## Profile of the Economy

[Source: Office of Macroeconomic Analysis]

## Real gross domestic product (GDP)

Growth in real gross domestic product (GDP) accelerated in the second quarter of 2003 to a 2.4 percent annual rate. That was a full percentage point above the pace in the prior two quarters, though still below the potential growth rate of the economy, estimated at 3.1 percent. Many sectors of GDP improved in the second quarter, although growth was held back by declines in inventories, exports, and spending by State and local governments, as well as a surge in imports (which are subtracted from GDP). Excluding inventories and net exports, real domestic final sales grew at a 4.6 percent pace, the fastest since the first quarter of 2000.

Personal consumption expenditures accelerated to a 3.3 percent rate from 2.0 percent in the prior quarter. Increased purchases of motor vehicles and other durable goods, such as furniture and household equipment, accounted for much of the growth. Business fixed investment was also very favorable, with a 6.9 percent rate of increase representing the strongest gain in 3 years. That growth reflected primarily a 7.5 percent increase in real equipment and software investment, which resumed its yearlong upward trend after declining in the first quarter of 2003. Business investment in structures also increased in the second quarter for the first time in seven quarters.

National defense consumption expenditures and gross investment surged at a 44 percent annual rate in the second quarter, contributing 1.7 percentage points to GDP growth. That was the largest quarterly increase since a 110 percent jump in the third quarter of 1951 during the Korean war.

Defense spending often fluctuates from quarter to quarter, and the latest increase followed a 3.3 percent decline in the first quarter. Federal nondefense expenditures fell 4.1 percent in the second quarter, and State and local spending was off 1.5 percent.

## Growth of Real GDP

(Percent change, fourth quarter to fourth quarter)

At the producer level, finished goods prices rose at a 4.8 percent annual rate during the first 6 months of the year, following a modest 1.2 percent increase during 2002. Prices were down during the latest 3 months ending in June after increasing sharply in the first 3 months of the year. As with the CPI, sharply rising energy costs during the first quarter were partially offset by declines during the second quarter. Over the first half of the year, energy prices were up at a 19.2 percent annual rate, somewhat faster than the 12.3 percent increase registered last year. Core finished goods and food prices are also contributing to the overall acceleration in finished goods inflation. Core prices are up at a modest 0.5 percent pace to this point this year, while food prices increased at a 7.6 percent rate. Both followed slight declines last year. Further back in the production chain, increases in core intermediate materials prices have picked up a small amount this year.

Hourly compensation costs (including stock options) as calculated in the national income accounts for the private nonfarm business sector are up at a 3.8 percent annual rate in the first half of 2003 . This was a little below the 4.0 percent annual rate rise in productivity, yielding a 0.2 percent dip in unit labor costs in the first half of the year, compared with a 1.6 percent decline in unit labor costs across the four

## Consumer Prices

(Percent change from year earlier)

quarters of 2002. The employment cost index (ECI) for total compensation, a fixed-weighted compensation measure that does not account for stock options, increased at a 4.4 percent annual rate during the first half of 2003, boosted by a surge in benefit costs. This is up from a 3.4 percent increase last year.

## Producer Prices - Finished Goods <br> (Percent change froma year earlier)

## Employment and unemployment

The labor market remained weak in mid-2003. Payroll employment continued to shrink for a sixth straight month in July, bringing the total job loss since January to almost 500,000 . The unemployment rate receded from an 8 -year high of 6.4 percent in June to 6.2 percent, but the decline was entirely due to reduced labor force participation.

The 44,000-drop in nonfarm payrolls recorded in July reflected widespread job losses. The biggest decline occurred in the manufacturing sector, which cut 71,000 workers in July, and has been eliminating jobs continuously since July 2000. Over the past 3 years, 2.7 million factory jobs have been eliminated. For the few industries showing growth in July, gains were minimal. One notable exception was in temporary help supply, which brought on 42,000 workers and added 122,000 since April. Total payroll employment is now down by 2.7 million from its peak in

February 2001, and by 1 million since the November 2001 recession trough.

The unemployment rate eased by 0.2 percentage point in July to 6.2 percent. Although the jobless rate remains elevated compared to the 5.8 percent rate averaged in 2002, it is still low compared to highs of 7.8 percent in 1992 and 10.8 percent in 1982.

Sluggish labor markets continued to have a restraining effect on wage growth. Over the 12 months ending in July, average hourly earnings of nonfarm production workers rose by 3.1 percent, little changed from the 2.9 percent increase posted over the year-earlier period and down from readings averaging 3.9 percent from late 1996 through the summer of 2001. Growth in earnings adjusted for inflation has slowed to 1.0 percent over the 12 months ending in June (by the latest available statistics) from 2.0 percent during the yearearlier period. The slowdown in real wage growth reflects higher inflation, resulting primarily from an increase in energy prices.

## Unemployment Rate <br> (Percent)

Establishment Employment
(Average monthly change in thousands)

*Based on July data

## Real disposable personal income and consumer spending

Personal income in nominal terms grew at a 3.5 percent annual rate in the first half of 2003, close to the 3.6 percent averaged across the four quarters of 2002 . Growth in wages and salaries, which account for just under 60 percent of personal income, accelerated to a 2.8 percent annual rate in the first two quarters from 1.9 percent the previous year. Transfer payments from government to individuals were up at a 7.0 percent annual rate in the first half of this year, down from a 9.5 percent pace last year. Gains in other labor income, consisting mainly of employer contributions to pension funds and health insurance, slowed from 9.4 percent last year to a 4.8 percent annual rate in the first half of 2003. Dividend income continued to grow, accelerating to a 7.0 percent rate this year from a 6.4 percent pace in 2002. Interest income grew in the second quarter of this year, registering only the second measurable gain in the last 2-1/2 years.

Disposable (after-tax) income adjusted for inflation rose at a 2.3 percent annual rate in the first half of 2003, up a little from the 1.6 percent pace in the second half of last year, but well below the more than 9 percent registered in the first half of the year when real income was boosted by reduced withholding that had been legislated in the Economic Growth and Tax Relief and Reconciliation Act of 2001.

Real consumer spending has picked up gradually this year. Following a modest 1.7 percent annual rate increase in the fourth quarter of 2002, growth in real spending accelerated to a 2.0 percent rate in the first quarter of 2003,
and to a 3.3 percent pace in the second. Consumer spending in the second quarter rose at a faster rate than after-tax income, pushing the personal saving rate down to 3.3 percent from 3.6 percent in the first quarter. The saving rate averaged 3.7 percent during 2002, up from a 64 -year low of 2.3 percent in 2001.

## Industrial production and capacity utilization

Industrial production remained weak in the first half of 2003. Output from factories, mines, and utilities fell by 3.2 percent at an annual rate in the second quarter, after advancing by a slight 0.3 percent in the first quarter. Production increased 0.1 percent in June, but was down 1.0 percent over the last 12 months.

Manufacturing production, which accounts for about 85 percent of all industrial output, advanced by 0.1 percent in May and by 0.4 percent in June. The June gain was the largest since January 2003, and the first consecutive monthly increase since last August. Still, manufacturing production fell by 2.3 percent at an annual rate in the second quarter after declining 0.6 percent in the first quarter. Production of motor vehicles and parts rose in June for the first time since January, but contracted by a rapid 12.8 percent pace overall in the second quarter. Apart from automobiles, manufacturing output shrank 2.4 percent in the second quarter. Production in the high-technology industries (computers, communications equipment, and semiconductors) increased by a strong 14.4 percent in the second quarter, the largest quarterly advance since the fourth quarter of 2000. Computers, office equipment, and
semiconductors contributed to the sharp gain in the second quarter. However, communications equipment remains the softest segment of the high-technology industries as it fell at roughly an 8 percent rate in the second quarter. Nondurable manufacturing declined by 2.0 percent at an annual rate in the second quarter, as paper and chemical production remained weak. Production at utilities, which accounts for a little over 9 percent of total industrial output, contracted by 14.4 percent in the second quarter due to the mild summer weather.

The capacity utilization rate for the industrial sector held steady at 74.3 percent in June, the lowest level since 1983, and 7 percentage points below the long-term average of 81.3 percent. Capacity utilization in the manufacturing sector edged up 0.2 of a percentage point to 72.8 percent in June, only slightly above April's 20-year low of 72.5 percent and 7.4 percentage points below its long-term average of 80.2 percent. Utilization in the high-tech industries has edged up since the end of 2002 and reached 62.9 percent in June, still well below its long-term average of 79.3 percent recently.

## Nonfarm productivity and unit labor costs

Productivity growth remained impressive over the past year. Nonfarm business productivity (real output per hour worked) surged by 5.7 percent at an annual rate in the second quarter. Over the most recent four quarters, labor productivity rose by a strong 3.8 percent, representing some acceleration from the "New Economy" productivity growth rate of 2.9 percent averaged since 1995 and significantly better than the 1.4 percent averaged from 1973 to 1995 . The latest productivity report contained revisions which raised further the already high levels of productivity growth in recent years.

Hourly labor compensation rose by 3.5 percent at an annual rate in the second quarter and by 2.8 percent during the past four quarters. Unit labor costs remain contained due to the strong growth in productivity; however, they actually fell by 2.1 percent in the second quarter, and were down 1.0 percent over the past four quarters. These costs began falling in mid-2001, and by the second quarter of 2003 they were down by a 1.7 percent annual rate.

Productivity in manufacturing grew by 4.2 percent at an annual rate in the second quarter following a 4.9 percent advance in the first quarter. Factory output per hour worked increased by 4.8 percent over the most recent four quarters. Despite the recent strong productivity growth in this sector, gains have come as a result of declines in hours worked rather than a boost in output. (Manufacturing payrolls have declined more than 2.7 million since the middle of 2000.)

Hourly compensation in manufacturing advanced by 5.4 percent at an annual rate in the second quarter and by 5.6 percent over the past four quarters. Continued productivity gains have controlled unit labor costs; however, these costs were up 1.2 percent in the second quarter and only 0.7 percent over the latest four quarters.

## International transactions

The current account measures trade in goods and services as well as the flow of investment income and unilateral transfers (including government grants and pension payments, and private transfers to and from foreigners). The current account has been in deficit almost continuously since the early 1980s but has fluctuated widely over time. In the first quarter of 2002, the current account deficit rose by $\$ 30.1$ billion at an annual rate to a new high of $\$ 544.4$ billion, or 5.1 percent of GDP. The increase was primarily due to a jump in the trade deficit, but a decline in net income received on U.S.-owned assets abroad and an uptick in unilateral transfers also contributed.

Regular annual revisions (which affected data spanning back to 1992) reduced the current account gap reported for 2002 from $\$ 503$ billion ( 4.8 percent of GDP) to $\$ 481$ billion (4.6 percent of GDP)-still an all-time high. Revisions to prior years were small on balance and had essentially no impact on the current account as a share of GDP.

The current account is, by definition, matched by offsetting transactions in the capital and financial accounts, with any difference in the recorded flows listed as a statistical discrepancy. Capital account transactions, which mainly consist of debt forgiveness and wealth transfers associated with immigration, are typically small and in the first quarter amounted to $\$ 1.4$ billion at an annual rate. That was unchanged from the prior quarter and down slightly from $\$ 1.5$ billion in the third quarter of 2002.

