From the foregoing statement of actual receipts and expenditures for the first quarter of the current fiscal year, and the estimates of the same for the remaining three quarters, based upon appropriations already made, and also on the assumption that Congress will not increase the expenditures by deficiency or other appropriations, it will be seen that, in the judgment of the Department, the revenues will reach the sum of \$297,456,145 14, and that the ordinary expenditures will amount to \$268,447,543 76. This exhibit gives a surplus revenue of \$29,008,601 38. Under existing laws it is estimated that \$32,293,692 32 will be required to be provided for the sinking fund for this year. If the statement, as here submitted, shall prove to be approximately correct, the revenues will fall short by the amount of \$3,285,090 94 of providing for the appropriations made by Congress.

ESTIMATES FOR THE FISCAL YEAR ENDING JUNE 30, 1877.

It is estimated that the receipts for the fiscal year 1877, will be—	r ending June 30,
From customs	\$165,000,000 00
	\$100,000,000 00
From internal revenue	120,000,000 00
From sales of public lands	1,500,000 00 7,200,000 00
From tax on circulation of national banks	7, 200, 000 00
From reimbursement of interest by Pacific Railway	
Companies	500,000 00
From customs' fines, penalties, and forfeitures	100,000 00 1,900,000 00
From consular, letters patent, and other fees	1 900 000 00
From proceeds of sales of government property	800,000 00
	7 000, 000 00
From miscellaneous sources	7,000,000 00
Total ordinary receipts	204 000 000 00
Total ordinary receipts	304, 000, 000 00
	,
It is estimated that the ordinary expenditures for	r the same period
will be—	
For civil expenses	\$17,500,000 00
For foreign intercourse	1, 353, 000, 00
For Indians	1, 353, 000 00 7, 000, 000 00
For pensions.	29, 534, 000 00
Tor pensions.	29, 334, 000 00
For military establishment, including fortifications,	
river and harbor improvements, and arsenals	40,000 000 00
For naval establishment, including vessels and ma-	
chinery and improvements at navy yards	21,000,000 00
For civil miscellaneous, including public buildings,	
and light-houses, collecting revenues, mail steam-	
ship service, deficiency in postal revenues, public	
minting fro	50 000 000 00
printing, &c	52,000,000 00.
For interest on public debt	97, 000, 000 00
For interest on Pacific Railway bonds	3, 878, 000 00
Total estimated expenditures, exclusive of the	
sinking fund account and principal of the	
public debt	269, 265, 000 00
	, ,

It is expected that for this fiscal year the surplus revenues of the government will amount to \$34,735,000. The estimated amount to be provided for the sinking fund is \$34,063,377 40. There is reason to hope, therefore, that the income of the government for this year will amply provide for all its obligations, including the sinking fund.

The estimates received from the several Executive Departments are

The estimates received from the several Executive	Debar meno are
as follows:	
Legislative establishment	\$2,865,378 50

Total debt	
Debt, less cash in the treasury	2, 128, 688, 726 32

Showing a reduction, as above stated, of... \$14, 399, 514 84 It will be observed that the surplus revenues, exclusive of provision for the sinking fund, as shown in the statement of receipts and expenditures for the fiscal year, were \$13,376,658 26, or \$1,022,856 58 less than the amount of the reduction of the debt as shown by the monthly statement of the same.

The difference between these two statements arises from the difference of dates at which they are made up, as will be seen by a comparison of them as regards the cash in the treasury at the commencement and close of the fiscal year, and of the item of "interest due and unpaid, and accrued interest to date," which, in the monthly debt statement, is treated as a liability of the Government, precisely as is the principal of the debt, but which is not so considered in the statement of receipts and expenditures.

The cash in the treasury July 1, 1874, as shown by the monthly debt statement of that date, and which embraced only the moneys officially reported to the Department at the time of its issue, was	and expenditures.

It will, therefore, be perceived that no difference exists in these two accounts, other than that which grows out of the manner of their preparation.

Frugality in administration is among the foremost and most important points of a sound financial policy. Faithful collection of the revenue and reduction of expenditures to the lowest point demanded by the necessities of government, constitute the first duty of those intrusted with making and administering the law. The obligation to adhere strictly to this duty has peculiar force while the public indebtedness is large and the industries of the country are suffering from financial depression. Rigid economy at such a time must lead to two important results; first, advancement of the credit of the government throughout the financial world, and hence ability to refund the debt at a lower rate of interest; second, and by no means least in importance, greater willingness on the part of the people to bear the burden of taxation, when they see that their government, like themselves, is reducing expenditures to the lowest practicable point, and applying the revenue received from them to its necessary and legitimate purposes. The general depression of business which followed the era of inflation and extravagance, through which we have just passed, has made it necessary that individuals, associations, and corporations should reduce their expenditures to the minimum; and, having done so, the taxpayers have a right to demand that the government shall do likewise. While the interest on the public debt, and all other national obligations, must be promptly met, there are many points at which it is believed that considerable reduction of appropriations can properly be made; and the Secretary invites critical examination of all the estimates submitted to Congress. Increase of public expenditures in time of great prosperity and extravagance is accomplished by an easy process; but a corresponding reduction when the reverse comes can be brought about only by the closest vigilance and most determined resistance to every appeal for appropriations not required by the existing necessities of government.

No appropriation of money should be made without reference to the probable amount of revenue to accrue within the year in excess of existing obligations and liabilities.

THE SINKING FUND.

The fifth section of the act of February 25, 1862, sets apart as a special fund all duties on imported goods, and directs the application thereof—

First. To the payment in coin of the interest on the bonds and notes of the United States.

Second. To the purchase or payment of one per centum of the entire

debt of the United States, to be made within each fiscal year after the first day of July, 1862, which is to be set apart as a sinking fund, and the interest of which shall, in like manner, be applied to the purchase or payment of the public debt, as the Secretary of the Treasury shall from time to time direct.

Third. The residue thereof to be paid into the treasury of the United States.

. Section six of the act of July 14, 1870, directs that the bonds theretofore purchased and then held in the treasury in accordance with the provisions of the act aforesaid, and all other bonds which had been purchased by the Secretary of the Treasury with surplus funds in the treasury, and any bonds thereafter applied to said sinking fund, with all others thereafter redeemed or paid, shall be recorded, cancelled, and destroyed, and that the amount of the bonds of each class so cancelled and destroyed shall be deducted, respectively, from the amount of each class of the outstanding debt of the United States. The lastnamed act also provides that, in addition to other amounts to be applied to the redemption or payment of the public debt, an amount equal to the interest on all bonds belonging to the aforesaid sinking fund shall be applied, as the Secretary of the Treasury shall from fime to time direct, to the payment of the public debt, as provided for in section five of the act first above named, and appropriates from the receipts for duties on imports the amount so to be applied.

These acts are regarded by the Secretary as imposing upon him the imperative duty to take care of the sinking fund, as therein directed, out of the coin received from duties on imports. This requirement is secondary only to the payment of interest on the public debt. It takes precedence of all other appropriations, as, by the very terms of the legislation, only the residue of receipts from customs, after deducting interest on the public debt and providing for the sinking fund, goes into the treasury.

The statute imposes upon the Secretary a duty to be performed annually, the requirement being that the purchase, or payment, for and on account of the sinking fund shall be made within each fiscal year.

During the past fiscal year it was not practicable to purchase the amount of United States bonds required for the sinking fund, for the reason that such bonds could not be bought at par, and the Secretary was forbidden by law to pay more. But the eleventh section of the act of March 3, 1875, authorizes the Secretary, for the purpose of obtaining bonds for the sinking fund, to give notice that he will redeem, in coin at par, any bonds of the United States, bearing interest at the

rate of six per centum, of the kind known as five-twenties; and further provides that interest on such bonds shall cease at three months from the date of notification. The amount required for the sinking fund for the fiscal year ending June 30, 1875, was \$31,096,545. Of this amount \$1,096,500 six per cent. five-twenty bonds were purchased at the rate of \$99 87½ for each hundred dollars in bonds; and on the 11th day of March, 1875, a call was made for \$30,000,000 of the same class of bonds. This call matured on the 11th day of June, 1875, which, being so near the end of the fiscal year, a part of the bonds named in the notice were not presented for redemption during that year. Of the amount so called only \$24,073,900 were presented for payment before the 30th day of June. Therefore, the amount which appears upon the books of the treasury as actually applied to the sinking fund within the past fiscal year is \$25,170,400.

For the current fiscal year it is estimated that \$32,140,914 must be applied to the fund. To meet this requirement a call was made on the 1st day of September for \$8,000,000 six per cent. five-twenty bonds, and on the 15th day of November a further call for \$5,000,000 bonds of the same class. The balance necessary to complete the total amount for this year will be called from time to time in such manner as to cause the least disturbance of the market, and it is hoped that the whole amount will be presented for payment within the year.

REFUNDING THE NATIONAL DEBT.

Since the Secretary's last report to Congress the refunding of the national debt authorized by the acts of July 14, 1870, and January 20, 1871, has been continued. The contract which was entered into July 28, 1874, and which is fully set forth and explained in the last annual report, was renewed January 29, 1875, the contracting parties being Messrs. August Belmont & Co., of New York, on behalf of Messrs. N. M. Rothschild & Sons, of London, England; Messrs. Drexel, Morgan & Co., of New York, on behalf of Messrs. J. S. Morgan & Co., of London, England; and Messrs. J. & W. Seligman & Co., of New York, on behalf of Seligman Brothers, London, England. The conditions of the contract were slightly modified, the contracting parties being allowed one-half of one per cent. commission, and binding themselves to defray all expenses incurred in transporting five per cent. bonds to London, and six per cent. bonds, United States coin coupons, and gold coin, from London to Washington, besides the expenses of preparing the new bonds.

Under this agreement the contracting parties have subscribed for

\$122,688,550, the balance of "New Fives" then remaining unnegotiated; and the Secretary now has the pleasure of announcing to Congress that the funding of the five hundred million of six per cent bonds into those bearing five per cent interest has been accomplished, thereby saving an annual interest to the government of five million dollars.

The success which has attended the refunding of \$178,548,300 of the national debt during the last sixteen months, with the steady improvement of the national credit, induces the belief that the remainder of the six per cent. bonds can be refunded, within a reasonable time, in accordance with the provisions of the acts before mentioned. attention of Congress is, however, called to the fact that, by the terms of the authorizing act, the bonds to be issued at the rate of four and one-half per cent. are redeemable at any time after the expiration of fifteen years from the date of their issue. Bonds most easily placed on the market, which are most sought for by investors, and considered in all respects the most valuable, are those having a long period to run. Taking into consideration the fact that but little inducement is offered in the amount allowed as commissions for placing the United States loans, compared with that paid by other governments, it is thought important to give these bonds all the elements of popularity that may be possible; and the Secretary, therefore, recommends that an amendment be made to the act of July 14, 1870, which shall extend the time of redemption of such bonds to thirty years from the date of their issue.

RESUMPTION OF SPECIE PAYMENT.

The depression of business and general contraction of values which followed the financial panic of 1873 have continued to a greater or less degree in all parts of the country. Similar financial convulsions have occurred in other countries, and their effects are now being felt to a degree as great, perhaps, as in this country. These disastrous disturbances have been brought about in our own country by overtrading, over-credit, and excessive enterprise of a speculative character, stimulated by too great abundance of promises to pay, existing in the form of currency not based upon, or convertible into, the only actual money of the world and of the Constitution, gold and silver. Other commercial countries which have suffered and are now suffering from financial depression, have felt the influence of like causes, while in some of them the temptation to carry prosperous times to excess has, as has often happened before, led to over-production, and that superfluity of trade and credit which must inevitably, sooner or later, be followed by a collapse, and a corresponding period of depression. Although there

are gratifying indications of increased activity in certain branches of business in the United States, it must be admitted that confidence has not yet been restored to the extent necessary to bring about a general revival, or to put the trade and industries of the country upon a basis of activity and permanent prosperity. Nor is it reasonable to expect that this will be done until there shall be a nearer approach to resumption of specie payment, and consequent improvement in the character of the currency. The constant disturbance of exchange and fluctuation of values, the uncertainties of business, the want of confidence between individuals, corporations, and communities, which all experience proves to be the inevitable result of the use of a medium of exchange possessing no intrinsic value, representing no considerable amount of labor in its production, and not convertible into that which is recognized as money throughout the commercial world, are considerations which should claim the attention of every thoughtful representative of the people. However rapid may be our increase in population, wealth, and material strength, we cannot take the rank as a commercial or business people to which we are entitled by superior natural advantages, and the productive energies of our population, or attract to us the surplus capital of the world, so long as we have fluctuating standards of value, and such uncertainty in our fiscal legislation as makes the assembling of Congress and our frequent elections occasions of anxiety and apprehension not only with the holders of our securities abroad, but with business men at home.

Great Britain has kept the value of her pound sterling substantially unvarying for two hundred years, and, in consequence of this steadiness, it has become the basis of the transactions, not only of British commerce and trade, but of all the world. In all civilized countries government negotiations with foreign money-lenders are made upon this basis; and, as a general rule, the only foreign bills current all over the world are those which are expressed in pounds sterling payable in London, which city thus becomes the great centre where a true measure of property and debts can be found; and hence, the commerce of the world revolves around it, and pays tribute to its commercial standard. With an unsteady and varying currency, having no fixed relation to the money of the world, but always much below its par value, we can never attain that commercial independence to which our great resources and active population entitle us.

Every branch of industry and all classes of people are alike interested in the restoration of a sound and stable circulating medium, the laborer and producer no less than the merchant, bondholder, and

banker. The present unequal and fluctuating currency oppresses and injures laborers and producers, who constitute a great majority of our people, far more than it affects injuriously dealers in money. The difference between gold and our paper currency is a margin upon which experienced money dealers do business, and it is this that gives the opportunity for artificial combinations whereby values are increased or reduced at pleasure. The purchasing power of the currency is increased or diminished by the manipulations of large operators united for that purpose, and producers and laborers are often made to suffer, without effective power of resistance. Restoration of a sound and unvarying currency must bring better relative wages with more constant employment, because the value of labor, as of that which it produces, will be measured by a more certain standard; and, with the return of confidence, there must come activity, prosperity, larger markets, and greater demand, which, as both reason and experience prove, do not tend to lower wages, or make employment less certain.

The claim that the large issue of inconvertible paper currency has been beneficial to producers is, perhaps, sufficiently disproved by reference to the reports of sales of leading articles of produce, such as wheat, corn, and pork, before and since the issue of such currency. The most trustworthy statistics show that such articles were sold in New York during the five years from 1870 to 1874, inclusive, for about the same price that they brought in the five years from 1856 to 1860, inclusive.

On the other hand it is equally certain that the farmer has paid increased prices, during the period from 1870 to 1874, for articles imported for consumption, upon all of which the difference between gold and currency must be paid by the consumer, who pays in the Thus the producer of domestic articles is constantly subjected to loss in exchanging his products for such articles as coffee, tea, sugars, and other imported goods, which enter into daily consumption. In this connection it should be borne in mind that a greater volume of currency is required for the transaction of business when it consists of inconvertible paper, which does not circulate abroad, than when the currency in general use is gold, which flows through every artery of commerce. The statistics of our foreign trade illustrate this proposition. For every imported article the consumer must pay to the importer, besides the cost in gold, increased by his percentage of profit, as much more as the difference between gold and the currency with which payment is made. This difference, commonly called the premium on gold, increases by many millions the total amount which would otherwise be required to complete all such transactions.

The proper office of currency, whether it be gold or paper, is to serve as a medium of exchange for the adjustment of transactions between buyers and sellers. When it is sound and stable, receivable in all parts of the commercial world, the amount which actually passes from hand to hand in business transactions is far below the volume A small per cent. thereof is adjusted by the actual handling of money. Exchanges are, for the most part, made by transfers of credits through banks and other agencies. Wherever exchanges and business fransactions are conducted on the basis of coin, and paper convertible into it, the volume will be regulated by natural causes. Money, like merchandise, will go where there is demand for it, and where something of value can be obtained in exchange for it. When the financial panic of 1857 created a demand for gold in this country, a ready and continued supply came steadily from abroad to meet the necessities of our people, and brought speedy relief. Now, the enforced use of inconvertible paper currency not only obstructs the flow of gold from abroad, but drives from the country the precious metals yielded by our mines.

Good and bad currency cannot be retained in anything like equal proportions in a country having commercial relations with other powers and peoples. The latter will drive away the former. Gold and silver will flow steadily to those parts of the commercial world where business is done on the basis of an unvarying standard of values, and where every issue of paper is convertible into the precious metals at the option of the holder, because they are needed there. Such is the inevitable operation of the law of supply and demand; and the present limited and inadequate supply of coin in this country is chiefly due to this cause. Gold has become a commodity of trade, the price of which from day to day depends largely upon the will of those who have combined to control the market. This presents a serious obstruction to all productive industries and commerce, and introduces into business transactions an element of uncertainty, which often unsettles the most intelligent calculations, and tends to destroy confidence, without which there can be no real or permanent prosperity. Apparent, but fictitious prosperity has often followed large issues of irredeemable paper currency, but no result is more certain to flow from a given cause, than disaster and financial distress to follow a period of inflation of business and credit caused by excessive issues of paper currency. The philosophy which teaches by example, as well as the deductions of reason, establishes conclusively that there is no effective remedy for the evil but the removal of its cause.

The circumstances attending the issue of the United States notes now in circulation impose upon the Government a peculiar obligation to provide for their speedy and certain redemption in coin. They were issued in the exercise of a power which can be called into use only in a time of supreme necessity, and were paid out for the support of an army composed of brave and patriotic citizens who had responded to the call of their country in the hour of its extreme peril. To suffer a promise made at such a time and under such circumstances to be dishonored by subsequent indifference or non-performance, would be little better than open repudiation, and would affect injuriously our national name and credit.

It is worthy of note that for the most part those who now oppose the redemption of legal-tender notes, and who ask for a further issue and continued and indefinite reissue of the notes now in circulation, were most strenuous in their opposition to such issues during the civil war. The acts authorizing such issues were denounced as in violation of sound principles of finance, and not warranted by the Con-Their constitutional validity was resisted at every point, and subjected to the test of judicial decision in almost every court inthe country, both State and national. The supreme judicial tribunal of the nation upheld the acts as measures of necessity in a time of great exigency, but it has neither decided nor intimated that such power may be exercised by Congress in time of public tranquillity. Indeed it is fairly inferable, from all the court has said in the various cases in which the question has been before it, that the issue of such notes in time of peace is not within the constitutional power The language and argument of the court leave no reason to believe that it would sustain the claim of power to increase the volume of such issues or to reissue such as have been redeemed in obedience to law, when the public exigency no longer ex-Those who opposed such issues at a time of supreme necessity, and insist upon further issues when the emergency has passed away, put themselves in the attitude of opposing war measures in the midst of war, and advocating them in a time of profound peace. Congress carefully confined the operation of the act to the period of necessity by authorizing "the reissue from time to time, as the exigencies of the public interests shall require."

The government is bound, not only by economic considerations and proper regard for the interest of the people, but by express and repeated promises, to provide for the redemption in coin of all its issues of legal-tender notes. The original legal-tender act was regarded and

treated at the time of its adoption as a temporary measure, made necessary and justifiable only by the exigency of war, which taxed all the resources and energies of the nation. The first act authorizing such issues (February 25, 1862) is entitled "An act to authorize the issue of United States notes, and for the redemption or funding thereof, and for funding the floating debt of the United States"-language that significantly expresses the views of the Congress by which it was It authorized the issue of \$150,000,000 legal-tender notes. and made provision for funding them in bonds issued on the credit of the government, bearing interest in gold, and payable at a future This was the best the government could do in the midst of its struggle for existence and rightful supremacy. The state of the public credit did not admit the possibility of the immediate procurement of a sufficient amount of coin to redeem the notes absolutely. A well-settled principle of political economy forbade the issue of paper currency without providing for its redemption, and, in obedience thereto, Congress made the only practicable provision for the redemption of the notes which it authorized to be issued and stamped with the quality of legal tender. The act of July 11, 1862, which authorized a further issue of \$150,000,000, contained a like provision, and further provided that any notes issued thereunder might be paid in coin, instead of being converted into bonds, at the discretion of the Secretary of the Treasury. The notes thus anthorized were issued. and accepted by the people upon the assurance that they had the right to fund them in gold-bearing bonds of the United States, and this consideration undoubtedly constituted an important element of their value, and gave them a quality in aid of their circulation and free acceptance in all business transactions. In the opinion of wise and patriotic men, who, as the representatives of the people, were charged. with maintaining the indissolubility and supremacy of our national, Union, it was necessary to resort to this extraordinary measure for the purpose of carrying the war to a successful termination. It was, in substance and effect, a national war loan, based upon the credit of the government, and coupled with a pledge for redemption, but the periodof payment was to be thereafter determined when the public exigency would permit. It was not in the minds of those who devised and consummated the scheme, that the government was about to enter upon the issue of an irredeemable paper currency, which should permanently. take the place of the world's measure of values. Nor was it claimed by the most earnest advocate of the measure that the Constitution had given to Congress power to issue a permanent paper currency as a

IÍ F

substitute for, and stamped by law with, the qualities which, in the estimation of political economists, could exist only in the precious metals. In the light of the experience of the civilized world, such a purpose would have been regarded as little better than financial madness, and its avowal by the authors of the legal-tender acts would surely have caused the defeat of the plan for exerting the borrowing power of the government by means of such issues.

But the purpose and meaning of the acts in question are not left open for forensic discussion, having been authoritatively settled by the unanimous opinion of the highest judicial tribunal known to our Constitution. As soon after the termination of the war as 1868, it was argued before the Supreme Court that the legal-tender notes of the United States were issued as money, a substitute for metallic currency, and that, having been made legal tender in payment of all debts, including (with certain exceptions) the government's own, of course, when presented for payment, if similar notes, being legal tender, were offered in exchange for them, the debt would be discharged, by a delivery of new notes of the same kind, and so on ad infinitum. To this argument the court replied:

"Apart from the quality of legal tender impressed upon them by acts of Congress, of which we now say nothing, their circulation as currency depends upon the extent to which they are received in payment, on the quantity in circulation, and on the crédit given to the promises they bear. In other respects they resemble the bank notes formerly issued as currency.

"But, on the other hand, it is equally clear that these notes are obligations of the United States. Their name imports obligation. Every one of them expresses upon its face an engagement of the nation to pay the bearer a certain sum. The dollar note is an engagement to pay a dollar, and the dollar intended is the coin dollar of the United States—a certain quantity in weight and fineness of gold or silver, anthenticated as such by the stamp of the Government."

This authoritative declaration of the Supreme Court defines clearly and precisely the meaning and intent of Congress in the acts which authorized the issue, and should be accepted as conclusive of the obligation and duty of the government to provide for the payment in specie of all such issues.

Nor is this all. Subsequent to this decision, and for the purpose of putting a quietus upon the mischievous discussion of the subject, Congress, on the 18th day of March, 1869, declared by public act that "the United States solemnly pledges its faith to make provision at the earliest practicable period for the redemption of the United States notes in coin."

These provisions of the various acts of Congress, which were passed with the approval of the Executive, the clear adjudication of the Supreme Court, as well as the plainest principles of political economy, and proper regard for the public welfare, commit the government to the redemption in coin of the notes issued under the circumstances before stated. National faith and honor could not be more distinctly or unequivocally pledged to the performance of a plain duty.

In view of these solemn and repeated pledges, it seems idle to resort to the consideration of elementary principles of finance to prove the evils of an irredeemable paper currency. In the face of such pledges, disregard of which would bring national dishonor, and serious, if not irreparable, injury to the public credit, it can hardly be necessary to discuss questions of expediency, or to point out the ills which the experience of the civilized world shows must follow a violation of well-known laws of political economy.

It is among the first and most important functions of government to give to its people a sound and stable currency, having a fixed relation to the standard of values in general use among nations. The true matter with which government has to do is not so much a question of volume as of soundness and stability of the currency. When it has established a currency of fixed and stable value, having a known relation to that of other powers, and furnishing a uniform medium of exchange, the volume may and should be left to be determined by the wants of trade and business. Natural causes, aided by individual effort and enterprise, will regulate the volume of currency far more wisely and with greater safety to business than acts of Congress imposing artificial limits, subject to increase or diminution at every session.

The existing provision of law making United States notes legal tender for all debts, both public and private, with certain exceptions relating to transactions with government, is an artificial barrier to the use of gold and silver, tending not only to prevent the flow of gold toward this country, but promoting the shipment abroad of our own production of the precious metals. For this reason Congress should abolish the legal-tender quality of the notes, as to all contracts made, and liabilities arising after a fixed day. The first day of January, 1879, being already fixed by law as the time when the redemption of United States notes then outstanding shall begin, it would be proper, and safe to provide that such notes shall not be legal tender for contracts made, or liabilities incurred after the first day of January, 1877. Such an act would not too suddenly change the value of the notes, and would not affect injuriously either debtors or creditors, but would

remove a present obstruction to the retention of our gold and silver production, and create a demand for the return of gold now abroad, thus promoting final resumption by preparing the country for it.

In furtherance of the purpose of the act of the last Congress to provide for the resumption of specie payments, the Secretary recommends that authority be given for funding legal-tender notes into bonds bearing a low rate of interest. Such bonds should run for a longer period of time than those now authorized for refunding the interest-bearing debt, and should be made available to national banks for deposit to secure their circulation and other liabilities to the government, and should bear a rate of interest so low as not to cause too rapid absorption of the notes. It seems probable that a bond bearing interest at the rate of four per cent., would invite the funding of a sufficient amount of legal-tender notes to lessen materially the sum of gold which, in the absence of such provision, must be accumulated in the treasury by the 1st of January, 1879, to carry out the imperative requirements of the act of January 14, 1875. If it be apprehended that authority to the Secretary to fund an unlimited amount of notes might lead to too sudden contraction of the currency, Congress could limit the amount to be funded in any given period of time. The process being in no sense compulsory as to the holders of United States notes, and the rate of interest on the bonds being made low, it is not probable that currency which could find profitable employment would be presented for redemption in such bonds. Only the excess of notes above the needs of business would seek such conversion. Authority to the Secretary of the Treasury to redeem and cancel two million of legal-tender notes per month by this process would greatly facilitate redemption at the time now fixed by law, and besides would have the advantage of publicity as to the exact amount to be withdrawn in any given month. Bonds issued for this purpose should be of the denomination of fifty and one hundred dollars, and any multiple thereof, in order to meet the convenience of all classes of holders of United States notes. faith of the government now stands pledged to resumption on and after January 1, 1879, and to the final redemption and removal from the currency of the country of the legal-tender notes as fast as they shall be presented for redemption, according to the provisions of the act of January 14, 1875. To resume on the 1st of January, 1879, without further legislation, would require the accumulation of a large amount of gold in the treasury in order to avert the possibility of failure of the plan. Such an amount of gold can be procured with difficulty, and not without more or less embarrassing effect upon the

trade and commerce of our own and other countries. The present abundance and cheapness of both currency and capital presents a favorable opportunity for the withdrawal and redemption of a considerable part of the outstanding legal-tender notes, thereby making easy and effectual the redemption now pledged. Such withdrawal of legal-tender notes, thus dispensing with the necessity for accumulating gold in the treasury in proportion to the amount withdrawn, would tend to appreciate those remaining outstanding and make it easier to protect and keep in circulation the silver coin now authorized to be issued.

The act last referred to is an express recognition of the duty and obligation of the government to resume specie payment at the day therein named; and, however widely different may be the views of intelligent persons upon the means adopted by Congress, it is gratifying to know that the end sought to be reached has met the concurrence of the country, and that a majority of the people, wherever the matter has been publicly and fully discussed, have signified their approval of the determination of Congress to be faithful to its pledges, and to relieve them of the ills of an irredeemable paper currency.

The act in question not only makes express provision for resumption at a fixed date, but commits the government to the use of all such means as may be needful to that end. If experience shall show that the means provided by Congress need to be supplemented by further legislation for the easier and more certain accomplishment of the end, it must be assumed that Congress will not suffer the great purpose to be impeded for want of such additional legislation. act confers large powers on the Secretary of the Treasury, touching the issue of United States bonds for the purpose of procuring the supply of gold necessary to execute such of its provisions as go into immediate operation, and to provide for the redemption in gold of United States notes outstanding on and after the 1st of January, In this respect the power conferred on the Secretary is ample; but if, for any cause, it should be found impracticable to accumulate in the treasury a sufficient amount of gold to carry out the provisions of the act, the Secretary is left without the choice of other means to accomplish the end. It may, perhaps, be doubted whether the process of accumulating a large amount of gold by a given time could go on without meeting opposition from the financial powers of the world. It is safe to say that so large an amount of gold as would be required to carry out the purpose and direction of the act cannot be suddenly acquired. It can be done only by gradual processes, and by taking

advantage of favorable conditions of the money market from time to time.

The loss of interest on large sums hoarded in the treasury for a considerable period in advance of January, 1879, is a consideration not to be disregarded, although it should not be permitted to outweigh the benefits to result from full and complete execution of the act.

The Secretary regrets that the condition of the treasury has been such as to render it necessary to make sales of gold coin from time to time to meet current expenditures payable in currency. Such sales have been made in New York city, upon public notice, in accordance with the plan previously adopted, and have been limited from month to month to the amount necessary to keep on hand a sufficiency of currency to meet probable demands upon the treasury under existing appropriations. It is the desire of the Secretary to retain in the treasury, so far as practicable, the gold received from customs, and sales are discontinued whenever the balance of currency in the treasury is sufficient to meet currency payments.

THE NATIONAL BANKS.

The report of the Comptroller of the Currency contains a defence of the national-bank system. It also contains, in addition to the usual bank statistics, tables showing, by States, the ratio of national and State taxation imposed upon the national banks for three different years; tables showing the amount and rate of dividends made semi-annually by the national banks in the States and principal cities for the last seven years; a comparison, by States, of the amounts of deposits of institutions other than national banks, shown in returns obtained by the Comptroller, with those reported to the Commissioner of Internal Revenue for purposes of taxation; a table of the transactions of the New York clearing house for twenty-two years, exhibiting the percentage of currency required in the payment of its large daily balances; also a table exhibiting the percentage of lost or unredeemed circulating notes of closed banks; together with a summary of the decisions of the Supreme Court of the United States in reference to the national banks.

The number of banks organized from the authorization of the system to November 1, 1875, is 2,307, of which 2,087 were doing business on the 1st of October last. From their reports of the date last named, it appears that the aggregate capital of these banks was \$504,829,769; surplus, \$134,356,076; circulation outstanding, \$318,350,379; individual deposits, \$664,579,619; loans, \$980,222,951; specie, including coin cer-

tificates, \$8,050,329; legal-tender notes, including United States certificates of deposit, \$125,268,734; and on deposit with the United States Treasurer, \$19,686,960.

The following table exhibits the capital stock and net deposits, and the classification of the loans of the New York City banks at corresponding dates for the last six years:

New York City.

	Oct. 8, 1870, 54 banks.	Oct. 2, 1871, 54 banks.		Sep. 12, 1873, 48 banks.	Oct. 2, 1874, 48 banks.	Oct. 1, 1875, 48 banks.

On single-name paper, with- out other security	105, 146, 590	122, 806, 969	123, 183, 625		° 19, 959, 609 119, 881, 979	
Aggregate	167, 969, 157	198, 653, 799	183, 185, 726	199, 160, 888	201, 777, 054	202, 089, 733

The aggregate amount of call loans of the New York City banks, October 1, 1875, was \$55,114,058: a little more than one-fourth of the entire loan of these banks, and a little more than one-fourth of their net deposits.

The amount of single-name paper, without other security, was \$16,255,100. The amount of business paper, time notes secured by collateral, and accommodation paper, combined, was \$130,720,575. The amount of accommodation paper (the issue of which has been one of the leading causes of the disasters that have occurred during the last two years) is much less than heretofore; and the sharp discrimination now being exercised by the banks, superinduced by severe losses through the purchase of this kind of paper, is rapidily bringing about a more honest and healthy use of credit by the commercial classes.

A statement of the rates of interest in New York city, carefully prepared from daily reports, shows the following results:

The average rate of interest for the year ending June 30, 1875, was 3 per cent. on call loans, and 5.6 per cent. on commercial paper, and for the six months ending October 31, 1875, the average rate was 2.6 per cent. on call loans, and 5.1 per cent. on commercial paper. The average rate for the preceding year was 3.8 per cent. on call loans, and 6.4 per cent. on commercial paper, and for the six months ending October 31, 1874, it was 2.7 per cent. on call loans, and 5.6 per cent. on commercial paper; from which it will be seen that the rates during the periods given above, for 1875, were somewhat less than for the corresponding periods for 1874.

The act of June 20, 1874, provides for the retirement of the circulation of national banks and the surrender of bonds held as security therefor, by the deposit of legal-tender notes in the treasury for the amount of circulation thus retired; and the act of January 14, 1875, provides for the unlimited issue of circulating notes to national banks, subject to the provisions of law, and the reduction of the legal-tender notes at the rate of eighty per cent. upon the amount thus issued to national banks, until the legal-tender notes shall be reduced to \$300,000,000. Under the operation of these two acts \$15,721,175 of national-bank notes have been issued; \$4,734,500 from June 20, 1874, to January 14, 1875, and \$10,986,675 from January 14 to November 1, 1875, upon which latter amount \$8,763,756 of legal-tender notes have been retired.

Banking having been made free by the act of the last Congress, without restriction as to the amount of circulating notes that may be issued to any part of the country, it is believed that such currency will distribute itself according to the demands and necessities of business. The privileges which attach to national banks being open to individuals in all parts of the country, capital will not be slow to establish additional banks, or to increase the circulation of those already in existence, whenever and wherever the exigencies of business shall render it apparent that an increase of circulation is desirable. But it does not seem probable that such demand will arise to any considerable extent while the volume of legal-tender notes continues so great as to cause large sums to lie idle in commercial centres, for want of safe and profitable investment.

The whole amount of legal-tender notes deposited to retire national-bank circulation since June 20, 1874, is \$37,576,179, (including \$3,813,675 deposited by banks in liquidation previous to the passage of that act,) of which \$17,337,537 has been paid out for the redemption of national-bank notes, leaving \$20,238,642 thereof on deposit in the treasury on the first day of November last.

The operation of the acts of June 20, 1874, and January 14, 1875, may be briefly stated in tabular form as follows:

National-bank notes outstanding June 20, 1874	.\$349,894,182
National-bank notes issued from June 20,	
1874, to January 14, 1875 \$4, 734, 50	00
National-bank notes retired from June 20,	10
1874, to January 14, 1875 2, 767, 23	52 1 005 000
	1 , 967, 268
A count contate of disc. Tonyone 14, 1975	251 861 450
Amount outstanding January 14, 1875	: 001, co1, 400

National-bank notes retired from January 14, 1875, to November 1, 1875	
1875, to November 1, 1875	
Amount outstanding November 1, 1875	345, 586, 902
Legal tender notes retired, being 80 per cent. of circulation issued from January 14, to October 28, 1875	
Legal tender notes deposited in the treasury under act of June 20, 1874, together with \$3,813,675 deposited by banks in liquidation previous to the passage of that act \$37,576,179 Amount paid out for redemptions	
Amount remaining on deposit for redemption of national-bank notes, November 1, 1875	\$20, 238, 642

The Comptroller recommends that no present change be made in these two acts, so far as they relate to the national banks.

The amount of cash reserve held by the national banks, including their redemption fund on deposit with the Treasurer on October 1, 1875, the date of their last report, was \$149,460,452, which is \$25,365,379 more than they would have been required to hold upon circulation and deposits prior to the passage of the act of June 20, 1874, repealing the provision requiring reserve upon circulation; and the cash reserve held by New York City banks at the last-named date was \$60,467,759, which also exceeds by \$5,324,667 the amount that would have been required upon circulation and deposits previous to the passage of that act; from which it is seen that, on account of the redundancy of money, the stagnation of business, and the consequent low rate of interest during the past year, the effect of the act repealing the reserve upon circulation cannot yet be definitely ascertained.

COINAGE.

The report of the Director of the Mint presents in detail the operations of the mints and assay offices.

The amount of bullion received and operated upon during the last fiscal year was— $\,$

Gold		\$43, 152, 584 5	60
Silver		18, 304, 406 0	17
Tota	d։	61, 456, 990 5	7

XXVI REPORT OF THE SECRETARY OF THE TREASURY.

Gold		
Total,		54, 626, 920 44
The coinage for the fiscal year was	as follows:	
	No. of pieces.	Value.
Gold	1,739,062	\$33, 553, 965
Silver		10, 070, 368
Minor	14, 629, 500	230, 375
Total	39, 191, 778	43, 854, 708
The silver coinage consisted of—		:
The sirver comage consisted of	No. of pieces.	Value.
Trade-dollars	5, 697, 500	\$5,697,500
Subsidiary silver coin	17, 125, 716	4, 372, 868

silver coinage has amounted to \$3,895,010, which, added to the coinage of the year, makes a total subsidiary silver coinage of \$8,267,878.

The bars manufactured were—

Gold	\$16,019,879 93
Silver	7, 029, 430 54

At the mint in San Francisco a large refinery has been equipped and put in successful operation, and that institution is now in a condition to meet the large and increasing demand for refining and coinage at that point.

The rooms formerly occupied by bankers in the assay office at New York have been altered and repaired, and will hereafter be devoted to the operations of that office. The additional capacity thus given is necessary to meet the increased demands for refining bullion in that city.

Additional annealing furnaces have been erected at the mint in Philadelphia, and the coinage machinery at the Carson City mint has been duplicated, thereby increasing the coining capacity of both institutions.

The change in the relative values of gold and silver is considered at some length by the Director, and the various causes producing the result are clearly set forth in his report, and are worthy of careful attention.

The diminished use of silver coin in various European countries, and the increasing production of our silver mines, would appear to render the present a very favorable time for procuring supplies of bullion for the manufacture of silver coin to be used in the redemption of the fractional currency.

So much of the act of January 14, 1875, as relates to the purchase and coinage of silver for redemption of fractional currency, has been put into partial operation, and is now being executed as rapidly as the exigencies of the case will admit. Since the passage of the act, 8,243,642 ounces of silver bullion have been purchased, at an average price of $111\frac{4}{10}$ cents per standard ounce. The mints have been put into active operation, and the aggregate amount of silver coin now in the treasury is \$10,000,000.

The Secretary has been urged to begin the work of resumption by issuing silver coin in redemption of outstanding currency, and it has been insisted that, under the first section of the act, he has no discretion, but must issue the silver coin as fast as it can be turned out from the mints. While the act requires the coinage to proceed as rapidly as practicable, it does not, in terms, require the Secretary to issue it at once; nor does it fix the period of time when the issue must begin. For obvious reasons, it has been, and yet is, impracticable to put or keep silver coin in circulation. The present depreciation of currency below gold precludes the probability that silver would remain in circulation, and, therefore, it has been deemed impracticable to issue it for the present, or until, by the nearer approach of, or greater preparation for, general resumption, there shall be such an appreciation of the circulating currency of the country as would give assurance that the silver coin to be issued would not be hoarded for shipment abroad, or converted into plate and jewelry, or reduced to bullion.

The report of the Director gives valuable information in relation to the precious-metal mines of the United States, and of the extensive developments recently made in the Pacific States. The mining industry of the precious metals appears to be in a very prosperous condition, and affords every reason to believe that the yield for the next four or five years will show a marked increase over the production of recent years.

REVENUE FROM CUSTOMS.

The receipts from customs for the year ending June 30, 1874, were \$163,103,833 19, and at the corresponding date of 1875 they were \$157,167,722 35, a decline of \$5,936,111 34.

XXVIII REPORT OF THE SECRETARY OF THE TREASURY.

The receipts for the first quarter of the current fiscal year were \$44,233,626 25, while for the corresponding period of last year they were \$46,651,200 10, showing a decrease of \$2,417,573 85.

For the months of October and November, 1875, the receipts were \$23,936,950 23, and for the same months of last year they were \$22,755,811.

The effect upon the customs receipts of the act of February 8, 1875, imposing duties on certain articles therein enumerated, and making additions to the free list, cannot yet be stated with certainty. Nor is it possible, at present, to determine with accuracy the effect of the act of March 3, 1875, restoring the ten per centum of duties repealed by the act of June 6, 1872.

The following statement of importations of the classes of merchandise chiefly concerned, is derived from the Bureau of Statistics, and, to some extent, serves to show the effect of the act of March 3, 1875, on the duties received:

Value of importations of cotton, glass and glassware,
India rubber and gutta-percha, iron and steel,
leather, metals not otherwise provided for, paper,
straw, wool, (including hair of alpaca, &c.,) and
manufactures thereof, for the nine months ending
September 30, 1874\$94, 917, 416 00
Value of importations of same articles for corresponding
period of 1875, (including the seven months next suc-
ceeding the act of March 3, 1875)
Decrease

This decrease was occasioned principally by the falling off in two classes of importations, viz:

Iron and steel and manufactures thereof	\$8, 260, 066 00
Wools and manufactures thereof	

12, 204, 274 00

Returns for the four months ending June 30, 1875, show that of importations for that period amounting to \$30,547,005, duties have been paid on \$23,629,606 withdrawn for consumption, yielding \$10,954,719 of revenue. In this amount is of course included the ten per centum restored by the act of March 3, 1875, showing an apparent increase for four months of \$1,095,471 90. But in this connection there is to be considered the fact that, for the corresponding period of the year 1874, the importations of the same classes of merchandise amounted to \$36,022,467, showing a decrease in importations for the four months

XXIX

ending June 30, 1875, of \$5,475,462, of which \$4,800,378 is due to the falling off of importations of iron and steel and manufactures thereof. It is, therefore, difficult to determine, in the light of returns now at hand, to what extent the apparent increase of revenue resulting from the repeal of the ten per cent reduction is offset by the decrease in importations, and, consequently, in the amount of entries for consumption on payment of duties.

In relation to the twenty-five per cent. increase of duty on sugar and molasses, under the act of March 3, 1875, it is still more difficult to determine the effect on the revenue. Owing to the change of classification and of drawback on refined sugar exported, together with the fact that hardly sufficient time has elapsed to enable a comparative statement of much value to be prepared, the increase of revenue derived from the additional duty levied cannot be given. The actual increase of duty collected from the time the act took effect, March 3, 1875, to June 30, 1875, was \$2,445,017, but how far this increase is affected by the classification and drawback cannot be determined with accuracy.

Pursuant to the act of June 18, 1874, admitting free of duty articles intended for the International Exposition of 1876, at Philadelphia, under such regulations as the Secretary of the Treasury shall prescribe, collectors of customs at the various ports have been furnished with regulations designed to cover the subject in the spirit and intent of the act. It is hoped that, while these regulations will afford all reasonable facilities for the importation of such articles as may be consigned for exhibition from the various nationalities of the world, they are so guarded as to prevent frauds upon the revenue by persons who, under pretence of being exhibitors, may attempt abuses of the privileges accorded them.

The general views held and suggestions made in the report submitted to Congress in December, 1874, in the discussion of the tariff laws, regarded solely as revenue measures, are still entertained, and are referred to now with the added suggestion, that experience has shown that when duties are imposed upon any articles at rates so high as to be almost prohibitory, injury is done the revenue by lessening the amount of the importation of such articles, besides inducing a tendency to augment the evil of their clandestine introduction.

In the collection of duties upon importations, two evils are chiefly operative to prevent the government from realizing the full measure of revenue—first, smuggling, and secondly, undervaluation.

The first of these evils is more generally prevalent, especially on the

northern frontier, than is commonly supposed, the difficulties attending a proper surveillance of that frontier, under existing circumstances, being very great, if not in some respects insurmountable. Without going into full details, it may be said, by way of illustration, that in the four collection districts of Vermont, Champlain, Oswegatchie, and Cape Vincent, having a frontier line of more than three hundred miles, with eight principal ports or stations and forty-one minor stations, after deducting the number permanently employed at such principal points and four for service in Canada in connection with the sealing of cars, there are but fifty-nine officers remaining for service at the minor stations and as a coast-guard to prevent smuggling. Deducting from this number one officer for permanent service at each minor station, there remain but fourteen as a preventive force, or less than one man for every twenty-one miles of frontier.

These statistics apply to portions of the border which offer speedy and direct means of travel between Canada and the United States, and which, during several months of the year, are thronged by travellers of every condition and with every variety of object in view, from those bent merely on pleasure or legitimate business, to those whose chief occupation is to defraud the revenue.

Information obtained by the Department, from trustworthy sources, renders it quite certain that systematic frauds have been perpetrated by smuggling over the border wines, brandy, and other articles of merchandise. Similar observations might be made as to other parts of our frontier.

The second general cause which operates to prevent the government from receiving its full measure of dues is undervaluation, a source of perhaps greater loss than the direct offence of smuggling. This evil is attributable, in part, to the devices of dishonest importers, in part to the fluctuations in market values, but more, probably, to the defects of the appraisement system itself. Without disparagement of the class of officers known as local appraisers, many of them of long experience and the most unquestioned integrity, it cannot be denied that there is often very great diversity at the different ports regarding the classification and valuation of merchandise. While this diversity sometimes arises from an honest difference of opinion, it not unfrequently happens that there is collusive action between assistants or other subordinates of the appraisers, and the importers, which, when once begun, is a source of constant loss to the revenue as well as of injury to honest merchants.

To correct these evils the office of general appraiser was created; and to those officers, five in number, supervision over appraisers and

their assistants is committed by law. But can satisfactory results be anticipated from their labors when the large extent of their field of operations is considered in connection with their limited number? To the general appraiser at Boston are assigned ports and districts, thirty-five in number. To the general appraiser at New York, the district of New York city. To the general appraiser at Philadelphia, twenty-two ports and districts. To the general appraiser at Baltimore, fifty-seven districts and ports. To the general appraiser at New Orleans, eighteen districts and ports.

The labors and duties of these officers have been greatly increased by the privilege of immediate transportation granted to importers in the interior by the act of 1870, whereby the number of ports requiring the attention of the general appraisers is enlarged and uniformity of valuation rendered much more difficult.

The first general suggestion which presents itself by way of remedy for some of the defects of the present system of appraisements is an increase in the number of general appraisers, to be drawn from the ranks of subordinate officers of requisite ability and experience; and, secondly, a consolidation of customs districts, by which minor districts would be merged in larger ones, thus reducing the sphere of action of this class of officers, and enabling them to concentrate their efforts to better advantage.

In connection with the general subject of a consolidation of customs districts, it may be remarked that an examination of statistical returns from all the districts in the United States will show that in some of them the amount of business transacted is not sufficient to justify keeping up the corps of officers whose aggregate compensation exceeds the amount of revenue collected by them, and who can render adequate return only by acting as a preventive or detective force. That species of service requires a greater number of officers to guard exposed lines of coast and frontier than existing circumstances will permit. Consolidation of a number of districts would facilitate the performance of such duties, besides securing a reduction of the aggregate expenses. And, as auxiliary to this, it is recommended that fixed salaries be made applicable to all ports and districts, and that all officers be required to pay into the Treasury all fees, perquisites, and emoluments, of whatever nature or character, received by them.

Another remedy, and the most effective which could be adopted for correcting the evils of the appraisement system, is the substitution, so far as practicable, of specific for ad-valorem duties. This change would work a great reduction in the amount of labor requiring

XXXII REPORT OF THE SECRETARY OF THE TREASURY.

the knowledge of experts. The entire process of ascertaining duties would be more simple, certain, and safe. Opportunities for collusive undervaluation would be greatly lessened, and if errors were committed they could not, as to specific rates and amounts, be accounted for except upon the supposition of culpable negligence or actual fraud; whereas, in respect to ad-valorem duties, an error of judgment may readily be assigned as a sufficient explanation.

Such change, either with or without a decrease in the number of dutiable articles, would insure a very considerable reduction of the force at the chief ports, with a consequent diminution of expenses.

The revised tariff contains thirteen schedules, embracing upwards of fifteen hundred dutiable articles which are either distinctly specified or included in general or special classifications. To these must be added nearly one thousand articles not enumerated, but which, under the general provisions of sections 2499 and 2516 of the Revised Statutes, would be assigned a place as dutiable either by virtue of similitude to some enumerated article, or as articles, manufactured or unmanufactured, not otherwise provided for, making over twenty-five hundred in all. The free list contains an enumeration of over six hundred articles, thus constituting a total aggregate of more than three thousand articles embraced by the tariff either as dutiable or free.

Of articles subject to duty, and either named in, or subject to specific classification by schedule, eight hundred and twenty-three pay ad-valorem rates varying from ten to seventy-five per cent.; five hundred and forty-one pay specific duties according to quantity or weight; and one hundred and sixty pay compound or both specific and advalorem rates.

The articles to be dealt with under sections 2499 and 2516, which, as before stated, number nearly one thousand, must necessarily be subject to either specific, ad-valorem, or compound duties, but in what proportion it is impracticable to state.

From this general recapitulation of the features of the tariff with reference to the number of articles embraced in it, and the variety of rates applicable thereto, to say nothing of questions arising under the free list, it is evident that every step taken towards perfecting a more compact and simple system of duties on imports must contribute not only to the ultimate safety of the customs revenue but to its more prompt and economical collection.

But the only sure remedy for the evils of smuggling, and collusive or other undervaluations, lies at last in the selection and retention of faithful and competent officers. Neither laws nor regulations, however stringent or minute, will accomplish the desired results without faithful officers to execute them.

Referring to the estimates of receipts and expenditures for the next fiscal year, and to the necessity now existing for the accumulation of gold in the Treasury, the Secretary again calls the attention of Congress to the effect of the act of 1872, repealing the duty on coffee and tea. In his last annual report the Secretary expressed the opinion that the act admitting these articles to free entry had been without advantage to consumers in this country, but that the duty repealed had been added to the cost abroad. The repeal of duty has been followed by increase of export duty in the countries of production, and this increase is paid by consumers. Subsequent consideration of the subject has confirmed the views heretofore expressed, and the Secretary recommends restoration of the duty on the articles in question. Being imported in large bulk, the duty is easily collected, and the opportunities for fraudulent introduction are comparatively slight.

During the fiscal year 1875 the cost of collecting the revenue from customs was reduced more than half a million dollars per annum, by dropping from the rolls in the various customs districts a considerable number of officers and employés, and by reducing the salaries of others, which are not fixed by law, but are under the control of the Secretary.

There has been a large falling off in the aggregate amount of fines, penalties, and forfeitures connected with the customs, which constitute a part of the appropriation for the expenses of collecting the revenue from customs. The amount received from that source for the first quarter of the current fiscal year is only \$28,521 75, and it is estimated that for the entire year the amount will fall about \$900,000 below the sum received from the same source for the fiscal year 1873.

In view of this decline, further reduction of expenses has recently been made at the rate of a little more than a million dollars per annum, which secures a decrease of nearly six hundred thousand dollars for the remainder of this fiscal year. Whether the reduction can be maintained without danger to the revenue remains to be determined. The power of the Secretary, however, does not extend beyond the appropriations made by Congress, and it is his purpose, as well as his duty, to keep the expenses within the amount authorized by law.

A detailed statement of the various sums of money refunded under the provisions of the act of March 3, 1875, and other acts of Congress relating to the revenue, together with copies of the rulings under which repayments have been made, has been prepared, and may be found in the tables accompanying this report.

III F

XXXIV REPORT OF THE SECRETARY OF THE TREASURY.

INTERNAL REVENUE.

The report of the Commissioner of Internal Revenue, herewith transmitted to Congress, presents fully the condition of this branch of the revenue, with estimated receipts for the remainder of this fiscal year, and explains, as fully as can now be done, the effect of the act of the last Congress upon receipts from the tax on distilled spirits and tobacco.

The following tabular statement shows the comparative receipts, from the various sources of internal revenue, for the fiscal years ending June 30, 1874 and 1875, respectively:

Sources.	1874.	1875.	Increase.	Decrease.
Spirits	\$49, 444,089 85 33,242,875 62 9,304,679 72 3,387,100 67 364,216 34 6,136,844 64 764,880 14	\$52,081,991 12 37,303,461 88 9,144,004 41 4,097,248 12 281,107 61 6,557,229 65 1,080,111 44	\$2,637,901 27 4,060,586 26 710,087 45 420,385 01 315,231 30	\$160,675 31 83,108 73
Total	102,644,746 98	110, 545, 154 23	8, 144, 191 29	243,784 04

This table is made up from the reports of collections made to the Commissioner of Internal Revenue, which include commissions on sales of stamps paid in kind, and therefore do not enter into the actual cash receipts of the treasury. They include, also, sums reported as collected but not actually paid into the treasury at that time. Hence there is an apparent discrepancy between the totals here shown and the aggregate amount deposited on account of internal revenue as shown by warrants covering the same into the treasury for the fiscal year.

The receipts from internal revenue for the first quarters of the fiscal years ending, respectively, June 30, 1875 and 1876, were as follows:

First quarter of 1875	\$26, 314, 615 33 28, 199, 723 50
Increase	1, 885, 108 17

The aggregate receipts for the months of October and November, of the current year, were \$19, 638, 907 19, while for the same months of last year they were \$17, 476, 202 99, showing an increase of \$2, 162, 704 20.

Since the last annual report to Congress fifty-six collection districts have been abolished by consolidation with other districts, with an estimated annual saving to the government of about one hundred and seventy thousand dollars.

During the past fiscal year frauds of unusual character and magnitude were discovered in this branch of the service, which appear to

have been carried on with more or less injury to the revenue for several years past. The report of the Commissioner sets forth in detail the manner in which such frauds have been perpetrated, and gives the estimate of that office of the amount of probable loss to the revenue, with suggestions of modifications of the law deemed essential to more certain collection of the tax on distilled spirits. The attention of Congress is invited especially to that feature of the report. The recommendations made therein for modification of the law with a view to the prevention of like frauds in future, are concurred in by the Secretary, and commended to the consideration of Congress. So long as it is necessary to maintain a tax on distilled spirits amounting per gallon to three or four times the cost of production, it may be expected that the great temptation to avoid payment of the tax, on at least a part of the production, will excite the cupidity of producers, and that every possible device for evasion will be used. Each gallon of spirits that escapes payment of tax increases by so much the profit to the producer. cannot be denied that a tax imposed for revenue purposes is regarded by many persons as a harsh exaction from the citizen, to be thwarted if possible, or that violations of the punitive provisions of revenue statutes are looked upon by many as venial offences. But the necessities of government, including the maintenance of national faith, imperatively demand the closest collection of all the revenues levied by law; and, besides, due regard for the interest of those who meet honestly and promptly the demands of government upon them, in this respect, requires that all others shall be made to bear their proper share of such taxation. Every evasion of tax by dishonest persons must eventually increase the burdens of honest taxpayers. These considerations should induce every citizen to render proper aid to the government in its efforts to collect the revenue, by giving information of violations of law and of frauds on the revenue, which may come to his knowledge; but experience shows that few are willing to give such information unless they can receive direct pecuniary compensation.

When recently it became known that the government was losing a large part of the revenue due from distilled spirits, it was found extremely difficult to obtain exact or satisfactory information as to the method of perpetrating the frauds, or to ascertain, with reasonable certainty, who were the guilty parties. It was obvious that frauds on the revenue were being extensively practiced, and it was equally clear that this could not be successfully done, under existing provisions of law, without guilty connivance or participation by inferior officers, and at least culpable negligence on the part of others of higher grade.

XXXVI REPORT OF THE SECRETARY OF THE TREASURY.

In the opinion of the Secretary, the circumstances seemed not only to justify but require a resort to means other than those in ordinary use for detection by the Bureau of Internal Revenue. Accordingly, the appropriation for detecting and bringing to trial and punishment persons engaged in counterfeiting, and for detecting other frauds upon the government, was drawn upon for this purpose. The Solicitor of the Treasury, who is charged with the proper use and disbursement of that fund, was directed to inquire into the alleged frauds on the revenue in the matter of distilled spirits, and was instructed to spare no proper effort to detect the guilty parties, and furnish their names, with the evidence against them, to the proper officers of the Department of Justice. This duty was entered upon with energy, and, after the existence of conspiracies and combinations to defraud the government was developed, the investigation was continued, in co-operation with officers of internal revenue, and resulted in the certain detection of frauds on the revenue of more than ordinary significance. the direction of the Commissioner of Internal Revenue, the investigation has been pursued with commendable energy and zeal. siderable number of officers of internal revenue have been found to be in guilty collusion with distillers and rectifiers in fraudulent practices, whereby large sums were lost to the revenue. The evidence thus acquired having been reported to the proper district attorneys, has resulted in a large number of prosecutions for conspiracy, duplicate use of stamps, and other offences. So far as these prosecutions have been completed, they have, with few and comparatively unimportant exceptions, resulted in convictions. A large number of distillers, rectifiers, and subordinate officers of internal revenue, have pleaded guilty to indictments against them, thus confessing their offences, and thrown themselves upon the mercy of the court.

Besides the institution of criminal proceedings, civil suits have been brought upon the bonds of officials and of distillers; distilleries and spirits have been seized as forfeited to the United States for violations of law; and, wherever the evidence warranted, assessments have been made against distillers for delinquent taxes and placed in the hands of collectors, with instructions to collect by process of law. Urgent applications have been presented for the compromise of many of the cases, but it has been deemed better for the interest of the government to allow all of them to take the usual course in the courts; hence, all such applications have been denied.

The Secretary considers it important to the future collection of the revenue, that all parties engaged in persistent and systematic frauds

shall be visited with the severest penalties of the law. To this end instructions have been repeatedly given to officers of internal revenue, and others in the service of this Department, to render all proper assistance to the officers of the Department of Justice in the prosecution of the cases now pending, and in the detection and punishment of such guilty parties as have not yet been indicted. It is deemed of especial importance that officers of the government who have betrayed their trust, and engaged in frauds on the revenue, shall be brought to speedy and coudign punishment. Those who are intrusted with official duties and responsibilities should be given to know that the government will not deal lightly with them when they prove to be guilty of corruption in office. Taxpayers cannot be expected to deal honestly with government when its own trusted officers are permitted to participate in frauds on the revenue, without incurring swift and certain punishment. The highest guaranty for the faithful collection of revenue is in the vigilance and integrity of officials. This guaranty can be secured only by careful selection in the first instance, by retaining in office such as have proved their efficiency and honesty, and by prompt dismissal and vigorous prosecution of such as have been found faithless.

EXPORTS AND IMPORTS.

The comparative value of the exports and imports of the United States for the last fiscal year, in coin, appears, from official returns to the Bureau of Statistics, to be as follows:

Exports of domestic goods	\$499, 284, 100 00 14, 158, 611 00
Total exports	
Excess of imports over exports	19, 562, 725 00
For the fiscal year ended June 30, 1874, the excess imports was \$18,876,698.	s of exports over
Exports of specie and bullion	
Excess of exports over imports	71, 231, 425 00
Total excess of exports of goods, specie, and bullion, over imports of same	

XXXVIII REPORT OF THE SECRETARY OF THE TREASURY.

While the returns of the values of exports by sea are substantially accurate, it has not been practicable to obtain complete statements of the exports to Canada in railway cars, owing to the fact that there is no law requiring persons exporting merchandise by land conveyance to file full manifests of the exported goods with collectors of customs.

The Commissioner of Customs of the Dominion of Canada has, however, furnished detailed statements from which it appears that the value of exports to Canada during the last fiscal year was \$15,660,218 in excess of that returned by the customs officers of the United States, which would increase the total exports of the year by that amount, (i. e., from \$513,442,711 to \$529,102,929,) and reduce the excess of imports of merchandise over exports to \$3,902,507.

There was withdrawn from bond for consumption, in excess of that entered for warehouse during the past fiscal year, merchandise of the value of \$2,992,061.

The total exportation of specie and bullion was greater than that for the preceding year by \$25,501,737; while the exports of domestic goods have decreased in value \$70,149,321.

Importations have decreased to the amount of \$34,400,906 as compared with those of the preceding fiscal year, and of \$109,024,103 as compared with the fiscal year ended June 30, 1873.

There was an increase in the value of the importation of the following articles: Tea, \$1,561,469; fur-skins, undressed, \$664,907; fur-skins, dressed, and furs, \$486,558; argols, \$374,108; drugs, chemicals, dyes, &c., \$1,309,864; dye-woods in sticks, \$405,891; gums, \$526,364; hides and skins, \$2,092,025; silk, raw, \$650,298; silk, manufactures of, \$384,141; fancy goods, \$1,104,962; fruits, \$4,255,002; jute, grasses, and manufactures of, \$566,983; precious stones, \$1,124,803; seeds, \$2,033,766; wool and manufactures of, \$547,469.

There was a decrease in value of importations of articles brought back to the United States, \$1,267,286; coffee, \$4,457,479; India rubber, \$1,521,239; breadstuffs, \$1,557,840; pig iron, \$1,829,354; bar iron, \$1,294,174; iron rails, \$917,977; steel rails, \$6,908,148; machinery, \$596,714; band, hoop, and scroll iron, \$176,512; anchors, cables, and chains, \$97,776; old and scrap iron, \$703,006; fire-arms, \$218,226; steel bars, ingots, sheets, and wire, \$420,149; cutlery and tools, \$385,037; other manufactures of iron, \$1,770,533; barks, \$532,625; cochineal, \$353,134; indigo, \$331,152; madder, \$387,160; nitrate of soda, \$369,526; soda and salts of, \$506,137; tin, in bars, blocks, or pigs, \$853,557; wood and manufactures of, \$2,770,536; wood, unmanufactured, \$366,856; live animals, \$543,815; cotton manufactures, \$455,468; earthen, stone,

and chinaware, \$617,145; flax and manufactures of, \$699,146; glass and glassware, \$452,849; hair and manufactures of, \$343,986; hemp, raw, \$566,664; lead, \$714,812; opium and extract of, \$502,435; provisions, \$517,499; salt, \$531,724; sugar and molasses, \$7,816,686; tobacco and manufactures of, \$1,844,021; wines, spirits, and cordials, \$866,942.

There was an increase in certain articles exported, as follows, the values being stated in currency: Cotton manufactures, \$976,042; lard, \$3,592,503; cheese, \$1,760,608; iron manufactures, \$1,424,188; sewing machines, \$203,633; drugs and chemicals, \$150,592; hides and skins, \$2,169,343; furs and fur-skins, \$1,062,059; leather and leather goods, \$2,538,278; brass, \$497,098; clocks and parts of, \$215,407; copper ore, \$619,128; copper, in pigs, bars, sheets, and old, \$919,079; fruits, \$639,841; ginseng, \$210,166; hops, \$1,258,528; fire-arms, \$3,162,182; lead and manufactures of, \$127,265; manures, \$332,500; oil cake, \$1,038,940; quicksilver, \$495,275; seeds, clover, timothy, and garden, \$553,293.

The exports of domestic gold and silver in excess of the imports was \$62,953,412, as against \$31,244,780, for the previous year.

There was a decrease in the value of the exportations of the following articles: Agricultural implements, \$464,381; hogs, \$886,622; bacon, and hams, \$4,771,295; Indian corn, \$313,014; Indian-corn meal, \$238,866; rye, (1,357,384 bushels), \$1,363,772; wheat, (17,992,751 bushels), \$41,813,596; railroad cars, \$641,037; bituminous coal, (158,301 tons), \$758,723; anthracite coal, (85,756 tons), \$444,458; cotton, raw, (98,183,400 lbs.), \$20,584,955; hemp and manufactures of, \$243,898; illuminating oils, (25,668,571 gallons), \$10,530,594; spirits, distilled, (1,820,222 gallons), \$813,262; spirits of turpentine, \$834,389; tallow, \$2,443,117; tobacco, leaf, (94,195,891 pounds), \$5,157,632; sailing-vessels sold to foreigners, (14,745 tons), \$617,528; shooks, staves, and headings, \$1,217,062; timber, sawed and hewed, \$2,064,318; wood and other manufactures of, \$332,256.

COMMERCE AND NAVIGATION.

There is little change in the proportion of the foreign carrying trade transacted in foreign vessels, about 74 per cent. of imports and exports, during the last fiscal year, having been carried in foreign vessels as against about 72 per cent. for the preceding year, and 76 per cent. for the fiscal year 1872.

The Register of the Treasury reports the total tonnage of vessels of the United States to be 4,853,732 tons, an increase of 53,080 tons over that of the fiscal year ended June 30, 1874, exclusive of the canal-boat tonnage, amounting to about 48,000 tons, exempt from enrolment and license under the act of Congress approved April 18, 1874.

The actual increase is believed to be about 141,878 tons, this amount being the excess of gains over losses during the year; but this aggregate has been reduced to 53,080 tons (the increase first above mentioned) by omitting the tonnage of the exempted canal-boats, and by corrections of tonnage returns, about 40,000 tons.

The following table exhibits the total tonnage for the last two years:

	1874.		1875.	
	Vessels.	Tons.	Vessels.	Tons.
Registered	2,728 29,758	1, 428, 923 3, 371, 729	2, 981 29, 304	1, 553, 828 3, 299, 904
Total	32, 486	4, 800, 652	32, 285	4, 853, 732

The tonnage of vessels built, as given by the Register, is 297,639, being a decrease from that of the preceding year of 135,086 tons or over 31 per centum. The number of vessels built was 1,301.

Official numbers have been awarded by the Bureau of Statistics since July 1 to November 10,1875, to 894 vessels, whose carrying capacity amounts to 146,115 tons. Of this number, sixty-three were new seagoing vessels of 100 tons and over; forty-five of 1,000 tons and over; three of 2,000, and two of 3,000 tons, each, with an aggregate tonnage of 100,226 tons.

REVENUE MARINE.

The past year is the first of the administration of this branch of the public service with the advantage of the completion of the reorganization begun four years ago. The improvement resulting from this reorganization more than equals all that was anticipated. The report of the commission which proposed the plan does not indicate that any other benefit was expected than a reduction of the expenses of the service. The result shows, however, not only a considerably larger reduction than was anticipated, but the attainment of a much higher degree of efficiency than characterized the service in former years. The commission estimated the annual cost of maintaining the service, when the reorganization should be accomplished, at \$943,639 The expenditure of the last fiscal year was \$897,899 56, an amount

considerably lower than that of any previous year since separate accounts of expenditure for the maintenance of this service have been kept, and about \$300,000 less than the average annual expenditure previous to the beginning of the reorganization.

One of the chief means by which this reduction has been accomplished is the substitution of small and swift light-draught steamers and small sloops for the larger steamers and unserviceable schooners formerly in use, a change which, through the greater speed of the new vessels, their ability to navigate bays, inlets, bayous, and other waters inaccessible to the old ones, and their especial adaptation for rendering assistance to distressed vessels, has greatly enhanced the usefulness of the service.

The revenue vessels designated by the President for winter cruising, under the act of December 22, 1837, were especially serviceable in the humane work of assisting vessels in distress during the last winter. Throughout the month of February the marine columns of the principal commercial newspapers contained daily accounts of such relief administered to suffering vessels.

The general services performed by revenue vessels during the last fiscal year may be summarized as follows:

Number of vessels in distress assisted	195
Number of lives saved	
Number of vessels seized or reported for violation of law	1,245
Number of vessels boarded and examined	22,225
Number of miles sailed	198, 117

Besides the above, various services of a special nature have been rendered, such as conveying outfits and supplies to life-saving stations, and assisting the operations of the Navy.

A comparison of the foregoing exhibit, with the following statement of services performed by the revenue vessels during the ten years preceding the reorganization, strikingly illustrates the relative advancement of the service in efficiency.

Statement of services performed by revenue vessels during the period from 1861 to 1870, inclusive.

