and totaled \$20,624 million, of which \$10,005 million was accepted at yields ranging from 7.90 percent, price 101.101, up to 7.93 percent, price 100.757. Tenders at the high yield were allotted 29 percent.

Noncompetitive tenders were accepted in full at the average yield, 7.91 percent, price 100.986. These totaled \$376 million. Competitive tenders accepted from private investors totaled \$9,629 million.

In addition to the \$10,005 million of tenders accepted in the auction process, \$150 million was accepted from Federal Reserve banks for their own account.

The bonds of November 2021 may be held in STRIPS form. The minimum par amount required is \$25,000.

Auction of 2-Year and 5-Year Notes

February 19 Treasury announced it would auction \$14,250 million of 2-year notes of Series W-1994 and \$9,750 million of 5-year notes of Series J-1997 to refund \$10,928 million of securities maturing February 29, 1992, and to raise about \$13,075 million of new cash.

Notes of Series W-1994 were dated March 2, 1992, due February 28, 1994, interest payable August 31 and February 28 until maturity. An interest rate of 5-3/8 percent was set after determination of which tenders were accepted on a yield auction basis.

TREASURY FINANCING: January-March, Con.

Tenders for the notes were received prior to 12:00 noon, EST, for noncompetitive tenders and prior to 1:00 p.m., EST, for competitive tenders February 25, and totaled \$36,688 million, of which \$14,305 million was accepted at yields ranging from 5.39 percent, price 99.972, up to 5.41 percent, price 99.935. Tenders at the high yield were allotted 41 percent. Noncompetitive tenders were accepted in full at the average yield, 5.40 percent, price 99.953. These totaled \$988 million. Competitive tenders accepted from private investors totaled \$13,317 million.

In addition to the \$14,305 million of tenders accepted in the auction process, \$838 million was accepted from Federal Reserve banks as agents for foreign and international monetary authorities, and \$763 million was accepted from Federal Reserve banks for their own account.

The notes of Series J-1997 were dated March 2, 1992, due February 28, 1997, with interest payable on the last calendar day of August and February until maturity. An interest rate of 6-3/4 percent was set after the determination of which tenders were accepted on a yield auction basis.

Tenders for the notes were received prior to 12:00 noon, EST, for noncompetitive tenders and prior to 1:00 p.m., EST, for competitive tenders February 26, and totaled \$31,787 million, of which \$9,762 million was accepted at yields ranging from 6.74 percent, price 100.042, up to 6.75 percent, price 100.000. Tenders at the high yield were allotted 72 percent. Noncompetitive tenders were accepted in full at the average yield, 6.75 percent, price 100.000. These totaled \$684 million. Competitive tenders accepted from private investors totaled \$9,078 million.

In addition to the \$9,762 million of tenders accepted in the auction process, \$150 million was accepted from Federal Reserve banks for their own account.

2-Week Bills

January 31 tenders were invited for approximately \$12,750 million of 364-day Treasury bills to be dated February 13, 1992, and to mature February 11, 1993. The issue was to refund \$12,550 million of maturing 52-week bills and to raise about \$200 million of new cash. Tenders were opened February 6. They totaled \$38,621 million, of which \$12,861 million was accepted, including \$698 million of noncompetitive tenders from the public and \$3,901 million of the bills issued to Federal Reserve banks for themselves and as agents for foreign and international monetary authorities. The average bank discount rate was 4.01 percent.

Cash Management Bills

February 25 tenders were invited for approximately \$14,000 million of 57-day bills to be issued March 4, 1992, representing an

additional amount of bills dated October 31, 1991, maturing April 30, 1992. The issue was to raise new cash. Tenders were opened February 27. They totaled \$48,434 million, of which \$14,081 million was accepted. The average bank discount rate was 3.97 percent.

MARCH

Auction of 2-Year and 5-Year Notes

March 18 Treasury announced it would auction \$14,750 million of 2-year notes of Series X-1994 and \$10,250 million of 5-year notes of Series K-1997 to refund \$18,254 million of Treasury notes maturing March 31 and to raise about \$6,750 million of new cash.

The notes of Series X-1994 were dated March 31, 1992, due March 31, 1994, with interest payable September 30 and March 31 until maturity. An interest rate of 5-3/4 percent was set after the determination of which tenders were accepted on a yield auction basis.

Tenders for the notes were received prior to 12:00 noon, EST, for noncompetitive tenders and prior to 1:00 p.m., EST, for competitive tenders March 24, and totaled \$41,944 million, of which \$14,779 million was accepted at yields ranging from 5.84 percent, price 99.832, up to 5.85 percent, price 99.814. Tenders at the high yield were allotted 84 percent.

Noncompetitive tenders were accepted in full at the average yield, 5.85 percent, price 99.814. These totaled \$1,154 million. Competitive tenders accepted from private investors totaled \$13,625 million.

In addition to the \$14,779 million of tenders accepted in the auction process, \$732 million was accepted from Federal Reserve banks as agents for foreign and international monetary authorities, and \$2,262 million was accepted from Federal Reserve banks for their own account.

The notes of Series K-1997 were dated March 31, 1992, due March 31, 1997, with interest payable September 30 and March 31 until maturity. An interest rate of 6-7/8 percent was set after the determination of which tenders were accepted on a yield auction basis.

Tenders for the notes were received prior to 12:00 noon, EST, for noncompetitive tenders and prior to 1:00 p.m., EST, for competitive tenders March 25, and totaled \$25,522 million, of which \$10,290 million was accepted at yields ranging from 6.93 percent,

TREASURY FINANCING: January-March, Con.

price 99.771, up to 6.94 percent, price 99.729. Tenders at the high yield were allotted 90 percent.

Noncompetitive tenders were accepted in full at the average yield, 6.94 percent, price 99.729. These totaled \$1,037 million. Competitive tenders accepted from private investors totaled \$9,253 million.

In addition to the \$10,290 million of tenders accepted in the auction process, \$700 million was accepted from Federal Reserve banks as agents for foreign and international monetary authorities, and \$250 million was accepted from Federal Reserve banks for their own account.

52-Week Bills

February 28 tenders were invited for approximately \$13,750 million of 364-day Treasury bills to be dated March 12, 1992, and to mature March 11, 1993. The issue was to refund \$11,233 million of maturing 52-week bills and raise about \$2,525 million of new cash. Tenders were opened March 5. They totaled \$31,077 million, of which \$13,785 million was accepted, including \$625 million of noncompetitive tenders from the public and \$3,409 million of the bills issued to Federal Reserve banks for themselves and as agents for foreign and international monetary authorities. The average bank discount rate was 4.37 percent. ◇

1 The 13-week bills represent additional issue of bills with an original maturity of 26 weeks or 52 weeks.

2 For bills issued on or after May 2, 1974, includes amounts exchanged on noncompetitive basis by Government accounts and Federal Reserve banks.

3 For 13-week, 26-week, and 52-week bills tenders for \$1,000,000 or less from any one bidder are accepted in full at average price or accepted competitive bids; for other issues, the corresponding amount is stipulated in each offering announcement.

4 Equivalent coupon-issue yield.

5 Except \$1,000,000 at 98.908 percent and \$1,575,000 at 98.903 percent.

6 Except \$1,500,000 at 99.067 percent.

7 Except \$2,000,000 at 98.074 percent.

8 Except \$580,000 at 99.029 percent and \$610,000 at 99.024 percent.

9 Except \$45,000 at 98.079 percent.

10 Except \$355,000 at 99.029 percent.

11 Except \$735,000 at 98.104 percent.

12 Except \$1,050,000 at 99.042 percent.

13 Except \$10,000 at 97.973 percent and \$1,000,000 at 97.953 percent.

14 Except \$2,280,000 at 99.002 percent.

15 Except \$1,700,000 at 97.947 percent.

16 Except \$15,000 at 94.237 percent.

17 Except \$90,000 at 96.158 percent.

¹ Currently, all issues are sold at auction. For bill issues, the rate shown is the average bank discount rate. For note and bond issues, the rate shown is the interest rate. For details of bill offerings, see table PDO-2.

² From date of additional issue in case of a reopening.

³ In reopenings the amount issued is in addition to the amount of original offerings.

⁴ Includes securities issued to U.S. Government accounts and Federal Reserve banks; and to foreign and international monetary authorities, whether in exchange for maturing securities or for new cash.

⁵ Eligible for STRIPS.

⁶ Interest began to accrue before the issue date (settlement date) of this loan.

⁷ Yields accepted ranged from 8.58% (price 99.856) up to 8.59% (price 99.838) with the average at 8.59% (price 99.838).