The financial account measures transactions that alter the foreign financial assets and liabilities of the United States. Net financial inflows slowed further in the first quarter to $\$ 451.0$ billion at an annual rate from $\$ 610.2$ billion in the fourth quarter and a recent high of $\$ 684.8$ billion in the third. The most recent pullback partly reflected a surge in outflows for U.S.-owned assets abroad, which are subtracted from inflows for foreign-owned assets in the United States. U.S. purchases of foreign securities and U.S. claims on foreigners reported by U.S. banks both jumped sharply in the first quarter. On the other side of the equation, net foreign investment in the United States eased slightly as foreigners divested themselves of U.S. equities and federally-sponsored agency bonds. The swing from net purchases to net sales of those assets was partially offset by a substantial rise in net foreign purchases of U.S. corporate bonds and a small increase in foreign acquisitions of U.S. Treasury securities. The first-quarter results also showed a pronounced pickup in foreign direct investment in the United States from the very sluggish pace recorded in 2002.

## Exchange rate of the dollar

The dollar's trend lower from a peak in February 2002 continued into the spring, although some strengthening began in the summer of 2003. In the 18 months between that peak and July, the nominal exchange value of the dollar
relative to a broad index covering the currencies of 26 important U.S. trade partners has depreciated by 8.3 percent. This decline follows a period of sustained appreciation that saw the dollar's value surge by 12 percent between December 1999 and February 2002.

The decline has been a function mainly of dollar weakness against the seven currencies of the United States' major trading partners, including the euro area countries, Japan, Canada, the United Kingdom, Australia, Sweden, and Switzerland. Since February 2002, the exchange rate of the dollar compared to an index of these currencies fell by 16.7 percent. Dollar depreciation against the yen and the euro, whose combined weights account for roughly 55 percent of the major index, has been largely responsible. Over the same
period, the dollar/euro exchange rate fell by 23.4 percent and the dollar/yen exchange rate fell by 11.2 percent, reflecting global investors' on-going concerns about the pace of U.S. economic recovery as well as more recent considerations about the possibility of deflation.

The dollar remains relatively strong compared with the currencies of many other important trading partners, although the pace of its appreciation continues to recede. Since February 2002, the exchange value of the dollar compared to an index of currencies that includes Mexico, China, Brazil, and seven other Asian countries has appreciated by 3.1 percent. Since December 1999, this index has risen by nearly 11 percent.

## 

## Interest rates

The Federal Reserve eased monetary policy 13 times since 2000 in response to a weakened economic situation, reducing the target for the federal funds rate (the rate that banks and other financial institutions charge each other for overnight loans) by a total of $5-1 / 2$ percentage points to its current rate at mid-August of 1 percent. This is the lowest level of federal funds rates since 1958. In response to this monetary easing, the interest rate for the 3-month Treasury bill has fallen since the beginning of 2001 from levels above 5 percent to current levels at mid-August under 1 percent.

Rates on long-term Treasury securities declined on balance during 2002 through mid-June of this year, but have risen since then. Starting at over 5 percent early in 2002, the 10-year Treasury rate was averaging below 4 percent by September, and after holding steady for several months, it fell again in May and the first half of June of this year to under 3.2 percent, the lowest levels since the 1950s. Since then, the 10 -year rate has risen, and by mid-August, it was around $4-1 / 2$ percent. Long-term rates are influenced by several factors. Treasury securities are desirable as safe havens against economic and geopolitical uncertainty, which has the effect of keeping yields low. In addition, weakness in the economy helped push them down this spring, and the
most recent rise partly reflects expectations of stronger economic conditions.

Mortgage interest rates generally follow movements of the 10 -year Treasury rate. The interest rate on a conventional 30-year fixed-rate loan fell from a monthly average peak of $8-1 / 2$ percent in May 2000 to under 5-1/4 percent at midJune of this year-lows not seen since the mid-1960s. Recently this rate rose, and as of mid-August was over 6-1/4 percent, although this is still very low. Exceptionally beneficial mortgage rates have induced many homeowners to refinance, providing them with the funds to support more consumption spending.

Corporate bond yields are influenced by long-term Treasury rates, but they are also affected by numerous other factors. Moody's seasoned Baa yield on corporate bonds reached a monthly average peak of almost 9 percent in May 2000 , and then underwent a series of declines down to around 6 percent by mid-June of this year. Since then, it rose to about 7 percent by mid-August. The spread between the Baa yield and the 10-year Treasury yield increased sharply late in 2002, averaging over 3-3/4 percent last October, reflecting concerns about the dependability of corporate financial statements and an increased perception of corporate and economic risk. The spread has narrowed since then to under 2-3/4 percent by mid-August.

## Short-term Interest Rates

(Percent)

## Long-term Interest Rates

(Percent)

## Housing

Activity in the housing sector increased in the second quarter of 2003 after a lull in the first quarter. Sales of new single-family homes shot up at a 50 percent annual rate to an annual selling pace of 1.089 million, the highest quarterly total since the series started in 1963. Through the first half of 2003, new home sales were on pace to break last year's record. Resales of existing single-family homes have also been strong, topping 5.8 million at an annual rate in both the first and second quarters. If maintained through the rest of the year, that would also represent a new record.

Strong demand for new homes led to high levels of housing starts in the first half of 2003 and the last half of 2002. Over the last four quarters, starts were running at more than a 1.7 million annual rate, a level not seen since the last housing boom in the mid-1980s. Single-family homes have been holding at about a 1.4 million unit pace in recent quarters, while starts in the smaller and more volatile multifamily market were running at a 320,000 annual pace in the latest quarter.

Expansion in new home demand, as well as a boom in spending on major home improvements fueled by cash-out mortgage refinancing, resulted in increased real residential investment. Growth in such investment increased at an annual rate of 6.0 percent in the second quarter of 2003 following gains of 10.1 percent in the first quarter and 9.4 percent in the fourth quarter of 2002.

Very low mortgage rates, favorable demographic conditions, the relative safety of housing as an investment and strong home price appreciation spurred the demand for homes. Towards the end of the second quarter and into July
and August mortgage interest rates rose, but rates were still low by historical standards and other housing fundamentals remained very favorable. The mortgage rate for a 30-year loan rose from a record low for this series of 5.21 percent in late June to 6.34 percent by the beginning of August. Demand for new homes has been little affected by the higher rate as applications for a mortgage to purchase a home continue to rise. Refinancing activity, in contrast, has slowed, but many homeowners will continue to benefit from past refinancings through reduced monthly mortgage payments and a lower debt burden, factors that will continue to support consumption and the economy.

## Federal budget

Through the first three quarters of fiscal year 2003, the Federal budget was in deficit by $\$ 271$ billion, $\$ 154$ billion more than in the same months of fiscal 2002. A slowgrowing economy and the increased spending required to combat terrorism and provide for domestic security were primarily responsible for the deterioration in the Federal budget balance.

Receipts in that period were about $\$ 49$ billion, or 3.5 percent lower than in the first three quarters of fiscal 2002. Part of the decline represented a legislated shift in the timing of a corporate tax payment from fiscal 2001 to fiscal 2002, which boosted receipts by about $\$ 23$ billion in the prior fiscal year. After adjustment, receipts for the current fiscal year to date would be only 2 percent lower than last year. Corporate tax receipts, excluding the timing shift, have improved modestly through the fiscal year as corporate profits have increased, while individual income taxes
through 9 months of this fiscal year were 6.0 percent below last year's amount.

Budget outlays through 9 months of fiscal 2003 were $\$ 106$ billion, or 7.0 percent higher than last year. Defense military outlays were up 16.2 percent and accounted for $\$ 40$ billion of the increase. Other functions posting large growth in percentage terms included unemployment insurance, Medicare, and Medicaid.

The deficit is expected to continue to widen in the JulySeptember quarter as tax reductions and other provisions of the Jobs and Growth Tax Relief Reconciliation Act take effect, funding continues for operations in Iraq, and other legislated and policy changes are incorporated. The Federal budget deficit could approach $\$ 450$ billion this fiscal year and next, but that would still be a moderate 4.2 percent in relation to GDP, less than highs in the early 1990s and in the 1980s. The Administration's Mid-Session Review projects that, as stronger economic growth resumes, the budget deficit will shrink rapidly after fiscal 2004.

Debt held by the public for fiscal year 2003 to date was up about $\$ 267$ billion to $\$ 3.8$ trillion at the end of June, doubling from the $\$ 131$ billion increase recorded for the same 9 months of fiscal 2002.

## Net national saving and investment

Net national saving, the source of funds for new investment, fell to 0.8 percent of net national product (NNP) in the first quarter of 2003 (latest available data) from 1.9 percent in 2002 and 3.8 percent in 2001, and a recent high of 7.5 percent in 1998. (Net national saving and NNP exclude depreciation to replace worn-out or obsolete equipment, software, and structures used in production.)

For the most part, the recent decline in the net national saving rate stemmed from a movement in the Federal budget from a surplus of 0.8 percent of NNP in calendar year 2001 to deficits of 2.2 percent in calendar year 2002 and 3.0 percent in the first quarter. The emergence of these deficits largely reflected the effects of the recession and the need for spending on homeland security following the terrorist attacks in 2001. The deficit of State and local governments relative to NNP also increased a bit in the latest five quarters because of the weaker economy. Combined, the total public sector deficit was 3.7 percent of NNP in the first quarter and 2.8 percent of NNP in calendar year 2002, compared to a surplus of 0.5 percent of NNP in 2001. Even so, these deficit levels are considerably below public sector deficits averaging 3.9 percent of NNP from 1982 to 1995.

In the first quarter, private saving was 4.5 percent of NNP, a bit less than the 4.7 percent in 2002 but well above
the rate of 3.3 percent in 2001, which was the lowest rate since 1938. Both personal saving and retained earnings reached lows in 2001 not seen in at least 50 years. Personal saving has risen substantially to 3.1 percent of NNP in the first quarter and 3.2 percent in 2002, from 1.9 percent in 2001. The low personal saving rate in 2001 reflected the enormous growth in the stock market before 2001 that boosted household wealth so much that there was less incentive to save from income. In contrast, the most recent rise in saving indicated greater caution on the part of consumers in the face of the stock market declines and the weak economy. Retained earnings of corporations were at 1.4 percent of NNP in the first quarter, which was near the rates of 1.5 percent in 2002 and 1.4 percent in 2001.

Net domestic investment (by government and private industry in structures, equipment, software, and inventory) slowed to 5.9 percent of NNP in the first quarter, from 6.1 percent of NNP in 2002 and 6.8 percent in 2001, and almost 10 percent in each of the prior 3 years. Nevertheless, the most recent rates of investment are still above rates of less than $5-1 / 2$ percent in 1991 and 1992. A large part of investment during the last decade was financed from abroad. U.S. net foreign investment swung from 0.3 percent of NNP in 1991 to -6.0 percent in the first quarter and -5.4 percent in 2002.

## Net National Saving

(Saving as a percent of NNP)

## INTRODUCTION: Federal Fiscal Operations

Budget authority usually takes the form of appropriations that allow obligations to be incurred and payments to be made. Reappropriations are Congressional actions that extend the availability of unobligated amounts that have expired or would otherwise expire. These are counted as new budget authority in the fiscal year of the legislation in which the reappropriation act is included, regardless of when the amounts were originally appropriated or when they would otherwise lapse.

Obligations generally are liquidated by the issuance of checks or the disbursement of cash-outlays. Obligations may also be liquidated (and outlays recorded) by the accrual of interest on public issues of Treasury debt securities (including an increase in redemption value of bonds outstanding); or by the issuance of bonds, debentures, notes, monetary credits, or electronic payments.

Refunds of collections generally are treated as reductions of collections, whereas payments for earned-income tax credits in excess of tax liabilities are treated as outlays. Outlays during a fiscal year may be for payment of obligations incurred in prior years or in the same year. Outlays, therefore, flow in part from unexpended balances of prior year budget authority and from budget authority provided for the year in which the money is spent. Total outlays include both budget and off-budget outlays and are stated net of offsetting collections.