	Vessels in distress as sisted.	Lives saved.	Vess'ls seized or reported for violation of law.		Miles sailed.
Total during ten years. Average	1, 218	187	1, 163	132, 988	1,510,651
	122	19	116	13, 300	161,065

There have been added to the fleet during the year one small propeller of about thirty-two tons, commissioned for duty in the harborand bay of San Francisco, and two sloops which do duty as revenue cruisers on the Atlantic coast, and, at the same time, are specially used in connection with the life-saving service. Plans and specifications have also been prepared, and proposals invited, for the construction of a small steamer for harbor duty at Philadelphia. The steamer authorized to be built for the Pacific coast is well advanced, and it is expected will be ready to go into commission next season.

LIFE-SAVING SERVICE.

The stations in operation during the past year are located in districts Nos. 1, 2, 3, 4, and 6, embracing the line of coast from the eastern extremity of Maine to Cape Hatteras, with the exception of that portion embraced between Cape Henlopen and Cape Charles.

The cost of maintaining the service during the last fiscal year, exclusive of the expenditure for the establishment of new stations, was \$163,204 52.

It appears from the reports of the superintendents that during the season of 1874-75, (from November 1, 1874, to November 1, 1875,) 82 vessels have been driven ashore within the limits of the operation of these stations, having on board 975 souls, and valued, with their cargoes, at \$2,607,722. The life-saving apparatus was used at 44 wrecks, and 468 persons were actually brought ashore by it, while more or less assistance was rendered in most of the other cases. Of the property imperilled \$1,756,475 in value was saved. Sixteen lives and \$851,247 of property were lost. 726 days of shelter were afforded at the stations to 219 shipwrecked persons. Fourteen of the persons who perished were lost from the Italian bark "Giovanni," wrecked at Peaked Hill bar, Cape Cod, in the severest gale known to that coast for many years. This disaster is the first resulting in great loss of life which has occurred since the present system of conducting the service was established. A thorough investigation was directed to be made into the circumstances of the catastrophe, which proved that no fault attached to the service, but that the loss of life was wholly due to the fact that the persons upon the wreck were beyond the reach of any known means of assistance from shore. To extend the range of the means of establishing effective communication between the shore and stranded vessels in cases where life-boats are not available, so as to protect the few points upon our coasts where vessels are liable to strand beyond the reach of the means now in use, has been and still is an object of special endeavor.

Some of the most experienced officers connected with the service, aided by skilful officers detailed from the ordnance corps of the Army, and the best manufacturers of ordnance, are engaged upon the problem, and it is gratifying to state that their experiments give promise of success.

The following is a statement of disasters to vessels which have occurred within the field of the operations of the service since the adoption of the present system in 1871, and the results of these disasters. It should be observed that during the season of 1871–772, the service was limited to the coasts of Long Island and New Jersey, and during the seasons of 1872–774 to Cape Cod, Long Island, and New Jersey:

Total number of wrecks	185
Total number of lives imperilled	
Total number of lives saved	
Total number of lives lost	19
Total number of shipwrecked persons sheltered at the sta-	
tions	368
Total number of days' shelter afforded	1,307
Total value of property imperilled	
Total value of property saved	\$4,514,756
Total value of property lost	\$1,742,902

Six of the stations authorized to be established between Cape Henlopen and Cape Charles have been erected during the past year, and are now occupied by crews. The remaining two are nearly completed.

The houses of refuge authorized for the Florida coast and the stations for the great lakes, except Lake Superior, are being built under contract, as are also those for Point Judith and Eaton's Neck, Long Island Sound.

Sites for the stations provided for the Pacific coast and Lake Superior have been selected, and proposals for their construction will be invited at an early day. Upon the completion of these stations it is believed that our coasts will be as well protected in this manner as the interests of commerce and humanity require, and due regard for economy will justify.

For more specific information relating to this service, reference is made to Appendix A of this report.

The statistics of disasters to American shipping, required by the act of Congress of June 20, 1874, to be collected through officers of the customs, arranged in tables convenient for examination, with explanatory notes, together with wreck charts showing the localities of disasters, will be found in Appendix B.

LIGHT-HOUSE SERVICE.

The light-house establishment, which is the largest in the world, and whose charge embraces ocean, lake, and river lines of unequalled extent, steadily increases in usefulness to commercial and maritime interests. During the past year it has established seventeen light-houses and two hundred and eighty beacon lights on the Western rivers, together with twenty-one buoys. The present number of aids to navigation in the United States is 622 light-houses, 23 light-ships, 45 fog-signals, 358 day-beacons, 280 river lights, and 2,880 buoys.

Since the date of the last report the Light-house Board, in view of the fact that mineral oil is coming into use in France and England for light-house illumination, has made, through its scientific members, extensive experiments in the mineral oils of this country in order to ascertain whether a suitable material of home production can be had for this purpose. The experiments, so far as prosecuted, induce the belief that a proper mineral oil can probably be obtained from our own manufacturers, and perhaps at considerably reduced expense. Its introduction involves an entire change in the lamps now used, and if this can be effected at a reasonable cost, it is proposed to put the oil on trial in a number of light-houses of the least importance, which is the course pursued in the European light-house establishments, when, if found satisfactory, it will be tried in the larger and more important ones.

An elaborate and extensive series of experiments has also been made in regard to sound, as applied to fog-signals, with results valuable to science and the promise of much practical utility to navigators.

The most signal work of the Establishment during the past year has been the commencement of the lighting and buoyage of the Mississippi, Missouri, and Ohio rivers, in conformity with the act of Congress approved June 23, 1874. The rivers have been divided into two light-house districts, with proper officers assigned to each. The means employed for lighting have been substantial lens-lanterns, which are placed with regard to the tortuous character of the stream, at intervals of rarely more than two miles distance. Mineral oil is used, and a bright light shown in the stormiest weather. The lights are attended by men, procured at a small compensation from among the residents on the rivers, who have generally proved trustworthy. At specially dangerous points buoys have been placed as day-marks. The narrow and crooked channels of these rivers, and the presence of hidden obstructions, make their navigation at many points extremely perilous, and the best pilots cannot always avert disaster. The work of light-

ing them is reported to give satisfaction to the extensive shipping interests of the interior, passage now being practicable at all times where it was before attended with difficulty and danger. To complete the work an additional number of lights and buoys will be needed, and the appropriation for maintaining them must necessarily be increased.

A light-ship for Winter Harbor Shoal, and one for general service, appropriated for by act of March 3, 1873, are nearly completed. They are noticeable as being the strongest and largest vessels ever built for the Establishment, and as having steam fog-signals, which will be of great service to mariners.

Estimates are presented by the Board for two new steam buoy-tenders for the Atlantic coast, to replace vessels which are worn out, too small and of too little power for the service required of them, and which are constantly in need of expensive repairs. An estimate is also presented for an additional steam tender for the Pacific coast, the single one in use being insufficient for the service of that seaboard, and the frequent chartering, at high rates, of private vessels being consequently necessitated.

In its estimate for light-house supplies the Board includes a provision for the purchase of a small number of books for light-stations, especially those most remote, according to the usage of the French and English light-house establishments. A small quantity of reading matter at the light-stations, to be kept and accounted for as public property, might, it is suggested, form the nucleus for considerable donations from private sources; and the libraries so formed would conduce, as in other countries, toward making the light-keepers more contented with their isolated positions, and less disposed to absent themselves from the place of their duties, besides exerting a general good influence.

COAST SURVEY.

The report of the Superintendent of the Coast Survey shows that during the past year special activity was maintained in that work. In each of the seaboard States of the Atlantic and Pacific satisfactory progress is reported in shore-line surveys and extensions of coast to-pography; in additional determinations of latitude and longitude; and in researches relative to tides, currents, and the magnetic elements. The hydrography of the coast approaches has been advanced by means of the provision made by Congress for several steam-vessels. Among special records of the year are those brought by experienced astronomers in the service from stations to which they had been assigned, by government authority, to observe the late transit of Venus.

XLVI REPORT OF THE SECRETARY OF THE TREASURY.

The inception of a systematic survey of the Atlantic, Gulf, and Pacific coasts of the United States, at a time when requirements for commerce and navigation were not as they now are, but largely prospective, has been fully justified by results which present striking proof of the forethought of those who projected the system. Within a single generation the results of the work are such that representative foreigners may compare, with their own, charts of all our chief and secondary harbors, unsurpassed in either precision or style. These local charts, however, represent only the most important areas in a geodetic survey, which has been prosecuted from the outset with the utmost care, and by the best methods. That the system for defining the approaches of our extensive coasts, wisely adopted originally, and sustained by Congress at the present time, is now recognized as yielding also a sure basis for the future action of States of the Union in regard to their final surveys and maps, affords additional evidence of the soundness of the policy that has marked successive administrations in our first century as a nation.

At certain localities along the seaboard, particularly about the ports, light-house sites, and coast defences, maps of great precision are requisite in public works. For ground of less importance, details are generalized in the representation. But the invisible sea bottom of the coast holds dangers so widely distributed, and so great, that no generalization is admissible. The interests of commerce and the safety of navigation alike require the exact development of all the unseen ground over which vessels may pass, and precise knowledge of each separate danger. Danger-marks, as of hidden rocks for example, insignificant though they may be in pictorial effect on maritime charts, are often found to be anything but insignificant, in the relation which they bear to other developments, as means for the safety of life and the preservation of property.

Information of much importance is obtained by the survey concerning features on land where of necessity stations are occupied. For the great undertaking now in progress, to increase the depth of water on one of the bars of the Mississippi, many details of the work rest on the accuracy of maps, charts, and computations resulting from a survey ordered by the last Congress. Tables, computed in the Coast Survey office, are now regularly issued in print, to show for a year in advance the hours of high and low water, and the height of tide in each of our seaports. The variation of the compass at places in the interior—which variation for extended periods of time is known

only by reference to observations recorded at points near the coast—is now a subject of frequent inquiry.

Within the present year information has been supplied from the archives of the survey bearing on unsettled boundaries between some of the older States, on the action of legislative committees in regard to natural and artificial resources in navigation, on decisions concerning questions in admiralty, on projects for defence, on sites for the construction of light houses, and on plans for the preservation of harbor channels and anchorages.

All of which sufficiently manifests alike the national character of the work and the interest and importance attaching to its progressive and its ultimate results.

MARINE-HOSPITAL SERVICE.

As provided by the act of March 3, 1875, "to promote economy and efficiency in the marine hospital service," a seamen's time-book has been issued, but it is yet too early to state definitely the effect of its introduction on the collection of hospital dues.

Hospital relief is now extended to certain seamen, who, previous to the passage of said act, were excluded from the benefits of the service. This service now furnishes care and treatment to foreign seamen, sick and destitute American seamen returned to the United States from foreign ports by United States consular officers, sick and disabled seamen belonging to vessels of the Engineer Corps of the Army, and to vessels of the Navy where no other provision has been made for them, and to seamen of the vessels of the Coast Survey and Lighthouse Service, while insane patients of the Marine-hospital Service are admitted to the Government Hospital for the Insane.

No considerable repairs have been made to the marine-hospital buildings for several years, and as none of the old hospitals can be so modified as to answer the requirements of the present state of knowledge concerning hospital construction, any large outlay on them is deemed unadvisable. Experience would seem to indicate that extensive and costly alterations and repairs require to be frequently renewed, and, therefore, the erection of comparatively inexpensive pavilion wards, in accordance with the most approved plans of recognized authorities on this subject, is deemed desirable.

The old marine-hospital building and grounds at Pittsburg, Pa., were sold during the year, under the act of June 22, 1874, for \$37,167 79, and a new site purchased for \$30,000. The erection of the new hospital at that place has not been commenced, however, owing to the fact that

XLVIII REPORT OF THE SECRETARY OF THE TREASURY.

the amount (\$20,550 96) realized from the sale of a portion of the grounds in 1870, is not available for this purpose without the action of Congress.

The unusual amount of suffering and disease among seamen and sailors who were exposed to the severe cold of the last winter, caused a marked increase in the demand for relief from the marine-hospital fund, and a larger number of persons enjoyed the benefits of the service than in any previous year. Fifteen thousand and nine sick and disabled seamen were treated during the year, and the aggregate number of days' relief furnished is four hundred and five thousand six hundred and sixty-five. The total expenditure for the year was \$404,390 60, and the amount of hospital dues collected \$338,893 78.

STEAMBOAT-INSPECTION SERVICE.

The Supervising Inspector General of Steam-Vessels reports the following matters of interest connected with this service for the fiscal year ending June 30, 1875:

Number of officers employed in the service	103
Number of steam-vessels inspected during the year	
Aggregate tonnage of steam vessels inspected	
Number of officers licensed	14,571

The number of lives lost by various accidents to steam-vessels is as follows:

By explosion or accidental escape of steam	51 475
By steamers burned By collisions	475 17
By snagging, wreck, and founder	64
Total number of lives lost	607

Of this number four hundred and one were Chinese passengers, lost by the burning of the American steamship "Japan" on the coast of China, December 17, 1874, leaving the total of other losses during the year but 206, which is an unusually small number.

The gross receipts from the inspection of steam-vessels		
and officers licensed are	\$260,944	75
Disbursements in payment of salaries, travelling and inci-	.,	
dental expenses of inspectors	212,392	02
	,	

This service is generally in a highly efficient and satisfactory condition, and it is believed that, under the operation of the laws for this purpose, a degree of safety to life on steam-vessels has been secured equal to all reasonable anticipation.

It is recommended that provision be made for the annual meeting of the Board of Supervising Inspectors in September of each year, at such place as the Secretary of the Treasury shall designate, instead of on the third Wednesday of January at the city of Washington, as now provided by section 4405, Revised Statutes.

THE REDEMPTION AGENCY FOR NATIONAL BANKS.

There have been redeemed, under the act of June 20, 1874, circulating notes of national banks amounting to \$130,322,945. Of this amount, \$15,213,500 were forwarded to the respective associations by which the notes were issued, and \$115,109,445, unfit for use, delivered to the Comptroller of the Currency for destruction. The aggregate expense of this redemption was \$290,965 37, each bank paying its share thereof in proportion to its circulating notes so redeemed.

At the commencement of the current fiscal year the division organized under the above act came, in accordance with the 3d section of the act of March 3, 1875, under the direction of the Secretary, having been, prior to that time, attached to the Treasurer's office, and no specific authority given the Secretary over its operations.

BUREAU OF ENGRAVING AND PRINTING.

In the report submitted by the Chief of this Bureau will be found a sketch of the history of this important branch of the service, with a statement in detail of its operations for the past fiscal year.

From this report it will be seen that the organization of the Bureau is such, as respects both its mechanical appliances and its methods of administration, as to meet all the requirements of the government. This Bureau is charged with functions closely affecting the public credit and the integrity of the national currency, and its management for many years has been most satisfactory, whether reference be had to its usefulness and efficiency or to the faithfulness of the officers directly in charge.

With the use of a special and distinctive paper, manufactured under the supervision of the Department, and the system of checks and counter-checks, enforcing the accountability of each officer and employé connected with the business of engraving and printing the public securities, it is believed that the highest practicable measure of security has been attained, and that the government is fully protected against unauthorized issues. Discrepancies rarely occur, and when they do

IV F

are readily and easily corrected. The Bureau is thoroughly equipped with all requisite machinery of improved patterns, and has a corps of skilled artisans whose engraved and mechanical work shows a high degree of excellence.

Pursuant to the direction of the act of the last Congress, the work of preparing United States and national bank notes has been divided between the Bureau of Engraving and Printing and such responsible, capable, and experienced bank note companies and engravers as would contract for the work at the lowest cost to the government, and at prices not greater than those theretofore paid for the same class of work.

PUBLIC BUILDINGS.

The condition of the public buildings under the charge of the Supervising Architect may be said to be generally satisfactory. The large amount of work imposed upon that officer renders it impracticable to proceed with the construction of all buildings authorized by law as rapidly as demanded by local communities in which they are respectively situated, and necessarily delays the beginning of some. The suggestion of the Supervising Architect, touching the desirability and expediency of causing plans for public buildings to be prepared by architects whose whole time is not required to be given to supervision of those already in process of construction, merits the attention and consideration of Congress.

It is desirable that all buildings constructed for public use should be of the most durable material, and conveniently adapted to the purposes for which they are designed. This can be best accomplished by bringing into requisition, by competitive means, the best architectural talent of the country.

It is, therefore, recommended that Congress make provision for carrying into effect the modification indicated by the Supervising Architect in this regard.

The Secretary repeats the suggestion of his last report, that the present is not a favorable time for making large appropriations for public buildings.

CLAIMS FOR PROCEEDS OF COTTON.

In the report of December last, reference was made to the action of the Department in the disposition of claims for the proceeds of cotton, under the provisions of the fifth section of the act of May 18, 1872.

The rule of decision therein stated has been strictly adhered to, and

all claims have been rejected which did not appear, from satisfactory evidence, to come within the plain letter of the statute.

The number of claims filed under this act was 1,336, which have been acted on as follows:

Allowed	39
Rejected	1, 181
Dismissed for want of jurisdiction	96
Under examination	20

The amount paid out on the claims allowed, as aforesaid, is \$180,358 43.

The claims now under examination will be disposed of in a short time. Upon their decision all proceedings under the act will be finally closed.

The following table contains a summary statement of the proceeds of captured and abandoned property covered into the treasury, and the amounts that have been awarded and paid therefrom under the several acts of Congress:

Proceeds of captured and abandoned proj	perty covered		
into the treasury	.	320, 910, 656	44
Awarded to claimants by Court of Claims		, ,	
under the act of March 12, 1863 \$	11.348.247 73	•

	_		

CLAIMS AGAINST THE GOVERNMENT.

The state of the law relating to the examination and payment of certain classes of claims against the Government should receive the attention of Congress.

The Third Auditor and Second Comptroller, accounting officers of the Treasury Department, are required by law to adjudicate and settle claims upon the United States for the value of property lost or destroyed while in possession of the Government, either by contract or impressment, and claims for stores received or taken and used by the The power conferred upon these officers is an anomalous one. Before the year 1816 claims of this nature were presented directly to Congress, and, when found to be just and proper, were provided for by special legislation. By the act approved April 9, 1816, provision was made for payment to owners of property lost or destroyed in the war between the United States and Great Britain. Pursuant to this act, a commissioner was appointed by the President, with the advice and consent of the Senate, whose duty it was to decide all cases arising under the act, and upon his adjudication the amount found due the claimant was paid out of the Treasury. By an amendment to this act, made the next year, the commissioner was required to report the facts in each case to Congress, to the end that provision might be made for the relief, of the claimant, and all cases in which the amount allowed exceeded two hundred dollars were required to be revised by the Secretary of War, and confirmed by him before payment.

By the act approved April 20, 1818, all claims under the act of 1816 and its amendment not acted on by the commissioner were transferred to the Third Auditor, who, in his adjudications, was to be governed by the rules prescribed for the commissioner. Again, in 1822 it was enacted that the accounting officer of the Treasury Department should audit and settle, without limitation, claims of officers, volunteers, and other persons in the campaign against the Seminole Indians, under rules to be prescribed by the President. When, however, in 1833, Congress passed a similar act for the settlement of claims for property lost in expeditions against the Indians on the frontier of Illinois and Michigan, the Third Auditor of the Treasury was required to examine, allow, and pay them, whatever the amount, as similar claims were required to be allowed and paid under the acts of 1816 and 1817.

But again, by the act of June 30, 1834, if a claim of this character exceeded two hundred dollars, instead of deciding the same, the Third Auditor was required to report the whole proof to Congress. By the subsequent acts of January 18, 1837, March 2, 1847, and March 3, 1849, all of which were enactments in relation to property lost or destroyed in the military service of the United States, the Third Auditor had the power to decide and pay, without revision, under rules prescribed by the Secretary of War, with the assent of the President, all claims, whatever the amount. By an amendment to the act of 1849, made July 28, 1866, the Third Auditor was required to transmit his adjustment to the Second Comptroller for his decision.

By the act of July 4, 1864, as amended by the acts of February 21,

1867, December 23, 1869, and March 3, 1871, and section 300 appendix to Revised Statutes, the jurisdiction of the Court of Claims was declared not to include any claim against the United States growing out of the destruction or appropriation of, or damage to, property by the Army or Navy engaged in the suppression of the rebellion, but claims of loyal citizens in States not in rebellion for quartermaster stores and subsistence received or taken for the use of the Army are to be reported to the Third Auditor by the Quartermaster General or Commissary General, with a recommendation for settlement.

While no uniform rule has been adopted in the settlement of these claims, it is not easy to perceive the reasons which induced Congress to depart from that first established in the act of 1816. But, whatever may have been the reason, experience has shown that the accounting officers of the Treasury are not the proper persons to have the duty of passing upon such claims. In almost every case these settlements require an investigation which properly belongs to a court of law. In practice, this investigation is often not made either by the Third Auditor or Second Comptroller, but is necessarily intrusted to subordinates not accustomed to consider and weigh evidence. Thus great injustice is done the Government by the allowance of claims upon evidence taken ex parte, which would not be admissible in a court of law organized for the ascertainment of truth.

The act of March 30, 1868, reproduced in section 191, Revised Statutes, makes it at least doubtful whether the Secretary of the Treasury has power to prevent this evil, unless he should take upon himself the questionable responsibility of refusing to sign warrants for the payment of adjudicated claims.

Claims against the Government have been permitted to sleep until the officers connected with the transactions out of which they arose have died, or gone out of service, and then been revived and supported by *ex parte* testimony of such character as to cause their allowance by the accounting officers.

As a partial remedy for the evil, it is recommended that all such claims be barred if not presented within a specified time. There is, practically, no limitation now. It will be seen that the act of 1816 barred claims not presented within two years. Perhaps this period is too short. Six years is adopted in the legislation of most of the States as the time in which actions on simple contracts are barred. Claims against the Government should not be valid for a longer time than this, and there are strong reasons for requiring them to be presented in a shorter time. But a better and more effectual remedy for the

evil would be the enactment of a law requiring all such claims to be presented in the United States circuit courts of the districts where they arise, by proceedings in the nature of suits against the United States, under such limitations and restrictions, both as to the right to institute the suit and as to the mode of procedure, as Congress may see proper to impose.

It may be said that such a course would be at variance with the idea that the sovereign should not be subject to suit. The United States, as a sovereign power, however, has practically subjected itself to suit by the legislation already cited, as well as by the establishment of the Court of Claims. The theory of exemption from suit has been long since abandoned in England by the allowance of the petition of right in any one of the superior courts of common law or equity at Westminster. Besides, no just government can now afford to withhold from its citizens the right to present and prosecute their proper demands upon it in some form or other; and it is better both for the government and the honest claimant that the claim should be passed upon by a competent tribunal, armed with power to ascertain the truth and to prevent fraud. The advantage to the government of such a course is manifest. Claims, instead of being paid on partial and ex parte testimony, would be subjected to thorough examination by a court and jury, and the interests of the government would be protected by its attorneys.

The highest test of the credibility of a witness consists in cross-examination by opposing counsel in the presence of the tribunal which is to weigh the evidence.

Experience has shown that, as a rule, no claim subjected to the scrutiny of a court in the vicinity where it arises is likely to be sustained if it is unfounded in fact, while, on the contrary, such claims are often carried through the Department without attracting the attention of those who either know them to be false or have the means of proving them to be so, and not until they are made public, after payment, is the evidence of their fraudulent character produced. It has happened that claims have been passed by the accounting officers, which were subsequently ascertained to be fraudulent and fictitious, and the government has felt called upon to proceed by civil action to recover the money, and to institute criminal prosecutions against parties engaged in the fraud.

In England, by an act passed in 1860, to amend the petition of right against the government, it is provided that, so far as applicable, the course of procedure in the trial of suits between subject and subject should be extended thereto.

Trial in the vicinage is no less important to the government than to the honest claimant. Requiring a citizen from a distant part of the Union to come to Washington and bring his proofs with him to try his claim against the government, often operates oppressively on him, and is without corresponding benefit to the government. It is difficult to perceive why such a case should not be tried in the vicinity where it arises, and where, as has been before said, if tried with the publicity attending a jury trial, with the witnesses present to undergo cross-examination, the establishment of false and fraudulent claims would certainly be rendered more difficult. The government would be placed at no disadvantage by the remoteness of the place of trial from the departments where the public records are kept, for the statute already makes certified copies of such records competent evidence, and they could as well be sent to distant parts of the country as to the court sitting in Washington City. In rare and exceptional cases, the production of original records may be required, but these could be sent in charge of a proper custodian.

REPORTS OF BUREAU OFFICERS.

The reports of the heads of bureaus are herewith transmitted, and referred to as containing statements and information of the business of the Department more in detail than could properly be embodied in this report. The Secretary gratefully acknowledges his indebtedness to the officers of the Department generally for the zeal and fidelity with which they have discharged their duties.

B. H. BRISTOW,

Secretary of the Treasury.

To the Honorable

THE SPEAKER OF THE HOUSE OF REPRESENTATIVES.

Table F.-Statement of outstanding principal of the public debt, &c.-Continued.

Year.	Amount.	_
1870	\$2, 480, 672, 427 2, 353, 211, 332 2, 253, 251, 328 2, 234, 482, 993 2, 231, 600, 488 22, 232, 284, 531	81 32 78 20 43 95

^{*}In the amount here stated as the outstanding principal of the public debt are included the certificates of deposit outstanding on the 30th of June, issued under act of June 8, 1872, amounting to \$31,-730,000, in 1873; \$58,760,000 in 1874, and \$56,415,000 in 1875, for which a like amount in United States notes was on special deposit in the Treasury for their redemption, and added to the cash-balance in the Treasury. These certificates, as a matter of accounts, are treated as a part of the public dobt, but, being offset by notes held on deposit for their redemption, should properly be deducted from the principal of the public dobt in making comparison with fermer years.

funded loan of 1881.							
The act of July 14, 1870, (16 Statutes, 272,) authorizes the issue of \$200,000,000 at 5 per centum, \$300,000,000 at 4½ per centum, and \$1,000,000,000 at 4 per centum, principal and interest payable in coin of the present standard value, at the pleasure of the United States Government, after ten years for the 5 per cents; after fifteen years for the 4½ per cents; and after thirty years for the 4 per cents; these bonds to be exempt from the payment of all taxes or duties of the United States, as well as from taxation in any form by or under State, municipal, or local authority. Bonds and compons payable at the Treasury of the United States. This act not to authorize an increase of the bonded debt of the United States. Bonds to be sold	10 years	May 1, 1881	5 per cent	Par	\$500, 0C0, 000 00	\$412, 306, 450 00	\$412, 306, 450 00
at not less than par in coin, and the proceeds to be applied to the re- demption of outstanding 5-20s, or to be exchanged for said 5-20s, par for par. Payment of these bonds, when due, to be made in order of dates and numbers, beginning with each class last dated and num- bered. Interest to cease at the end of three months from notice of intention to redeem. The act of January 20, 1871, (16 Statutes, 399,) increases the amount of 5 per cents to \$500,000,000, provided the total amount of bonds issued shall not exceed the amount originally authorized, and authorizes the interest on any of these bonds to be paid quarterly.							
CERTIFICATES OF DEPOSIT.					`		
The act of June 8, 1872, (17 Statutes, 336,) authorizes the deposit of United States notes without interest by banking associations in sums not less than \$10,000, and the issue of certificates therefor in denominations of not less than \$5,000; which certificates shall be payable on demand in United States notes at the place where the deposits	Indefinite:	On demand	Noue	Par	No limit	137, 675, 000 00	58, 415, 000 0
were made. It provides that the notes so deposited in the Treasury shall not be conuted as a part of the legal reserve, but that the certificates issued therefor may be held and counted by the national banks as part of their legal reserve, and may be accepted in the settlement of clearing-house balances at the places where the deposits therefor were made, and that the United States notes for which such certificates were issued, or other United States notes of like amount, shall be held as special deposits in the Treasury, and	,						,
used only for the redemption of such certificates.

APPENDIX A.

THE LIFE SAVING SERVICE.

The sea and lake coasts upon which the establishment of life-saving stations is authorized by law are divided into districts, as follows: District No. 1 embraces the coasts of Maine and New Hampshire; district No. 2, the coast of Massachusetts; district No. 3, the coasts of Rhode Island and New York, (Long Island;) district No. 4, the coast of New Jersey; district No. 5, the coasts of Delaware, Maryland, and Virginia, from Cape Henlopen to Cape Charles; district No. 6, the coasts of Virginia and North Carolina, from Cape Henry to Cape Hatteras; district No. 7, the coast of Florida; district No. 8, the coasts of Lakes Ontario and Erie; district No. 9, the coasts of Lakes Huron and Superior; district No. 10, the coast of Lake Michigan; and district No. 11, the Pacific coast.

The stations in operation during the past year are located in districts Nos. 1, 2, 3, 4, and 6, and are 104 in number. The reports of the superintendents show that during the past season (from November 1, 1874, to November 1, 1875) 82 vessels were driven ashore upon the line of coast protected by these stations, having on board 975 persons, and valued, with their cargoes, at \$2,607,722. Twelve of the disasters occurred in district No. 1, 20 in district No. 2, 17 in district No. 3, 25 in district No. 4, and 8 in district No. 6.

At 44 wrecks the life saving apparatus was used, and 468 persons were rescued by it, and in most of the other instances assistance of some kind in succoring the shipwrecked and in saving property was rendered by the service. Of the lives imperiled, 959 were saved; \$1,756,475 of property was saved, and \$851,247 was lost, the number of vessels and cargoes totally lost being 14, and the number of lives lost 16. The number of shipwrecked persons sheltered at the stations was 219, and the number of days' shelter afforded 726.

A tabular statement of the foregoing disasters, giving the name and character of the vessel in each case, the exact locality of the disaster, the loss attending it, and all other desirable particulars, is appended.

The cost of maintaining the service during the year, exclusive of the

expenditure for establishing new stations, was \$163,204.52.

Of the persons lost, as noted above, one of a badly frost-bitten crew, rescued from the schooner John Rommell, Jr., wrecked on the coast of Cape Cod, perished from cold after reaching the shore, the rest of the crew being restored with much difficulty. Another was lost from the steamer Vicksburg, which was driven ashore near station No. 21, on the Long Island coast, on the night of February 25, 1875. The crews of stations 21 and 22 landed the passengers and crew of the steamer, except the cook, who was drowned in an attempt to get ashore before assistance arrived. It must be confessed that it is probable this life would have been saved had the keeper and crew of the station within whose precinct the disaster occurred not been remiss in the exercise of the vigilance required of them. The occurrence was fully investigated, and it was found that the keeper had neglected to send out his patrols after 10 o'clock on the night in question, because, as he alleged, the wind

blowing off shore, he thought there was no danger, and his men were wearied with the unusual watching which the two preceding days and nights of dense fog had exacted. The vessel stranded soon after the patrol was withdrawn, and the people on board remained without assistance, exposed to imminent peril, until near 4 o'clock in the morning. The excuse of the keeper could not be accepted as satisfactory, nor could the praiseworthy conduct of the crew, after the accident became known to them, atone for their recreancy to the humane interests intrusted to them, in having availed themselves of the permission of the keeper to omit an indispensable duty. Both keeper and crew were therefore summarily dismissed, and, as an admonition to all others in the service, the order of dismissal was read to the crews of all the stations.

The other fourteen were lost from the ill-fated Italian bark Giovanni. at Peaked Hill Bar, Cape Cod, in the terrible storm that prevailed on that coast during the 3d and 4th of March, 1875. One only of those on The wreck of the Giovanni is the first disaster board was saved. resulting in marked loss of life which has occurred within the limits of the operation of the life-saving service since the organization of the present system in 1871. It excited much interest at the time, and some erroneous statements regarding the management and effectiveness of the life-saving apparatus on that occasion became current. It is gratifying to learn, however, from the report of the investigation which was ordered and made into all the circumstances of the sad occurrence, that the men of the service conducted themselves with great fidelity and heroism, and that the loss of life was solely due to the fact that the vessel had stranded so far from shore that the unfortunate people on board were beyond the reach of any human aid. No boat could live in the sea then raging, and the wreck lay beyond the range of shot and line. The testimony shows that no effort was omitted which offered a ray of hope, and that the mortar and ammunition employed were in perfect condition and as effective as any in use. The report of the investigation is

appended.

There are two or three points upon the Atlantic and lake coasts where large vessels are liable, as in the case of the Giovanni, to ground outside of the reach of any mortar or rocket apparatus invented. ing the past summer a series of experiments, under the direction of Captain Ottinger, of the revenue-marine service, who has heretofore invented some valuable life saving apparatus, has been conducted with the view of securing, if possible, a greater range with the shot-line. Captain Merryman, inspector of life-saving stations, has been also similarly engaged, assisted by the board of experimental gunnery of the Ordnance Corps of the Army. Captain Ottinger has succeeded in obtaining a considerable increase of range with a somewhat heavier mortar and a smaller line than those now in use. No opportunity has yet occurred for testing in actual service the practicability of his improve-The points vet to be settled are whether the mortar is sufficiently light to admit of its ready transportation along the beach, and whether the line with which the greater range has been obtained is large enough to be easily handled by the people on a wreck, and strong enough to draw the hauling-lines of the life-car through the water against the force of swift currents and heavy surf. In view of the difficulty experienced in transporting the apparatus from the nearest station to the scene of the wreck of the Giovanni, and to further provide for future disasters in that dangerous locality, the inspector recommended the erection of a relief boat house there, to contain a boat, mortar, life-car, and some other of the heavier portions of the life saving apparatus. This recommendation has been acted upon, and the building will soon be completed. It is the intention to place there for trial during this winter the new mortar of Captain Ottinger, so that in case of another disaster at that point it can be made available on the spot, while if a wreck should occur within a reasonable distance of the place the practicability of its ready transportation along the beach may be tested. Captain Merryman and the officers of the Ordnance Corps have not yet completed their labors, but they have good hopes of succeeding in producing means of effecting practicable communication with vessels which may be driven ashore at any point on our coast in any weather.

That no means might be omitted to avert a repetition of the catastrophe at Peaked Hill Bar, a recent German invention for extending the range of the shot-line, which is highly commended, has also been

purchased, and is now on its way here.

To illustrate the efficiency of the present system of administering this service, the following statement of disasters to vessels which have occurred within the scope of its operations since its adoption in 1871,* and of the results of these disasters, is subjoined:

Total number of disasters Total number of lives imperiled. Total number of lives saved Total number of lives lost Total number of shipwrecked persons sheltered at the stations. Total number of days' shelter afforded Total value of property imperiled. Total value of property saved.	2, 583 2, 564 19 368 1, 307 \$6, 293, 658
Total value of property imperiled. Total value of property saved. Total value of property lost	\$4,514,756

This is a record unsurpassed by that of any life-saving establishment in the world. The efficiency of the present system will be better realized, however, when a contrast is instituted with the service as it

existed prior to the date of its re-organization in 1871.

The earliest life saving stations on our shores were established in 1850 on the coasts of New Jersey and Long Island. Small houses were erected at selected points, and furnished with surf-boats, mortars, shotlines, and other apparatus, among which was the life car invented by Captain Ottinger. There appears to have been no organization, nor was there any systematic record of the operations of the service at this time. Upon the occasion of wrecks, the only aid rendered was by the extemporized efforts of such people as could be hastily mustered from the scant and dispersed population in the vicinity of the stations, and as this was not always available, fatal disasters were sadly frequent.

The wreck of the steamship Powhatan, on the New Jersey coast, in 1854, in which over three hundred lives were lost, led to some improvement in the service. Twenty-six stations on the coast of Long Island, and fourteen on the New Jersey coast, were established, and a superintendent was appointed for each coast, and a keeper for each station, but no provision was made for crews; a serious omission, since experienced and courageous surfmen are of prime necessity, especially upon those wastes of marginal sand which are almost destitute of inhabitants, and upon which, consequently, crews cannot be improvised. The service continued in this inchoate and unorganized

[&]quot;It should here be observed that, during the four years embraced, the operations of the service have been limited as follows: Season of 1871-72, to the coasts of Long Island and New Jersey; seasons of 1872-74, to the coasts of Cape Cod, Long Island, and New Jersey; season of 1874-75, to the coasts of Maine, New Hampshire, Massachusetts, Rhode Island, Long Island, New Jersey, and a portion of Virginia and North Carolina.

condition until 1871, except that in 1870 a partial improvement was made by employing six surfmen at alternate stations for three months

in the year, but only on the coast of New Jersey.

One of the marked advantages of the present system is in the complete and accurate statistics of the service, resulting from the keeping of careful and systematic records. Nothing of the kind was attempted prior to 1871, and the account of results is consequently meager and incomplete in comparison. The figures accessible, however, establish a striking proof of the superiority of the present service. For example, during the twenty years from 1850 to 1870, the number of vessels known to have been wrecked on the shores of Long Island and New Jersey is 272, an average of 13 per annum; while the four years, from 1871 to 1875, give a record of 118 wrecks, an average of 29 per annum. number of lives lost from the wrecks known to have occurred during the first-named period is 512, an average of over 25 per annum, while from the wrecks of the last four years only 4 lives were lost, an average of 1 per annum. Here, it will be seen, the average of life lost during the period covered by certain knowledge is strikingly less than for the contrasted term, whose average as given would certainly be increased if we were in possession of fuller information.*

But the thorough and comprehensive organization of the service constitutes its chief advantage and involves the secret of its efficiency. Before 1871, although many lives were saved through its instrumentality, it could hardly be termed a service, being almost destitute of organization. It is now under the government of a code of rules and regulations, carefully framed with reference to all its requirements and exigencies. The stations, wherever practicable, are located within convenient signaling distance of each other, and the beach between them is regularly patrolled, day and night, by surfmen provided, for nocturnal use, with beach-lanterns and also with red Coston hand-lights, (a species of Bengal light,) which they kindle immediately when a wreck or a vessel in distress is descried in the darkness, and with flags for use in the day-time. A code of signals with these flags and lights has been devised, so effectual that all necessary communication for initiating aid for a wrecked or endangered vessel can at once be exchanged, and so simple that the rudest intelligence can find no difficulty in mastering At a number of the stations, also, the signal-service of the Army has established its semaphores and telegraphs, thus facilitating and extending intercommunication. During the severe portion of the year, for a period of four to six months, crews of surfmen, selected for their hardiness and skill, are now regularly employed, the term of their employment being by law capable of such extension, in the discretion of the Secretary of the Treasury, as the severity of the season may require. In the summer time, when wrecks more rarely occur, and the surfmen, generally fishermen, are away at sea, provision for casualty is made by the employment of substitutes, who receive a stipend for each occasion upon which they render assistance. Another valuable feature is the institution of strict examinations for all its employés. The superintendents who are in charge of the respective districts are required to be of exemplary character, in the vigor of health and manhood, able to read, write, and keep accounts, familiar with the coast to which their duties appertain, and conversant with the management of life boats and life-

^{*} In the 512 lives stated as known to have been lost during the 20 years from 1850 to 1870, from the 272 wrecks of which information has been obtained, the crews of two vessels, from which all on board were reported lost, are not included.

⁴ F

saving apparatus. The keepers, who are charged with the special government and care of the stations, must be of good character, able to read, write, and have a more thorough and practical knowledge of the management of the boats and apparatus than the superintendents, being captains of their respective crews. The surfmen are examined in regard to their physical capacity and their skill in handling boats in dangerous seas.

At all the stations ample provision is now made for affording shelter and succor to such victims of marine disaster as may require them. The scientific means for resuscitating persons apparently drowned are reduced to a formula, and made part of the practice of the keepers of the A thorough system of inspections, presided over by officers of nantical experience, is established, whereby the stations are maintained in the highest state of effectiveness, the boats and apparatus being rigorously examined, and the men periodically drilled in all the maneuvers practiced in effecting communication with wrecks and rescuing imperiled persons therefrom. Careful records are required to be keptof all noteworthy occurrences at each station, and forwarded, in the form of reports, to the Department; all public property, and the receipts and expenditures, both of funds and materials, are subjected to rigid accountability; and especial attention is given to the collection of accurate statistics of all wrecks and marine disasters on our coasts, with the view of making our knowledge of this subject as complete as possible.

It is unnecessary to extend the comparison between the past and present efficiency of this service. Under its later operation the shores of Cape Cod, New Jersey, and Cape Hatteras, formerly the dismay of mariners and ship owners, have been almost wholly shorn of their terrors. It is believed that its usefulness may still be enhanced by extending the scope of its work in another direction, and by adding to its present functions those of a coast guard for the protection of the revenue against smuggling.

The present life-saving stations and those in process of construction, when completed, will occupy, at brief intervals, a large portion of the line of the Atlantic coast, upon which, as previously stated, a constant patrol is kept from four to six months in the year, while a degree of watchfulness is exercised from the stations during the remaining time. It is thought that considerable smuggling and picarooning might be prevented along the coast if the keepers of the stations were vested with the powers of inspectors of customs. Instances have recently occurred in which, to protect the interests of the Government, it has been necessary to send inspectors, on the occasion of wrecks, great distances at considerable expense.

During the past year six new stations have been erected in district No. 5, and the two others authorized by law are in process of construction, to be completed by January 1, 1876. The district has been organized, and the six stations completed are occupied by their respective crews. Contracts for the construction of all the stations authorized to be established by act of June 20, 1874, upon Lakes Outario, Erie, Huron, and Michigan, except at Buffalo and Grosse Point, have been entered into, and the building of them is rapidly progressing, as also the houses of refuge authorized for the coast of Florida.

The stations to be established at Point Judith and Eaton's Neck, Long Island Sound, for which appropriation was made by act of March 3, 1875, have also been contracted for, and are to be completed before the first of June next.

Sites have been selected for the stations provided for on the Pacific coast and Lake Superior. Some difficulty has been experienced in obtaining the proper titles to these sites, which has caused some delay in prosecuting the work of construction. The plans and specifications for the buildings are prepared, and proposals for the erection of those for the Pacific coast have been invited. Those for Lake Superior will be erected next season.

The following statement shows the localities of the several life-saving

stations and houses of refuge now authorized by law:

With all the foregoing stations completed and in operation, it is believed the dangerous portions of our coasts will be well protected, and the limits of the service as extended as the demands of humanity and the needs of commerce require.

The medals authorized by act of February 24, 1873, to be presented to the men who rescued lives on the occasion of the Metis disaster, have been presented to the persons named in the act, with the exception of one who has deceased. A medal has also been presented, in accordance with the joint resolution of Congress of June 20, 1874, to John Horn, jr., of Detroit, Mich., for rescuing men, women, and children from drowning in Detroit River.

Dies have also been made for the two classes of life saving medals authorized by act of June 24,1874. There have been applications received on behalf of thirty-two persons for these medals, but the investigations into the merits of the several claims have not been completed, and no medals have yet been awarded.

assistance offered, but not required.

Office of the Inspector of United States Life-Saving Stations, No. 16 Broadway, New York, March 20, 1875.

SIR: In obedience to your instructions of the 9th instant, (S. I. K.,) directing me to proceed to Cape Cod and investigate the circumstances connected with the wreck of the Italian bark Giovanni, on the 4th instant, and to transmit to the Department, in writing, the result of my investigation, I have the honor to submit the following report:

I reached Provincetown, Mass., on the afternoon of the 12th instant, and proceeded at once to Life-saving Station No. 6, "Peaked Hill Bar," three miles distant, accompanied by Superintendent Sparrow. I examined, under oath, Keeper Atkins and the six surfmen belonging to the station. On the following day I visited Station No. 7, and examined Keeper Worthen and his crew. The depositions of the keepers and two of the surfmen, the former verified under oath by all the surfmen of each station, are herewith transmitted.

I met several of the citizens of Provincetown on the evening of the 12th, and was informed that no blame attached to the men belonging to the two stations. It was generally agreed that they were promptly at hand when the vessel struck, and had used every exertion within their power to rescue the crew of the Giovanni. I did not, therefore, consider it necessary to obtain the sworn testimony of citizens, but confined my inquiry to the particulars of the disaster by an examination of the keepers and surfmen, by personal observation of the locality, and by practical tests of the mortar apparatus, regarding the efficiency of which I had heard doubt freely expressed. In questioning the men belonging to the stations separately, I was unable to discover any serious discrepancies in their testimony, and accordingly reduced to writing only the depositions of the keepers and two surfmen, which were afterward read respectively to all the surfmen and substantiated by them. There is no material difference in the depositions, except as to points of time and distance, which, under the circumstances, could not be expected to be accurately noted by the men.

From the evidence herewith submitted and the verbal statements of several eyewitnesses, the circumstances attending the disaster appear to have been substantially

as follows:

During the night of the 3d of March, and continuing through the 4th and morning of the 5th, Cape Cod was swept by a violent northeast gale, accompanied by a thick snow-storm, which, on the morning of the 4th, broke up into violent squalls, the intervals between which were infrequent and of short duration, until the afternoon. Many of the oldest inhabitants of the cape, nearly all of whom are or have been sea-faring men, declare this to have been the severest gale that has occurred there for twenty-five years.

The severity of the storm during the night of the 3d and morning of the 4th was such that the keepers of the stations had caused the patrols to be doubled, in view of the dangers which would surround a solitary person exposed to such weather. The patrols of Nos. 6 and 7, before meeting, traverse a distance of about two and a half miles each. The distance along the beach between the two stations, roughly surveyed by Superintendent Sparrow, is four miles and 1,300 yards. One of the patrols belonging to No. 7 becoming exhausted from exposure to the fury of the storm, Keeper Worthen himself was compelled to take his place at 4 a. m. on the 4th. About 1 p. m. the blinding snow-storm that had prevailed during the morning and the previous night began to moderate, and soon exposed the ill-fated Giovanni to the view of the two patrols, Paine and Rich, who were then about one mile north and west from Station No. 7. She was about half a mile outside of the outer bar, under a close-reefed main topsail, with the fore-topsail blowing in ribbons from the yard and bolt ropes. The sea was tremendous, breaking in seven fathoms, as it appeared to the men of the stations, who are familiar with the soundings off the cape. The bark was on the starboard tack, or heading to the westward; and at the moment she was discovered by the patrols, Paine and Rich her foresail was seen to fall, and she swung off before the wind, heading for the beach, as if her master had at the same instant discovered the land, and, as a last and desperate resort, had determined to beach her. Doubtless the unfortunate commander saw the patrol, and believing help was at hand, steered more trustfully toward certain destruction. She soon came npou the outer bar, over half a mile from the shore, where the breakers were of such extraordinary height that as she surged over their crests her stern was uplifted high in the air, while her bow was submerged, the vessel appearing to the patrol about to "pitch-pole," or tumble over head first. Apparently crossing the outer line of breakers without damage, the bark now came upon the second or middle bar, as it is termed by the surfmen. For a moment she was enveloped in the breakers and spray, and on again appearing to the view her rudder was seen to be broken, and swinging useless across the stern-post. Thus disabled and unmanageable, she broached to, and went pounding along the outer edge of the inner bar until she brought up on shoaler ground, about a mile and a half to the northward and westward of the place where she first struck. When she came over the second line of breakers she was plainly visible to the keeper of Station No. 7, who was on

patrol near the Highland Light, about a mile away. Comprehending the situation at once, he hastened to the light-house and vainly endeavored to procure horses to baul the boat-carriage and apparatus up the coast. Then harrying to his station, he perceived the bark drifting to the northward and westward, and concluded that she would eventually come on shore nearer to No. 6 than to his own station. sembled his crew and proceeded up the coast to the assistance of No. 6. From that station, in the mean time, the bark had already been descried by the patrols, and also by Keeper Atkins, who made signal for the return of his patrols from the eastward and westward, and prepared his mortar apparatus for transportation in the hand-cart. His long experience with wrecks in that vicinity suggested at once the impossibility of using a boat in such a sea, and the beach, which was thickly strewn with huge cakes of ice, together with the deep snow-drifts that covered the rugged and-hills, made its transportation without borses utterly impracticable. The surfmen speedily assembled, and the loaded hand-cart was soon being dragged by eager hands toward the approaching wreck. At first they made fair progress along the beach below the ice, but the rising tide drove them to the first range of sand-hills, which present to the sea steep faces or bluffs whose heights vary from fifteen to thirty feet. The route of the hand-cart was now impeded by the soft, yielding nature of the coarse sand and frequent snow-drifts. Within half a mile of the point nearest the wreck, they were met by a portion of the crew of station No. 7, and with their assistance finally arrived abreast of the bark, which appeared to be hard and fast about six hundred yards distant. The seas were making a clean breach over her, and, driving onward with resistless fury, finally broke up in a tremendous surf upon the beach. At this time two persons were discovered in the breakers, clinging to a plank. They were drifting rapidly to the westward in the strong current, which invariably runs in that direction during easterly gales. Their course was followed along the beach by the surfmen, with lines ready to assist them. Occasionally they appeared to be coming directly in, but the under-tow would sweep them seaward again. After drifting nearly a mile, one of them was swept from the plank and disappeared. The other, who proved to be the steward of the bark, finally came within reach of a surfuan, who, with a line around his body, rushed into the surf and brought the exhausted man safely on the beach. He was immediately conveyed to station No. 6, and properly cared for. Knowing their utter helplessness to render the hapless crew of the bark any present aid, the life-saving men for a moment stood appalled at the awful scene. But the keepers were soon in consultation, and determining that the chances were in favor of the bark driving closer in on the rising tide, and coming within reach of the mortar apparatus, one man was left upon the beach and the remainder proceeded to station No. 7 for the life-car. With the life-car, hawsers, shotlines, shovels, axes, sand-anchors, crotch, &c., on the boat-carriage, the two crews started again for the wreck about 5.30 p.m. Their route lay behind the outer ridge of the sand-hills, the beach being impassable, as the sea was breaking in many places sheer against the bluffs. Frequent snow-drifts four or five feet deep opposed their progress in the hollows between the hills, and a passage for the carriage had to be forced by shoveling away or beating down the snow. The darkness of the night was such that the two lanterns they carried but dimly lighted their path. About midway they were met by a party of ten or twelve persons from Truro on foot, and bound to the wreck. These willingly lent their assistance, and at 10 o'clock the carriage was abreast the bark. This toilsome journey, over a distance of about two and a half miles, occupied four hours and a half.

From the foregoing it will be seen that the crews of the stations had zealously kept the required watchfulness, and were indefatigable in their efforts to get the necessary

apparatus upon the ground.

The darkness of the night and the continued violence of the gale prevented any further efforts at that time to save the crew of the bark. Fires were lighted, around which the surfmen gathered shivering in their wet clothing, while they burned signal-lights to encourage the shipwrecked people. By the glare of the burning signals the wreck could be occasionally faintly discerned rolling helplessly in the breakers. About midnight, portions of the wreek and cargo began to come ashore, and gave token to the watchers that the vessel was breaking up. Daybreak was anxiously awaited, and when at last it came the bark's foremast alone was standing, and in its top were gathered the survivors. The wreck had now beaten in to within perhaps 400 yards of the shore and lay rolling heavily. The distance between the wreck and the beach was variously estimated by the life-saving men and by the bystanders. No estimate was less than 300 yards, while the greater number judged her at 400 and upward. That she must have been at least 400 yards off is avident from the fact that the winternate she must have been at least 400 yards off is evident from the fact that the unfortunate people in the foretop of the bark were so indistinctly seen from the shore that opinions varied as to their number, some placing them at five and others at seven or eight. The tide was nearly full. The mortar apparatus was placed in position directly opposite the wreck, and as near the water as possible, and the first shot fired. Its aim was directly at the wreck and right in the wind's eye, (northeast.) The shot fell short.

The gale had slightly abated, but still offered very great resistance, as was indicated by the bowing of the line upward far above the trajectory of the ball. A second shot was fired, carrying out, according to the statement of Keeper Atkins, 275 yards of line, and a third with no better success. During the firing the foremast was swaying frightfully to and fro, and the unfortunate mariners, no longer able to maintain their grasp, were flung, one by one, from the foretop into the sea; and just after the third shot the last man disappeared. The foremast remained standing until about 10 a.m., when it fell, and the remainder of the vessel broke up. The mortar used on the occasion belonged to Station No. 6. It was manufactured in 1873, at the West Point Foundry, at Cold Spring, N. Y., and is exactly similar in weight and caliber to those in use at all the stations, except an improvement in the bed-piece, which gives additional strength to that part. The firing was superintended by Keeper Atkins, who is familiar with the use of the apparatus, from frequent practice and an experience of many years in the service of the Massachusetts Humane Society.

On the 12th and 13th instant I carefully inspected the mortar apparatus at stations 6 and 7. I found the apparatus at both stations in excellent condition, and had several shots fired in my presence, with as good effect as mortars used for this purpose

usually give.

The powder used at the stations is "Dupont's best sporting H F." The charge is four ounces of powder, which is the capacity of the chamber. More than that quantity has not been found to materially increase the distance; the combustion of the powder in the chamber driving the outside grains, without their ignition, as was shown by firing over clean snow.

In view of the fact that the loss of life at this disaster has been somewhat extensively and erroneously attributed to the failure of the mortar apparatus to accomplish what might be expected of it, I deem it proper, in this connection, to give a brief description of the apparatus, and to refer to what has been heretofore accomplished with it by ex-

periment and in actual service.

The mortar is of the ordinary form with a caliber of 5½ inches, and chambered for a charge of 4 onnces of powder, weighing with the bed about 300 pounds. The iron balls are solid and weigh 24 pounds each. They are cast with a score 2 inches long by § of Across the center of the score an an inch wide, the central depth of which is 1 inch. iron-bar is inserted flush with the surface of the ball, to which in service a line is Each station is furnished with two shot-lines, one of Manila and the other of Italian hemp. The first is about three-eighths and the latter seven sixteenths of an inch in diameter. The weights are, respectively, ten and twelve yards to the nound. inch in diameter. The weights are, respectively, ten and twelve yards to the pound. The character of these lines was determined after a long series of experiments, as also by actual service in this country, and particularly in England, where this method of assisting the shipwrecked originated. The use of the mortar for the purpose of throwassisting the shipwrecked originated. The use of the mortar for the purpose of throwing a line was first suggested in 1791, and in 1809 six persons were rescued from a wreck by means of Captain Manby's mortar apparatus, that furnished the model upon which our own, with some improvement, is constructed.

The essential requirements of an efficient apparatus have been found to be as follows: 1st. Portability, which was very early acknowledged to be the very essence of the service, as it was apparent that the whole apparatus must be light enough to be readily

transported along the coast by a few persons.

2d. A piece of ordnance answering the first requirement that will at the same time project a shot the greatest distance without such impetus as to impair the safety of

the line.

3d. A line whose size will encounter the least resistance in its passage through the air, light enough to avoid too great an augmentation of the weight to be carried by the ball, and withal of sufficient strength to withstand the jerk of the initial velocity of the shot, and bear the heavy strain of dragging the hauling lines of the apparatus by the shipwrecked people across strong currents and through heavy breakers. For use at shipwreck, in addition to the mortar, balls, and shot-lines, there must be

bauling-lines, a hawser, life-car, and various implements transported.

It will thus be seen that the first requirement (portability) governs the others and Our mortars conform to the foregoing, and limits the size and range of the mortar. their most effective range in beavy weather is from 250 to 275 yards, while under very favorable circumstances they have carried the line 400 yards. The ball alone has been thrown 1,000 yards. No better, if as good, results have been obtained in any The latest account within my reach of experiments that have been made in England, where for sixty years these mortars have been used, furnishes the following table:

Mean of extreme range obtained with shot 30 pounds weight, attached to line of equal size of Russian and Manila hemp, with a brass 5½ inch mortar, at an elevation of 33°, charge 10 ounces of powder. Mean of 20 rounds.

		Tarus,
Fine weather and light winds, Russian	e	248
Tide weather and right winds, thissian	,	&4 0

Zido wowdor wha right winds, blanda		
· ·		

				*, * *	 . •	Yards.
Moderate weather, fresh	breeze, Russian	·			 	237
Moderate weather, fresh						
Elevation 28°, strong ga	le and heavy sq	ualls, Russia	an		 	211
Elevation 28°, strong ga	le and heavy sq	ualls, Manil	a		 	243

It will be observed that 10 ounces of powder was used in the above experiments. Equally as good, and even better results have been obtained with our mortars of the

same caliber, charged with only four ounces.

Respectfully referring you to my report dated September 1, 1873, of experiments with the Boxer rocket-apparatus, used extensively in England, it will be seen that the greatest range obtained with them under the most favorable circumstances, was 400 yards. Their flight either against or across a strong breeze of wind is very uncertain, nuch more so than that of the 24-pound ball. A recent invention in Germany for projecting lines for life-saving purposes was some time since brought to my notice. But, while this apparatus appeared ingenious and somewhat more portable than our own, the range of the shot is no greater. From all the information I could obtain, as to the state of the sea, it seems scarcely possible that any boat whatever could have reached the wreck. But it is to be regretted that the surf-boat was not at hand, that an attempt might have been made. The impracticability of transporting it from either station, without the aid of at least two horses, was apparent to me, after surveying the ground eight days after the disaster. In this connection it is suggested that a few of the stations may be supplied with one or two horses during the winter months, or authority given by law to impress teams for hauling the boat-carriages, when the safety of human life is involved, as is the case in England.

In view of the difficulty experienced on the above occasion in transporting the apparatus, and to provide for similar emergencies in that quarter, I recommend the establishment of a relief boat-house midway between stations 6 and 7. The house need be only large enough to contain a boat and a life-car, with perhaps a hawser and a few

minor articles.

In case of any disaster within half a mile on either side of the relief-house, the men belonging to the stations could at once assemble, there and find the heaviest portions of the apparatus already at hand, and perhaps but a comparatively short distance

from the wreck.

On the 14th, I personally examined the scene of the disaster. The spot where the mortar was placed was easily identified and pointed out. The shoals in the direction of and neighborhood of the line of firing (at right angles with the line of the beach) were examined in a boat, 400 yards out, and no vestige of the wreck was found, so that the exact spot where she broke up could not be accurately defined. Two hundred and twenty-six measured yards westerly from the line of firing, and 440 feet from low-water mark on the beach, I found a portion of the wreck, apparently all that remains in the water of the ill-fated Giovanni.

It is evident that during the whole time the vessel was beyond the reach of any life-saving apparatus yet invented. If she had been provided with any one of the various life-rafts, it is more than possible that all hands might have reached the shore in safety. Her boats were soon destroyed by the huge seas that were seen to sweep

her decks.

No portion of Cape Cod is so dangerous as that lying between the Highland Light and the Race. Its outlying shoals extend seaward in some places nearly a nile from the beach, and upon them numerous melancholy disasters have occurred. A light-ship and fog-horn on Stellwagen's Bank would be an important aid to navigation, and largely divest the shoals off the bend of the cape of their terrors.

I am, very respectfully,

J. H. MERRYMAN,

Captain United States Revenue Marine and Inspector.

Hon. B. H. Bristow, Secretary of the Treasury, Washington, D. C.

APPENDIX B.

Abstracts of returns of wrecks and casualties to vessels which have occurred on and near the coasts and on the rivers of the United States, and to American vessels at sea, and on the coasts of foreign countries, during the fiscal year ending June 30, 1875.

The following statistics relating to disasters to shipping during the fiscal year ending June 30, 1875, are compiled from returns collected and transmitted by officers of the customs in compliance with the provisions of the act of Congress approved June 20, 1874, and with instructions issued from the Department. In order to secure uniformity in the returns, the several collectors of customs were supplied with blank forms containing a list of questions, the answers to which would afford the requisite data, with instructions to distribute the same to their subordinate officers and to the managing owners, agents, and masters of vessels suffering disaster in their respective districts. Charts showing the coasts of the United States were also furnished officers of the customs, who were required to note upon them by certain symbols the exact localities of all disasters, reports of which they had transmitted to the Department. These charts were returned with the disasters noted at the end of each quarter. By their aid the localities of disasters have been fixed upon the wreck-charts which follow Where several casualties occurred at or near the same point during the year, and it has consequently been impracticable to insert the symbol of each disaster in the exact locality of its occurrence, the symbols have been grouped and lines extended from the groups to the localities. In cases of collision, one symbol is used to denote a disaster, although two or more vessels were involved.

The returns above named, which give the name of each vessel and various other particulars not included in the tables, are carefully filed in the Department so as to be readily referred to for such particulars.

In the preparation of the tables it has been found advisable, in order

to facilitate reference, to make the following general divisions:

I. Disasters occurring on the Atlantic and Gulf coasts of the United States, embracing—

1. All casualties outside of, but in proximity to, the coast line.

2. All casualties occurring in the bays and harbors adjacent to the coasts named.

3. All casualties occurring in or near the mouths of rivers emptying into the ocean or gulf.

II. Disasters occurring upon the Pacific coast of the United States, including those occurring in adjacent waters, as in the first division.

III. Disasters occurring on the Great Lakes, embracing-

1. All casualties occurring on Lakes Superior, Michigan, Huron, St. Clair, Erie, or Ontario, reported by officers of the customs, whether in waters under the jurisdiction of the United States or of Great Britain.

2. All casualties occurring in the rivers, straits, &c., connecting the

several lakes named.

3. All casualties occurring in the harbors of any of said lakes, or in or near the mouths of rivers emptying into them within the United States. One disaster which occurred on Lake Champlain is included in this division.

IV. Disasters occurring in rivers within the United States, embracing all rivers except those referred to in the foregoing division.

V. Disasters occurring to American shipping at sea or in foreign waters.

The disasters embraced in the foregoing divisions are classified as follows, viz:

1. Founderings—embracing founderings which resulted from the leaking or capsizing of vessels, but not those which resulted from collision, stranding, or striking any sunken wreck, or against piers, snags, or ice.

2. Strandings—embracing disasters resulting from running aground, striking a rock, reef, bar, or other natural object, although the vessel

may have foundered as a result of such casualty.

3. Collisions—embracing all collisions between vessels only.

4. Other causes—embracing disasters resulting from various causes as follows, viz:

Fire, irrespective of result.

Scuttling, or any intentional damage to vessel.

Collisions with fields or quantities of ice, although vessel may be sunk thereby.

Striking on sunken wrecks, anchors, buoys, piers, or bridges.

Leakage, (except when vessel foundered or went ashore for safety.)

Loss of masts, sails, boats, or any portion of vessel's equipments.

Capsizing, when vessel did not sink.

Damage to machinery.

Fouling of anchors. Striking of lightning.

Explosion of boilers.

Breakage of wheels.

Also water-logged, missing, and abandoned vessels.

Four hundred and seventy seven vessels are reported as having met with collision, but it should be remembered that as two vessels were engaged in each collision, (though in a few instances three or more collided with each other in gales,) the actual casualties of this nature are about one half that number.

Besides the disasters to vessels and cargoes which are embraced in the tables, 73 lives were lost by drowning out of the crews employed on 54 different vessels. In these cases neither vessels nor cargoes suffered damage, the persons drowned having been lost overboard, or having perished by the capsizing of small boats in which they had left their vessels to attend fishing trawls, or for some other purpose.

While the information contained in the following statements is undoubtedly generally accurate, it should be borne in mind that the reports upon which the tables are based are those of the owners, agents, or masters of the vessels concerned, who are interested parties. The tables distinguishing the causes of disasters, therefore, may not be entirely reliable, and the actual number of disasters arising from defects of vessels, or their equipments, or from carelessness, inattention, ignorance, &c., may be more numerous than appears.

The number of disasters to foreign vessels in American waters during the year was 83, copies of the returns of which have been forwarded through the Department of State to the respective governments to which the vessels belonged. In return, wreck reports giving the particulars of disasters to American vessels on foreign coasts have generally been received from the governments of the countries in which they occurred, copies of which have, in all cases, been promptly forwarded to the owners or agents of the vessels concerned.

The tables include all disasters involving losses as low as \$50, for the purpose of exhibiting the nature, causes, and localities of casualties, the character of vessels, loss of life, and other information of importance.

As, however, any damage less than \$500 to vessels or cargoes may be considered unimportant, the following table is presented which shows the number of casualties resulting in damage of that amount and exceeding it.

						A	mou	nt of	loss	es.			' .		
	\$500 to \$1,000.	\$1,000 to \$2,000.	\$2,000 to \$5,000.	\$5,000 to \$10,000.	\$10,000 to \$20,000.	\$20,000 to \$30,000.	\$30,000 to \$40,000.	\$40,000 to \$50,000.	\$50,000 to \$75,000.	\$75,000 to \$100,000.	\$100,000 to \$200,000.	\$200,000 to \$300,000.	\$300,000 and over.	Unknown.	Total.

Prior to the act of June 20, 1874, there was no provision of law requiring the collection and preservation of statistics of marine disas-Such statistics, however, became a year or two since incidentally needful to the Department. Instructions were therefore issued to officers of the customs, requiring them to collect and forward all essential particulars of disasters which might thenceforth occur within their districts, or to vessels owned therein, together with all obtainable information respecting disasters of the ten preceding years. All available sources were resorted to for the desired data, such as the records of underwriters, wreck commissioners, superintendents of life-saving stations, light-house keepers, &c. From the careful research made and the extent and completeness of the various records which were consulted, it is believed that the information obtained is substantially correct. statistics, properly tabulated and arranged by years, were published in an appendix to the last annual report, and are available for comparison with the following tables of last year's disasters.

ATLANTIC AND GULF COASTS.

Collisions	12	1, 390. 84	7	5		30
Other causes	107.	34, 953. 25	36	17	54	768
Total	152	46, 255. 44	67	30	55	961

Note.—In this table are included a number of cases in which loss of life was sustained without any injury occurring to the vessel meeting with such casualty; for example, fishermen drowned by the upsetting of their dory while attending their trawls; knocked overboard by boom, &c. In these cases the nature of the cargo is not stated.

Table 65.—List of places on the coasts of the United States where vessels have stranded during the last ten years.

ANDUM.

as follows, referred to on page 4 of the tables accompanying the Secretary's report, viz: judgments;) "refunding duties erroneously or illegally exacted;" "marine-bospital establishment."

Exhibit A.

TREASURY DEPARTMENT, April 5, 1873.

SIR: I am in receipt of your letter of the 1st instant, requesting instructions relative to the rate of duty to be exacted, under the Department's ruling of the 18th of December last, on a class of ribbons composed in part of cotton and in part of silk, and claimed by the importers to be known to the trade as cotton edge or Boyeaux ribbons, and cord-edge or round-edge ribbons.

I have carefully examined the evidence submitted on behalf of the importers, and forwarded by you to prove their claim, which comprises the certificates of nearly one hundred persons and firms in the dry-goods business, both importers and jobbers, at New York, Boston, and other large cities, all of which are to the effect that those goods are not known, bought, or sold in the trade as silk-ribbons, but by other designations, and it seems thereby to be well established that dealers are fully aware of the fact that these goods are composed of silk and cotton when making purchases or sales thereof under such designations.

It is presumed from the foregoing that this class of ribbons was known in the trade as aforesaid at the time the act of June 30, 1864, was passed; but upon this point no evidence is afforded, and no one has affirmed, to my knowledge, that any change in their commercial

designation has occurred since that time.

In rebuttal of this testimony on the part of the importers, no evidence whatever is offered beyond the statement of the appraiser that "so far as these ribbons have had or can have any commercial designation based on the materials of which they are composed, that commercial designation must be silk-ribbons," and the further statement that they have been heretofore classified in that department as silk-ribbons. Upon this point, therefore, the testimony offered by the importers must

be accepted as conclusive.

The instructions of the Department of the 18th of December last were that all ribbons which, at the time of the passage of the act of June 30, 1864, or at the date of importation, were known as silk-ribbons, and bought and sold as such in the trade, will be classified as silk-ribbons, and subjected to a duty of 60 per cent. ad valorem. To the same effect was the ruling of the Department of April 21, 1870, on the appeal (8021a) of Henry Barbey & Co., of New York, where the decision of the collector, charging 60 per cent. duty on certain Faille ribbons, was affirmed upon the ground that the goods were "universally known to the trade as silk-ribbons, and were bought and sold as a pure silk article of a superior quality," the fact that they contained a modicum of cotton being generally unknown.

Upon the foregoing state of facts the Department holds that the class of ribbons forming the subject of your letter should be classified, not as silk-ribbons, but as manufactures of which silk is the component of chief value not otherwise provided for, and be subjected to duty at the rate of 50 per cent. ad valorem, under the last clause of section 8 of the

act of June 30, 1864.