⁸ The low, high, and average yield was 8.58% (price 99.734).

⁹ Yields accepted ranged from 8.62% (price 99.379) up to 8.63% (price 99.328) with the average at 8.62% (price 99.379).

¹⁰ Yields accepted ranged from 8.88% (price 99.991) up to 8.91% (price 99.937) with the average at 8.90% (price 99.955).

¹¹ Yields accepted ranged from 8.73% (price 99.728) up to 8.75% (price 99.676) with the average at 8.74% (price 99.702).

¹² Yields accepted ranged from 8.87% (price 100.033) up to 8.88% (price 99.967) with the average at 8.88% (price 99.967).

¹³ Yields accepted ranged from 8.83% (price 99.162) up to 8.85% (price 98.954) with the average at 8.84% (price 99.058).

¹⁴ Yields accepted ranged from 8.51% (price 99.982) up to 8.53% (price 99.946) with the average at 8.52% (price 99.964).

¹⁵ Yields accepted ranged from 8.52% (price 99.847) up to 8.56% (price 99.681) with the average at 8.54% (price 99.764).

¹⁶ Yields accepted ranged from 8.38% (price 99.991) up to 8.42% (price 99.919) with the average at 8.41% (price 99.937).

¹⁷ Yields accepted ranged from 8.49% (price 100.033) up to 8.50% (price 100.000) with the average at 8.50% (price 100.000).

¹⁸ Yields accepted ranged from 8.55% (price 99.741) up to 8.58% (price 99.586) with the average at 8.57% (price 99.637).

¹⁹ Yields accepted ranged from 8.05% (price 99.909) up to 8.07% (price 99.873) with the average at 8.07% (price 99.873).

²⁰ Yields accepted ranged from 8.08% (price 99.791) up to 8.10% (price 99.738) with the average at 8.10% (price 99.738).

²¹ Yields accepted ranged from 8.74% (price 100.066) up to 8.84% (price 99.411) with the average at 8.77% (price 99.869).

²² Yields accepted ranged from 8.86% (price 98.851) up to 8.88% (price 98.644) with the average at 8.87% (price 98.747).

²³ Yields accepted ranged from 8.18% (price 99.900) up to 8.20% (price 99.864) with the average at 8.19% (price 99.882).

²⁴ Yields accepted ranged from 8.56% (price 99.685) up to 8.58% (price 99.603) with the average at 8.57% (price 99.644).

²⁵ Yields accepted ranged from 8.17% (price 99.919) up to 8.18% (price 99.901) with the average at 8.18% (price 99.901).

²⁶ Yields accepted ranged from 8.52% (price 99.933) up to 8.53% (price 99.900) with the average at 8.53% (price 99.900).

²⁷ Yields accepted ranged from 8.74% (price 100.052) up to 8.79% (price 99.794) with the average at 8.76% (price 99.948).

²⁸ Yields accepted ranged from 7.83% (price 99.855) up to 7.84% (price 99.836) with the average at 7.84% (price 99.836).

²⁹ Yields accepted ranged from 7.78% (price 99.921) up to 7.79% (price 99.895) with the average at 7.78% (price 99.921).

³⁰ Yields accepted ranged from 8.50% (price 100.000) up to 8.52% (price 99.867) with the average at 8.52% (price 99.867).

³¹ Yields accepted ranged from 8.69% (price 100.589) up to 8.72% (price 100.270) with the average at 8.71% (price 100.376).

³² Yields accepted ranged from 7.47% (price 99.826) up to 7.49% (price 99.790) with the average at 7.49% (price 99.790).

³³ Yields accepted ranged from 7.93% (price 99.710) up to 7.95% (price 99.626) with the average at 7.95% (price 99.626).

³⁴ Yields accepted ranged from 7.30% (price 99.908) up to 7.33% (price 99.854) with the average at 7.32% (price 99.872).

³⁵ Yields accepted ranged from 7.66% (price 99.881) up to 7.67% (price 99.847) with the average at 7.66% (price 99.881).

³⁶ Yields accepted ranged from 7.94% (price 99.656) up to 7.95% (price 99.603) with the average at 7.95% (price 99.603).

³⁷ Yields accepted ranged from 7.08% (price 99.853) up to 7.09% (price 99.835) with the average at 7.09% (price 99.835).

 47 Yields accepted ranged from 6.99% (price 100.018) up to 7.00% (price 100.000) with the average at 7.00% (price 100.000).
 48 Yields accepted ranged from 7.69% (price 99.734) up to 7.70% (price 99.694) with the average at 7.70% (price 99.694).
 49 Yields accepted ranged from 7.07% (price 99.814) up to 7.09% (price 99.761) with the average at 7.09% (price 99.761).
 50 Yields accepted ranged from 8.06% (price 99.593) up to 8.07% (price 99.526) with the average at 8.07% (price 99.526).
 51 Yields accepted ranged from 8.19% (price 99.278) up to 8.24% (price 98.728) with the average at 8.21% (price 99.057).
 52 Yields accepted ranged from 6.81% (price 99.890) up to 6.83% (price 99.853) with the average at 6.81% (price 99.890).
 53 Yields accepted ranged from 7.66% (price 99.857) up to 7.70% (price 99.694) with the average at 7.69% (price 99.734).
 54 Yields accepted ranged from 7.03% (price 99.945) up to 7.06% (price 99.890) with the average at 7.06% (price 99.890).
 55 Yields accepted ranged from 7.95% (price 99.696) up to 7.97% (price 99.615) with the average at 7.96% (price 99.655).
 56 Yields accepted ranged from 8.25% (price 100.000) up to 8.26% (price 99.948) with the average at 8.26% (price 99.948).
 57 Yields accepted ranged from 6.93% (price 99.899) up to 6.95% (price 99.862) with the average at 6.94% (price 99.881).
 58 Yields accepted ranged from 7.88% (price 99.980) up to 7.89% (price 99.939) with the average at 7.89% (price 99.939).
 59 Yields accepted ranged from 6.90% (price 99.933) up to 6.93% (price 99.853) with the average at 6.92% (price 99.880).
 60 Yields accepted ranged from 7.94% (price 99.557) up to 7.95% (price 99.489) with the average at 7.94% (price 99.557).
 61 Yields accepted ranged from 8.15% (price 99.721) up to 8.19% (price 99.278) with the average at 8.17% (price 99.499).
 62 Yields accepted ranged from 6.45% (price 99.862) up to 6.46% (price 99.843) with the average at 6.46% (price 99.843).

63 Yields accepted ranged from 7.36% (price 99.547) up to 7.38% (price 99.465) with the average at 7.37% (price 99.506).
 64 Yields accepted ranged from 6.13% (price 99.991) up to 6.15% (price 99.954) with the average at 6.14% (price 99.972).
 65 Yields accepted ranged from 7.04% (price 99.834) up to 7.05% (price 99.792) with the average at 7.05% (price 99.792).
 66 Yields accepted ranged from 7.19% (price 99.647) up to 7.20% (price 99.593) with the average at 7.20% (price 99.593).
 67 Yields accepted ranged from 6.00% (price 100.000) up to 6.01% (price 99.981) with the average at 6.01% (price 99.981).
 68 Yields accepted ranged from 6.91% (price 99.854) up to 6.93% (price 99.771) with the average at 6.92% (price 99.812).
 69 Yields accepted ranged from 5.97% (price 100.081) up to 6.03% (price 99.919) with the average at 6.00% (price 100.000).
 70 Yields accepted ranged from 7.50% (price 100.000) up to 7.56% (price 99.584) with the average at 7.53% (price 99.792).
 71 Yields accepted ranged from 7.98% (price 100.227) up to 8.01% (price 99.887) with the average at 8.00% (price 100.000).
 72 Yields accepted ranged from 5.49% (price 100.019) up to 5.52% (price 99.963) with the average at 5.51% (price 99.981).
 73 Yields accepted ranged from 6.52% (price 99.916) up to 6.54% (price 99.832) with the average at 6.54% (price 99.832).
 74 Yields accepted ranged from 5.09% (price 99.831) up to 5.13% (price 99.756) with the average at 5.12% (price 99.775).
 75 Yields accepted ranged from 6.24% (price 99.513) up to 6.25% (price 99.470) with the average at 6.24% (price 99.513).
 76 Yields accepted ranged from 6.38% (price 99.972) up to 6.41% (price 99.805) with the average at 6.40% (price 99.861).
 77 Yields accepted ranged from 4.98% (price 99.802) up to 5.00% (price 99.765) with the average at 4.99% (price 99.784).
 78 Yields accepted ranged from 6.26% (price 99.958) up to 6.29% (price 99.831) with the average at 6.28% (price 99.873).
 79 Yields accepted ranged from 5.51% (price 99.973) up to 5.55% (price 99.864) with the average at 5.54% (price 99.891).
 80 Yields accepted ranged from 7.29% (price 101.413) up to 7.30% (price 101.344) with the average at 7.29% (price 101.413).
 81 Yields accepted ranged from 7.90% (price 101.101) up to 7.93% (price 100.757) with the average at 7.91% (price 100.986).
 82 Yields accepted ranged from 5.39% (price 99.972) up to 5.41% (price 99.935) with the average at 5.40% (price 99.953).
 83 Yields accepted ranged from 6.74% (price 100.042) up to 6.75% (price 100.000) with the average at 6.75% (price 100.000).
 84 Yields accepted ranged from 5.84% (price 99.832) up to 5.85% (price 99.814) with the average at 5.85% (price 99.814).
 85 Yields accepted ranged from 6.93% (price 99.771) up to 6.94% (price 99.729) with the average at 6.94% (price 99.729).