Receipts are reported in the tables as either budget receipts or offsetting collections. They are collections from the public, excluding receipts offset against outlays. These, also called governmental receipts, consist mainly of tax receipts (including social insurance taxes), receipts from court fines, certain licenses, and deposits of earnings by the Federal Reserve system. Refunds of receipts are treated as deductions from gross receipts. Total Government receipts are compared with total outlays in calculating the budget surplus or deficit.

Offsetting collections from other Government accounts or the public are of a business-type or market-oriented nature. They are classified as either collections credited to appropriations or fund accounts, or offsetting receipts (i.e., amounts deposited in receipt accounts). The former normally can be used without appropriation act by Congress. These occur in two instances: (1) when authorized by law, amounts collected for materials or services are treated as reimbursements to appropriations. For accounting purposes, earned reimbursements are also known as revenues. These offsetting collections are netted against gross outlays in determining net outlays from such appropriations; and (2) in the three types of revolving funds (public enterprise, intragovernmental and trust); offsetting collections are netted against spending, and outlays are reported as the net amount.

Offsetting receipts in receipt accounts cannot be used without appropriation. They are subdivided into three categories: (1) proprietary receipts, or collections from the public, offset against outlays by agency and by function; (2) intragovernmental transactions, or payments into receipt accounts from governmental appropriation or fund accounts. They finance operations within and between Government agencies and are credited with collections from other Government accounts; and (3) offsetting governmental receipts that include foreign cash contributions.

Intrabudgetary transactions are subdivided into three categories: (1) interfund transactions-payments are from one fund group (either Federal funds or trust funds) to a receipt account in the other fund group; (2) Federal intrafund transactions-payments and receipts both occur within the Federal fund group; and (3) trust intrafund transactionspayments and receipts both occur within the trust fund group.

Offsetting receipts are generally deducted from budget authority and outlays by function, subfunction, or agency. There are four types of receipts, however, that are deducted from budget totals as undistributed offsetting receipts. They are: (1) agencies' payments (including payments by offbudget Federal entities) as employers into employees' retirement funds; (2) interest received by trust funds; (3) rents and royalties on the Outer Continental Shelf lands; and (4) other interest (i.e., that collected on Outer Continental Shelf money in deposit funds when such money is transferred into the budget).

The Government has used the unified budget concept set forth in the "Report of the President's Commission on Budget Concepts" as a foundation for its budgetary analysis and presentation since 1969. The concept calls for the budget to include all of the Government's fiscal transactions with the public. Since 1971, however, various laws have been enacted removing several Federal entities from (or creating them outside of) the budget. Other laws have moved certain off-budget Federal entities onto the budget. Under current law, the off-budget Federal entities consist of the two Social Security trust funds, Federal Old-Age and Survivors Insurance and the Federal Disability Insurance Trust Fund, and the Postal Service.

Although an off-budget Federal entity's receipts, outlays, and surplus or deficit ordinarily are not subject to targets set by the Congressional resolution, the Balanced Budget and Emergency Deficit Control Act of 1985 [commonly known as the Gramm-Rudman-Hollings Act as amended by the Budget Enforcement Act of 1990 (2 United States Code 900922)] included off-budget surplus or deficit in calculating deficit targets under that act and in calculating excess deficit. Partly for this reason, attention has focused on both on- and off-budget receipts, outlays and deficit of the Government.

Tables FFO-1, FFO-2 and FFO-3 are published quarterly and cover 5 years of data, estimates for 2 years, detail for 13 months, and fiscal year-to-date data. They provide a summary of data relating to Federal fiscal operations reported by Federal entities and disbursing officers, and daily reports from the FRBs. They also detail accounting transactions affecting receipts and outlays of the Government and off-budget Federal entities and their related effect on assets and liabilities of the Government. Data are derived from the "Monthly Treasury Statement of Receipts and Outlays of the United States Government."

- Table FFO-1 summarizes the amount of total receipts, outlays, and surplus or deficit, as well as transactions in Federal securities, monetary assets and balances in Treasury operating cash.
- Table FFO-2 includes on- and off-budget receipts by source. Amounts represent income taxes, social insurance taxes, net contributions for other insurance and retirement, excise taxes, estate and gift taxes, customs duties and net miscellaneous receipts.
- Table FFO-3 details on- and off-budget outlays by agency.
- Table FFO-4 summarizes on- and off-budget receipts by source and outlays by function as reported to each major fund group classification for the current fiscal year to date and prior fiscal year to date.
- Table FFO-5 summarizes internal revenue receipts by states and by type of tax. Amounts reported are collections made in a fiscal year. They span several tax liability years because they consist of prepayments (estimated tax payments and taxes withheld by employers for individual income and Social Security taxes), payments made with tax returns and subsequent payments made after tax returns are due or are filed (that is, payments with delinquent returns or on delinquent accounts).

Amounts are reported based on the primary filing address provided by each taxpayer or reporting entity. For multistate corporations, the address may reflect only the district where such a corporation reported its taxes from a principal office rather than other districts where income was earned or where individual income and Social Security taxes were withheld. In addition, an individual may reside in one district and work in another.

- Table FFO-6 includes customs collection of duties, taxes, and fees by districts and ports.

## Third-Quarter Receipts

The following capsule analysis of budget receipts, by source, for the third quarter of fiscal 2003 supplements fiscal data reported in the June issue of the "Treasury Bulletin." At the time of that issue's release, not enough data were available to analyze adequately collections for the quarter.

Individual income taxes-Individual income tax receipts, net of refunds, were $\$ 232.5$ billion for the third quarter of fiscal 2003. This is a decrease of $\$ 11.6$ billion over the comparable prior year quarter. Withheld receipts increased by $\$ 7.2$ billion and non-withheld receipts decreased by $\$ 21.2$ billion during this period. Refunds decreased by $\$ 2.4$ billion over the comparable fiscal 2002 quarter. There was an increase of $\$ 0.9$ billion in accounting adjustments between individual income tax receipts and the Social Security and Medicare trust funds over the comparable quarter in fiscal 2002.

Corporate income taxes-Net corporate income tax receipts were $\$ 53.0$ billion for the third quarter of fiscal 2003. This is an increase of $\$ 15.4$ billion compared to the prior year third quarter. The $\$ 15.4$ billion change is comprised of an increase of $\$ 11.9$ billion in estimated and
final payments, and a decrease of $\$ 3.5$ billion in corporate refunds.

Employment taxes and contributions-Employment taxes and contributions receipts for the third quarter of fiscal 2003 were $\$ 188.0$ billion, an increase of $\$ 0.7$ billion over the comparable prior year quarter. Receipts to the Federal Old-Age and Survivors Insurance, Federal Disability Insurance, and Federal Hospital Insurance trust funds changed by $\$ 1.4$ billion, $\$ 0.2$ billion, and $-\$ 0.9$ billion respectively. There was a $-\$ 2.4$ billion accounting adjustment for prior years employment tax liabilities made in the third quarter of fiscal 2003, while there was a - $\$ 1.5$ billion adjustment in the third quarter of fiscal 2002.

Unemployment insurance-Unemployment insurance receipts, net of refunds, for the third quarter of fiscal 2003 were $\$ 17.0$ billion, an increase of $\$ 2.5$ billion over the comparable quarter of fiscal 2002. Net State taxes deposited in the United States Treasury increased by $\$ 2.6$ billion to $\$ 13.3$ billion. Net Federal Unemployment Tax Act (FUTA) taxes did not change significantly from $\$ 3.7$ billion.

Contributions for other insurance and retirementContributions for other retirement were $\$ 1.2$ billion for the third quarter of fiscal 2003. This was a negligible change from the comparable quarter of fiscal 2002.

## Budget Results and Financing of the U.S. Government and Third-Quarter Receipts by Source, con.

Excise taxes-Net excise tax receipts for the third quarter of fiscal 2003 were $\$ 16.6$ billion, a decrease of $\$ 0.8$ billion over the comparable prior year quarter. Total excise tax refunds for the quarter were $\$ 0.6$ billion, not a significant change over the comparable prior year quarter.

Estate and gift taxes-Net estate and gift tax receipts were $\$ 5.7$ billion for the third quarter of fiscal 2003. These receipts represent a decrease of $\$ 1.5$ billion over the same quarter in fiscal 2002.

Customs duties-Customs duties net of refunds were $\$ 4.7$ billion for the third quarter of fiscal 2003. This is an increase of $\$ 0.3$ billion over the comparable prior year quarter.

Miscellaneous receipts-Net miscellaneous receipts for the third quarter of fiscal 2003 were $\$ 9.1$ billion, not a significant change over the comparable prior year quarter.

## INTRODUCTION: Source and Availability of the Balance in the Account of the U.S. Treasury

The Department of the Treasury's (Treasury's) operating cash is maintained in accounts with the Federal Reserve banks (FRBs) and branches, as well as in tax and loan accounts in other financial institutions. Major information sources include FRBs, Treasury Regional Financial Centers, Internal Revenue Service Centers, Bureau of the Public Debt, and various electronic systems. As the FRB accounts are depleted, funds are called in (withdrawn) from thousands of tax and loan accounts at financial institutions throughout the country.

Under authority of Public Law 95-147 (codified at 31 United States Code 323), Treasury implemented a program on November 2, 1978, to invest a portion of its operating cash in obligations of depositaries maintaining tax and loan accounts. Under the Treasury tax and loan (TT\&L) investment program, depositary financial institutions select the manner in which they will participate. Financial institutions wishing to retain funds deposited into their tax
and loan accounts in interest-bearing obligations can participate. The program permits Treasury to collect funds through financial institutions and to leave the funds in TT\&L depositaries and in the financial communities in which they arise until Treasury needs the funds for its operations. In this way, Treasury is able to neutralize the effect of its fluctuating operations on TT\&L financial institution reserves and on the economy. Likewise, those institutions wishing to remit the funds to the Treasury account at FRBs do so as collector depositaries.

Deposits to tax and loan accounts occur as customers of financial institutions deposit tax payments, which the financial institutions use to purchase Government securities. In most cases, this involves a transfer of funds from a customer's account to the tax and loan account in the same financial institution. Also, Treasury can direct the FRBs to invest excess funds in tax and loan accounts directly from the Treasury account at the FRBs.

## INTRODUCTION: Federal Debt

Treasury securities (i.e., public debt securities) comprise most of the Federal debt, with securities issued by other Federal agencies accounting for the rest. Tables in this section of the "Treasury Bulletin" reflect the total. Further detailed information is published in the "Monthly Statement of the Public Debt of the United States." Likewise, information on agency securities and on investments of Federal Government accounts in Federal securities is published in the "Monthly Treasury Statement of Receipts and Outlays of the United States Government."

Effective January 1, 2001, Treasury's Bureau of the Public Debt revised formats, titles, and column headings in the "Monthly Statement of the Public Debt of the United States," Table I: Summary of Treasury Securities Outstanding and Table II: Statutory Debt Limit. These changes should reduce confusion and bring the publication more in line with the public's use of terms.

Treasury's Financial Management Service (FMS) compiles data in the "Treasury Bulletin" tables FD-2 and FD-6 from the "Monthly Statement of the Public Debt of the United States." Effective June 2001, FMS revised procedures and categories in these tables to agree with the Bureau of the Public Debt's publication changes.