You will therefore be governed accordingly.

I am, very respectfully,

Collector of Customs, New York. WM. A. RICHARDSON, Secretary. TREASURY DEPARTMENT, June 17, 1873.

SIR: I inclose herewith a copy of a letter from Hon. George H. Williams, Attorney-General, dated the 13th instant, advising an acquiescence in the decision of the court in the case of Chapon vs. Smythe, recently tried in the United States circuit court at New York, before Judge Smalley and a jury, involving the proper rate of duty on silk and cotton-velvet ribbons, and have to say that the Department has carried out the recommendation of the Attorney-General in the premises.

I have, therefore, to direct that from and after the receipt hereof you conform your practice thereto, by charging 50 per cent. ad valorem duty on all silk and cotton ribbons, whether velvet or otherwise, not com-

mercially recognized as silk-ribbons.

I am, very respectfully,

WM. A. RICHARDSON, Secretary.

COLLECTORS OF CUSTOMS, Various Ports.

Exhibit B.

TREASURY DEPARTMENT, July 2, 1874.

SIR: On the 27th ultimo the Department decided, on the appeal (2307b) of Dieckerhoff, Raffloer & Co., that certain silk and cotton bindings, which had been classified by you as silk trimmings, at a duty of 60 per cent. ad valorem, were only liable to duty at the rate of 50 per cent. ad valorem, under the concluding clause of the 8th section of the act of June 30, 1864.

The same question is involved in the following-described appeals, (the goods being similar,) heretofore transmitted by you to the Department, and therefore you are authorized to adjust the entries covered thereby in accordance with such decision, and, if necessary, to forward certified statements for a refund to the importers of the excessive duties exacted.

I am, very respectfully,

B. H. BRISTOW, Secretary.

Exhibit C.

TREASURY DEPARTMENT, October 31, 1874.

Sir: Your communication of September 21, last, transmitting application of Samuel Shipley, owner of a cargo of wheat and pease imported at your port for transportation to New York, and exportation thence to a foreign port, having been mislaid, has not received the immediate attention to which it was entitled.

The Department sees no objection to the change of entry requested by the shipper, the application appearing to have been made in good faith, and the mistake of entry for consumption on the part of the agent

having been without the knowledge of the owner.

On such correction being made, with proper certificate of actual export at New York, you are authorized to prepare a certificate of refund of the duties paid, and forward the same to this Department.

I am, very respectfully,

CHAS. F. CONANT,

Acting Secretary.

COLLECTOR OF CUSTOMS, Erie, Pa.

Federal Reserve Bank of St. Louis

Exhibit D.

TREASURY DEPARTMENT, October 21, 1873.

SIR: I inclose herewith, for your information, a copy of a communication from the Solicitor of the Treasury, dated the 18th instant, recommending that the Department acquiesce in the judgment for plaintiffs rendered by the United States circuit court for the district of Massachusetts, in the case of the Washington Mills Company vs. Thomas Russell, collector, &c., recently tried in said court, the question at issue being as to the rate of duty to be assessed on certain Australian wool imported by plaintiffs from London and Liverpool per Batavia and Parthia, in the months of January and February, 1871, and have to inform you that the Department has, by letter of this date, to the Solicitor, acquiesced in his views, and requested him to instruct the United States attorney at Boston accordingly.

You will therefore prepare and forward to the Department certified statements for refund of the excess of duties exacted in this and all similar cases where the requirements of the law as regards protest and appeal and time of commencement of suit have been complied with.

I am, very respectfully,

WM. A. RICHARDSON,

Secretary.

COLLECTOR OF CUSTOMS,

Boston, Mass.

Exhibit E.

TREASURY DEPARTMENT, March 1, 1875.

SIR: Your letter of the 3d instant is received, reporting upon the appeal (1346½c) of Mr. E. M. Skidmore, from your decision assessing discriminating duty of 10 per cent. ad valorem on certain ivory imported by him per the Russia, from Liverpool, September 3, 1874. You also inclose affidavit of Mr. Skidmore, together with bill of lading and invoice.

These papers clearly show that the ivory in question was originally shipped at Bombay, and destined for the port of New York. Such destination is definitely stated in the invoice and declaration before the United States consul at that port and certified by him. The affidavits of the appellant state that it was "ordered from Bombay to be shipped via Liverpool, and for account of Messrs. Green & Arnold of New York City, and not purchased in Liverpool, but in Bombay, and intended, at the time of purchase, to be sent direct to New York City, and was not offered, or intended to be offered, in the United Kingdom for sale;" and further, "that there was no vessel bound direct to New York from Bombay, and that the goods could not be forwarded to New York that way."

The transshipment at Liverpool being only an incident in the voyage of importation, the Department, in accordance with its ruling of October 21, 1871, (synopsis 940,) holds that the discriminating duty does not apply, and your decision is, therefore, hereby reversed.

You will please forward to the Department the usual certified state-

ment for refund of the duty collected.

I am, very respectfully,

B. H. BRISTOW, Secretary.

COLLECTOR OF CUSTOMS, New York.

Exhibit F.

TREASURY DEPARTMENT, April 17, 1875.

Sir: Referring to a class of cases known as "charges and commissions" cases, in which judgments have been recovered against collectors of customs, but which the Department has hitherto declined to pay, for the reason that no certificate of probable cause, as required by the twelfth section of the act of March 3, 1863, (Revised Statutes, section 989,) had been granted therein, I have to state that application has been made in behalf of the parties, both plaintiff and defendant, for payment of such judgments, and I have, after due consideration, concluded to refer the certified statements in such cases to the accounting officers for examination and settlement, and for the issuance of a warrant in the usual manner, payable out of the proper appropriation, if any, upon the express condition that, before final payment by the collector of any such judgment, he shall require to be presented, and filed with him, a certificate from the clerk of the court, showing that a certificate of probable cause has been duly granted and entered of record in such case.

You will please instruct the collector accordingly.

I am, very respectfully,

B. H. BRISTOW, Secretary.

Hon. H. C. Johnson, Commissioner of Customs, Treasury Department.

Exhibit G.

TREASURY DEPARTMENT, December 1, 1874.

SIR: Referring to Department's letter of the 16th instant, addressed to the Solicitor of the Treasury, (a copy of which is herewith inclosed,) acquiescing in the decision of the court in the case of Kuttroff vs. Murphy, late collector, involving the rate of duty on dry carmine, I transmit herewith a letter from Hartley & Coleman, of the 23d instant, in which they request that you be instructed to consent to the discontinuance of certain cases wherein duty has been exacted upon dry carmine at the rate of 35 per cent., and to make up certified statements for the refund of the duties exacted in excess of 25 per cent., where the provisions of law relative to protest, appeal, and suit have been complied with.

The Department agrees to such proposition, and you are hereby directed, in forwarding such certified statements, to give the Department's number of the appeal, return, and the letter of Hartley & Coleman.

I am, very respectfully,

B. H. BRISTOW, Secretary.

Collector of Customs, New York.

TREASURY DEPARTMENT, December 15, 1874.

SIR: In reply to your letter of December 10, and referring to Department's letter of December 1, the directions therein contained are hereby

modified so as to limit the release or refund to cases technically covered by the terms embraced in the letter, viz: "Nakarat carmine," "Oriental carmine," "Carmine No. 40," &c.

Such was the intention of the letter of December 1.

I am, very respectfully,

B. H. BRISTOW, Secretary.

Collector of Customs, New York.

Exhibit H.

TREASURY DEPARTMENT, June 23, 1875.

Sir: Your letter of the 12th of April last is received, transmitting the appeal (1829d) of P. E. Brulatour from your decision assessing duty, without an allowance of 5 per centum for breakage, on certain ale in bot-

tles, imported per "Memphis," April 1, 1875.

The question as to whether the allowance of 5 per cent. in lieu of breakage, under the provision in Section 2 of the act of February 8, 1875, should apply to malt-liquors in bottles, has been duly considered, and the Department has arrived at the conclusion, after receiving reports from the collector and appraiser at the ports of New York, Philadelphia, and Boston, and from the appraiser at Baltimore, all tending to sustain this view, that Congress, by inserting the word "liquors," in addition to the words "distilled spirits," in such proviso, intended to include malt-liquors, which comprise ale, beer, and porter. This result was evident from previous legislation, (see Schedule D of the Revised Statutes,) ale, beer, and porter being classified under the general provision for liquors.

The Department, therefore, sustains the said appeal, and authorizes you to adjust the entry by allowing the 5 per centum in lieu of breakage, and, if necessary, to forward a certified statement for a refund of the

duties exacted in excess.

I am, very respectfully,

CHAS. F. CONANT,

Acting Secretary.

Collector of Customs, New Orleans, La.

Exhibit I.

TREASURY DEPARTMENT, July 31, 1872.

SIR: Application has been made to this Department for a reversal of its decision whereby silk crapes are classified as silks in the piece, and charged with 60 per cent. duty, and for a refund of the difference in duty between that rate and the rate claimed by the parties, viz, 50 per cent. ad valorem.

A suit involving this question has been twice tried. On one trial the jury disagreed, and on the other trial a verdict was had against the Government. The application of the parties has been submitted to the Solicitor of the Treasury and to the United States district attorney at

New York, both of whom state substantially that, in their opinion, the question involved is mainly, if not entirely, one of commercial designation, and in view of the trials already had, and of the conflict of evidence likely to be presented on any further trial of the case, they do not

recommend that a further trial be had.

As it is the desire of the Department to avoid undue litigation in doubtful cases, I am disposed to join in the view taken by the law-officers before-mentioned, and have therefore to direct that your practice in this respect be changed, and that such goods hereafter be classified at 50 per cent., as "manufactures of silk not otherwise provided for;" and you are authorized to prepare the necessary certified statements for the refund to the importers of the amounts found due them, upon certificates of discontinuance of the various suits being filed, and also in cases where protests and appeals have been duly filed, and no suits instituted where time for commencement of suit has not expired.

I am, very respectfully,

WM. A. RICHARDSON,
Acting Secretary.

COLLECTOR OF CUSTOMS, New York.

Exhibit K.

TREASURY DEPARTMENT, May 5, 1875.

SIR: The Department is in receipt of a letter from the United States Attorney-General, dated the 28th ultimo, in which he expresses the opinion that there is no ground for bringing the case of W. E. Hartwig vs. C. A. Arthur, collector, lately tried at your port, to the Supreme Court, and recommends that this Department acquiesce in the decision, which was in favor of the plaintiff, and which held that German sausages were exempt from duty, under the special provision for "Bologna sausages," contained in section 5 of the act of June 6, 1872, since reenacted in section 2505 of the Revised Statutes.

The Department, therefore, acquiesces in the decision of the court so rendered, and directs you, upon the plaintiff duly satisfying the judgment in the case, to prepare and forward a certified statement for

the payment of the same.

With regard to the other cases still pending on the same question, where the requirements of law as to protest, appeal, and the bringing of suit have been duly observed, you are directed, for the purpose of facilitating the final disposition thereof, to refer each case to the appraiser for his special return as to whether the article which is the subject-matter thereof is entitled to exemption from duty under the principle established by said decision of the court; but if such report shall be in the affirmative, you will delay, until further advised, the preparation and forwarding of the usual certified statements for refund.

The same course may also be pursued in regard to the entries of such goods, where the time to bring suit has not expired, but where protest

and appeal were duly made.

The Department having recently submitted, for a formal opinion from the Attorney-General, under the refund act of March 3, 1875, the question whether a judgment against the Government in one of a class of cases will be sufficient to justify refunds in other cases of the same class without a separate and distinct adjudication of each case, suitable further instructions will, on receipt of such opinion, be given you as to the final disposition of the cases covered by the present instructions.

I am, very respectfully,

CHAS. F. CONANT,
Acting Secretary.

Collector of Customs, New York.

TREASURY DEPARTMENT, May 20, 1875.

SIR: Referring to Department's letter to you of the 5th instant, in which you were informed that the United States Attorney-General having concurred, the Department had acquiesced in the decision of the United States circuit court of your district, in the case of W. E. Hartwig vs. Chester A. Arthur, which was to the effect that German and all other sausages commercially known as "Bologna sausages" were exempt from duty, I have to say that the United States attorney having, since the 6th instant, given the opinion that a decision of the court, acquiesced in by himself and this Department, in one of a class of cases, governs in the whole of such class, you are now directed to carry out the instructions contained in such letter, which are to adjust all entries of such sausages in accordance with such decision, where the requirements of law as to protest, appeal, and bringing of suit have been duly observed, and upon the discontinuance of the suits to forward the usual certified statements for the refund to the importers of the amounts found due, and also to pursue the same course in the cases where protest and appeal have been made, and where the time to bring suit has not expired.

In this connection, and referring to your letter of the 18th instant, you are directed to cause the practice at your port to conform to such decision.

I am, very respectfully,

B. H. BRISTOW, Secretary.

COLLECTOR OF CUSTOMS, New York.

Exhibit L.

TREASURY DEPARTMENT, May 7, 1875.

SIR: In the case of C. F. & G. G. Lenning vs. Chester A. Arthur, collector, lately tried at your port, which resulted in a verdict for the plaintiffs, thus sustaining the position taken by them that certain Japanese wax is exempt from duty under the provisions for "wax,

* * * Chinese," contained in the fifth section of the act of June 6, 1872, (section 2505 of the Revised Statutes,) the Department is in receipt of a letter from the United States Attorney-General, dated the 28th instant, in which he is of the opinion that as the wax in question was proved on the trial to be identical with the so-called Chinese wax of commerce, and as there is no ground for a writ of error, that such decision of the court should be acquiesced in.

The opinion of the United States attorney who tried the case, dated

February 8, 1875, is to the same effect.

The Department therefore acquiesces in such judgment, and upon the

Digitized for FRASER

plaintiffs duly satisfying the judgment, you are hereby authorized to forward a certified statement for the payment thereof.

I am, very respectfully,

B. H. BRISTOW,

Secretary.

COLLECTOR OF CUSTOMS, New York.

Exhibit M.

TREASURY DEPARTMENT, June 19, 1875.

SIR: Your letter of the 8th of April last is received, further reporting upon the appeal (5426c) of R. Kepling & Son from your decision assessing duty at the rate of 40 per cent. ad valorem, less 10 per cent. on certain imitation precious stones, imported per Pommerania, September 25, 1874, which the importers claim to be only liable to duty at the rate of 10 per cent. ad valorem.

It appears from the special report of the appraiser and an examination of samples that the merchandise in question consists of imitations of brilliants, garnets, cameos, &c., composed of glass or paste, not set; that they were erroneously classified as "manufactures of glass," and that they are specially provided for in Schedule M of the Revised Statutes for "composition of glass or paste * * * when not set" at a duty of 10 per cent. ad valorem, (without any reduction,) as claimed by the importers.

You are therefore authorized to adjust the entry accordingly, and, if necessary, to take the usual steps for refunding the duties erroneously

exacted.

This decision will also apply to the appeal (1621d) of the same importers, on the entries of similar goods per Hammonia, September 2, and Holsatia, October 8, 1874, which was transmitted by you on the 8th of April last.

I am, very respectfully,

B. H. BRISTOW, Secretary.

COLLECTOR OF CUSTOMS, New York.

Exhibit N.

TREASURY DEPARTMENT, July 15, 1875.

SIR: The Department has been informed by the United States attorney of your district that two cases of Frederick R. Fowler et al. vs. Augustus Schell, former collector, &c., (O. S. 289 and 369,) which involved the question as to the proper rate of duty on caustic soda imported prior to 1861, were recently tried before the United States circuit court for the southern district of New York, and resulted in judgments against the defendant—the effect thereof being to decide that such merchandise was only dutiable, at the time of importation, at the rate of 4 per cent. ad valorem, instead of 15 per cent. ad valorem, as collected.

Upon submitting the matter to the United States Attorney-General, in accordance with the requirements of the act of March 3, 1875, that

officer has expressed the opinion that no writ of error or appeal should be taken in these cases to the United States Supreme Court, and that this Department should acquiesce in the decision of the court. The United States attorney of your district is also of the same opinion.

Under these circumstances the Department acquiesces in the decision of the court so rendered, and therefore directs, upon said judgments being duly satisfied on the records of the court, that a certified statement be prepared and forwarded to the Department for the payment thereof.

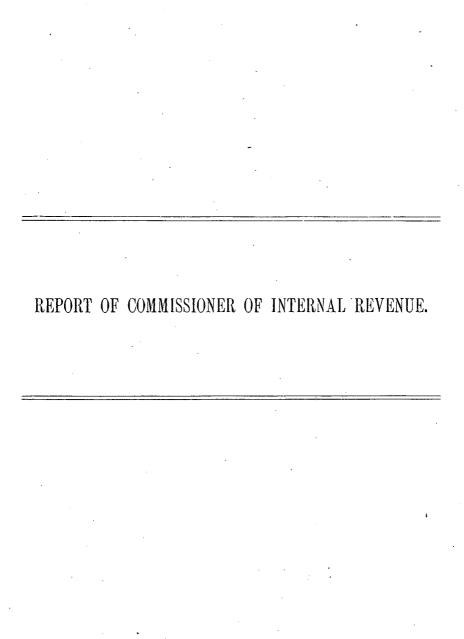

The Department also directs that the same course be taken with reference to three other cases, involving the same question, which the United States attorney reports to be still pending undecided at your port, provided the plaintiffs duly enter a discontinuance of such suits upon the terms usually granted by the Department.

I am, very respectfully,

B. H. BRISTOW, Secretary.

COLLECTOR OF CUSTOMS, New York.

REPORT

OF THE

COMMISSIONER OF INTERNAL REVENUE.

TREASURY DEPARTMENT, Office of Internal Revenue, November 8, 1875.

SIR: I have the honor to transmit herewith certain tabular statements, made up from the accounts of this Office, to enable you, as required by law, to lay the same before Congress, to wit:

Table A, showing the receipts from each specific source of revenue, and the amounts refunded in each collection district, State, and Territory of the United States, for the fiscal year ended June 30, 1875.

Table B, showing the number and value of internal-revenue stamps ordered monthly by the Commissioner, the receipts from the sale of stamps, and the commissions allowed thereon; also, the number and value of stamps for special taxes, tobacco, cigars, snuff, distilled spirits, and fermented liquors, issued monthly to collectors, during the fiscal year ended June 30, 1875.

Table C, showing the territorial distribution of internal revenue from various sources in the United States for the fiscal years ended June 30, 1864, 1865, 1866, 1867, 1868, 1869, 1870, 1871, 1872, 1873, 1874, and 1875.

Table D, showing the aggregate receipts from each collection-district, State, and Territory, for the fiscal years ended June 30, 1863, 1864, 1865, 1866, 1867, 1868, 1869, 1870, 1871, 1872, 1873, 1874, and 1875.

Table E, showing the total collections from each specific source of revenue for the fiscal years ended June 30, 1863, 1864, 1865, 1866, 1867,

1868, 1869, 1870, 1871, 1872, 1873, 1874, and 1875.

Table F, showing the ratio of receipts from specific sources to the aggregate of all collections for the fiscal years ended June 30, 1864, 1865, 1866, 1867, 1868, 1869, 1870, 1871, 1872, 1873, 1874, and 1875.

Table G, showing the receipts from special taxes under act of June 6, 1872, in each collection-district, State, and Territory, for the special-tax year ended April 30, 1875.

Table H, an abstract of reports of district attorneys, concerning suits and prosecutions under the internal-revenue laws during the fiscal year

ended June 30, 1875.

Table I, an abstract of seizures of property for violation of internalrevenue laws during the fiscal year ended June 30, 1875.

OUR INTERNAL-REVENUE SYSTEM.

The two principal sources of income to the United States are customsduties and internal revenue taxes. The former are levied upon articles the growth or manufacture of foreign countries imported into the United States; the latter are laid, at the present time, principally upon certain commodities manufactured in this country entering largely into cor

sumption, though not to be classed among the necessaries of life, such as distilled spirits, fermented liquors, tobacco, snuff, cigars, &c.

These latter taxes, so far as they are confined to consumable articles, constitute strictly excise duties, a term which is sometimes, though not with strict accuracy, applied to our entire internal revenue system.

An excise is properly that branch of the public revenue arising from duties paid upon the manufacture or sale of certain commodities made or sold within the country where this system of taxation prevails. It applies solely to consumable commodities made or produced at home, in contradistinction both to customs, which are duties payable on commodities imported from abroad, and to those duties imposed upon the use of certain commodities not immediately consumable, such as taxes upon carriages, gold and silver plate, pianos, watches, &c.

Our system of internal revenue taxes is broader, therefore, than the excise system, and has embraced, since its origin in 1862, taxation upon occupations and trades; upon sales, gross receipts, and dividends; upon incomes of individuals, firms, and corporations; taxes upon specific articles not consumed in the use; stamp duties, taxes upon various classes of manufactures, as well as taxation upon legacies, distributive

shares, and successions.

Excise duties are not of modern origin by any means. They existed upon the continent of Europe before their introduction into England in 1643, during the sitting of the Long Parliament, in the reign of Charles the First. At first they were imposed with great caution and moderation, and chiefly upon commodities where the burden would be least felt, such as beer and ale, eider, perry, and the like.

With this explanation the terms "excise duties" and "internal-revenue taxes" will be used indiscriminately, as our present system is but

an enlargement of the excise law.

A better and more general classification of all taxation (under national authority) would be "external" and "internal" taxes; the one derived wholly from merchandise imported from abroad, the other wholly from taxes laid upon home manufactures, occupations, incomes, licenses, &c.

Direct taxes on lands and excise taxes have followed the three principal wars of the United States: the revolutionary war, that of 1812,

and the war of the rebellion.

These forms of taxation have never met with popular favor, and with the exception of the present revenue law have never maintained their footing upon the statute-book for any considerable time. gatherer from earliest history has been an unwelcome presence, and his business an ungracious one. His office is inquisitorial in its very nature, leading to inquiries into people's affairs, the condition of their business, their losses and gains, matters which most people prefer keeping secret from the public. The process of assessment and collection is summary, involving, in case of delinquency, penalties and sacrifice of property. The tax is a palpable thing to be paid, or some cherished possession is No circumstances of poverty, misfortune, sickto be sold to meet it. ness, or death stay the distraint. Injustice in the assessment itself is relievable only by a circuitous process, involving first an application for abatement, next an application for a refund after the tax is paid or collected, and, these being overruled, an appeal to the courts against the Here at last the claimant, who has insisted that he either owed no tax at all, or a tax less than that demanded, collects from the Government what he has compulsorily paid, but frequently at the expense of ruinous delay and sacrifice.

Such a law could not well be popular, and has never been allowed in

our previous history to remain upon the statute-book beyond the exi-

gency which called it into existence.

The imposition of an unaccustomed tax upon any article entering largely into the consumption of the people, has always encountered opposition. The reason is plain, as its effect is immediately seen in the increased price of the article, whatever it is. People do not stop to reason upon the necessity of the tax, but selfishly see only a peremptory interference by Government in the price of the commodity taxed, to that extent impairing their ability to gratify their wants. This opposition is not the less vehement, though the article, like whisky or tobacco, is not to be numbered among the necessaries of life. It is manifested by various devices to evade the odious law, and these failing, by opposing violence to its execution. The officers who are so unhappy as to be the instruments for the collection of the obnoxious tax, are the immediate victims of the people's vengeance.

The earliest law laying duties upon spirits distilled within the United States, went into operation in 1791, and was approved by the first President. Though mild in comparison with the present law, and highly necessary in the then financial condition of the country, it provoked great opposition and resistance. The western counties of Pennsylvania rose in insurrection against its enforcement in 1794. The proclamation of President Washington produced no effect to deter the insurgents. They were organized and drilled, and bade open defiance to the Government, uor did the refractory submit until an army drawn from the militia of different States had marched into the very center of the disturbed district and seized the ringleaders of the insurrection. The cost of this insurrection to the Government was one and a half millions of dollars.

The national debt at that time was seventy-six millions, and the whole amount of the Treasury receipts six millions and a half. Yet the law which led to this insurrection was so framed as to give least cause for opposition. The articles taxed were few, the taxes themselves low, the officers few in number, and the machinery for executing the law as sim-

ple as it was possible to make it, consistently with efficiency.

The taxes upon spirits varied according as they were distilled from sugar, molasses, or other foreign materials, or from articles of the growth or product of the United States. The tax in the latter case varied according to the proof of the spirits—from nine to twenty-five cents on the gallon. They were collected at the distillery in money, subject to an abatement of two cents a gallon for present payment, or the distiller, at his election, was permitted to allow them to go into consumption upon bond being given for the payment of the duty.

. It is curious to observe how many careful provisions against fraud in the existing law are found in this earliest legislation upon the subject.

In 1792 the law was modified, reducing the duties on spirits distilled from materials the product of the United States, and prohibiting the importation of spirits from foreign ports, except in casks of the capacity of ninety gallons and upward, the obvious intent being to encourage their manufacture in the United States, and thus to increase the revenues of the Government. From this beginning, and under the encouragement of Hamilton, the scope of the law was enlarged, and, by successive enactments, was extended to carriages, snuff, refined sugars, auction-sales, licenses for retailing wine and spirits, and to stamp-duties on bills of exchange, bills of lading, and numerous other instruments. Upon Jefferson's accession to the presidency, and upon his recommendation, the whole system of internal taxes was abolished.

When the war with Great Britain occurred in 1812, it again became

necessary to resort to the collection of internal revenue duties. On the assembling of Congress in May, 1813, in extra session, President Madison, after stating the receipts and expenditures during the preceding six months, advised Congress to adopt a well-defined system of internal revenue in aid of existing sources. Mr. Gallatin's plan was adopted by Congress, and acts were passed imposing duties on refined sugar, salt, carriages, auction-sales, licenses for distilleries and for retailing wine, spirits, and foreign goods, with stamp-duties on bank-notes, bills of exchange and other notes, which were expected to produce two millions yearly, and a direct-tax on houses, lands, and slaves, at their assessed value, amounting to three millions.

Mr. Monroe, in his first message to Congress, in December, 1817, recommended the repeal of the internal taxes, and early in the session all

were abolished except the duty on salt.

The present system of internal taxes originated in the necessities of the Government growing out of the rebellion, when it became necessary to resort to every available source of income to defray the expenses of the war, and to establish the national credit. Accordingly, beginning with the first act of July 1, 1862, an elaborate system of internal taxation was set on foot, which reached nearly every species of manufacture, trade, profession, and occupation, and embraced many articles which were specifically taxed, the incomes of individuals, firms, associations, and corporations, documents of various kinds, thirty-one in number, subjected to a stamp tax, and laying a heavy hand upon legacies, successions, and the gross receipts of those operating steamboats, ships, barges, canal boats, stage coaches, toll-roads, ferries, and bridges, and the gross receipts of railroads, express, insurance, and telegraph companies; upon lotteries, theaters, operas, museums; upon banks and bankers; upon trust-companies, and saving institutions, and upon occupations, fifty one in number, requiring licenses from those who carried them on varying from ten dollars (\$10) to two hundred dollars (\$200.)

It may be doubted whether there ever existed in any country a system of taxation so comprehensive and minute in its details, reaching every man's daily subsistence, and greatly increasing the cost of nearly all the necessaries of life. From the multiplied sources of revenue opened by this law, the Government was enabled to realize in a single year three hundred and ten million nine hundred and six thousand nine hundred and eighty-four dollars and seventeen cents, (\$310,906,984.17,) against five million dollars (\$5,000,000) which Madison and Gallatin expected to derive from the internal taxes of 1813.

The customs-revenue for the same year, which yielded the enormous tax just stated, was less than one hundred and eighty million dollars, (\$180,000,000.) We may search in vain in our own history, or that of other nations, for such an example of patience and patriotism as was exhibited by the people of this country in the payment of these extraordinary burdens. Since the existing system went into operation, and counting from the fiscal year ending the 30th of June, 1863, to the 30th of June, 1875, the close of the last fiscal year, the amount collected under this system has been two billion eighty-six million five hundred and ninety thousand seven hundred and three dollars and eighty-eight cents, (\$2,086,590,703.88.)

When to this are added the sums collected from the direct tax on lands laid in 1861, and the amount derived from customs duties, we may well feel astonished that the country was not only able to survive such extraordinary burdens of taxation, but even to attain a high degree of pros-

perity.

The actual amount of receipts into the Treasury from all sources from and after June 30, 1861, to June 30, 1874, inclusive, exclusive of loans and Treasury notes, was as follows:

Customs		\$1,973,710,367 91

Total		4 702 606 041 00

Commencing with the year 1866, there has been a continuous repeal going on year by year of such internal taxes as were most oppressive, or at least of such as gave rise to most complaint, until at present but few subjects of taxation remain.

The taxes are now levied upon distilled spirits, fermented liquors, manufactured tobacco, snuff, and cigars; upon articles embraced schedule A; upon certain occupations; upon bank checks and the deposits, circulation, and capital of banks.

The following table exhibits the sums collected during the several fiscal years below given ending on June 30, 1875:

Year.	Internal-revenue taxes.	Year.	Internal-revenue taxes.
1863	117, 145, 748 52 211, 129, 529 17	1871. 1872. 1873. 1874. 1875. Supplemental collections*	114, 075, 456 08 102, 644, 746 98 110, 545, 154 23

to retain in their possession such part of the collections made by them as was necessary to pay the expenses of assessing and collecting. They, therefore, reported to this Office the entire amount collected, and deposited only so much as was not required to defray the aforesaid expenses.

Commissions allowed for the sale of adhesive stamps have always been regarded by this Office as part

Soon after the close of the war, and before the appointment of collectors of internal revenue in the late insurrectionary districts, large collections were made by special Treasury agents on articles produced in those districts and subject to tax under internal revenue laws, and reported to this Office. Collections thus made by officers other than regularly appointed collectors of internal revenue were probably not regarded as receipts from internal revenue when covered into the Treasury, and were the refer to the reference to the research the research the research the research that the research the research that the research the research the research that the research the research that the research that the research the research that the research the research that the resear therefore charged to some other account.

From this exhibit it will appear that the amount of revenue collected in 1874 from internal taxes was, in consequence of the duties repealed from year to year, less than during any single year since the system went into operation except the first. The increase during the last fiscal year is owing in part to the increase of duties laid by the act of March 3, 1875, upon distilled spirits, manufactured tobacco, cigars and cigarettes, and in part to the taxes collected under laws repealed, extraordinary efforts having been put forth by this Office to collect the delinquent taxes due from banks and bankers, railroad and other corporations, and taxes due on incomes, legacies, and successions.

It is with pardonable pride that I present the following table, in order to show with what accuracy this Office estimated, one year since, the probable receipts for the fiscal year ending June 30, 1875. It could not be known at that time that Congress would make any increase upon

^{*} These collections are mostly balances found due the Government from year to year in the settlement of the accounts of such collectors as have retired from office. They are now presented in aggregate for the first time, and are given in detail in the appendix to table D of this report.

† The aggregate amount of internal revenue collected during the several fiscal years from 1863 to 1875, as shown by the figures in the above table, is considerably more than the aggregate amount of internal revenue deposited during the same time, as appears from the books in the office of the Secretary.

The following explanation, it is believed, will satisfactorily account for the discrepancy between the collections and deposits:

Prior to July 1, 1865, collectors of internal revenue were authorized to act as disbursing agents, and to retain in their possession such part of the collections made by them as was necessary to pay the

the objects of taxation, such as was in fact done by the act of March 3, 1875, and omitting the three million two hundred and three thousand eight hundred and eighteen dollars and eighty-five cents (\$3,203,818.85) realized between that date and the 30th June, 1875, in consequence of this increase, and two hundred and sixteen thousand and twenty-seven dollars and thirty-four cents (\$216,027.34) receipts under the act of May 8, 1872, (which led to the formation of the Sanborn contract,) the receipts into the Treasury exceeded the estimate only one hundred and twenty-five thousand three hundred and eight dollars and four cents, (\$125,308.04.)

In this connection, and to illustrate the table just given, the following statement is furnished showing the receipts under the act of March 3, 1875, up to and inclusive of June 30, 1875, from the different articles subjected to an increased tax:

Statement showing the receipts under act of March 3, 1875, prior to July 1, 1875.

Articles.	Quantities.	Increased rate.	Tax returned.
Distilled spirits. gallons Cigars M Cigarettes M Manufactured tobacco pounds Total	507, 075, 212 13, 986, 383 22, 836, 180	1 00 25 04	3, 496 59 913, 447 20

It will doubtless be matter of surprise that the increased amount realized from distilled spirits during that period (March 3, 1875, to June 30, 1875) was so small. The explanation, however, is found in the fact that it became generally known, through the proceedings in Congress, that an increase in the rate of the tax would probably be made, and distillers, in order to realize the benefit of the increase, withdrew from bonded warehouses, upon payment of the taxes at seventy cents a gallon, 5,430,021 gallons in the month of January, 1874, and the enormous quantity of 11,504,356 gallons in February following, an excess over the previous month of 6,074,335 gallons, and leaving still in the bonded warehouses over seven million gallons of spirits on March 3, 1875, the day when the increase of tax from seventy to ninety cents per gallon was made by Congress.

By law these spirits were allowed, after bond given, to remain in the distillery warehouse one year before withdrawal, and these spirits have been and still continue to be placed on the market subject only to the former duty of seventy cents per gallon. Had these spirits been subjected, like those manufactured after March 3, 1875, to a tax of ninety cents per gallon, the difference in the two rates would have yielded to the Treasury, after their entire withdrawal from bond, at least one

million four hundred thousand dollars, (\$1,400,000.) To be sure this difference would not probably all be shown during the last fiscal year, since parties might, under the law, defer the withdrawal from ware-

house for one entire year after entry.

An examination into the practical workings of internal revenue legislation shows that the imposition of an increased tax is not usually followed by an immediate corresponding increase in the amount of revenue collected. While legislation is pending, extraordinary efforts are made by the distiller and manufacturer to secure the benefit of the existing low rate to as large a quantity of their distilled and manufactured product as possible. After the law increasing the rate has gone into operation the market is supplied for a time with the surplus taxed at the low rate, and several months usually elapse before this surplus is exhausted, and the revenue flows again naturally in its accustomed channels.

The case of distilled spirits has already been alluded to. The truth of the preceding observations is also confirmed by a comparison of the receipts from manufactured tobacco for periods immediately prior and subsequent to March 3, 1875, when the rate was raised from twenty to twenty four cents per pound, with the receipt for the corresponding periods in the preceding fiscal year.

During January and February the receipts were as follows:

	Months.	1874.	1875.
January February		 \$1, 990, 535 1, 824, 610	, \$1, 378, 828 3, 548, 877
Total	•••••••••••••••••••••••••••••••••••••••	 3, 815, 145	4, 927, 705

The following are the receipts from the same source for the four succeeding months of the two fiscal years:

. •	Months.	• .	1874.	1875.

Thus at the same rate of tax, but under the stimulus of its prospective increase, one million one hundred and twelve thousand five hundred and sixty dollars (\$1,112,560) more were received in January and February, 1875, than during the corresponding period in 1874, while the receipts for the next four months, after the tax had been increased four cents per pound, were one million four hundred and thirteen thousand six hundred and sixty dollars (\$1,413,660) less than the receipts for the last four months of the preceding fiscal year.

BRITISH EXCISE SYSTEM.

Having spoken of the origin in Great Britain of the excise system in 1643, it may be interesting to know the sources of her present income under the excise laws, which, however, are undergoing frequent modifications from year to year, and to note the identity of the subjects of taxation with those in this country before our internal revenue system had been reduced to its present limits. The following two tables, save the last column in each, showing the reduction of pounds sterling to money of the United States, are taken from the statistical abstract of

the United Kingdom presented to both Houses of Parliament by command of Her Majesty, and show the product of the excise laws for the fiscal year of that government ending March 31, 1875.

Statement showing the amount of revenue collected from excise in the United Kingdom during the year ended March 31, 1875, expressed in pounds sterling and in United States money, the value of the pound sterling being \$4.866\frac{1}{2}, as estimated by the Director of the Mint and proclaimed by the Secretary of the Treasury January 1, 1875.

Total		51, 330, 523 18

It may be some consolation to know that, grievous as are our burdens laid upon such of our population of forty-two millions or more as consume the articles taxed by our internal-revenue laws, the British public, numbering less by one-fourth than our people, paid, under their excise laws, during the year ending March 31, 1875, taxes, measured by gold of the United States, to the amount of one hundred and eightythree million nine hundred and sixty two thousand seven hundred and fifty-six dollars and fifty-six cents, (\$183,962,756.56,) against one hundred and ten million five hundred and forty five thousand one hundred and fifty four dollars and twenty three cents, (\$110,545,154.23,) paid in currency by the people of this country during the fiscal year which ended June 30, 1875. This comparison, if it does not reconcile such as find fault with our system as oppressive and vexatious, should modify their complaints, since it is apparent that a given amount of taxes from some source must, under all circumstances, be raised to defray the necessary expenses of Government, to discharge its obligations, and maintain the public credit. At best, it is but a choice of means, and all reasonable men will agree that, in laying taxation, articles of luxnry should be preferred to articles of necessity, and that the tax should be placed upon the product in the hands of the manufacturer or producer, so that, as in case of customs duties, it is left matter of choice who shall re-imburse the manufacturer or importer the taxes he has paid.

NET AMOUNTS OF RECEIPTS FROM ALL SOURCES OF INTERNAL REVENUE DURING THE LAST FISCAL YEAR IN THE SEVERAL STATES AND TERRITORIES.

Your attention is invited to the interesting recapitulation of receipts from all sources of internal revenue during the last fiscal year in the dif-

ferent States and Territories, found in Exhibit A, on page 95. From this it appears that, deducting amounts refunded, the net total of receipts was as follows:

[n	Alabama	\$111,816-41	
	Arizona	10,263 06	
	Arkansas	71,823 39

	Montana	23, 666 10	
	Nebraska	292, 472 30	
	Nevada	53, 147 30	
	New Hampshire.	298, 812 80	
	New Jersey	2, 362, 478 29	
	New Mexico	21, 965 52	
	New York	15, 200, 898 34	
	New York	1,629,994 37	
	Ohio	14,656,295 30	
	Oregon	47, 939 64	
	Pennsylvania	6, 149, 954 40	
	Rhode Island.	231,767 50	
	South Carolina	120, 818 00	
	Tennessee	858, 910 50	
	Texas	257, 448 37	
	Utah	31,545 51	
	Vermont	58, 251 85	
	Virginia	7, 659, 639 97	
	Washington	21, 146 60	
	West Virginia	508, 684 38	
	Wisconsin	2,720,868 14	
	Wyoming	2, 720, 606 14	
	wyoung	11, 34% 11	

The results thus shown do not indicate that the States paying the largest amounts of internal revenue pay in proportion to their relative population or wealth; nor that the consumption of their tax paid commodities within their limits is in proportion to the amount produced; nor that they excel in general manufacturing enterprise. On the contrary, they rather show that whisky is distilled in largest degree in the great corn-growing districts, brandies in the fruit districts, and that fermented liquors are brewed in sections of the country where barley most abounds, or in centers where that portion of our foreign population who prefer them as a beverage are found in largest numbers; and that tobacco, cigars, &c., are manufactured principally in or near the tobaccogrowing regions. Large cities, fortunate in their location as accessible from all parts of the country by water and rail, constitute an exception

to the general rule, since the manufacture of the raw materials is carried on largely there, without much reference to the localities where those materials are produced, unless, indeed, the cost of transportation on bulky articles entering into the manufacture prove a hinderance to successful competition with the rural districts. New York is a notable example, yielding last year fifteen millions of revenue. It is neither a great corn nor tobacco growing State. The city of New York is the point where most of the excisable commodities are produced, except whisky. This is not made to any extent, on account of the cost of bringing corn from the West, and the difficulty of successful competition with Cincinnati, Saint Louis, Chicago, and Milwaukee in the manufacture of that article.

Net aggregate increase, \$2,637,901.27.

Since the institution of our excise system spirits have been the largest source of revenue derived from any species of manufacture. It is so in other countries. In all, where the system prevails, spirits head the column as the first commodity thought to be a proper subject of taxation and as yielding the largest revenue.

The receipts from this and kindred sources, such as special taxes paid by rectifiers, wholesale and retail liquor dealers, manufacturers of stills, &c., have greatly varied during the thirteen years the law has been in force, according as the tax was high or low, or fixed at that medium rate which did not prohibit general consumption or offer too much temptation to illicit distilling, and according as the law was vigorously or loosely administered. The amount of spirits actually consumed has not greatly varied during these years, notwithstanding the changes in the law fixing the amount of the tax; and this fact has been one of

the standing arguments in favor of taxing distilled spirits not only here, but in other countries, viz, that the amount consumed does not depend to any considerable extent upon the rate of tax imposed. is as steady as the appetite to be fed is fixed and exacting. Excessive taxation may be the cause of general and systematic fraud, leading to great loss of revenue, but production and consumption go on as before, whatever the taxes. This is well illustrated in the years while the tax was \$2 on the gallon. Take for illustration the year 1868. The taxes derived from this source during that year were less than \$19,000,000, while in 1869, when the rate was reduced to 50 cents, they ran up to \$45,000,000, and the year following to \$55,000,000. Yet no one can doubt that the actual production in gallons did not essentially differ in the years named. Looking over the entire period since duty upon spirits was first imposed by the act of July 1, 1862, when Congress moved with the same timidity and moderation in taxing this article that characterized its action in 1791, when the experiment was first made, we are struck with surprise at the great difference in the receipts from the sources named.

Showing a sum-total of receipts from spirits of\$489, 763, 999 14

It will be seen from this table that the receipts during the last fiscal year were essentially the same as in 1873, and greater than during any other year except 1870, when they reached \$55,606,094.15. At the present rate of tax, fixed by Congress on the 3d of March last, it is estimated that the receipts during the present fiscal year will exceed those of any year which has gone before.

It is proper to state in this connection that the rate of tax on distilled spirits has been fixed by Congress, from time to time, as follows: By act of July 1, 1862, at twenty cents per gallon; by act of March 7, 1864, at sixty cents; by act of June 30, 1864, at one dollar and fifty cents; by act of December 22, 1864, at two dollars; by act of July 20, 1868, at fifty cents; by act of June 6, 1872, at seventy cents; by act of March 3, 1875, at ninety cents.

So far as we may judge by the increased receipts over corresponding months of 1874, the present tax may be enforced with great profit to the revenue, notwithstanding the large amount of whisky on the market when the last rate was fixed, which had paid but seventy cents, and the large amount in bond on March 3, which is subject to the old rate, and which has not yet been exhausted.

WHISKY FRAUDS—HOW THEY HAVE BEEN COMMITTED—PRECAUTIONS TAKEN AGAINST THEIR RECURRENCE—THEIR EXTENT—ADDITIONAL LEGISLATION RECOMMENDED.

Public attention has been often called, within the past few months, to extensive frauds committed in certain localities upon the revenue

by distillers and rectifiers of distilled spirits. I propose, briefly as I can, to give an account, first, of the checks; guards, and protections against frauds established by law; second, of the manner in which "whisky frauds," so called, lately exposed, were perpetrated upon the Government; third, of the extent of these frauds; fourth, of the checks recently established to prevent a recurrence of the same; and, fifth, to suggest the legislation which, in my opinion, is necessary to insure a fuller collection in the future of taxes upon distilled spirits.

I. The system of surveillance now in force at all distilleries, to insure that none of the product may escape taxation, is based upon the presumption that all local officers are honest. Where such is the case it works admirably, and insures the collection of tax upon every gallon of spirits produced by the distiller. It could hardly be expected, however, that among over twenty-three hundred store-keepers and gaugers some would not prove dishonest, especially since there is always near them, in the person of the distiller, if he happen to be an unscrupulous man, a tempter to move them by bribes.

In order, therefore, to effectually prevent fraud, it is necessary to establish a system that shall surely detect it, and that shall be followed by certain and severe penalties. With the distiller it is a matter of dollars and cents, so that, if the risk in committing fraud is made so great that it does not pay, he will not only be honest himself, but will

inform on others as a matter of self-protection.

The present system may be described briefly as follows: A storekeeper is assigned to every distillery, whose duty it is to record the time of filling and emptying every mash tub, to weigh every pound of grain that is used in the mash, and to see that the law is strictly com-The cistern room, where the spirits are received, is placed in charge of a gauger, who determines the exact quantity produced, and the gauge of each barrel into which the spirits are drawn. The pipes from the still to the cistern-room are continuous, so that the distiller has no access to the spirits until after they are gauged and the quantities determined. Each barrel filled in the cistern room must be serially numbered, beginning with No. 1, and running consecutively without duplication. A warehouse-stamp must then be affixed to the barrel, which stamp has also a serial number, never duplicated, and shows the number of barrel, contents in proof and wine gallons, name of gauger, and date of affixing. The barrel so marked is then placed in a warehouse on the distillery premises, where it can remain not to exceed one month without a warehousing-bond, or not to exceed one year when such a bond is given. When the package is to be withdrawn, the collector furnishes, on application and after payment of the tax, a tax-paid stamp, which is filled in with the same number of package, proof and wine gallons, as appears on the warehouse stamp, and has itself another distinctive serial number, which is never duplicated. The package of spirits is now ready for market, and is so fully marked and branded as to enable any revenue officer to identify it wherever found, since no other package can exist legally with the same numbers, marks, and

The distiller is required to keep a book, in which he records a full description of each package, specifying all the marks and brands above specified, and the name of the party to whom each package is sold. The purchaser is required to keep a book, which records a like description of the package, and states both from whom it was purchased and to whom he sells it. A complete record is thus kept of the whereabouts

of each package of spirits until it is dumped for rectification or reaches the consumer.

The system of checks, as applied to rectifiers, is as follows: A rectifier is permitted to rectify spirits bought by him, and place the same upon the market under a rectifier's stamp. When he purchases the spirits, and is ready to dump for rectification, he makes out a full description of the packages, giving all serial numbers, date of original gauge, and name of distiller producing the spirits, and sends a notice of intention to rectify the same to the collector, who at once details a gauger to examine and regauge the spirits. It is this gauger's duty, also, to see the packages emptied and the stamps destroyed; and to certify the fact on the face of the rectifier's notice. An account is opened with each rectifier, in which he is credited with the total proof gallons of spirits so dumped, and charged with the total proof gallons covered by rectifiers' stamps placed on spirits gauged out of his estab-The collector is not allowed to issue rectifiers' stamps for a number of proof gallons in excess of the number reported as dumped by the rectifier and gauger, as above indicated.

It is thus apparent that, if all officers were honest, the above-described checks would effectually prevent any spirits being sold in the market

that had not paid the proper tax.

II. To perpetrate fraud, the distiller must first obtain the consent of the store-keeper to use more grain than his survey calls for. It has been proven by experience that a fermentation that will produce the largest yield of spirits from grain cannot be made in less than forty-eight hours. The regulations, therefore, allow this time for fermentation, and forbid more than one filling of the tubs in seventy-two hours, thus requiring the tub to remain empty for twenty-four hours. If, however, the distiller will prepare what is known as "quick-yeast," he is enabled to complete a fermentation in twenty-four hours, or less time, though with a loss of yield in spirits. This he can well afford, if he can sell half his product without tax. Having gained the consent of the storekeeper, who keeps his books as if the law were being complied with, the distiller makes two fermentations where one is allowed, and then has nearly double the quantity of spirits that the books show produced. The distiller who has this illicit product on hand does not dare place it upon the market in the only way possible, that is, by the re-use of stamps, since the detection of a single package so duplicated would subject him to the severe penalties of the law. He must, therefore, call to his assistance the rectifier, who, even if detected, is dealt with much more leniently by the law, while the difficulties in detecting him are much greater than with the distiller.

To make the transfer of the illicit spirits from the distillery to the rectifying house, the gauger in charge of the cistern-room must either permit barrels to be filled and surreptitiously removed without stamps, or he must affix stamps which have been once used. If the spirits were removed to the rectifying house without stamps, no notice of rectification describing the same could be sent to the collector, and, therefore,

no credit could be had by which to obtain rectifiers' stamps.

Two methods of placing illicit spirits upon the market have been in

vogue:

Ist. The first was made possible by the fact that rectifiers' stamps have heretofore been so prepared that each stamp could protect any number of gallons which the gauger chose to fill in. This character of fraud will be best indicated by an illustration. A certain rectifier buys from a distiller, say, one hundred packages of tax-paid spirits, contain-

ing, say, forty proof-gallons each. He files with the collector the descriptive notice above mentioned, and asks for the issue of rectifiers' stamps to cover four thousand (4,000) gallons of spirits after rectifica-A gauger is detailed to gauge these spirits out of the rectifyingtubs, carrying with him a book of blank stamps, to be filled up according to the contents of each package. The gauger reports, on a prescribed form, that the rectifier has placed the four thousand gallons in, say, four hundred packages, containing ten gallons each, and returns the stubs of the stamps filled up in accordance with this statement. The packages so represented are afterward found to contain, say, eighty gallons each, and the stamps thereon are filled up in accordance therewith, so that, in fact, only fifty of the stamps were used to cover the "straight spirits," and, under cover of the remaining three hundred and fifty, twenty-eight thousand (28,000) gallons of illicit spirits are placed upon the market. This case is by no means an extreme one, but is a fair example of what was the constant practice in the districts herein

2d. The other favorite method may be illustrated as follows:

The distiller sends to the rectifying house a number of barrels of spirits upon which the tax has been regularly paid. The descriptive notice aforesaid is filed and a gauger detailed, who reports the stamps destroyed, whereas the fact is that the stamps are not actually destroyed. Either the packages with the stamps uncanceled are returned to the distiller and refilled with illicit spirit, or the stamps are removed and placed by the distiller or rectifier on other barrels of spirits upon which no tax has been paid. These barrels are sent to the rectifier, and by him shipped to some distant market without making any record of the transaction on his Government books. A modification of this form of fraud consists in the rectifier's filing a purely fictitious notice, containing a description of spirits which he has never received, and emptying in place thereof an equal quantity of illicit spirits.

In one of the two ways above described all the frauds recently discovered have been committed, and the Government has lost thereby at least four million dollars in the last two years. The frauds have mainly been carried on at four places, namely: Saint Louis, Milwaukee, Chicago, and Evansville, and all at distilleries producing what is known as "high-wines." This class of spirits does not require ageing, as does the fine sour-mash whisky made for drinking purposes. It consequently does not excite suspicion to find high-wines on the market to-day that were produced yesterday. This rapid transfer from distillery to the market affords facilities for re-use of stamps, which are scarcely feasible with the whiskies that require a year's warehousing before being ready for market, since it would be prima-facie evidence of fraud if a distiller of fine whiskies would not take advantage of the year which the Government allows his spirits to remain in warehouse without payment of tax. If once in warehouse, the Government is sure of its tax; hence the comparatively small amount of fraud discovered in places producing fine whiskies. As a further reason why fraud in these whiskies cannot be perpetrated, it may be stated that as a rule they do not require rectification, and the frauds above indicated cannot be committed without the aid of a rectifier.

III. As an indication of the extent of the frauds above described, I have the honor to report that documentary evidence is in possession of this Office which has warranted the seizure of twenty-four distilleries and thirty-seven rectifying houses, and implicated over fifty United States gaugers and store-keepers. This evidence also shows the issue between

July 1, 1874, and May 1, 1875, of fraudulent spirits by the duplication of twenty thousand (20,000) packages, containing probably one million two hundred thousand (1,200,000) proof-gallons, and, by the aid of false gauging, to the additional amount of one million proof-gallons. This, of course, is but a portion of the fraud actually committed, but in itself indicates the loss of tax to the Government in ten months to an amount not less than sixteen hundred and fifty thousand dollars, (\$1,650,000.)

IV. The checks which have lately been established to prevent the

recurrence of such frauds as I have described are as follows:

1st. As before stated, every barrel of spirits produced at a distillery has a serial number, which is never duplicated. An account has been opened with each distiller, in which is entered the serial number of every package of spirits produced by him. As fast as reports of rectifiers are received showing the dumping of these packages, the serial numbers are checked off and an entry made showing the date of emptying and the name of the rectifier. Transcripts have been required monthly from the books of every distiller, rectifier, and wholesale liquor-dealer in the United States, containing full descriptions of the spirits purchased and sold by them. Complete abstracts are made from the transcripts, so that all the spirits of each distiller, as found in the several markets of the country, These abstracts are then comare condensed into one account monthly. pared with the records showing spirits dumped by rectifiers, so that if spirits are placed upon the market after they are reported dumped, the fraud will be discovered at once. So perfect and unerring is this system that, although the spirits may have passed through several hands, there is no trouble in fixing the guilt where it belongs. This prevents the reuse of stamps, which I have heretofore described as the second method of committing frauds.

2d. To aid still further in preventing this character of fraud, this Office has lately adopted new regulations in regard to the use of tax-paid stamps, by which a portion of the stamp is cut out at the time of dumping and returned with the gauger's report. This effectually destroys the stamp and prevents its re-use, while at the same time a sufficient amount of the engraving is shown upon the slip to determine

whether the stamp is genuine.

3d. To prevent what I have described as the first class of frauds, namely, removing spirits to the rectifying-house without stamps, and disposing of the same by filling stubs of rectifiers' stamps with a small number of gallons and the stamp with a much greater number, the following check has lately been adopted: A new series of rectifiers' stamps has been issued, in which each stamp has printed upon its face the number of gallons the package contains, so that the stub must necessarily show the same thing. Every gallon of spirits for which a rectifier's stamp is issued must of necessity be returned by the gauger and charged to the rectifier. It is, therefore, impossible for him to get rid of illicit spirits, even if he succeed in removing them from the distillery to the rectifying-house.

4th. As a further check upon frauds such as I have described, the vigorous prosecution of the bondsmen of more than forty store-keepers and gaugers for the forfeiture of the full penalty of the bond, which has been

set on foot, will do much to make such officers honest.

V. With regard to additional legislation required to enforce the honest collection of tax on distilled spirits, I give it as my opinion that the only law necessary is one that shall make the requirements as stringent and the penalties for defrauding the Government as severe in the case of the rectifier as they now are in the case of the distiller. The

rectifier should be required to give a bond in an amount equal to the tax represented by all the spirits he can possibly rectify each month. The house and tract of land upon which the establishment is located should be forfeited to the United States in case of fraud. He should not be allowed to handle any spirits at his rectifying house except those he purchases for rectification and sells under rectifiers' stamps.

Under the present system of detecting frauds, at least thirty days must elapse before the discovery could be made and the guilt fixed. As the apparatus in a rectifying house capable of refining a quantity of spirits upon which the tax would amount to one hundred thousand dollars a month may not be worth more than ten thousand dollars, it will readily be seen that under the present law, which only forfeits the apparatus and spirits owned by him at the time of seizure, a rectifier may aid in defrauding the Government of one hundred thousand and forfeit only ten thousand dollars. By absconding to a foreign country he also escapes the criminal punishment.

I have also to suggest that the law now in force in regard to returns to be made by rectifiers is so indefinite, that some legislation is needed

to enforce the regulations of the Commissioner.

I also think it would be better if rectifiers, distillers, and wholesale liquor-dealers were required to make transcripts of their books monthly, instead of this labor being performed by local officers, as it is at present. It would also relieve officials of an immense amount of labor, and would accomplish the more important result of preventing the destruction of books by parties about to be detected in fraud. There would then be a sworn copy in this Office, that would always be admissible evidence in courts against the guilty parties.

I am firmly of the opinion that the present large tax upon distilled spirits can be collected with but small loss. This opinion is based upon the fact that every store-keeper, gauger, and employe who is connected with the distillery where fraud is perpetrated becomes a pensioner upon the distiller. If, therefore, distillers be kept under such strict surveillance that the amount of money gained by fraud is not sufficient to pay a large corps of officers and workmen in necessary collusion with them to consummate the fraud, they will, as a matter of policy, be honest.

Statement showing the receipts from all sources relating to fermented liquors during the fiscal years ended June 30, 1874 and 1875, with the decrease from each source.

STAMPS ISSUED—THEIR EFFICIENCY AS A MEANS OF COLLECTING REVENUE.

Discoveries of extensive frauds upon the Government in the manufacture and sale of distilled spirits which have been made during the past year have not weakened the confidence of this Office in the stamp system, by which most of the internal revenues of the country are now collected, but, on the contrary, have clearly demonstrated the fact that frauds of any magnitude cannot be perpetrated without the collusion of revenue officials.

During the fiscal year ending June 30, 1875, as will appear from detailed statements hereto annexed, there were issued by this Office—

Beer-stamps	 30,770,640
Tobacco, cigar, and cigarette stamps	
Stamps for distilled spirits	 4, 563, 620
Special-tax stamps	
Documentary and proprietary stamps	 452, 350, 688
Representing an aggregate value of	 \$125,699,619 54

The work of preparing, counting, and issuing these stamps, and keeping the accounts appertaining thereto, is one of great magnitude, but has been attended without the loss of a stamp.

Since I assumed the duties of the Office, I have, with your approval, terminated contracts for printing certain kinds of stamps, and after due advertisement for proposals new contracts have been entered into, which will result in saving to the United States several thousand dollars per annum; and it is believed that the interests of the Government are afforded equal protection under the new as under the old contracts.

The act of July 20, 1868, empowered the Secretary of the Treasury and the Commissioner of Internal Revenue to alter, renew, or change the form, style, and device of any stamp, mark, or label used under any provision of the laws relating to distilled spirits, tobacco, snuff, and cigars, when, in their judgment, necessary for the collection of revenue-tax or the prevention or detection of frauds therein, and to publish regulations for the use of the same.

But it was provided that in no case should such renewal or change extend to an abandonment of the general character of the stamps, nor to the dispensing with any provisions requiring that the stamps should be kept in book form and have thereon the signatures of revenue officers.

This law obviously contemplated that no change should be made in the material of the stamps, and excluded the adoption of metallic

stamps.

But on the 6th of June, 1872, Congress authorized the Commissioner to make such change in stamps and to prescribe such instruments or other means for attaching, protecting, and canceling stamps for the articles above enumerated, or any of them, as he and the Secretary might approve. Under this act it was claimed, and probably with iustice, that said officers possessed the power to substitute metallic for adhesive stamps, in their discretion. In other words, it was insisted that the act of 1872 repealed so much of the act of 1868 as limited the discretion of the officers named, in the changes they should adopt, to paper or adhesive stamps, and that this intent of Congress was disregarded in the Revised Statutes, which went into force on the 1st day of December, 1873, since both acts were carried into the revision, and now constitute sections 3445 and 3446. It is apparent in reading these sections that the power conferred by the act of 1872 is completely neutralized by the re-enactment of the law of 1868, now found in said 3446th section, and no discretion is left as to the material to be employed in the stamps.

I think the attention of Congress should be called to this apparent error in the revision, and that if it be the sense of the law making power either that the material of any class or classes of the stamps should be changed, or that the discretion to change the material should be lodged, as before, in the Secretary and Commissioner, it will be necessary to restore the law as it was before the adoption of the Revised

Statutes.

ABSTRACT OF CASES COMPROMISED.

The whole number of cases compromised, as provided under section 102, act of July 20, 1868, during the fiscal year ended June 30, 1875, was 744.

COLLECTORS—SCALE OF SALARIES.

The maximum compensation allowed by law to collectors is fixed at four thousand five hundred dollars (\$4,500) per annum. By an act of Congress passed at the last session you are authorized, on the recommendation of this Office, to make allowances to collectors, from time to time, such as you shall deem just and reasonable, to be governed, however, by two principles, the territorial extent of their districts and the amount of duties collected by them. These allowances extend to clerk-hire, stationery, advertising, postage, furniture, fuel, and light, as well as to allowances to deputy collectors. Under the power conferred, the following schedule has been formed, and constitutes, during the present fiscal year, the compensation allowed to collectors for their personal services and responsibilities:

0	r collectio	on of-	_	•					A

GAUGING AND GAUGERS' FEES.

I desire to call your attention to the subject of ganging, and to suggest some changes which I deem of great importance. I have been constrained lately to modify the scale of fees regulating the pay of gaugers, with a view to economy, as the expense connected with this branch of the service has seemed to me too great. The difficulty in making a scale of fees which shall be uniform and apply equitably to all these officers, whose duties and compensation vary according to their localities and the amount of work to be done, and the time spent in reaching distant distilleries, is very great. Under the scale of fees established by my predecessor, the first five hundred gallons of spirits gauged in any month was paid for at the rate of ten cents per gallon, provided the limit of six dollars per day was not exceeded. Experience has proved that a gauger can easily gauge from fifteen hundred to two thousand gallons in one day, so that it frequently happened in districts having only a small quantity to be gauged that the large fees prescribed for the first five hundred gallons were earned in one day, and, in order to come within the six dollars limit, the gauger would secure five gallon packages to be gauged on a sufficient number of subsequent days to entitle him to receive fifty. dollars, (\$50,) allowed by the schedule. In order to prevent this abuse

of the regulation, I have prescribed a scale of fees which applies to each day's work, so that this is prevented, and a gauger can only receive pay not to exceed six dollars for work performed in any one day. In a number of cases this rule works harshly, but being forced to choose between two evils, I have selected the lesser.

I am of opinion that many gaugers who at the present receive only six dollars per day justly earn a larger sum, and I should be glad to see such receive at least seven per day. The aggregate amount, however, paid for gauging is, in round numbers, one million of dollars, and this, in my judgment, is excessive. I believe this expense may be reduced one-fourth or more, after paying the deserving gaugers seven dollars per day. If Congress see fit to confer power upon the Commissioner to consolidate the offices of gauger and store keeper, whenever, in his judgment, it can be done without detriment to the service, this power, in my opinion, could be profitably and wisely exercised at every distillery whose producing capacity does not exceed forty gallons per day. In this way I estimate that at least one hundred thousand dollars would be saved in expenses. If gauging at wholesale liquor dealers is abo'ished, as I shall hereinafter suggest, an additional sum of two hundred thousand dollars may be saved. Let the limit of salary be then fixed at seven dollars per day, and I feel satisfied that a scale of fees could be established that would pay the deserving ones this limit without increasing the expenses beyond three-quarters of a million per an-

TOBACCO.

The total receipts from tobacco for the fiscal year ended June 30, 1875, were thirty seven million three hundred and three thousand four hundred and sixty one dollars and eighty eight cents, (\$37,303,461.88.)

Comparing the receipts from the several sources of manufactured tobacco, snuff, and cigars, special taxes upon the manufacture and sale of the same, special taxes upon the sale of raw or leaf tobacco, and from the sale of export stamps, with the receipts from corresponding sources for the fiscal year ended June 30, 1874, the following results are shown:

Manufactured tobacco taxed at 20 cents per pound. Manufactured tobacco taxed at 24 cents per pound. Snuff, taxed at 32 cents per pound	5, 480, 683	19
Total for the year ended June 30, 1875. Year ended June 30, 1874	25, 200, 759 21, 938, 955	
Increase of collections on tobacco and snuff	3, 261, 803	92
Cigars, cigarettes, &c., taxed at \$5 per thousand. Cigars, cigarettes, &c., taxed at \$6 per thousand. Cigarettes taxed at \$1.50 per thousand. Cigarettes taxed at \$1.75 per thousand.	3, 042, 451 40, 967	$\begin{array}{c} 27 \\ 25 \end{array}$
Total on cigars, &c., for the year ended June 30, 1875		
Increase on cigars, cigarettes, &c	872, 235	29

Per cent. of increase on tobacco and snuff for the last fiscal year over the preceding year, $14\frac{4}{3}$; and on eigars, cheroots, and eigarettes, $9\frac{2}{3}$ per cent.

Year ended June 30, 1875, received from sale of export-stamps	\$6,981 20 6,735 40
Increase from sale of export-stamps	245 80
Year ended June 30, 1875, collected from dealers in leaf-tobacco	92, 228 33 115, 991 88
Decreased collections from dealers in leaf-tobacco	23,763 55
Year ended June 30, 1875, collected from dealers in manufactured to- bacco, &c Year ended June 30, 1874, collected from dealers in manufactured to- bacco, &c	1, 596, 460 95 1, 641, 937 79
Decreased collections from dealers in manufactured tobacco, &c.	45, 476 84
Year ended June 30, 1875, collected from special taxes of tobacco and cigar manufacturers. Year ended June 30, 1874, collected from special taxes of tobacco and cigar manufacturers. Decreased collections from tobacco and cigar manufacturers	160, 554 45 160, 615 34 60 89
200000000000000000000000000000000000000	
Year ended June 30, 1875, collected from special taxes of peddlers of to- bacco	40,627 91 44,671 30
Decreased collections from peddlers of tobacco	4,043 39
Year ended June 30, 1875, collected from sources under tobacco formerly taxed but now exempt. Year ended June 30, 1874, collected from sources under tobacco formerly taxed but now exempt.	22 00 376 08
Decreased collections from these sources	354 08

The total amount of collections from the foregoing sources aggregates the sum of thirty-seven million three hundred and three thousand four hundred and sixty-one dollars and eighty-eight cents, (\$37,303,461.88,) and shows an increase as compared with the previous fiscal year of four million sixty thousand five hundred and eighty-six dollars and twenty-six cents, (\$4,060,586.26,) and an increase over any previous fiscal year of two million nine hundred and seventeen thousand one hundred and fifty-eight dollars and seventy-nine cents, (\$2,917,158.79.)

Under the present internal revenue law, all taxes imposed upon tobacco, snuff, and cigars, and upon the business of manufacturing and selling the same, are collected by special and denominational stamps. Hence, from the amount of receipts from any given source, it is easy to deduce the quantity and number of tobacco and cigars, respectively, manufactured and sold, and also the number of persons engaged in the

business of manufacturing and selling the same.

From the foregoing figures it will be seen that while the amount of business done for the last fiscal year, as indicated by the increased collections on the goods made and sold, was largely in excess of any previous year, the number of persons and firms engaged in the business, par-

ticularly in the selling of the goods, was diminished by several thousand.

Number of tobacco and snuff manufacturers	983
Number of cigar manufacturers	15,073
Number of dealers in leaf-tobacco	
Number of dealers in manufactured tobacco	
Number of peddlers of tobacco	2,210

Allowing that there are four cigar-makers employed on an average for each cigar-factory, a number closely approximating to the actual number reported in the manufacturer's bonds, and it gives a total of cigar-makers employed during the last fiscal year of 60,292 persons.

There are no data given in the reports rendered to this Office from which it is possible to ascertain, even approximately, the number of employés engaged in the manufacture of tobacco; but allowing an average of fifty persons to each factory, which will probably be found not to vary materially from the actual number, and we have a total of 49,150 persons thus employed. Thus it will be seen that there were engaged in the manufacture of tobacco, snuff, and cigars during the last fiscal year 125,498 persons, and in the sale and distribution of the same 324,941 persons or firms, making an aggregate of 450,439 persons or firms directly engaged in this branch of national industry.

Production of manufactured tobacco and cigars.

Computing the number of pounds of tobacco and snuff and the number of cigars, cigarettes, &c., produced from the amounts of taxes collected on the same, and we have the following exhibit as the result:

Tobacco taxed at 20 cents per pound	Pounds. 93, 265, 216. 45 22, 836, 179. 95 3, 334, 478. 22
Total quantity on which tax was paid	119, 435, 874, 62 9, 179, 315, 88
Gives a total production of.	128, 615, 190. 50
This shows an increase over the production of the preceding fiscal year of	10, 066, 572, 50

The number of cigars, cigarettes, &c., on which taxes were collected during the fiscal year ended June 30, 1875, including the imported cigars, which paid an internal revenue tax in addition to the importduty, was as follows:

Cigars, cheroots, &c., taxed at \$5 per thousand. Cigars, cheroots, &c., taxed at \$6 per thousand. Cigarettes taxed at \$1.50 per thousand. Cigarettes taxed at \$1.75 per thousand.	507,075,211 $27,311,500$

REVIEW.