Note.--All notes and bonds, except for foreign-targeted issues, were sold at auction through competitive and noncompetitive bidding. Foreign-targeted issues were sold at auction through competitive bidding only.

¹ Includes trust funds and accounts that comprise Government accounts under the unified budget concept.

² Excludes banks and insurance companies.

³ Included with all other investors are certain Government deposit accounts and

Government-sponsored agencies, formerly included with Government accounts.

Note.--For detail of offerings, see table PDO-3.

INTRODUCTION: Savings Bonds and Notes

Series EE bonds, on sale since January 1, 1980, are the only savings bonds currently sold. Series HH bonds are issued in exchange for Series E and EE savings bonds and savings notes. Series A-D were sold from March 1, 1935, through April 30, 1941. Series E was on sale from May 1, 1941, through December 31, 1979 (through June 1980 to payroll savers only). Series F and G were sold from May 1, 1941, through April 30, 1952. Series H was sold from June 1, 1952, through December 31, 1979. Series HH bonds were sold for cash from January

1, 1980, through October 31, 1982. Series J and K were sold from May 1, 1952, through April 30, 1957. U.S. savings notes were on sale May 1, 1967, through June 30, 1970. The notes were eligible for purchase by individuals with the simultaneous purchase of series E savings bonds. The principal terms and conditions for purchase and redemption and information on investment yields of savings notes appear in the *Treasury Bulletins* of March 1967 and June 1968; and the Annual Report of the Secretary of the Treasury for fiscal 1974.

U.S. SAVINGS BONDS AND NOTES

TABLE SBN-1.--Sales and Redemptions by Series, Cumulative through Mar. 31, 1992

[In millions of dollars. Source: Monthly Statement of the Public Debt of the United States; Market Analysis Section, United States Savings Bonds Division]

Series	Sales ¹	Accrued discount	Sales plus accrued discount	Redemptions ¹	Amount outstanding	
					Interest-bearing debt	Matured non-interest-bearing debt
Saving bonds:						
Series A-D ²	3,949	1,054	5,003	5,002	-	1
Series E, EE, H, and HH.....	292,385	137,940	430,325	288,649	139,924	1,754
Series F and G.....	28,396	1,125	29,521	29,517	-	4
Series J and K.....	3,556	198	3,754	3,753	-	-
Saving notes.....	862	557	1,419	1,081	337	-
Total.....	329,148	140,874	470,022	328,002	140,261	1,759

¹ Sales and redemption figures include exchange of minor amounts of (1) matured series E bonds for series G and K bonds from May 1951 through April 1957; (2) series F and J bonds for series H bonds beginning January 1960; and (3) U.S. savings notes for series H bonds beginning January 1972; however, they exclude exchanges of series E bonds for

series H and HH bonds.

² Details by series on a cumulative basis and by period of series A-D combined will be found in the February 1952 and previous issues of the *Treasury Bulletin*.

Note.—Series E and EE include U.S. savings notes (Freedom Shares) on sale from May 1, 1967, through June 30, 1970, to E bond buyers.

INTRODUCTION: Ownership of Federal Securities

Federal securities presented in the following tables are public debt securities such as savings bonds, bills, and notes that the Treasury issues. The tables also detail debt issued by other Federal agencies under special financing authorities. (See the Federal debt (FD) tables for a more complete description of the Federal debt.)

- Table OFS-1 presents Treasury marketable and nonmarketable securities and debt issued by other Federal agencies held by Government accounts, the Federal Reserve banks, and private investors. Social Security and Federal retirement trust fund investments comprise much of the Government account holdings.

The Federal Reserve banks acquire Treasury securities in the market as a means of executing monetary policy.

- Table OFS-2 presents the estimated amount of public debt securities held by private investors. Information is obtained from sources such as the Federal financial institution regulatory agencies. State, local, and foreign holdings include special issues of nonmarketable securities to municipal entities and foreign official accounts. They also include municipal, foreign official, and private holdings of marketable Treasury securities. (See footnotes to the table for description of investor categories.)

¹ U.S. savings bonds, series A-F and J, are included at current redemption value.² Includes domestically chartered banks, U.S. branches and agencies of foreign banks, New York investment companies majority owned by foreign banks, and Edge Act corporations owned by domestically chartered and foreign banks.³ Includes partnerships and personal trust accounts.⁴ Includes U.S. savings notes. Sales began on May 1, 1967, and were discontinued on June 30, 1970.⁵ Excludes of banks and insurance companies.⁶ State and local governments have been redefined to include their fully defeased debt that is backed by nonmarketable Federal securities. Includes State and local pension funds.⁷ Consists of the investment of foreign balances and international accounts in the United States. Estimates reflect 1978 benchmark through December 1984 and 1984 benchmark to date.⁸ Includes savings and loan associations, credit unions, nonprofit institutions, mutual savings banks, corporate pension trust funds, dealers and brokers, certain Government deposit accounts, and Government-sponsored agencies.

INTRODUCTION: Market Yields

The tables and charts in this section present yields on Treasury marketable securities, and compare long-term yields on Treasury securities with yields on long-term corporate and municipal securities.

- Table MY-1 lists Treasury market bid yields at constant maturities for bills, notes, and bonds. The Treasury yield curve in the accompanying chart, is based on current market bid quotations on the most actively traded Treasury securities as of 3:30 p.m. on the last business day of the calendar quarter.

Treasury obtains quotations from the Federal Reserve Bank of New York, which composites quotations provided by five primary dealers. Treasury uses these composite quotations to derive the yield curve, based on semiannual interest payments and read at constant maturity points to develop a consistent data series. Yields on Treasury

bills are coupon equivalent yields of bank *discount rates* at which Treasury bills trade in the market. The Board of Governors of the Federal Reserve System publishes the Treasury constant maturity data series in its weekly H.15 press release.

- Table MY-2 shows average yields of long-term Treasury, corporate, and municipal bonds. The long-term Treasury average yield is the 30-year constant maturity yield. The corporate bond average yield is developed by Treasury by calculating reoffering yields on new long-term securities maturing in at least 20 years and rated Aa by Moody's Investors Service. The municipal bond average yield prior to 1991 was compiled by Treasury. Beginning with January 1991, the average yield is the "Municipal Bond Yield Average," published by Moody's Investors Service for 20-year reoffering yields on selected Aa-rated general obligations. See the footnotes for further explanation.

Monthly averages (in percentages)

INTRODUCTION: U.S. Currency and Coin Outstanding and in Circulation

The U.S. Currency and Coin Outstanding and in Circulation (USCC) statement informs the public of the total face value of currency and coin used as a medium of exchange that is in circulation at the end of a given accounting month. The statement defines the total amount of currency and coin outstanding and the portion deemed to be in circulation, and includes some old and current rare issues that do not circulate, or that may do so to a limited extent. Treasury includes them in the statement because the issues were originally intended for general circulation.

The USCC statement provides a description of the various issues of paper money. It also gives an estimated average of currency and coin held by each individual, using estimates of population from the Bureau of the Census. USCC information has been published by Treasury since 1888, and was published separately until 1983, when it was incorporated into the *Treasury Bulletin*. The USCC comes from monthly reports compiled by Treasury offices, various U.S. Mint offices, the Federal Reserve banks, and the Federal Reserve Board.