- Table FD-1 summarizes the Federal debt by listing public debt and agency securities held by the public, including the Federal Reserve. It also includes debt held by Federal agencies, largely by the Social Security and other Federal retirement trust funds. The net unamortized premium and discount also are listed by total Federal securities, securities held by Government accounts and securities held by the public. The difference between the outstanding face value of the Federal debt and the net unamortized premium and discount is classified as the accrual amount. (For greater detail on holdings of Federal securities by particular classes of investors, see the ownership tables, OFS-1 and OFS-2.)
- Table FD-2 categorizes by type, that is, marketable and nonmarketable, the total public debt securities outstanding that are held by the public.
- Table FD-2 (Historical) categorizes by type interestbearing marketable and nonmarketable Treasury securities. The difference between interest-bearing and total public debt securities reflects outstanding matured Treasury securitiesthat is, unredeemed securities that have matured and are no longer accruing interest. Because the Federal Financing Bank is under the supervision of Treasury, its securities are held by a U.S. Government account.
- In table FD-3, nonmarketable Treasury securities held by U.S. Government accounts are summarized by issues to particular funds within Government. Many of the
funds invest in par value special series nonmarketables at interest rates determined by law. Others invest in marketbased special Treasury securities whose terms mirror those of marketable securities.
- Table FD-4 presents interest-bearing securities issued by Government agencies. Federal agency borrowing has declined in recent years, in part because the Federal Financing Bank has provided financing to other Federal agencies. (Federal agency borrowing from Treasury is presented in the "Monthly Treasury Statement of Receipts and Outlays of the United States Government.")
- Table FD-5 illustrates the average length of marketable interest-bearing public debt held by private investors and the maturity distribution of that debt.

In March 1971, Congress enacted a limited exception to the amount of bonds with rates greater than 4-1/4 percent that could be held by the public. This permitted Treasury to offer securities maturing in more than 7 years at current market interest rates for the first time since 1965. In March 1976, the definition of a bond was changed to include those securities longer than 10 years to maturity. This exception has expanded since 1971, authorizing Treasury to continue to issue long- term securities. The ceiling on Treasury bonds was repealed on November 10, 1988.

The volume of privately held Treasury marketable securities by maturity class reflects the remaining period to maturity of Treasury bills, notes and bonds. The average length is comprised of an average of remaining periods to maturity, weighted by the amount of each security held by private investors. In other words, computations of average length exclude Government accounts and the FRBs.

- In table FD-6, the debt ceiling is compared with the outstanding debt subject to limitation by law. The other debt category includes Federal debt Congress has designated as being subject to the debt ceiling.
- In table FD-6 (Historical), the same debt information is compared as in table FD-6. Changes in the non-interest-bearing debt shown in the last column reflect maturities of Treasury securities on nonbusiness days, which can be redeemed on the next business day.
- Table FD-7 details Treasury holdings of securities issued by Government corporations and other agencies. Certain Federal agencies are authorized to borrow money from the Treasury, largely to finance direct loan programs. In addition, agencies such as the Bonneville Power Administration are authorized to borrow from the Treasury to finance capital projects. Treasury, in turn, finances these loans by selling Treasury securities to the public.

## INTRODUCTION: Public Debt Operations

Chapter 31 of Title 31 of the United States Code allows the Secretary of Treasury to borrow money by issuing Treasury securities. The Secretary determines the terms and conditions of issue, conversion, maturity, payment, and interest rate. New issues of Treasury notes mature in 2 to 10 years. Bonds mature in more than 10 years from the issue date. Each outstanding marketable security is listed in the "Monthly Statement of the Public Debt of the United States." The information in this section of the "Treasury Bulletin" pertains only to marketable Treasury securities.

- Table PDO-1 provides a maturity schedule of interest-bearing marketable Treasury notes and bonds. All unmatured Treasury notes and bonds are listed in maturity order, from earliest to latest. A separate breakout is provided for the combined holdings of the Government accounts and Federal Reserve banks (FRBs), so that the "all other investors" category includes all private holdings.
- Table PDO-2 presents the results of weekly auctions of 4-, 13-, and 26-week bills. Treasury bills mature each

Thursday. Issues of 4- and 13 -week bills are reopenings of 26-week bills. Issues of cash management bills also are presented. High yields on accepted tenders and the dollar value of total bids are presented, with the dollar value of awards made on both competitive and noncompetitive bases.

To encourage the participation of individuals and smaller institutions, Treasury accepts noncompetitive tenders of up to $\$ 1$ million for bills and $\$ 5$ million for notes and bonds in each auction of securities.

- Table PDO-3 lists the results of auctions of marketable securities, other than weekly bills, in chronological order over the past 2 years.
- Table PDO-4 indicates the total amount of marketable securities allotted to each class of investor. The FRBs tally into investor classes the tenders in each auction of marketable securities other than weekly auctions of 4-, $13-$, and 26 -week bills.

## TREASURY FINANCING: APRIL-JUNE

[Source: Bureau of the Public Debt, Office of Financing]

## APRIL

## Cash Management Bills

On March 31, 2003, Treasury announced it would auction $\$ 20,000$ million of 12-day bills. They were issued April 3 and matured April 15. The issue was to raise new cash. Treasury auctioned the bills on April 2. Tenders totaled $\$ 51,734$ million; Treasury accepted $\$ 20,000$ million. The high bank discount rate was 1.180 percent.

On April 3, Treasury announced it would auction $\$ 8,000$ million of 6-day bills. They were issued April 9 and matured April 15. The issue was to raise new cash. Treasury auctioned the bills on April 8. Tenders totaled $\$ 28,985$ million; Treasury accepted $\$ 8,000$ million. The high bank discount rate was 1.200 percent.

## Auction of 2-Year Notes

On April 21, 2003, Treasury announced it would auction $\$ 27,000$ million of 2-year notes of Series K-2005. The issue was to refund $\$ 18,619$ million of securities maturing April 30 and to raise new cash of approximately $\$ 8,381$ million.

The notes of Series K-2005 were dated and issued on April 30. They are due April 30, 2005, with interest payable on October 31 and April 30 until maturity. Treasury set an interest rate of 1-5/8 percent after determining which tenders were accepted on a yield auction basis.

Treasury received tenders for the notes before 12 noon e.d.s.t for noncompetitive tenders and before 1 p.m. e.d.s.t.
for competitive tenders on April 23. Tenders totaled \$58,290 million; Treasury accepted $\$ 27,000$ million. All noncompetitive and successful competitive bidders were allotted securities at the high yield of 1.704 percent with the equivalent price of $\$ 99.845$. Tenders at the high yield were allotted 11.08 percent. The median yield was 1.689 percent, and the low yield was 1.640 percent. Noncompetitive tenders totaled $\$ 773$ million. Competitive tenders accepted from private investors totaled $\$ 26,224$ million.

In addition to the $\$ 27,000$ million of tenders accepted in the auction process, Treasury accepted $\$ 7,293$ million from Federal Reserve banks (FRBs) for their own accounts. The minimum par amount required for STRIPS of notes of Series K-2005 is $\$ 1,000$.

## M A Y

## Cash Management Bills

On May 5, 2003, Treasury announced it would auction $\$ 10,000$ million of 5-day bills. They were issued May 8 and matured May 13. The issue was to raise new cash. Treasury auctioned the bills on May 7. Tenders totaled $\$ 38,405$ million; Treasury accepted $\$ 10,000$ million. The high bank discount rate was 1.145 percent.

On May 8, Treasury announced it would auction \$15,000 million of 2-day bills. They were issued May 13 and matured May 15. The issue was to raise new cash. Treasury auctioned the bills on May 12. Tenders totaled $\$ 54,445$

## TREASURY FINANCING: APRIL-JUNE, con.

million; Treasury accepted $\$ 15,000$ million. The high bank discount rate was 1.175 percent.

On May 19, Treasury announced it would auction $\$ 4,000$ million of 6 -day bills. They were issued May 21 and matured May 27. The issue was to raise new cash. Treasury auctioned the bills on May 20. Tenders totaled \$20,270 million; Treasury accepted $\$ 4,000$ million. The high bank discount rate was 1.150 percent.

On May 27, Treasury announced it would auction $\$ 4,000$ million of 16-day bills. They were issued May 28 and matured June 13. The issue was to raise new cash. Treasury auctioned the bills on May 27. Tenders totaled $\$ 17,830$ million; Treasury accepted $\$ 4,000$ million. The high bank discount rate was 1.160 percent.

## May Quarterly Financing

On April 30, 2003, Treasury announced it would auction $\$ 22,000$ million of 3-year notes of Series G-2006, \$18,000 million of 5 -year notes of Series F-2008, and $\$ 18,000$ million of 10-year notes of Series B-2013 to refund \$2,271 million of Treasury securities maturing May 15 and to raise about $\$ 55,729$ million of new cash.

The 3-year notes of Series G-2006 were dated May 15. They are due May 15, 2006, with interest payable on November 15 and May 15 until maturity. Treasury set an interest rate of 2 percent after determining which tenders were accepted on a yield auction basis.

Treasury received tenders for the notes before 12 noon e.d.s.t. for noncompetitive tenders and before 1 p.m. e.d.s.t. for competitive tenders on May 6. Tenders totaled \$43,169 million; Treasury accepted $\$ 22,000$ million. All noncompetitive and successful competitive bidders were allotted securities at the high yield of 2.009 percent with an equivalent price of $\$ 99.974$. Treasury accepted in full all competitive tenders at yields lower than 2.009. Tenders at the high yield were allotted 43.18 percent. The median yield was 1.980 percent, and the low yield was 1.800 percent. Noncompetitive tenders totaled $\$ 144$ million. Competitive tenders accepted from private investors totaled $\$ 21,726$ million.

In addition to the $\$ 22,000$ million of tenders accepted in the auction process, Treasury accepted $\$ 391$ million from FRBs for their own accounts. The minimum par amount required for STRIPS of notes of Series G-2006 is $\$ 1,000$.

The 5-year notes of Series F-2008 were dated May 15. They are due May 15, 2008, with interest payable on November 15 and May 15 until maturity. Treasury set an interest rate of 2-5/8 percent after determining which tenders were accepted on a yield auction basis.

Treasury received tenders for the notes before 12 noon e.d.s.t. for noncompetitive tenders and before 1 p.m. e.d.s.t.
for competitive tenders on May 7. Tenders totaled \$37,679 million; Treasury accepted $\$ 18,000$ million. All noncompetitive and successful competitive bidders were allotted securities at the high yield of 2.680 percent with an equivalent price of $\$ 99.744$. Treasury accepted in full all competitive tenders at yields lower than 2.680. Tenders at the high yield were allotted 98.89 percent. The median yield was 2.660 percent, and the low yield was 2.610 percent. Noncompetitive tenders totaled $\$ 166$ million. Competitive tenders accepted from private investors totaled $\$ 17,784$ million.

In addition to the $\$ 18,000$ million of tenders accepted in the auction process, Treasury accepted $\$ 336$ million from FRBs for their own accounts. The minimum par amount required for STRIPS of notes of Series F-2008 is $\$ 1,000$.

The 10-year notes of Series B-2013 were dated May 15. They are due May 15, 2013, with interest payable on November 15 and May 15 until maturity. Treasury set an interest rate of $3-5 / 8$ percent after determining which tenders were accepted on a yield auction basis.

Treasury received tenders for the notes before 12 noon e.d.s.t. for noncompetitive tenders and before 1 p.m. e.d.s.t. for competitive tenders on May 8. Tenders totaled \$21,927 million; Treasury accepted $\$ 18,000$ million. All noncompetitive and successful competitive bidders were allotted securities at the high yield of 3.700 percent with an equivalent price of $\$ 99.378$. Treasury accepted in full all competitive tenders at yields lower than 3.700 . Tenders at the high yield were allotted 26.17 percent. The median yield was 3.615 percent, and the low yield was 3.500 percent. Noncompetitive tenders totaled $\$ 89$ million. Competitive tenders accepted from private investors totaled $\$ 17,831$ million.