Prior to the act of July 20, 1868, the legislation of Congress with regard to the mode of collecting taxes on manufactured tobacco, snuff, and cigars seems to have been, and necessarily so, experimental in its character. In a country producing the raw material, and where no such taxes had ever before been levied, and therefore without any practical experience to serve as a guide, it was no easy matter to determine in advance what rates of tax, or what modes of collecting the same, or what restrictions it might be necessary to impose upon the producer, the manufacturer, or the dealer in tobacco, in order to yield to the Government the greatest amount of revenue, with a just and equitable distribution of the burdens of such taxation, and at the same time preserve as much as possible the interest of each of the different classes of persons before mentioned.

Different rates and different modes of assessing and collecting.

The rates of taxation have varied under different enactments, on different grades of manufactured tobacco, from two cents per pound to forty cents per pound; on snuff, from twenty cents to forty cents per pound; and on cigars, from one dollar and fifty cents per thousand to forty dollars per thousand.

Under some of the earlier laws, the tax was made partly specific and partly ad valorem, with a view of bringing the quality and price of the goods in as elements in determining the amount of tax which should be paid on a given quantity. But, however just and equitable such a mode of levying a tax on these articles might have appeared in theory, in practice it was found to be impracticable, and failed to produce satisfactory results.

STAMP-SYSTEM OF COLLECTING.

By the act of July 20, 1868, the present system of collecting all taxes on manufactured tobacco, snuff, and cigars by means of suitable stamps was adopted. This system necessarily involved prescribed modes of packing, with certain restrictions and limitations. It involved also certain modes of marking, branding, stamping, and canceling stamps, which were either specifically prescribed in the statute or authorized to be so prescribed by regulations. It made the tax specific in all cases, and uniform upon all cigars, of five dollars (\$5) per thousand; on cigarettes weighing not exceeding three pounds per thousand, one dollar and fifty cents, (\$1.50;) on snuff, thirty-two cents per pound; and on all smoking and chewing tobacco two rates, one of sixteen cents, the other of thirty-two cents per pound, respectively.

The more important provisions of the act of July 20, 1868, were thoroughly discussed during a long session of Congress, running far into the summer of that year. The committees in charge of the bill, in addition to such information as the Revenue Department could furnish them, availed themselves of the knowledge and experience of manufacturers themselves. In fact, many of the most important provisions of the law and most stringent restrictions of the same were adopted, if not upon the suggestion and recommendation of men representing the trade in its

various branches, at least with their approval.

CHANGES MADE BY THE ACT OF JUNE 6, 1872.

The bonded-warehouse system authorized by the act of July 20, 1868, for the storage of tobacco intended for export, was repealed by the act of June 6, 1872. By the same act the tax on all manufactured tobacco,

excepting snuff, was made uniform at 20 cents per pound; and by the same law more stringent provisions were enacted to enable the Government to control the movement of raw or leaf tobacco, and to prevent its sale for direct consumption, either by dealers or the growers or producers thereof. These amendments, opposed at the time by a portion of the trade, have, since their enactment into law and since time has been given to test their practical operations, received the general approval of the trade, and are now regarded, especially the two last named, as of paramount importance to manufacturers of and dealers in manufactured tobacco.

INCREASED RATE OF TAX UNDER THE ACT OF MARCH 3, 1875.

By the act of March 3, 1875, the rate of tax on all grades of manufactured tobacco was increased twenty per cent., and a corresponding increase made upon cigars, the tax now being twenty four cents per pound on tobacco, and six dollars (\$6) per thousand on cigars; cigarettes weighing not exceeding three pounds per thousand, being taxed at one dollar and seventy-five cents (\$1.75) per thousand, instead of one dollar and fifty cents, (\$1.50) as under previous law.

THE TAX ULTIMATELY PAID BY CONSUMERS.

The tax on tobacco, snuff, and cigars, being levied upon the manufactured goods, and made payable by means of stamps attached to the same when sold, or removed from the place of manufacture for sale or consumption, is an indirect tax upon the purchaser or consumer. Primarily, indeed, the manufacturer pays the tax, but charges the same over to, and collects it from, the purchaser, so that, ultimately, the tax is paid by the consumer, each consumer paying now in exact proportion to the quantity consumed. The burden of this tax being thus distributed among the millions of voluntary consumers, its weight can never be seriously felt so long as it is not excessive in amount and is uniformly and thoroughly collected.

Estimated number of consumers of manufactured tobacco and cigars in the country, and the average consumption of each.

Supposing the population of the entire country at the present time to be forty four million, and that two thirds of the adult male population are in the daily habit of using tobacco in one or more of the forms in which tobacco is used, we have eight million eight hundred thousand consumers.

Of this number probably eight hundred thousand, consisting of the growers or producers of tobacco and the laborers employed in raising the same, the manufacturers of tobacco and their employés, consume tobacco, raw or manufactured, from which the Government receives no revenue.

Dividing the 119,435,874 pounds of manufactured tobacco and the 1,967,959,662 cigars, &c., on which taxes were collected during the last fiscal year, equally among eight million consumers, and they will receive a small fraction (about an ounce) less than fifteen pounds of tobacco per capita, and with it two hundred and forty-six cigars or cigarettes.

The following schedule shows the aggregate amount of taxes collected on manufactured tobacco and snuff, with the different rates of tax and

the average rate per pound for each fiscal year, for the period beginning September 1, 1862, and ending June 30, 1875:

Fiscal years ended June 30—	Aggregate col- lections.	Different rates at which taxes were collected.	Average rate of tax per pound.

Schedule showing the aggregate taxes collected on tobacco, snuff, and cigars, collected from special taxes on the manufacture and sale of the same, and the aggregate amount of collections from all of these sources, for each fiscal year, since the adoption of the present mode of collecting by stamps.

Fiscal years ended June 30 –	Collected on to- bacco, souff, and organs.	Collected on spe- cial taxes.	Agregate collections from all those sources.
1869	\$22, 332, 016 31	\$1,098,691 26	\$23, 430, 707 57
1870	30, 019, 263 46	1,331,444 42	31, 350, 707 88
1871	32, 158, 712 91	1,420,194 27	33, 578, 907 18
1872	32, 136, 932, 45	1,599,238 07	33, 736, 170 52
1873	32, 338, 249 70	2,048,053 39	34, 386, 303 09
1873	31, 272, 547 83	1,970,327 79	33, 242, 875 62
1874	35, 406, 587 04	1,896,874 84	37, 303, 461 88

The total amount of taxes collected on tobacco and snuff from September 1, 1862, to June 30, 1875, is two hundred and twenty-five million three hundred and fifty-six thousand two hundred and nineteen dollars and seventy-eight cents, (\$225,356,219.78.) These collections were made

on 944,827,866 pounds, being at an average rate of $23\frac{85}{100}$ cents per pound.

The total collections on cigars, cheroots, and cigarettes for the same period were \$68,233,206.16. Of this sum there was collected during the first five years, under the graded and partly ad valorem rates, \$11,957,656.84, while during the remaining eight years, when the rate of tax was specific and uniform on all cigars and cigarettes of five dollars (\$5) and one dollar and fifty cents (\$1.50) per thousand, respectively, the collections were \$56,275,549.32.

The foregoing tables and figures seem to establish fully the following propositions: First, that the true mode of levying taxes upon manufactured tobacco, snuff, and cigars is by means of specific and uniform rates; secondly, that the collections are the most easily and thoroughly made by means of suitable revenue-stamps attached to each package after the goods are properly packed; thirdly, that the rate of tax which will produce the greatest amount of revenue lies between the extreme rates which have been successively tried under different revenue laws; and, fourthly, that the best results thus far, other things being equal, have been obtained during those years when the rates have been most nearly uniform and constant.

While it is doubtful whether the removal of the tax altogether on tobacco, snuff, and cigars would have the effect of greatly increasing the consumption of the same, it is certain that any material reduction of the present rates, save, perhaps, the reduction of the rate of tax on snuff, from thirty-two to twenty-four cents per pound, would cause a corresponding reduction in the aggregate collections.

It is to be observed that the present rate of twenty-four cents per pound on all descriptions of manufactured tobacco, save snuff, is within a very small fraction the same as the average rate $(23\frac{85}{100}$ cents) for the thirteen years during which such taxes have been collected, and it is fair to presume that this rate of twenty-four cents per pound is the true revenue-rate, or the rate which, under the present system, will produce the greatest amount of revenue to the Government. While a lower rate, as the foregoing figures show, would give diminished collections on the quantity actually reported for taxation, a higher rate would not only tend to incite to fraudulent productions and sales, but would encourage the growth of the plant, and its use by consumers in its raw or unmanufactured state.

Twenty-five pounds of leaf-tobacco is about the average quantity used in making one thousand cigars. This quantity of leaf-tobacco, if cut or granulated and put up as smoking tobacco, would be liable, when sold, to a tax in the aggregate of six dollars, (\$6.) When, therefore, the rate of tax on tobacco is twenty-four cents per pound, the rate of tax on cigars should be, as it is, six dollars (\$6) per thousand, in order that the burden of taxation may be equally distributed between the two classes of manufacturers and consumers.

ASSESSMENTS.

The ascertainment of liability to taxes on the part of persons, firms, associations, and corporations, and the assessment of those taxes, formerly belonged to assessors. The office of assessor was abolished by act of 24th December, 1872, and now the Commissioner of Internal Revenue is required to make the inquiries, determinations, and assessments of all taxes and penalties imposed by the internal revenue law, where such taxes have not been duly paid by stamps at the time and in the manner provided by law. He is required to certify a list of such

assessments, when made, to the proper collectors, respectively, who proceed to collect and account for the taxes and penalties so certified.

The power thus conferred has been exerted, within the past fiscal year, in making assessments exceeding eight million dollars. No power more arbitrary in respect to rights of property can be conceived, since it is expressly provided that no suit for the purpose of restraining the assessment or collection of any tax shall be maintained in any court. Is it asked, How, then, are the rights of the citizen protected against injustice? I answer, First, in the justice of the Commissioner in making the original assessment; next, in the opportunity given him to review his action, when an appeal is made for the abatement of the tax; and, finally, when the illegal tax has been paid or collected, in the remedy which the citizen has against the United States, in suing the collector and recovering back money and interest. Though this process seem circuitous, and the redress tardy, yet no efficient tax-law could afford to relax these seeming rigors, and allow the Commissioner and collectors to be thwarted at every step by injunctions and restraining orders.

This power of assessment extends to all distilled spirits removed from the place where they were distilled, and not deposited in a bonded warehouse; to deficiencies in the distiller's mouthly returns, where he does not report all the spirits that should have been produced by him, having reference to the quantity of material that has gone into his distillery and its spirit-producing capacity; to manufacturers of tobacco, snuff, and cigars, where these products have been sold, or removed for sale or consumption, without the use of the proper stamps, the power of assessment within the period of two years being given in such cases; to fermented liquors removed from breweries unstamped; to proprietary articles removed unstamped from the factories; to legacies and successions; to special taxes on trades and occupations; to incomes and dividends; and to the deposits, capital, and circulation of banks and bankers.

The present system of assessment, under the act of December 24, 1872, having gone into force in May, 1873, the first assessment-year ended April 30, 1874, and the second April 30, 1875. Accordingly, the following table shows the assessments made by the Commissioner and receipted for by collectors during these two assessment-years, with the increase or decrease on each article assessed.

The increase of \$556,939.22 in the tax assessed this year on deposits, capital, and circulation of banks, &c., over the amount assessed last year, includes assessments amounting to \$227,715.80, made in December last against certain manufacturing and other corporations on notes paid out and used for circulation. These assessments, which had heretofore escaped the vigilance of the local officers, were made by this Office in strict accordance with existing laws, but they were not collected, as Congress, by act approved March 3, 1875, relieved those companies against whom assessments had been made, together with all other parties against whom similar large assessments were contemplated, from the payment of the tax and penalty. But, even after deducting this item of \$227,715.80 from the total increase of \$556,939.22, there remains a clear gain of \$329,223.42 over the assessments made during the year ended April 30, 1874, and an increase over the collections from these sources during the fiscal year ended June 30, 1873, of \$1,158,514.24.

The large amount of \$2,385,520.41 assessed on distilled spirits is mostly owing to the recent discovery of stupendous frands committed by distillers in various parts of the country. This amount will be largely increased during the current assessment-year, additional assessments having already been made as follows: \$142,137.22 in May, \$24,153.71 in June, \$68,958.34 in July, \$413,874.18 in August, and \$136,468.45 in September; amounting in all to \$785,591.90. The advantage which the present mode of assessment affords, of creating a lien on the property of the distiller as soon as the fraudulent removal of spirits is discovered, has proved of great benefit to the Office, and, taken in connection with the measures recently adopted through the newly created Division of Revenue Agents, will, it is confidently expected, result in securing a much more thorough collection of the tax on distilled spirits.

Observation and experience having demonstrated that, as a general rule, brewers produce one barrel of beer from every 2½ bushels of malt, or its equivalent, this Office announced its adoption of that quantity as a basis for estimating the quantity of fermented liquors produced by the brewer, in a letter dated July 15, 1874, and published in the Internal Revenue Record. Assessments have been made from that time on the reported deficiency of such production, except when satisfactorily explained. This action secured an increase of \$7,577.47 in the tax assessed on fermented liquors.

A standard of production in the case of cigars having been determined in a similar manner, and reports required of collectors showing the quantity of materials used and number of cigars made by manufacturers in their respective districts, a very large increase of assessments of tax on cigars removed from the factory unstamped resulted. The increase, \$105,797.72, is, in fact, about seven times the amount assessed during the previous year on tobacco, snuff, and cigars. It is expected that during the current year the assessments of tax on tobacco will also largely increase, as steps have been taken, by prescribing a form of report to be made by collectors to this Office, to secure a more efficient collection of the tax on this article.

The amount of penalties assessed this year is \$331,993.02, an increase of \$163,702.93 over last year. This amount, however, includes assessments, amounting to \$113,914.56, against certain manufacturing and other corporations, which, as in the case of the tax on deposits, capital, and circulation of banks, &c., were not collected by reason of the act of Congress above referred to. Deducting this amount, we have still an increase of \$49,788.37, which will appear quite large when it is considered that the most of these assessments are penalties against delinquent spe-

cial tax payers, and that, therefore, each single assessment must of necessity be very small, ranging from \$2.50 to \$15. By the revised form of assessment lists, collectors are required to state the date on which the tax-payer made the prescribed return, and, as by this date his liability to a penalty is determined, it is believed that by this precaution few, if any, escape the penalty justly due.

Particular attention has been paid to the assessment and collection of the tax on legacies and successions, and on incomes and dividends. The increase of \$58,119.83 in the tax on legacies and successions, and of \$588,808.10, the whole amount assessed on incomes and dividends, is attributable to special investigations made by internal-revenue officers

and to favorable judicial action.

The decrease of the assessments for deficiencies and excess of material used in the production of distilled spirits, amounting to \$69,941.15, indicates that the majority of distillers have learned to adapt the management of their business to the surveyed capacity of their distilleries.

The amount assessed as "other taxes" last year was for taxes omitted to be assessed by the former assessors while they were still in office. These assessments having all been completed before the expiration of the first assessment-year, no assessments under this head could be made

in the second year.

The bulk of taxes reported on Form 58 is composed of amounts paid to collectors by order of court in suits which have been finally decided. The decrease of \$32,555.13 in the assessments under this head may therefore be taken as evidence that suits involving a less amount of tax were decided in the last year than in the previous one. It is observed that when revenue officers have discovered taxes to be due and not assessable under the statute of limitation relative to assessments, the parties liable have preferred to waive the benefit of the statute and make returns as the basis for assessments rather than be sued for the taxes and penalties.

For the purpose of relieving the accounts of collectors from duplicate charges, it was determined, in the beginning of the past assessment-year, to exclude special taxes which had been paid by stamps, from the receipt which is given by the collector for the amount of the assessment-list. Taking this into consideration, the apparent decrease in the amount assessed last year for special taxes, from the assessments of the previous year, amounting to \$110,045.11, is easily explained. If such special taxes had been included during the year ended April 30, 1875, the amount assessed would have been largely in excess of that

assessed during the previous year.

The whole amount of taxes assessed during the year ended April 30, 1875, was \$8,230,003.22, an increase over the amount assessed during the previous year of \$3,444,335.77.

OPERATIONS AT DISTILLERY-WAREHOUSES.

The following table shows the quantity of distilled spirits in taxable gallons, at 70 cents and at 90 cents tax, placed in distillery-warehouses, withdrawn therefrom, and remaining therein at the beginning and close of the fiscal year ended June 30, 1875:

	Gallons.	Gallons.
Quantity of distilled spirits remaining in bond July 1, 1874. Distilled spirits produced from July 1, 1874, to March 3, 1875. produced from March 3, 1875, to June 30, 1875.	42, 606, 320	17, 755, 969*
Total produced to June 30, 1875		60, 930, 425

		78, 686, 394

^{*} Including 2,145,010 gallous out on export-bonds, and excluding 204,716 gallons, at 50 cents, destroyed by fire, and 2,034 gallous assessed as not actually in warehouse.

EXPORTATION OF DISTILLED SPIRITS.

The quantity of distilled spirits removed from distillery-warehouses for export during the year ended June 30, 1874, was 4,060,106 gallons; the quantity so removed during the year ended June 30, 1875, was only 587,413 gallons; a decrease of 3,472,693 gallons.

No change has been made in the laws or regulations governing such exportations, except that the regulation requiring sureties on bonds filed with collectors of customs to justify on the basis of their real

estate was revoked by you in an order dated February 28, 1875.

There has been no increase in the rate of exportation of alcohol during the first quarter of the present fiscal year, but the quantity of rum removed for exportation has largely increased; the quantity reported removed up to the time this report is made (November 5, 1875) being 404,503 taxable gallons.

EXPORTATION OF MANUFACTURED TOBACCO AND SNUFF IN BOND.

The records of the Office show that tobacco and snuff which had been removed in bond for exportation prior to July 1, 1874, remained unaccounted for by landing certificates on that day, as follows:

Tobacco at 20 cen	ts taxtax	5, 476, 115. 50 pounds.
Total		5 401 140 19 namedo

During the fiscal year ended June 30, 1875, the quantities of tobacco removed for exportation in bond without payment of tax were as fol-

10 11 0 1	
Tobacco under exportation-bonds, at 20 cents	6, 691, 190. 63 pounds.
Tobacco under exportation-bonds, at 24 cents	
Tobacco under transportation-bonds, at 24 cents	
Snuff, at 32 cents per pound tax	38, 756. 25 pounds.

Total removed from manufactories for exportation 9, 179, 315. 88 pounds.

lows:

A decrease of 1,621,611.12 pounds from the amount so removed dur-

ing the fiscal year ended June 30, 1874.

This decrease may be partly explained by the fact that under the act of June 6, 1872, the manufacturer alone could execute the export bond as principal, and thereby was held responsible for the acts of his customers to whom he sold the tobacco and who were the real exporters. If it should prove true that this fact has tended to discourage to some extent the exportation of tobacco, it is hoped and believed that the evil will be remedied by the act of February 8, 1875, by which the manufacturer is allowed to remove tobacco under a transportation-bond, which is canceled upon the production of a clearance certificate by the collector of customs at the port of export, showing that the goods have been laden on board the outward bound vessel, and upon the execution of an export-bond by the owner or shipper of the tobacco to the collector of customs.

While the amount bonded for exportation has decreased, the amount actually accounted for as exported by landing-certificates has increased. The amount thus accounted for during the year is 10,994,808.13 pounds, 1,955,784.24 pounds more than during the previous year.

The amount of tobacco removed and remaining unaccounted for by landing certificates at the end of the year is as follows:

	Pounds.
Amount removed from bonded warehouses, at 20 cents tax	77, 830, 50
Amount removed under export-bonds, at 20 cents tax	1,679,893.50
Amount removed under export-bonds, at 24 cents tax	1,604,852,50
Snuff removed under export-bonds, at 32 cents tax	7, 284, 00
Tobacco removed under transportation-bonds, of which 78,067 pounds	
have been accounted for by clearance-certificates	244, 674. 00
,	

Showing a reduction from the balance reported at the beginning of the year, of 1,866,614.63 pounds.

DRAWBACK.

The following table shows the amount of drawback of internal taxes allowed on different articles exported during the fiscal year ended June 30, 1875.

	<u></u>					
Port of export.	Number of claims.	Medicines and preparations.	Tax on tobacco.	Tax on snuff.	Tax on fermented liquors.	Total.
Baltimore Boston New Orleans New York Philadelphia San Francisco Suspension Bridge Troy	14 56 3 311 19 4 1	\$5, 254 94 16, 078 63 1, 535 12 15 55 64 80	\$1, 322 60 70 40 3, 535 20 503 20	\$353 28	\$161 87 46 24	\$1, 322 60 5, 325 34 353 28 19, 775 70 1, 581 36 503 20 15 55 64 80
Total	410	22, 949 04	5, 431 40	353 28	208 11	28, 941 83

Total amount of drawback allowed during the fiscal year ended June 30. 1874, was \$35,495.31, showing a decrease of \$6,553.48, in the claims a llowed during the past year.

TAXATION UPON THE CAPITAL, DEPOSITS, AND CIRCULATION OF BANKS AND BANKERS.

National banks pay taxes to the Treasurer of the United States in the months of January and July, of one-half of one per cent. each halfyear, upon the average amount of their notes in circulation; of onequarter of one per cent. each half year, upon the average amount of their deposits, and the same rate each half-year on the average amount of their capital stock beyond the amount invested in United States These taxes are collected by the Treasurer, and constitute no part of the internal revenue. Since the organization of national banks, the amount realized from these sources up to the close of the last fiscal year has been sixty four million nine hundred and eighty-nine thousand three hundred and seventy four dollars and forty-six cents, (\$64,989,-374.46;) the amount realized during the last fiscal year having been seven million two hundred and seventy thousand seven hundred and fifty eight dollars and forty cents, (\$7,270,758:40.) The amount paid by the national banks on deposits alone, during the period of their existence up to June 30, 1875, is thirty million eighteen thousand and twenty-eight dollars and twelve cents, (\$30,018,028,12,) while the amount paid during the last fiscal year is three million four hundred and twentyseven thousand five hundred and seventy-six dollars and thirty-one cents, (\$3,427,576.31.)

Other taxes on banks and bankers, not national, are collected under the internal revenue laws. The persons, firms, and institutions thus taxed embrace every incorporated or other bank, and every person, firm, or company having a place of business where credits are opened by the deposit or collection of money or currency, subject to be paid or remitted upon draft, check, or order, or where money is advanced or loaned on stocks, bonds, bullion, bills of exchange, or promissory notes, or promissory notes are received for discount or for sale. These taxes consist, first, of a tax of one-twenty-fourth of one per cent. each month upon the average amount of the deposits of money subject to payment by check or draft or represented by certificates of deposit; second, of a tax of onetwenty fourth of one per cent. each month on the capital employed by these banks and bankers beyond the average amount invested in United States bonds; third, of a tax of one-twelfth of one per cent. each month upon the average amount of circulation issued by them, and an additional tax of one sixth of one per cent. each month upon the average amount of such circulation issued beyond the amount of 90 per cent. of the capital of the bank, association, corporation, company, or person.

I have been thus particular in calling your attention to the laws regulating taxes upon national banks, and upon banks not national, and bankers, for the purpose of presenting forcibly the exemptions on deposits in savings banks. It is provided that the deposits in associations or companies known as provident institutions, savings banks, savings funds, or savings institutions, having no capital stock and doing no other business than receiving deposits to be loaned or invested for the sole benefit of the parties depositing, without profit or compensation to the association or company, shall be exempt from tax on so much of their deposits as they have invested in securities of the United States, and on all deposits not exceeding two thousand dollars, (\$2,000,) made in the name of any one person.

Congress, by act of 18th of June, 1874, extended this exemption from taxation to deposits in such institutions as were then existing, doing business only as savings banks, and recognized as such by the laws of

their respective States or by Congress. The exemption from taxation was to be the same as with deposits in savings institutions having no capital, although, in fact, they had a capital stock or bond for the additional security of their depositors. In fact, the law authorized a dividend of 8 per cent. on the stock in providing that the excess of profits above this dividend should be divided among the depositors, and besides provided that interest at the rate of not less than $4\frac{1}{2}$ per cent. be paid in all cases to the depositors, to be made good, if necessary, from the capital stock. This is the present condition of the law.

The internal revenue act of June 30, 1864, exempted savings banks from all taxation where they had no capital stock and confined their business to receiving and loaning deposits for the benefit of depositors

only, doing no other business of banking.

The act of March 3, 1865, struck out this exemption, and, of course, left savings-banks liable to taxation upon their deposits. But Congress, on the 13th of July, 1866, again having the subject under consideration, subjected to taxation all deposits in provident institutions, savings-banks, and savings-institutions where the deposits made by any one person amounted to five hundred dollars, (\$500,) or upward.

By the existing law, as seen, the deposits made by any one person are not liable to tax unless they exceed two thousand dollars, (\$2,000,) and this exemption instead of being confined to savings banks having no capital stock and doing no banking business is now, by recent legislation, extended to classes of institutions bearing kindred names having

a capital stock and making dividends.

The fruits of this legislation are seen in the appended table, which exhibits the capital and deposits held by banks and bankers, other than national, in May, 1875, and the aggregate average amount of the same during the six months previous, in the several States and Territories, taxable under the internal-revenue laws, and the percentage of the taxable amounts reported for said six months as compared with the total amounts held during May last.

It will be observed from the footings of this table—

That the average amount of capital held by these banks	
and bankers (not national) in May, 1875, was	\$200,316,098
That the average amount of their deposits in the same	, ,
month was	1, 346, 014, 813
That the total of capital and deposits in the same month	, , ,
was	1, 546, 330, 911
While the amount of the taxable capital and deposits of	. ,
these banks and bankers during said six months was	
only	780, 494, 076

or a little more than three fourths of a million of dollars, while the amount of the actual capital and deposits of these same institutions was,

in round numbers, \$1,546,000,000.

It will also be apparent from the table how unequally this taxation is distributed among the States. Thus, upon a given amount of capital and deposits, the tax on California, as compared with Massachusetts, is as ten to one; on Michigan, as compared with the same State, as sixteen to one; on Virginia, as compared with Vermont, as five to one. The city of New York, possessing taxable capital and deposits \$50,000,000 less than Maine, New Hampshire, Vermont, Massachusetts, and Connecticut combined, pays a tax three times as great as these States, while these same States, having capital and deposits three times

 $12 \, \, {
m F}$

as great as California, pay about one half the tax thereon that is paid by California.

I present these figures for your consideration, and for such use as you deem proper to make in your report to Congress, and with this single remark, that if deposits in these so called savings institutions are thought a proper subject for exemption from taxation where they are employed with such profitable results, it were better to return to the rule adopted by Congress in 1866, when deposits made by any one person in excess of \$500 were subjected to taxation.

		<u> </u>	<u> </u>		I

MISCELLANEOUS.

On the 15th day of May last I assumed the duties of the office of Commissioner of Internal Revenue, made vacant by the resignation of Hon. John W. Douglass.

The office force consisted of—

One Commissioner, at a salary of	
One deputy commissioner	3,500
One deputy commissioner	3,000
Seven heads of division	2,500
One stenographer	
Thirty clerks class four	1,800
Forty-five clerks class three	1,600
Fifty-two clerks class two	1,400
Eighteen clerks class one	1,200
Seventy-five clerks (ladies)	900
Five messengers	840
Three assistant messengers	720
Fourteen laborers	720

By act of Congress approved March 3, 1875, it became necessary, on the first of July, for me to recommend the dropping of three clerks of the third class, two clerks of the second class, five lady clerks, and two I accordingly called upon my several heads of division to inform me in writing relative to the efficiency of the individuals employed in their respective divisions, that I might be enabled with justice to dispense with the services of those who were least efficient. reports, in my judgment, warranted a greater reduction than was contemplated by the act referred to; and consequently I recommended the dropping of the names of twenty persons from the rolls of the Office, and the appointment of eight person's vice those dropped in excess of the requirements of the law. The entire number of persons now employed in the Bureau is two hundred and forty-one, including officers. This force is divided under the law into seven divisions, as follows, to wit:

1. DIVISION OF LAW, in charge of Charles Chesley, esq., solicitor of internal revenue, assisted by William H. Armstrong. This division is subdivided into four sections, to wit:

Section 1.—O. F. Dana, chief; in charge of frauds, seizures, suits, &c. Section 2.—E. H. Breckenridge, chief; in charge of abatement and

refunding claims.

Section 3.—Henry A. Blood, chief; in charge (excepting as hereinafter stated) of questions relating to special taxes, documentary stamp-taxes, taxes on incomes, legacies, and successions, and on dividends, &c., lands purchased for the United States on distraint, and the extension of time on distraints.

Section 4.—Israel Kimball, chief; in charge of matters (including special taxes) relating to tobacco, snuff, and cigars, not in suit or in bond, and stamp-taxes on medicines and preparations under Schedule A of Revised Statutes.

2. DIVISION OF ACCOUNTS, in charge of H. C. Rogers, esq., first deputy commissioner, assisted by Edward Tompkins. This division is

subdivided into the following sections:

Section 1.—Edward Tompkins, chief; in charge of the examination and reference of the revenue and disbursing accounts, and estimates of collectors, and of their applications for special allowances, and of all matters relative to advertising and the purchase of blank-books, newspapers,

and stationery for supervisors, collectors, revenue-agents, &c.

Section 2.—Samuel H. Goodman, chief; in charge of the examination and reference of the monthly bills of supervisors, revenue agents, gaugers, and distillery surveyors, and of all miscellaneous claims presented to this Bureau arising under any appropriation made for carrying into effect the various internal-revenue laws, (excepting claims for abatement, refunding, and drawback,) and the preparation of estimates for appropriations by Congress.

3. DIVISION OF STATISTICS AND DIRECT TAXES, in charge of James M. Ray, esq., second deputy commissioner. This division is subdivided into the following sections, to wit:

Section 1.—J. B. Taylor, chief; in charge of statistics.

Section 2.—C. W. Eldridge, chief; in charge of direct taxes.

4. DIVISION OF DISTILLED SPIRITS, in charge of T. A. Cushing. This division is charged with the supervision of all matters pertaining to distilleries, distilled spirits, fermented liquors, wines, rectification, gaugers' fees and instruments, approval of bonded warehouses, and the assignment of store-keepers. This division is subdivided into two sections, as follows:

Section 1.—E. S. Holmes, chief; in charge of fermented liquors, recti-

fiers' returns, gaugers, gaugers' instruments, and locks and seals.

Section 2.—Samuel L. Stephenson, chief; in charge of registering of stills, notices and returns of distillers' reports of surveys, plans of distilleries, approvals of warehouses, assignments of store-keepers, store-keepers' monthly reports of materials used and spirits produced, and gaugers' reports of gauging done at fruit distilleries.

5. STAMP DIVISION, in charge of E. R. Chapman. This division is charged with the supervision of the preparation, safe-keeping, issue, and redemption of stamps for distilled spirits, tobacco and cigars, fermented liquors, special taxes, documentary and proprietary stamps, and the

keeping of all accounts pertaining thereto.

This division also has supervision of all business with Adams Express Company, the preparation, custody, and issue of steel dies for canceling stamps; also the custody of official postage stamps, and the

stamping and dispatch of the mails.

6. DIVISION OF ASSESSMENTS, in charge of C. A. Bates. This division is charged with the preparation of the assessment-lists, and with the consideration of all reports and returns, except those received from distillers, rectifiers, and brewers, affording data from which assessments may be made; also, with keeping the bonded account, and with the consideration of claims for the allowance of drawback.

7. DIVISION OF APPOINTMENTS, ETC., Alexander H. Holt, chief clerk, in charge, assisted by Samuel J. Butterfield. This division is charged with all matters pertaining to appointments, commissions, leaves of absence, office-discipline, assorting and disposition of the mail, registry and keeping of all letters, with the care of the general files; and all matters relating to messengers, laborers, office-stationery, printing, advertising, and the preparation of blanks and blanks-books for the Bureau. This division is subdivided into five sections:

Section 1.—Miss J. M. Seavey, chief; in charge of copying, preparation

and charge of press-copies, and recording the same.

Section 2.—Miss Anuie É. Adams, chief; in charge of the registry of letters.

Section 3.—R. D. Swingle, chief; in charge of printing, circulars, specials,

regulations, and blank forms.

Section 4.—George C. Kirby, chief; in charge of messengers and laborers, opening and disposition of the mail, and stationery for the Bureau.

Section 5.—Richard A. Charles, chief; in charge of the general files. The foregoing constitute the internal working force of the Bureau. The external machinery for the collection of the revenue, including an enumeration of leading classes of manufacturers, from whom largest amount of revenue is derived, is as follows:

At present there are two hundred and nine collection-districts in the

United States, with a corresponding number of collectors; these collectors employ to assist them twelve hundred and five deputies. their districts were six hundred and eighty nine grain-distilleries registered, six hundred and fifty-six of which were operated during the fiscal year ended June 30, 1875, and four thousand and forty fruit-distilleries registered, three thousand nine hundred and forty-five of which were operated during the same fiscal year; also, twelve hundred and fortyseven rectifiers, five thousand three hundred and forty-eight wholesale, and one bundred and sixty-three thousand four hundred and fifty-five retail, liquor dealers. During the fiscal year ended June 30, 1875, there were two thousand seven hundred and eighty three brewers engaged in the manufacture of fermented liquors. There are employed ten hundred and seventy-eight gaugers, and twelve hundred and thirty-three store-There are nine hundred and eighty-three manufacturers of tobacco and snuff, and fifteen thousand and seventy-three cigar manufacturers; and there are employed thirty-two inspectors of tobacco, snuff, and cigars.

There are also employed ten supervisors and twenty-five revenue agents. At the time of my taking charge of the Bureau the latter were assigned to duty under the direction of the supervisors. There were also employed special clerks to supervisors, who acted under their direction,

and performed substantially the same duty as revenue agents.

The frauds which were developed just previous to my assuming the office of Commissioner led to a change in the organization and direction of this force of agents, and on the 18th day of May I issued an order organizing a division of revenue agents, with Homer T. Yaryan, esq., as cluef in charge, relieving supervisors of all responsibility in relation to directing the movements of said agents, transferring the same to Mr. Yaryan under my direction.

Subsequently, upon a careful examination of the law, I became convinced that there was no authority conferred therein for the employment of the special clerks to supervisors above referred to, and, in conformity therewith, an order was issued on the 31st day of August, informing supervisors that from and after that date the services of special clerks

would be discontinued.

This action necessitated the assigning to duty, under the direction of each supervisor, two revenue agents, thereby leaving but five revenue agents, including the chief, to act under the immediate direction of this Office. There have been employed in the division of revenue agents, under the direction of Mr. Yaryan, twenty-five persons, in examining the returns of distillers and rectifiers, and comparing the same with transcripts of the books of wholesale liquor dealers, covering the period from July 1, 1874, to the present time. These examinations have resulted in furnishing evidence by which the Government will be able to recover large amounts of tax upon spirits fraudulently manufactured by distillers, and have developed fraud in places not heretofore suspected, resulting in important seizures of distilleries and rectifying-houses. It may be safely stated that at least \$1,000,000 in taxes and condemned property will be recovered through the agency of this division, which otherwise would probably have been lost to the Government.

The force of revenue agents is entirely inadequate to perform the duties contemplated by law, and I therefore earnestly recommend that Congress, at its approaching session, be requested to authorize by law the employment and payment of fifteen agents in addition to the present number. With such a force, I am confident that the country can be so thoroughly policed as to prevent the perpetration of fraud and greatly

increase the revenue.

Report of work done in section 1, division 7, from July 1, 1874, to June 30, 1875.

Months.	Number of press-copy letters received, briefed, and reg- istored.	Number of pages of press- copy received each mouth.	Numbor of pages of press- copy written each month.	Covering pages in record- books.	Number of pages of press- copyreceived over number recorded each month.	Number of pages of letter, legal-cap, and foolscap paper written and compared each month.	Number of letters folded for indorsing.	Number of letters ruled for indorsing.	Number of envelopes and labels addressed and compared.	Number of claims scheduled and compared.	Number of forms 51, 122, 23, 234, 58, 60a, 93a, 130a, and 69 copied and compared.	Number of back letters briefed and registered.	Number of orders for press- copy letters received.	Number of pages of press- copy letters counted and arranged for records.	Number of pages of record- books compared.

Average number of pages of press-copies of letters received each month	,
Average number of pages of press copy recorded each month	
Average increase each month of pages of press copy unrecorded	
Number of pages of press-copy letters unrecorded for the fiscal year ended June 30, 1875	46,277

It must be borne in mind that out of the seventy lady clerks employed in this Bureau only twenty are employed in this section, and that this number are engaged not only in recording press copies, but on much miscellaneous work for other divisions, as will appear from the above It will also be observed that there are one hundred thousand pages of press-copies unrecorded at the beginning of the present fiscal year. These are constantly fading, and should at once be recorded, and for the purpose of accomplishing this work I would recommend that Congress be requested to authorize the employment and payment, at the rate of nine hundred dollars (\$900) per annum, of twenty-five additional lady clerks, for the period of six months from the 1st of January, 1876, at the end of which time, I trust, their services can be dispensed

There are now employed in this Bureau five messengers and fifteen laborers. The former receive a salary of eight hundred and forty dollars (\$840) and the latter seven hundred and twenty dollars (\$720) per annum. I would recommend that Congress be requested to authorize the employment and payment, at the rate of eight hundred and forty dollars (\$840) per annum, of twenty-five messengers, instead of the five messengers and fifteen laborers at present authorized. I do this for the reason that they all perform similar labor, and the present force is inadequate.

Since the report of my predecessor, thirteen collection-districts have been abolished—that is, consolidated with those at present existing thereby saving to the Government an annual expense of about \$40,000.

I am convinced that further consolidations can be made, thereby greatly reducing expenses without injuriously affecting the collection of the revenue.

AMENDMENTS OF THE LAW RECOMMENDED.

Experience has developed the necessity of some changes in the internal revenue laws, which I proceed to state.

1. As to the forfeitures of distilleries.—The present law (section 3332 Revised Statutes) provides that when a judgment of forfeiture in any case of seizure is recovered against any distillery having a registered producing capacity of less than one hundred and fifty gallons a day because no bond has been given, every still, doubler, worm, &c., therein shall be so destroyed as to prevent the use of the same, or any part thereof, for the purpose of distilling; and the material shall be sold as in case of other forfeited property.

This contemplates a judgment of forfeiture.

In the mountainous districts of several of the Southern States a great deal of illicit distilling of spirits, in remote and out of the way localities, is carried on, to the great detriment of the revenue. The distillingapparatus is of a simple and inexpensive nature, easily removed, and, when broken up, of little or no value. A proceeding in rem against such property is a mere farce, or would be so but for the costs which the United States must pay, which is a very serious matter, since nothing can be realized from the sale of the broken materials.

The practice has been in such cases for the revenue official making the seizure to destroy the property at once, taking the responsibility of being sued for the damages. No suit of the kind has been brought so far as this Office is advised, and for the reason, I suppose, that no one is willing to avow himself the owner or operator of the illicit still. But the proceeding is irregular, and authority should be conferred by law

upon the revenue officer to destroy the still where its guilt is evident, and provision be made for a just compensation to the owner making claim for the value of the property so destroyed and establishing its innocence.

2. Special taxes.—A special tax of twenty-five dollars is imposed upon the retail dealer in spirituous liquors, and he is defined to be one who sells, or offers for sale, foreign or domestic distilled spirits or wines in less quantities than five wine-gallons at the same time.

The wholesale liquor-dealer pays a special tax of one hundred dollars (\$100) for the privilege of selling like spirits in quantities of not less

than five wine-gallons at the same time.

The following questions have arisen in the construction of this law,

and should be solved by legislation:

A is a retail liquor-dealer; B is his creditor and takes the entire stock of distilled spirits, belonging to A, in payment of his debt, either by negotiation or by purchase under execution. How shall B dispose of the goods? If in bulk, he becomes a wholesale liquor-dealer and must pay a special tax of one hundred dollars (\$100) as a means of realizing his debt. If by retail, he cannot, under existing law, operate under A's license, and must pay a special tax of twenty-five dollars (\$25) for the privilege. He might probably, consistently with law, get rid of the stock by sending the different kinds of liquor, in packages of not less than five gallons at a time, to a wholesale liquor-dealer to sell for him on commission; but this would be a tedious and costly process.

Again, can A, the retail liquor-dealer, sell his entire stock, even to a creditor, without becoming a wholesale dealer, and, therefore, liable to

the tax of one hundred dollars (\$100)?

It is obvious that additional legislation is needed to meet cases of the

above character.

3. Branding cigar-boxes.—By the act of July 20, 1868, all cigars were required to be packed in boxes not before used for that purpose, containing certain quantities each, without any specification as to the material from which such boxes should be made.

In section 89 of the act, it was provided that all cigars which should be removed from any manufactory or place where cigars were made without the same being packed in boxes as required by said act, or without burning into each box with a branding-iron the number of cigars contained therein, the name of the manufacturer, and the number of the district and State, should be forfeited to the United States.

The nature of the branding here prescribed seems to contemplate

that wood should be the material used in boxing the cigars.

But Congress by the act of June 6, 1872, section 31, provided that not only wood, but metal, paper, or other materials might be used, separately or in combination, for packing tobacco, snuff, and cigars, under such regulations as the Commissioner of Internal Revenue might establish.

In the Revised Statutes (sections 3362 and 3397) both of these provisions are retained, to wit, that which allows boxes of wood, metal, paper, or other materials to be used in the packing of cigars, and that which requires the burning into each box, with a burning iron, the name of the manufacturer, the number of cigars, and the number of the district and State.

Cigars are packed largely in tin and paper boxes, and the manufacturers assert that it is wholly impracticable to burn into the boxes with a burning-iron the prescribed set of words.

The construction of the statutes in question was submitted, on the

recommendation of this Office, by you to the Attorney-General, who delivered his opinion on the 11th of October last, to the effect that there are such metals and paper as will admit of being branded with a hot iron, and that therefore the requirements of the statutes as to burning into each box the prescribed formula cannot be dispensed with.

Without expressing any opinion upon this issue of fact between the manufacturers and the Department of Justice, I am of opinion that Congress should be advised to so amend the law as to allow the Commissioner of Internal Revenue to prescribe other forms of marking the boxes than by burning with a hot iron where other materials for boxes

are employed than wood.

4. Gauging at wholesale liquor-dealers.—I have given much consideration to the question whether the present plan of gauging of wholesale liquor-dealers' packages by United States gaugers could not be dispensed with, and am of the opinion that it is not only feasible and economical, but will be a better check upon fraud than obtains under the present system. It is estimated that the expense heretofore incurred by the Government for gauging at wholesale liquor-dealers' establishments amounts to about one-fourth the entire sum paid for gauging, or more than \$250,000 per annum. It is believed that, if Congress will empower collectors to fill stamps upon application of wholesale liquor-dealers, giving full description of the packages they desire to draw from, a very simple system of checks can be adopted that will prevent the overissne of wholesale liquor dealers' stamps to cover more spirits than was originally contained in the package drawn from. This system is based upon the fact that every package of spirits purchased by a wholesale liquor-dealer has been once gauged and stamped by a United States gauger, and that a complete record of its contents in proof and wine gallons is to be found in this Office.

5. Matches.—An amendment in the law in relation to friction-matches is needed. The present remedy in case of violation of the law is only a civil one. It should be made a criminal offense punishable by fine or imprisonment. The seizure of the matches and a suit for the statutory penalty are insufficient remedies where the violator of the law is with-

out property.

6. Revenue agents.—I recommend that internal revenue agents be clothed by law with power to make seizures of property when directed by the Commissioner of Internal Revenue; also to administer oaths, and, under the direction of this Office, to demand and obtain inspection of the books and papers of distillers, rectifiers, brewers, wholesale liquor-dealers, and manufacturers of tobacco, snuff, and cigars, which relate to their occupations.

7. I recommend that Congress invest the Commissioner with power to designate the points where collectors and supervisors shall establish

and maintain their offices within their respective districts.

For changes in the law suggested in relation to the collection of taxes on distilled spirits, I refer to my recommendations under the head "Whisky frauds," and for other changes, to what is said under the head "Miscellaneous."

Finally, I estimate that the collections from all sources of internal revenue, during the current fiscal year, will amount to \$122,000,000.

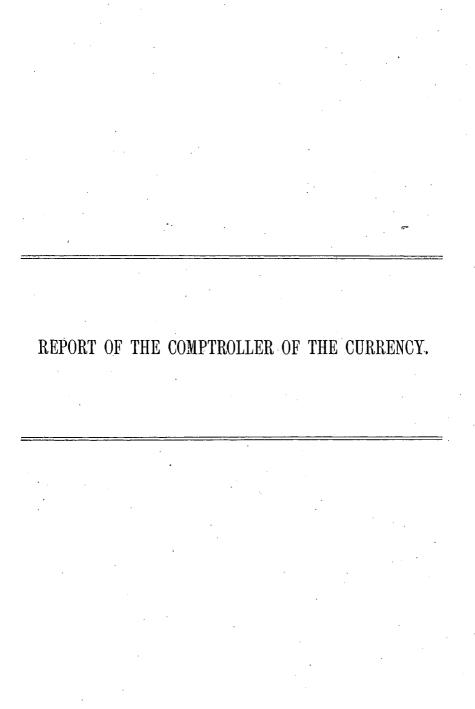

Respectfully,

D. D. PRATT, Commissioner.

Hon. B. H. Bristow, Secretary of the Treasury.

MEMORANDUM.

Since the foregoing report was prepared, the number of collectiondistricts has been still further reduced by consolidation, the present number being one hundred and sixty-one, (161;) and consequently the number of collectors dismissed the service as no longer necessary is forty-eight, (48.)

REPORT

OF

THE COMPTROLLER OF THE CURRENCY.

TREASURY DEPARTMENT, OFFICE OF THE COMPTROLLER OF THE CURRENCY, Washington, November 29, 1875.

SIR: I have the honor to submit for the consideration of Congress, in compliance with section three hundred and thirty-three of the Revised Statutes of the United States, the thirteenth annual report of the Comptroller of the Currency.

During the past year one hundred and seven banks have been organized, with an authorized capital of \$12,104,000, and \$4,794,180 of circulation; of which number two were gold banks, with \$200,000 capital and \$120,000 of circulation. Five banks have failed, with an aggregate capital of \$1,000,000; and thirty-eight banks, with a total capital of \$3,920,000, have gone into voluntary liquidation by votes of shareholders owning two-thirds of their capital stock.

The total number of national banks organized since the establishment of the national banking system is 2,307. Of these, forty have failed, and one hundred and seventy-five have gone into voluntary liquidation, leaving 2,092 in existence on November 1 of this year.

Three of these banks, located in the city of New York, have no circulation, and two hundred and forty-one have reduced their circulation and withdrawn a portion of their bonds, under the act of June 20, 1874, one hundred and seventeen of them having deposited legal-tender notes and reduced the amount of their bonds on deposit as security for circulation to the minimum amount allowed by law.

Included in this aggregate are nine national gold banks, located in California, with a capital of \$4,700,000, and circulation of \$2,630,000. The following table exhibits the resources and liabilities of the banks at the close of business on the first day of October, 1875—the date of their last report—the returns from New York, Boston, Philadelphia, and Baltimore, from the other redemption cities, and from the remaining banks of the country, being tabulated separately.

	New York City.	Boston, Philadelphia, and Baltimore. Other rese		Country banks.	Aggregate.	
	48 banks.	97 banks.	91 banks.	1,851 banks.	2,087 banks.

THE NATIONAL BANKING SYSTEM.

The proposition to substitute Treasury notes in place of national bank notes has been frequently advanced since the establishment of the national banking system, and its discussion has been general throughout the country during the past year.

During the war of 1812 a large amount of various kinds of Treasury-notes was issued. The policy of the State banks at that time seemed to be antagonistic to the government, and to correct this antagonism various propositions were made, with a view to identify the interests of the various monetary institutions in some degree, at least, with those of the United States. Fifty years later, in 1863, this was accomplished by the establishment of the national banking system. A passing allusion to the legislation and the discussions upon this subject during both periods will, perhaps, be useful at the present time. A reference to the first period will exhibit the different kinds of Treasury-notes which were temporarily issued, and withdrawn at the

close of the war, and the efforts which were made to conciliate the State banks. A like reference to the later period will show that the national banking system was authorized as a permanent system, and that the issue of Treasury-notes was an expedient devised to meet a great national emergency; and that it was the intention of Congress in this, as in the former instance, to withdraw such issues as speedily as possible after the close of the war.

War was declared with Great Britain on June 11, 1812. Specie payments were suspended, except in New England, August 31, 1814. Peace was restored February 11, 1815. Specie payments were nominally resumed February 2, 1817. The charter of the first Bank of the United States expired March 4, 1811, and the second Bank of the United States was not authorized until April 3, 1816. Mr. Crawford, then Secretary of the Treasury, estimated that, during the four years ending in 1815, the bank circulation was increased in volume from \$29,000,000 to \$99,000,000.*

Many of the notes of city banks were taken at a discount of twenty per cent.; those of the country banks at twenty to fifty per cent.† Specie almost entirely disappeared from circulation, and, in addition to the notes issued by State banks, large amounts of unauthorized currency were circulated by other corporations and by individuals in notes of denominations from six cents to ten dollars. Credit money was plenty, rates of interest low, and borrowers were solicited by tempting offers to use the idle funds in the banks.

The Treasury department added largely to the already abundant circulation, issuing large amounts of Treasury notes. Many of these notes were deposited with such banks as consented to receive them, the government meanwhile refusing the notes of those banks which declined to accept the Treasury notes—usually the stronger banks. The whole amount of Treasury notes, absolute and contingent, which was authorized between June 30, 1812, and February 24, 1815, was \$60,500,000, of which amount \$36,680,794 was issued.‡

The notes authorized prior to February 24, 1815, bore interest at the rate of five and two-fifths per centum § a year, and were receivable in payment of all duties and taxes laid by the authority of the United States, and of all public lands sold by said authority; and when so received interest was to be computed at the rate of "one cent and one-half a cent per day" on every one hundred dollars of principal, each

t In 1812. Bank of England notes were at a discount of twenty and three-fourths per cent., in 1813, of twenty-three per cent., and in 1814, of twenty-five per cent. In 1812, as much wheat could be purchased for ninety shillings of gold as for one hundred and fifteen shillings of paper; and in 1813 as much for seventy-four shillings of gold as for one hundred and eleven shillings of paper.—" Banks and Bankers," by D. Hardcastle, jr.; London, 1842, p. 126.

(Report of Secretary Crawford, 1820, p. 165.)

^{*}His estimate of the circulation, made in 1820, was as follows: 1813, \$62,000,000; 1815, \$99,000,000; 1819, \$45,000,000 to \$53,000,000. (Elliot's Funding System, p. 735.)

[§] The substitute proposed for the legal-tender act which passed the House of Representatives February 6, 1862, contained a section providing for the issue of transferable certificates, bearing interest at the rate of 5% per cent. per annum.—Spaulding's History of the Legal Tender Paper Money, p. 94.

month being reckoned as thirty days. These notes were depreciated from eight to ten per cent. below bank notes, which bore no interest

but were redeemable in specie.

The act of February 24, 1815, authorized the issue and re-issue of Treasury-notes to an amount not exceeding \$25,000,000, upon principles essentially different from those governing prior issues.* These notes might be of any denomination. If of a denomination less than one hundred dollars, they were designated as "small Treasury-notes," were payable to bearer, and bore no interest. If of a denomination of one hundred dollars or upward, they were payable to order, transferable by indorsement, and bore interest at the same rate as the notes of \$100 and upward previously authorized. The principal and interest were not payable at any specified time, but the notes were everywhere receivable in all payments to the United States. The holders of the small Treasurynotes could exchange them at pleasure, in sums of not less than one hundred dollars, for certificates of funded stock bearing interest at seven The notes of the denomination of one hundred dollars and over were exchangeable for certificates of funded stock, bearing interest at six per cent.; and by that act the holders of all Treasury notes previously issued were likewise authorized to convert the same into certificates of funded debt bearing interest at six per cent.

"The Treasury notes which were issued under acts passed prior to February 24, 1815, were, for the most part, of a denomination too high to serve as a current medium of exchange; and it was soon ascertained that the small Treasury-notes, fundable at an interest of seven per cent., though of a convenient denomination for common use, would be con-

verted into stock almost as soon as they were issued."

The issue of the first description of notes was not restrained, but that of the small Treasury-notes was limited to cases of peculiar urgency; and the whole amount of the latter notes which had been issued

and re-issued on September 30, 1815, was \$4,142,850.

The Secretary of the Treasury, in his report for 1813, refers to some of the plans which were proposed for remedying the monetary evils of the day, and for the resumption of specie payments. He endeavored to associate the banks, with a view to furnish "a uniform currency," and also, through their agency "in circulating Treasury notes, to overcome the inequalities of the exchange." These attempts were, he acknowledges, not successful. Another plan was proposed, with the design "to curtail the issues of bank-notes, to fix the public confidence in the administration of the affairs of the banks, and to give to each bank a legitimate share in the circulation." The establishment of a national bank with large capital and circulation was regarded as the best and perhaps the only adequate resource to relieve the country and the government; and on April 30, 1815, Congress by resolution declared that "from and after the 20th of February next (1817) no duties, taxes, debts, or sums of money accruing or becoming payable to the United States ought to be collected or received otherwise than in the legal currency of the United States, or Treasury-notes, or notes of the Bank of the United States, or any notes of banks which are payable and paid on demand in the said legal currency of the United States."

A bill was brought before the legislature of New York in 1815 "impos-

^{*}Report of the Secretary of the Treasury, 1815, p. 13. Report of the Secretary of the Treasury, 1815, p. 26. †The acts of July 12, 1870, and June 20, 1874, contained provisions for the redistribution and equalization of the national-bank currency, which provisions were repealed by the act of January 14, 1875.

ing a penalty of twelve per cent, on any bank within that commonwealth which would not pay its notes on demand;" but its passage in that year was prevented by the exertions of the banks and their agents. It subsequently, however, became a law, f and specie payments were at least nominally resumed on that day. If places of redemption had been required at one or more of the commercial centers, the redemption would have been complete; and the banks which could not comply with such a provision would have been forced into liquidation.

A similar system proposed in 1815 and 1831.

A magazine writer, in 1815,‡ proposed a plan which is the first conception, so far as I am aware, of the principles which distinguish the the present national bank system, and which was that the public funds should serve, in the absence of specie, as the basis and support and limit of a paper currency. The proposition was "that the banks be obliged, until they can resume specie payments, to pay their notes, in sums of not less than one hundred dollars, in United States six per cent. stock at par; or, if the stock bore a less rate of interest, at the price of that stock in the market." It was claimed that this would be a certain check against the immoderate issue of paper money. Most of the banks, it was urged, held considerable amounts of such funds, purchased at a low price, and could realize a profit by using it in payment of their debts. If the proposed convertibility were authorized, their notes, then so much depreciated, would at once appreciate in value.

The six per cent. stock, at par, was proposed as a standard by which to fix the minimum value of bank-notes, such notes being convertible, at the option of the holders, into the stock at its market-price; so that one hundred dollars of the notes might be better, but not worse, than one hundred dollars of six per cent. stock. It was also proposed that a national bank should be established, with the obligation, under a heavy specific penalty, of paying its notes and debts of every kind in cash or in funded stock. The State banks would be compelled to adopt a similar system, or, what would amount to the same thing, to pay their notes with the notes of this national institution. "The success of the plan would not be doubtful if Congress could be persuaded to provide for the payment of the interest of the national debt in specie. Nothing but necessity can excuse the payment of the national creditors with depreciated money. During the war that necessity existed, but it exists no longer."

"To provide the means for the payment of the interest on the public debt,"it was proposed "that the duties upon imports be receivable in cash only." "The payment of the interest of the public debt in specie, combined with the assurance of the national good will, security, and resources,

^{*}On January 14, 1875, Congress fixed a date (January 1, 1879) for the resumption of specie payments, and on March 22, 1875, the New York legislature passed the following

[&]quot;Section 1. All taxes levied and confirmed in this State on and after January 1, 1879, shall be collected in gold, United States gold-certificates, or national-bank notes which are redeemable in gold on demand.

[&]quot;SEC. 2. Every contract or obligation, made or implied, after January 1, 1879, and payable in dollars, but not in a specified kind of dollars, shall be payable in United States coin of the standard of weight and fineness established by the laws of the United

States at the time the contract or obligation shall have been made or implied."

+"A Short History of Paper Money and Banking in the United States," &c., by
William M. Gouge, Philadelphia, 1833, p. 85.

‡ From the Analectic Magazine (Philadelphia) for December, 1815, p. 489.—This
article, signed "W.," is entitled "On banks and paper currency," and is a sprightly
review of an essay published in Philadelphia, entitled "The History of a Little
Frenchman and his Bank-notes. Rags! Rags! Rags!"

would soon impart to the whole capital a specie value; that capital would then become a solid foundation for a paper currency—a standard to measure it and keep it steady—inferior only to specie itself. With such a support we know not whether such a currency might not be permanently adopted as an improvement in political economy." "There would be no danger of an over issue, for no man of ordinary prudence will retain in his possession paper money for which he has not good use, when he can immediately convert that money into well-secured, readily-

salable stock, yielding an annual interest paid in specie."

a plan, it was contended, would be likely to result in It would create an additional establishing a uniform currency. demand for the public funds, and increase their value. The banks would be obliged to invest their capital in national stock to answer the demands of their creditors, and it would of course be for their interest to keep up its price; by which means private and public credit would be indissolubly linked together, and a new moral bond acquired to strengthen the Union. "The various currencies, as they now exist, are not congenial, but rather adverse, to the union of the States. Were they separated, each bank might, nevertheless, preserve a certain credit, but on the proposed plan a separation would ruin them all; and this fact affords an additional argument for the issue of a currency which would habituate the people to regard the faith of their federal government as the standard of value; which would facilitate loans, should a war for the maintenance of our rights become unavoidable; which would identify every man's fortune, as well as his freedom, with the general security, create a deep and universal interest in the conservation of good order, government, and law, and thus enlist every motive, selfish and generous, and every principle, sordid as well as liberal, into the service of this free, confederated republic."

A sum usually somewhat exceeding the capital of the Bank of England is permanently loaned by that institution to the government, and these funds are held, in the language of Albert Gallatin, "as the best security to the holders of its notes and to depositors." In discussing the propriety and practicability of incorporating a similar provision into the banking system of the United States, Mr. Gallatin found the only objection to lie in the fact that while in England the large amount of the public debt, as compared with the capital of the banks, enabled the latter to use such debt as a security for their circulating notes, in the United States the banking capital of the country was necessarily so much larger than the entire amount of all other public stocks, that

such a measure was impracticable.

At the date of Mr. Gallatin's essay (1831) the debt of the Government was in process of rapid reduction, and within the next four years was entirely extinguished, while the banking capital was largely above two hundred millions, and rapidly growing with the increasing commerce of the country. Under these circumstances he suggested a resort to mortgages on real estate, for want of public stocks, which plan, however, he found liable to the objection that the accommodations which the banks could, in that case, afford to individuals, might be too much curtailed; and he concludes that "if these objections can be removed, the plan proposed would give to the banking system of the United States a solidity, and inspire a confidence, which it cannot otherwise possess."

The same high authority also refers to the proposed issue of Treasury

notes at that time as follows:

The proposition has not been suggested to resort to a third, though the most simple, mode—that of issuing, without the aid or machinery of any bank whatever, a Gov-

ernment paper payable on demand in specie.

The general objections to a paper issued by government have already been stated at large. Yet it must be admitted that there may be times when every other consideration must yield to the superior necessity of saving or defending the country. If there ever was a time, or a cause, which justified a resort to that measure, it was the War of the Independence. It would be doing gross injustice to the authors of the Revolution and founders of that independence, to confound them with those governments which, from ambitious views, have, without necessity, inflicted that calamity on their subjects.

The old Congress, as the name purports, were only an assembly of plenipotentiaries, delegated by the several colonies or States. They could only recommend, and had not the power to lay, taxes. The country was comparatively poor; extraordinary exertions were necessary to resist the formidable powers of Great Britain. Those exertions were made, and absorbed all the local resources; the paper money carried the United States through the most arduous and perilous stages of the war, and, though operating as a most unequal tax, it cannot be denied that it saved the country. It is to be hoped that a similar state of things will not again occur; but at all events the issue of a government paper ought to be kept in reserve for extraordinary exigencies.

Many of the propositions for raising the necessary means for conducting the war of 1812, and for the resumption of specie payments at the close of the war, were identical with those proposed during the recent civil war, and with the present plans for the resumption of specie payments. The war of 1812 was prosecuted, as has been seen, by means of loans and bank credits, and by the issue of Treasury notes. Just prior to the late civil war, in the year 1860, temporary loans were made by the government at twelve per cent. interest; and during the year 1861 a large amount of government obligations was issued, of which \$100,000,000 were time, seven and three-tenths per cent. Treasury-notes, and \$50,000.000 were demand-notes.

Discussion and passage of the national bank act.

In December, 1861, the Secretary of the Treasury proposed two methods for obtaining the necessary means for carrying on the war. His first proposition was to substitute demand notes, payable in coin, in place of the notes of private corporations. The second was the gradual issue of national bank notes, secured by the pledge of United States bonds, to replace the existing bank notes authorized by the laws of the several States. The first plan had already been partially adopted by the issue of fifty millions of dollars in demand-notes; but the possible disasters which might result from a continuation of the expedient outweighed, in the opinion of the Secretary, any advantages which could be derived from it, and his second proposition was therefore urgently recommended by him.

The advantages claimed by the latter plan were, a currency of uniform security and value, protection from losses in discounts and exchanges, increased facilities to the government in obtaining loans, a diminution of the rate of interest, or a participation by the people in the profits of circulation, an avoidance of the perils of a great money monopoly, and a distribution of the bonds of the uation to the leading monetary associations of the country, thus identifying their interests with those of the government.

The report of the Secretary was prepared with the expectation, then prevalent, that the war would be of short duration. Soon, however, the magnitude of the struggle became evident, and the large drafts upon the Treasury, caused by the expenditure of more than a prevalent, that the war would be of short duration. million of dollars daily, made it plain that the urgent necessities of the

government could not be supplied through the associated action of the existing banks, nor depend wholly upon the sale of its bonds.

A general suspension of specie payments took place on December 28, 1861, and on February 25 and July 11, 1862, Congress passed two acts authorizing the issue, in the aggregate, of three hundred millions of dollars of Treasury-notes—the later act, however, reserving fifty millions for the redemption of temporary loans, to be issued and used when necessary for that purpose. These notes were, by the terms of the law, made a legal tender, and fundable into a bond bearing interest at six per cent. in gold; and the demand-notes, amounting to sixty millions of dollars, which had been previously issued, were also, upon the request of the Secretary of the Treasury, and at the solicitation of banks in New York City, made a legal tender by the act of March 17, 1862.

The immediate necessities of the government compelled the partial adoption at that time of the first plan of the Secretary, and further consideration of the second was, for the time being, deferred. Large amounts of government notes were issued; but the notes of private corporations still continued in circulation, the amount of the latter increasing during the year ending November 1, 1862, from \$130,000,000

to \$167,000,000.

A national bank bill was prepared in December, 1861, by Mr. Spaulding, of New York, in accordance with the second plan of the Secretary, and printed for the use of the Committee of Ways and Means; but, after some discussion in opposition to the bill, it was laid aside. In December, 1862, the Secretary, in his annual report, called the attention of Congress to his second recommendation of the year previous, and again urged his objections to the issue of United States notes. The principal objections to the latter circulation, as a permanent system, were thus stated by him: "(1) The facility of excessive expansion when expenditures exceed revenue; (2) The danger of lavish and corrupt expenditure, stimulated by facility of expansion; (3) The danger of fraud in management and supervision; (4) The impossibility of providing it in sufficient amounts for the wants of the people whenever expenditures are reduced to equality with revenue, or below it."

In discussing the fourth objection, he says:

Whenever the country shall be restored to a healthy, normal condition, and receipts exceed expenditures, the supply of United States notes will be arrested and must progressively diminish. Whatever demand may be made for their redemption in coin must hasten this diminution, and there can be no re-issue; for re-issue, under the conditions, necessarily implies disbursement, and the revenue, upon the supposition, supplies more than is needed for that purpose. There is then no mode in which a currency in United States notes can be permanently maintained except by loans of them, when not required for disbursement, on deposits of coin or pledge of securities, or in some other way. This would convert the Treasury into a government bank with all its hazards and mischiefs. If these reasonings be sound, little room can remain for doubt that the evils certain to arise from such a scheme of currency, if adopted as a permanent system, greatly overbalance the temporary though not inconsiderable advantages offered by it.

Among the advantages which would arise from the second plan the following were urged:—That the United States bonds would be required for banking purposes; a steady market would be established and their negotiation greatly facilitated; a uniformity of price for the bonds would be maintained at a rate above funds of equal credit but not available to banking associations. "It is not easy to appreciate the full benefits of such conditions to a government obliged to borrow;" it will "reconcile as far as practicable the interests of existing institutions with those of

the whole people," and will supply "a firm anchorage to the Union of the States."

On February 2, 1863, the banking bill previously introduced in the House was reported from the Finance Committee of the Senate with amendments, and ten days later passed that body by a vote of 23 to 21. It passed the House of Representatives on the 20th of the same month by a vote of 78 to 64, and was approved by the President February 25, 1863.

Senator Sherman, who reported the bill from the Finance Committee, in a speech delivered at that time, said: "We are about to choose between a permanent system, designed to establish a uniform national currency based upon the public credit, limited in amount, and guarded by all the restraints which the experience of men has proved necessary, and a system of paper money without limit as to amount except for the growing necessities of war. In the consideration of such a question we surely should scrifice all local interests, all pride of opinion; and while acting promptly under the pressure of events, we should bring to our aid all the wisdom of united counsels, and all the light which the experience of former generations of men can give us. * * Another practical objection to these United States notes is, that there is no mode of They are safe; they are of uniform value; but there is no mode pointed out by which they are to be redeemed. No one is bound to redeem them. They are receivable, but not convertible. They are debts of the United States, but they cannot be presented anywhere for No man can present them, except for the purpose of fundredemption. ing them into the bonds of the United States. They are not convertible; they lack that essential element of any currency.

"Another objection is, that they can only be used during the war. The very moment that peace comes, all this circulation that now fills the channels of commercial operations will be at once banished; they will be converted into bonds; and then the contraction of prices will be as rapid as the inflation has been. The issue of government notes can only be a temporary measure, and is only intended as a temporary measure to provide for a national exigency. * * But it is asked, why look at all to the interests of the banks; why not directly issue the notes of the government, and thus save to the people the interest in the debt represented by the notes in circulation? The only answer to this question is that history teaches us that the public faith of a nation alone is not sufficient to maintain a paper-currency. There must be a combination between the interests of private individuals and the government."

Mr. Spaulding, the author of the legal-tender act, in reporting the same to the House, said: "The bill before us is a war-measure, a measure of necessity and not of choice, presented by the Committee of Ways and Means to meet the most pressing demands upon the Treasury to sustain the Army and Navy." This was the view taken throughout the whole discussion of the legal-tender act. On the day of the passage of the national-bank bill, he said he "should vote for it, not that it would afford any considerable relief to the Treasury in the next two or three years, but because he regarded it as the commencement of a permanent system for providing a national currency that would, if wisely administered, be of great benefit to the people and a reliable support to the government in the future." And more recently, in a letter addressed to this Office, he says that "all the advocates of the legal-tender act, while it was pending in Congress, based their arguments upon the necessity of its passage as a temporary relief to the Treasury during the war, and not as a permanent policy of the government; on the contrary, the national banking law was advocated as a permanent system of

national currency and banking for the whole country.