¹ Issued on and after July 1, 1929.² U.S. notes outstanding corrected from second quarter of fiscal 1991.³ Excludes coin sold to collectors at premium prices.⁴ Includes \$481,781,898 in standard silver dollars.⁵ Represents value of certain partial denominations not presented for redemption.⁶ Based on Bureau of the Census estimates of population.

INTRODUCTION: Federal Agencies' Financial Reports

Section 114 of the Budget and Accounting Procedures Act of 1950 (31 U.S.C. 3513a) requires each executive agency to provide the Secretary of the Treasury with reports and information on the agency's financial condition and operations. Although these provisions do not apply to the Federal Government's legislative and judicial branches, they are encouraged to submit reports so that the Secretary of the Treasury can prepare comprehensive reports on all of the financial activities of the Government.

Federal agencies submit four financial reports and three supporting reports. The financial reports include: Report on Financial Position (SF 220), Report on Operations (SF 221), Report on Cash Flow (SF 222), and Report on Reconciliation (SF 223). The supporting reports are: Direct and Guaranteed Loans Reported by Agency and Program Due from the Public (SF 220-8), Report on Accounts and Loans Receivable Due from the Public (SF 220-9), and Additional Financial Information (SF 220-1). Agencies submit SF 220-8 quarterly, and annually for publication in the *Treasury Bulletin*. Meanwhile, all agencies submit SF 220-9 annually, while some report quarterly on a selected basis.

The Treasury Financial Manual (1 TFM 2-4100) sets criteria for the submission of annual and quarterly reports in accordance with the Reporting Entities Listing (Bulletin No. 91-09). There are reports for six fund types: revolving funds, trust revolving funds, 15 major trust funds, all other trust funds, all other activity combined, and consolidated

reports of each organizational unit. Financial transactions supporting the reports are accounted for on the accrual basis, although the SF 221 can be submitted on a cash basis under certain circumstances.

The Office of Management and Budget (OMB) Circular No. A-127 requires agencies to prepare reports from a budgeting and accounting system that contains an integrated data base, which is part of the agency's integrated financial management system. Reports are supposed to include all assets, liabilities, and equities relating to all programs and activities under control of the reporting agency. (Treasury reports assets of disbursing officers.)

Reports should also include transfer appropriation accounts from other agencies, foreign currencies, operations conducted in the territories or overseas, and any monetary assets or property received, spent, or otherwise accounted for by the reporting agency. Amounts are reported to the dollar.

Information from SF 220-8 is presented in table FA-1, which reflects the direct and guaranteed loans to the public through the Federal Credit Program to support credit activities. Credit program levels are controlled by authorizing legislation and appropriation acts. SF 220-8 also provides the Federal Reserve Board information to monitor the flow of funds. The accompanying chart depicts direct and guaranteed loans for the first quarter of fiscal 1992.

**INTERNATIONAL
STATISTICS**

INTRODUCTION: International Financial Statistics

The tables in this section provide statistics on the U.S. Government's reserve assets, liabilities to foreigners, and its international financial position.

- Table **IFS-1** shows U.S. reserve assets, including gold stock and special drawing rights held in the Special Drawing account in the *International Monetary Fund (IMF)*. The table also shows U.S. reserve holdings and holdings of convertible foreign currencies in the IMF.

- Table **IFS-2** contains statistics on liabilities to foreign official institutions, and selected liabilities to all other foreigners, which are used in the United States balance of payments statistics.

- Table **IFS-3** shows nonmarketable bonds and notes that Treasury issues to official institutions and other residents of foreign countries. The figures are in dollars or dollar equivalents.

- Table **IFS-4** presents the general foreign exchange value of the U.S. dollar. Values presented are broader than those provided by single exchange rate levels and do not claim to represent a guide to measuring the impact of exchange rate levels on United States international transactions. Indices are computed as geometric averages of individual currency levels with weights derived from the share of each country's trade with the United States during the years 1982 and 1983.

INTERNATIONAL FINANCIAL STATISTICS

TABLE IFS-1.--U.S. Reserve Assets

[In millions of dollars]

End of calendar year or month	Total reserve assets ¹	Gold stock ²	Special drawing rights ^{1 3}	Foreign currencies ⁴	Reserve position in International Monetary Fund ^{1 5}
1987	45,798	11,078	10,283	13,088	11,349
1988	47,802	11,057	9,637	17,363	9,745
1989	74,609	11,059	9,951	44,551	9,048
1990	83,316	11,058	10,989	52,193	9,076
1991 - Apr.	78,297	11,058	10,325	48,108	8,806
May	78,263	11,057	10,515	47,837	8,854
June	74,940	11,062	10,309	44,940	8,629
July	74,816	11,062	10,360	44,664	8,730
Aug	73,514	11,062	10,479	43,247	8,726
Sept.	74,731	11,062	10,722	43,853	9,094
Oct.	74,508	11,059	10,710	43,674	9,065
Nov	74,651	11,058	10,942	43,708	8,943
Dec	77,719	11,057	11,240	45,934	9,488
1992 - Jan	75,868	11,058	10,980	44,717	9,113
Feb	75,088	11,058	11,020	44,014	8,996
Mar	74,657	11,057	10,947	43,659	8,994
Apr.	74,712	11,057	10,930	43,757	8,968

¹ Beginning July 1974, the International Monetary Fund (IMF) adopted a technique for valuing the special drawing right (SDR) based on a weighted average of exchange rates for the currencies of selected member countries. The U.S. SDR holdings and reserve position in the IMF are also valued on this basis beginning July 1974.

² Treasury values its gold stock at \$42.2222 per fine troy ounce pursuant to 31 U.S.C. 5117(b) issues certificates to the Federal Reserve at the same rate against all gold held.

³ Includes allocations of SDRs in the Special Drawing Account in the IMF, plus or minus transactions in SDRs.

⁴ Includes holdings of Treasury and Federal Reserve System; beginning November 1978, these are valued at current market exchange rates or, where appropriate, at such other rates as may be agreed upon by the parties to the transactions.

⁵ The United States has the right to purchase foreign currencies equivalent to its reserve position in the Fund automatically if needed. Under appropriate conditions the United States could purchase additional amounts related to the U.S. quota.

¹ Includes Bank for International Settlements.² Derived by applying reported transactions to benchmark data.³ Beginning in March 1988, includes current value of zero-coupon, 20-year maturity Treasury bond issue to the Government of Mexico. Beginning March 1990, also includes current value of zero-coupon, 30-year maturity Treasury bond issue to the Government of Mexico. Beginning December 1990, also includes current value of zero-coupon, 30-year maturity Treasury bond issue to the Republic of Venezuela. Also see footnotes 1 and 2, table IFS-3.⁴ Includes debt securities of U.S. Government corporations, federally sponsored agencies, and private corporations.⁵ Includes liabilities payable in dollars to foreign banks and liabilities payable in foreign currencies to foreign banks and to "other foreigners."⁶ Includes marketable U.S. Government bonds and notes held by foreign banks.⁷ Principally the International Bank for Reconstruction and Development, the Inter-American Development Bank, and the Asian Development Bank.

Note.--Table is based on Treasury Department data and on data reported to the Treasury Department by banks, other depository institutions, and brokers in the United States. Data correspond generally to statistics following in this section and in the "Capital Movements" section. Table excludes International Monetary Fund "holdings of dollars" and holdings of U.S. Treasury letters of credit and nonnegotiable noninterest-bearing special U.S. notes held by other international and regional organizations.

¹ Each index covers (a) 22 currencies of countries represented in the Organization for Economic Cooperation and Development (OECD): Australia, Austria, Belgium-Luxembourg, Canada, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Japan, the Netherlands, New Zealand, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, and the United Kingdom; and (b) currencies of 4 major trading economies outside the OECD: Hong Kong, Korea, Singapore, and Taiwan. Exchange rates are drawn from the International Monetary Fund's "International Financial Statistics" when available.

² Index includes average annual rates as reported in "International Financial Statistics."

Note--These indices are presented to provide measures of the general foreign exchange value of the dollar that are broader than those provided by single exchange rate levels. They do not purport to represent a guide to measuring the impact of exchange rate levels on U.S. international transactions. The indices are computed as geometric averages of individual currency levels with weights derived from the share of each country's trade with the United States during 1982-83.

INTRODUCTION: Capital Movements

Treasury collects information about the transference of financial assets and other portfolio capital movements between the *United States and foreigners*, and has since 1935. Commercial banks and other depository institutions, bank holding companies, securities brokers and dealers, and nonbanking enterprises in the United States file capital movement reports with district Federal Reserve banks.