In addition to the $\$ 18,000$ million of tenders accepted in the auction process, Treasury accepted $\$ 252$ million from FRBs for their own accounts. The minimum par amount required for STRIPS of notes of Series B-2013 is $\$ 1,000$.

## Auction of 2-Year Notes

On May 27, 2003, Treasury announced it would auction $\$ 25,000$ million of 2-year notes of Series L-2005. The issue was to refund $\$ 20,444$ million of securities maturing May 31 and to raise new cash of approximately $\$ 4,556$ million.

The notes of Series L-2005 were dated May 31 and issued June 2. They are due May 31, 2005, with interest payable on November 30 and May 31 until maturity. Treasury set an interest rate of 1-1/4 percent after determining which tenders were accepted on a yield auction basis.

Treasury received tenders for the notes before 12:00 noon e.d.s.t. for noncompetitive tenders and before 1:00 p.m. e.d.s.t. for competitive tenders on May 29. Tenders totaled

## TREASURY FINANCING: APRIL-JUNE, con.

$\$ 44,353$ million; Treasury accepted $\$ 25,000$ million. All noncompetitive and successful competitive bidders were allotted securities at the high yield of 1.305 percent with an equivalent price of $\$ 99.892$. Treasury accepted in full all competitive tenders at yields lower than 1.305 percent. Tenders at the high yield were allotted 84.45 percent. The median yield was 1.274 percent, and the low yield was 1.235 percent. Noncompetitive tenders totaled $\$ 886$ million. Competitive tenders accepted from private investors totaled $\$ 24,074$ million. Accrued interest of $\$ 0.06831$ per $\$ 1,000$ must be paid for the period from May 31 to June 2.

In addition to the $\$ 25,000$ million of tenders accepted in the auction process, Treasury accepted $\$ 6,020$ million from FRBs for their own accounts. The minimum par amount required for STRIPS of notes of Series L-2005 is $\$ 1,000$.

## J U N E

## Cash Management Bills

On May 29, 2003, Treasury announced it would auction $\$ 24,000$ million of 2-day bills. They were issued June 3 and matured June 5. The issue was to raise new cash. Treasury auctioned the bills on June 2. Tenders totaled $\$ 56,470$ million; Treasury accepted $\$ 24,003$ million. The high bank discount rate was 1.175 percent.

On June 2, Treasury announced it would auction \$18,000 million of 8-day bills. They were issued June 5 and matured June 13. The issue was to raise new cash. Treasury auctioned the bills on June 4. Tenders totaled \$52,225 million; Treasury accepted $\$ 18,000$ million. The high bank discount rate was 1.170 percent.

## Auction of 4-Year 11-Month 2-5/8 Percent Notes

On June 9, 2003, Treasury announced that it would auction $\$ 15,000$ million of 4 -year 11-month $2-5 / 8$ percent notes of Series F-2008. The issue was to raise new cash.

The notes of Series F-2008 were dated May 15 and issued June 16. They are due May 15, 2008, with interest payable on November 15 and May 15 until maturity.

Treasury received tenders for the notes before 12 noon e.d.s.t. for noncompetitive tenders and before 1:00 p.m. e.d.s.t. for competitive tenders on June 11. Tenders totaled
$\$ 27,135$ million; Treasury accepted $\$ 15,000$ million. All noncompetitive and successful competitive bidders were allotted securities at the high yield of 2.100 percent with an equivalent price of $\$ 102.437$. Treasury accepted in full all competitive tenders at yields lower than 2.100 percent. Tenders at the high yield were allotted 46.80 percent. The median yield was 2.055 percent, and the low yield was 1.900 percent. Noncompetitive tenders totaled $\$ 54$ million. Competitive tenders accepted from private investors totaled \$14,946 million.

Accrued interest of $\$ 2.28261$ per $\$ 1,000$ must be paid for the period from May 15 to June 16. The minimum par amount required for STRIPS of notes of Series F-2008 is $\$ 1,000$.

## Auction of 2-Year Notes

On June 23, 2003, Treasury announced it would auction $\$ 25,000$ million of 2-year notes of Series M-2005. The issue was to refund $\$ 21,098$ million of securities maturing June 30 and to raise new cash of approximately $\$ 3,902$ million.

The notes of Series M-2005 were dated and issued June 30. They are due June 30, 2005, with interest payable on December 31 and June 30 until maturity. Treasury set an interest rate of $1-1 / 8$ percent after determining which tenders were accepted on a yield auction basis.

Treasury received tenders for the notes before 12 noon e.d.s.t. for noncompetitive tenders and before 1:00 p.m. e.d.s.t. for competitive tenders on June 25 . Tenders totaled $\$ 46,079$ million; Treasury accepted $\$ 25,000$ million. All noncompetitive and successful competitive bidders were allotted securities at the high yield of 1.179 percent with an equivalent price of $\$ 99.894$. Treasury accepted in full all competitive tenders at yields lower than 1.179 percent. Tenders at the high yield were allotted 88.71 percent. The median yield was 1.129 percent, and the low yield was 1.000 percent. Noncompetitive tenders totaled $\$ 839$ million. Competitive tenders accepted from private investors totaled $\$ 24,161$ million.

In addition to the $\$ 25,000$ million of tenders accepted in the auction process, Treasury accepted $\$ 6,700$ million from FRBs for their own accounts. The minimum par amount required for STRIPS of notes of Series M-2005 is $\$ 1,000$.

## INTRODUCTION: Savings Bonds and Notes

Series EE bonds, on sale since July 1, 1980, and series I bonds, on sale since September 1, 1998, are the savings bonds currently being sold. Series HH bonds are issued in exchange for series E and EE savings bonds and savings notes. Series A-D were sold from March 1, 1935, through April 30, 1941. Series E was on sale from May 1, 1941, through December 31, 1979 (through June 1980 to payroll savers only). Series F and G were sold from May 1, 1941, through April 30, 1952. Series H was sold from June 1, 1952, through December 31, 1979. Series HH bonds were sold for cash from January 1, 1980, through October 31,
1982. Series J and K were sold from May 1, 1952, through April 30, 1957. U.S. savings notes were on sale May 1, 1967, through June 30, 1970. The notes were eligible for purchase by individuals with the simultaneous purchase of series E savings bonds.

The principal terms and conditions for purchase and redemption and information on investment yields of savings notes appear in the "Treasury Bulletins" of March 1967 and June 1968; and in the Annual Report of the Secretary of the Treasury for fiscal 1974.

Note.-Series E and EE include U.S. savings notes (Freedom Shares) on sale from May 1,
1967, through June 30, 1970, to E bond buyers.

## INTRODUCTION: Ownership of Federal Securities

Federal securities presented in the following tables are public debt securities such as savings bonds, bills, notes, and bonds that the Treasury issues. The tables also detail debt issued by other Federal agencies under special financing authorities. [See the Federal debt (FD) tables for a more complete description of the Federal debt.]

Effective January 1, 2001, Treasury's Bureau of the Public Debt revised formats, titles, and column headings in the "Monthly Statement of the Public Debt of the United States," Table I: Summary of Treasury Securities Outstanding and Table II: Statutory Debt Limit. These changes should reduce confusion and bring the publication more in line with the public's use of terms.

Treasury's Financial Management Service (FMS) compiles data in the "Treasury Bulletin" table OFS-1 from the "Monthly Statement of the Public Debt of the United States." Effective June 2001, FMS revised procedures and categories in this table to agree with the Bureau of the Public Debt's publication changes.

- Table OFS-1 presents Treasury marketable and nonmarketable securities and debt issued by other Federal agencies held by Government accounts, the FRBs, and private investors. Social Security and Federal retirement trust fund investments comprise much of the Government account holdings.

The FRBs acquire Treasury securities in the market as a means of executing monetary policy.

- Table OFS-2 presents the estimated amount of public debt securities held by private investors. Information is obtained from sources such as the Federal financial institution regulatory agencies. State, local, and foreign holdings include special issues of nonmarketable securities to municipal entities and foreign official accounts. They also include municipal, foreign official, and private holdings of marketable Treasury securities. (See footnotes to the table for description of investor categories.)

TABLE OFS-1.—Distribution of Federal Securities by Class of Investors and Type of Issues*

[^17]${ }^{8}$ Source: Federal Reserve Board Treasury International Capital Survey. Includes nonmarketable foreign series Treasury securities and Treasury deposit funds. Excludes Treasury securities held under repurchase agreements in custody accounts at the Federal Reserve Bank of New York. Estimates reflect the 1984 benchmark to December 1989 the 1989 benchmark to December 1994 and the 1994 benchmark to March 2000. The March 2000 benchmark was released in 2002.
2000 benchmark was released in 2002 .
9
Includes individuals, Government-sponsored enterprises, brokers and dealers, bank personal trusts and estates, corporate and non-corporate businesses, and other investors.

Note.-Ownership data were revised (in June 1999) back to March 1989 in order to update ownership categories and to incorporate greater reliance on Flow of Funds data of the Federal Reserve Board.

## INTRODUCTION: Market Yields

The table and chart in this section present yields on Treasury marketable securities for maturities ranging from 1 -month to 20-years.

Table MY-1 lists Treasury market bid yields at constant maturities for bills, notes, and bonds. The Treasury yield curve in the accompanying chart is based on current market bid quotations on the most actively traded Treasury securities as of 3:30 p.m. on the last business day of the calendar quarter.

The Treasury uses quotations obtained by the Federal Reserve Bank of New York to derive the yield curve, based on semiannual interest payments and read at constant maturity points to develop a consistent data series. The Board of Governors of the Federal Reserve System publishes the Treasury constant maturity data series in its weekly Statistical Release H. 15.

On July 31, 2001, Treasury expanded its constant maturity index to include a 1-month constant maturity yield, and Table MY-1 now includes a 1-month maturity beginning on that date. On February 18, 2002, Treasury discontinued the 30 -year constant maturity yield. In lieu of the 30 -year yield, Table MY-1 will include a 20-year maturity. Historical data for the 20-year maturity is available from the Board of Governors' Statistical Release H. 15.

Prior to January 2003, this section also included data on long-term Treasury, corporate and municipal yields (Table MY-2). Effective January 2003, Table MY-2 and Chart MYB have been discontinued because Treasury no longer issues long-term bonds and no longer calculates or estimates longterm corporate rates.

## INTRODUCTION: U.S. Currency and Coin Outstanding and in Circulation

The U.S. Currency and Coin Outstanding and in Circulation (USCC) statement informs the public of the total face value of currency and coin used as a medium of exchange that is in circulation at the end of a given accounting month. The statement defines the total amount of currency and coin outstanding and the portion deemed to be in circulation. It includes some old and current rare issues that do not circulate or that may do so to a limited extent. Treasury includes them in the statement because the issues were originally intended for general circulation.

The USCC statement provides a description of the various issues of paper money. It also gives an estimated average of currency and coin held by each individual, using estimates of population from the Bureau of the Census. USCC information has been published by Treasury since 1888, and was published separately until 1983, when it was incorporated into the "Treasury Bulletin." The USCC comes from monthly reports compiled by Treasury offices, various U.S. Mint offices, the Federal Reserve banks (FRBs) and the Federal Reserve Board.

## INTRODUCTION: International Financial Statistics

The tables in this section provide statistics on U.S. Government reserve assets, liabilities to foreigners, and its international financial position. All monetary figures are in dollars or dollar equivalents.

- Table IFS-1 shows reserve assets of the United States, including its gold stock, special drawing rights held in the Special Drawing Account in the International Monetary Fund (IMF), holdings of convertible foreign currencies and reserve position in the IMF.
- Table IFS-2 contains statistics on liabilities to foreign official institutions, and selected liabilities to all other foreigners, which are used in the U.S. balance of payments statistics.
- Table IFS-3 shows nonmarketable bonds and notes that the Treasury issues to official institutions and other residents of foreign countries.