The act of March 3, 1863, authorized an additional issue of \$150,000,000 of United States Treasury notes, and the right to exchange legal tender notes for six per cent. bonds was limited to July 1, 1863. The act of June 30, 1864, provided that the total amount of United States notes issued, or to be issued, should not exceed \$400,000,000, and such additional sum, not exceeding \$50,000,000, as might be lawfully required for the redemption of temporary loans.

The Secretary of the Treasury in his report for December, 1865, expressed the opinion that the legal-tender acts were war-measures, and ought not to remain in force one day longer than should be necessary to enable the people to prepare for a return to the gold standard. He also urged as a serious objection to the issue of United States notes as a permanent currency, that "the paper-circulation of the country should be flexible, increasing and decreasing according to the requirements of legitimate business; while, if furnished by the government, it would be quite likely to be governed by the necessities of the Treasury or the interests of parties, rather than the demands of commerce and trade; besides, a permanent government currency would be greatly in the way of public economy, and would give to the party in possession of the government a power which it might be under strong temptations to use for other purposes than the public good—keeping the question of the currency constantly before the people as a political question, than which few things would be more injurious to business."

The House of Representatives during the same month passed a resolution, by a vote of 144 yeas to 6 nays, "cordially concurring in the views of the Secretary of the Treasury in relation to the necessity of the contraction of the currency, with a view to as early a resumption of specie payments as the business interests of the country will permit." In order to carry into effect this resolution Congress, by an act approved March 12, 1866, authorized the funding of the legal-tender notes, and under the operation of that act more than \$72,000,000 were retired. In January, 1868, any further reduction of the volume of legal-tender notes was prohibited, the amount then remaining outstand-

ing being \$356,000,000.

On March 18, 1869, an act was passed, in which the United States "solemnly pledges its faith to make provision at the earliest practicable period for the redemption of United States notes in coin." tion six of the act of June 20, 1874, provides that "the amount of United States notes outstanding and to be used as a part of the circulating medium shall not exceed the sum of \$382,000,000, which said sum shall appear in each monthly statement of the public debt, and no part thereof shall be held or used as a reserve;" and the act of January 14, 1875, authorizes the increase of the circulation of national banks, without respect to the limit theretofore existing, and provides that whenever, and so often, as circulating notes shall be issued to banking associations, it shall be the duty of the Secretary of the Treasury to redeem the legal-tender United States notes to the amount of eighty per centum of the sum of national bank notes so issued, and to continue such redemption as such circulating notes shall be issued until there shall be outstanding the sum of \$300,000,000 of such legal-tender United States notes, and no more; and that, on and after January 1, 1879, he shall redeem in coin the United States legal-tender notes then outstanding, on their presentation for redemption at the office of the assistant treasurer of the United States in the city of New York, in sums of not less than fifty dollars.

A banking system similar to that now existing was suggested, as has been seen, in 1815, and, later, in 1831; and it is said that a similar policy was proposed by Alexander Hamilton, before his appointment to the Secretaryship of the Treasury, when, on being asked by Washington, "What is to be done with our terrible debt?" he answered, "Bank on it; it is our only available capital, and the best in the world."

During the war of 1812 a large amount and a variety of kinds of Treasury notes were issued. The policy of the State banks, aided by the State sovereignty sentiment, opposed any system of separate or independent fiscal agency of the government. The desire then was to conciliate the banks by harmonizing the interests of the different mouetary institutions with those of the national administration. At a later period the system which would have given to the banks of the United States "a solidity and inspire a confidence in them which they cannot otherwise possess," could not be carried into effect, because the bank capital of the country far exceeded the amount of the national debt. Fifty years later (1863) a clear harmony of interests was effected between the banks and the government by the establishment of the present national banking system, and at the same time the public was supplied with a stable circulating medium; the change producing none of the inconveniences or disturbances which usually accompany radical modifications in the monetary system of a country.

The government currency won its honors and secured the confidence of the people at a time when no other form of currency then existing could command general circulation. It borrowed the war debt from the people, and at the same time supplied them with the indispensable medium of exchange in all business transactions. Its necessity in the time of our war overrode all the prejudices against the use of a papercurrency, whether those prejudices arose from principles of constitutional construction or from doctrines of political economy. It was felt to be equally as good as the government. It rested upon its solvency; and the friends of the Union accepted it as the representative of the nation's faith and credit. The government was then contracting debt day by day, and the people cheerfully received its promises to pay in exchange for their commodities and services. It purchased largely, and its creditors were content to wait until it should regain the ability to redeem its promises.

The war was well over before the national banking system came fully into operation,* at which time the Treasury and its depositories in the principal cities found themselves unequal to the task of disposing of its bonds, funding its miscellaneous issues, and receiving and disbursing its internal revenue. Just in season for this service the national banking system became well matured and established in every center of business throughout the country; and these institutions at once invested their capital in government bonds, and assisted in disposing of its securities. Secretary Chase says that the organization of the system at once inspired faith in the securities of the government, and more than any other one cause enabled him to provide for the prompt payment of the soldiers and the public creditors; and adds, that he "risks nothing in saying that, within the present year, the benefits of

^{*}The Treasury-notes issued by the government, including the 7-30 and compound-interest notes, were, in 1865, much greater in amount than at any other time. The amount of national-bank notes in circulation on January 1, 1864, was \$280,000; on July 1, 1864, it was only \$31,234,420; and on July 1, 1865, about three months after the close of the war, it was but \$146,336,030.

the system will have so proved themselves to the sense and patriotism of the people that it will be beyond the reach of successful assault."

The second plan of Secretary Chase was carried into effect by the passage of the national banking act, and its success has more than fulfilled every expectation. The interest bearing, convertible, and interchangeable Treasury notes, issued in the early days of the government, were withdrawn from circulation two years after the close of the war of 1812; and it is evident, from the reports of finance ministers, from the debates in Congress at the time of the passage of the legaltender act, from the uniform legislation since that time, including the measures adopted by the last Congress, and, finally, by the decision of the Supreme Court of the United States,* that it was intended that the national banking system should be permanent; the institutions organized under it being by the express terms of the law authorized to continue for a period of twenty years; and that the issue of Treasury notes should not be increased in amount, but were to be withdrawn from circulation as rapidly as possible.

The United States notes have performed every service expected of them; and the national bank issues have the same security, while their parent institutions supply to the public all the conveniences and utilities that any conceivable banking system can possess, and their issues will be redeemed in gold just so soon as the Treasury resumes payment of its debts in specie. Finally, reason and experience alike teach us that we must either continue to adhere to the national banking-system, or yield control of the issue and management of bank-currency to the varying and conflicting legislation of forty or fifty different States and Territories, accompanied, as it surely will be, by all those evils and disasters which are the natural attendants upon the organization and perpetuation of State banking institutions.

Monopoly.

One of the principal objections urged against the national banking system is that it is a monopoly; moreover, that it is a monopoly authorized and continued at the expense of the government. The reverse of this is true; for the national system, so far from being a monopoly, has, in fact, uprooted the real banking monopoly, which has existed in this country from the foundation of the government down to a late day. Should the national system be unfortunately overthrown, that monopoly would be again and at once revived, by the repeal of the provision imposing a tax of ten per cent. upon the issues of State banks, which provision is acknowledged to be one of the compensations of the war.

Prior to the passage of the first national bank act, State banks were organized in most of the States of the Union in the interest of individuals, under authority of special charters obtained from their several legislatures. The national banking system was intended to be a free system, and from the beginning the organization of banks was open to all; but the amount of circulation originally authorized having subsequently become exhausted, the establishment of banks with circulation was, of necessity, for a time suspended. The act of January 14, 1875, however, removed all restrictions in this respect; and since that date every application which has conformed to the requirements of the law has been granted.

At the time of the organization of the national banking system, it had few friends among the shareholders of the then existing State

^{*} See 12 Wallace, pp. 540 and 557.

banks. These were, as a rule, in the possession of a monopoly granted them by the State legislatures; and the bitter opposition to the national system on the part of the officers and shareholders of State banks may

be directly traced to that fact.

Mr. McCulloch, the late Secretary of the Treasury, to whom this Office is indebted for its excellent organization, has stated in a recent letter that he was originally strenuously opposed to the system, because he was then at the head of a large and profitable banking institution, which he "foresaw must go into liquidation or surrender its privilege of issuing two dollars for one dollar of banking capital, if the new banking system went into operation." He was subsequently induced to accept the position of Comptroller of the Currency, and in the letter above mentioned says: "The system grew into favor with me day by day, and I have now no hesitation in saying that, for the United States, it is not only vastly superior to the system which it superseded, but that it is the best system which has been, or is likely to be, devised."

Our national banking system is the only national system not a monopoly in operation in any country. Eleven, only, of the joint-stock banks in Scotland, and but one hundred and sixty seven of the joint-stock and private banks in England, in addition to the Bank of England, have the privilege of issuing circulation; and these banks are not even required by law to publish balance-sheets for the information of the public. The Bank of France is the fiscal agent of that government, and

it alone issues the paper-circulation of that country.

The State banks and savings banks of many of the leading States of the Union are to day chartered institutions, and by the terms of their charters are often so entirely without restrictions, that they are not required to publish statements prepared by themselves informing their

creditors and the public of their condition.

A monopoly is a privilege; something so valuable that it commands a premium, and which its owner does not willingly surrender without a struggle. But the national banks have, since the passage of the act of June 20, 1874, voluntarily surrendered more than \$33,000,000 of their circulation; and forty-three banks, with a total capital of \$5,040,000, have since that date gone into liquidation, chiefly for the reason that the privilege of circulation is not a profitable one, and because the restrictions of the system are onerous in comparison with those imposed by State legislatures. If the national-bank act contained no restrictions upon the banks, or imposed no taxes upon their circulation, and if currency were issued to them equal in amount to the value of the bonds deposited, then the interest received by them upon the bonds would, it is granted, be in the nature of a gratuity. This condition of things was true in some of the States previous to the organization of the national banking system; but it has not at any time been true of the national banks.

Profit on circulation.

A very erroneous idea prevails as to the amount of profit derived by the national banks from their circulation; but to show that the profit from this source is not nearly so great as is supposed by many persons, it is only necessary to take into consideration the amount of capital the banks necessarily invest in the United States bonds required to secure their circulation, with the legal restrictions that govern their business, and then to compare the combined income received by them on their bonds and circulation with that which would be received on the same capital loaned on bond and mortgage security, but free from the restrictions governing national banks. On November 1, 1875, there was on deposit with the Treasurer, as security for the circulation of the national

banks, \$367,549,412 in the various classes of bonds of the United States, as will be seen by reference to a subsequent page of this report. If from this sum be deducted the amount held as security for the notes of the national gold-banks, and also the amount deposited in excess of that required by law to secure the circulation issued upon them, there will remain \$361,498,112 of bonds, worth, in currency, on the day named, \$425,840,533.

The table below exhibits the various classes and amounts of these bonds, their currency-value at the date mentioned, the amount of circulation issued thereon, and the amount of interest derived from them, both in gold and in currency value, gold being quoted on that

day at 116:

Class of bonds.	Par value.	Currency- value.	Circulation issued.	Gold iu- terest.	Currency value of in- terest.
Sixes of 1881 Five-twenties of 1865. Five-twenties of 1865, (new) Five-twenties of 1867. Five-twenties of 1867. Five-twenties of 1868. Ten-forties of 1864 Fives of 1881 Pacific Railroad bonds. Totals.	\$82, 781, 050 7, 056, 600 6, 536, 650 10, 282, 100 2, 981, 000 97, 974, 150 141, 072, 050 12, 814, 512	\$100, 578, 976 8, 256, 169 7, 811, 297 12, 467, 046 3, 629, 367 113, 772, 482 163, 467, 238 15, 857, 958 425, 840, 533	\$74, 502, 945 6, 350, 899 5, 882, 985 9, 253, 890 2, 682, 900 88, 176, 735 126, 964, 845 11, 533, 061 325, 348, 260	\$4, 966, 863 423, 396 392, 199 616, 926 178, 860 4, 898, 708 7, 053, 602	\$5, 761, 561 491, 139 454, 951 715, 634 207, 78 5, 682, 501 8, 182, 178 768, 870

If there be deducted from the amount of capital required to purchase these bonds (\$425,840,533), the amount of premium which they bore on November 1, 1875, (\$64,342,421,) as well as the ten per cent. margin for which no circulation is issued (\$36,149,811), the available means of the banks will be reduced from \$425,840,533 to \$325,348,260.

The bonds representing this amount of capital consisted, as appears by the table, of \$239,046,200 of five per cent., and \$109,637,400 of six per cent. gold-bearing bonds, together with \$12,814,512 of Pacific Railroad bonds issued by the government, and bearing interest at the rate of six per cent. per annum in currency. The annual interest on these bonds amounts to \$18,530,554 in gold and \$768,870 in currency, the total currency-value of the interest at the date named, with gold at 116, being \$22,264,312. As the banks are required to pay into the Treasury of the United States one per cent. of their circulation (or \$3,253,482) as a tax thereon, they have left \$19,010,830 in currency as the net amount of

interest received by them on their bonds.

On receiving their circulation, they are required by the act of June 30, 1874, to place an amount equal to five per cent. thereof (or \$16,267,413) with the Treasurer of the United States as a redemption-fund, leaving, of the \$325,348,260 that their bonds secure, \$309,080,847, only, available for use; which amount, if loaned at eight per cent. per annum, (estimated as the average rate throughout the country,) will produce an income of \$24,726,467; and this, added to the net interest received on the bonds (\$19,010,830) gives \$43,737,297 as the whole income derived by the national banks from their circulation and from the bonds deposited to secure it. The capital used to purchase the bonds (\$425,840,533), if loaned at eight per cent. annual interest, would produce an annual income of \$34,067,042, and the difference, which is \$9,670,055, or two and one quarter per cent. on the capital, represents the profit that the banks receive over and above what could be obtained from the loan of the same amount of capital at the rate of interest named. This is concisely shown as follows:

Interest on \$309,080,847 of circulation, loaned at 8 per cent Interest on U. S. bonds (\$768,870 currency, \$18,530,554 gold) Premium, at 16 per cent., on \$18,530,554 gold interest	2, 964, 888
Total Less tax on circulation	$\overline{46,990,779} \ 3,253,482$
Total profit on capital employed	$\overline{43,737,297}$ $34,067,242$
Difference, which represents profit on circulation	9,670,055
Two and one-fourth per cent. of the capital employed (is \$9,581,412, which, as shown above, is about the value of the national banks of the country. In localities when	of circulation

two and three fourths per cent.; and where the rate is ten per cent. the profit is less than one and three-fourths per cent.

The large margin—exceeding \$100,000,000—between the value of the bonds owned by the banks and the circulation issued thereon, would, in case of disaster, be available as a reserve for the payment of the depositors or other creditors; and this is an additional argument in favor of

interest is seven per cent., the value of circulation is somewhat less than

issuing circulation under the restrictions of the law, as now provided. If specie payments should be reached within a few years, the premium paid by the national banks upon their bonds would be nearly if not entirely lost, while investments by private bankers and State banks of an equal amount of capital in loans on bond and mortgage would not suffer from any such depreciation. This loss has not been taken into consideration in the foregoing estimate. Another important consideration is that the average ratio of State taxation upon national banks during the year 1874 was somewhat more than two per cent. upon capital. If the national banks should go into liquidation, and the owners of the bonds should continue to hold the same, the amount of State taxation saved to them would nearly equal the benefit which they now realize from circulation.

Dividends.

It is urged, as a further objection to the national banking system, that the dividends paid to stockholders are greater than the earnings of other corporations. It is true that some national banks which have accumulated a large surplus, or are organized in localities where the proportion of deposits to capital is large or the rate of interest high, as in the Western and Southern States, do declare large dividends; but it is well known that, as a rule, the rates of interest charged on commercial paper by the national banks in their respective localities are less than those charged by State banks, private bankers, and individuals. But the dividends and earnings of the national banks do not, as a rule, exceed by more than two per cent. the current rates of interest authorized by law in the respective States; and this additional amount of profit is surely not too great a compensation for the risks and expenses incident to the business of banking, and to which capital loaned directly on mortgage security is not subject.

On a subsequent page of this report will be found tables showing for a series of years the amount and ratios of dividends to capital, to capital and surplus, and of earnings to capital and surplus, of the national banks in every State and principal city in the Union. But in order to further aid in correcting the prevalent error that exorbitant or extravagant profits are annually divided by them upon the amount of means invested, a tabular statement is subjoined showing corresponding ratios, for the last six and a half years, in the several geographical sections of the country, and the average ratio for the whole period.

Proposed 3.65 treasury notes.

It has been proposed to withdraw the national bank notes from circulation, and to authorize an additional issue of \$400,000,000 of greenbacks, the latter to be interchangeable, in sums of fifty dollars for Treasury-notes bearing interest at the rate of 3.65 per cent. per annum, or one cent per day on each one hundred dollars, and to repeal all acts tending to a resumption of payments in specie. The greenbacks received by the Treasury in exchange for 3.65 notes are to be used for the purchase of six per cent. 5-20 bonds, for the purpose of saving interest to the government. The act of February 24, 1815, as has been seen, authorized the issue of Treasury notes of the denomination of one hundred dollars, bearing interest "to be computed at the rate of one cent and one half a cent per day;" and it also authorized the issue of small Treasury-notes, which were exchangeable, in sums of one hundred dollars, for certificates of funded stock, bearing interest at seven per But Secretary Dallas, as before stated, says "it was soon ascertained that the small Treasury-notes fundable at an interest of seven per cent., though of a convenient denomination for common use, would be converted into stock almost as soon as issued."

The experience of 1815 will be repeated with the issue of additional greenbacks, interchangeable for 3.65 notes. The law authorizing the issue of four and one half and also of four per cent. bonds is still in force. These interest bearing notes are not, therefore, at present of a standard sufficiently high for funding purposes, and are, in this respect, unlike the notes which were issued in 1815; but the principle of interchangeability will cause the non-interest-bearing notes to be exchanged for them "almost as soon as issued." The non-interest-bearing certificates of deposit, now held by the banks, and amounting to \$50,880,000, will at once be converted

into greenbacks, and these, together with \$150,000,000 of cash reserve also held by the different banks and bankers of the country, will be speedily exchanged for 3.65 notes. These latter notes will be used by every clearing house in the country for the payment of balances, and a large proportion of the circulation will then consist of the new interconvertible interest bearing notes; so that the whole authorized issue of these notes will soon be in demand.

If the amount of interest bearing notes be limited to \$400,000,000, and a reserve of twenty-five per cent. in legal-tender notes be held in the Treasury, the amount of the latter which may be invested in United States six per cent. bonds will be \$300,000,000. This sum will purchase \$250,000,000 of six per cent. bonds, assuming that the average premium is no greater than at present—twenty per cent. The amount of interest saved upon the \$250,000,000 of 5.20 bonds retired will be \$15,000,000, while the interest paid by the government on the \$400,000,000 of 3.65 notes outstanding will be \$14,600,000, the net saving to the government being \$400,000. But through this process the present tax on bank circulation, amounting to \$3,250,000, will be lost; so that, instead of saving \$400,000, the government will by this experiment be actually the loser of \$2,850,000. If, however, the issue of 3.65 notes shall be increased to an amount equal to that of the legaltender and national-bank notes combined, the loss in interest to the government would be somewhat less than before stated, but equal to at least \$2,500,000. It, therefore, seems evident that the substitution of the proposed expedient in place of a system which has been in successful operation for the last thirteen years will result in a loss to the government instead of a gain.

The national banks, as has been seen, are disposed to retire their circulation, and it is probable that during the next year a very large proportion of it will be voluntarily surrendered. But, if the proposition now under consideration should be adopted, many of the banks would go into liquidation, and their loans, to a very great extent, be called in, for the purpose of distributing their present capital and surplus among their stockholders, who would, without doubt, generally organize under State systems and as private bankers. By this course a large proportion of the State taxes, now amounting to an average of about two per cent. upon capital, would be saved to the banks, as a result of the conversion of their capital or deposits into interest-bearing notes, which, like other issues of the government, would be subject to taxation neither by

national nor State authorities.

Restrictions.

Mr. Woodbury, in his report as Secretary of the Treasury in 1836,

If all the States would unite in adding a few judicious limitations on the amount. of discounts as compared with capital and deposits, and on the safe kind of security to be taken for them, with the requirement of frequent publicity of their condition in detail, and of rigid accountability to periodical examinations by legislative anthority, the time is not distant when our currency would become stable; indeed, it deserves consideration whether, under such circumstances, the whole monopolies of banking might not with public advantage be entirely abolished, and the banking privilege, under the above restrictions, securities, limitations, and requirements, (particularly if the personal liability of the stockholders is superadded,) might not safely be thrown open to all.

The twenty-seven years succeeding the report referred to, and preceding the passage of the national back act, were full of disasters arising from the failures of banks and bankers, and of consequent losses to their creditors and bill-holders. During that period the bank legislation was directed chiefly toward reforming the currency and securing the bill-holder from loss, and but little attention was given to legislation concerning the necessary "restrictions, securities, limitations, and requirements" which should surround any general system of banking authorized by law. Indeed, under the different State systems, it was and is impossible for "all the States to unite" in judicious restrictions

upon banking, as suggested by Mr. Woodbury.

Good bankers really require few or no restrictions; and the system of banking in Scotland is frequently adduced as one which has been successful without restrictions. The eleven joint stock banks of Scotland, with their numerous branches, have long enjoyed a monopoly of banking in that country. They are managed by men who have established a high character for integrity, skill, and judgment in the conduct of business, and are located in communities which are accustomed to the strict usages and precedents peculiar to a correct system of banking; and these methods of business are more potential than statutory provisions. The Scotch banks do not fear competition, for they enjoy a monopoly of circulation, worth four per cent. per annum; and they know that no loose or bad system of banking would be countenanced or even tolerated by their dealers. The Scotch system is "a law unto itself," and needs few legal restrictions. But in this country, where any association of persons, with or without experience, may organize a bank, it is of great importance that they should be under such judicious limitations as are known to characterize good banking.

The national banks have earned a good character, because, as a rule, they have conformed to such needful restrictions as have been fixed by legislation, and as are required for the safety of their creditors or dealers. For this reason many existing associations have preferred to re-organize under the national bank act, because by so doing they could attain a character and credit which, as private bankers or under State systems, not so securely guarded, they could not so readily acquire. That these restrictions have been generally observed by the national banks may be seen by reference to tables of reserve, and to the summaries of reports of various kinds frequently published by this Office. This may also be inferred from the few failures and the comparatively small losses to creditors which have occurred during the thirteen years' con-

tinuance of the system.

Failures of national banks.

The losses to creditors from the failures of banks prior to 1863 cannot be even approximately estimated, the only accessible data having reference solely to losses upon circulation. Mr. MacCulloch says that "the destruction of country banks in England has upon three different occasions, in 1792, in 1814–'15-'16, and in 1825-'26, produced an extent of bankruptcy and misery that has never perhaps been equaled except by the Mississippi scheme in France. In 1826, forty-three commissions of bankruptcy were issued against country bankers, and from 1809 to 1830 no less than 311."

Elliot's Funding System* gives a list of fifty-five banks in the United States, with an aggregate capital of \$67,036,265, which failed in 1841. The total bank capital in that year, as stated by Elliott, was \$317,642,692, and the failures therefore represented more than one-fifth

^{*} Page 1176.

of the entire bank capital of the country. It is further mentioned that, in nearly every instance the capital invested in such failures was wholly lost. Of these fifty five banks, twenty five had been organized under the free banking system of New York, which was adopted in 1838, and represented a capital of \$3,327,965; and eleven were organized under the safety-fund system, with a capital of \$3,000,000. The failures in Penusylvania represented \$45,711,000 of capital, including the United States Bank of Penusylvania, with a capital of \$35,000,000. The failures in Ohio represented \$2,377,169, in Illinois \$3,446,125, and in the city of New Orleans \$4,708,652 of capital. Corresponding facts respecting the State banks of this country in subsequent years, and especially in connection with the panic of 1857, will be remembered.

Since the organization of the national banking system in 1863, and down to October 1, 1875, thirty-eight national banks have failed, with a total capital of \$9,011,100, and with circulation amounting to

\$5,874,893.

The experience of this country, previous to the organization of the national banking system, has shown that in twenty years an amount equal to its whole banking circulation was lost in the hands of the people—the loss by bills of broken banks alone being computed to have been at the rate of five per ceut per annum. There has been no loss whatever upon the circulation of the national banks, and no loss to the bill-holder can arise so long as the present laws shall remain in force.

The total amount of claims proved against all of the insolvent national banks is \$14,672,106. Dividends amounting to \$8,292,877 have been paid upon these claims; and it is estimated that the total loss to their creditors since the organization of the system in 1863 will not exceed \$3,985,000. This total loss is less than that realized, in more than one instance, from the failure of a single banking house during the period first mentioned. There has already been paid upon the total amount of proved claims an average of fifty six and one half per cent., and it is estimated that the proportion paid and to be paid upon such claims will be about seventy-three per cent.

Six banks in New York City and one in Brooklyn have failed, with an aggregate capital of \$3,000,000; and three of those in New York, with a capital of \$1,200,000, have paid their depositors in full, the amount so paid being \$1,332,031. The bank in Brooklyn, which failed with \$1,191,380 due to depositors, has paid to that class of its creditors 96 per cent. in dividends, amounting to \$1,143,725. The whole amount of claims of the depositors of the seven banks mentioned is \$4,482,568, upon which \$3,878,755 have been paid, being an average dividend of eighty six and one half per cent. The total amount of losses of depositors of national banks in New York and Brooklyn is estimated at \$246,130, or five and two-fifths per cent. upon the amount of claims proved.

There have been no losses by failures of national banks in any of the other principal cities, except in Chicago, New Orleans, and Washington. One bank only has failed in the New England States, and the total loss to creditors of that institution is but \$1,379. The loss to all creditors of national banks in the Middle States is estimated at \$701,401, and in the Western States at \$841,729. The largest proportion of loss has been in the Southern States, where business has continued unsettled throughout the entire period since the organization of the system; the losses in those States being estimated at \$2,439,994 upon \$6,638,074 of liabilities.

The whole number of banks which have failed, with their location and

capital, claims proved and dividends paid, together with the estimated loss, is as follows:

States.	No. of banks.	Capital.	Claims proved.	Dividends.	Estimated loss.
Connecticut	1	\$60,000	\$68, 986	\$67, 606	\$1,379
New York.		3, 501, 100	5, 049, 430	4, 251, 207	432, 684
Pennsylvania		550,000	1, 055, 264	669, 660	268, 717
Illinois	3	800, 000	1, 001, 816	128, 922	593, 310
Ohio		100, 000	144, 775	50, 671	43, 432
Indiana		100, 000	206, 998	46, 611	84, 825
Iowa	. 1	100,000	205, 256	140, 258	64, 998
Kansas		100,000	55, 329	24, 898	
Utah	1	150,000	76, 366	11, 455	38, 183
Nevada		250, 000	169, 812	135, 850	16, 981
District of Columbia	2	700, 000	2, 254, 458	1, 022, 487	687, 707
Virginia	3	700, 000	1, 342, 252	501, 618	754, 852
Tennessee	1	100,000	376, 932	65, 335	311, 597
Alabama	. 1	100, 000	288, 932	1 01, 126	158, 913
Mississippi	1	50, 000	33, 110	11, 588	18, 210
Arkansas	1	50, 000	15, 142	15, 142	
Louisiana	. 3	1, 600, 000	2, 327, 248	1, 048, 443	508, 715
Totals	38	9, 011, 100	14, 672, 106	8, 292, 877	3, 984, 503

In each of ten States in the above table there was a failure of one bank only, the aggregate capital of these ten banks being one million dollars. In twenty-two States and Territories, including all the New England States except Connecticut, with New Jersey, Delaware, Maryland, Kentucky, Missouri, Michigan, Wisconsin and Minnesota, there have been no failures.

The number of mercantile failures in the United States since 1869* is estimated at 26,880, with liabilities amounting to \$809,460,000. Of this number there were 2,974, with liabilities to the extent of \$218,908,350, in New York City alone. The number of failures of national banks which have occurred in the United States during the same period is twenty-two, with liabilities amounting to \$8,952,878. Upon this sum, dividends amounting to \$5,492,029 have already been paid, and it is thought that a large proportion of the remaining indebtedness will yet be liquidated; the total loss to depositors and other creditors being estimated at \$1,810,040, or an average of about twenty and one-fifth per cent. of their claims. In New York City, the number of failures of national banks during the same time was five; liabilities, \$3,120,436; estimated amount of loss, \$178,839.

The total remaining indebtedness of all the insolvent national banks does not equal the loss which has occurred during the present year from the failure of the single house of the Messrs. Collie, in England; nor does the unpaid indebtedness which has accrued since 1869 exceed the

*Dunn, Barlow & Co. give the mercantile failures for the years 1870 to 1875 for the United Sta es and for New York City as follows:

	United States.			ork City.
Year.	Number	Liabilities.	Number.	Liabilities.
870 871 872 973 874 875, (9 months, only)	3, 551 2, 915 4, 067 5, 183 5, 830 5, 334	\$88, 242, 000 85, 252, 000 121, 056, 000 228, 499, 000 155, 239, 000 131, 172, 000	430 324 385 644 645 546	\$20, 573, 000 20, 740, 000 20, 684, 000 92, 635, 000 32, 580, 000 31, 696, 35

losses resulting during the past year from the operations of Dr. Strousburg alone, a Berlin speculator of notoriety, in Russia, Germany and Austria.

Surplus.

The few failures of national banks, and the comparatively small proportion of loss which has resulted to their creditors from this cause, may, in great measure, be attributed to the beneficial restrictions of the act. under which a large amount of surplus has accumulated since the organization of the system, and which surplus is a perpetual and increasing fund to which losses and bad debts may be charged. The following table exhibits the amount and increase of the surplus fund, semi-annually, from 1863 to the present time:

Date.	Number of banks.	Amount of surplus.	Semi-annual increase.
July, 1864	467	\$1, 129, 910	
Jan., 1865July, 1865	638	8, 663, 311 31, 303, 566	\$7, 533, 401 22, 640, 255
Jan., 1866	1582	43, 000, 371	11, 696, 805
July, 1866		50, 151, 992 59, 992, 875	7, 151, 621 9, 840, 883
July, 1867	1636	63, 232, 811 70, 586, 126	3, 239, 936 7, 353, 315

Tune, 1872		105, 181, 943 111, 410, 249	3, 608, 789 6, 228, 306
une, 1873	1968	116, 847, 455	5, 437, 206
Dec., 1873	1983	120, 961, 268 126, 239, 308	4, 113, 813 5, 278, 040
Dec., 1874	2027	130, 485, 641 133, 169, 095	4, 246, 333 2, 683, 454

The great increase in this fund during the years 1865 and 1866 was largely owing to the conversion, in those years, of State institutions into national banks; but prior to the organization of this system there was not, that I am aware, any provision of law requiring banks to carry any portion of their net earnings to a surplus fund.

The act provides not only that a national bank shall, before the declaration of a dividend, carry one-tenth part of its net profits of the preceding half year to its surplus fund, until the same shall amount to twenty per centum of its capital, but that losses and bad debts shall be deducted from its net profits before any dividend shall be declared. further provides that all debts due to an association on which interest is due and unpaid for a period of six months, unless the same are well secured and in process of collection, shall be considered bad debts within the meaning of the law. And this provision is construed to include stocks and bonds upon which interest is past due, as well as promissory notes.

The London and Westminster Bank, in view of the exceptional losses and frauds during the past year, has transferred the sum of five hundred thousand pounds sterling from the "rest" (surplus) to a special suspense account, which sum is considered more than sufficient to meet all contingencies. The London Economist, in commenting upon this course, says: "Nothing can be better than that the greatest joint-stock bank in

the country, the Bank of England alone excepted, which belongs to a different order of things, should take this decided and wise course. There are two policies in such a case possible, and only two. One is, at once to estimate the whole loss, to largely reduce the present dividend, and to write the necessary sum off the reserve fund; the other, to estimate the possible loss low, to write off but little, and, above all things, to declare as high a dividend as possible. In all companies, the rules of morality prescribe the former. It is wrong not to provide for plain losses, and wrong to pay unreal dividends. But in the case of a bank, it is not only wrong, but dangerous. Perfect explicitness in such cases is the only means of safety. The credit of a bank is its life, and that credit can only be maintained by deserving the confidence of the public, by telling the whole truth, though it is not favorable, and by acting consistently upon real facts, though they are not pleasant.

"If the largest of our joint stock banks—the bank of which it used to be said that it never was known to lose largely, or to be concerned in any but good business—writes so large a sum off its reserve fund, and lessens its dividend by one-half, no other bank need fear to tell the whole truth and nothing but the truth. Credit will never be good as long as people believe that anything is kept back. No doubt it needs manliness and fortitude to tell the truth, when the truth is not pleasant; but it is only by manliness and fortitude that confidence can be obtained in common life, or that credit can be preserved in the difficult and trying trans-

actions of business."

A bank which is conducted upon correct principles will always refuse to declare a dividend until it is absolutely certain that the necessary amount of earnings is in hand. Legislation is not needed to prevent the payment by such a bank of fictitious dividends; but badly-managed corporations often declare unreal dividends, the officers persuading themselves that debts which are doubtful, and which should be at least placed in a suspense account, will be eventually collected. Dividends in such cases are made, not from the earnings of the bank, but from its capital, or from other funds which do not belong to it. If bad debts can be charged to a surplus fund already accumulated, the dividend may not necessarily be passed, while the failure to make a dividend or a diminution of the surplus discloses in either case to shareholders the true condition of the bank, and tends to prevent the further payment of unreal dividends; the latter being too often the first acts of fraud on the part of unscrupulous officers and directors.

The rigid enforcement of this restriction by this Office has frequently resulted in an entire change in the officers and management of national

banks, thus averting otherwise inevitable losses and failures.

Publicity.

The statistics hitherto compiled from the reports of the national banks have been found of great value, and are in constant request by those who are interested in or are seeking information upon, questions of finance. Under no previous system has it been possible to procure complete returns from which to present to the public, periodically, full information of the condition of the banks of this country. As has been already said, not even the joint stock banks of England are required to make reports to any constituted authority, and but a very few of the banks of the Kingdom of Great Britain ever pretend to publish statements of their condition.

Prior to the year 1834 no systematic effort had been made to obtain full

statistics concerning the banks in the various States; but, Congress having by resolution directed the Secretary of the Treasury to procure and publish such statistics, an effort was made to do so; the result of which may be inferred from a report to Congress, made in 1855 by the then Secretary of the Treasury, wherein it is said that the returns of the banks were so imperfect as to indicate extraordinary incapacity on the part of those making them, and that great difficulty was experienced in arranging in any intelligible or satisfactory manner those that were In many States no reports whatever were required from banks chartered under their laws; in others infrequent ones only were required; and in the few in which the banks made quarterly reports there was an entire absence of uniformity as to the dates upon which their condition was required to be shown. It followed that no reliable information of the amount, at any given date, of the paper-circulation of the country, of the specie held by the banks, or, indeed, of their resources or liabilities generally, was obtainable, and the statistics furnished by the Secretary were therefore, through necessity, in a great degree based upon estimates, which were made from reports that in themselves were unsatisfactory and unreliable.

In 1873 it was by law made the duty of the Comptroller of the Currency to present annually to Congress, from the best sources attainable, a statement of the condition of the banks, banking companies, and savings banks organized under State and Territorial laws; but by reference to his report it will be seen how difficult, for the reasons stated, has been the task of obtaining the desired information, and how incomplete and meager the result of his labors in this direction. Efforts have been made to induce the State legislatures to remedy the difficulty by appropriate legislation, but thus far without success; and it is not probable that, under the ever-changing statutes of forty-three different States and Territories, any reliable statistics as to the affairs of banking corpora-

tions chartered by them can ever be obtained.

Thorough publicity as to the condition of banking institutions, whether organized by authority of Congress or by that of the State legislatures, is desirable, both for statistical purposes and as a check upon illegitimate operations. An eminent financier and political economist, in an essay published in 1831, says: "Another great guarantee against improper management is the obligation to make public annual statements of the situation of the banks. The mystery with which it was formerly thought necessary to conceal the operations of those institutions has been one of the most prolific causes of erroneous opinions upon that subject and of mismanagement on their part. * * * Publicity is in most cases one of the best checks that can be devised; it inspires confidence and strengthens credit; while concealment begets distrust, and often engenders unjust suspicions."

The originators of the national banking system, recognizing the importance of publicity, wisely provided for securing it to the fullest possible extent, by requiring the national banks to furnish to the Comptroller of the Currency reports of their condition—at first quarterly, and at a later period five times in each year—and to publish such reports in the local newspapers in the places where the banks are severally established. From these reports full statements are made up and published annually in the report of the Comptroller to Congress, showing the amount and kinds of the loans made by the banks; the amount of specie, legaltender money, and other cash means held by them; the character and amount of their other resources, and of their liabilities to the public; the state of their reserves; their earnings, dividends and surplus; to-

gether with all such other information tending to throw light upon their condition and management as can be given in general statements.

The national banks are also examined each year by competent persons, whose reports are made in the same general form as are those made by the bank-officers; thereby affording a means of instituting comparisons by which to ascertain the correctness of the returns made by the banks. The reports of the examiners also give, in addition, detailed information, which can be obtained in no other way, relative to the condition and management of the banks; thus enabling the Comptroller frequently to detect, and to inform directors and stockholders of, the existence of irregularities and mismanagement on the part of bank-officers which are dangerous to the stability of the banks. Disasters are by these means in many cases averted, and valuable experience gained by the banks.

Statistics so complete and accurate as those deduced from the reports of the national banks have never been made in any country under any previous system. They are of great value, whether viewed as a means of imparting to the public necessary information in regard to the banks, or of supplying to the statist and political economist or to Congress important and reliable data upon which to base such further legislation as may be found necessary for improving the administration of the banking system of the country. Experience has shown that such statistics cannot be obtained except under a general law of Congress, requiring frequent and detailed reports from the banks to be made to one officer, and by him compiled for the use of the public.

Consolidation of the national debt.

The Comptroller has endeavored to answer as concisely as possible the chief objections urged against the national banking system, and to present some reasons why the system should be continued. The monetary problems to be solved during the next few years are the consolidation of the national debt into bonds bearing a low rate of interest and the resumption of specie payment.

The conversion of the present national debt into a bond bearing four and one-half per cent. interest would save to the government nearly nine-teen millions of dollars annually, while the reduction of interest resulting from the funding of the debt into a four per cent. bond would amount to twenty-seven and one-half millions annually; and there appears no good reason why, during the next ten years, the public debt should not be consolidated into a bond bearing interest at no greater rate than four per cent. In order to accomplish this most desirable end, it will be necessary to enlist in its support all the leading monetary institutions of the country. This assistance, as we have seen, was needed during the war of 1812, and has been needed from the time of the organization of the Bank of North America until the present. A system of economy in expenditure, together with an increased amount of revenue, will soon give to the country a credit not excelled by that of other countries, which readily obtain loans at less than four per cent. per annum.

But there are those who, seeing evils which are largely imaginary, desire the entire overthrow of the national banking system, for the purpose of substituting therefor another system which has been often tried without success, and which will inevitably lead to a loss of credit and partial or complete repudiation, not unlike that which has recently overtaken the Turkish government. The national banking system should not be repealed, but should be so moulded as to become and

continue both profitable to the people and advantageous to the government.

The interests of the national banks will be promoted by the reductionto a low rate of the interest upon the public debt; for such a reduction will carry with it a reduction of the present onerous taxation upon bank capital, circulation and deposits. The banks and bankers of England have at all times a fund at their command in which their surplus and reserves can be invested without danger of loss, namely, the English consols, bearing interest at three per cent. The national banks derive but a small profit (about two and one half per cent.) from their circulation; but if the public debt were consolidated into a security resembling the English consols,* always salable in the market at a nearly uniform rate, it would furnish a fund in which the reserves of the banks could at all times be placed, and thus enhance not only the profits but the security and safety of every monetary institution in the country. The funding of the national debt at a low rate of interest will also aid materially in bringing about the resumption of specie payments; for the return to specie payments depends to a great extent upon the credit of the government.

It is very generally acknowledged that the national banking system is superior to the systems which preceded it in this country, and equal, if not superior, to any other system of banking yet devised; and the principal reason adduced for desiring its overthrow is that money can be saved to the government by authorizing it to furnish the circulation of the country. Such a course will not result in true economy; for it will immediately and indubitably injure our credit abroad, and have the effect of preventing the sale in foreign markets of United States bonds

bearing a low rate of interest.

The experience of the last thirteen years has shown that the present is a safe and good system; but even were it much less perfect than it is, the common prudence of ordinary business men would dictate the postponement of the discussion of the repeal and liquidation of a banking system whose resources amount to nineteen hundred millions of dollars, among which are included one thousand millions of loans, to the people, with more than four hundred millions to the government, until the debt of the country shall be funded at a satisfactory rate of interest, and permanent arrangements be effected for the redemption of its demand obligations. When the purchasing power of the legal-tender notes shall be made equal to gold, it will then be in order to discuss the policy of the establishment of a different banking system, and the issue of additional paper money by the government.

NATIONAL-BANK CIRCULATION.

Section 5177 of the Revised Statutes limited the issue of national-bank notes to \$354,000,000; of which amount \$150,000,000 was required by the act of March 3, 1865, to be apportioned among the associations organized in the States and Territories and in the District of Columbia, according to representative population, and \$150,000,000 to associations organized in the several States and Territories and in the District of Columbia, having due regard to the existing banking capital, resources, and business of such State, District, and Territory. The remaining \$54,000,000 was, by the act of July 12, 1870, authorized to be

^{*} Since the year 1850 the English consols (three per cents) have ranged in price from 99½ (in 1851) to 87½ (in 1866.) The average price has, however, during that period, been above 92; a rate which indicates the borrowing power of the government to be about three and one-fourth per cent. per annum.

issued to associations in States and Territories having less than their proportion of circulation under the apportionment above described. The same act authorized the withdrawal of \$25,000,000 from banks organized in those States which had received more than their proportion, and its redistribution to banks located in States which had received less

than their proportion of circulation.

The redistribution of circulation, as contemplated by this act, was found to be impracticable, for reasons given in previous reports of the Comptroller; and a subsequent act, approved June 20, 1874, provided for a system of redemption of national bank notes at the Treasury Department, and a redistribution of \$55,000,000 of circulation, under an apportionment made on the basis of population and wealth as shown by the returns of the census of 1870. The same act authorized the deposit by any national bank of lawful money with the Treasurer, in sums of not less than \$9,000, for the purpose of retiring circulatingnotes, and the withdrawal by them of bonds held as security for such Under this provision a greater amount of circulation has been voluntarily surrendered than was needed to supply applications therefor; and hence the withdrawal of circulation from one portion of the country for the purpose of re-issue in another has proved to be unnecessary. The greatest amount of circulation outstanding at any time prior to January 14 last was on December 1, 1874, when it reached \$352,394,346; and this amount is \$1,605,654 less than that then authorized by law.

During the period intervening between the passage of the act of June 20, 1874, and that of January 14, 1875, sixty banks were organized, with an aggregate capital of \$5,369,000, and to which circulation was issued amounting to \$3,753,580. Additional circulation, to the amount of \$980,920, was also issued to national banks previously organized, making a total issue of \$4,734,500 during that time. Within the same period circulation to the amount of \$2,767,232 was redeemed and destroyed, without re-issue; the actual increase being, therefore, but

\$1,967,268.

The following table exhibits, by States, the number of national banks organized, with their capital and circulation, together with the circulation issued to banks previously organized, and the circulation voluntarily returned and destroyed, from June 20, 1874, to January 14, 1875.

The act of January 14, 1875, approved since the date of my last report, repealed all laws which limited the aggregate amount of national-bank circulation, and also the laws (above referred to) which provided for its withdrawal and redistribution. It further authorized the unlimited issue of circulation to banks organized, or to be organized, under existing laws, but made it the duty of the Secretary of the Treasury to retire legal-tender notes to the extent of eighty per cent. of the additional national bank notes issued, until their amount should be reduced to \$300,000,000.

Section 3 of this act is as follows:

That section five thousand one hundred and seventy-seven of the Revised Statutes, limiting the aggregate amount of circulating-notes of national banking-associations be, and is hereby, repealed; and each existing banking-association may increase its circulating-notes in accordance with existing law without respect to said aggregate limit; and new banking-associations may be organized in accordance with existing law, without respect to said aggregate limit; and the provisions of law for the withdrawal and redistribution of national-bank currency among the several States and Territories are hereby repealed. And whenever, and so often, as circulating-notes shall be issued to any such banking-association, so increasing its capital or circulating-notes, or so newly organized as aforesaid, it shall be the duty of the Secretary of the Treasury to redeem the legal-tender United States notes in excess only of three hundred million of dollars, to the amount of eighty per centum of the sum of national-bank notes so issued to any such banking-association as aforesaid, and to continue such redemption as such circulating-notes are issued until there shall be outstanding the sum of three hundred million dollars of such legal-tender United States notes, and no more. And on and after the first day of January, anno Domini eighteen hundred and seventy-nine, the Secretary of the Treasury shall redeem, in coin, the United States legal-tender notes then outstanding on their presentation for redemption, at the office of the assistant treasurer of the United States in the city of New York, in sums of not less than fifty dollars. And to enable the Secretary of the

Treasury to prepare and provide for the redemption in this act authorized or required, he is authorized to use any surplus revenues, from time to time, in the Treasury not otherwise appropriated, and to issue, sell, or dispose of, at not less than par, in coin, either of the descriptions of bonds of the United States described in the act of Congress approved July fourteenth, eighteen hundred and seventy, entitled "An act to authorize the refunding of the national debt," with like qualities, privileges, and exemptions, to the extent necessary to carry this act into full effect, and to use the proceeds thereof for the purposes aforesaid. And all provisions of law inconsistent with the provisions of this act are hereby repealed.

Between the date of this act and November 1, following, eighty-nine banks were organized, with an aggregate capital of \$10,654,100 and \$3,750,680 of circulation. Additional circulation, amounting to \$7,235,995, was also issued to national banks organized previous to the date of the act last mentioned, making a total issue, since January 14, of \$10,986,675. Legal tender notes amounting to \$8,763,756, have, under the provisions of the law, been withdrawn from circulation and destroyed, leaving the amount of such notes outstanding on November 1, 1875, \$373,236,244. During the same period \$14,570,305 of national-bank notes were redeemed by the Treasurer, and \$2,690,918 surrendered to this Office, none of which has been re-issued. The actual decrease, therefore, in national-bank circulation has, since January 14, 1875, been \$6,774,548.

The total circulation issued to national banks under the acts of June 20, 1874, and January 14, 1875, was, on November 1 of this year, \$15,721,175, during which time \$20,028,455 of their notes were redeemed or surrendered and destroyed; the decrease in total circulation during this period being \$4,307,280. The whole amount of legal-tender notes deposited with the Treasurer under the act of June 20, 1874, by banks now in operation, for the purpose of retiring circulation, was \$27,552,329, which amount was deposited by two hundred and forty-one There was also deposited by banks in liquidation, \$6,210,175, to which must be added a balance of \$3,813,675 remaining from deposits made by liquidating banks prior to that date; making a total of \$37,576,179 thus deposited. Deducting from this sum the amount of circulating notes which, during that period, was redeemed and destroyed and for which no re-issue was made, there remained on November 1, of legal-tender notes on deposit with the Treasurer for the purpose mentioned, \$20,238,642, which amount will doubtless be increased from mouth to month; so that the extent of withdrawals of national-bank notes during the current year will probably exceed that of their issue.

The following table exhibits, by States, the issue and retirement of circulation from June 20, 1874, to November 1, 1875:

The following summary exhibits, concisely, the operation of the acts of June 20, 1874, and of January 14, 1875, down to November 1, of the present year:

National-bank circulation outstanding June 20, 1874 \$4,734,500 Issued from June 20, 1874, to January 14, 1875 \$4,734,500 Redeemed and retired between same dates 2,767,232	\$349, 894, 1~2
Increase from June 20, 1874, to January 14, 1875	1,967,268
Amount outstanding January 14, 1875	351, 861, 450
Redeemed and retired from Jan. 14 to Nov. 1, 1875 14, 570, 305 Surrendered between same dates	
Total redeemed and surrendered 17, 261, 223 Issued between same dates 10, 986, 675	
Decrease from January 14 to November 1, 1875	6,274,548
Amount outstanding November 1, 1875	345, 586, 902
Balance of legal-tender notes on deposit in the Treasury Jane 20, 1874, to redeem circulating-notes of insolvent and liquidating banks	\$3, 813, 675 33, 762, 504
Total	37, 576, 179 17, 337, 537
Legal-tender notes remaining on deposit November 1, 1875	20, 238, 642
Legal-tender notes retired under act of January 14, 1875 Decrease of national bank-notes from June 20, 1874, to Nov. 1, 1875	

National gold-banks.

The national gold-banks of the United States are nine in number, and are all located in the State of California. Their total capital, which on November 1, 1874, was \$3,650,000, has been increased during the present year to \$4,700,000. Their aggregate circulation has also, during the same period, been increased from \$2,150,000 to \$2,630,000.

The National Gold Bank and Trust Company of San Francisco has deposited in the Treasury of the United States \$740,000 in gold for the purpose of retiring its circulating-notes, \$340,000 of which was deposited during the present month. Two other gold-banks, one at Stockton and the other at Petaluma, have deposited \$160,000 and \$40,000, respectively, for the same purpose, the total amount of specie so deposited being \$940,000; and their notes to that amount are now redeemable in gold both at the office of the assistant treasurer in San Francisco and at the Treasury in Washington.

Prior to the late financial crisis in California the gold notes had an extensive circulation in the mining regions of the Pacific coast, the expense of transportation being considerably less than upon gold coin; but owing to the deranged condition of business and the suspension of labor in many of the mining-districts, the demand for these notes has largely diminished. The already-existing prejudice of the people of the Pacific coast against the use, as money, of any description of paper-currency, is said to have been increased by the recent

refusal of the other banks and bankers of San Francisco to either receive or pay out the gold notes; and as the total capital of the two national gold-banks in San Francisco was but \$3,000,000, while that of the State and foreign banks and private bankers in that city is estimated to be not less than \$25,000,000, the effect of such refusal can be readily appreciated. The recent prompt and simultaneous redemption of these notes in gold, in San Francisco and Washington, together with a restoration of the industries of the State to their former prosperity, will without doubt restore their credit.

By the act of June 20, 1874, the requirement of a reserve upon circulation was repealed; but this provision did not apply to the gold-banks. The circulation of such banks is by law limited to eighty per cent, of the par value of the United States bonds deposited by them; and as the estimated profit on circulation in California is only from one to two per cent., (the legal rate of interest being ten per cent. per anuum,) there can be little inducement for the organization of national gold-banks in that State. It has been suggested that an increase to ninety per cent., in the ratio of the notes issued to the bonds deposited, shall be authorized. This increase will, it is thought, be necessary, if additional gold-banks are to be hereafter organized, and it is therefore recommended.

REDEMPTION.

It may be said that a bank is in good condition just in proportion as its business is conducted upon short credits, with its assets so held as to be available on brief notice. If banks loan upon real estate, upon long time, or upon inconvertible collaterals, the necessity of redemption will certainly compel them to call in such loans so far as possible, and to re-loan their available means upon short credits which are easily convertible. If banks are obliged to redeem their notes in specie, they must so regulate their business that their resources can be readily converted into specie.

An anomalous characteristic of the present system of redemption is that the legal-tender note, in which the national-bank note is redeemable, is of no more value in the market than the issues of the banks themselves; but the exchanging of one kind of paper for another has, no doubt, had the effect of reminding the weaker class of banks that the notes which they issue are not really money, but are simply promises to pay, and which are really to be paid in money to the holder on demand. In proportion as the value of the legal-tender note is increased, the demand for such notes in exchange for the issues of national banks will If, under the act of January 14, 1875, a sufficient amount of legal-tender notes shall be withdrawn to reduce the aggregate amount to three hundred millions of dollars, as contemplated by the act, a system of redemption approximating to that of redemption in specie will take place, and the banks will be obliged to retire their issues, or submit to frequent redemptions. The real benefits of such a system will then become apparent. It will give elasticity to the currency, and prevent the issue of bank-notes beyond the requirements of business.

The following table exhibits the amount of national bank notes received monthly by the Comptroller of the Currency, from June 20, 1874, to November 1, 1875, and the amount received for the same period

at the redemption agency of the Treasury:

•		Receiv	ed by Comp	troller.		
Month.	From banks for re-issue or surren- der.	From redemption agency for redissue.	Of closed banks.	Under act of June 20, 1874.	Total.	Received at redemp- tion agency:

From the above table it will be seen that there was received at the redemption agency of the Treasury, from June 20, 1874, to November 1, 1875, \$219,336,445. Of this amount, \$92,000,000, or about forty-two per cent., was received from the banks in New York City. The total amount received by the Comptroller for destruction, from the redemption agency and from the national banks direct, was \$166,935,253; of which amount \$15,094,354 were issues of the banks of the city of New York; \$12,549,877, of those of the city of Boston; \$5,650,667, of Philadelphia; \$3,366,735, of Baltimore; \$3,141,600, of Pittsburgh; \$2,796,945, of Chicago; \$1,841,749, of Saint Louis; \$1,288,570, of Cincinnati; \$1,386,692, of New Orleans; \$1,110,780, of Albany; and of those of the other redemption-citics, \$3,307,795.

The amount of national-bank notes now outstanding upon which the charter number has been printed, is \$156,256,347, leaving \$101,960,555 of notes in circulation without such numbers. If the present system shall be continued until these notes are replaced by new notes bearing their charter numbers, economy will result to the banks, for the expense of assorting will always thereafter be greatly reduced; and when this shall have been done the machinery now in operation will be ready and adequate for the redemption of national-bank notes in specie.

The objection to the present system, on the part of the banks, is the expense, and there is no doubt that their complaints are entitled to consideration; for, under any true system of redemption, the correct principle is that the holder shall, at his own expense, present the note at the place of redemption, while, under the act of June 20, the expense of such presentation is borne by the association which issued the note. But there are good reasons for the continuance of the system as it is. If the transmitting bank is to bear the expense of presentation, in many instances the filthy and mutilated notes which should be retired will be paid out in order to avoid that expense, and at the same time banks in the chief commercial cities will be subject to charges which should be

borne by those who have the benefit of the circulation. The expense to which the issuing banks are subject is in some degree counterbalanced by the privilege which they have of sending unassorted bank-notes to the Treasury for redemption, and by the repeal of the provision requiring reserve upon circulation. Letters upon this subject have been received by the Comptroller from the officers of many leading banks, and it is their almost universal opinion that the redemption of bank-notes should, at least for the present, be performed by the government and

not by private corporations.

Section 5173 of the Revised Statutes provides that the expenses of this Office shall be paid out of the proceeds of the taxes or duties assessed and collected on the circulation of the national banks. This tax, from the organization of the system to July 1, 1875, amounts to \$30,836,937, while the expenses of the Bureau and of the printing and preparation of the notes have been but \$3,689,617.64. The tax on deposits was imposed as a war-tax; and as other similar war-taxes have been repealed, the national banks claim that this tax also should be repealed. The amount of taxation to which the national banks are subject (the average rate, including State and national, being about four per cent. per annum) is much greater than that imposed upon any other capital in the country; and it seems but just that the tax on deposits should be remitted. Under existing law, the assorting, redemption, and destruction of the notes of banks in liquidation, or which are retiring their circulation, is required to be done at the expense of the government. has, during the past year, been borne chiefly by the banks; and the amount of this class of currency to be redeemed during the next year is estimated to be about one-eighth of the whole issue, for which purpose there will probably be on deposit with the government not less than an average of \$20,000,000, in addition to the redemption fund of about \$16,000,000.

If the tax on deposits be not repealed, the Comptroller recommends that Congress authorize an appropriation of an amount sufficient to defray the expenses of redemption, to be paid from the taxes collected from the national banks, now amounting, annually, to more than seven millions of dollars. The banks will then still contribute the greater portion of the expense, through the permanent deposit by them of legal-tenders in the Treasury as a redemption fund; while the trifling cost of redemption will be more than counterbalanced by the constant purification of the currency and the permanent reduction of exchange throughout the country to a minimum rate.

throughout the country to a minimum rate.

Under the present system of redemption the Treasurer transmits by express legal tender notes in payment of unassorted national-bank notes received by him. Many of the banks prefer that such returns should be placed to their credit with their correspondents in the commercial cities; and if such transfers can be made at the option of the transmitting bank, a large amount of expense will be saved to them, and one of the principal objections to the present system obviated.

The following table exhibits the number and amount of national-bank notes, of each denomination, which have been issued and redeemed since the organization of the system, and the number and amount outstand-

ing on November 1, 1875:

Demonstructions		Number.		Amount.

TAXATION.

The Comptroller in September last issued a circular addressed to the national banks, requesting returns of State taxation for the years 1874 and 1875. The assessment for 1875 had not generally been made at that time, and the returns for that year were therefore meager. The number of banks in operation during the year 1874 was nineteen hundred and seventy-seven, forty-one of which paid no State taxes because they were organized after the assessment for the year had been made, and thirty-six failed to reply. Returns were, however, received from nineteen hundred banks, having a capital of \$476,836,031. The thirty-six banks which made no returns had a capital of \$16,800,000.

The returns made to the Treasurer for 1874 were classified by States in this Office, and the following table prepared, giving the amount of United States and State taxes and the rate of taxation in every

State in the Union for that year.

^{*} Including the capital of banks from which returns of the amount of State taxation were not received.

Similar tables will be found in the appendix, giving returns by States for 1867 and 1869.

An examination of these three tables will show that the State of New York paid the highest bank taxes of any of the Eastern or Middle States, the United States taxes for that State in the years named being respectively 2.6, 2.6, and 1.9 per cent., and the State taxation 3.5, 2.7, and 2.9 per-

cent.; totals, in 1867, 6.1, in 1869, 5.3, and in 1874, 4.8 per cent. The corresponding totals for New Jersey were, in 1867, 4.2; in 1869, 4.2, and in 1874, 3.6 per cent.; for Pennsylvania, in 1867, 3.; in 1869, 3.2; and in 1874, 2.3; for Massachusetts, in 1867, 4.0; in 1869, 3.7, and in 1874, 3.4; for Maine, 3.5, 3.9, and 3.2; New Hampshire, 3.8, 4.1, and 3.2; Connecticut, 3.3, 3.4, and 2.9; and in the remainder of the Eastern and Middle States more than 2 per cent. in 1874, with the exception of Delaware, which paid but 1.8 per cent.

Of the Western States, the national banks in Ohio paid the following percentage of taxation: in the year 1867, 4.6; in the year 1869, 5.5, and in the year 1874, 3.6. In the State of Indiana for the same years the percentage was 3.7, 4.1, and 3.8. In Illinois it was 4.8, 4.8, and 4.0; in Michigan, 3.5, 3.2, and 2.8; in Missouri, 3.4, 3.7, and 3.3; in Wisconsin, 4.7, 4.9, and 4.1; Minnesota, 3.3, 4.2, and 3.5; Kansas, 4.5, 8.4, and 4.8;

Nebraska, 7.1, 6.4, and 5.3.

Of the Southern States, South Carolina paid the following percentages: 3.4 in 1869, and 4.7 in 1874; Tennessee, 4.1, 2.7, and 3.7, in the three years named; and the remainder of the Southern States paid in 1874 more than 3 per cent., with the exception of Louisiana and Alabama, which paid 2.9, and of Kentucky, which paid but 1.6 per cent.

Returns were also received from the national banks in 1866, which were not tabulated by States. The United States taxes for that year

were \$8,069,938; State taxes, \$7,949,451; total, \$16,019,389.

An estimate of the total taxation of the national banks for the ten years ending in 1875 has been made, by assuming the rate of State taxation in the years in which no returns were made to this Office to have been the same as the known rate in the years which immediately preceded them. For the years 1872 and 1873 the necessary allowance has been made in the estimate for the amount of the income and license tax and the stamp-tax on promissory notes, which taxes had then been Such estimate is shown in the following table: repealed.

Years.		A	Ratios to capital.

^{*} Capital of banks reporting State taxes, \$476,836,031.

The Comptroller has heretofore, in his reports, called the attention of Congress to the fact that while the national banks are subject to a tax upon their entire capital (which can be easily ascertained from their books and reports,) and not unfrequently upon the market value of their shares, the capital and shares of other corporations, the amount and value of which can be as readily ascertained by appropriate legislation, are assessed at not one half of their value; while private firms and individuals are almost wholly exempted from bearing their share of the

Letters recently received by the Comptroller from the presidents of two principal banks—one in the East and the other in the West—refer

to this greatest of all economical subjects in such plain terms, that he cannot forbear calling the attention of Congress to their suggestions. Many of the shareholders of the national banks depend for their income chiefly upon the earnings of these institutions; and it does not seem just that these thousands of shareholders shall, by any construction of law, be compelled to pay an undue proportion of the taxes of the country. It is submitted that the law, as now interpreted by different State courts and by assessors and collectors, is neitheir equitable nor

A national bank in one of the eastern cities recently refused to pay its taxes, on the ground that the shares of a neighboring State bank were assessed at no greater value than its own, though worth several The court is understood to have held that the bank times as much. had no right to complain, since its shares were not taxed above their value; and that it was not for it to consider whether the shares of other banks of much greater value were taxed at the same rate. The tax commissioners of New York city propose to tax the banks of that city, national and State, not only upon the full par value of their shares but on the total amount of their surplus, without any allowance or abatement. In consequence of this purpose a committee, composed of officers of five principal banks in that city, was appointed to confer with the commissioners. The law of New York provides, in substance, that so much of the property of individual stockholders as is held by them in bank-stock is liable to be taxed for the value of the shares; and a penalty is prescribed if any bank allows the transfer of shares after the tax has become due and before it is paid. The banks in New York City, in order to avoid annoyance and vexatious suits, have for several years paid the tax (about three per cent. annually) to the city direct, instead of leaving it for the stockholders to pay; and the chairman of the committee, in his communication, writes as follows:

The tax commissioners refuse to allow time either for a decision by the State court of last resort or for appeal to the legislature for redress. They take the ground that, as they must be governed by what the courts say is the law, and as the courts have spoken, they must act, and act before the 1st of January, 1876. We reply, substantially as follows:

1st. We speak for national banks, and say they owe their existence to the laws of

Congress, and not to the legislature of New York.

Congress expressly exempts the surplus of national banks from taxation for wise and obvious reasons. It desires to build up strong instead of weak banks, for the safety and benefit of the public, no less than for the profit and advantage of the stock-

On the other hand, if local taxation is to be exercised without any restriction on the part of the United States, then national banks may be taxed out of existence, and State banks substituted, with all the concomitant evils that may arise. For it is certain that, if existing profits of banks now held as a surplus fund are to be subject to an additional tax of three per cent, that fund will be divided among the shareholders,

for the simple reason that no bank could afford to carry it.

2d. The construction of the State law by the tax commissioners seems to the committee unsound; for the law says the tax is to be levied on the value of the shares; not the market value, or intrinsic value, but "value." And the practice heretofore not the market value, or intrinsic value, but "value." And the practice heretorore has been in accordance with law, on the supposition that, without any qualifying word, par was understood. The tax has been laid accordingly. Again, the rule of taxation, as adopted by the tax commissioners, has been a practical violation of the United States law, which says the capital of banks shall not be taxed at a higher rate than is assessed on other personal property. Whereas the city (not the country) has taxed the shares at \$100 each, if that were the par; while other real and personal property was taxed at only sixty dollars on every hundred dollars. A bank, for instance, of \$200,000 capital, is taxed on that sum; while an individual worth that would be taxed on \$120,000. This is parient to propessive and each to be illegal This is unjust, oppressive, and ought to be illegal.

3d. But we claim that the State has no right whatever to tax national banks, excepting to the extent that such right is explicitly granted by the United States law. This principle is made quite emphatic by the United States Supreme Court in the recent

decision of case No. 502, the Farmers and Mechanics' National Bank, Buffalo, against Peter C. Dearing, in relation to usury. In that case, under the third head, the court says: "The national banks were brought into existence by the government for its own good. The National government has exclusive control over them. No State has any. Against the national will, in regard to the banks, as in regard to all other institutions of national creation, the States have no power, by taxation or otherwise, to retard, impede, burden, or in any manner control. This is clear, and, as we think, conclusive."

The president of the Western bank, in his letter, says: "The greatest wrong now existing under our national-currency act is that of taxation—the great lack of uniformity in assessing values, varying from less than twenty-five per cent. of actual value to full

value and surplus.

"Section 95 (section 5219 Revised Statutes) clearly intended by one of its restrictions to provide against excessive tax on national-bank shares, but it practically fails to protect us, because 'other moneyed capital' is not assessed at one-half value, while in many instances (our own as one) the full value is assessed. We are powerless to raise the assessments of others, though unequal; and ours, being actual value, cannot be 'sworn down.' It is now subject to the caprice of local assessors, who gain popularity by the inequality they make, as against all corporate capital—national banks in particular. If this section could be so amended as to read (10th line of section 5219), 'assessed upon other personal and real property in the hands of individual citizens of such State,' the evil would be remedied. In this State, our principal 'other moneyed capital' is in railroads, the shares of which are not taxed. They pay a small percentage on their earnings; not one-half of one per cent. on their capital, actual or nominal."

The section referred to provides that the real property of the national banks shall be subject to taxation to the same extent, for State, county, or municipal purposes, as is other real property; and it is therefore not probable that it was intended to impose upon the shares of the national banks a tax greater than that imposed upon the shares of other corporations.

Section 5214 of the Revised Statutes provides that the national banks shall pay to the Treasurer the following taxes: One per cent. annually upon the average amount of notes in circulation, and one-half of one per cent. annually upon the average amount of deposits, and the average amount of capital stock not invested in United States bonds.

The following table exhibits the amount of United States taxes* collected, annually, from the organization of the system (1863) to July 1, 1875; which amount has been collected without any expense whatever to the government except the compiling of the returns in the Treasury:

Year.	On circulation.	On deposits.	On capital.	Aggregate.
1864 1865 1866 1866 1867 1868 1869 1870 1871 1872 1873 1874 1874	733, 247 59 2, 106, 785 30 2, 868, 636 78 2, 946, 343 07 2, 957, 416 73 2, 949, 744 13 2, 987, 021 69 3, 193, 570 03 3, 353, 186 13 3, 404, 483 11	\$95, \$11 25 1, 087, 530 86 2, 633, 102 72 2, 650, 180 07 2, 564, 143 44 2, 614, 553 48 2, 614, 767 61 2, 802, 840 85 3, 120, 984 37 3, 196, 569 29 3, 209, 967 37 3, 514, 310 39	\$18, 402 23 133, 251 15 406, 947 74 321, 881 36 306, 781 67 312, 918 68 375, 962 26 385, 292 13 389, 356 27 454, 891 51 469, 048 02 507, 417 76	\$167, 310 45 1, 954, 029 60 5, 146, 835 81 5, 840, 698 21 5, 817, 268 18 5, 884, 888 94, 474 00 6, 175, 154 67 7, 004, 646 93 7, 083, 498 67 7, 305, 134 04

^{*} The amount collected by the Commissioner of Internal Revenue from State banks, savings-banks, and private banks and bankers, during the fiscal year ended June 30, 1875, was as follows:

On deposits		\$2,972,260	27
On capital		1, 102, 241	58
	,		
Total		4. 097 248	12

^{*}Of this amount, \$11,627.92 was derived from the tax of ten per cent. upon unauthorized circulation.

Two cent stamp-tax on bank-checks.