Forms and instructions are developed with the cooperation of other Government agencies and the Federal Reserve System, and in consultations with representatives of banks, securities firms, and nonbanking enterprises. Copies of the reporting forms and instructions may be obtained from the Office of Data Management, Office of the Assistant Secretary for Economic Policy, Department of the Treasury, Washington, D.C., 20220, or from district Federal Reserve banks.

In general, information is reported opposite the country or geographical area where the foreigner is located, as shown on records of reporting institutions. However, information may not always reflect the ultimate ownership of assets. Reporting institutions are not required to go beyond addresses shown on their records, and so may not be aware of the actual country of domicile of the ultimate beneficiary.

United States liabilities arising from the deposits of dollars with foreign banks appear as liabilities to foreign banks, although the liability of the foreign bank receiving the deposit may be to *foreign official institutions* or to residents of another country.

Transactions with branches or agencies of foreign official institutions, wherever located, are reported opposite the country that has sovereignty over the institutions. Transactions with international and regional organizations are not reported opposite any country, but are accounted for in regional groupings of such organizations. The only exception is information pertaining to the Bank for International Settlements, which is reported opposite "Other Europe."

Banks and other depository institutions, bank holding companies, International Banking Facilities (IBFs), securities brokers and dealers, and nonbanking enterprises in the United States must file reports. These enterprises include the branches, agencies, subsidiaries, and other affiliates in the United States of foreign banking and nonbanking firms. Those with liabilities, claims, or securities transactions below specified exemption levels are exempt from reporting.

Banks and other depository institutions, and some brokers and dealers, file monthly reports covering their dollar liabilities to, and dollar claims on, foreigners in a number of countries. Twice a year, June 30 and December 31, they also report the same liabilities and claims items to foreigners in countries not shown separately on the monthly reports. Quarterly reports are filed for liabilities and claims denominated in foreign currencies in relation to foreigners. The exemption level applicable to these banking reports is \$15 million.

Banks and other depository institutions, securities brokers and dealers, and other enterprises report monthly their transactions with foreigners in long-term securities. They must report securities transactions with foreigners if their aggregate purchases or their aggregate sales amount to at least \$2 million during the covered month.

Exporters, importers, industrial and commercial concerns, financial institutions (other than banks, other depository institutions, and brokers), and other nonbanking enterprises must file reports quarterly if liabilities to, or claims on, unaffiliated foreigners amount to \$10 million or more during the covered quarter.

Nonbanking enterprises also report each month their U.S. dollar-denominated deposit and certificates of deposit claims of \$10 million or more on banks abroad.

The data in these tables do not cover all types of reported capital movements between the United States and other countries. The principal exclusions are the intercompany capital transactions of nonbanking business enterprises in the United States with their own branches and subsidiaries abroad (*own foreign offices*) or with their foreign parent companies, and capital transactions of the U.S. Government. Consolidated data on all types of international capital transactions are published by the Department of Commerce in its regular reports on the United States balance of payments.

- **Section I** presents liabilities to foreigners reported by U.S. banks and other depository institutions, as well as brokers and dealers. Dollar liabilities are reported monthly; those denominated in foreign currencies are reported quarterly. Respondents report certain of their own liabilities and all of their custody liabilities to foreigners.

- **Section II** presents claims on foreigners also reported by U.S. banks and other depository institutions, brokers, and dealers. Data on bank claims held for their own account are collected monthly. Information on claims held for their domestic customers, as well as foreign currency claims, is collected on a quarterly basis only. Maturity data are reported according to time remaining to maturity. Reporting also covers certain items held by brokers and dealers in the United States.

- In **section III** are supplementary statistics on U.S. banks' liabilities to, and claims on, foreigners. Supplementary data on bank loans and credits to nonbank foreigners combine selected information from the TIC reports with data from the monthly Federal Reserve 2502 reports submitted for major foreign branches of U.S. banks. Other supplementary data on U.S. bank dollar liabilities to, and dollar claims on, countries not regularly reported separately appear in the June and December issues of the *Treasury Bulletin*.

- **Section IV** shows the liabilities to, and claims on, unaffiliated foreigners by exporters, importers, industrial and commercial concerns, financial institutions (other than banks, other depository institutions, and brokers), and other nonbanking enterprises in the United States. Information does not include accounts of nonbanking enterprises in the United States with their own branches and subsidiaries abroad or with their foreign parent companies. These are reported by business enterprises to the Department of Commerce on its direct investment forms. Data exclude claims on foreigners held through banks in the United States.

- **Section V** contains information on transactions in all types of long-term domestic and foreign securities with foreigners reported by banks, brokers, and other entities in the United States. The data cover transactions executed in the United States for the accounts of foreigners, and transactions executed abroad for the accounts of reporting institutions and their domestic customers. This includes transactions in newly issued securities as well as transactions in, and redemptions of, outstanding issues. Also, some transactions classified as direct investments in the balance of payments accounts may be included. However, the data do not include nonmarketable Treasury bonds and notes shown in table IFS-3.

In the case of outstanding securities, the geographical breakdown of the transactions data does not necessarily reflect the ultimate owners of or the original issuers of the securities. This is because the path of a security is not tracked prior to its being purchased from, or after it is sold to, a foreigner in a TIC reportable transaction. That is, before it enters and after it departs the reporting system, ownership of a security may be transferred between foreigners of different countries. Such transfers may occur any number of times and are concealed among the net figures for U.S. transactions opposite individual countries. Hence, the geographical breakdown shows only the country of domicile of the foreign buyers and sellers of securities in a particular round of transactions.

Note.—Data represent a partial breakdown of the amounts shown for the corresponding dates for the "other" geographical categories in the regular monthly series in the *Treasury Bulletin*.

INTRODUCTION: Foreign Currency Positions

Information on holdings of foreign currencies, or foreign currency positions, of banks and nonbanking firms in the United States has been collected since 1974. It has also been collected on those of foreign branches, *majority-owned foreign partnerships and subsidiaries* of United States banks and nonbanking firms.

Reports cover five major foreign exchange market currencies and U.S. dollars held abroad. This information is published in the *Treasury Bulletin* in seven sections. FCP-I is a summary of worldwide net positions in all of the currencies reported. FCP-II through -VI present information on specified foreign currencies. FCP-VII presents the U.S. dollar positions of the foreign branches and subsidiaries of U.S. firms that are required to report in one or more of the specified foreign currencies. Reporting is required by title II of Public Law 93-110, which is an amendment to the Par Value Modification Act of September 21, 1973, and by implementing Treasury regulations.

Information for the United States includes amounts reported by sole proprietorships, partnerships, and corporations in the United States, including the U.S. branches and subsidiaries of foreign nonbanking concerns. The Weekly Bank Positions category includes figures reported by agencies, branches, and subsidiaries of foreign banks as well as banking institutions located in the United States. Data for "foreign branches" and "abroad" include amounts reported by the branches and by majority-owned partnerships and subsidiaries of U.S. banking and nonbanking concerns.

Data generally do not reflect foreign currency positions of foreign parents or their subsidiaries located abroad except through intercompany accounts. Data do include the foreign subsidiaries of a few foreign-owned U.S. corporations. Assets, liabilities, and foreign exchange contract data are reported based on time remaining to maturity as of the date of the report, regardless of the original maturity of the instrument involved.

Since January 1982, the exemption level for banks and banking institutions has been \$100 million. The exemption level for nonbanking firms is also \$100 million on positions in the United States, and on foreign branch's and subsidiaries' positions since March 1982.

Firms must report their entire position in a foreign currency if the specified U.S. dollar equivalent exemption level is exceeded in any category of assets, liabilities, exchange contracts bought and sold, or in the net position of that currency.

In general, exemption levels are applied to the entire firm. In reports on their foreign branches and majority-owned partnerships and subsidiaries, U.S. banks and nonbanks are required to report the U.S. dollar-denominated assets, liabilities, exchange contracts bought and sold, and net positions of those branches, partnerships, and subsidiaries with nonexempt holdings in the specified foreign currencies.

FOREIGN CURRENCY POSITIONS

SECTION I.--Summary Positions

FOREIGN CURRENCY POSITIONS

FOOTNOTES: Tables FCP-I through FCP-VII

SECTION I

¹ Worldwide net positions on the last business day of the calendar quarter of nonbanking business concerns in the United States, their foreign branches and majority-owned partnerships and subsidiaries. Excludes receivables and installment paper that have been sold or discounted before maturity, U.S. parent companies' investments in their majority-owned foreign subsidiaries, fixed assets (plant and equipment), and capitalized leases for plant and equipment.

² Foreign branches, majority-owned partnerships and subsidiaries only.