## TABLE IFS-2.-Selected U.S. Liabilities to Foreigners

[^20]${ }^{8}$ Data on the two lines shown for this date reflect different benchmark bases for foreigners' holdings of selected U.S. long-term securities. Figures on the first line are comparable to those for earlier dates; figures on the second line are based in part on a benchmark survey as of end-March 2000 and are comparable to those shown for the following dates.

Note.-Table is based on Treasury data and on data reported to the Treasury by banks, other depository institutions and brokers in the United States. Data generally correspond to statistics following in this section and in the "Capital Movements" section. Table excludes International Monetary Fund "holdings of dollars" and holdings of U.S. Treasury letters of credit and nonnegotiable noninterest-bearing special U.S. notes held by international and regional organizations.

## INTRODUCTION: Capital Movements

## Background

Data relating to U.S. international transactions in financial instruments and to other portfolio capital movements between the United States and foreign countries have been collected in some form since 1935. This information is necessary for compiling the U.S. balance of payments accounts, for calculating the U.S. international investment position, and for use in formulating U.S. international financial and monetary policies.

From the beginning, reporting under the Treasury data collection program has been mandatory. Under the current Treasury International Capital (TIC) reporting system, an assortment of monthly, quarterly, and semiannual reports are filed with district Federal Reserve banks by commercial banks, securities dealers, other financial institutions, and nonbanking enterprises in the United States. These data are centrally processed and maintained at the Federal Reserve Bank of New York, which, along with the district banks, acts as fiscal agent for Treasury. Beginning in late 1998, the Federal Reserve Board also undertakes services on behalf of Treasury in support of the TIC data collection system. The TIC reports of individual respondents are treated as confidential, and access to the respondent level data and to some sensitive data aggregates is strictly limited to specific staff of Treasury and the Federal Reserve System.

Data derived from Treasury reports are published in the Capital Movements section of this quarterly Treasury Bulletin and are posted monthly on the TIC website, http://www.ustreas.gov/tic. (See NOTE at the end of the INTRODUCTION text for additional website information.) TIC data aggregates are also published in the Federal Reserve Bulletin and are used in the U.S. international transactions and investment position compilations published by the Department of Commerce in the Survey of Current Business.

Forms and instructions are developed with the cooperation of other Government agencies and the Federal Reserve System and in consultation with representatives of banks, securities firms, and nonbanking enterprises. The most recent revisions to selected reporting forms and instructions were effective February 28, 2003. The major changes are outlined under "Description of statistics" below. Copies of the reporting forms and instructions may be obtained from the Office of Program Services, Office of the Assistant Secretary for International Affairs, Treasury, Washington, D.C. 20220; the International Finance Division, Board of Governors of the Federal Reserve System, Washington, D.C. 20551; or district FRBs. Reporting forms and instructions also may be downloaded from the TIC website.

## Basic definitions

The term "foreigner" as used in TIC reporting covers all institutions and individuals resident outside the United

States, including U.S. citizens domiciled abroad; the foreign branches, subsidiaries and offices of U.S. banks and business concerns; the central governments, central banks, and other official institutions of foreign countries, wherever located; and international and regional organizations, wherever located. The term "foreigner" also includes persons in the United States to the extent that they are known by reporting institutions to be acting on behalf of foreigners.

In general, information is reported opposite the country or geographical area where the foreigner is located, as shown on records of reporting institutions. This information may not always reflect the ultimate ownership of assets. Reporting institutions are not required to go beyond addresses shown on their records and may not be aware of the actual country of domicile of the ultimate beneficiary.

Transactions with branches or agencies of foreign official institutions, wherever located, are reported opposite the country that has sovereignty over the institutions. Transactions with international and regional organizations are not reported opposite any single country, but are accounted for in regional groupings of such organizations. The only exception is information pertaining to the Bank for International Settlements, which is reported opposite "Other Europe." For purposes of publication only, information on the European Central Bank also is included in "Other Europe."
"Short-term" refers to obligations payable on demand or having an original maturity of one year or less. "Long-term" refers to obligations having an original maturity of more than one year and includes securities having no maturity.

## Reporting coverage

TIC reports are required from banks and other depository institutions, bank/financial holding companies (BHCs/FHCs), securities brokers and dealers, and nonbanking concerns in the United States, including the branches, agencies, subsidiaries, and other affiliates in the United States of foreign banking and nonbanking firms. Institutions with total reportable liabilities, claims, or securities transactions below specified reporting thresholds are exempt from reporting.

Beginning in February 2003, substantial revisions to the coverage and formats of the TIC B-series and C-series forms were introduced. The reasons for the changes were to comply with new and expanded international standards for reporting data on portfolio investment; to reduce reporting burden; to clarify reporting concepts and instructions; and to improve the quality of the series by closing known gaps in the data. Notices of these changes and requests for public comments on them were published in the Federal Register last year and some modifications were made in response to the comments received. A detailed outline of the changes affecting each form may be accessed on the TIC website.

Banks, other depository institutions, and securities brokers and dealers file monthly B-series reports covering their dollar liabilities to, and dollar claims on foreigners in a number of countries. Twice a year, June 30 and December 31, they also report the same liabilities and claims items attributed to foreigners in countries not shown separately on the monthly reports. Quarterly reports are filed for liabilities and claims denominated in foreign currencies and for claims on foreigners held for respondents' domestic customers. All positions are exclusive of long-term securities. Beginning January 2001, the exemption level applicable to the banking reports was raised from $\$ 15$ million to $\$ 50$ million. This exemption level is also subject to the provision that reportable amounts for any one country do not exceed $\$ 25$ million.

Banks and other depository institutions, securities brokers and dealers, and other entities report their transactions with foreigners by country in long-term securities on monthly Form S. Respondents must report securities transactions with foreigners if their aggregate purchases or their aggregate sales amount to at least $\$ 50$ million during the covered month.

Quarterly reports are filed by exporters, importers, industrial and commercial concerns, financial institutions (other than banks, other depository institutions, and securities firms), and other nonbanking enterprises on their liabilities and claims positions with foreigners. Except as noted below under "Description of statistics," the reportable liabilities and claims positions are with unaffiliated foreigners. Separate reports are filed for financial balances and for commercial balances. Effective for reports filed as of March 31, 2003, the threshold applicable to Form CQ-1 for reporting financial liabilities to, and claims on, foreigners is $\$ 50$ million, up from $\$ 10$ million. At the same time, the reporting threshold for Form CQ-2, which covers commercial liabilities and claims positions with foreigners, was raised from $\$ 10$ million to $\$ 25$ million.

The data in these tables do not cover all types of reported capital movements between the United States and other countries. Except as noted in Section IV in "Description of statistics" below, the principal exclusions are the intercompany capital transactions of nonbanking business enterprises in the United States with their own branches and subsidiaries abroad or with their foreign parent companies (own foreign offices) and capital transactions of the U.S. Government. Consolidated data on all types of international capital transactions are published by the Department of Commerce in its regular reports on the U.S. balance of payments.

## Description of statistics

Data collected on the TIC forms are published in the "Capital Movements" tables in five sections. Each section contains all the data relevant to the same statistical series, with tables showing time series by type and country, and detailed breakdowns of the latest available data.

- Section I covers liabilities to foreigners reported by banks, other depository institutions, and securities brokers and dealers in the United States. BHCs/FHCs also report for all domestic nonbank, non-securities firm affiliates, other than their insurance affiliates, which report separately on the C-series forms. Dollar-denominated liabilities are reported monthly on Forms BL-1 and BL-2. Liabilities denominated in foreign currencies are reported quarterly on Form BQ-2. Respondents report certain of their own liabilities and a wide range of their custody liabilities to foreigners. Effective with reports filed as of February 28, 2003, coverage was broadened to cover the positions of U.S. broker-dealer respondents with their affiliated foreign offices. (Depository institutions and $\mathrm{BHCs} / \mathrm{FHCs}$ already reported such positions.) The scope of the reports was also extended to include cross-border brokerage balances as well as offshore sweep accounts and loans to U.S. residents in "managed" foreign offices of U.S. reporting institutions. Additionally, in a new Part 2, Form BQ-2 was expanded to include the foreign currency-denominated liabilities held by respondents for their domestic customers. Further, banks' own positions have been defined to be consistent with regulatory reports such as the FR 2950/2951 to include all amounts in the respondent's "due to/due from" accounts, unless in an instrument that is specifically excluded. Finally, the columns for demand deposits and non-transactions accounts are now combined, as are short-term U.S. agency securities and other negotiable and readily transferable instruments.
- Section II presents claims on foreigners reported by banks, other depository institutions, and securities brokers and dealers in the United States. BHCs/FHCs also report for their domestic nonbank and non-securities firm affiliates, other than their insurance affiliates, which report separately on the C-series forms. Data on respondents' own dollar claims are collected monthly on Form BC. Information on claims held for domestic customers as well as on claims denominated in foreign currencies is collected on a quarterly basis only on Forms BQ-1 and BQ-2, respectively. Effective with reports filed as of February 28, 2003, reporting coverage was expanded as outlined in Section I. Additionally, columns were added for separate reporting of negotiable CDs and other short-term negotiable instruments issued by foreigners. Further, the foreigner category, "foreign official institutions," replaced the former, broader category, "foreign public borrowers," for consistency with the liabilities reporting on this sector.
- Section III contains supplementary data on dollar liabilities to, and dollar claims on, countries not listed separately on the monthly reports submitted by banks, other depository institutions, and securities brokers and dealers in the United States. The supplementary reports are filed semiannually as of the end of June and December.
- Section IV shows the liabilities to, and claims on, unaffiliated foreigners of exporters, importers, industrial and commercial concerns, financial institutions (other than
banks, other depository institutions, and securities brokers and dealers), and other nonbanking enterprises in the United States. Data exclude claims on foreigners held by banks in the United States.

Historically, the information does not include any accounts of nonbanking enterprises in the United States with their own branches and subsidiaries abroad or with their foreign parent companies. These are reported by business enterprises to Commerce on its direct investment forms. However, effective with reports filed as of March 31, 2003, a number of changes were introduced in the coverage and reporting formats of nonbanking forms. A major revision is the addition of Section B to Form CQ-1 to capture foreign affiliate positions (including those with affiliates of the respondent's parent) of insurance underwriting subsidiaries and financial intermediaries. Insurance underwriting subsidiaries of $\mathrm{BHCs} / \mathrm{FHCs}$ now include positions vis-à-vis all foreign-resident affiliates. From end-March 2003 forward, financial intermediaries are to report positions vis-à-vis all foreign-resident affiliated financial intermediaries.

- Section $\mathbf{V}$ contains information on transactions with foreigners in long-term domestic and foreign securities as reported by banks, securities brokers and dealers, and other entities in the United States. The data cover transactions executed in the United States for the accounts of foreigners and transactions executed abroad for the accounts of reporting institutions and their domestic customers. This includes transactions in newly-issued securities as well as transactions in, and redemptions of, outstanding issues.

However, the data do not include nonmarketable Treasury bonds and notes shown in table IFS-3.

The geographical allocation of the transactions data indicates the country of location of the foreign buyers and sellers who deal directly with reporting institutions in the United States. The data do not necessarily indicate the country of beneficial owner or issuer, or the currency of denomination of securities. For instance, a U.S. purchaser's order for Japanese securities may be placed directly with an intermediary in London. In this instance, the transaction for Form S reporting purposes would be recorded opposite the United Kingdom and not opposite Japan. Similarly, purchases and sales of U.S. securities for the account of an Italian resident may be placed, for example, in the Swiss market. In that case, the trades would be reported opposite Switzerland and not opposite Italy.