The Secretary of the Treasury, upon the appeal of the Comptroller in April last, decided that examinations of national banks, made for the purpose of ascertaining whether the law requiring the affixing of the two-cent stamp upon bank-checks was observed by them, could be conducted only by bank examiners appointed by this Office; and this opinion has been since confirmed by the United States court for the district of Pennsylvania. Since that time, in compliance with the request of the then Commissioner of Internal Revenue, copies of the reports of the examiners upon this subject have been regularly transmitted to that Office. The officers of internal revenue have considered it their duty to impose a penalty for any neglect to comply with this provision, the amount of the penalty being dependent upon the number of checks found unstamped. No penalty can be collected under the law unless the intent to defraud the government shall be made apparent. The national banks of Baltimore, and associations in many other localities, insisted that there was no intention to defraud; but that the few checks found unstamped were the result either of inadvertence or of the poor sticking quality of the stamps. They have, however, paid under protest the penalties demanded, preferring this course rather thant o be forced into litigation with the government. Of the whole number of banks examined since the decision of the Secretary, not more than five have been reported by the examiners as guilty of intentional fraud.

The revenue derived in the fiscal year ending June 30, 1874, from the sale of the two-cent stamps affixed to sight-drafts and checks, was \$1,502,549; the total face value of stamps manufactured during the fiscal year ending June 30, 1875, was \$1,944,166. The amount of income arising from the actual use of these stamps during any fiscal year cannot be accurately determined. The annoyance to the banks and to this O ffice growing out of the strict enforcement of this provision of the law, has been greater than that in reference to all the other restrictions of the national banking laws combined; and the Comptroller, believing that the amount of revenue derived from this source does not counterbalance the evils arising from the surveillance to which all banks and bankers are necessarily subjected thereby, and being satisfied that, in almost every instance, the failure to comply strictly with this requirement is chargeable to the carlessness of transient depositors or to the insufficiency of the mucilage upon government stamps, urgently recommends the repeal of the provision requiring the affixing of the two-cent stamp upon bank checks.

DIVIDENDS AND EARNINGS.

Section 5212 of the Revised Statutes provides that the national banks shall report to the Comptroller, within ten days after declaring any dividend, the amount of such dividend, and the amount of net earnings in excess of such dividend. From these returns the following table has been prepared, exhibiting the aggregate capital and surplus, total dividends, and total net earnings of the national banks, with the ratio of dividends to capital, dividends to capital and surplus, and earnings to capital and surplus, for each half year, commencing March 1, 1869, and ending September 1, 1875; from which it will be seen that the average dividends upon capital during the last year were less than ten per cent, while the ratio of dividends to capital and surplus was less than eight per cent:

							RATIOS.

The specie, as returned by the national banks on October 1st of this year,* is classified as follows: Coin, \$3,364,569.74; United States coincertificates, \$4,485,760—total, \$8,050,329,73. It will be observed that the amount of coin then held is less than at any time during the last six years—the amounts held by the banks of New York City and by all the banks of the country being, respectively, \$9,450,641.66, and \$13,190,615.48 less than the amounts held by them in October of last year.

This marked decrease in the amount of specie is believed to arise from the increased demand for commercial balances abroad, and from the special demand during the late monetary excitement in San Francisco. Authoritative statistics show that sixty-four millions of specie were exported during the first nine months of the present year, as against forty-four millions for the same period last year. The demand from San Francisco is believed to have been about five millions.

The Director of the Mint gives the following estimate of the move-

^{*}The average amount of specie held by the national banks of the city of New York during the week ending November 27, was \$14,425,000.

ment of specie for the last three years, and of the amount in the country on June 30, 1874, and June 30, 1875:

Specie held by the Treasury and the national banks June 30, 1872 Estimated amount in Pacific coast States and Territories at that date Estimated amount held by bankers and others elsewhere Estimated product of United States mines for two years Imports of coin and bullion for same period.	\$98, 389, 864 20, 000, 000 10, 000, 000 140, 000, 000 49, 695, 343
Total. Deduct exports of coin and bullion during same period	318, 085, 207 151, 238, 979
Total estimated amount of specie on hand June 30, 1874	166, 846, 228 72, 000, 000 20, 900, 717
Total	259, 746, 945 92, 132, 142
Total estimated amount of coin and bullion in the country June 30, 1875.	167, 614, 803

The Director says that in this estimate no account has been taken of the amount of gold and silver consumed in the arts and manufactures from June 30, 1872, to June 30, 1875. It is difficult to obtain any reliable data upon this point. Whatever the amount may have been, it was reduced to a considerable extent by the plate, and other manufactured articles of gold and silver, which found their way to the melting pot from the accumulated stock of the country. Making due allowance for the latter, the amount to be deducted from the estimated total may be stated at, say \$15,000,000; and, allowing \$10,000,000 for possible overestimates, this would leave the amount of coin and bullion in the country on the 30th of June, 1875, about \$142,000,000. Of this total, from \$12,000,000 to \$15,000,000 consists of silver coin and bullion.

The following table exhibits the amount and kinds of outstanding paper currency of the government and of the national banks on the 1st day of November in each year, from 1865 to 1875, inclusive:

		United S	tates issues:

^{*} The capital stock is stated at various dates, the amounts at a uniform date in each year not being

† Yearly averages for twenty-two years. 5 Totals for twenty-two years.

The amount of the coin and paper currency of a great nation is small in comparison with that of bank checks, certificates, and bills of exchange which are used as credit circulation. It has been said that they are simply the "small change;" and by an examination of this table it will be perceived how inconsiderable is the aggregate of currency used in comparison with that of bank-checks, and how small an amount is actually needed to settle the large daily transactions of business at the New York clearing house.

A table will be found in the appendix, prepared by Mr. E. B. Elliott, of this Department, showing, for the period of thirteen years and nine months, from the close of the year 1861 to the 30th day of September, 1875, the average greenback-price of gold and the average gold-price of greenbacks, by months, quarter-years, half-years, and fiscal and calendar years, as derived from daily quotations of sales in open market in New York City. The chart accompanying the table exhibits the average currency-prices of gold and the average gold-prices of currency, by quarter years, for the same period.

LOST OR UNREDEEMED BANK-NOTES.

Many exaggerated estimates have been made of the proportion of loss upon Treasury and bank notes which have been in actual circulation for a series of years. The amount of demand Treasury-notes issued from July 17, 1861, to December 31, 1862, was \$60,000,000, in denominations of five, ten, and twenty dollars. The amount of these notes remaining outstanding on the 1st of November last was \$69,707, the portion unredeemed being between one-eighth and one-ninth of one per cent. of the amount issued.

In the absence of sufficient data no reliable statement of similar losses arising from the circulation of bank-notes has ever been made. In order to ascertain as nearly as possible the proportion of loss upon such notes, the Comptroller applied to the superintendent of the bank-department of the State of New York for a statement of the amount of outstanding circulation of the banks of that State, at a period when it was greatest, and the amount remaining outstanding at the expiration of the six years' notice required to be given by the banks before they were by law relieved from the obligation to redeem them. Through the courtesy of the superintendent in transmitting a series of reports to the Comptroller, this Office has been enabled to prepare tables exhibiting the amount of notes which had been issued to the banks, and the amount remaining unredeemed at the expiration of the legal notice. Returns were in this way obtained from two hundred and eighty-six banks, either incorporated, or organized under the safety-fund or the free-banking systems of the State of New York. It was found that the maximum amount of circulation issued to them was \$50,754,515, and that the total circulation still outstanding was \$1,336,337, showing that the proportion of unredeemed circulation was 2.63 per cent. only of the amount issued.

Thirty of these banks still remain in operation in the city of New York, either as State or national institutions; and letters of inquiry from this Office, addressed to them during the month of October last, have elicited the following information: The maximum amount of circulation issued to them was \$7,763,010; remaining unredeemed in October, 1875, \$142,365; amount unredeemed in proportion to that issued,

1.83 per cent., as will be seen from the following table:

The statutes of the State of Wisconsin provide that a bank of issue, after eighty per cent. of its notes shall have been retired, may give notice for two years, in some newspaper of the county where it is established, that its circulating notes must be presented for redemption at the office

of the State comptroller within three years from the date of such first notice. After the expiration of that time the comptroller is authorized to surrender to the order of the bank any securities he may hold for the redemption of its notes.

From an examination of the official reports of the State superintendent, transmitted through the courtesy of the State comptroller, it is found that the greatest amount of circulation issued to two hundred and forty Wisconsin State banks was \$7,565,409, and that the amount remaining unredeemed is \$134,747; the proportion of outstanding or unredeemed notes being 1.78 per cent, only, of the amount issued.

The following table gives similar information as to the national banks which failed prior to the year 1870, from which it will be seen that the amount of circulation issued to them was \$1,554,400, the amount outstanding on November 1, 1875, \$21,653, and that the proportion of notes remaining unredeemed is only 1.39 per cent. of the total issue.

INSOLVENT BANKS.

Since my last annual report receivers have been appointed for five national banks, as follows:

Gibson County National Bank, Princeton, Indiana. First National Bank of Utah, Salt Lake City, Utah. Cook County National Bank, Chicago, Ill. First National Bank of Tiffin, Ohio. Charlottesville National Bank, Va.

During the year dividends have been declared as follows:

Merchants' National Bank, Washington, D. C., 10 per cent.

National Unadilla Bank, Unadilla, N. Y., 13\(\frac{1}{2}\) per cent; total, 45\(\frac{1}{2}\) of per cent.

Scandinavian National Bank, Chicago, 15 per cent; total, 40 per cent.

Atlantic National Bank, New York, 15 per cent; total, 70 per cent.

First National Bank, Washington, D. C., 10 per cent; total, 60 per cent.

Merchants' National Bank, Petersburg, Va., 9 per cent; total, 24 per cent.

First National Bank, Mansfield, Ohio, 10 per cent; total, 35 per cent.

First National Bank, Norfolk, Va., 15 per cent; total, 35 per cent.

First National Bank of Rockford, Ill., 16\(\frac{1}{12}\) per cent; total, 41\(\frac{1}{12}\) per cent.

First National Bank of Carlisle, Pa., 15 per cent; total, 40 per cent.

First National Bank of Topeka, Kans., 15 per cent; total, 45 per cent.

Gibson County National Bank of Princeton, Ind., 40 per cent.

First National Bank of Utah, Salt Lake City, Utah, 15 per cent.

National Bank of the Commonwealth, City of New York, 20 per cent. to share-

First National Bank of Fort Smith, Ark., 13 per cent. to shareholders.

The affairs of the National Unadilla Bank, New York, of the First National Bank of Fort Smith, Ark., and of the First National Bank of Rockford, Ill., have been finally closed; and it is expected that during the next year those of the Ocean National Bank of New York City, the First National Bank of New Orleans, the First and Merchants' National Banks of Petersburgh, Va., the First National Bank of Washington, D. C., the Gibson County National Bank of Princeton, Ind., and of the Wallkill National Bank of Middletown, N. Y., will be finally closed.

Many of the claims against the Eighth National Bank of New York

Many of the claims against the Eighth National Bank of New York City have, during the past year, been assumed and liquidated by the stockholders of the bank in their individual capacity; and these liquidated claims have by them been turned over to this Office, in lieu of the payment of assessments, amounting to fifty-five per cent., made upon them as stockholders on account of such claims. The uncollected assets of the bank have also been sold by the receiver to the representative of the stockholders, under the order of the United States district court. On other claims against the association, for small amounts remaining outstanding, dividends have been declared in full. The creditors of the National Bank of the Commonwealth of New York City have been paid in full, and dividends amounting to twenty per cent. have, during the last year, been declared in favor of its shareholders. Dividends amounting to thirteen per cent. have also been declared in favor of the shareholders of the First National Bank of Fort Smith, Ark.

On account of a deficiency of assets, assessments have been directed to be made, under section 5151 of the Revised Statutes, upon the shareholders of the following named banks: First National Bank, New Orleans; Crescent City National Bank, New Orleans; New Orleans National Banking Association; Atlantic National Bank, of New York City; Wallkill National Bank, Middletown, N. Y.; First National Bank, Washington, D. C.; First National Bank, Norfolk, Va.; First National Bank, Anderson, Ind., and the Scandinavian National Bank of Chicago, Ill.; and suits have been directed to be brought against their delinquent shareholders for the enforcement of their liability under the section named.

It is impossible to prevent delays in liquidating the affairs of insolvent banks when the stockholders of such institutions resist by litigation the enforcement of the personal-liability clause of the national-bank act. Every effort will in such cases be made to close up the affairs of the banks with the least possible expense to creditors and shareholders.

SECURITY OF CIR ULATING NOTES.

The following table exhibits the kinds and amounts of United States bonds held by the Treasurer on the 1st day of November, 1875, to secure the redemption of the circulating notes of national banks:

Class of bonds.	Authorizing act.	Rate of interest.	Amount.
Loan of February, 1861, (81's) Loan of July and August, 1861, (81's) Loan of 1863, (81's) Five-twenties of March, 1864 Five-twenties of June, 1864 Five-twenties of 1865 Consols of 1865. Consols of 1867. Consols of 1868. Ten-forties of 1864 Funded loan of 1881 Pacific Railway bonds	July 17 and August 5, 1861. March 3, 1863 Murch 3, 1864 June 30, 1864 March 3, 1865 do do do March 3, 1864 July 14, 1870, and January 20, 1871	do do do do do do do do do do do	51, 059, 350 28, 046, 70, 179, 000 4, 656, 200 8, 272, 700 6, 536, 650 10, 282, 100 2, 981, 000 97, 974, 150 141, 072, 050
Total			367, 549, 412
	• .	l	

These securities consist of \$128,503,212 of six per cent., and \$239,046,200 of five per cent. bonds. The amount of six per cent. bonds now held is \$17,478,438 less than on November 1, 1874, and the five percent. bonds have also been reduced \$393,900 during the same period.

Since October 1,1870, there has been an increase of five per cent. bonds, amounting to \$143,103,650, and a decrease of six per cent. bonds of \$118,388,088. Since October, 1865, the increase in five per cent. bonds has been \$162,193,600, and the decrease of six per cent. bonds \$147,747,338.

CLASSIFICATION OF STOCKS AND BONDS.

Below is a statement of the aggregate amounts of the various kinds of bonds, stocks, and mortgages, and the amount of real estate owned by the national banks of the United States on the 30th day of June, 1875:

United States bonds, par value	. 143 56	\$402,028,100 00
Stocks and bonds of cities	,630 77	
Bonds of counties and towns	595 84

An examination of the table shows that the national banks held on October 1, 1875, \$26,400,000 more of reserve than would have been required prior to the act of June 20, 1874, and \$82,400,000 more than is required under that act. The amount of cash-reserve held was \$148,500,000, which sum exceeds by \$25,000,000 the amount required prior to June 20, 1874, and is \$43,300,000 greater than that required under the present act.

The following tables exhibit the amount of circulation and of net deposits, together with the reserve held by the national banks, at three

periods in each year, from 1870 to the present time:

USURY.

An important decision has recently been made by the Supreme Court of the United States in the case of 'The Farmers and Mechanics' National Bank of Buffalo vs. Dearing, upon the subject of usury, in which the following points have been determined:

1. That when a national bank makes a loan at a usurious rate of interest it can recover only the amount actually loaned, all interest being forfeited.

2. That when a national bank has received payment of a usurious loan, the party paying such usury may, if he bring his action within two years from the date of the loan, recover from the bank twice the amount of all interest paid on such transaction.

3. That the penalties for usurious transactions or agreements made by national banks are restricted to those imposed by the Revised Statutes of the United States, which are paramount to the penalties prescribed for similar offenses by the laws of the several States and Territories.

The Comptroller is frequently solicited to bring suits, under the authority of section 5239 of the Revised Statutes, for the forfeiture of the rights, privileges and franchises of national banks, on account of usurious transactions. In a previous report this subject was referred to as follows:

Charges have been made against several national banks during the past year for receiving usurious rates of interest. These complaints have been made not only against banks in the South and West, where high rates of interest prevail, but also against banks organized in other States, where the usurious rate charged was but slightly in excess of the rate of six per cent. allowed by law. Section 30 of the act provides that when the amount of interest charged is greater than the rate authorized by State law, twice the interest paid may be recovered by the person paying the same; while section 53 provides that the franchises of an association may be forfeited if the directors of a bank knowingly violate the provisions of the act. The original national-currency act of February 11, 1863, provided as a penalty for usury the forfeiture of the debt, and section 50 of the same act also subjected the rights, privileges, and franchises of an association to forfeiture for willful violations of the act. It may be doubted therefore, whether Congress intended to impose a specific penalty involving the loss of

the whole debt, and then, in addition, subject the same bank to a forfeiture of charter in a subsequent section, which is applicable to other violations of law. I am informed by gentlemen who participated in the framing of the present national-currency act that the forfeiture of twice the amount of interest was regarded as a sufficient penalty

for such violations of law, and, at the same time, a sufficient protection to borrowers.

These statements are confirmed by the act of April 22, 1870, "An act to amend the usury laws of the District of Columbia," which provides "that if any person or corporation in this District shall contract to receive a greater rate of interest than ten per cent. upon any contract in writing, or six per cent. upon any verbal contract, such person or corporation shall forfeit the whole of said interest so contracted to be received, and shall be entitled only to recover the principal sum due to such person or corporation." It will be observed that the forfeiture of the interest is the only penalty prescribed by Congress, nearly six years after the passage of the national-currency act, for corporations and individuals in the District of Columbia.

The rates of interest fixed by State laws are not governed by any sound economical or business principles. In three of the New England States usury laws are abolished, while in the remainder the rate has remained for half a century at a uniform standard, which is less than the present rate of the Bank of England. In Minnesota and Virginia the rate is limited to twelve per cent.; in Illinois, Wisconsin, and Missouri, to ten per cent.; in Alabama and Ohio, to eight per cent.; while in Pennsylvania, Maryland, and Kentucky the rate is fixed at six per cent. In New York, the taking of an excess beyond the limit of seven per cent. forfeits the whole debt, and subjects the creditor to fine and imprisonment. It would be difficult to give any good reason why the rate of interest should be limited to ten per cent. in the city of Washington, to six per cent. in the neighboring cities of Philadelphia, Baltimore, Wilmington, and Raleigb, and to twelve per cent. across the Potomac, in Alexandria, and in the capital of Virginia. Many of the States have practically repealed their usury laws, while other neighboring States retain upon their statute books laws which are so continually evaded that they have become obsolete. Savings-banks chartered by Congress, savings-banks, trust-companies, and safe-deposit companies authorized by the legislatures of almost every State of the Union, as well as private bankers, offer for interest on deposits rates nearly equal, and sometimes exceeding, the ruling rates allowed by law; and under such circumstances it is difficult to control by legislation the rates of the national

Self-protection stimulates even the most conservative banks to control their own business and retain the accounts of dealers of long standing. The rates of interest charged must correspond in some degree to the supply of money and to the demand. If high rates are paid for deposits, it is with the expectation that the borrower will pay a rate correspondingly high. Hence loans are made to those dealers who will leave the largest proportion of the amount borrowed with the bank for the longest period in the guise of deposits. Banks in New York charge seven per cent., in Philadelphia and Baltimore six per cent.; but their loans are made chiefly to dealers whose average accounts show balances continually on hand equal to one-eighth or oue-fourth of the amount borrowed; while the banks in the South and the West not unfrequently charge the ruling rate without regard to the account of the customer. The expedients for violating the usury laws are so numerous, that it may well be doubted whether it would not be better for all parties to allow the rate charged to be regulated by the state of the money-market. Under existing laws, in an easy money-market, the rate not unfrequently falls below that prescribed by law. If money is scarce, the rate is nominally within the limit, but really regulated in accordance with a previous understanding between borrower and lender

There are no usury laws in Great Britain or in the other commercial European states; and the commonwealth of Massachusetts, one of the most prosperous and enlightened States of the Union, has recently abolished such laws; and it will be found, by reference to the table on a preceding page, that the earnings of the banks in that State for the four years since the passage of the act have been even less than in many of the Eastern, Middle, and Southern States, where the rate is fixed at six per cent.

Mr. McCulloch, late Secretary of the Treasury, in his first report as Comptroller of the Currency, recommended a uniform rate of interest, and expressed the opinion that Congress possessed the power to enact such a law under the constitutional provision of regulating commerce among the several States. Congress alone has the power to coin money and regulate the value thereof; and if it alone has authority to issue and authenticate the paper-currency of the country, there would seem to be no good reason why it should not also provide for its free circulation, which is now impeded by the ever-changing statutes of forty different legislatures.

The penalty for usury should at least be defined, and until this is done the Comptroller will not feel himself called upon to institute proceedings for forfeiture of the charter of a bank for usurious transactions, when it is evident that the business of the

association is conducted legitimately and safely in other respects.

16 F

COUNTERFEITS.

Since the passage of the act of June 20, 1874, \$219,336,440 of national-bank notes have been received, assorted, and counted in the Office of the Treasurer, a large proportion of which has also passed through the hands of experts in this Office. This amount nearly equals two-thirds of the present total national bank circulation. The Treasurer informs me that in counting and assorting this large amount of currency only five hundred and twenty counterfeit notes of all denominations have been discovered; of which two hundred and five were twos, one hundred and thirty-eight fives, one hundred and twenty tens, fifty two twenties, and five one-hundreds; amounting, in all, to \$3,840.*

The only well-executed counterfeits of national bank notes of the denomination of five dollars, that have been discovered, are upon five of the national banks in Illinois, namely: The First and Traders' National Banks of Chicago, The First National Bank of Paxton, The First National Bank of Canton, and The First National Bank of Aurora. The amount of notes of this denomination which has been issued to the four banks first named is \$433,700, about three-fourths of which has been withdrawn from circulation. Circulars have recently been addressed to all of the national banks, and to the postmasters of the country, requesting the return to the Treasury of all genuine five-dollar notes of these banks coming into their possession; and it is expected tha during the present year very nearly the whole of such issues will be retired. Experience has shown that the prompt retirement of the genuine notes of any denomination which has been successfully imitated is the most effectual means of preventing the circulation of their coun-The Comptroller has also the satisfaction of stating that the reasury detective force has recently captured the plate from which all

the counterfeit five-dollar notes before referred to have been printed, ud no further issue of these spurious notes is apprehended.

It is believed, as stated in my former reports, that the large amount of engraver's work, both upon the faces and the backs of the national-bank notes, together with the similitude of the designs, has tended to prevent their being successfully counterfeited; and it seems certain that

^{*}The following table, showing the number and amount of counterfeit notes of the Bank of England presented to that bank during various periods from 1806 to 1874, has been compiled from a statement presented in July last by the deputy governor of the bank to a select committee of the House of Commons, and printed in the London Bankers' Magazine for October, 1875:

	. Total r	umber and	amount.	Average for each year.

The amount of circulation of the Bank of England on November 3, 1875, was £37,905,215, or \$184,465,728.80. (London Economist, November 6, 1875.)

a new issue of national-bank notes, differing in design from that now in use, will have the effect to increase the number of counterfeits. The objection urged against the present design is that it prevents the fiber in the paper now used from being readily seen; and to meet this objection the Comptroller suggests that a more simple design be substituted for the large central vignette upon the backs of the notes, which can be done with but little expense, thus leaving the fiber of the paper more clearly visible.

BANK-NOTE PLATES.

The sundry civil appropriation bill, approved March 3, 1875, after making appropriations for paper and the expenses of printing the national-bank notes, and for expenses of engraving and printing the notes, bonds, and other securities of the United States, provides that "the above-named notes, currency, and other securities of the United States shall be executed with not less than three plate printings; and that the Secretary of the Treasury shall have executed one or two of such printings by such responsible, capable, and experienced bank-note companies or bank-note engravers as may contract for the same at the lowest cost to the government, and at prices not greater than those heretofore paid for the same class of work; no company or establishment executing more than one printing upon the same note or obligation, and the final printing and finishing to be executed in the Treasury Department."

Under this provision the Secretary of the Treasury, in the month of August last, decided to have the final printing of the national-bank notes (the printing of their faces) executed at the Bureau of Engraving and Printing of the Treasury Department; and, in order to accomplish this purpose, the material used in printing this portion of the notes, consisting of 6,168 face plates, 4,565 rolls, and 4,730 dies, has been transferred from the custody of the Comptroller of the Currency, by whom they were held, as provided in section 5113 of the Revised Statutes, to that of the Secretary of the Treasury. In addition to the material mentioned, 831 back-plates, 172 rolls, and 98 dies were similarly transferred. Since then all notes issued have been printed upon the distinctive or special paper heretofore used in printing the legal-tender notes, and the words "Series of 1875," as also the signature of the present Treasurer of the United States, have been imprinted upon their face.

An examination of the plates, dies, bed-pieces and other material from which the national bank circulation is printed, has been completed, in whole or in part, and a schedule of the same has been filed in this Office as required by section 5174 of the Revised Statues. A large amount of material, also, which had been used in printing the notes of associations which are in liquidation, has been destroyed in the presence of three witnesses, appointed, respectively, by the Secretary of the Treasury, the Comptroller of the Currency, and by the bank-note com-

panies who were at the time in possession of such material.

Other similar material, recently transferred to the custody of the Secretary has also have destroyed in the presence of mitnesses appointed.

Other similar material, recently transferred to the custody of the Secretary, has also been destroyed in the presence of witnesses appointed by the Secretary and the Comptroller. The examination of this large amount of material and its transfer to Washington has occupied two months' time; and this, together with the alterations in the plates referred to, has caused considerable delay in furnishing to this Office unsigned circulating notes for issue to the banks. It is expected that these alterations will be so far completed by the month of January next that circulating notes will thereafter be delivered with the usual promptness.

STATE AND SAVINGS BANKS, AND TRUST AND LOAN COMPANIES.

As required by section three hundred and thirty-three of the Revised Statutes, the Comptroller presents herewith the condition of these monetary institutions, so far as obtained, for the year 1874–775.

Savings-banks.

The returns received from the six New England States, and from New York and New Jersey, are, apparently, as complete and correct as the State authorities could make them. Those from California, compiled by the San Francisco Herald, also bear evidence of accuracy and completeness. From Pennsylvania only five savings-banks (four in Philadelphia and one in Pittsburgh) have furnished reports. The four Philadelphia banks report their aggregate assets at \$15,374,775; the Dollar Savings-Bank of Pittsburgh at \$4,140,137. Maryland returns six savings banksfive in Baltimore, having assets of \$18,933.448, and one in Frederick, with assets of \$113,570. Minnesota returns three; aggregate assets, \$119.163. Indiana, which reported six savings banks on January 1, 1874, will not furnish returns for the present year until January next.

In the tabular statements of several of the States it will be observed that certain amounts have been added for the purpose of balancing. These forced balances, made in this Office, will be found in the item of "other investments" when the total resources fall short, and in "other liabilities" when the deficit is on the credit side of the account. An instance of this kind ccurs in the savings-bank statement for Massachusetts, and the missing sum of \$593,285 in the aggregate resources has been added to "other investments." Last year it was found necessary to add \$902,790 to "other liabilities" in order to balance the statement. State commissioner of savings banks furnishes no correction or explanation of these apparent errors in the "aggregates" which he supplies; and it has been found utterly impossible to derive any satisfactory explanation from the reports of the individual banks embraced in his last annual report. His suggestion, in this last report, that "the banks be required to furnish a statement of their condition, in the form of a trialbalance of their accounts," intimates plainly that the primary fault is in the law of the State, which does not require sufficiently explicit returns to be made by the banks.

The item of "expenses" in the tables is extremely defective, many of the returns giving none whatever; and in a considerable number of the reports, United States bonds are not distinguished from other bonds and stocks, nor is the separation of the amount of "loans on real estate" from that of "loans on personal and collateral security" always

observed.

The present year furnishes savings banks reports (complete and partial) from twelve States, ten of which appeared in my last annual report. Returns from three other States are now given for the first time, while from one that was reported by me last year no returns have been received. A comparison of the aggregates for the purpose of exhibiting their differences would therefore be useless; but the six New England States, together with New York, New Jersey, and California, admit of instructive comparison.

Their principal items stand thus:*

States.	Aggregat	e deposits.	Number of	depositors.	Average to each.			
	1873_'74.	1874-'75.	1873-'74.	1874-'75.	1873-'74.	1874-'75.

State banks.

In the tables of the appendix, banking institutions having capital stock, though calling themselves savings banks, are included with State banks; and in several cases where but one true savings bank is found in the report of a State, it, also, has been combined with the banks of discount and deposit of that State, to avoid the necessity of additional

The tables representing this class of banks are compiled from the returns of 551 institutions, situated in twenty four States and the District of Columbia; none having been received from the Territories. aggregate loans and discounts are \$176,308,949, and their investments in bonds and stocks amount to \$24,012,934. Of this last amount the item of "investments in United States bonds" is, for the reasons stated, inaccurate, and considerably below the true figures. The items of "other investments," "undivided profits," and "surplus," though correct in the aggregate cannot be relied upon individually. The total resources are stated to be \$272,338,996. In a few unimportant instances only has it been necessary to force a balance in the tables.

The statement of the banks of Ohio, here given, was furnished by its Secretary of State. The amounts are apparently averages, returned to the auditors of eighty-eight counties for purposes of State taxation. They are without dates, but were collected in the months of September and October of this year. The number of banks assigned to Ohio is therefore an estimate only, and it has been found necessary to add the sum of \$720,651 to "liabilities" in the statement, in order to balance it.

The report of the nine banks in Chicago is taken from the Inter-Ocean. There were no others obtainable from the State of Illinois.

West Virginia making returns of ten banks; Maryland, sixteen; Ohio, one hundred and five (estimated); New Orleans, five; Arkansas, one; and Texas, five; are now given for the first time. Missouri, which was returned last year, could not be obtained for the present report.

Trust and loan companies.

Reports from thirty-five of these institutions, situated in New York, Massachusetts, Connecticut, Rhode Island, and Philadelphia, have been obtained, and are separately tabulated in the appendix.

The aggregate capital of these is \$21,854,020; their deposits, \$85,-025,371; loans, \$65,900,174; investments in bonds, stocks, and mort-

^{*} From official reports made to Parliament it is found that the amount due to depositors (including accrued interest) by the old savings-banks, and the post-office savings-banks of the United Kingdom of Great Britain and Ireland, was, at the close of the year 1874, \$314,495,807. The number of open accounts was 3,132,293, making an average of \$100.40 per capita. This shows a vast difference in the average of each depositor as compared with those of this country; but there is probably a great difference, also, in the character of the deposits. Those of Great Britain are, in the main, actual savings, while great numbers of the American savings-banks do a considerable amount of commercial business.

gages, of all kinds, \$39,409,904; cash and cash items, \$9,019,016; and their total resources are \$122,890,175. Several of these companies state that they hold very large values, amounting to many millions, in trust, which are not the property of the companies, and are not, therefore, returned by them as deposits proper. The reports of the trust companies for New York, Massachusetts, Connecticut, and Rhode Island are furnished by their respective State superintendents of banking institutions. Those of Philadelphia were obtained by direct applications made to their proper officers, who cordially and promptly responded to the requests of this Office, although they expressed doubt whether they could be properly classed as banking institutions.

Explanatory.

Early in this year, at the time thought most appropriate for obtaining the latest reports, the Comptroller addressed letters to the governors, and to the bank superintendents of all the States having such an officer, asking for returns of the banking institutions of their respective States. The only available reports which have been received in answer to these applications will be found in the appendix. During the summer and autumn he again applied for the required information to the officers of nearly one hundred and fifty banking companies in the States from which no authentic reports had been received.

The Comptroller takes pleasure in acknowledging the courtesy of a large number of these gentlemen; but when the results of all these inquiries are examined, it will be seen how neglectful are the constituted authorities in respect to the monetary institutions of their respective

States.

The returns of 1,260 of the State banks, trust companies, and savings banks in the United States show more than eleven hundred millions of dollars of deposits; seven hundred and seventy-five millions of loans and discounts; ninety-one millions of capital stock; sixty-nine inillions of surplus funds and undivided profits, and a grand total of nearly thirteen hundred millions of resources, balanced by an equal amount of liabilities. How much beyond these sums remains unreported to this Office must be left to the estimates or conjectures of ex-

perts in finance.

To understand the difficulties encountered by the Comptroller in collecting the statistics of the banks under consideration, it is sufficient only to instance the fact that many of the States do not, by law, require these institutions to report their condition to any of the State authorities. To his inquiries, several of the governors replied, "We have no such information;" and others added, "and we don't know where it is to be had." Some of the States require returns of those items only which they subject to taxation for State purposes, which are generally the capital stock and deposits of the banks; and even where full returns are required, they are usually averages for periods that vary in length and terminal dates.

Among the States from which either no reports were received, or such, only, as could not be utilized, are the great States of Illinois, Ohio, Virginia, Louisiana, Missouri, and many others. Of the thirty-seven States in the Union, the Comptroller has been able to obtain reports of banks of discount and deposit from twenty-four only, and of the ten Territories, returns have been received from the District of Columbia alone. Many of these reports are manifestly defective. He has also obtained reports of savings banks from but twelve States and parts of States, and of trust and loan companies from four States and one city.

One other source of information, which supplies some of the deficiencies mentioned, is found in the returns made to the Commissioner of Internal Revenue for purposes of taxation. From the reports obtained by the Comptoller and from these returns the following table has been prepared, showing the number of State and savings banks and of trust companies, and the amount of their deposits at various dates in 1874–75, together with the number of banks and private bankers, and their average deposits for June, 1873, and May, 1875, as returned to the Commissioner. The table also shows the average amount of capital in May, 1875, and the taxable capital and deposits for the six months ending May 31, 1875, as reported to him. The total average deposits for November, 1873, is also given in a note.

NOTE.—The amount of the average deposits for the month of November, 1873, as reported to the Commissioner of Internal Revenue, was \$1,160,861,826.

This table affords all the additional information at the command of this Office in reference to the number, deposits, and capital of State

banks and private bankers of the country.

Three hundred and twenty-nine banks and bankers in Illinois return to the Commissioner \$35,629,942 of deposits, two hundred and ten in Missouri, \$35,723,844, and ninety-three in Kentucky, \$12,200,901; from none of which could returns be obtained from any State officials. The savings-banks of California, twenty-five in number, hold \$72,509,103 of deposits, while these, with eighty-seven other institutions and private bankers, return to the Commissioner \$99,640,319; indicating that the total amount of deposits in California, outside of the national banks and the savings-banks, is but \$27,131,206. By a similar comparison it will be found that five hundred and ninety-five private bankers in the State of New York held but \$24,669,176 of deposits, while two hundred and fifty-three State and savings-banks and trust companies held \$416,106,226. Other comparative results of corresponding character may be deduced from the table.

Unfortunately for a useful comparison of summaries, the Commissioner's report embraces the returns of private bankers and brokers, and does not distinguish them, in numbers or amounts, from the incorporated or legally authorized banks to which the Comptroller's inquiries

are restricted.

The total number of banks and private bankers reporting to his Office is 4,375, while the banks represented in the reports obtained by this Office number but 1,260; the Commissioner's summary of the deposits held in May, 1875, is put at \$1,346,000,000, while the aggregate reported to the Comptroller for various dates in 1874-775 is \$1,100,000,000—the number of the banks and bankers in one statement exceeding by 3,115 that of the banks, trust companies, and savingsbanks in the other, while their deposits are but \$246,000,000 greater in amount.

Information in regard to these institutions, approximating to acaccuracy and completeness, can be obtained only through improved State legislation. Much that is promising of good results has already been done by exciting attention and endeavor in this direction. Appropriate bills were reported last winter in the legislatures of Illinois and Virginia, but were not passed. In these States, and elsewhere, the subject is undergoing what may be regarded as preliminary consideration. In several of the States, laws more or less effective are now in operation; and it is deserving of notice that New York has enacted a law with respect to her savings banks far more exacting and restrictive than are the legal restrictions imposed upon the national banks; thus conforming to a provision in the State constitution which was recently ratified by popular vote. It is a truth, not universally recognized, that concealment is not among the vested rights of chartered money corporations; but it is safe to say that the soundest of them regard publicity of their affairs to be a measure of safety to themselves and a duty to the public.

AMENDMENTS.

The following amendments of the national bank act are recommended.

1. An amendment authorizing the Comptroller to appoint receivers of national banks, whether transacting business or in liquidation, when insolvency shall become evident from the protest of drafts or of cheeks drawn upon such associations, or otherwise, if, after due examination,

it shall appear that the assets are insufficient for the liquidation of ex-

isting indebtedness.

2. Authorizing the appointment of a receiver when the charter of a bank shall be determined and adjudged forfeited by a United States court before which suit is brought, as provided in section 5239 of the Revised Statutes.

3. Providing that after full payment shall have been made of all the debts of an association, an agent may be appointed by the shareholders of the bank, for the purpose of liquidating its affairs; and thereupon discharging the Comptroller and receiver, by virtue of such legislation, from all further responsibilities.

4. For the investment of the funds of insolvent banks, on deposit with the Treasurer, in interest-bearing securities of the United States, when

dividends are delayed by reason of protracted litigation.

5. Providing that if any shareholder or shareholders of banks, whose capital stock is impaired, shall refuse, after three months' notice, to pay his or their assessments, as provided in section 5205 of the Revised Statutes, a sufficient amount of the capital stock of such delinquent shareholder or shareholders shall be sold to make good the deficiency.

6. An amendment of section 5200 of the Revised Statutes extending the limit of liability of any association, person, company, or firm, for money borrowed, from one-tenth of the capital paid in, to fifteen per cent. of capital and surplus for banks located in the reserve cities, and to one-tenth of capital and surplus for other banks.

7. Prohibiting the deposit of more than ten per cent. of the capital of a national bank with any private banker, or with any person or asso-

ciation other than a national banking association.

8. That no national bank shall be liable to make good any deficiency which may hereafter arise in any special deposit made with such bank, unless there shall be produced by the owner of such deposit a receipt in which the liability of the bank shall be distinctly stated.

9. The repeal of the two-cent stamp-tax upon bank-checks.

10. Requiring the word "counterfeit," or "altered," or "illegal," to be stamped on all counterfeit or unauthorized issues.

11. The repeal of that portion of section 4 of the act of June 17, 1870, which provides for the organization of savings banks in the District of Columbia.

Many of these proposed amendments were incorporated into a bill reported from the Committee on Banking and Currency during the last session of Congress, but no final action was reached upon them.

SYNOPSIS OF SUPREME COURT DECISIONS.

The following synopsis of the decisions of the Supreme Court of the United States relative to national banks (3d to 21st Wallace, inclusive) has been prepared at the request of the Comptroller by Hon. Charles Case, late receiver of the First National Bank of New Orleans, now of this city.

ABATEMENT.

An action brought by a creditor of a national bank is abated by a decree of a district or circuit court dissolving the corporation and forfeiting its franchises. (National Bank of Selma vs. Colby, 21 Wallace, 609.)

ACTIONS.

I. A national bank may be sued in proper State court. (Bank of Bethel vs. Pahquioque Bank, 14 Wall., 383, p. 395.)

II. Such banks may sue in Federal courts. The word "by" was omitted in section 57 of act of 1864 by mistake. (Kennedy vs. Gibson, 8 Wall., pp. 506-7.) Receivers may also sue in United States courts. (Ibid., pp. 506-7.)

ACTIONS-Continued.

III. When the full personal liability of shareholders is to be enforced the action must be at law. (Kennedy vs. Gibson, 8 Wall., p. 505.)

IV. But if contribution only is sought the proceedings should be in equity joining

all the shareholders within the jurisdiction of the court. (*Ibid.*, pp. 505-6.)

V. In such equity suit a decree interlocutory may be entered for the per centum ordered, and the case may stand over for the further action of the court if necessary until the whole personal liability is exhausted. (*Ibid.*, p. 505.)

VI. In such equity suit it is no defense that shareholders not within the jurisdiction are not joined. (*Ibid.*, p. 506.)

VII. Suits to enforce personal liability of shareholders may properly be brought before other assets are exhausted. (Ibid., pp. 505-6. See also "Comptroller," III, "DEBTORS," I.)

VIII. When a creditor attaches the property of an insolvent national bank he cannot hold such property against the claim of a receiver appointed after the attachment-suit was commenced. Such creditor must share pro rata with all others. (National Bank of Selma vs. Colby, 21 Wall., 609.)

ATTORNEYS.

Section 56 of currency act is directory only, and it cannot be objected by defense that a suit is brought by private attorney instead of the United States district attorney. (Kennedy vs. Gibson, 8 Wall., p. 504.)

BY-LAWS.

A national bank cannot by its by-laws create a lien on the shares of a stockholder who is a debtor of the association. (Bullard vs. National Bank, &c., 18 Wall., 589.) See also case of Bank vs. Lanier, 11 Wall., 369, cited under "Loans on shares, post.

CHECKS.

I. Holder of check on a national bank cannot sue the bank for refusing payment in the absence of proof that it was accepted by the bank. (National Bank of Republic vs. Millard, 10 Wall., p. 152.)

II. The relation of banker and customer is that of debtor and creditor. Receiving deposits is an important part of the business of banking, but the moment they are received they become the moneys of the bank, may be loaned as a part of its general fund, and the check of the depositor gives no lien upon them.

(Ilid., per Davis, J., p. 155.)

III. Perhaps, on proof that check had been charged to the drawer, and that the bank had settled with him on that basis, the holder or payee could recover on a count for "money had and received." (Ibid., pp. 155-6.)

on a count for "money had and received." (Ibid., pp. 155-6.)

IV. The facts that the bank was a United States depository and the check was drawn by a United States officer to a United States creditor, do not vary the rule. (Ibid., pp. 155-6.)

COMPTROLLER.

I. Comptroller must decide when and for what amount the personal liability of the shareholders of an insolvent national bank shall be enforced. (Kennedy vs. Gibson, 8 Wall., p. 505.)

II. His decision as to this is conclusive. Shareholders cannot controvert it. (Ibid., p. 505.)

III. In any suit brought to enforce such personal liability, such decision of the Comptroller must be averred by the plaintiff, and, if put in issue, must be (Ibid., p. 505.)

Comptroller appoints the receiver, and therefore can remove him. (Ibid., p. 505.) VI. Comptroller cannot subject the United States Government to the jurisdiction

of a court, though he appears and answers to the suit. (Case vs. Terrill, 11 Wall., p. 199.)

I. "The purpose of the currency act was, in part, to provide a currency for the whole country, and, in part, to create a market for the Government loans." (Per Strong, Justice, in Tiffany vs. Missouri, 18 Wall., p. 413.)

DEBTORS OF NATIONAL BANKS.

. I. Debtors of an insolvent national bank, when sned by the receiver, cannot object that pleadings do not show a compliance with all the steps prescribed by statutes as preliminary to the appointment of such receiver. (Cadle, Receiver, &c., vs. Baker & Co., 20 Wall., p. 650.)

II. Such ordinary debtors may be sued by receiver without previous order of Comptroller. (Bank vs. Kennedy, 17 Wall., p. 19.)

INTEREST.

I. Under section 30 act of 1864, a national bank in any State may take as high rate of interest as by the laws of such State a natural person may stipulate for, although State banks of issue are restricted to a lesser rate. (Tiffany vs. National Bank of Missouri, 18 Wall., p. 409.)

[Note.—In Missouri, natural persons may take ten per cent., but State banks are restricted to eight per cent. In this case the national bank had taken nine

per cent. Held, legal.

II. Held, also, that as the action was virtually brought to recover the penalty for usury, the statute (section 30) must receive a strict construction. (Ibid., p. 409.)

JUDGMENTS.

I. A judgment against a national bank in the hands of a receiver upon a claim only establishes the validity of such claim; the plaintiff can have no execution on such judgment, but must await pro rata distribution. (Bank of Bethel vs. Pahquioque Bank, 14 Wall., p. 383. Clifford, J., p. 402.)

LOANS ON SHARES.

 National banks are governed by the act of 1864, which repealed the act of 1863 and cannot, therefore, make loans on the security of their own shares, unless to secure a pre-existing debt, contracted in good faith. Bank, &c., vs. Lanier, 11 Wall., p. 369.)

II. The placing of funds by one bank on permanent deposit with another bank is a loan within the spirit of section 35 of act of 1864. (*Ibid.*, p. 369.)

III. Loans by such banks to their shareholders do not create a lien on the shares of such borrowers. (Ibid., p. 369. See also Bullard vs. Bank, 18 Wall., p. 580; aud "BY-LAWS," supra.)

RECEIVERS.

I. Receiver of a national bank is the instrument of the Comptroller and may be

removed by him. (Kennedy vs. Gibson, 8 Wall., p. 505.)
Such receiver is the statutory assignee of the assets of the bank, and may sue to collect the same in his own name, or in the name of the bank, for his use. (Ibid., p. 506.)

III. In such suit it is not necessary to make the bank or creditors parties. (Ibid.,

p. 506.)

IV. Receiver of a national bank represents such bank and its creditors, but he in no sense represents the United States Government, and cannot subject the Government to the jurisdiction of any court. (Case vs. Terrill, 11 Wall., p. 199.)

to the jurisdiction of any court. (Case vs. Terril, 11 Wall., p. 199.)
V. Decision of a receiver rejecting a claim against his bank is not final. Claimant may still sue. (Bank of Bethel vs. Pahquioque Bank, 14 Wall., p. 383.)
VI. The clause of section 50, act of 1864, which prescribes that the receiver shall be "under the direction of the Comptroller" means only that he shall be subject to his direction, not that he shall not act without orders. He may and must collect the assets. That is what he is appointed for. (Bradley, J., in Bank vs. Kennedy, 17 Wall., pp. 22-3.)

SHARES OF STOCK.

I. A national bank whose certificates of stock specify that the shares are transferable on the books of the bank ou surrender of the certificates, and not otherwise, and which suffers a shareholder to transfer without such surrender, is liable to a bona fide transferee for value of same stock, who produces such certificate with usual power of attorney to transfer; and this is so though no notice had been given to the bank of the transfer. (Bank vs. Lanier, 11 Wall., p. 369.)

II. Shares, quasi, negotiable. (Ibid., p. 369.)

SHARES, TAXATION OF.

I. The act of 1864, rightly construed, subjects the shares of the association in the hands of shareholders to taxation by the States under certain limitations set forth in section 41, without regard to the fact that part or the whole of the capital of such association is invested in national securities, which are declared by law exempt from State taxation. (Van Allen vs. Assessors, 3 Wall., p. 573.) (Chase, Chief-Justice, and other judges dissented.)

II. Act thus construed is constitutional. (Ibid., p. 573.)

III. A certain statute of New York which taxed shares of national-bank stock declared void, because shares of State banks were not taxed, although their capital was: the act of Congress prescribing that shares of national-bank shall

ital was; the act of Congress prescribing that shares of national-banks shall be taxed only as shares of State banks are. (Ibid., p. 573.)

The ruling as to taxing shares of stock re-affirmed in Bradley vs. People, 4 Wall., and National Bank vs. Commonwealth, Wall., p. 353.*

^{*} See also 4 Wall., 244, and 19 Wall., 490.

SHARES, TAXATION OF-Continued.

In last case, held that a State law requiring the cashier to pay the tax was valid. Held, also, that a certain State tax-law virtually taxed "shares of moneyed corporations," &c.

IV. Shares of stock in national banks are personal property, and, though in one sense incorporeal, the law which created them could separate them from the person of their owner for taxation, and give them a situs of their own.-(Tappan, Collector, vs. Bank, 19 Wall., p. 490.)
Sec. 41 did thus separate them, and give them a situs of their own. (Ibid., p. 490.)

VI. This provision of the national-currency act became a law of the property (in shares), and every State in which a bank was located acquired jurisdiction, for taxation, of all the shares, whether owned by residents or non-residents, and power to legislate accordingly. (Ibid., p. 490.)

APPENDIX.

Special attention is called to the carefully-prepared tables contained in the report and the appendix, showing the number of banks organized and closed, with their capital, bonds deposited and circulation, the resources and liabilities of the banks from their organization to the present time, their resources, dividends and earnings, the amount of proved claims and of dividends made to creditors of insolvent banks, banks which have gone into liquidation, the amounts and different kinds of United States bonds and other stocks and bonds held by the banks, the amount of specie and paper money of the banks and in the United States, the unredeemed notes of State and national banks which have ceased to do business, the capital and deposits of State and savings banks, and the amount of national and State taxes. A list of these tables will be found on the following page, and an index to the last report of each of the two thousand and eighty-seven national banks at the end of the volume.

In concluding this report the Comptroller takes great pleasure in acknowledging the uniform courtesy of the honorable Secretary of the Treasury, and desires also to tender his thanks to the officers and clerks associated with him, for the faithfulness and industry with which they have performed their respective duties.

JOHN JAY KNOX.

Comptroller of the Currency.

Table showing for each State and Territory, on the 1st day of November, 1875, the total number of banks organized, closed and closing, and in operation, with their capital, bonds on deposit, and circulation issued, redeemed, and outstanding.

Note.—All the items in the statements for Ohio are "averages" returned as subject to State taxation.

Twelve or these banks are in Baitmore, with aggregate deposits of \$4,121,622, and aggregate resources of \$6,135,722.

† Four of those, calling themselves savings banks, have capital stock. The National Savings Bank having none, is included in this table to avoid the necessity for an additional statement.

† An apparent excess of assets added to balance. The report taken from the New Orleans Daily Republican, of July 15, 1875.

^{*} No dates given. They were collected from auditors of 88 counties during August and September. † Estimated. The secretary of state styles them "banking institutions, other than national banks." † Received July 21, 1875. The auditor of state says: "No report for the present year can be furnished." † The financial editor of the Luter-Ocean furnishes this statement, and adds: "Eight of these banks hold, probably, five sixths of the savings deposits in the city."

|| Difference between reported resources and liabilities added to balance.

Expenses of the Office of Comptroller of the Currency for the fiscal year ending June 30, 1875.

For special dies, plates, paper, printing, &c. \$324, 556 68
For salaries 120, 680 00

The contingent expenses of the Office were paid out of the general appropriation for contingent expenses of the Treasury Department, and, as separate accounts are not kept for the different Bureaus, the amount cannot be stated.

REPORT OF THE DIRECTOR OF THE MINT.

Equipment of a refinery in the mint at San Francisco, enlargement of the melting and refininy facilities in the United States assay office at New York, and increased coining facilities at the mints in Philadelphia and Carson.

The original plans for the new mint edifice at San Francisco, and according to which it was constructed, contemplated the use of the nitric acid process for refining. When the building had been completed and occupied for coining operations, it was thought that the space allotted for the refining was sufficient for the employment of the sulphuric acid method, but after the plans and drawings for the same had been prepared, it was found that a sufficient capacity could not be obtained, or the iron portions of the rooms secured against serious injury from sulphurous acid gas generated and emitted during the refining operation. After an exhaustive examination of the subject, it was determined, with your approval, to equip a nitric acid refinery, with certain modifications and improvements, having for their object increased efficiency and reduced cost of separating (usually termed refining) of the precious metals.

The arranging of the plan of the refinery and its equipment was intrusted to Robert E. Rogers, professor of chemistry in the University of Pennsylvania, whose eminent qualifications as a chemist and metallurgist, rendered him peculiarly qualified for this service, and who performed the duty assigned him in an entirely satisfactory manner. The refinery has been in successful operation since the 26th day of August

last, and with much advantage to the public interests.

The business of the assay office in New York has increased to such an extent during the last two years, as to render necessary the occupancy of the rooms in the Wall street building, which have until recently been rented to banking firms. These rooms have been altered, repaired, and otherwise put into condition for the purposes to which they are hereafter to be devoted, and the capacity for melting and refining bullion has thereby been doubled, and the office is better adapted in many respects for the convenient transaction of its business.

A careful examination by the Supervising Architect of the Treasury, of the rear building, in which refining by sulphuric acid has been carried on for a number of years, having developed the fact that the iron beams were corroded by sulphurous acid gas to such an extent as to weaken them and render additional supports necessary, the latter have been

provided and put in place by the officer referred to.

The duplication of the coining machinery at the mint in Carson, for which an appropriation was made two years ago, has been completed and the coining capacity doubled. At the mint in Philadelphia, the annealing capacity having been found too limited, two additional furnaces have been erected, and the coining capacity thereby increased. With these improvements the mints and assay offices are in a very efficient condition.

ADDITIONAL VAULT FACILITIES REQUIRED.

The experience of the last year has demonstrated the insufficiency of the facilities of the Treasury and its offices for the convenient and safe storage of coin, particularly in the Western States, and more silver coin has of late been retained in the custody of the mints than could be properly cared for.

In view of this fact and the increased amount of coin which will have

to be stored in the Treasury offices in different parts of the country before specie payments shall have been resumed, it is suggested that the provision of additional vaults should be undertaken at an early day.

PREPARATIONS FOR COINAGE AT NEW ORLEANS.

Under the provisions of the act of Congress approved June 20, 1874, the mint at New Orleans has been prepared for re-opening as far as the limited appropriations therefor would permit, and it would now be practicable to conduct thereat the operations of melting, assaying, and stamping of bullion; but the appropriations having been made for the purpose of re-opening the establishment, "to be conducted hereafter as a mint subject to the provisions and restrictions of the coinage act of 1873," do not authorize it to be conducted as an assay office.

Estimates for the appropriations necessary to carry into effect the provisions of law above referred to will be submitted for your consid-

eration and such action as you may deem proper.

THE TRADE-DOLLAR.

In the latter part of the year 1872, it became apparent that the change in the German monetary system, and other causes affecting the demand and supply, would produce a serious decline in the value of silver and

injuriously affect our silver mining interests.

To provide a market for the silver mined in the western portion of our country, a coin of a standard likely to make it acceptable in China was authorized early in the following year, 1873. About two years afterward, January, 1875, a law looking to the substitution of silver for the paper fractional currency was enacted. Upon a superficial examination the trade-dollar may be supposed to interfere with the plan of substituting silver for the fractional currency; such, however, is not the case, its coinage not having the least effect on the general market-The real effect is to make something of a local market price of silver. at San Francisco, and if our annual production of that metal was not more than the miuts could coin, the silver production of the Pacific coast would command slightly better rates; but the fact is, the coiningcapacity of the mints for silver coins of less denomination than the dollar is not equal to more than half the production, and two years' yield of the mines will, it is probable, furnish sufficient silver to manufacture all the fractional coins that can be advantageously used in the country.

After the redemption of the fractional notes, silver coins, with the exception of the trade-dollar, can only be issued under the coinage laws in exchange at par for gold coins; and as this limitation will be a barrier to their excessive coinage, the demand for bullion for that purpose must, after two or three years, be quite small. The coining rate of silver in trade-dollars is $\$1.14_{-780}^{28}$ per standard ounce. Deducting the charge of $1\frac{1}{4}$ per cent. on the nominal value (equal to 1_{-700}^{42} cents per ounce) gives a return to the depositor in that coin of nearly 113 cents per ounce. The fact that the average price of silver purchased for the

Note.—\$1,000,000 in gold coin weigh 53,750 troy ounces, or 3,685.71 avoirdupois pounds; equal to, at 2,000 pounds to the ton, 1 ton 16 cwt. 86 pounds. \$1,000,000 in trade-dollars weigh 875,000 troy ounces, or 60,000 avoirdupois pounds; equal to, at 2,000 pounds to the ton, 30 tons.

^{\$1,000,000} in subsidiary silver coin, (half and quarter dollars, 20-cent pieces, and dimes,) weigh 803,750 troy ounces, or 55,114.28 avoirdupois pounds; equal to, at 2,000 pounds to the ton, 27 tons 11 cwt. 14 pounds.

fractional coins has been only 111_{10}^4 cents per standard ounce, proves that the trade-dollar coinage has not influenced the price to any perceptible extent.

The Comstock bullion, which has San Francisco for its natural market, consists, on the average, of twenty-one parts by weight of silver to one of gold. The two metals must be separated or parted before either can be brought to the legal standard for coinage. The most economical proportion for the parting operation being two parts by weight of silver to one of gold, the Comstock bullion admits of gold containing a small percentage of silver, being added and refined with but trifling expense compared with that which would be incurred if fine silver had to be purchased and added to such gold to bring it to the proper proportions for refining.

This class of bullion is, for this reason, a favorite in the London market, where gold containing a small percentage of silver constitutes principally the partible bullion received, and a higher rate is paid for it

there than for fine silver.

Formerly this unparted bullion was nearly all shipped direct from the mines to London, but the coinage of the trade-dollar and repeal of the charge for coining gold have caused it, during the present year, to be

refined and minted in the United States.

Ultimately China must have a national coinage of silver, and in the mean time a more extensive use of the silver coins of other countries will be found advantageous not only to the Chinese, but to foreign residents at the different ports. The American trade-dollar has been well received in that empire, and if authority were given to coin at our western mints five, ten, twenty, and fifty cent pieces of the same standard, they would no doubt find a ready market at the different commercial ports, and gradually work their way into the interior of the empire.

If this trade-coinage should incidentally afford protection to our mining interests, which have already been injuriously affected by the fall in the value of silver, it could hardly be regarded otherwise than as

sound national policy.

PURCHASES AND COINAGE OF SILVER.

The first section of the act of January 14, 1875, for the resumption of specie payments, authorized and required the Secretary of the Treasury, to cause to be prepared as rapidly as possible, silver coins for the

redemption of the fractional currency.

The purchases of silver bullion for this purpose from January 14 to October 31, 1875, have amounted to \$9,183,417.37, at an average price, with the refining charge added for the Doré bullion, of $111_{\frac{1}{4}0}$ cents per ounce standard. The average price of silver in London during the same period has been 56.99 pence per ounce, British standard, which, reduced to United States standard and money, gives $112_{\frac{1}{4}0}$ cents.

The following statement exhibits the purchases made to October 31,

1875, and a comparison of rates paid with London quotations:

Date. Amount. Second per standard ounce.	Purchased by	the United S	tates.	London rates.			of the

11 cents per ounce.

The purchases were commenced soon after the passage of the act, and continued from time to time, as was required, for the economical working of the mints; the quantity proposed to be purchased, and limit of price to be paid having been in each case first submitted to the Secretary, and his approval obtained. In making these purchases, the condition of the bullion and exchange markets was carefully inquired into, the London rates ascertained, and the respective superintendents instructed to purchase at the lowest market rate, and not above the limit authorized.

The coining rate of the fractional silver coins being $124\frac{4168}{10000}$ cents per standard ounce, and the average cost of the bullion $111\frac{4}{10}$ cents, the seignorage or gain on its coinage will be 13 cents per ounce, or about 12 per cent.

The fractional silver coin manufactured during the same period was as follows:

Half-dollars. Quarter-dollars Twenty cents. Dimes	4, 260, 200 1, 253, 590	1,065,050 250,718
Total	28, 424, 390	7,820,908

The coinage of these pieces for the month of November may be set down at \$680,000, and the amount in the Treasury and mints on the 31st

[†] Deducting gold contained in Doré bullion, \$3,474,637.31, the amount of silver purchased up to October 31, 1875, has been \$9,183,417.37.

Note.—The Doré bullion was refined or parted on account of the United States at an average cost of

of January, 1875, at \$1,500,000; which amounts, added to the coinage from February 1 to October 31, 1875, inclusive, would give a total of about \$10,000,000.

The amount of silver coins exchanged at par for gold during the fiscal year was \$20,425.37; the difference between the cost of the silver coins and their naminal, on tale yelve, being a gain to the Transparence of the silver coins

and their nominal, or tale value, being a gain to the Treasury.

REDEMPTION OF FRACTIONAL PAPER-CURRENCY IN SILVER COINS.

The policy of the redemption of the fractional paper-currency in silver coin in advance of gold-resumption has been discussed to some extent, and various suggestions made as to the practicability of the scheme. So far as the measure was predicated upon an expected favorable condition of the silver market, the result has thus far been satisfactory, and will no doubt continue to be so in the future; but the appreciation in the value of legal-tender notes (which is also necessary to insure a favorable result) has not taken place; on the contrary, the average value of the paper-currency has been lower since than it was at the time of the passage of the act, and this notwithstanding the fact that about \$9,000,000 in legal-tender notes have been withdrawn and canceled.

To state the causes of the increase of the gold premium, or decrease in the value of United States notes, would involve a review of the condition of the various industries of the country, its finances, our foreign indebtedness, and the state of the principal money-markets of Europe, which cannot be properly undertaken in this report. It may be stated, however, that some of the causes may be regarded as of a temporary character, and that certain contingencies connected with the money-market and gold-supply have tended to place the limited amount of coin in this country, other than the Treasury stock, almost entirely within the control of speculation, thereby rendering its price somewhat arbitrary.

This state of affairs was intensified by the recent financial disturbances on the Pacific coast, where gold constitutes the circulating medium, and by the temporary interruption of the supply of bullion from the largest producing mines of the country, caused by the destruc-

tion by fire of the hoisting and other works of these mines.

A very gradual contraction of the legal-tender notes and a moderate revival of business will, it is probable, by the time the necessary stock of silver coin to commence the redemption can be prepared, reduce the gold-premium to such a point as will insure the success of the measure.

The depreciation of United States legal-tender notes, which commenced soon after their issue took place, caused the silver coins to be exported, and rendered the employment of a substitute necessary. The issue of fractional notes was undoubtedly preferable to the debasement of the silver coins, but their permanent use is neither desirable nor practicable. The annual issue being about \$36,000,000 on a circulation of from \$40,000,000 to \$45,000,000, shows the average life of these notes to be, say, fifteen months.

The estimates of the Treasury officers having charge of the business show the necessary expense of maintaining this currency, during the last fiscal year, to have been \$1,410,746. This does not include the expense attending the handling of the fractional notes at the different subtreasuries and depositories, all of which receive them for redemption, and which, if added to the expenses incurred at the Department, would probably show the total cost of maintaining the fractional currency to

be equal to about 5 per cent. on the annual issue, and corresponding with the interest on the amount of bonds which may have to be sold to procure, say, \$36,000,000 (gold value) in silver bullion for coinage, and which would give silver coins of the nominal value of \$45,000,000.

Notwithstanding the expense incurred, and the care which has been exercised by the Government, to renovate and keep the fractional currency in good condition, it is well known that a large percentage of the notes in circulation, particularly in localities not convenient to banks, are deteriorated to an extent rendering them quite unfit for use. It has also been counterfeited to a much greater extent than coin, and the detection of the spurious notes is infinitely more difficult than counterfeit coins. The loss to the public from this source must ultimately be very considerable.

The "wastage," as the small percentage of these notes worn out or destroyed while in circulation may be properly termed, falls mostly upon a class of people the least able to bear it. It is no satisfaction to a man who suffers the loss of a tenth of his day's wages by receiving a 25-cent note which no one will accept from him in payment, to be told that it reduces to that extent the expenses of the issue of such money by the

Government of the United States.

The expense of manufacturing the subsidiary silver coins is estimated by the mint officers at from $1\frac{1}{2}$ to 2 per cent, the rate being less when the mints are worked to their maximum capacity. The total expense attending the manufacture of the coinage of the last fiscal year (\$43,854,708) was \$889,370, or about 50 per cent. of the expense of maintaining the fractional currency. In this estimate the seigniorage realized on the silver and minor coinage (\$436,105.81) has not been considered as reducing the cost of coinage, the same being regarded as a gain to the Government, and not an earning by the mints.

The rule of the principal countries is to redeem in kind the subsidiary silver coins when worn to an extent rendering the inscriptions illegible. A long period, probably fifty years,* would elapse before any considerable portion of a new issue of silver coins would diminish in weight by abrasion to an extent sufficient to require their withdrawal. The advantage in this respect of silver coins over paper fractional currency is so great as not to admit of comparison. Moreover, their bullion value, when presented for exchange for new pieces, would, of course, be the same, or nearly so, as when issued, less the loss by wear.

The seigniorage or gain to the Treasury on the subsidiary silver coins will be from 10 to 12 per cent., and more than sufficient to defray the necessary expenses of coining, distribution, and maintenance in good

condition.

It is a well-settled principle that the "change" currency, in order to remain in circulation, must be inferior in intrinsic value to the standard coins. If of the same value, or convertible into such coins, it would, whenever the standard money became scarce, be presented for conversion at a rate that would withdraw it for a time from circulation, and thereby subject the public to great inconvenience.

The divisions of the dollar, or change-money, being constantly handled, are more rapidly worn than the larger denominations. Paper is, therefore, a very defective material for such money, and the expense of renovation being so great, the provision of law for the withdrawal of these

^{*}The result of careful observation and experiments in this country shows the average diminution from natural abrasion of the whole body of silver currency, when in actual circulation, to be about 1 per cent. in twelve years; quarter-dollars and dimes showing a greater percentage than half-dollars.

notes and substitution of coin is undoubtedly judicious. Silver has been adopted for such a currency by the principal countries, the coins being stamped at a valuation sufficiently above their bullion-value to render them inexportable in the ordinary fluctuations of bullion and exchange.

NOTE.—The following memoranda are gathered from the laws and regulations of different countries as to the renovation and calling in of worn subsidiary coins.

Great Britain.

"The silver coinage is issued through the medium of the Bank of England, who are able, as in the case of gold, to judge from the amount in their possession, and the demands made upon it, at what times and in what quantities fresh supplies will be required for circulation. As, however, silver is a token coinage representing more than the intrinsic value of the metal used in its manufacture, it is coined for the profit of the state, and not from metal brought in, as in the case of gold, by the public. Silver bullion for coinage is purchased with sums advanced to the master of the mint, from time to time, from the consolidated fund, by the treasury, under the ninth section of the

coinage act.

"The advantage of making silver a token coinage has been shown in a former portion of this report, and it is evident that if under the existing law silver were coined on demand for persons bringing it to the mint, the profit on the transaction would hold out so great an inducement to the public to offer it for coinage as to lead in a short time to an inordinate amount of coinage, and to the consequent depreciation of that part of the currency. This profit, then, levied as a seigniorage with the object already mentioned, accrues as of right to the state; but, on the other hand, it becomes equally the duty of the state to withdraw from circulation, at its own expense, all silver coins which may become worn and unfit for further use. This withdrawal is effected through the Bank of England, who undertakes the 'garbling' or sorting shillings and sixpences, and of returning the worn pieces periodically to the mint. The worn coin is received by the mint at its nominal value, and a vote of £15,000 a year is annually taken in the mint-

"So far as England is concerned this arrangement insures a constant supply of good silver coin, and the withdrawal of coins which have become unfit for circulation. * * * "There is no least current weight 'for silver coins.' As silver is a token coinage, the withdrawal of silver coin is undertaken by the state." * * * -British Mint Report, 1870.

Monetary treaty concluded December 23, 1865, between France, Belgium, Italy, and Switz-

* "The small silver coins must be withdrawn from circulation as soon as they have lost by abrasion 5 per cent below the legal allowance. The pieces are to be recoined by the government issuing them, when they shall have been reduced by usage 5 per cent. below the minimum, or when their stamp shall have been effaced."

German empire.

* * * "National silver, nickel, and copper coins which, by long circulation or use, have lost considerably in weight or imprint, will be received in national and local depositories, but must be withdrawn at the expense of the empire." * * * — Mint law of July 9, 1873.

Monetary convention between the King of Norway and Sweden and the King of Denmark, May 27, 1873.

* Subsidiary coin ceases to be legal tender of payment, relative to the state funds, when so worn as to be no longer capable of identification in so far as regards the country by which it was issued, but relative to all other parties when the inscription shall have become disfigured, or when it shall have been rendered indistinct by abr sion.

"All coin having ceased to be deemed legal tender of payment relative to private funds and parties, shall be withheld from circulation after having been paid into any of the state funds. The same rule applies to silver coin which shall have been reduced over 4 per cent. below its standard weight." * * * *

Monetary system of the Netherlands.

* * * "6,7. There is no law requiring the withdrawal from circulation coin whose value is diminished by wear. However, the accounting-clerks are authorized, by a decree of the minister of finance, to reserve coins which have been returned in so defaced a condition that they can no longer serve as a circulating medium.

"These coins are replaced by new ones at the expense of the state."

INCREASE IN THE LEGAL-TENDER OF SILVER COINS SUGGESTED.