³ Weekly worldwide net positions of banks and banking institutions in the United States, their foreign branches, and majority-owned foreign subsidiaries. Excludes capital assets and liabilities.

⁴ Foreign branches and majority-owned subsidiaries only.

majority-owned partnerships and subsidiaries only..

² Excludes receivables and installment paper sold or discounted before maturity, fixed assets (plant and equipment), and parents' investment in majority-owned foreign subsidiaries.

³ Capitalized plant and equipment leases are excluded.

⁴ Includes both spot and forward exchange rates.

⁵ Columns 1 and 3 less columns 2 and 4.

⁶ Representative rates on the report date. Canadian dollar and United Kingdom pound rates are expressed in U.S. dollars per unit of foreign currency, all others in foreign units per U.S. dollar. The source of the automated representative rates changed as of June 30, 1988.

⁷ Banks and banking institutions in the United States, their foreign branches, and majority-owned subsidiaries. In section VII, foreign branches and majority-owned subsidiaries only.

⁸ Excludes capital assets.

⁹ Excludes capital liabilities.

¹⁰ Includes both spot and forward exchange contracts.

¹¹ Columns 3 and 9 less columns 6 and 12.

¹² See footnote 6.

SECTIONS II THROUGH VII

¹ Positions of nonbanking business concerns in the United States, their foreign branches, majority-owned partnerships, and subsidiaries. In section VII, positions of foreign branches,

INTRODUCTION: Exchange Stabilization Fund

To stabilize the exchange value of the dollar, the Exchange Stabilization Fund (ESF) was established under the Gold Reserve Act of January 30, 1934 (31 U.S.C. 822a), which authorized establishment of a Treasury Department fund to be operated under the exclusive control of the Secretary, with approval of the President.

Subsequent amendment of the Gold Reserve Act modified the original purpose somewhat to reflect termination of the fixed exchange rate system.

Resources of the fund include dollar balances, partially invested in U.S. Government securities, *Special drawing rights (SDRs)*, and balances of foreign currencies. Principal sources of income (losses) for the fund are profits (losses) on SDRs and foreign exchange, as well as interest earned on assets.

- Table ESF-1 presents the assets, liabilities, and *capital* of the fund. The figures are in U.S. dollars or their equivalents based on current exchange rates computed according to the accrual method of accounting. The capital account represents the original capital appropriated to the fund by Congress of \$2 billion, minus a subsequent transfer of \$1.8 billion to pay for the initial U.S. quota subscription to the *IMF*. Gains and losses are reflected in the cumulative net income (loss) account.

- Table ESF-2 shows the results of operations by quarter. Figures are in U.S. dollars or their equivalents computed according to the accrual method. "Profit (loss) on foreign exchange" includes realized profits or losses on currencies held. "Adjustment for change in valuation of *SDR holdings and allocations*" reflects net gain or loss on revaluation of SDR holdings and allocations for the quarter.

EXCHANGE STABILIZATION FUND

TABLE ESF-1.--Balances as of Sept. 30, 1991, and Dec. 31, 1991

[In thousands of dollars]			
Assets, liabilities, and capital	Sept. 30, 1991	Sept. 30, 1991 through Dec. 31, 1991	Dec. 31, 1991

Other liabilities:			
Special drawing rights certificates	10,018,000	-	10,018,000
Special drawing rights allocations	6,702,549	305,860	7,008,409
Total other liabilities	16,720,549	305,860	17,026,409
Capital:			
Capital account	200,000	-	200,000
Net income (loss) (see table ESF-2)	14,083,232	1,910,338	15,993,570
Total capital	14,283,232	1,910,338	16,193,570
Total liabilities and capital	32,154,441	2,214,498	34,368,939

Table ESF-2.--Income and Expense

[In thousands of dollars]		
Income and expense	Current quarter Oct. 1, 1991 through Dec. 31, 1991	Fiscal year to date Oct. 1, 1991 through Dec. 31, 1991
Profit (loss) on:		
Foreign exchange	1,264,138	1,264,138
Adjustment for change in valuation of SDR holdings and allocations ¹	189,245	189,245
Interest (net charges) on:		
Special drawing rights	73,319	73,319
U.S. Government securities	32,475	32,475
Foreign exchange	351,161	351,161
Income from operations	1,910,338	1,910,338
Net income	1,910,338	1,910,338

¹ Beginning July 1974, the International Monetary Fund (IMF) adopted a technique for valuing the special drawing rights (SDRs) based on a weighted average of exchange rates for the currencies of selected member countries. The U.S. SDR holdings and allocations are valued on this basis beginning July 1974.

² Excludes foreign exchange transactions for future and spot delivery.

³ A non-interest-bearing liability to the U.S. Treasury resulting from the transfer to the Exchange Stabilization Fund of foreign currencies drawn from the IMF by the United States.

Note.--Annual balance sheets for fiscal years 1934 through 1940 appear in the 1940 Annual Report of the Secretary of the Treasury and those for succeeding years appear in subsequent reports through 1980. Quarterly balance sheets beginning with Dec. 31, 1938, have been published in the *Treasury Bulletin*. Data from inception to Sept. 30, 1978, may be found on the statements published in the January 1979 *Treasury Bulletin*.

Expanded, With References to Applicable Sections and Tables

Accrued discount (SBN-1, -2, -3)—Interest that accumulates on savings bonds from the date of purchase until the date of redemption or final maturity, whichever comes first. Series A, B, C, D, E, EE, F, and J are discount or accrual type bonds—meaning principal and interest are paid when bonds are redeemed. Series G, H, HH, and K are current-income bonds, and the semiannual interest paid to their holders is not included in accrued discount.

Amounts outstanding and in circulation (USCC)—Includes all issues by the Bureau of the Mint purposely intended as a medium of exchange. Coins sold by the Bureau of the Mint at premium prices are excluded; however, uncirculated coin sets sold at face value plus handling charge are included.

Average discount rate (PDO-2, -3)—In Treasury bill auctions, purchasers tender competitive bids on a discount rate basis. The average discount rate is the weighted, or adjusted, average of all bids accepted in the auction.

Budget authority ("Federal Fiscal Operations")—Congress passes laws giving budget authority to Government entities, which gives the agencies the power to spend Federal funds. Congress can stipulate various criteria for the spending of these funds. For example, Congress can stipulate that a given agency must spend within a specific year, number of years, or any time in the future.

The basic forms of budget authority are appropriations, authority to borrow, and contract authority. The period of time during which Congress makes funds available may be specified as 1-year, multiple-year, or no-year. The available amount may be classified as either definite or indefinite; a specific amount or an unspecified amount can be made available. Authority may also be classified as current or permanent. Permanent authority requires no current action by Congress.

Budget deficit—The total, cumulative amount by which budget outlays (spending) exceed budget receipts (income).

Capital ("Federal Obligations")—Assets, such as land, equipment, and financial reserves.

Cash management bills (PDO-2)—Marketable Treasury bills of irregular maturity lengths, sold periodically to fund short-term cash needs of Treasury. Their sale, having higher minimum and multiple purchase requirements than those of other issues, is generally restricted to competitive bidders.

Competitive tenders ("Treasury Financing Operations")—A bid to purchase a stated amount of one issue of Treasury securities at a specified yield or discount. The bid is accepted if it is within the range accepted in the auction. (See Noncompetitive tenders.)

Coupon issue—The issue of bonds or notes (public debt).

Currency no longer issued (USCC)—Old and new series gold and silver certificates, Federal Reserve notes, national bank notes, and 1890 Series Treasury notes.

Current income bonds ("U.S. Savings Bonds and Notes")—Bonds paying semiannual interest to holders. Interest is not included in accrued discount.

Debt outstanding subject to limitation (FD-6)—The debt incurred by the Treasury subject to the statutory limit set by Congress. Until World War I, a specific amount of debt was authorized to each separate security issue. Beginning with the Second Liberty Loan Act of 1917, the nature of the limitation was modified until, in 1941, it developed into an overall limit on the outstanding Federal debt. In 1991, the debt limit was \$4,145,000 million; the limit may change from year to year.

The debt subject to limitation includes most of Treasury's public debt except securities issued to the Federal Financing Bank, upon which there is a limitation of \$15 billion, and certain categories of older debt (totaling approximately \$595 million as of February 1991).

Discount—The interest deducted in advance when purchasing notes or bonds. (See Accrued discount)

Discount rate (PDO-2)—The difference between par value and the actual purchase price paid, annualized over a 360-day year. Because this rate is less than the actual yield (coupon-equivalent rate), the yield should be used in any comparison with coupon issue securities.