NOTE: Current and historical data on United States transactions with foreigners in long-term securities and on the gross foreign liabilities and claims reported by banks in the United States are available on the TIC website: http://www.ustreas.gov/tic. These data may be downloaded as separate time series for each country or geographical area regularly shown in the capital movements tables. Also available on this website are other series, including a table on "Major Foreign Holders of Treasury Securities," showing estimated total holdings of U.S. Treasury bills, bonds and notes for current and recent periods. All data series on the TIC website are updated monthly.

International and

[^26]${ }^{6}$ Before January 2001, data included in United Kingdom.
${ }^{7}$ On February 4, 2003, Yugoslavia changed its name to Serbia and Montenegro. Data for other entities of the former Yugoslavia recognized as independent states by the United States are reported under "Other Europe" as follows: Beginning in December 1992 for
Bosnia and Herzegovina, Croatia and Slovenia; and since June 1994 for the former
Yugoslav Republic of Macedonia.
${ }^{8}$ Beginning January 2001, Cayman Islands replaced British West Indies in the data series.

[^27]U.S. banking liabilities to foreigners were recorded at about $\$ 2.3$ trillion in June 2003, an increase of about $\$ 375$ billion from yearend 2002. The increase in liabilities to foreigners in the first half of this year in part reflects changes to the reporting scope of the TIC reporting system effective February 2003. In particular, these figures now include brokerage balances and positions with affiliated foreign offices reported by U.S. brokers and dealers. U.S. banking liabilities increased $\$ 197$ billion in 2002, and $\$ 127$ billion in 2001.
U.S. banking liabilities to foreigners, excluding long-term securities, are concentrated in international financial centers. The data on this page show that more than half of U.S. banking liabilities currently is recorded against the United Kingdom and banking centers in the Caribbean. These two areas also recorded most of the reported increase in liabilities during the first half of 2003. Foreigners domiciled in the rest of Europe and in Asia account for nearly 40 percent of U.S. banking liabilities.

In the mid-1990s, U.S. banking liabilities grew rapidly, with annual growth averaging about 10 percent. Growth slowed to about 5 percent per year from 1998 through 2000, but picked up again to 8 percent in 2001 and more than 10 percent in 2002.

[^30]In March 2003, U.S. banking claims increased to more than $\$ 1.5$ trillion, an increase of nearly $\$ 175$ million from yearend 2002. In part, the increase in claims reflects changes to the reporting scope of the TIC reporting system effective February 2003. In particular, these figures now include brokerage balances and positions with affiliated foreign nonbanking offices reported by U.S. brokers and dealers.
U.S. banking claims on foreigners, excluding longterm securities, are concentrated in international financial centers. About 80 percent of these claims are reported opposite the United Kingdom, "All other Europe," and banking centers in the Caribbean. These areas also accounted for most of the increase in U.S. banking claims in the first quarter. The share of claims against foreigners domiciled in Asia has declined over the past several years from about 20 percent at the end of 1996 to less than 10 percent currently.
U.S. banking claims on foreigners grew markedly in the mid-1990s, but claims leveled off in 1998 and 1999, growing on average about 5 percent per year. In 2000 and 2001, claims grew 14 percent, matching the growth rate in 1997, but growth in banking claims slowed again in 2002 to less than 5 percent.

The data on this page represent foreign investors' purchases and sales of long-term U.S. securities (that is, U.S. Treasury and Government agency bonds and notes, and U.S. corporate bonds and stocks) as reported to the TIC reporting system. Foreign investors also acquire U.S. equities through mergers that involve stock swaps. Net foreign acquisitions of U.S. equities through stock swaps amounted to $\$ 21$ billion in 2000, $\$ 7$ billion in both 2001 and 2002, and zero in the first half of 2003. (Stock swaps data for the most recent quarter are Federal Reserve Board/Treasury estimates and are subject to substantial revisions.) These stock swaps are not reported under the TIC reporting system.

The data present aggregate net purchases for 2000 through the first half of 2003. The figures show that foreigners' annual net purchases (gross purchases minus gross sales) of U.S. securities have maintained an extremely high level since 2000.

Annual net foreign purchases of U.S. securities first surpassed $\$ 100$ billion in 1993. In 2002, net foreign acquisitions (including stock swaps) of U.S. securities totaled a record $\$ 554$ billion. In the first half of 2003, net foreign acquisitions of U.S. securities have accelerated to $\$ 388$ billion, or more than $\$ 700$ billion on an annual basis.

[^41]The data on this page represent U.S. investors' purchases and sales of long-term foreign securities as reported to the TIC reporting system. However, in the past several years, U.S. investors also have acquired a substantial amount of foreign stocks, mostly European, through mergers that involve stock swaps. Net acquisitions through stock swaps amounted to $\$ 80$ billion in 2000, $\$ 47$ billion in 200, but only $\$ 3$ billion in 2002, and $\$ 15$ billion in the first half of 2003. (Stock swaps data for the most recent quarter are Federal Reserve Board/Treasury estimates and are subject to substantial revisions.) These stock swaps are not reported under the TIC reporting system.

Including the stock swaps, annual U.S. net purchases of long-term foreign securities averaged about $\$ 100$ billion from the mid-1990s through 2000, without much variation from year to year. In 2001, U.S. investors sold \$31 billion in foreign bonds, but U.S. purchases of foreign stocks held up and U.S. acquisitions of foreign securities (including stock swaps) only fell to $\$ 67$ billion. In 2002, U.S. investors again sold foreign bonds ( $\$ 28$ billion), but U.S. purchases of foreign stocks (including stock swaps) fell sharply and on net U.S. investors sold $\$ 24$ billion in foreign securities. In 2003, strong U.S. demand for foreign equities has offset continued net sales of foreign bonds; on net (including stock swaps), U.S. investors acquired $\$ 12$ billion in foreign securities in the first half of the year.

## INTRODUCTION: Foreign Currency Positions

The "Treasury Bulletin" reports foreign currency holdings of large foreign exchange market participants. These reports provide information on positions in derivative instruments, such as foreign exchange futures and options, that are increasingly used in establishing foreign exchange positions but were not covered in the old reports.

The information is based on reports of large foreign exchange market participants on holdings of five major foreign currencies (Canadian dollar, Japanese yen, Swiss franc, pound sterling, and euro) and the U.S. dollar. Positions in the U.S. dollar, which have been collected since January 1999, are intended to approximate "all other" currency positions of reporting institutions. U.S.-based businesses file a consolidated report for their domestic and foreign subsidiaries, branches, and agencies. U.S. subsidiaries of foreign entities file only for themselves, not for their foreign parents. Filing is required by law (31 United States Code 5315; 31 Code of Federal Regulations 128, Subpart C).

Weekly and monthly reports must be filed throughout the calendar year by major foreign exchange market participants, which are defined as market participants with more than $\$ 50$ billion equivalent in foreign exchange contracts on the last business day of any calendar quarter during the previous year (end March, June, September, or December). Such contracts include the amounts of foreign exchange spot contracts bought and sold, foreign exchange forward contracts bought and sold, foreign exchange futures bought and sold, and one half the notional amount of foreign exchange options bought and sold.

A quarterly report must be filed throughout the calendar year by each foreign exchange market participant that had more than $\$ 5$ billion equivalent in foreign exchange contracts on the last business day of any quarter the previous year (end March, June, September, or December).

This information is published in six sections corresponding to each of the major currencies covered by the reports. Tables I-1 through VI-1 present the currency data reported weekly by major market participants. Tables I-2 through VI-2 present more detailed currency data of major market participants, based on monthly Treasury and Federal Financial Institutions Examination Council (FFIEC) 035 reports. Tables I-3 through VI-3 present quarterly consolidated currency data reported by large market participants and FFIEC reporters that do not file weekly reports.

Principal exchanged under cross-currency interest rate swaps is reported as part of purchases or sales of foreign exchange. Such principal also was noted separately on monthly and quarterly reports through December 1998, when this practice was discontinued. The net options position, or the net delta-equivalent value of an options position, is an estimate of the relationship between an option's value and an equivalent currency hedge. The delta equivalent value is defined as the product of the first partial derivative of an option valuation formula (with respect to the price of the underlying currency) multiplied by the notional principal of the contract.

## INTRODUCTION: Exchange Stabilization Fund

To stabilize the exchange value of the dollar, the Exchange Stabilization Fund (ESF) was established pursuant to chapter 6, section 10 of the Gold Reserve Act of January 30, 1934 (codified at 31 United States Code 5302), which authorized establishment of a Treasury fund to be operated under the exclusive control of the Secretary, with approval of the President.

Subsequent amendment of the Gold Reserve Act modified the original purpose somewhat to reflect termination of the fixed exchange rate system.

Resources of the fund include dollar balances, partially invested in U.S. Government securities, special drawing rights (SDRs), and balances of foreign currencies. Principal sources of income $(+)$ or loss ( - ) for the fund are profits $(+)$ or losses (-) on SDRs and foreign exchange, as well as interest earned on assets.

- Table ESF-1 presents the assets, liabilities and capital of the fund. The figures are in U.S. dollars or their equivalents based on current exchange rates computed according to the accrual method of accounting. The capital account represents the original capital appropriated to the fund by Congress of $\$ 2$ billion, minus a subsequent transfer of $\$ 1.8$ billion to pay for the initial U.S. quota subscription to the International Monetary Fund. Gains and losses are reflected in the cumulative net income ( + ) or loss ( - ) account.
- Table ESF-2 shows the results of operations by quarter. Figures are in U.S. dollars or their equivalents computed according to the accrual method. "Profit (+) or loss (-) on foreign exchange" includes realized profits or losses. "Adjustment for change in valuation of SDR holdings and allocations" reflects net gain or loss on revaluation of SDR holdings and allocations for the quarter.

TABLE ESF-1.—Balances as of Dec. 31, 2002, and Mar. 31, 2003

| Income from operations... | 572,337 1, 1 , 688,717 |
| Net income (+) or loss (-).. | 572,337 1,568,717 |
| ${ }^{1}$ Due to debt crisis during the period of March 2003, this amount was not invested, per Fiscal Assistant Secretary. Debt crisis officially ended June 2003; therefore, figure will not be forthgoing for next submission. <br> ${ }^{2}$ Beginning July 1974, the International Monetary Fund adopted a technique for valuing the SDRs based on a weighted average of exchange rates for the currencies of selected member countries. The U.S. SDR holdings and allocations are valued on this basis beginning July 1974. | Note.-Annual balance sheets for fiscal 1934 through 1940 appeared in the 1940 "Annual Report of the Secretary of the Treasury" and those for succeeding years appeared in subsequent reports through 1980. Quarterly balance sheets beginning with December 31, 1938, have been published in the "Treasury Bulletin." Data from inception to September 30, 1978, may be found on the statements published in the January 1979 "Treasury Bulletin." |

Trust Funds

## TABLE TF-15A.-Highway Trust Fund

The following information is released according to the provisions of the Byrd Amendment [codified at 26 United States Code 9503(d)] and represents data concerning the Highway Trust Fund. The figure described as "unfunded authorizations" is the latest estimate received from the DOT for fiscal 2004.

The 24-month revenue estimates for the highway and mass transit accounts, respectively, include the latest estimates received from Treasury's Office of Tax Analysis for excise taxes, net of refunds. They represent net highway receipts for those periods beginning at the close of fiscal 2004.