The subsidiary silver coins and the trade-dollar are by law a legal tender to the extent of five dollars. The propriety of increasing the amount to ten dollars is suggested for the consideration of the Secretary of the Treasury.

THE COURSE OF GOLD AND SILVER.

The principal money-markets of the world have been occasionally disturbed during the last three years, and the margin of the exchanges has been such as to afford a wide field for speculation. In seeking for the causes of these disturbances, it would appear, at first glance, that the supply of gold is unequal to the legitimate demands of the rapidly-increasing commerce of the world. A careful examination of the subject, however, will show that the monetary troubles have not been caused by insufficient supplies of gold, but by its having been withheld in large sums from circulation, and the diminished use of silver as money. It will be of some interest to note the events and circumstances which have caused this abnormal state of affairs.

In 1871, provision was made by law for a new money system in the German empire, the principal features of which were the establishment of the exclusive gold standard, the demonetization of silver, and the issue of national coins, involving, as a necessary consequence, the withdrawal of all gold and silver coins then in circulation or held as treasury and bank reserves.

The amount of silver coin in the empire, at the time of the enactment of the new monetary-law, was estimated by the best authorities at about \$350,000,000. It was expected that two-thirds of this amount would be exported to neighboring countries, and the balance converted into subsidiary coin.

The natural markets for this surplus were the Netherlands and those countries having a double standard, for the reason that silver has there a fixed rate to gold in the legal-tender coins. In proportion to the fall in the price of silver which immediately commenced, the silver coins of the Netherlands and the five-franc piece of France, Belgium, Italy, and Switzerland became depreciated to an extent which enabled exchange dealers and speculators to largely import silver for coinage, and these coins entering freely into circulation soon caused gold to be exported.

The countries referred to became alarmed, and measures were taken by them to prevent a further influx of silver at the expense of gold. The Netherlands temporarily closed its mint, and France, together with her monetary allies, limited the manufacture of *legal-tender silver coins at their respective mints to a total of about \$28,000,000 for the year 1874, and the same amount for 1875; the contingent for each year being about as follows:

	Francs.
France.	60,000,000
Belgium	
Italy	
Switzerland	

[&]quot;The words "legal-tender silver coins" refer to coins that are by law unlimited legal tender, and not to subsidiary or token silver coins which are purposely overvalued, issued on government account only, and limited as to issue and legal tender.

The closing of the Netherlands mint was followed by the enactment of a law which authorized the coinage of a legal tender gold piece, and prohibited the coinage of silver, except for government account. These measures were skillfully taken, and closed the door against silver, and correspondingly opened it for gold.

The delay in completing the great monetary reform in Germany must be attributed mainly to the action of the neighboring countries in practically closing what was expected would be the best and largest markets for silver. Under the former money system, Germany was a purchaser of silver; but when the change from the silver to the gold standard

took place, ceased to be so and became a large seller.

The condition of the State Bank of Russia would appear to indicate that the prospective fall in silver had caused some uneasiness at St. Petersburg, and that protective measures had been taken, from the fact that the Bank held on the 1st of January, 1856, 67,897,561 roubles, gold, and 45,234,372 roubles, silver; and on July 22, 1874, 194,049,231

roubles, gold, and 23,315,329 roubles, silver.

Notwithstanding the large amount of specie received in payment of the French indemnity, Germany has, from time to time, since 1872, been a purchaser of large sums of gold, and the manufacture of the new standard national coins has already amounted to about \$285,000,000. The coins, however, have not gone into general circulation to the extent originally expected, for the reason that the old standard silver coins which are inferior in value continue, under the provisions of the new monetary law, to be effective money in payments. Gold has, therefore, to a large extent been held in the vaults of the imperial treasury, mints, and the banks.

While this has been the course in Germany, France has been gradually recovering the gold which she lost during and after the close of the war with Prussia, the Bank of France alone holding more than \$300,000,000 in specie.

The specie-stock of France before the war was estimated as follows:

	. Francs.
Gold	4,800,000,000
Silver	

The indemnity to Prussia paid in specie was 500,000,000 francs, leaving 5,500,000,000 francs in the country, which have remained in a dormant condition on account of the forced currency of paper money.

From what has been stated it will appear that governments, banks, and exchange-dealers have during the period under review been purchasers of gold which was likely to advance in value, and sellers of silver, which showed indications of a decline, and that the course of the precious metals during the last two years has not been controlled by the usual influences previously operating, but by transactions of unusual character and magnitude, involving, as a necessary consequence, large and sudden transfers of coin and bullion from one country to another, and which, by raising or depressing prices, created a wide field for speculative operations.

Fortunately such a condition of affairs rarely arises and cannot continue much longer. The gold standard is to go into force and effect throughout the entire territory of the German empire on the 1st of January, 1876, in accordance with an imperial decree of September 22, 1875, and which would appear to indicate the employment at an early day of more decided measures than heretofore for the withdrawal of the depreciated legal-tender silver coins, and thus make room for the more

veluable new national money...

When the complete demonetization or withdrawal of these depreciated silver coins shall have been accomplished, gold will enter freely into the channels of circulation and money affairs resume their usual course.

France would appear to have a supply of specie abundantly sufficient for the resumption and maintenance of specie payments, and the treasury and bank reserves of Europe no doubt consist of a greater percentage of gold than at the time of the enactment of the new money law of the German empire. The sooner the German monetary reform now in progress is completed and the Bank of France, resumes specie payments, the better it will be for Germany, France, and the United States. The time fixed for resumption by France, is January, 1878, but it is probable that it will take place before the time specified.

The lowest price of silver immediately preceding the discovery of gold in California and Australia—average for the year 1848—was 59½ pence per ounce, British standard, 925 thousandths fine, and the highest price reached after those discoveries was in 1859, the average of that year having been $62\frac{1}{18}$ pence. From 1859 there was a gradual depreciation during thirteen years, after which the influx of California and Australia gold ceased to have any influence. The average of 1872 was $60\frac{1}{18}$ pence. Since then there has been a very marked decline, the

prices falling in June and July, 1875, as low as 55½ pence.

During the last two months, September and October, the price in London has recovered to about 57 pence, owing to diminished receipts from the United States, and increased exports to the Indies and Spain.

The fabulous accounts which reached Europe of the discoveries made near the close of 1874 on the Comstock lode, in the State of Nevada, no doubt had some influence in bringing about the heavy decline in price which has occurred during the present year. Some of the accounts not only placed an excessive estimate on the probable yield of the extensive ore body, but the very important fact that the bullion from that source is, in value, nearly half gold appears to have escaped attention. For the information of those who may desire to consider the effect of the fall in silver on the finances, industries, commerce, and exchanges of different countries, it may be stated that the gold value of the principal legal-tender silver coins of European countries has, of late, averaged about 8½ per cent. less than their tale or nominal values in the moneys of account which they respectively represent.

THE FUTURE VALUE OF SILVER.

The gold standard practically prevailed in Great Britain a long period before 1816, during which time silver was likewise in circulation and a legal tender. In that year silver was demonetized, and gold made the exclusive standard and unlimited legal tender.

Since 1870 the exclusive gold standard has been adopted by the United States, Germany, Japan, and the Scandinavian states. The double standard exists in France, Belgium, Italy, Switzerland, the Netherlands, Portugal, and Spain, and the silver standard in Russia, Austria, Mexico, China, and the Indies.

The money systems of the South American states are very much confused, and it is difficult to determine their respective legal standards,

but they no doubt call for the use of more silver than gold.

The circulating medium in the United States, France, Spain, Russia, and Austria consists chiefly of forced paper currency, amounting altogether to about \$2,500,000,000 to \$3,000,000,000. The legal basis for

the redemption of the same in the United States is gold; France, Italy, and Spain gold or silver, (in the fixed proportion of one to fifteen and a half,) at the option of the issuer, and for Russia and Austria silver.

No further extension of the exclusive gold standard appears to be probable for some years to come, although the period of waiting and expectation, as the limit placed upon the legal tender silver coinage of the states of the Latin monetary union and the Netherlands may be characterized, will no doubt continue until the German surplus silver shall have been distributed, but its effect on the price of silver will be counterbalanced to some extent by the use of subsidiary silver coin in the United States.

Four years having elapsed since the change in the German money system was inaugurated, and the adoption of the exclusive gold standard having been carried to the full extent warranted by the supply of that metal, we may reasonably expect an increased demand for silver, but not sufficient to cause for some time to come a material alteration in the present relative valuation of gold and silver, which is about as one to seventeen.

MONEY AND THE MONEY SYSTEM OF THE UNITED STATES.

The question of returning to a specie basis is receiving general and earnest consideration, and, while its discussion does not come within the limits of this report, certain well-settled principles and facts in connection with the subject of money and the monetary system of this country may with propriety be briefly referred to.

A money standard subject to as little variation as possible, and by which values may be computed, exchanges effected, and contracts fulfilled with uniformity and equity, has long been regarded as a necessity

by every well-regulated government.

The experience of nations has proved the precious metals, and particularly gold, to be the least variable as a monetary standard and the best adapted for a circulating medium of all known substances; their peculiar properties, and particularly those of easy manipulation and resistance to the elements and agencies which either destroy or injuriously affect other metals and substances, rendering them eminently adapted for this service.

No material or substance not of intrinsic value, and comparatively imperishable, is suitable for a circulating medium and permanent standard of value. The value of the precious metals depends, as in the case of all other commodities, on certain inherent qualities and the cost of production. By value, is meant the rate in the legal money-terms of a nation or government at which labor and property of all kinds are exchanged one for another. A given weight of gold or silver, unlike all other things, has a fixed value by law in the legal money-terms of all countries, and this peculiarity contributes greatly to maintain uniformity in their value.

The units of the money of account of all countries associated in modern civilization were originally based on, or declared by law to be represented by, a certain weight of pure metal in the form of coins, and

the latter made a legal tender without limit.

The quantity of pure metal representing the ideal unit of the money of account, once being fixed by law, becomes the basis of exchange and measure of contracts, and its steady maintenance has always been regarded by the most enlightened statesmen and eminent writers on finance as an imperative duty of governments.

The precious metals being the real basis of all well-regulated money

systems, no one commercial country can even temporarily depart from such without subjecting itself to serious evils. All paper money issued in countries having monetary systems based on the precious metals, whether forced into circulation by authority or received without compulsion, are simply promises to pay in coins representing the monetary unit, and their payment in such coins or redemption in their equivalent

is obligatory on the issuer.

Soon after the adoption of the Constitution of the United States, the subject of a national money system was taken into consideration, and able papers on the subject were contributed by Hamilton, Jefferson, Gouverneur Morris and other eminent men of that period. The result was the passage of the act of April 2, 1792, which established the Mint for the purpose of a national coinage, and the money of account of the United States; authorized the coinage of gold and silver coins of prescribed weight and fineness, and declared them lawful tenders in payment of all sums whatsoever, those of full weight according to their stamped value, and those of less than full weight at values proportional to their respective weights.

The monetary standard established by the act referred to was gold and silver, and the importance which the eminent statesmen and financiers of that day attached to a uniform standard is seen in the provision which limited the legal-tender coins of less than full weight to their

actual bullion value.

No subsequent acts of Congress declared anything but gold and silver a legal tender in the payment of debts, until the law of February 25, 1862, was enacted. This law authorized the issue, "on the credit of the United States," of United States notes "payable to bearer at the Treasury of the United States," and declared such notes a legal tender in the payment of all debts both public and private, except duties on imports and interest on certain bonds and notes.

A forced paper currency is well known to be, from various causes, subject to frequent fluctuations in value, and, unlike the precious metals, is wanting in the property of self-adjustment under the operations of supply and demand, and for these reasons alone must always prove an uncertain system upon which to conduct the business and exchanges of the country.

PRODUCTION OF THE PRECIOUS METALS FROM THE MINES OF THE UNITED STATES.

Several communications and statements from official sources respecting the bullion production will be found in the appendix. These papers embrace a detailed account of the gross yield of the mines in the State of Nevada for the last fiscal year, kindly furnished through the superintendent of the Carson mint by the State comptroller. It would be a very valuable addition to our bullion statistics if similar statements to that furnished by the State authorities of Nevada could be procured from all the States and Territories in which the precious metals are produced.

I take this occasion to acknowledge the hearty co-operation of the various State officials who were invited to furnish information on this subject.

NEW AND EXTENSIVE DEVELOPMENTS OF PRECIOUS-METAL ORES ON THE COMSTOCK LODE.

It was a curious coincidence that, about the time the spacious new mint at San Francisco was completed, and increased facilities given the Carson mint by the duplication of its coining-machinery, that the Pacific coast should be surprised by the reported discovery of an ore-body in the Comstock lode which surpassed, in extent and richness, all

others that had been previously met with.

Since the usefulness of those mints to the country at large, and more especially California and Nevada, depended upon the supply of the precious metals which they receive for manipulation, it was important to ascertain how far the expectations of an abundant supply from that source were likely to be realized. Additional interest was given to this discovery in consequence of the passage of an act of Congress looking to preparations for a return to specie payments.

In view of these facts, and being in California during the summer on official business, I felt it my duty to obtain correct information respecting the extent of the ore-body and its prospective yield of bullion. I accordingly sought a conference with the managers of the "Consolidated Virginia" and "California" mines, in which the discovery was represented to have been made, and explained to them my views, stating that the information sought was deemed important for the use of the Government.

The gentlemen applied to cheerfully acquiesced in my wishes, and volunteered every aid they could give in promoting my object, offering to allow me to select any one whom I thought proper to go into the mines for the purpose of making full observations and measurements, , and to take specimens from the several drifts, cross-cuts, and winzes for assay, representing, as nearly as could be obtained, an average of the

In view of this offer, I determined to make a personal inspection of these mines, and to call to my aid the services of Prof. Robert E. Rogers, who, as before stated, had been selected for the important duty of superintending the equipment of the refinery in the new mint at San Francisco. The annual settlement of the San Francisco mint having been completed, I visited Virginia City, in company with Professor Rogers, on the 16th day of After spending a day in examining the topography of the locality and the general course of the Comstock lode, as exhibited by the workings along its line, we entered the mines, and on the first day examined the drifts and cross-cuts, which had been made on the 1,400, 1,500, and 1,550 feet levels, observing the course of the same, and making such a collection of specimens as seemed to us to represent an average of the character of the ore-body. Upon comparing our views, it appeared that there were some points which peeded a further and corroborative inspection, and accordingly the next day Professor Rogers repeated his visit into the mines, settled the points that had been omitted on the first day, and gathered a second extensive collection of specimens for assay.

Before we left Virginia City for San Francisco, the superintendent of the mines placed in our hands certified surveys, exhibiting the direction, relative position, and length of the galleries, cross-cuts, and winzes of the different levels. These surveys were taken to San Fran-

cisco for careful examination and study.

On the 26th of August, having official business at the Carson mint, I again visited the mines, repeated their inspection, and examined especially the explorations which had been made since my previous visit, taking specimens from them for assay.

At my request, the superintendent of the mines has furnished a statement, showing the explorations and developments made from August 26th, the deta of my last visit, up to the 2d instant (Nevember)

26th, the date of my last visit, up to the 2d instant, (November.)

ore-body.

In the mean time, the assays of the specimens taken have been made

under the supervision of Professor Rogers.

With the data thus obtained, we have been able to arrive at somewhat definite conclusions as to the probable yield of these mines. These conclusions are embodied in a report by Professor Rogers, herewith submitted, and in which I concur.

I have referred to the two mines under one head, since, for the purpose of our examination, it was not necessary to make any distinction between them. After the works recently destroyed by fire shall have been rebuilt and operations fully resumed, the total production of all the mines on the Comstock may be safely estimated at not less than fifty million dollars per annum, about forty-five per cent. of which will be gold.

In this connection it is interesting to add, as indicating the extensive bullion-resources of our western country, that a production nearly equal to that estimated for the Comstock may be auticipated from other

domestic sources during the year 1876.

The favorable condition of the precious metal mining industry is due to the judicious expenditure of a large amount of capital in extensive enterprises, by men of superior energy and business qualifications. Nearly all the mines on the Comstock, as well as the hydraulic gravelmines in California and vein mines in other localities, as a general rule, made heavy drafts on labor and capital before any returns on the outlay were secured. Notwithstanding the improvements which have been made in mining and in the reduction of ores, the business is one of uncertainty and hazard, and, taking one year with another, the expenses no doubt equal, if they do not exceed, the production.

Many of the present largest yielding mines were originally discovered by the adventurous and daring prospectors, who are always advancing into unexplored localities and endure hardship and danger which would soon discourage the boldest, were it not that under the liberal and fostering policy of the Government the discoveries which they may make become their own property, subject to conditions looking to a certain degree of exploration and development before complete title can be acquired. The first capital which follows these prospectors is generally sunk, and but a small proportion of the mines are continuously worked, and many totally abandoned after considerable expenditures have been made.

These facts show that the policy pursued by the Government with reference to the precious metal mining interests has been eminently wise, and should be steadily continued.

THE CONSTRUCTION GIVEN THE FIRST SECTION OF THE ACT OF MARCH 3, 1873, AS TO THE RULE OF VALUATION OF FOREIGN COINS, SUSTAINED BY THE SUPREME COURT.

In my last annual report the operations of the act of March 3, 1873, prescribing a new rule for the valuation in United States money of account, of foreign coins, and fixing the par of exchange with Great Britain, were described at some length, and the fact stated that the question as to the legality of the construction given the first section of the act by the Treasury Department was then pending in the Supreme Court of the United States.

Since the date of that report, the decision of that tribunal, sustaining the departmental construction, has been rendered, and the new rule of valuation applied to the standard coins respectively of all countries. The values respectively of the standard coins of different countries, ascertained and proclaimed in accordance with the section of law referred to, will be subject to alteration only when any country shall change or modify its monetary standard.

MONEY SYSTEM OF CHINA.

Our increasing commercial intercourse with China renders it quite necessary that we shold possess accurate information as to the different money units or weights in use in the various ports of that extensive empire. The non-intercourse policy with foreigners, so long and rigidly observed, is gradually giving way under the influence of commerce, and it is to be hoped that the Chinese will, at no distant period, see the necessity which exists for, and the advantages which would result from, a reform in their present defective money system.

The nominal moneys of account are the liang, tseen, fun, and le, called by foreigners tael, mace, candareen, and cash. They are, with the exception of the last named, denominations of weight in decimal

proportions.

Under the title of the Chinese tael, in the appendix will be found valuable information respecting the money-weights of China and the mode of using bullion in business transactions, for which we are indebted to the zealous and intelligent labors of S. Wells Williams, esq., secretary of the United States legation, Peking, and to the United States consuls at the various ports of the empire.

TEST ASSAYS OF THE COINAGE OF JAPAN.

Samples of the test or pyx coins of the imperial mint at Osaka, Japan, sent through the Department of State, with a request from the Japanese government that they be assayed at the Philadelphia mint, were received on the 1st instant, (November,) and, pursuant to your instructions, have been carefully tested at the Philadelphia mint, and the results reported to you.

The correspondence of the Japanese assays to those made here is very satisfactory, and shows that the legal standard fineness or purity

of the coinage of Japan is faithfully maintained.

MONEY STATISTICS.

We are frequently called upon by members of Congress and others for information respecting the amount of specie in the country at differ-

ent periods.

Leaves as the estimated stock on the 30th of June, 1875. 167, 614, 803

In this estimate no account has been taken of the amount of gold
and silver consumed in the arts and manufactures from June 30, 1872.

and silver consumed in the arts and manufactures from June 30, 1872, to June 30, 1875. It is difficult to obtain any reliable data upon this

point. Whatever the amount may have been, it was reduced to a considerable extent by the plate and other manufactured articles of gold and silver which found their way to the melting-pot from the accumulated stock of the country. Making due allowance for the latter, the amount to be deducted from the estimated total may be stated at, say, \$15,000,000, and allowing \$10,000,000 for possible overestimates, would leave the amount of coin in the country on the 30th of June, 1875, at about \$142,000,000. Of this total, about \$12,000,000 to \$15,000,000 consists of silver coin and bullion.

I have taken considerable care to make an estimate of the amount of specie-circulation of the country at various important financial periods, availing myself of the Treasury and congressional reports, and covreing the time since 1790. This information will be found in the appendix.*

THE PRINTING OF CERTAIN DOCUMENTS RELATING TO MONETARY SYSTEMS SUGGESTED.

During the last two years a number of documents have been received at this Office, in response to circulars sent through the Department of State to our representatives abroad, containing valuable information relative to the monetary systems of foreign countries and the annual production of the precious metals. These documents have been translated, and it is suggested that they should be printed for public use. If this suggestion meets your approval, a small appropriation should be procured to cover the expense of properly arranging these papers, under the supervision of this Office.

SILVER CONTAINING MERCURY.

Gold and silver bullion is sometimes combined with other metals of a character calculated to render not only the complete refining of the gold and silver difficult, but to embarrass in a certain degree their assay, the correctness of which is of the highest importance, since by it the proportion of gold and silver respectively in all classes of bullion is determined, and constitutes the basis of all computations.

Traces of mercury having been observed in some of the deposits of silver recently received at the Philadelphia mint, the assayer of that

*The Treasurer of the United States in his report for the fiscal June 30, 1872, (Finance Report 1871-72, p. 269,) gives the total cash bal	
close of that year as \$107,587,169, and states that the balance consists silver.	of gold and
Other lawful money \$17, 822, 569 The report of the Comptroller of the Currency for the same year (Finance	
Report, p. 96) gives the amount of coin held by the national banks in New York City on June 10, 1872, at	3, 782, 909
Other national banks	4, 842, 154
Making a total in the Treasury and national banks of	98, 389, 662
On page 307, Finance Report 1871-72, the Treasurer of the United States states the total amount of coin-certificates outstanding at	33, 149, 500
And the amount redeemed but not destroyed	1, 063, 200
Leaving total outstanding	32, 086, 300

balance or in the Comptroller's statement of the amount of coin held by the national banks in New York City.

The item of \$4,842,154 coin held by other national banks included some coin-certificates, but the amount was inconsiderable.

No portion of these outstanding certificates was included in the Treasurer's coin

institution made a careful examination of the subject, and has given the facts ascertained and conclusions arrived at in an interesting report, which will be found in the appendix.

ANNUAL SETTLEMENT.

The annual settlement of the coinage mints and the assay-office at New York, and which embraced a careful count of the coin and bullion on hand at each institution, was made at the close of the fiscal year and proved satisfactory, the wastage having been unusually small.

My personal supervision was given to the settlement of the San Francisco and Carson mints; and at the Philadelphia mint and the assay-office, New York, experienced clerks of this Bureau attended and super-

vised the same.

I discharge a pleasant duty in acknowledging the faithfulness and efficiency with which the clerks of this Bureau have discharged their duties, and the fidelity and skill with which the various operations of the mints and assay offices have been conducted.

I have the honor to be, very respectfully,

H. R. LINDERMAN, Director of the Mint.

Hon. B. H. Bristow, Secretary of the Treasury.

APPENDIX No. 1.

Statements exhibiting in detail the operations of the mints and assay offices during the fiscal year; also, bullion imports and exports; result of annual and test assays; valuation of foreign coins.

A 1.—Deposits and purchases of bullion at the mints and assay-offices during the fiscal year ended June 30, 1875.

Reports on internal-revenue accounts, copied	3,558
Internal-revenue cases prepared for suit	38

The foregoing statement contains but an enumeration of items, but does not show, as it could not, the labor or care required of the persons employed in the Office in their examination. The investigation of the accounts reported upon involved the examination of over 7,900,000 vouchers, and the adjustment of more than \$2,300,000,000 represented in them. More than fifteen hundred powers of attorney have been critically examined, and a large number of bonds for the issue of duplicates of drafts and checks, and of certificates of the public debt in cases of loss and destruction.

In the report from this Office for the year 1867, I detailed at some length the duties imposed upon the employes of the Office, and the judgment and skill required of them, and asked an increase of the force so as to make it adequate to the labor. The force was increased, but subsequently decreased, and is not now sufficient. At the highest point it was too small, and it has been found necessary to ask of the Secretary a detail from his or other offices. A direct addition to the force is preferable to temporary transfers, for the latter cannot always be relied upon, and in the nature of things are not adapted to securing a high degree of qualification.

The following comparison will, to some extent, show the propriety of an increase:

The number of warrants issued during 1861, was	17, 187
The number of warrants issued during 1867, was	40,814
The number of warrants issued during 1873, was	46, 379
The number of warrants issued during 1875, was	48, 407
The number of accounts revised and certified during 1861, was	7,998
The number of accounts revised and certified during 1867, was	18,409
The number of accounts revised and certified during 1873, was	17,896
The number of accounts revised and certified during 1875, was	

During a few years past it has been found necessary, from want of force, in many instances, to embrace in report and warrant several distinct claims, and of different persons, and while this saves something of the labor necessary in preparing reports and warrants, it does not preserve that distinction which is desirable, and in after examinations advantageous. The practice ought not, in my judgment, to be extended, but should be decreased.

The following is quoted from the report for 1867: "Inasmuch as this Office supervises the work of other offices, and its decisions are in the main final, the Comptroller thinks the clerks should be chiefly of the higher classes, and the compensation such as may secure character and ability, and induce persons possessing such qualities to remain in the Office."

Entertaining these opinions, I respectfully recommend that one chief of division, one clerk of class four, one clerk of class one, and one laborer

be added to the force now authorized.

In conclusion, I take pleasure in bearing testimony to the fidelity, efficiency, and promptness of the clerical force attached to the Office.

Respectfully submitted.

R. W. TAYLER, Comptroller.

The SECRETARY OF THE TREASURY.

http://fraser.stlouisfed.org/ Federal Reserve Bank of St. Louis

OF

THE SECOND COMPTROLLER OF THE TREASURY.

TREASURY DEPARTMENT, Second Comptroller's Office, September 30, 1875.

SIR: I have the honor to submit the following report of the operations of this office for the fiscal year ending June 30, 1875.

The aggregate number of accounts of disbursing officers and agents which have been received, as well as those which have been finally adjusted, is as follows:

	From-	Received.	Revised.	Amount.
Second Auditor Third Auditor Fourth Auditor		 9, 628	12, 220 10, 720 5, 951	
Total	······································	 27, 092	28, 891	162, 695, 049

The above accounts have been duly entered, revised, and the balances found thereon certified to the head of the Department in which the expenditure has been incurred, viz: Those from the Second and Third Auditors to the Secretary of War, (excepting accounts relating to pensions and Indians, which are certified to the Secretary of the Interior,) and those from the Fourth Auditor to the Secretary of the Navy.

Character of accounts.	Received.	Revised,	Amount in volved.
From the Second Auditor:

An act was passed at the last session of Congress diminishing the number of clerks, and, to a certain extent, re-organizing this office, with a deputy comptroller and chiefs of divisions recognized by law. The change has been beneficial, and the work of the office is in a satisfactory condition, very little of it being now in arrears.

Very respectfully, your obedient servant,

J. M. BRODHEAD, Comptroller.

Hon. B. H. Bristow, Secretary of the Treasury.

In submitting this report I beg leave to ask the attention of the Secretary to the statement made in my last annual report, in relation to the growth of the business of this Office.

The number of accounts adjusted during the last fiscal year exhibits an increase greater than in any previous year. To meet the demands thus made upon the Office, I have to request that its permanent clerical force may be increased three clerks of the third class.

I am gratified in being able to commend the clerks and employés of the Office generally for promptness and idelity in the performance of

their official duties.

Respectfully submitted.

D. W. MAHON, Auditor.

Hon. B. H. BRISTOW, Secretary of the Treasury.

Total	- 	6, 033.	207 25

In my last report reference was made to the extra work devolving upon this division in consequence of the large increase in the number of Indian claims referred to this Office for payment by requisition on the Treasury. During the fiscal year ending June 30, 1874, 424 claims were received, upon which \$3,050,552.94 was drawn from the Treasury. In the last fiscal year the number received was 1,664, and the amount paid out \$4,422,865.55, showing au iucrease of \$1,372,312.61 in the amount disbursed, and 540 in the number of claims. In nearly every case each claim required a separate statement and report, while in the consolidated quarterly accounts of agents one statement and report will cover. any number of vouchers.

The falling off in the number of money-accounts of agents, of which 361 were received, against 520 in the previous fiscal year, is mainly attributable to the abolishment, under the act of February 14, 1873, of four superintendencies, which embraced upwards of twenty agencies. All the superintendents rendered large quarterly accounts, which are now included in the agency accounts—so that while the number of accounts has diminished, the volume has increased.

The miscellaneous work of this division included the compilation of two annual reports to Congress, of 1,200 folio pages; reports and copies of documents for the Commissioner of Indian Affairs and the Second Comptroller, and 2,248 letters.

During the month of June three clerks were engaged making transcripts of accounts for suit, under the direction of the Second Comptrol-In this connection, I would state that the accounts of Indian agents and superintendents who are no longer in the service are being closed up as rapidly as possible, suit being instituted against all delinquents.

PAY AND BOUNTY DIVISION.

The following tabular statements exhibit in detail the operations of the two branches of this division during the year:

Treasurer, New York City Amount secured to claimants from attorneys withholding the same Amount of judgments obtained and reported	200 00 1,472 63 3,174 23
Total	53, 499 56

In my last annual report the increase of cases requiring investigation by this branch of the Office was accounted for by the fact that since the transfer of the Freedmen's Bureau to the War Department, frauds and malpractice had been discovered in the payment of claims by the subagents of the late Commissioner of the Bureau; and it was then presumed that the number would continue to increase until some definite action should be taken by superior authority to determine the civil liability of the bonded agents of the Bureau. Many cases then in the hands of the law officers of the Government are yet in statu quo as regards action on the bonds, and it is perhaps advisable that they should remain so until the allegations as to non-payment, false vouchers, &c., shall have been fully inquired into by the different United States attorneys, and some definite conclusion arrived at as to the facts and the liability of the sureties.

The co-operation of the Solicitor of the Treasury and of the officers of the War Department having control of freedmen's affairs has been highly satisfactory, and with their further aid, together/with the continued watchfulness of this Office, I anticipate still more beneficial results to the Department.

The average number of clerks employed in the Office during the year was 183.

The customary statements and reports called for by law and the regulations of the Department were prepared and transmitted, as follows:

To the Secretary of the Treasury.—Annual report of the transactions of the Office during the fiscal year.

Monthly tabular statement showing the business transacted in the Office, and the number of accounts remaining unsettled.

Monthly report of absence from duty of employés, with reasons

Annual statement of the clerks and other persons employed in this Office during the fiscal year or any part thereof, showing the amount paid to each on account of salary, with place of residence, &c., in pursuance of section 11 of the act of August 12, 1842, and resolution of

the House of Representatives of January 13, 1846.

To the Secretary of War.—Annual statement of disbursements from the appropriation for contingencies of the Army, prepared in detail for

transmission to Congress, under the act of March 3, 1809.

To the Adjutant-General of the Army.—Monthly and annual statement of the recruiting-fund, and the appropriation for contingencies of the Adjutant-General's Department.

For convenience of reference I subjoin a consolidated statement of the

business transacted in the Office during the fiscal year.

	On hand June 30, 1874.	Received during the year.	Disposed of during the year.	On band June 30, 1874.	Amount involved in accounts audited and settlements made during the year.	Number of letters written.

BOOK-KEEPER'S DIVISION.

The duty devolving upon this division is to keep the appropriation and money accounts of the Office. The average number of clerks engaged in this division during the period embraced in this report has been nine, and that number now constitutes its active force. The annexed statement (with the exception of appropriations for the Engineer Department, which are consolidated under the general head of "Sundry engineer appropriations,") shows the amount drawn out of certain of its appropriation accounts, and also the repayments made through this Office into the Treasury; and is a full exhibit of its financial operations for the fiscal year.

PER CONTRA.

	Deposits.	Second Auditor's transfers.	Third Anditor's transfers.	Total.
The number of credit and counter requisitions drawn by the Secretaries of War and of the Interior on sundry persons in favor of the Treasurer of the United States is 725. On which repayments into the Treasury have been made during the fiscal year ending June 30, 1875, through the Third Auditor's Office, as follows	\$1, 027, 411 38	. \$148, 893 63	\$127, 521 72	\$1, 303, 826 73

QUARTERMASTER'S DIVISION.

The accounts of quartermasters cover a wide range of money and property responsibility. The former embraces disbursements for barracks and quarters, hospitals, store-houses, offices, stables, and transportation of Army supplies; the purchase of Army clothing, camp and garrison equipage, cavalry and artillery horses, fuel, forage, straw, material for bedding, and stationery; payments of hired men, and of "per diem" to extra-duty men; expenses incurred in the pursuit and apprehension of deserters; for the burial of officers and soldiers; for hired escorts, expresses, interpreters, spies, and guides; for veterinary surgeons and medicines for horses; for supplying posts with water; and for all other proper and authorized outlays connected with the movements and operations of the Army not expressly assigned to any other Department.

Property purchased with the funds of the Quartermaster's Department is accounted for upon "returns" transmitted through the Quartermaster-General to this Office, (with the exception of "returns of clothing, camp and garrison equipage," which come under the supervision of the Second Auditor,) showing that the disposition made of it is in accord-

ance with law and Army regulations.

Number of letters written, 10,093; average number of clerks employed, $46\frac{7}{12}$; number of pages written, 19,816; number of vouchers examined, 273,103; number of claims examined under the eight-hour law, 311; involving \$12,127.85.

The act of Congress, approved June 23, 1870, "to authorize the settlement of the accounts of officers of the Army and Navy," the provisions of which were extended till June 23, 1875, has proved to be a wise measure so far as regards the adjustment of the accounts of officers of

the Quartermaster's Department. As evidence of this fact, it may be stated that four years ago the force employed on this division was one hundred and thirty clerks, and it was estimated that with this force many years would be required to close up the accumulated work of the division unless some change in the transaction of its business was adopted. This change was made under the provisions of the act above referred to, and vigorous efforts were put forth to systematize the work. Less than four years have passed, and the work is practically accomplished. The working force of the division has been reduced to forty-three clerks. Of the vast number of returns of quartermaster stores rendered during the war, the most of which were made up by volunteer officers, only ten remain unadjusted, and these, for various reasons, cannot be closed.

The accounts of all bonded delinquent officers are in course of adjustment, and are transmitted to the Second Comptroller for his action thereon, as rapidly as practicable. Suit is recommended to be brought against the sureties of the delinquent, if the Second Comptroller shall so direct, and steps taken to recover the amounts due the Government.

All claims arising under the second section of the act of Congress approved May 18, 1872, known as "the eight-hour law," have been promptly examined and adjusted. In every case where the claimant could be found, payment has been made. The amount disbursed to employés of the Quartermaster's Department has been much less than was originally estimated, amounting only to \$23,562.41.

SUBSISTENCE DIVISION.

This division examines the accounts of all commissaries and acting commissaries in the Army, whose duties are to purchase the provisions and stores necessary for its subsistence, and to see to their proper distribution. These commissaries render monthly money-accounts, with proper vouchers for disbursements of the funds intrusted to them; together with a provision return, showing the disposition of provisions and stores purchased or derived from other sources. These accounts are received through the Commissary-General of Subsistence, and are examined and audited in this division. The money-accounts and vouchers, together with a certified statement of the result of said examinations, are then referred to the Second Comptroller of the Treasury for revision. Upon their return from the Comptroller, with the settlement approved, the officers are notified of the result, and called upon to adjust or explain any omissions or errors that may have been discovered. The money and provision accounts, together with the vouchers and papers belonging thereto, are then placed in the settled files for future reference, and remain permanently in the custody of this Office.

ENGINEER DIVISION.

This division is employed in the examination of accounts of the officers and agents of the Engineer Department, who, under direction of the Chief of Engineers of the Army, (except the superintendent of the Military Academy at West Point, whose disbursements are directed by the Inspector-General,) disburse moneys out of the various appropriations—now 248 in number—made from time to time by Congress, for works of a public nature, which may be classed under the following general heads, viz:

The purchase of sites and materials for, and construction and repairs

of, the various fortifications throughout the United States.

Construction and repairs of reads, bridges, bridge-trains, &c., for armies in the field.

Surveys on the Atlantic and Pacific coasts.

Examination and surveys of the northern and western lakes and rivers.

Construction and repairs of breakwaters.

Repairs and improvement of harbors, both on sea and lake coasts.

Improvement of rivers and purchase of snag and dredge boats for the same; and

The expenses of the Military Academy at West Point.

The transactions of the division for the fiscal year are shown by the following statement, viz:

Several thousand "eight hour" claims have been received and examined, and 194 settled, involving \$6,565.49; also, many consolidated rolls prepared under this law, and a large amount of miscellaneous work done, which cannot well be reported in detail.

The property accounts of the officers of the Engineer Corps received during the year, and on file in this division, number 415.

Number of letters written, 2,004; number of clerks employed, 8.

STATE CLAIMS DIVISION.

The duties of this division embrace the settlement, under the various acts and resolutions of Congress relating thereto, of all claims of the several States and Territories for the "Costs, charges, and expenses properly incurred by them for enrolling, subsisting, clothing, supplying, arming, equipping, paying, and transporting their troops employed in

aiding to suppress the recent insurrection against the United States;" also, of all claims arising out of Indian and other border invasions.

^{*}This is the amount claimed in 4 cases, the amount claimed in the other case not being stated.
†This is the amount claimed in 71 cases, the amount claimed in the other case not being stated.

Number of letters written, 4.

By a comparison of this statement with the one submitted at the end of the previous fiscal year it will be perceived that the claims filed during this year were 1,822 less in number than those filed in that year; that 2,295 more claims were disposed of than were disposed of during the previous year, and that 598 more claims were disposed of than were received during the fiscal year; also, that the amount allowed exceeded that of the previous year in the sum of \$133,860.45, while the letters

written were 2,161 more than those written during the prior year.

The acts of the last Congress which covered into the Treasury all balances of appropriations which had stood upon the books of the Treasury for two years very greatly increased the labors of this division, rendering necessary the writing of large numbers of letters of explanation to disappointed claimants, and the answering of almost innumerable questions of importunate agents and attorneys. Yet, notwithstanding the imposition of these burdens, and many others which might be referred to, growing out of such legislation, there has been no falling off in the work done, but, on the contrary, a decided increase in the number of the claims disposed of, and therefore of the amount allowed.

I have uniformly refused to recommend claims for the use and occuvation of real estate in the States declared in insurrection, even when they arose upon contract, yet claims for rent have become very numerous; and it is found that they are, as a general thing, very badly prepared, and very poorly supported, rendering a settlement of many of them utterly impossible.

The difficulty of effecting such settlements has been greatly enhanced

^{*}This is the amount claimed in 390 cases, the amounts claimed in the others (425) not being stated. †This is the amount claimed in 23 cases, the amounts claimed in the others (24) not being stated. †This is the amount claimed in 35 cases, the amounts claimed in the others (37) not being stated.

[§] This is the amount claimed in 392 cases, the amounts claimed in the others (578) not being stated

since the Quartermaster-General ceased to make investigation of their merits by sending out agents to examine and report upon them. These examinations fall properly within the province of that Office, the property having been seized or rented by officers of his Department in almost every instance. It is respectfully suggested that you recommend to the consideration of Congress the extension of the provisions of section 3488, Revised Statutes, to all classes of claims that are settled in this Office, in order that the interests of the Government may be protected against the ex-parte statements of interested claimants and their attorneys. Such an act would be especially useful at present in the examination of claims for rent of property, but it should not be limited to that class o claims.

HORSE-CLAIMS DIVISION.

This division is engaged in settling claims for compensation for the loss of horses and equipage sustained by officers or enlisted men while in the military service of the United States, and for the loss of horses, mules, oxen, wagons, sleighs, and harness, while in said service by impressment or contract.

The number of claims received and docketed during the year is 661, in which the aggregate amount claimed is \$92,066.44. The number settled and finally disposed of during the same period (including those received prior as well as during the year) is 471, in which the aggregate amount claimed is \$89,060.65, and on which the aggregate amount

allowed is \$68,214.71.

There have been during the year 1,220 briefs made; 3,671 claims examined and suspended; 2,809 letters received and docketed, and 7,972 letters written.

The following table presents the condition of the business of this division at the commencement and close of the year, as well as its progress through the year:

	No.	Amount.	No.	Amount.
Claims on hand July 1, 1874 Claims received during the year Claims reconsidered during the year			5, 068 661 222	\$946, 506 98 92, 066 44 32, 297 84
Total	416	\$68, 214 71 12, 974 95	5, 951	1, 070, 871 26
Amount claimed	. 55	81, 189 66 7, 870 99	471	89, 060 65
Claims on hand July 1, 1875			5, 480	981, 810 61

As will be seen by the above statement, the work of this division is gaining quite rapidly; nearly one-third more claims having been received than disposed of during the year.

There are six clerks employed in the division, including the clerk in charge, and to do the work that is necessary to be done as it accrues

there should be at least eight.

Notwithstanding the fact that the work done during the year ending June 30, 1874, was considered very creditable to the division, the same clerks accomplished one third more during the last fiscal year.

PENSION DIVISION.

The duties of this division embrace the settlement of all accounts which pertain to the payment of Army pensions throughout the United

States. The Commissioner of Pensions is charged with the allowance of all claims for pensions under existing laws. The certificate issued in favor of the pensioner is sent directly to the agent for paying pensions, and at the same time a report (being a copy of the certificate) is sent to this Office. This report is recorded in a roll-book, prepared for each agency, on which are given the name in full, rate, date of commencement, termination, or other data, to assist in the proper adjustment of payments made.

An account is also kept with each pension agent, charging him with all moneys advanced for payment to pensioners, under his proper bond and fiscal year. At the end of each month the agent forwards his vouchers, abstract, and money statement directly to this Office, where a preliminary examination is made to see if the money advanced is properly accounted for, and then the account is acknowledged and filed, awaiting audit. Each voucher is afterward carefully examined, and the payment made entered on the roll-book opposite the pensioner's name. The agent's account, when audited, is reported to the Second Comptroller for his revision and approval, and, after revision, is returned to The agent is then notified of any errors that may have been: found, and the account placed in the settled files, where it permanently In cases of defalcation, certified copies of all papers or statements of accounts are prepared and forwarded to the Second Comptroller, who files therewith a certified copy of the bond, and forwards the same to the Solicitor of the Treasury for prosecution.

By the act of July 8, 1870, pensioners are paid quarterly instead of semi-annually as before, which more than doubles the amount of labor to be performed in examining, filing, and auditing accounts. The act of July 12, 1870, requires all accounts to be audited by fiscal years, and the unexpended balances to be covered into the Treasury. As applied to pensions, the law works admirably. The act of February 14, 1871, granted pensions to survivors of the war of 1812, who served not less than sixty days, and to their widows who were married prior to the

treaty of peace.

The act of June 8, 1872, amended the act of June 6, 1866, and increased the pensions, according to disability, to \$18, \$24, and \$31.25 per month, which act was further amended March 3, 1873, by allowing the \$18 to be divided *pro rata* for corresponding disability. The act of June 8, 1874, further amended the same by granting and increasing to pensioners who lost an arm above the elbow, or a leg above the knee, to \$24 per month, provided they did not receive an artificial limb or commutation therefor.

Amounts to the credit of pension appropriations carried to surplus fund under act of June 20, 1874, being outstanding balances prior to June 30, 1872:

Invalids, fiscal year 1870-771	\$793,450 15
Widows and others, 1870–771	
War 1812, act February 14, 1871, 1870-71	
Invalids, 1871-'72	218,733 79
Widows and others, 1871–72	1, 199, 470 66
War 1812, act February 14, 1871, 1871-72	1,832,505 06
	

12, 377, 121 36

Amounts refunded to credit of the following appropriations during the fiscal year ending June 30, 1875:

Invalid, 1870–'71		\$228	94
Widows and others, 1870-771		12,996	01
Invalid, 1871-772	•	1, 227	94

Pensioners recorded and restored	10,777 5,040
Pensioners increased.	25,874
Changes and errors noted	8,820
Pension vouchers examined	566, 844 535, 825
Pages of abstracts added	19,766
Pages of miscellaneous copied	1,207
Copies of surgeon's certificate sent to Commissioner of Pensions in increase cases.	1,475
Letters received and entered	4,065
Letters written	$4,579 \\ 668$

Ninety-six special settlements were made, (the number not being included in the tabular statement above,) mostly of old accounts, which had been closed.

Fifty-eight settlements, involving the sum of \$2,316.88, were made on account of lost or destroyed pension cheeks, as provided for by act

of Congress.

The changes in the laws for the payment of pensioners necessitated corresponding changes in the roll-books in which the names of pensioners and the payments to them are recorded. New books were procured with appropriate headings, and while the work of copying the names of pensioners into these books was in progress, the labor of a number of clerks was taken from the settlement of accounts of pension-agents. During the fiscal year, and from January 1, 1874, to April 30, 1875, this work was going on, and now the entire rolls of the several agencies have been copied into 117 large volumes, of 300 pages each, comprising the transfer of over 300,000 names. This has been done with a great deal of care, and without the employment of any additional force. It has thus resulted that the accounts of pension agents have not been settled as promptly as I desired; but the work of copying these names into the new books has been done, and well done, and there is now a separate roll for each agency, which was not the case with the old books. ments can now be made with greater facility and satisfaction. in the record section is up to date, and the surplus force employed thereon has been transferred to the settlement of accounts.

The force employed in this division numbered 45 clerks and 2 copyists.

January 1875. February March April May June	20	163 203 194 324 193 276	106 170 247 411 193 293 2, 439	420 510 348 883 14, 787 1, 548 22, 751	143 284 262 540 385 720 3, 352	87 107 62 155 112 138	3 2 7

The "special cases" named above embrace requests for varied information from the files of the Office; many cases show no vouchers examined, but close scrutiny of voluminous papers is required to get at the facts desired, and much time is necessarily consumed in the research, but it is impossible to show the amount of work done in a tabular form. The system of examination to ascertain if certifying officers have taken up and accounted for property purchased, and checking the abstract of the accounting officers, has resulted in disclosing many instances of duplicate claims presented, and preventing double payments.

The accounts of all officers referred for suit have been prepared and forwarded to the Second Comptroller. A large number of apparently delinquent officers have forwarded explanations, thus enabling the accounting officers to close their accounts, and, in a few instances, money has been paid for the same purpose. How to reach the delinquents still on the books, or their legal representatives, and induce payment of apparent balances due the United States, or proper explanations, is a problem which has not yet been satisfactorily solved.

BOUNTY-LAND AND PENSION DIVISION, WAR OF 1812.

During the fiscal year, eighteen hundred and ninety pension claims (1,890) under act of Congress of February 14, 1871, have been examined and the services properly certified to the Commissioner of Pensions.

Five hundred and fourteen bounty-land claims (514) were examined

and properly certified.

Three hundred and fifty-seven letters (357) were written on matters relating to the war of 1812, and the war of the Revolution.

POSTAGE-STAMPS.

The following statement shows the number of official postage stamps used in this Office during the fiscal year ended June 30, 1875:

Date.	l-ct.	2.	3.	6.	. 7.	10.	12.	15.	24.	30.	90.

Total	968	4, 685	16, 356	4, 399	12	59	150	59	24	53	27

THE FILES.

From March, 1817, to the end of the last fiscal year, the whole number of official money-settlements filed was..... 148, 562 Number added during this year..... 7,431

Total to June 30, 1875..... 155, 993

There are also a large number of property settlements and provision returns on file; but as a portion of them are filed by letters only, the entire number cannot well be ascertained. Some two thousand (2,000) of this class have been added during the year.

The settlements now occupy four rooms, containing, in all, about twenty-eight thousand (28,000) cubic feet of space available for files. Owing to certain alterations made in the large room, and the removal therefrom of the rolls of the war of 1812, it is probable there will be room for the incoming accounts up to June 30, 1876.

At present, the files are in good condition; but the rooms, with one exception, are uncomfortable and unsafe, none of them being fire-proof, and some steps should be taken at an early day to procure a fire-proof building, not only for the valuable papers already filed, upon which large sums have been paid, but also for the additional settlements which are added year by year.

There are ten lady copyists assigned to this Office, who have been usefully employed during the year. The number of difference sheets registered was 980, miscellaneous papers 3,921; total, 4,901. The number of pages of difference-sheets copied and compared was 3,354, number of miscellaneous papers, 13,503 pages; number of pages of letters, 3,598; total, 20,455 pages.

The business of some portions of the Office shows considerable increase; but the work has been performed as promptly as the force in the Office could perform it. The persons employed have been generally faithful and efficient in the discharge of the duties assigned them; but, for the reasons stated above, some accounts in the pension division have not been examined and reported as early as was desirable. work of transferring the names of pensioners into new books having been completed, the work in that division, it is hoped, will be brought up without delay.

Respectfully submitted.

ALLAN RUTHERFORD, Auditor.

Hon. BENJAMIN H. BRISTOW, Secretary of the Treasury.

REPORT

OF

THE FOURTH AUDITOR OF THE TREASURY.

TREASURY DEPARTMENT, Fourth Auditor's Office, October 30, 1875.

SIR: In compliance with your request, I have the honor to submit a statement of the work performed in this Office during the fiscal year ending June 30, 1875. In accordance with the act of Congress re-organizing the Treasury Department, approved March 3, 1875, this Office was divided into three divisions, and George L. Clark was appointed chief of the first division, Benjamin P. Davis chief of the second division, and William F. Stidham chief of the third division. But in order to facilitate the transaction of business in the Office, it was further divided into six sections, under the charge of the same number of heads. The following tabular statements, in a concise and comprehensive form, give the amount of the work performed by the sections respectively during the last fiscal year, and also its various details:

Statement of accounts, including marine, received and settled in the paymasters' division from July 1, 1874, to June 30, 1875, with the amount of cash disbursed in those settled, and the number of letters received and written in relation to the same—George L. Clark in charge.

Date.	Accounts received.	Accounts settled.	Letters received.	Letters written.	Cash disburse- ments.

In addition to the above this division is charged with the duties of preparing tabular statements and reports called for by Congress and the Secretary of the Treasury; keeping a record of appointments, resignations, removals, and absences; receiving and distributing the stationery used by the Office, and the payment of salaries to employés. Number of clerks employed, 8.

Statement showing the amounts disbursed at the different agencies on account of navy pensions, and the work performed by the navy-pension section during the fiscal year ending June 30, 1875—Richard Goodhart in charge.

Location.	Number of navy: invalid pension- ers.	Number of navy widow pension- ers and depend- ent relatives.	Total numbor of navy pensioners.	Total disburse. ments.

Total	1, 678	2, 179	3, 857	521, 829 60

During this time there were 209 accounts received; 244 accounts settled, involving an expenditure of \$550,250.46. Also, there were 410 letters received and 508 letters written. Average number of clerks

employed, $1\frac{2}{3}$.

Au examination of these tabular statements will show that, during the fiscal year, 660 paymasters' accounts, involving the sum of \$19,230,476.25, have been adjusted; 207 navy-paymasters' and individual accounts, in which the sum of \$22,879,322.36 was involved; 2,842 prize-claims, amounting to \$358,588 in the aggregate; 1,552 general claims, amounting to \$243,561 in the aggregate; and 244 navy-pension accounts, involving the sum of \$550,250.

In addition to the above, 1,919 pay-requisitions, amounting to \$26,498,130.30, and 218 refunding requisitions, amounting to \$4,697,428, have been entered; 656 allotments registered, 772 discontinued; 17,383 letters have been received and 21,859 written. Reports have been made in 340 pension cases, 42 bounty-land cases, and upon 9 applications for

admission into the United States Naval Asylum.

In the transaction of this large amount of business there were

employed, on an average, but 45 clerks.

It will thus be seen that the showing of this Office is very creditable to the industry, efficiency, and ability of the clerical force of the Department. As a whole, notwithstanding some few occasions for complaint, I have good cause to commend the conduct and work of the clerks under my charge. The heads of the different sections have uniformly performed their duties to my satisfaction, and I again take pleasure in mentioning the aid and assistance I have constantly received from my faithful and able deputy auditor, William B. Moore.

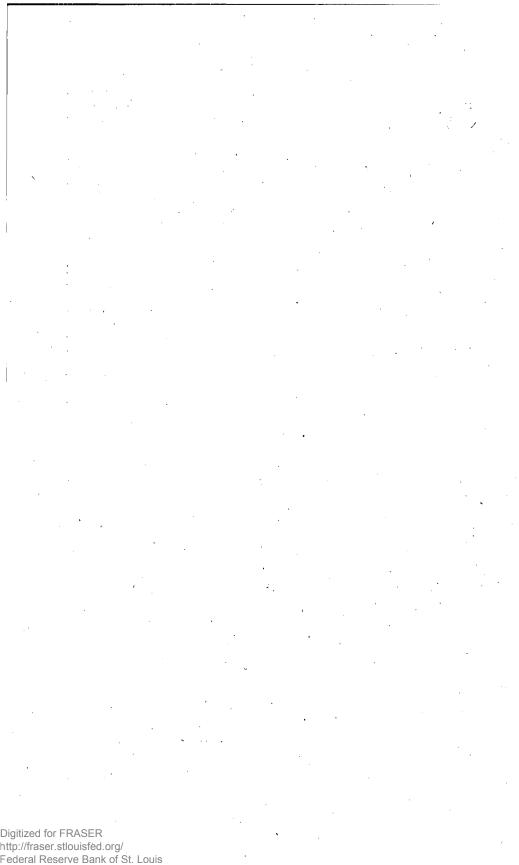

In thus submitting this concise statement of the business of the Office during the past fiscal year, I beg leave to observe that it is my desire to co-operate with you in every way to give correctness and efficiency to

the public service.

I have the honor to be, sir, your obedient servant, STEPHEN J. W. TABOR,

Auditor.

Hon. B. H. Bristow, Secretary of the Treasury.

REPORT

OF

THE FIFTH AUDITOR OF THE TREASURY.

TREASURY DEPARTMENT, FIFTH AUDITOR'S OFFICE, October 31, 1875.

SIR: Herewith are submitted tabular statements of the operations of this Office for the year ending June 30, 1875. There have been three thousand nine hundred and six letters written; two hundred and thirty thousand five hundred and forty-nine vouchers examined; and eleven thousand six hundred and ninety-seven accounts adjusted.

Very respectfully,

J. H. ELA, Auditor.

Hon. B. H. Bristow, Secretary of the Treasury.

Statement of the expenses of all missions abroad, for salaries, contingencies, and loss by exchange, from July 1, 1874, to June 30, 1875, as shown by accounts adjusted in this Office.

REMARKS.

No account for contingencies received.
 The minister died before reaching his post of duty.
 Accounts from this mission are quite incomplete and partially suspended.
 Account for 4th quarter, 1874, not received.
 Extra telegraph expenses included in contingencies.
 Presents to Turkish officials on conclusion of treaty explain large amount of contingencies.

Statement of consular fees, consular salaries, and emoluments to officers, and loss by exchange, for the fiscal year ended June 30, 1875.

REPORT OF THE SIXTH AUDITOR.

ttp://fraser.stlouisfed.org/ Federal Reserve Bank of St. Louis

REPORT

OF

THE SIXTH AUDITOR OF THE TREASURY.

OFFICE OF THE AUDITOR OF THE TREASURY FOR THE POST-OFFICE DEPARTMENT, October 20, 1875.

SIR: I have the honor to submit the following report of the business operations of this Office for the fiscal year ended June 30, 1875. annual report to the Postmaster-General, now in course of preparation, will exhibit in detail the financial transactions of the Post-Office Department during the past fiscal year.

A comparison of the tables of the present report with those contained in the report made by my predecessor for the fiscal year ended June 30, 1874, will show a large increase of business in each division.

EXAMINING DIVISION—BENJAMIN LIPPINCOTT, CHIEF OF DIVISION.

This division receives and audits the quarterly accounts current of all post-offices in the United States. It is divided into four subdivisions, viz: the opening-room, the stamp-rooms, the examining corps proper, and the error-rooms.

1. The opening-room.—All returns, as soon as received, are opened, and if found in order, according to regulations, are entered on the register, carefully folded and tied, and then forwarded to the stamp rooms.

The number of quarterly accounts current received during each quarter of the fiscal year ended June 30, 1875, was as follows:

Third quarter, 1874. Fourth quarter, 1874. First quarter, 1875. Second quarter, 1875.	34, 642 34, 946
---	--------------------

Increase over last fiscal year, 6,289.

2. The stamp-rooms.—The quarterly returns received from the opening-room are divided alphabetically among eight stamp-clerks, whose duties consist in comparing the stamp-statements of the postmasters in the accounts current with their own books, and the returns made to them from the stamp-division of the finance office, whence stamp-orders are issued and receipts for the same received and forwarded to the stamp-The returns thus approved or corrected are passed to the ex-All accounts from offices of the first and second classes are aminers. passed through the various subdivisions of the Office in advance of other returns, so that they may reach the chief of division and his assistants with as little delay as possible.

The number of accounts examined and settled by the stamp-clerks for

each quarter of the fiscal year was as follows:

Third quarter, 18/4	33, 011
Fourth quarter, 1874.	84,242
First quarter, 1875	
Second quarter, 1875.	
Total	126 692
I V 0 chl	100.000

Increase over last fiscal year, 5,384.

3. The examining corps proper is composed of seventeen clerks, among whom the returns received from the stamp-rooms are divided by sections,

each comprising several States or parts of States.

The average number to each section is about 2,000. After the examination of the accounts-current and the stamp-account, reviewing and refooting the transcript of mails received, and examining all vouchers belonging to that portion of the work, the balance is drawn on all accounts of the third, fourth, and fifth classes. The returns thus examined and completed are forwarded to the registering division to be entered upon its books.

The number of accounts examined and sent to the registering division

for the fiscal year was as follows:

Third quarter, 1874	33 011
Fourth quarter, 1874	
First quarter, 1875.	
Second quarter, 1875	34,873

Total 136, 683 Increase over last fiscal year, 5,384.

4. The error rooms contain five clerks, who review and re examine the error accounts received from the registering division, and forward to each postmaster a copy of his account as stated by him, and as audited and corrected by the Office.

The number of accounts corrected and copied during the fiscal year

was as follows:

Third quarter, 1874	5, 213
Fourth quarter, 1874	6,030
First quarter, 1875	5,739
Second quarter, 1875.	4, 277

Each subdivision reports weekly to the chief of division, and monthly through that officer to the deputy auditor, the progress of the work, so that the exact amount of labor performed by each clerk is clearly ascertained.

All vouchers relative to allowances made by the Post-Office Department for clerk-hire, lights, fuel, rent, stationery, &c., at post-offices of the first and second classes, are forwarded at the commencement of each quarter to the chief of division and his assistant for examination. A statement is then prepared, showing the vouchers received, the amount allowed, and the amount suspended, when found to be in excess of the allowance.

On receipt of the returns from the examiners these accounts are reviewed, and the amount allowable added, and the balance drawn by the chief of division.

The number of post-offices of the first and second classes which have received allowances for clerk-hire, rent, &c., was 395.

The number of offices of the second class having an allowance for clerk-hire only was 214.

The number of offices having an allowance for clerk hire to aid in separating the mails (independent of the number above stated) was 553.

Total number of offices of all classes receiving allowances and approved

by the chief of division was 1,162.

The expense accounts of the offices of the first and second classes were regularly entered by the chief of division and his assistant on the expense register, and show quarterly the amount of vouchers received, amount allowed, and amount suspended; copies of which were forwarded to each postmaster.

Attached to the examining division is a corresponding clerk, whose duty consists in corresponding with postmasters relative to errors in their accounts current and in making day-book entries, &c.

The amount involved in the settlement of the quarterly accounts current of postmasters during the fiscal year was as follows:

Third quarter, 1874	\$6, 158, 466 33
First quarter, 1875	6,664,424 20
Second quarter, 1875.	6,410,731 81

Increase over last year, \$992,785.72.

The labors of the examining division for the last fiscal year have been fully completed; all accounts received in proper form have been examined and passed to the registering division. At no period has the work been more perfect in all its details. Not only has there been a decided improvement in the preparation of returns by postmasters, particularly those of first and second class offices, but by judicious changes in the office, the efficiency of the examining corps has been greatly increased.

REGISTERING DIVISION-JOSEPH B. WILL, CHIEF OF DIVISION.

Thirteen clerks are employed upon this division, who receive from the examing division the quarterly accounts current of all the post-offices in the United States, re-examine and register them, placing each item of revenue and expenditure under its appropriate head, add and recapitulate the same, and exhibit in the register ending June 30 of each year, the total amount of receipts and expenditures for the fiscal year.

During the fiscal year ended June 30, 1875, the number of accounts

registered and amounts involved therein were as follows:

Third quarter, 1874		
Fourth quarter, 1874		
Second quarter, 1875	34, 873	6, 410, 731 81
Total		95 650 644 74

Increase over last year, 5,384; \$992,785.72.

To this division is also assigned the duty of entering in the changebooks, prepared for the purpose, all changes of postmasters, establishment, re-establishment, discontinuance, and change of name of postoffices reported from the appointment office. The number thus entered during the fiscal year was as follows:

Third quarter, 1874		 2,276
Fourth quarter, 1874	-3	 2,530
First quarter, 1875		 2,827
Second quarter, 1875		 3, 028
,		
Total		 10. 661

Decrease from last fiscal year, 853.

The work of this division is in excellent condition. The members of the division have performed their duties promptly and accurately. The quarterly accounts-current received from each office have been registered to June 30, 1875, and the footings and recapitulations completed.

BOOK KEEPERS' DIVISION-JAMES T. SMITH, CHIEF OF DIVISION.

To this division is assigned the duty of keeping the ledger-accounts of the Department, embracing postmasters, late postmasters, contractors, late contractors, and accounts of a general, special, and miscellaneous character.

This work requires the services of fifteen clerks, who are employed as follows, viz: Nine book-keepers of postmasters' accounts; three book-keepers of contractors' accounts; one clerk in charge of cash-book, deposit-book, wairant-register, and ledger of warrants and deposits; one assistant chief, who is also disbursing-clerk, in charge of stamp-journal, transfer-journal, and who makes the day-book entries on reports approved by the Auditor. The chief of division has general supervision, and also keeps the accounts with the several appropriations, receipts and expenditures of the Department, Executive Departments for official stamps, foreign governments, special agents, consuls, foreign mailagents. &c.

The auxiliary books, from which postings are made quarterly, are as follows: 13 registers of postmasters' quarterly returns, 43 pay-books, (contractors' accounts,) 9 journals, 1 register of warrants, 3 registers of Postmaster General's drafts, 1 stamp-journal, 1 cash-book, 1 deposit-book, 1 Auditor's draft-book, 1 transfer-journal, 1 money-order transfer-book, 12 registers of mail messenger and special-mail service, 1 route-agents' book, 1 letter-carriers' book, 1 special agents' fare-book; total, 90 books.

Postmasters' accounts of the first, second, and third classes, and all contractors' accounts, are balanced quarterly; all others at the end of the fiscal year. The work of the division is in a satisfactory condition, and fully up to the requirements of the office.

For a detailed statement showing the number of accounts by sections, and, to a limited extent, the labor performed in the preparation of auxiliary books, reference is made to the following table:

Ledgers of mail-contractors' accounts.

Number of section.	States,	Number of ledgers.	Current ac- counts.	Day-book entries journalized.	Accounts jour- nalized from transportation sheets.

Increase over last fiscal year, 3,549.

STATING DIVISION-WILLIAM H. GUNNISON, CHIEF OF DIVISION.

The general postal accounts of postmasters and those of late postmasters, until fully stated, are in charge of this division. The number of accounts is 58,929, an increase of 8,180 during the year, and an aver-

age of 3,683 to each of the sixteen sections.

The offices of the first, second, and third classes are called "presidential," and from them are derived nineteen-twentieths of the postal revenues. It is necessary, therefore, that the accounts of the postmasters at these offices should receive early attention, in order that any failure to pay indebtedness, or to comply with instructions, may be promptly ascertained and acted on. During the first two months of each quarter the items of the "presidential" accounts for the preceding quarter have been stated from the earliest records made in the Office, then compared with the statements rendered by postmasters, the differences investigated, and special instructions given, that the postmasters may use the audited balances in making their payments and in rendering their accounts for the current quarter.

Those of the general postal accounts of postmasters at offices of the fourth class showing debit balances of \$10 or more, as stated from the ledgers each quarter, have had the items of the succeeding quarter added, as in the case of "presidential" offices; if such sums were still due, special instructions were given to include the amounts in the payments for the current quarter. The items of the remaining accounts of the fourth class were stated as soon as they could be obtained from the ledgers. Statements of such of them as showed debit balances of \$1.00 or more, when stated and balanced with the ledgers to the close of the fiscal year ending June 30, 1874, were sent to the postmasters with in-

structions, before the 31st of December, 1874.

The accounts of late postmasters have been revised monthly in

order to secure an early adjustment; and all such accounts have recently been fully stated to the latest dates, for use in the annual report of the Office to the Postmaster-General.

The keeping of the record of statements rendered each quarter by the "presidential" offices, the preparing of circulars of instructions to post-masters, and various other duties, are assigned to a miscellaneous clerk. To the chief of division is assigned the general supervision of the division, the correspondence on the general postal accounts of postmasters at "presidential" offices, and on such special cases as may be referred to him.

Although two sections were added in November last, the increase in the number of accounts—particularly those of late postmasters—rendered the average number on the sections even larger than during the previous year.

The condition of the work of the division is satisfactory. The details

are more fully shown by the following statements:

Statement of the number of general postal accounts of postmasters, the increase in the number, and the classification of the offices, for the fiscal year ended June 30, 1875.

COLLECTING DIVISION-EDWARD J. EVANS, CHIEF OF DIVISION.

To this division is assigned the collection of balances due from all postmasters, late postmasters, and contractors; also the payment of all balances due to late and present postmasters, and the adjustment and final settlement of postal accounts. The average number of clerks employed is twenty, and the work of the division is apportioned as follows:

On correspondence, 4.—Their duty is to insure, as far as possible, the collection of all moneys due to the United States on postal and contractors' accounts, to examine the same carefully, and explain by letter,

ederal Reserve Bank of St. Louis

when necessary, the correctness of the balances due thereon, and to submit for suit or criminal proceedings accounts of defaulting post-

masters and contractors.

Continued daily attention, good judgment, and elever discrimination are required in this branch of the division, as is also a thorough knowledge of the entire business of the Office, and, to a degree, that of the Post-Office Department. The work has been most satisfactorily performed, as may be inferred from amounts collected on draft, shown in subjoined table.

On drafts and reports, 2.—Their duties are to locate and issue drafts for the collection of balances due by postmasters and contractors, to record the same in draft-registers, and report to the Post Office Department for payment all balances due to late postmasters, and record

the same.

This work, which involves the disbursement as well as collection of Department moneys, and is therefore one of great responsibility, is performed by the gentlemen in charge to the entire satisfaction of the Office.

On changes, 1.—His duties are to record all changes of postmasters reported to this Office from the Post-Office Department, to enter and file drafts paid, to record all accounts of late postmasters in the book of balances, and to state the final action thereon. Great care and constant watchfulness are required in the proper discharge of the labors of this desk, all of which are conscientiously bestowed by the gentleman in charge.

On letter-books, 2.—Their duty is to transcribe into their respective books all letters written by the several divisions of the Office, and transmit the same, together with all circulars relating to postmasters' accounts. This work has been performed promptly and satisfactorily.

On miscellaneous, 1.—His duties are to examine and compare with the ledgers all accounts of late postmasters, and close as "uncollectible" or by "suspense" all accounts so designated, and to assist in the preparation of the annual report to the Postmaster-General, and other

duties of a miscellaneous character.

On copying, 10.—Their duties are to copy and revise all accounts of postmasters and others; to transmit in their respective circulars all accounts of late postmasters; to copy changes of postmasters; to prepare salary books of the several post-offices, and to furnish a large portion of the material for the United States Official Register. This branch of the division is in excellent condition, and the work is performed

promptly and satisfactorily.