Dollar coins (USCC)—Include standard silver and nonsilver coins.

Domestic series (FD-2)—Nonmarketable, interest and non-interest-bearing securities issued periodically by Treasury to the Resolution Funding Corporation (RFC) for investment of funds authorized under section 21B of the Federal Home Loan Bank Act (12 U.S.C. 1441b).

Federal Intrafund transactions ("Federal Fiscal Operations")—Intrabudgetary transactions in which payments and receipts both occur within the same Federal fund group (Federal funds or trust funds).

Federal Reserve notes (USCC)—Issues by the U.S. Government to the public through the Federal Reserve banks and their member banks. They represent money owed by the Government to the public. Currently, the item "Federal Reserve notes—amounts outstanding" consists of new series issues. The Federal Reserve note is the only class of currency currently issued.

Foreign ("Foreign Currency Positions," IFS-2, -3)—(international) Locations other than those included under the definition of the United States. (See United States.)

Foreigner ("Capital Movements," IFS-2)—All institutions and individuals living outside the United States, including U.S. citizens living abroad, and branches, subsidiaries, and other affiliates abroad of U.S. banks and business concerns; central governments, central banks, and other official institutions of countries other than the United States, and international and regional organizations, wherever located. Also, refers to persons in the United States to the extent that they are known by reporting institutions to be acting for foreigners.

Foreign official institutions ("Capital Movements")—Includes central governments of foreign countries, including all departments and agencies of national governments; central banks, exchange authorities, and all fiscal agents of foreign national governments that undertake activities similar to those of a treasury, central bank, or stabilization fund; diplomatic and consular establishments of foreign national governments; and any international or regional organization, including subordinate and affiliate agencies, created by treaty or convention between sovereign states.

Foreign public borrower ("Capital Movements")—Includes foreign official institutions, as defined above, the corporations and agencies of foreign central governments, including development banks and institutions, and other agencies that are majority-owned by the central government or its departments; and state provincial and local governments of foreign countries and their departments and agencies.

Foreign-targeted issue (PDO-1, -3)—Foreign-targeted issues were notes sold between October 1984 and February 1986 to foreign institutions, foreign branches of U.S. institutions, foreign central banks or monetary authorities, or to international organizations in which the United States held membership. Sold as companion issues, they could be converted to domestic (normal) Treasury notes with the same maturity and interest rates. Interest was paid annually.

Fractional coins (USCC)—Coins minted in denominations of 50, 25, and 10 cents, and minor coins (5 cents and 1 cent).

Government account series (FD-2)—Certain trust fund statutes require the Secretary of the Treasury to apply monies held by these funds toward the issuance of nonmarketable special securities. These securities are sold directly by Treasury to a specific Government agency, trust fund, or account. Their rate is based on an average of market yields on outstanding Treasury obligations, and they may be redeemed at the option of the holder. Roughly 80 percent of these are issued to

five holders: the Federal old-age and survivors insurance trust fund; the civil service retirement and disability fund; the Federal hospital insurance trust fund; the military retirement fund; and the unemployment trust fund.

International Monetary Fund ("Exchange Stabilization Fund," IFS-1)—(IMF) Established by the United Nations, the IMF promotes international trade, stability of exchange, and monetary cooperation. Members are allowed to draw from the fund.

Interfund transactions ("Federal Fiscal Operations")—Transactions in which payments are made from one fund group (either Federal funds or trust funds) to a receipt account in another group.

Intrabudgetary transactions ("Federal Fiscal Operations")—These occur when payment and receipt both occur within the budget, or when payment is made from off-budget Federal entities whose budget authority and outlays are excluded from the budget totals.

Majority-owned foreign partnerships ("Foreign Currency Positions")—Partnerships organized under the laws of a foreign country in which one or more U.S. nonbanking concerns or nonprofit institutions, directly or indirectly, owns more than 50 percent profit interest.

Majority-owned foreign subsidiaries ("Foreign Currency Positions")—Foreign corporations in which one or more nonbanking business concerns or nonprofit institutions located in the United States, directly or indirectly, owns stock with more than 50 percent of the total combined voting power, or of the total value of all classes of stock.

Matured non-interest-bearing debt (SBN-1, -2, -3)—The value of outstanding savings bonds and notes that have reached final maturity and no longer earn interest. Includes all Series A-D, F, G, J, and K bonds. Series E bonds (issued between May 1941 and November 1965), Series EE (issued since January 1980), Series H (issued from June 1952 through December 1979), and savings notes issued between May 1967 and October 1970 have a final maturity of 30 years. Series HH bonds (issued since January 1980) mature after 20 years.

Noncompetitive tenders ("Treasury Financing Operations")—Offers by an investor to purchase Treasury securities at the price equivalent to the weighted average discount rate or yield of accepted competitive tenders in a Treasury auction. Noncompetitive tenders are always accepted in full.

Obligation ("Federal Obligations")—An unpaid commitment to acquire goods or services.

Off-budget Federal entities ("Federal Fiscal Operations")—Federally owned and controlled entities whose transactions are excluded from the budget totals under provisions of law. Their receipts, outlays, and surplus or deficit are not included in budget receipts, outlays, or deficits. Their budget authority is not included in totals of the budget.

Own foreign offices ("Capital Movements")—Refers to U.S. reporting institutions' parent organizations, branches and/or majority-owned subsidiaries located outside the United States.

Outlays ("Federal Fiscal Operations")—(expenditures, net disbursements) Payments on obligations in the form of cash, checks, the issuance of bonds or notes, or the maturing of interest coupons.

Par value—The face value of bonds or notes, including interest.

Quarterly financing ("Treasury Financing Operations")—Treasury has historically offered packages of several "coupon" security issues on the 15th of February, May, August, and November, or on the next working day. These issues currently consist of a 3-year note, a 10-year note, and a 30-year bond. Treasury sometimes offers additional amounts of outstanding long-term notes or bonds, rather than selling new security issues. (See Reopening.)

Receipts ("Federal Fiscal Operations")—Funds collected from selling land, capital, or services, as well as collections from the public (budget receipts), such as taxes, fines, duties, and fees.

Reopening (PDO-3, -4)—The offer for sale of additional amounts of outstanding issues, rather than an entirely new issue. A reopened issue will always have the same maturity date, CUSIP-number, and interest rate as the original issue.

Short-term ("Foreign Currency Positions")—Securities maturing in 1 year or less.

Special drawing rights ("Exchange Stabilization Fund," IFS-1)—International assets created by IMF that serve to increase international liquidity and provide additional international reserves. SDRs may be purchased and sold among eligible holders through IMF. (See IMF.)

SDR allocations are the counterpart to SDRs issued by IMF based on members' quotas in IMF. Although shown in exchange stabilization fund (ESF) statements as liabilities, they must be redeemed by ESF only in the event of liquidation of, or U.S. withdrawal from, the SDR department of IMF or cancellation of SDRs.

SDR certificates are issued to the Federal Reserve System against SDRs when SDRs are legalized as money. Proceeds of monetization are deposited into an ESF account at the Federal Reserve Bank of New York.

Spot ("Foreign Currency Positions")—Due for receipt or delivery within 2 workdays.

State and local government series (FD-2)—(SLUGs) Special non-marketable certificates, notes, and bonds offered to State and local governments as a means to invest proceeds from their own tax-exempt financing. Interest rates and maturities comply with IRS arbitrage provisions. SLUGs are offered in both time deposit and demand deposit forms. Time deposit certificates have maturities of up to 1 year. Notes mature in 1 to 10 years and bonds mature in more than 10 years. Demand deposit securities are 1-day certificates rolled over with a rate adjustment daily.

Statutory debt limit (FD-6)—By Act of Congress there is a limit, either temporary or permanent, on the amount of public debt that may be outstanding. When this limit is reached, Treasury may not sell new debt issues until Congress increases or extends the limit. For a detailed listing of changes in the limit since 1941, see the Budget of the United States Government. (See Debt outstanding subject to limitation.)

STRIPS (PDO-1, -3)—Separate Trading of Registered Interest and Principal Securities. Long-term notes and bonds may be divided into principal and interest-paying components, which may be transferred and sold in amounts as small as \$1,000. STRIPS are sold at auction at a minimum par amount, varying for each issue. The amount is an arithmetic function of the issue's interest rate.

Treasury bills—The shortest term Federal security (maturity dates normally varying from 3 to 12 months), they are sold at a discount.