## Glossary

## With References to Applicable Sections and Tables

Source: Financial Management Service

Accrued discount (SBN-1, -2, -3)-Interest that accumulates on savings bonds from the date of purchase until the date of redemption or final maturity, whichever comes first. Series A, $\mathrm{B}, \mathrm{C}, \mathrm{D}, \mathrm{E}, \mathrm{EE}, \mathrm{F}, \mathrm{I}$, and J are discount or accrual type bonds-meaning principal and interest are paid when bonds are redeemed. Series G, H, HH, and K are current-income bonds, and the semiannual interest paid to their holders is not included in accrued discount.

Amounts outstanding and in circulation (USCC)-Includes all issues by the Bureau of the Mint purposely intended as a medium of exchange. Coins sold by the Bureau of the Mint at premium prices are excluded; however, uncirculated coin sets sold at face value plus handling charge are included.

Average discount rate (PDO-2, -3)-In Treasury bill auctions, purchasers tender competitive bids on a discount rate basis. The average discount rate is the weighted, or adjusted, average of all bids accepted in the auction.
Budget authority ("Federal Fiscal Operations")—Congress passes laws giving budget authority to Government entities, which gives the agencies the power to spend Federal funds. Congress can stipulate various criteria for the spending of these funds. For example, Congress can stipulate that a given agency must spend within a specific year, number of years, or any time in the future.

The basic forms of budget authority are appropriations, authority to borrow, contract authority, and authority to obligate and expend offsetting receipts and collections. The period of time during which Congress makes funds available may be specified as 1-year, multiple-year, or no-year. The available amount may be classified as either definite or indefinite; a specific amount or an unspecified amount can be made available. Authority also may be classified as current or permanent. Permanent authority requires no current action by Congress.
Budget deficit-The total, cumulative amount by which budget outlays (spending) exceed budget receipts (income).

Cash management bills (PDO-2)—Marketable Treasury bills of irregular maturity lengths, sold periodically to fund short-term cash needs of Treasury. Their sale, having higher minimum and multiple purchase requirements than those of other issues, is generally restricted to competitive bidders.

Competitive tenders ("Treasury Financing Operations")A bid to purchase a stated amount of one issue of Treasury securities at a specified yield or discount. The bid is accepted if it is within the range accepted in the auction. (See Noncompetitive tenders.)

Coupon issue-The issue of bonds or notes (public debt).
Currency no longer issued (USCC) - Old and new series gold and silver certificates, Federal Reserve notes, national bank notes, and 1890 Series Treasury notes.
Current income bonds ("U.S. Savings Bonds and Notes")Bonds paying semiannual interest to holders. Interest is not included in accrued discount.

Debt outstanding subject to limitation (FD-6)-The debt incurred by the Treasury subject to the statutory limit set by Congress. Until World War I, a specific amount of debt was authorized to each separate security issue. Beginning with the Second Liberty Loan Act of 1917, the nature of the limitation was modified until, in 1941, it developed into an overall limit on the outstanding Federal debt. As of June 2003, the debt limit was $\$ 7,384,000$ million; the limit may change from year to year.

The debt subject to limitation includes most of Treasury's public debt except securities issued to the Federal Financing Bank, upon which there is a limitation of $\$ 15$ billion, and certain categories of older debt (totaling approximately $\$ 595$ million as of February 1991).
Discount-The interest deducted in advance when purchasing notes or bonds. (See Accrued discount.)

Discount rate (PDO-2)-The difference between par value and the actual purchase price paid, annualized over a 360-day year. Because this rate is less than the actual yield (couponequivalent rate), the yield should be used in any comparison with coupon issue securities.
Dollar coins (USCC)—Include standard silver and nonsilver coins.

Domestic series (FD-2)—Nonmarketable, interest- and non-interest-bearing securities issued periodically by Treasury to the Resolution Funding Corporation (RFC) for investment of funds authorized under section 21B of the Federal Home Loan Bank Act (12 United States Code 1441b).

Federal intrafund transactions ("Federal Fiscal Opera-tions")-Intrabudgetary transactions in which payments and receipts both occur within the same Federal fund group (Federal funds or trust funds).
Federal Reserve notes (USCC)—Issues by the U.S. Government to the public through the Federal Reserve banks and their member banks. They represent money owed by the Government to the public. Currently, the item "Federal Reserve notes-amounts outstanding" consists of new series
issues. The Federal Reserve note is the only class of currency currently issued.

Foreign ("Foreign Currency Positions," IFS-2, -3)Locations other than those included under the definition of the United States. (See United States.)

Foreigner ("Capital Movements," IFS-2)—All institutions and individuals living outside the United States, including U.S. citizens living abroad, and branches, subsidiaries, and other affiliates abroad of U.S. banks and business concerns; central governments, central banks, and other official institutions of countries other than the United States; and international and regional organizations, wherever located. Also refers to persons in the United States to the extent that they are known by reporting institutions to be acting for foreigners.

Foreign official institutions ("Capital Movements")Includes central governments of foreign countries, including all departments and agencies of national governments; central banks, exchange authorities, and all fiscal agents of foreign national governments that undertake activities similar to those of a treasury, central bank, or stabilization fund; diplomatic and consular establishments of foreign national governments; and any international or regional organization, including subordinate and affiliate agencies, created by treaty or convention between sovereign states.
Foreign public borrower ("Capital Movements")—Includes foreign official institutions, as defined above, the corporations and agencies of foreign central governments, including development banks and institutions, and other agencies that are majority-owned by the central government or its departments; and state provincial and local governments of foreign countries and their departments and agencies.
Foreign-targeted issue (PDO-1, -3)—Foreign-targeted issues were notes sold between October 1984 and February 1986 to foreign institutions, foreign branches of U.S. institutions, foreign central banks or monetary authorities, or to international organizations in which the United States held membership. Sold as companion issues, they could be converted to domestic (normal) Treasury notes with the same maturity and interest rates. Interest was paid annually.

Fractional coins (USCC)—Coins minted in denominations of 50, 25, and 10 cents, and minor coins ( 5 cents and 1 cent).

Government account series (FD-2)-Certain trust fund statutes require the Secretary of the Treasury to apply monies held by these funds toward the issuance of nonmarketable special securities. These securities are sold directly by Treasury to a specific Government agency, trust fund, or account. Their rate is based on an average of market yields on outstanding Treasury obligations, and they may be redeemed at the option of the holder. Roughly 80 percent of these are issued to five holders: the Federal Old-age and Survivors Insurance Trust Fund; the civil service retirement and
disability fund; the Federal Hospital Insurance Trust Fund; the military retirement fund; and the Unemployment Trust Fund.

Interfund transactions ("Federal Fiscal Operations")Transactions in which payments are made from one fund group (either Federal funds or trust funds) to a receipt account in another group.

International Monetary Fund ("Exchange Stabilization Fund," IFS-1) - (IMF) Established by the United Nations, the IMF promotes international trade, stability of exchange, and monetary cooperation. Members are allowed to draw from the fund.

Intrabudgetary transactions ("Federal Fiscal Operations")These occur when payment and receipt both occur within the budget, or when payment is made from off-budget Federal entities whose budget authority and outlays are excluded from the budget totals.

Matured non-interest-bearing debt (SBN-1, -2, -3)—The value of outstanding savings bonds and notes that have reached final maturity and no longer earn interest. Includes all Series A-D, F, G, I, J, and K bonds. Series E bonds (issued between May 1941 and November 1965), Series EE (issued since January 1980), Series H (issued from June 1952 through December 1979), and savings notes issued between May 1967 and October 1970 have a final maturity of 30 years. Series HH bonds (issued since January 1980) mature after 20 years.
Noncompetitive tenders ("Treasury Financing Opera-tions")-Offers by an investor to purchase Treasury securities at the price equivalent to the weighted average discount rate or yield of accepted competitive tenders in a Treasury auction. Noncompetitive tenders are always accepted in full.

Obligations ("Federal Fiscal Operations")—An unpaid commitment to acquire goods or services.

Off-budget Federal entities ("Federal Fiscal Operations")Federally owned and controlled entities whose transactions are excluded from the budget totals under provisions of law. Their receipts, outlays, and surplus or deficit are not included in budget receipts, outlays, or deficits. Their budget authority is not included in totals of the budget.

Outlays ("Federal Fiscal Operations")—Payments on obligations in the form of cash, checks, the issuance of bonds or notes, or the maturing of interest coupons.
Own foreign offices ("Capital Movements")-Refers to U.S. reporting institutions' parent organizations, branches and/or majority-owned subsidiaries located outside the United States.

Par value-The face value of bonds or notes, including interest.

Quarterly financing ("Treasury Financing Operations")Treasury has historically offered packages of several
"coupon" security issues on the 15th of February, May, August, and November, or on the next working day. These issues currently consist of a 3 -year note, a 10 -year note, and a 30 -year bond. Treasury sometimes offers additional amounts of outstanding long-term notes or bonds, rather than selling new security issues. (See Reopening.)

Receipts ("Federal Fiscal Operations")—Funds collected from selling land, capital, or services, as well as collections from the public (budget receipts), such as taxes, fines, duties, and fees.

Reopening (PDO-3, -4)—The offer for sale of additional amounts of outstanding issues, rather than an entirely new issue. A reopened issue will always have the same maturity date, CUSIP-number, and interest rate as the original issue.
Special drawing rights ("Exchange Stabilization Fund," IFS-1)—International assets created by IMF that serve to increase international liquidity and provide additional international reserves. SDRs may be purchased and sold among eligible holders through IMF. (See IMF.)

SDR allocations are the counterpart to SDRs issued by IMF based on members' quotas in IMF. Although shown in Exchange Stabilization Fund (ESF) statements as liabilities, they must be redeemed by ESF only in the event of liquidation of, or U.S. withdrawal from, the SDR department of IMF or cancellation of SDRs.

SDR certificates are issued to the Federal Reserve System against SDRs when SDRs are legalized as money. Proceeds of monetization are deposited into an ESF account at the Federal Reserve Bank of New York.

Spot ("Foreign Currency Positions")—Due for receipt or delivery within 2 workdays.
State and local government series (FD-2)-(SLUGs) Special nonmarketable certificates, notes, and bonds offered to State and local governments as a means to invest proceeds
from their own tax-exempt financing. Interest rates and maturities comply with IRS arbitrage provisions. SLUGs are offered in both time deposit and demand deposit forms. Time deposit certificates have maturities of up to 1 year. Notes mature in 1 to 10 years and bonds mature in more than 10 years. Demand deposit securities are 1-day certificates rolled over with a rate adjustment daily.
Statutory debt limit (FD-6)-By Act of Congress there is a limit, either temporary or permanent, on the amount of public debt that may be outstanding. When this limit is reached, Treasury may not sell new debt issues until Congress increases or extends the limit. For a detailed listing of changes in the limit since 1941, see the Budget of the United States Government. (See debt outstanding subject to limitation.)
STRIPS (PDO-1, -3)—Separate Trading of Registered Interest and Principal Securities. Long-term notes and bonds may be divided into principal and interest-paying components, which may be transferred and sold in amounts as small as $\$ 1,000$. STRIPS are sold at auction at a minimum par amount, varying for each issue. The amount is an arithmetic function of the issue's interest rate.

Treasury bills-The shortest term Federal security (maturity dates normally varying from 3 to 12 months), are sold at a discount.

Trust fund transaction ("Federal Fiscal Operations")An intrabudgetary transaction in which both payments and receipts occur within the same trust fund group.
United States-Includes the 50 States, District of Columbia, Commonwealth of Puerto Rico, American Samoa, Midway Island, Virgin Islands, Wake Island, and all other territories and possessions.
U.S. notes (USCC)—Legal tender notes of five different issues: 1862 (\$5-\$1,000 notes); 1862 (\$1-\$2 notes); 1863 (\$5$\$ 1,000$ notes); 1863 ( $\$ 1-\$ 10,000$ notes); and 1901 ( $\$ 10$ notes).