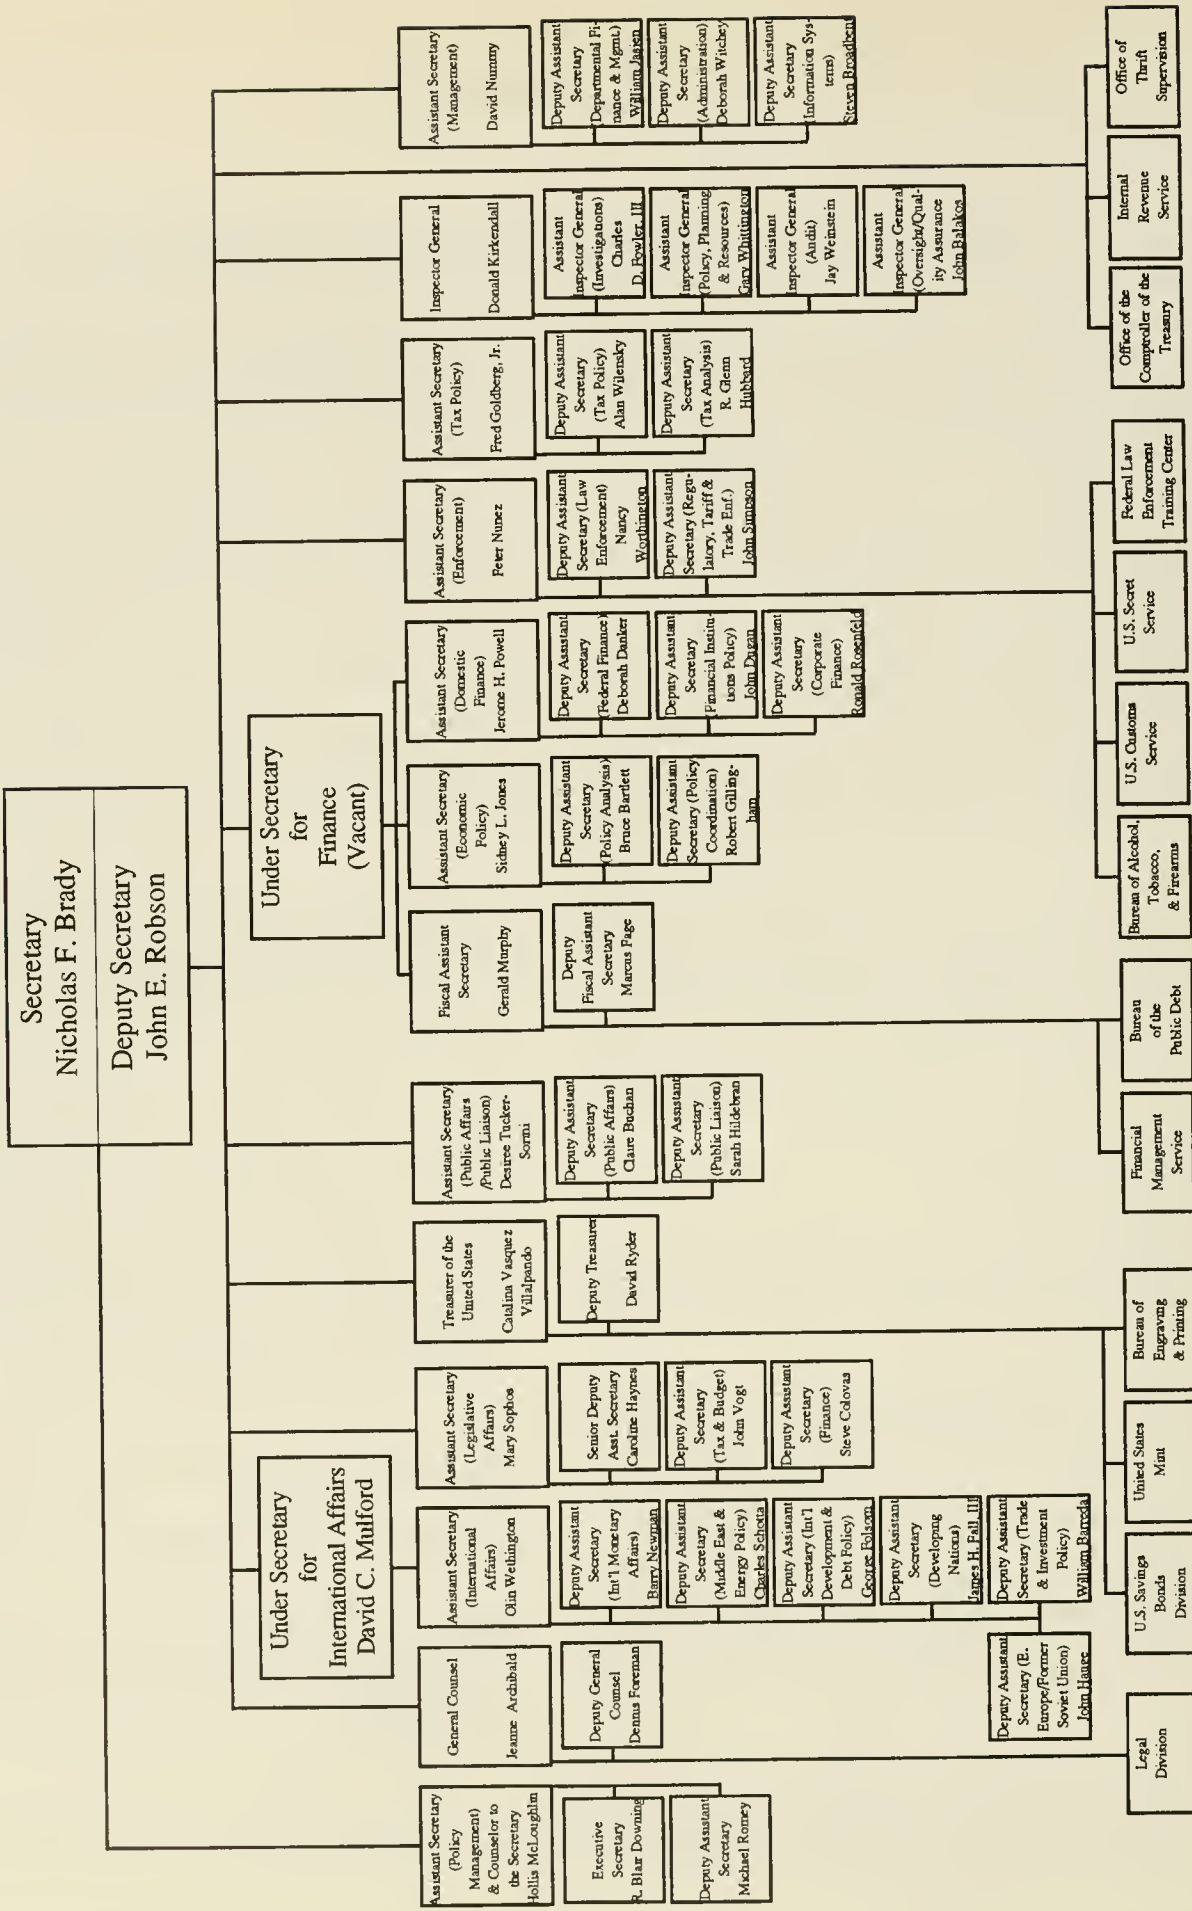

Trust fund transaction ("Federal Fiscal Operations")—An intrabudgetary transaction in which both payments and receipts occur within the same trust fund group.

United States—Includes the 50 States, District of Columbia, Commonwealth of Puerto Rico, American Samoa, Midway Island, Virgin Islands, Wake Island, and all other territories and possessions.

U.S. notes (USCC)—Legal tender notes of five different issues: 1862 (\$5-\$1,000 notes); 1862 (\$1-\$2 notes); 1863 (\$5-\$1,000 notes); 1863 (\$1-\$10,000 notes); and 1901 (\$10 notes).

Worldwide ("Foreign Currency Position")—Sum of "United States" and "foreign" trade.

PROFILE OF THE ECONOMY

LEADING INDICATORS

The index of leading indicators edged up in a modest 0.2 percent in March after gains of 0.8 percent in February and 1.0 percent in January. It was the first time the index has risen for 3 straight months since mid-1991. The March increase was less than expected and not broadly based--only consumer expectations and commodity prices were significantly improved. Two other of the 11 components were slightly positive, while the remaining seven were weak. But several components, such as initial unemployment claims, could contribute to a rise in April.

Ratio Scale:1982=100

* Note: Gray bars indicate recessions. The end of the current recession, which officially began in July of 1990, has not yet been determined.