On suits, &c., 2.—Their duties are to revise and settle the accounts of the United States attorneys, marshals, and clerks, for fees in causes arising in the Post Office Department, and to prepare for suit all cases of defaulting postmasters and contractors. All accounts reported by the corresponding clerks have been prepared for suit and transmitted to the Department of Justice, and all accounts of fees of attorneys, marshals, and clerks submitted for settlement have been examined and reported for payment.

The regulation of the Department requiring current business to be

dispatched on the day received is duly observed by this division.

I refer to the following tables for a more detailed statement of the work performed by the divisions during the fiscal year ended June 30, 1875:

In conclusion, I am gratified to be able to report the entire work of the Bureau in a highly satisfactory condition.

I desire to express my grateful appreciation of the valuable and efficient service of Mr. F. B. Lilley, the deputy auditor, of the chiefs of divisions, and of the clerks and employés generally, through whose faithful and intelligent co-operation the work of the Office has been brought to a more advanced and satisfactory state than at any time since its organization.

I have the honor to be, very respectfully, &c.,

J. M. McGREW, Auditor.

Hon. B. H. Bristow, Secretary of the Treasury.

Digitized for FRASER

REPORT

OF THE

TREASURER OF THE UNITED STATES.

TREASURY OF THE UNITED STATES, Washington, November 1, 1875.

SIR: As required by law, I herewith submit the following statement of the condition of the Treasury of the United States at the close of the fiscal year ended June 30, 1875, accompanied by tables to fully exhibit the operation thereof during the year. By examination of the comparative statement of receipts and expenditures given in the appendix to this report, it will be seen that while there has been an increase of \$7,597,708.68 in internal revenue receipts for the fiscal year 1875 over those of 1874, there has been a decrease in receipts from customs of \$5,936,111.34; from lands, \$438,788.76, and from miscellaneous sources, \$2,701,513.54; making a total net decrease of revenue for the fiscal year 1875 from that of 1874 amounting to \$1,478,704.96; but, more than an offset to that decrease in revenue, the total net decrease in expenditures for the same period is \$11,115,407.37, composed of the following items, viz: Decreased expenditures on account of interest on public debt, \$4,026,270.64; on account of War Department, \$1,193,281.24; on account of Navy Department, \$9,434,961.15; total decreased expenditures, \$14,654,513.03, less increased expenditures on account of Interior Department, \$2,109,996.29, and on account of c vil and miscellaneous, \$1,429,109.37; being a net difference of \$9,636,702.41 in favor of the fiscal year 1875 over that of 1874 in the matter of receipts and expenditures together.

TREASURER'S QUARTERLY ACCOUNTS.

The account of receipts and expenditures rendered by the Treasurer of the United States to the Accounting officers of the Treasury, and copies of which are to be laid before the Senate and House of Representatives, is to the end of the fiscal year 1875; making two years' statements instead of one, as ordinarily.

UNAVAILABLE MONEYS.

The amount of General Treasury moneys carried in the balances on the books of this Office, and which was unavailable on the 30th June, 1875, was \$29,860,042.34, as shown by "Statement IV" in the appendix to this report; and the amount of Post-Office Department moneys carried in a similar way, and which was unavailable on the same date, was \$40,078.06, as shown by "Statement III" in the appendix.

On page 178, Volume 5, United States Statutes at Large, chapter xxxv, it appears that an act was approved March 3, 1837, of which the following is the text of section 1:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the proper Accounting officers of the Treasury be, and they are hereby, authorized to credit the account of the Treasurer of the United States with the amount of the unavailable funds, whether charged to John Campbell or his predecessors, and to transfer the amount to the debit of the banks and individuals, respectively, that may be indebted for the same.

In order to avoid the daily, weekly, quarterly, and yearly repetition of the statement of the amount of these unavailable moneys, and to clear the late Treasurer's accounts of these fictitious balances, it is respectfully recommended that an act be passed similar to that above quoted; but to make such act sufficiently complete, so as to cover such unavailable items in the future, it is submitted that in all cases of deficit, default, or suspension of payment, from any cause whatsoever, whereby the moneys of the United States become unavailable, the Accounting-officers of the Treasury should be empowered, formally, to place upon record the facts in each and every case, charging the amount to the person who is in default, or whose assets are deficient or in suspension, and crediting the Treasurer of the United States in his General account.

DISBURSING OFFICERS' BALANCES AND REPORTS.

By Statements VIII and IX, in the appendix to this report, it will be seen that over 60,000 "Lists of balances" and "Statements of public funds" have been received and examined by this Office during the fiscal year 1875; also, that of the 1,844 balances of accounts reported by Depositories, 389 were useless for the purpose of comparison, no reports having been received from disbursing-officers to that number, and that many other officers who have the disbursement of public funds render no reports whatever.

To fully serve the purpose for which the work of examination and comparison done by this Office was instituted, it would seem to be only proper for all disbursing officers of the Government to render reports regularly and promptly; and, to make such reports effective, the statement rendered should give, 1st, the date and amount of each deposit made by the officer during the week; 2d, the date, amount, and payee of each check drawn during the week; and, 3d, the balance to his credit as shown by check-book, stub, or account. On the other hand, each depository should also report weekly, 1st, the amount deposited by or placed to the credit of every disbursing-officer; 2d, the amount of each disbursing officer's checks paid; and, 3d, the balance to the credit of each disbursing officer at the close of business on the last day This would not entail much additional labor upon any one branch of the service, but would enable every administrative Department and Bureau to know the amount of outstanding checks of each one of its disbursing-officers weekly, which is at present a quite uncertain element If, in addition to this being made matter of legislaof accountability. tive requirement, all accounts of official funds whatsoever were required to be reported weekly to some Accounting-officer, such system would not only serve the purpose for which it is intended, but tend to promote regularity and correctness in the keeping of all accounts of the Govern-The importance of this part of the fiscal business of the United States can be estimated from the fact that the amount expended by the several Departments through disbursing officers is over two hundred and fifty million dollars annually. It is, therefore, respectfully submitted

and urged upon the attention of Congress that some legislative action be had, so that a full and complete systemization be made of this not unimportant branch of the service.

PAYMENT OF SPEAKER'S CERTIFICATES.

Payments of compensation and mileage to members of the House of Representatives are now made by the Treasurer of the United States upon the certificate of the Speaker (or the Clerk of the House when there is no Speaker) that the member named is entitled to payment. The certificates, receipted by the member, are presented at the Treasurer's Office by the Sergeant-at-Arms, who receives payment thereof as the agent of the members, keeping account with and disbursing to them as they may require. It thus happens frequently that the Sergeant-at-Arms has in his possession large sums belonging to members, and to their credit on his books.

The amount of the Treasury warrant issued each month to re-imburse the Treasurer for the payments of the month is charged to him upon the books of the Register, and he obtains credit to offset such charge upon filing with the Auditing officer of the Department the Speaker's certificates, if they are found correct. But it has happened at various times that the Auditing-officer, having found errors in the computation of amounts due to members as expressed in the certificates, has not allowed credit for the full amount paid by the Treasurer, who has been put to considerable trouble to obtain repayment of the money so overpaid, and has not always succeeded in this. For instance, there are at this time held suspended against the late Treasurer, and to his debit on the books of the Register, a small amount, arising from overpayment to two members of the Thirty ninth Congress, the term of which expired in 1867. This suspension has continued to this date, notwithstanding the amounts paid were the amounts certified by the Speaker to be due, and the act of Congress expressly, declares that these certificates shall be conclusive upon all the Departments and officers of the Government, the First Comptroller holding that this requirement applies only to certificates drawn in conformity to law.

The law requiring that these certificates be paid out of the public Treasury, and passed as public accounts, does not require that they shall be paid before being passed by the proper Auditing-officer; and if the Treasurer is to be held responsible for errors that he has no means of detecting, it may be necessary for his own pecuniary safety that he submit the certificates for the action of the Auditing-officers prior to their payment. But as this would cause some delay, and perhaps inconvenience to members, that might be avoided, it is respectfully recommended that one of the officers of the House of Representatives be designated as a disbursing-officer for the purpose of these payments, giving such bond as may be required by law. The Secretary of the Senate is, by the present law, charged with the disbursement of the compensation and mileage of Senators, and it is not seen that any objection exists to the same method of payment of members of the House of Representatives.

THE NATIONAL BANK REDEMPTION AGENCY.

The National Bank Redemption Agency, established by act of Congress approved June 20, 1874, has been in operation since a few days thereafter, and during the fiscal year there have been redeemed, assorted, and accounted for 17,842,310 notes, of the aggregate value of \$130,322,945.

The expense	s of the	Agency	have	been as	follows:
THE CAPCHEC	J OI UII		H(0, C	OCCII GIS	10110 11 10 1

Express charges		: 4°00 000 01
All other expenses:		φου, υνο 31
Salaries	\$158,227 39	•
Printing and stationery. Postage Office-furniture.	12,290 72	
Postage	3,298 80	
Office-furniture	12,918 68	
Contingent expenses	768 47	
Profit and loss	15, 363 00	•
		202, 867 06
Total		290, 965 37

For these expenses an assessment has been made upon the banks for express charges in proportion to the amount in value of the notes redeemed, and for all other expenses and charges in proportion to the number of notes redeemed; this being considered the equitable method of making the assessment. The items going to make up these expenses and charges are set forth in detail upon the books of the Agency, and a concise statement thereof accompanied the assessment for the information of the banks. The full credit of the organization of the Agency and the success which has attended it in the past belong to my predecessor, and he and the law are responsible for the expenses incurred. The assessment was made for the aggregate of the charges and expenses as found upon the books of the Agency on the 30th of June, 1875, the day of his retirement from office. Should the banks seriously object to any of the charges or expenses included in the assessment, it is for them to take such steps to recover the same as may seem state of the Agency, circumstances and difficulties attending the organization of the Agency, have made any complaint. If to take such steps to recover the same as may seem best. Yet under the and which they have appreciated, few have made any complaint. the Agency is to be continued, its practical operation in the past has suggested some changes in the law for its successful conduct in the future, alike in the interest of the public and the banks. It has been hitherto esteemed that a bank has fully discharged its promise and obligation when it has redeemed the same in lawful money at its own counter or other designated place of redemption. Under this law, the bank is also required to pay the cost of the transportation of its notes to Washington, together with all other expenses, direct or incidental, attending the redemption of the same, and practically of the return of the redeeming medium to the residence of the note-holder.

For the notes of 171 banks which have failed or gone into voluntary liquidation prior to the 30th of June last, and also of 171 other banks that are retiring all or part of their circulation, there have been deposited in the Treasury legal-tender notes to the exact amount of circulation outstanding or to be retired. Such circulation is, by law, redeemable by the Treasury; yet, as a matter of fact, these notes, or nearly all of them, are presented to the Treasury through this Agency; and as these banks have no 5 per cent. fund to which to charge their pro rata share of the expense, the same can only be apportioned and assessed upon the banks still in full operation. There was on deposit in the Treasury on the 30th of June, 1875, \$18,203,667.05 in legal-tender notes for the purpose of taking up the circulation of such banks, the Government getting the benefit of this deposit without interest or expense. And yet, under the law, the expense of retiring such circulation is taxed to the remaining banks, who have had no interest or benefit therefrom. This is manifestly unjust. As the profits of this banking system are diminishing

because of increasing taxation and unfriendly legislation, the number of banks withdrawing their circulation is rapidly increasing, and to the same degree the proportion of this unjust levy upon the remaining banks will increase.

Since the passage of the "national-bank act" there has been paid, without cost or expense to the Government, by the national banks, of—

 Tax on circulation
 \$29, 220, 841 45

 Tax on deposits
 28, 327, 246 19

 Tax on capital
 3, 820, 381 82

The original intent of Congress in imposing this tax upon the "circulation" was evidently to cover the expense of the same; and if, from the next return of semi-annual duty upon their circulation, the banks be allowed to deduct the amount of the late assessment, and thereafter, as assessments be made, like deductions be allowed, the matter will, I believe, be satisfactory to the banks and just to the Government.

It is the public, not the banks, that is benefited by the renovation of

the currency or its redemption.

The rate per cent. on the amount redeemed for each bank will be materially less in the future, because much of the permanent furniture and appliances necessary have been provided, and because, as the "charternumbers" will have been imprinted on the notes, the labor of assorting will be very greatly diminished, and consequently a relative reduction of the force may be made.

Should Congress refuse to allow the repayment of assessments as proposed herein, the fact that so large a number of national banks have gone into liquidation, or are retiring their circulation, would seem to make it essential that the charges for transportation of currency for redemption be prepaid by the party sending; otherwise the remaining banks, as stated, would be required to pay the expenses of redemption of notes other than their own.

The labor, care, and responsibility of the management of this Agency are very great, involving the daily receipt, assorting, and payment, by currency or checks, of several hundred thousand dollars, and the keeping of over two thousand accounts, and the oversight of more than one

hundred and fifty clerks and counters.

And if this Agency be continued, it is greatly to be desired that the same be made a separate bureau of your Department, under the charge of a superintendent, who should give a bond for the faithful discharge of his duties; that the 5 per cent. fund required of national banks be kept in the Treasury as now provided, but subject to the check of such superintendent, and that such checks may be payable in currency or by transfer drafts upon any assistant treasurer of the United States, as may be desired by the party entitled to payment, or as the convenience of the Treasury may demand.

THE THEFT OF JUNE 2, 1875.

On the above named day, at about half past 2 o'clock p. m., while the packages of new money remitted to banks and others in return for mutilated notes redeemed were being checked off for delivery to the Adams Express Company, it was discovered that there was missing a package of \$47,097.65, intended for the National Park Bank of New York City. Immediate and thorough search for the package being made without success, notice was at once given to the Acting Secretary of the Treasury, who placed the matter in the hands of the Secret Serve Division of the Treasury Department for investigation, which was

immediately commenced and prosecuted, it is believed, with commend-

able activity.

The package in question, it appeared, had been put up among the earliest of those intended for remittance on that day, and, after having been sealed and addressed, was placed with other packages prepared for delivery, and was not missed until delivery was being made to the express company, as above stated, in the room immediately below the cash-room of this Office. This package consisted mainly of \$500 legal-tender notes, viz: 94 notes of \$500 each, and notes and currency of smaller denominations, to make up the amount of \$47,097.65. The \$500 notes, although clean, and apparently such as had not been used, were, in fact, notes that had been out and returned to the Office, but had not been destroyed for the reason that they were in good condition, and were used because at that time there was a scarcity of new notes of the large denominations; they did not therefore run in regular sequence of numbers, as would have been the case had the package been made up of notes from

original packages.

It was not believed by my predecessor in this Office that any person not employed in the room where this money was put up could have obtained access to the place where these packages were kept during the day, and therefore that the theft must have been committed by an employé in the room, and probably by one of several whose duties were in immediate connection with these packages, and possibly by one who knew the fact that the notes in this package were not in regular order of numbers, and therefore could not be so readily traced. clue as to the guilty party was obtained by this Office until early in August, when notice was received from the superintendent of police of the city of Washington that a resident of this city had been reported as being in possession of, and as having passed, under suspicious circumstances, a number of \$500 notes at Saratoga, N. Y. The clue thus found was followed up, and resulted in the arrest, within a few days thereafter, of one Brown, and of W. H. Ottman, from whom, it was alleged, Brown had received the notes, and of B. B. Halleck, a clerk in this Office, employed at the time of the theft upon the work of preparing the packages for remittance. Under the direction of the Secretary and of the Solicitor of the Treasury, proceedings were at once instituted by criminal process for the trial of the parties suspected, and by civil process for the recovery of such of the money, or its proceeds, as could be found in the possession of any of these parties.

The matter is at this time undergoing before the proper tribunals an examination, which, it is hoped, will result in the conviction of the parties charged with the crime, if guilty as alleged, and the recovery of the moneys and property attached. These moneys and property (inclusive of \$14,500 in \$500 notes believed to be some of the identical notes stolen, found on special deposit in a bank in Alexandria, Va., in the name of Ottman) amount in value to a considerable portion of the money taken.

That such a misfortune as the loss of this money should occur at the time that it did was particularly annoying to my predecessor, who was about to retire from the charge of this Office, and it may well be believed that great relief was felt by him, and by the employés of the Office who had fallen under suspicion by reason of their having had the opportunity to commit theft, upon this discovery; one of the parties implicated (Halleck) having confessed to his participation in the crime.

During the fiscal year the remittances of money by express from the room in which this theft was committed were 68,385 packages, amounting to \$150,298,535.90; and on the day of the theft 268 packages,

The loss of this package by the dereliction amounting to \$646,155.41. of an employé rendered it desirable that further precautions, if they could be devised, should be taken against a recurrence of such a misfortune, and for the safety of the large amounts involved; and this has been done by the placing of such additional checks upon the handling of this money as would seem to be of service in preventing loss. In this connection, it may not be improper to state that whenever it has been found that the safety of the public funds could be better assured by additional safeguards against loss by accident or by theft, such safeguards have been provided, and they will be continued and increased as shall be found practicable and advisable in the future; and while some of the regulations recently introduced may appear unnecessarily restrictive, yet in view of the magnitude of the business of the Treasury, involving the daily handling of millions of dollars, I have not deemed it prudent to omit any precaution which, in my judgment, would tend to the security of the public funds in my custody.

WORK OF THE OFFICE.

Reference was made by my predecessor in his last annual report to the increase of labor in this Office.

A continued increase, in many of the items, (not inclusive of the National Bank Redemption Agency,) appears from a comparison of the present report with that for the previous year.

During the present fiscal year an increase is shown—

Of 7,904 in the number of Treasury drafts, transfer checks, and quarterly interest checks drawn, and of 1,641 in the number of Post-Office warrants.

Of \$9,538,166 in the amount and 1,266,676 in the number of the notes redeemed of national banks failed, in liquidation, or reducing circulation.

Of \$15,733,752.71 in the amount and 17,504,575 in the number of notes of United States currency redeemed.

Of 11,487 in the number of money packages received, and of 19,796 in the number of money packages transmitted, by express.

Of 33,228 in the number of printed forms filled in inclosing and not

inclosing checks sent by mail.

In addition, by the opening and keeping of additional books as they have been found necessary to more correctly supervise the accounts with assistant treasurers and depositories, and with disbursing-officers; by the receiving upon deposit, and payment upon checks, of the moneys of the District of Columbia, of the Freedman's Savings and Trust Company, and of the various charitable and other associations or institutions which, having received funds by appropriation of Congress, are required to disburse the same only by check upon this Office; and by other items which need not be specifically stated, but which, with those named, make an addition to the labor of the Office not counterbalanced by any slight diminution that there may have been in any other branch of the work. It has required the full force authorized by law, constantly employed, and at times in excess of the usual office hours, to transact, with certainty and dispatch, the important portion of the public business intrusted to this Office.

I have the honor to be, very respectfully, yours,

JNO. C. NEW, r of the United States

Treasurer of the United States.

Hon. B. H. Bristow, Secretary of the Treasury.

The foregoing "Statement III" shows the balances and movement of Moneys of the United States for the Post-Office Department, as did "Statement II" for the General Treasury.

All Receipt and Pay-Warrants issued by the Postmaster-General are received and rogistered in the Division of Accounts of the Treasurer's Office; the United States, on account of the Post-Office Department, being credited with the amount covered in by the former: the latter, after having been signed by the Treasurer, or Assistant Treasurer, are returned to the Post-Office Department, whence they are mailed to the payees as drafts upon which payment is to be made; when paid, they are returned as vouchers by the officer paying, and, after verification of indorsement, are charged to the United States, on account of the Post-Office Department, in the Treasurer's Quarterly Account rendered to the Sixth Anditor of the Treasury.

Copies of the Treasurer's Quarterly Account with the United States on account of the Post-Office Department are rendered annually to the Senate and House of Representatives

The following is a summary of the Treasurer's Quarterly Account with the United States on account of the Post-Office Department for the fiscal year 1875:

	Dr. To Expenditures by Warrants paid by Treasurer To Expenditures by Postmasters, warranted by settlement		Cr. By Receipts by Warrant covered into the Treasury By Receipts by Postmasters, covered in by Warrant on settlement	
-	Total Expenditures Balance due the United States June 30, 1875	33, 912, 075 45 1, 524, 764 15	Total Receipts. Balance due the United States June 30, 1874	34, 712, 948 00 723, 891 60
		35, 436, 839 60		35, 436, 839 60

The amount of Unavailable Moneys included in the above balance on the 30th June, 1875, is \$40,078.06, and is composed of the following items, viz:
United States Sub-Treasury, New Orleans, La., 1861, \$31,164.44; United States Depository, Savannah, Ga., 1861, \$205.76; United States Depository, Little Rock, Ark., 1861,
\$5,823.50; Merchants' National Bank, Washington, D. C., failed, \$2,801; United States Depository, Galveston, Tex., 1861, \$33.36.

Diaitized for FRASER

^{* \$2.301} of this amount is due from the Merchants' National Bank of Washington, D. C., and is unavailable,

Still another class of items carried on the books of this Office and stated in the balances	from w	eek	ĺ

Still another class of items carried on the books of this Office and stated in the balances from week to week is composed of deficits on the part of late depositaries United States, so found when the depositories were turned over to their successors, viz:

Depositary United States, Baltimore, Md., 1866	68 07 75	7
Depositary United States, Santa F6, N. Mex., 1866	99 61	

A special item of deficit is that of the bullion fund of the Branch Mint of the United States at San Francisco, Cal., which occurred in various ways and at various times, between the years 1857 and 1869, and prior to the appointment of the present superintendent. The amount of deficit is \$419,243.84, and is included in the amount of the balance as shown on the books of this Office.

There is, in addition to all of the above, the large item of \$28,101,644.91 due from the States of the United States on account of transfers of deposits under act of Congress approved June 23, 1836, and which is omitted from the statements of cash balances of the Treasury, but is carried, nevertheless, from quarter to quarter, and from year to year, in the account of the Treasurer United States as rendered to the First Auditor of the Treasury.

30 F

^{*\$100,000} Union and Central Pacific Railroad bonds are held by the Treasurer as security for the amount due by the First National Bank, Washington, D. C.

					837, 259, 435 62

The books were closed as regards Repay and Counter Warrants on June 30, 1875, but as regards Revenue Covering-Warrants, although constructively as of date June 30, 1875, the books were not actually closed until Angust 15, 1875.

Unexpended balances of appropriations deposited in the Treasury by disbursing officers are covered in to the credit of the appropriations from which the amount was originally drawn by Warrants of the Secretary of the Treasury, technically termed "Repay Covering-Warrants."

"Counter-Warrants" earry amounts to the credit of an appropriation, because the appropriation was not properly chargeable with the expenditure, but some other appropriation from which the amount is drawn by "Trausfer-Warrants."

Warrants and Drafts.

The receipts as per Statement V. were carried into the Treasury by 14,679 Covering and Counter Warrants of the Secretary of the Treasury, and the expenditures were authorized by 33,300 Pay and Transfer Warrants, to facilitate payment of which 39,161 Drafts were issued by this Office, (Division of

The number of Receipt-Warrants, Pay-Warrants, and Drafts issued during the last ten fiscal years, as below stated, will give some idea of the increase of work of said Division.

	Fiscal years.									
	1866.	1867.	1868.	1869.	1870.	1871.	1872.	1873.	1874.	1875.

The books were closed, as regards the entry of Pay-Warrants, on June 30, 1875.

Transfer-Warrants are issued for the purpose of drawing an amount from an appropriation properly chargeable with an expenditure, in order to be placed to the credit of another appropriation from which the amount has been erroneously paid.

The total amount of "Transfer" and "Counter" Warrants should therefore agree.

The amount of unexpended balances repaid into the Treasury and amounts credited to appropriations are included in the statement of expenditures, in order to show the amount of net expenditures. For example, the total expenditures for the Navy Department are \$25,961,546.09, but \$789,966.63 not having been expended, was repaid into the Treasury, and \$3,673,953.19 having been credited back to appropriations for the use of that Department, the real net expenditures for the Navy are only \$21,497,626.27.

for the use of that Department, the real net expenditures for the Navy are only \$21,497,020	0.27.

Section 311 of the Revised Statutes of the United States provides that "The Treasurer shall, on the third day of every session of Congress, lay before the Senate and House of Representatives fair and accurate copies of all accounts by him from time to time rendered to and settled with the First Comptroller." The account entitled "The United States in account with _______, Treasurer of the United States," being his complete account of the Receipts and Expenditures of the moneys of the United States, is made up in the Division of Accounts and rendered quarterly to the First Auditor of the Treasury, and through that officer to the First Comptroller of the Treasury. The account ordinarily covers some fourteen hundred folio pages, making, with the copy retained in the Treasurer's Office and those rendered to Congress, nearly six thousand pages to be prepared and verified annually.

Statement VI shows the aggregate amount of Receipts covered in by Warrants, and also that of Expenditures anthorized by Warrants, according to classification, for the fiscal years 1874 and 1875, the detailed account of both of which years is rendered to Congress.

The account of the late Treasurer, the Hon. Francis E. Spinner, is settled to the 30th June, 1875, as far as practicable, but cannot be finally closed owing to the fact that a large number (between six and seven thousand) of paid drafts are withheld from credit, for the reason that other drafts, issued upon the same Warrants, remain unpaid. For this reason, three years must, it all probability, elapse before a final settlement of the late Treasurer's account can be passed by the Auditor and Comptroller.

VII.—EXPLANATORY STATEMENT OF DIFFERENCES BETWEEN BALANCES OF JUNE 30, 1875.

30, 1073.	
1.	
It will be seen by Statement II of this report that the 'General Treasury Balance' subject to draft June 30, 1875, was	\$145, 774, 419 14
subject to draft June 30, 1875, was By reference to the "Public Debt Statement" of July 1, 1875, it will be seen that the "Cash in the Treasury" at the close of business on the 30th June, 1875, is stated as	
"Cash in the Treasury" at the close of business on the 30th June, 1875, is stated as	142, 243, 361 82
The difference amounting to	3, 531, 057 32
The difference, amounting to. is accounted for by the fact that the transcripts of General Account containing report	
of receipts into the Treasury prior to July 1, 1875, were not received at this Office until after that date from the following offices, viz:	
Sub-Treasury United States New York \$389 974 75	
Sub-Treasury United States, Boston	
Sub-Treasury United States, Bostou 168, 664 00 Sub-Treasury United States, Philadelphia 141, 236 01 Sub-Treasury United States, Saint Louis 30, 042 41	
Sub-treasury united States, San Francisco	
Sub-Treasury United States, New Orleans 129, 346-70 Sub-Treasury United States, Charleston 22, 210-81	
Sub-Treasury United States, Cincinnati	
Sub-Treasury United States, Chicago	
Depository United States, Buffalo, N. Y	
Depository United States, Tucson, Ariz	
National Banks, Designated Depositories United States	
Balance but not in that of the "Public Debt Statement"	
3, 532, 581 57 Less amount of Counter Entries of Receipts reported on transcripts	
received after July 1, 1875	
	3, 531, 057 32
2.	
	\$1.45 774 419 14
June 30, 1875, "General Treasury Balance," as per Statement II, is	144, 702, 416 41
•	1, 072, 002 73
The difference, amounting to	1,072,002 73
follows, viz:	
Deposited in Treasury, Sub-Treasuries, and Depositories United States prior to July 1, 1874 \$8,772 04	
Deposited in Treasury, Sub-Treasuries, and Depositories United States	
in fiscal year 1875	
fiscal year 1875	
Deposited in National Banks, Designated Depositories United States,	
Total amount uncovered	1,072,002 73
3.	
By Treasurer's Quarterly Account, Statement VI, the "balance of covered moneys June 30, 1875," is and by "Receipts and Expenditures," Statement V, the "balance of covered moneys June 30, 1875," is	173, 571, 017 78
and by "Receipts and Expenditures," Statement V, the "balance of covered moneys	
	144, 702, 416 41
The difference, amounting to	28, 868, 601 37
is owing to the fact that in the Quarterly Account the Treasurer is charged with all	
and for which vouchers have passed the accounting officers: for which reason the	
The difference, amounting to. is owing to the fact that in the Quarterly Account the Treasurer is charged with all moneys that have been covered into the Treasury, less moneys drawn out by warrant and for which vouchers have passed the accounting officers; for which reason the sum of	
due by the States, and also the sum of	
for which drafts have been issued by the Treasurer, but not having been presented	
for which drafts have been issued by the Treasurer, but not having been presented for payment, or if presented, many drafts being imporfectly indorsed, and if paid, many	•
thousands of paid drafts having been issued on warrants with one or two other drafts which are still unpaid, this amount representing some seven thousand Treasurer's	
drafts, cannot be passed to his credit.	28, 868, 601 37
•	
4.	-
In Statement IV, unavailable funds June 30, 1875, the total amount "subject to draft"	
is stated as and by Statement VI, Treasurer's Quarterly Account, the balance due the United States is stated June 30, 1875, as	173, 876, 064 05
States is stated June 30, 1875, as	173, 571, 017 78
The difference, amounting to is exactly the difference between \$1,072,002 73	305, 046 27
the amount of receipts remaining uncovered June 30, 1875, construct-	
ively not in the Treasury, and therefore not charged to the Treasurer in his Quarterly Account, and the amount of drafts issued on Warrants	
but not yet paid, and therefore not credited to the Treasurer in his	
Quarterly Account	905 040 00

Total

Note.—The above total, added to the total amount of notes redeemed of National Banks failed, is \$2,198.25 less than the amount given in Statement XXIV; the difference being the amount of notes of the First National Bank of Newton, Newtonville, Mass., redeemed and destroyed by the Treasury, but for which it was afterward re-imbursed upon the consolidation of that bank with the National Security Bank of Boston, Mass.

XUIL-STATEMENT OF REDEMPTION OF CIRCULATING NOTES OF NATIONAL BANKS REDUCING CIRCULATION. (ACT OF JUNE 20, 1874.)

Note.—The above expenses were assessed upon the several National Banks in accordance with the following provision in section 3 of the act of June 20, 1874, (18 Stat., 123:)

"Each of said [National Banking] associations shall re-imburse to the Treasury the charges for transportation and the costs for associations shall be in proportion to the circulation redeemed, and be charged to the fund on deposit with the Treasurer."

The following is an explanation of the various items of expense as set forth in Memorandum No. 3, a copy of which was forwarded to each National Bank:

Express-charges.—This item includes all of the express-charges paid on national-bank notes fre credited for redemption; on new United States currency returned therefor; on national-bank notes fit for circulation assorted and returned to the several national banks, and on United States currency received for the credit of national banks in the five-per-cent. fund. All of these charges have been consolidated and assessed upon the several national banks in proportion to the amount of their circulation redeemed and assorted. The total amount of notes assorted during the year was \$130,322,945, making the average rate for each \$1,000 assorted, 676-10 cents. The rates charged by the express-companies were 25 cents per \$1,000 to and from all points within the territory of the Adams Express Company, and 60 cents per \$1,000 to and from all points within the territories of connecting companies. The average rate charged for each \$1,000 transported was about 35 cents.

Salaries.—This item includes the salaries paid in the Redemption Agency, and \$12,410.80 paid to

clerks employed in the Office of the Comptroller of the Currency under the act of June 23, 1874, which provides that the amount expended thereunder shall be re-imbursed from the five-per-cent. fund. The salaries of the persons employed in carrying into effect the redemption act are now fixed by law. The amount appropriated for the current fiscal year by the act of March 3, 1875, is \$201,496. The salaries paid during the last fiscal year were in no case bigber, and were in most cases lower, than are now authorized by law.

authorized by law.

Printing and stationery.—The printing of the Agoncy has been done by the Public Printer, and the stationery has been furnished by the Treasury Department at contract rates. The amount of this item has been deposited in the Treasury to the credit of the proper appropriations.

Postage.—The amount charged to this account is the face value of official postage-stamps furnished to the Agency by the Treasury Department, the amount of which has been deposited in the Treasury.

Office-furniture.—The amount of this, item has been expended for assorting-stands, covered desks for the counters, money-boxes for the counters and assorters, tellers' counters, wire-work for windows, door-ways, and partitions, and other similar furniture required for purposes of safety or convenience.

Nearly all of the furniture required for the present force of the Agency has now been provided. Except in a few cases where emergency required the purchase to be made in the open market, the furniture was obtained either from the cabinet-shop of the Treasury Department or by contract with the lawest bidder.

lawest bidder.

Contingent expenses.—This item includes telegrams, repairs, and other miscellaneous items not chargeable to any other head of account.

Profit and loss.—The amount charged bto this item is that of various packages of money abstracted from the Agency, and other smaller losses met with before it was provided with proper rooms, furniture, or other necessary guards against theft or loss. The provision of such guards, and the adoption of a rigid system of accountability and inspection, have prevented the occurrence of any losses of the kind during the last six months. The losses sustained were an inevitable result of suddenly throwing the redemption and assortment of the bank currency upon the Treasnry without allowing time in which to provide the requisite facilities for the work. Every effort has been made to detect and bring to justice the guilty parties. One person has been convicted of theft from the Agency, and another is under indictment for a similar offense.

A full and accurate statement of the facts pertaining to the losses has been spread upon the books of

indictment for a similar offense.

A full and accurrate statement of the facts pertaining to the losses has been spread upon the books of the Agency, and is open to the inspection of any person interested.

The labor and expense of counting and assorting being in direct proportion to the number of notes handled, all of the above expenses, with the exception of express-charges, have been assessed in proportion to the number of notes redeemed and assorted for each bank. The total number of notes assorted during the last fiscal year was 17.842,310; the expenses (exclusive of express-charges) were \$202,867.06, making the average charge for each 1,000 notes assorted \$11.37.

making the average energe for each 1,000 notes assorted \$11.31.

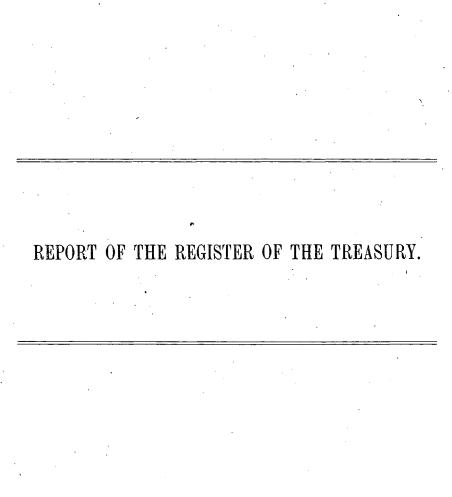

The aggregate expenses of the Agency for the year were about two-ninths of one per cent, upon the amount assorted. The assessment upon each bank varies from this average according as the average denomination of its notes assorted is greater or less than the average denomination of all of the notes assorted, which is \$7.30+. Unless there should be some unforescen increase of expense, the rate per cent, of the expenses for the current fiscal year will be much less than for the last year, on account of the increased efficiency of the force, and the fact that the requisite furniture and appliances have

already been provided.

The vonchers for all of the expenses of the Agency paid prior to July 1, 1875, were approved by the proper officers, and were examined by the committee appointed by the Secretary of the Treasury to examine the cash and accounts of the Treasury upon the retirement of the late Treasurer.

THE REGISTER OF THE TREASURY.

TREASURY DEPARTMENT, Register's Office, November 4, 1875.

SIR: I have the honor to submit herewith a detailed report of the business transacted in the several divisions of this Office during the

fiscal year which closed on the 30th of June last.

By reference to the reports of the different divisions, and comparing the same with those of the preceding year, it will be noticed that in some the work has increased, while in others there is no material change worthy of special notice.

There are two hundred and eight persons employed in this Bureau; a reduction in numbers since I assumed the duties of the Office of one

hundred and sixty one persons.

The amount of work performed has not materially decreased within the last six years, but the character of the force employed is much im-

proved and more efficient.

I deem it proper in this connection to represent that, in the appropriation for this Bureau for the last year, there were but one hundred counters allowed; a force which leaves me unable to assign a number adequate to the prompt dispatch of business in the note and fractionalcurrency division of this Office.

With my estimates for the next fiscal year I have transmitted a letter calling attention to this fact, and submitting an additional estimate to

meet the demand.

In my reports for the past two years I have called attention to the fact that much embarrassment has been experienced from a lack of room for the rapidly accumulating files of the Department. Unless additional room is obtained, it will be impossible properly to preserve them.

Under the act of Congress which took effect on the 1st of July last, there have been some changes made in the organization of this Bureau.

W. P. Titcomb, esq., has been promoted from chief of tonnage division to the office of deputy register of the Treasury, Mr. N. B. Walker from the position of disbursing clerk to that of chief of the tounage division, and Mr. E. S. Collamer to the position of disbursing-clerk.

It affords me great pleasure to be able to bear testimony to the fidelity and efficiency of the gentlemen who are associated with me in the administrative duties of the Bureau, and to the general good conduct of the clerks and other employés.

LOAN DIVISION-HARTWELL JENISON, CHIEF OF DIVISION.

Accounted for as follows:	
Coupon-bonds issued during the year	143, 092, 650 10, 872, 000
Coupon-bonds. Registered bonds Funding bonds, District of Columbia.	504,069,600
Total	815, 286, 700

Out of the funded 1881 coupon bonds some twenty millions are kept constantly on hand, signed, sealed, and perfected in advance, to meet orders for shipment to the syndicate. These bonds are stored in an inner safe of the vault, with extra lock-combinations for security.

The amount of bonds issued during the present year is some fifty millions in excess of the preceding period, making the average daily issue at the rate of 460 bonds, and \$700,000 in amount.

The registered portion of the several loans represents eight hundred and thirty millions, upon which dividends of interest are declared for eight different periods of payment in the year. A ledger-account is opened with each holder of this class of securities, requiring about one hundred and fifty ledgers and auxiliary books in constant use.

The register of powers of attorney and other authorities for the transfer of United States stock numbers 11,500 entries. The book is neatly and accurately kept by the clerk in charge, and is invaluable as a reference and record.

The recent order requiring returns of unclaimed dividends of interest to be made at the end of seven months instead of ninety days, as heretofore, will relieve this Office of much extra labor entailed by the former system, and better subserve the interests of the bondholders.

The general duties and details of this division do not differ materially from those of the preceding year. It is the invariable rule in the stock-issues to make returns the same day the bonds are received for transfer, and this promptness is counted upon as a certainty by the business community.

NOTE AND COUPON DIVISION-LEWIS D. MOORE, CHIEF OF DIVISION.

At the close of the fiscal year the clerical force of this division consisted of forty-nine clerks, fourteen males and thirty-five females, and one messenger.

The whole number employed during the year was fifty-five clerks,

eighteen males and thirty-seven females.

The average number per month was fifty-one clerks, sixteen males

and thirty-five females.

The following consolidated statement exhibits the character and amount of work performed by this division during the fiscal year ending June 30, 1875.

Statement of Treasury notes, bonds, and coupons.

Notes, bonds, &c.	Authorized act.	Number of pieces.	Total amount.	Coupons attached.
Five-twenty bonds registered, examined, scheduled, and delivered to committee. Rodeomed and exchanged. Redeemed and exchanged. Redeemed and exchanged.	September 9, 1858 February 25, 1862. July 14, 1870, and January 20 1871.	13, 826 176, 978 1	\$13, 826, 000 83, 202, 650 1, 000	1, 719 3, 302, 037 38
Total		190, 805	97, 029, 650	3, 303, 794

Statement of Treasury notes, bonds, and coupons.

Notes, bonds, &c.	Notes, bonds, &c. Authorizing act.		Total amount.
Treasury notes and certificates counted, assorted, arranged, registered, and examined. Of coupons detached from notes and bonds there were counted, assorted, and arranged numerically 3,754,480, registered 3,661,950, examined and compared 3,430,409.

NOTE AND FRACTIONAL CURRENCY DIVISION—CHARLES NEALE, CHIEF OF DIVISION.

Statement showing the number of notes and amount of fractional currency, Treasury notes, and national-bank notes (of such banks as are broken or have gone into voluntary liquidation) examined, counted, canceled, and destroyed by maceration during the fiscal year ending June 30, 1875:

	No. of notes.	Amount.
United States notes, new issue	2, 557, 381	\$21, 245, 070
United States notes, series 1869	21, 114, 111	85, 624, 180
United States notes, series 1874	1, 646, 630	2, 670, 350
United States notes, demand notes		6, 260
National-bank notes	410, 687	2, 476, 199
Fractional currency, first issue	112,000	13, 450
Fractional currency, second issue	112,000	14, 865
Fractional currency, third issue	336, 000	68, 300
Fractional currency fourth issue	50, 000, 000	9, 004, 800
Fractional currency, fourth issue, second series	5, 200, 000	2, 492, 000

Fractional currency, fifth issue	112, 400, 000	17, 064, 200
Total	217, 089, 501	152, 279, 674
During the year 1874	194, 226, 152	138, 078, 427
Increase	22, 863, 349	14, 201, 247

TONNAGE DIVISION-NEWEL B. WALKER, CHIEF OF DIVISION.

The total tonnage of the country exhibits an increase of 53,08° tons, the registered tonnage having increased 124,905 tons, the licensed tonnage (under 20 tons) 1,932 tons, while the enrolled tonnage has decreased 73,757 tons.

The actual increase is believed to be about 141,878 tons, this amount

being the excess of the gains over the losses during the year.

The aggregate has been reduced by corrections of the balances reported outstanding, and by dropping canal-boat tonnage exempt under the act of Congress approved April 18, 1874; from the latter cause, about 48,000 tons, and from the former about 40,000 tons.

Below are given the totals of the last two years:

	1874.		1875.	
·	Vessels.	Tons.	Vessels.	Tons.
RegisteredEnrolled and licensed	2, 728 29, 758	1, 428, 923 3, 371, 729	2, 981 29, 304	1, 553, 828 3, 299, 904
Total	32, 486	4, 800, 652	32, 285	4, 853, 732

The comparison of the different classes of vessels is as follows:

	1874.		1875.	
	Vessels.	Tons.	Vessels.	Tons.
Sailing-vessels Steam-vessels Canal-boats Barges	18, 147 4, 186 8, 245 1, 908	2, 473, 716 1, 185, 610 751, 612 389, 714	18, 354 4, 235 7, 808 1, 888	2, 584, 910 1, 168, 668 709, 996 390, 158
Total	32, 486	4, 800, 652	32, 285	4, 853, 732

It will be seen from the foregoing that the sailing tonnage has increased 111,194 tons, and the barge tonnage 444 tons, while the steam tonnage has decreased 16,942 tons, and the canal-boat tonnage 41,616 tons.

The proportion of the sailing tonnage registered is 52.6 per centum; of the steam tonnage, 16.4 per centum.

SHIP-BUILDING.

The following table exhibits the class, number, and tonnage of the vessels built during the last two fiscal year:

	18	74.	18	375.	
	Vessels.	Tons.	Vessels.	Tons.	
Sailing-vessels Steam-vessels Canal-boats Barges	404	216, 317 101, 930 48, 403 66, 075	798 323 62 118	206, 984 62, 460 6, 515 21, 780	
Total	2, 147	432, 725	1, 301	297, 639	

From the foregoing it appears that the amount built during the past year was less by 135,086 tons than that of the preceding year.

The tonnage built during the last two years in the several grand divisions of the country is shown below:

	1874.		1875.	
•	Vessels.	Tons.	Vessels.	Tons.
Atlantic and Gulf coasts	1, 341 63 417 326	266, 233 10, 860 91, 986 63, 646	893 70 177 161	231, 045 13, 429 29, 871 23, 294
Total	2, 147	432, 725	1, 301	297, 639

The above table shows a decrease in the amount built in each division except the Pacific coast.

The following table exhibits the iron tonnage built in the country since 1868:

•	1868.	1869.	1870.	1871.	1872	1873.	1874.	1875.
Sailing-vessels	2, 801	1, 039 3, 545	679 7, 602	2, 067 13, 412	12, 766	26, 548	33, 097	21, 632
Total	2, 801	4, 584	8, 281	15, 479	12, 766	26, 548	33, 097	21, 632

Tables showing the amount of iron tonnage outstanding will be found in the appendix to the report on commerce and navigation.

THE FISHERIES.

The tonnage engaged in the fisheries during the last two years is as follows:

	18	74.	1875.		
	Vessels.	Tons.	Vessels.	Толз.	
Cod and mackerel fisheries. Whale fisheries.	2, 099 162	78, 290 39, 107	2, 188 165	80, 20 6 38, 229	

Below is shown the amount of tonnage employed in the cod and mackerel fisheries, with the per centum of each State.

	Tonnage.	Per cent.
Massachusetts	51, 394	64
Maino Connecticut	3, 757	25. 3 4. 6
Rhode Island New York California	1, 159	1.9
Californa New Hampshire Pennsylvania	1, 009 962 24	1. 2 1. 2
Total		
10641	80, 207	

This shows a slight increase during the year.

The tonnage employed in the whale fisheries is given below:

		1874.		1875.	
Customs districts.	Vessels.	Tons.	Vessels.	Tons.	
New Bedford, Mass	126	34, 557	127	33, 47	
New London, Conn		2, 735	Sail, 13	1, 94 10	
Barnstable, Mass Edgartown, Mass San Francisco, Cal	15	1, 384	19	1, 80	
Edgartown, Mass	1 9	183 132	3 2	. 770	
Sag Harbor, N. Y.	, ĩ	116			
Total	187	44, 755	165	38, 22	

Of the above over 87.5 per cent. belongs at New Bedford. Fuller tables, showing the various classes of tonnage, will be found in the appendix to this report.

DIVISION OF RECEIPTS AND EXPENDITURES—J. H. BEATTY, CHIEF OF DIVISION.

The following statement exhibits the work of this division for the year ending June 30, 1875:

The number of warrants registered during the year for civil, diplomatic, miscellaneous, internal revenue, and public debt expenditures and repayments	
wasIn the preceding year	22,259 $24,548$
Decrease	2,289
D 0010 and	•
The number of warrants registered for receipts from customs, lands, internal revenue, direct tax, and miscellaneous sources was	13, 156
In the preceding year.	11,946
Increase	1,210
The number of warrants registered for payments and repayments in the War, Navy, and Interior (Pension and Indian) Departments was	12,564
In the preceding year	12, 249
Increase	315
The number of drafts registered was	40, 046 38, 641
Increase	1,405

Register.

The number of journal pages required for the entry of accounts relating to	
the civil, diplomatic, internal-revenue, miscellaneous, and public-debt receipts and expenditures was	4,558 4,266
Increase	292
The number of certificates furnished for settlement of accounts was	14, 972 11, 302
Increase	3,670
The number of accounts received from the First and Fifth Anditors and Commissioner of the General Land-Office was	23, 538 26, 579
Decrease	3,041

In the appendix will be found a statement of the receipts and expenditures of the Government, as required by the standing order of the House of Representatives of December 30, 1791, and section 237 of the Revised Statutes; also statements of the amount of money expended and number of persons employed, and the occupation and salary of each person, at each custom house, as required by section 258 of the Revised Statutes.

I have the honor to remain, with great respect, your obedient servant, JOHN ALLISON,

B. H. Bristow,

Hon. B. H. Bristow, Secretary of the Treasury.

APPENDIX.

General account of the receipts and expenditures of the United States for the fiscal year ended June 30, 1875.

THE SOLICITOR OF THE TREASURY.

DEPARTMENT OF JUSTICE,
OFFICE OF THE SOLICITOR OF THE TREASURY,
Washington, D. C., November 18, 1875.

SIR: I have the honor to transmit herewith seven tabular statements, exhibiting the amount, character, and results of the litigation, under the direction of this Office, for the fiscal year ending June 30, 1875, so far as the same are shown by the reports received from the United States attorneys for the several districts.

These tables embrace respectively-

1. Suits on custom-house bonds.

2. Suits on transcripts of accounts of defaulting public officers, excepting those of the Post Office Department, adjusted by the accounting-officers of the Treasury Department.

3. Post-Office suits, embracing those against officers of the Post-Office Department, and cases of fines, penalties, and forfeitures for violation

of the postal laws.

4. Suits for the recovery of fines, penalties, and forfeitures under the

customs-revenue and navigation-laws.

5. Suits against collectors of customs, and other agents of the Government, for refund of duties and acts done in the line of their official duty.

6. Suits in which the United States is interested, not embraced in the other classes.

7. A general summary or abstract of all the other tables.

An examination of this summary will show that the whole number of suits commenced within the year was 2,734, of which—

122 were of class 2, 315 were of class 3, 186 were of class 4,	for the recovery for the recovery	ofofof	1,381,119 28 100,387 23
		of	5, 907, 330 50

Of the whole number of suits brought, 653 were decided in favor of the United States; 12 were adversely decided; 537 were settled and dismissed; in 5, penalties were remitted by the Secretary of the Treasury; leaving 1,527 still pending.

Of those pending at the commencement of the year, 450 were decided for the United States; 124 were decided adversely; 701 were settled and dismissed; and in 20, penalties were remitted by the Secretary of

the Treasury.

The entire number of suits decided or otherwise disposed of during the year was 2,502; the whole amount for which judgments were obtained, exclusive of decrees in rem, was \$1,290,503; and the entire amount collected from all sources was \$621,950.11.

The collections in suits for violation of the customs and navigation laws during the year, it will be noticed, are very much less than in the preceding year. The accompanying tabular statement, based upon returns from the principal customs districts of the country, will give you a comparative view of the collections from this source for the years 1872, 1873, 1874, and 1875, showing in the districts mentioned a falling off, in comparison with the collections of the preceding year, of \$359,500.53.

As the disbursement of the \$125,000 appropriated for the prevention of counterfeiting and other frauds upon the Government has been made largely under your direction, and always with your advice, I have not deemed it proper to include in this report a detailed statement of the operations of this Office predicated upon that appropriation. If, hereafter, it is thought desirable, a special report in the premises can be made to you.

It is, perhaps, proper to remark that, in addition to the ordinary operations for the detection, prevention, and punishment of counterfeiting, a large portion of the fund has been used in what has proved to be a successful movement against corrupt combinations and conspiracies to defraud the United States of its internal revenue. In this connection I should also state that a portion of the fund has been used, under your direction, in a like successful movement against a similar combination to defraud the Government of its customs revenue at the port of New York.

I am, sir, very respectfully,

BLUFORD WILSON,
Solicitor of the Treasury.

Hon. B. H. Bristow, Secretary of the Treasury.

REPORT

OF THE

SUPERVISING ARCHITECT OF THE TREASURY.

TREASURY DEPARTMENT,
OFFICE OF THE SUPERVISING ARCHITECT,
October 1, 1875.

SIR: On the 1st day of January, 1875, I assumed the duties of the Office of the Supervising Architect of this Department, and have the honor to submit herewith a report of the works under its charge during the past fiscal year, and their present condition; the progress of the work during the first six months being determined from the records and files of the Office.

BUILDINGS IN COURSE OF CONSTRUCTION JANUARY 1, 1875.

BOSTON, MASS., POST-OFFICE AND SUBTREASURY.

That portion of this building for which plans were prepared by the late Supervising Architect was nearly completed when I took possession of the Office and is now finished, partially furnished, and is occupied by the post-office and the office of the assistant treasurer. In consequence of the order making the subtreasury at Boston a place of deposit for silver coin, it was found necessary to increase the strength of the flooring sustaining the vaults to carry the additional weight, which was accomplished at a small cost.

Total amount appropriated for that portion of the building already	
erected	\$3,017,085 08
Total amount expended thereon to September 30, 1875	3,017,085 08

CHARLESTON, S. C., CUSTOM-HOUSE.

The stone-work of this building and the approaches may be said to be completed. A portion of the iron-work of the roof is received and is ready to be put in place, and contracts have been entered into for the completion of the iron-work. The building will be ready for occupancy before the close of the present fiscal year. The amount appropriated at the last session of Congress is sufficient to meet all the expenditures anticipated on account of the work.

CHICAGO, ILL., CUSTOM-HOUSE, ETC.

As soon after taking charge of the Office as my duties would permit, I visited Chicago, Ill., to inform myself as to the condition and progress of the work, and, upon inspection of the building, I discovered serious cracks in the walls and defects in the stone, which excited considerable anxiety in my mind as to the stability of the foundations and the fitness of the materials used in the construction of a building of its magnitude and character, and upon my return, as soon as the condition of the ground would admit of an examination of the foundation, I directed two of my assistants to visit Chicago and make an examination as to the cause of the cracks and the apparent unequal movement in the The result of this investigation confirmed my fears; and, upon your attention being called to the matter, work was suspended in accordance with your directions, and a commission of three experts, not connected with the public service, was appointed to make a thorough test of the foundation and an examination of the materials used in the construction of the building. The report of this commission substantiated that made by the officers of the Department above referred to. the publication of this report, the mayor of Chicago, in compliance with a resolution of the council of that city, appointed a commission of seven local architects and engineers to perform similar duties to those assigned to the commission appointed by you and to report to him their finding. A copy of the resolution of the city council was forwarded to this Department, with the request that permission might be given to these gentlemen to make the necessary examination and tests, which permission you granted. The report of the local commission differing essentially from that of the gentlemen appointed by the Department, a third commission, equal in number to the second, consisting of engineers, architects and builders, was appointed by you, and upon the receipt of their report resumption of the work was directed by you, and it is now in progress. Copies of the reports of these commissions, and the indorsements thereon, are hereunto appended. (See Appendix A.)

CINCINNATI CUSTOM-HOUSE, ETC.

On June 30, 1874, a site was acquired and the excavation commenced, but very little work had been done thereon. Since that date the excavation has been completed, concrete foundations laid, and the basement and area walls carried up to their full height. The red granite with which the basement, area walls, and first four courses of the superstructure are faced is very nearly all supplied, and the contract will soon be completed. Of the gray granite for the superstructure, the first story is already cut, and also a large portion of the second story.

Total amount appropriated for this work	\$2,650,000	00
Total amount expended to September 30, 1875	1,772,060	62

COLUMBIA, S. C., COURT-HOUSE AND POST-OFFICE.

The condition of this building on June 30, 1874, was as follows: The main cornice was set and the brick-work nearly completed. Since that date the building has been finished and furnished, the heating apparatus supplied, and the building is now occupied. An appropriation of \$5,000 was made at the last session of Congress for the purchase of land for additional site, and, in compliance with that act, the land has been secured.

Total amount appropriated for building and for furniture	\$412,237 70
Amount expended to September 30, 1875	410, 415 34

HARTFORD, CONN., CUSTOM-HOUSE, ETC.

At the commencement of the past fiscal year the basement of the building was completed. The first story beams were received, but not set in place. During the past fiscal year the granite work of the first story has been completed, and that for the second and third stories is in progress. The walls on the north, south, and east sides of the building are up and ready for the second floor beams. About one third of the first story cornice is now set, and the stones of the remainder are now on the ground. Upon the west side the walls are now level with the top of the architraves, and the window and door arches are now being set.

Total amount appropriated for the building	\$350,000 00 318,164 70

INDIANAPOLIS, IND., COURT HOUSE AND POST-OFFICE EXTENSION AND REPAIR.

The work upon this building is completed, and the building has been refurnished.

Total amount appropriated	
Total amount expended	

LINCOLN, NEB., COURT-HOUSE AND POST-OFFICE.

At the beginning of the last fiscal year the excavation for this building had been begun, but little progress had been made. At the close of the building-season the condition of the work was as follows: The excavation and masoury for the basement were completed, ready to set the water-table and the first floor beams.

During the winter's suspension of the work, it was found that the plans prepared by the late Supervising Architect involved the necessity of an expenditure in excess of the amount to which the cost of the building was limited; and upon reporting the facts in the case to you, I was directed to prepare new plans, with a view to bringing the cost of the building within the amount to which it is limited, and accordingly the necessary plans were prepared and approved as required by law. Contracts have been entered into for the supply of the entire stone-work for the building, and the work is now in progress.

	07		 1 0		
Total amount :	appropriate	ed	 	 \$130,000	00

NEW ORLEANS, LA., CUSTOM-HOUSE.

The work upon this building partakes more of the character of alterations and repairs than of construction. During the past fiscal year the marble-work in the general customs business room has been completed, and the work is progressing in the rooms to be occupied by the United States courts and the assistant treasurer.

Amount appropriated since modification of plans	\$911,000 834,657	00 37
• •

NEW YORK CITY COURT-HOUSE AND POST-OFFICE.

The condition of this building June 30, 1874, was as follows: The roof of the building was nearly completed. Within the past fiscal year the building has been almost completed. The heating apparatus has been set in place, and the different offices partly furnished. It is at present occupied by the Post Office Department and the United States courts. A further appropriation will be required to complete the building.

Total amount appropriated for building and furniture	\$8,028,850 22 7,950,609 35
•	
Balance in Treasury	78, 240 87

OMAHA, NEB., COURT HOUSE AND POST OFFICE.

Within the past fiscal year the building has been completed and furnished, and is now occupied.

Total amount expended to September 30, 1875	369,098 18
Balance in Treasury	2,401 82

PARKERSBURGH, W. VA., COURT-HOUSE AND POST-OFFICE.

During the past year the basement, first story, and area walls of this building have been completed, and the second story is rapidly progressing.

ing.		
Total amount appropriated	\$168,000 151,066	$\frac{00}{24}$
Balance in Treasury		

At the suspension of work on this building during the winter season, the supervising inspector of materials of this Office was directed to make an examination of the building, and it was found thereupon that the stone for the trimmings of the building contracted for was unsuitable for the purpose, and that fact being reported to you, by your authority the contract was canceled, and new contracts entered into for a more durable material.

PHILADELPHIA, PA., COURT-HOUSE AND POST-OFFICE.

At the beginning of the past fiscal year work had been commenced on the excavation. During the past year the proceedings in condemnation of additional land for the site of the building have been completed and the land secured. The excavation over the whole area is nearly fin-

Total amount appropriated ..

ished, the greater part of the concrete foundations laid, and the granite of the area walls on the Chestnut, Ninth, and Market streets fronts set in place. The cutting of the stone for the basement story is progressing rapidly, and will be completed in time for setting when work is resumed next season. The granite for the first story and about one-half of the second story is cut.

Total amount appropriated	\$3,000,000 00 2,732,808 97
Balance available	267, 191 03

PORTLAND, OREG., CUSTOM-HOUSE.

This building has been completed during the past fiscal year, and is now occupied by the United States courts, post office, internal-revenue, and land-office. It was originally designed for and intended that this building should accommodate the customs-offices in addition to those hereinbefore specified, but it was represented to the Department to be situated in an inconvenient locality for this purpose. The special agents of the Treasury Department now at Portland, Oreg., report that the locality is suitable, and that these offices should be moved into the building. I have caused steps to be taken to investigate the case more fully, and, on receipt of the report from the officers directed to make the investigation, I will advise you.

Total amount appropriated	\$396,500 00 385,356 04
Polones available	11 142 06

PORT HURON, MICH., CUSTOM-HOUSE, ETC.

At the commencement of the fiscal year this building was nearly ready for the first tier of beams. The exterior walls of the substructure were set to the sill course. Within the past year the work progressed satisfactorily, and the building will be roofed in before the winter season.

Total amount appropriated	
Balance available	59, 057 75

ROCKLAND, ME., CUSTOM-HOUSE.

During the year the floor beams have been set, floors laid, building reofed in, and the story to be occupied by the post-office completed. The exterior of the building is entirely completed; and the building would have been finished had the appropriation been sufficient. The appropriation made at the last Congress, however, has been found insufficient to complete the work, and the further sum of \$20,000 is required therefor. Should it be obtained, the building will be entirely completed before the close of the present fiscal year.

Total amount appropriated		\$120,000
Total amount expended to September 30,	1875	120,000

RALEIGH, N. C., COURT HOUSE AND POST-OFFICE.

At the beginning of the last fiscal year the concreting had been completed, and the rubble foundation walls were being set. During the

year work has	progressed satisfactorily, and before	e the	close of	the next
fiscal year the	building will be completed.

SAN FRANCISCO, CAL., APPRAISERS' STORES.

During the past fiscal year the basement walls have been completed and the first story beams set in place. This building is designed to be of brick, with stone trimmings. Serious delay was occasioned by the difficulty in securing suitable brick for the superstructure, but the persevering efforts of the Office to secure them at a reasonable cost have proved successful, and pressed bricks of a superior quality are being made, which, it is understood, are the first which have been produced on the Pacific Coast, and the work has been resumed.

Total amount expended to September 30, 1875	
Balance available	201,798 90

SAN FRANCISCO, CAL., MARINE HOSPITAL.

During the year this building has been completed, furnished, and is now occupied.

Total amount expended to September 30, 1875	74,647 15
Roloneo available	42.41

SAINT LOUIS, MO., CUSTOM HOUSE.

During the past fiscal year work on this building has progressed satisfactorily. The exterior of the sub-basement, basement, sill and lintel courses, and pedestal courses of the first story, or the entire red granite work, is set in place. The area walls are completed; also connection with the tunnel.

The iron-work of the basement and sub-basement is also set in place. The granite-cutting for the superstructure has been prosecuted with vigor, the first story being completed, the second nearly so, and the third under way, and delivery of the stone at the site of the building commenced. The first story will be set in place before the commencement of the winter season, should no unforeseen accident prevent the delivery of the stone.

SITES.

The title to the additional land required for the United States customhouse at Evansville, Ind., has been perfected.

A suitable site has been donated by the city of Atlanta for a court-

house and post-office.

A site has been purchased under condemnation at Grand Rapids, Mich.

Additional land has been purchased for the proper protection from risk of fire for the court-house at Columbia, S. C., and custom-house at Louisville, Ky. The appropriations for this purpose were, for Columbia, \$5,000, and for Louisville, \$12,500; but the land for the latter was purchased at a cost of only \$6,000.

For the post-office, &c., at Jersey City, N. J., a suitable site, with a good brick building thereon, has been purchased for \$70,000, the appropriation for the same being \$100,000, and with the balance remaining available the building may be so arranged as to meet the present wants

of the public service in that city.

The title to the lot donated by the city of Memphis, Tenn., as a site for a United States custom-house, has not been approved by the Attorney-General, but the objection heretofore existing has been removed and the title will probably be completed within a short time. The prepara-

tion of plans for this work has been deferred on this account.

Under authority of act of March 3, 1875, appropriating \$160,000 for the purchase of a site for the proposed post-office, &c., at Harrisburgh, Pa., a commission, composed of three citizens of Harrisburgh, was appointed to receive proposals for a suitable site. The commission received ten proposals and reported unanimously that none of the property offered for sale was suitable. They were, thereupon, requested to make examination of such pieces of property in Harrisburgh as might seem to them suitable, and report thereon to this Department, submitting an estimate of the probable cost of the most eligible site. Their report has not yet been received.

Under the condemnation of a site for the court-house and post office at Pittsburgh, Pa., one of the parties appealed and delayed the adjustment of the condemnation, increasing the cost of the site to \$46,176.30 in excess of the amount appropriated, which sum the citizens of Pittsburgh have placed in the hands of the United States Depositary, which, with the appropriation, is sufficient to meet the entire award of the courts and all expenses incidental to securing title. The completion of

the proceedings is anticipated at no late day.

A site has been purchased for the Marine Hospital at Pittsburgh, Pa., from the proceeds of sale of old property, as directed by act of June 22,

1874.

In compliance with the act of March 3, 1875, appropriating \$10,000 for the purchase of a site at Topeka, Kans., a very excellent site has been secured, for which, it is understood, the citizens of Topeka subscribed \$10,000, being the amount necessary in addition to the appropriation.

NEW BUILDINGS.

Besides carrying on the works in progress when I took charge of this Office, I have prepared designs and estimates for eleven new buildings, which have been approved, as required by law, and work is in progress upon the following:

ATLANTA, GA., COURT-HOUSE AND POST-OFFICE.

The excavation is nearly	completed, and the	contracts for the	materials
for the concrete awarded.	- /		

for the concrete awarded.		
Total amount appropriated	\$160,000	00
Total amount expended to September 1, 1875	2,018	49
Balance available	157,981	51

COVINGTON, KY., COURT-HOUSE AND POST-OFFICE.

Excavation for this work is completed, and contracts for the materials for the concrete awarded.

Total amount appropriated	\$305,000 00 34,467 05
•	
Balance available	970 539 95

DOVER, DEL., POST-OFFICE.

Work on excavation for foundation has been completed.

Total amount appropriated	\$40,000 00
Total amount expended, including purchase of site, to September 1, 1875	10,851 45
	,

EVANSVILLE, IND., CUSTOM-HOUSE.

The excavation has been completed; concreting nearly completed. Contracts for the brick and stone work of the basement walls have been entered into. During the progress of the excavation of this building, it was found by test borings that the site was underlaid by a vein of quicksand, and in order to secure foundations and guard against accident, it was deemed necessary to incur a largely increased cost for the concrete, covering the whole area of the building to the depth of three feet in thickness, instead of wall-trenches only, as in ordinary cases.

Total amount appropriated	\$200,000 00 116,652 86
Balance available	83, 347 14

FALL RIVER, MASS., CUSTOM-HOUSE, ETC.

Work is progressing on the excavation and foundation trenches.

Total amount appropriated	\$240,000 00 136,100 03
Balance available	103, 899 97

GRAND RAPIDS, MICH., CUSTOM-HOUSE, ETC.

The site has been cleared; plans and estimates are prepared, but work has not yet been commenced.

Total amount appropriatedTotal amount expended, including pure		\$120,000 00 70,006 01
	•	
Polongo projloblo		40 003 00

HELENA, MONT., ASSAY-OFFICE.

The excavation is completed, basement walls carried up to height of first-story floor-beams, and contracts awarded for stone and brick work of the superstructure.

Total amount expended, including purchase of site, to September 1, 1875	\$50,000 00 16,962 00
Balance available	33,038 00

NASHVILLE, TENN., CUSTOM-HOUSE.

Work is about to commence upon excavation, and it is anticipated that the remainder of the season will be required for this work, as the excavation of the cellar is being made from solid rock.

Total amount appropriated	
Balance available	145, 923, 00

BOSTON, MASS., POST-OFFICE AND SUBTREASURY EXTENSION.

Under act of March 3, 1873, the purchase of additional land for the extension of this building was authorized. Proceedings in condemnation have been consummated, nearly one half of the land purchased, and the extension of the building begun. An appropriation should be made for the payment of the remainder of the site condemned, that the building as designed may be completed, the wants of the public service at Boston requiring it.

Total amount appropriated	\$570,655 98 440,513 30
Balance available	130 142 68

SAN FRANCISCO, CAL., SUBTREASURY.

Work has also begun upon the remodeling of the old mint building at San Francisco for the assistant treasurer, and a portion of the work has been placed under contract. Upon examination of the old building, it was found unsafe to retain any portion of the old walls. They were, therefore, taken down, and such material as can be made available will be used in the reconstruction.

Total amount appropriated	\$60,000 00
Total amount expended to September 30, 1875	12,439 10
Balance available	47 560 90

ALBANY, N. Y., CUSTOM-HOUSE.

That portion of the site at Albany on which the buildings were reserved from sale has been partially cleared. The paving of Broadway in front of the property being in a dangerous condition, contracts have been awarded for repaving from curb to street car track, and for making sewer connection with main for drainage purposes. The amount to which the cost of this building is limited is, in my opinion, insufficient to warrant me in preparing plans and estimates for a building suitable in character to the city of Albany, and the preparation of plans and estimates has therefore been deferred until further action is taken by

Congress. I recommend that the limit be increased to at least \$700,000. It is also desirable that a strip of land, say twenty five feet, adjoining that already secured, be purchased to obtain the necessary protection from fire from the adjoining property.

LITTLE ROCK, ARK., COURT-HOUSE AND POST-OFFICE.

I have also, in view of the limit of cost placed upon the building authorized to be constructed at Little Rock, Ark, deemed it inexpedient to take any action looking to commencement of work.

BUILDINGS REPAIRED AND REMODELED.

BOSTON, MASS., CUSTOM-HOUSE.

The repairs and alterations of this building have been vigorously prosecuted during the past year, and will be completed during the present month. It has also been partially supplied with new furniture and fixtures. The expenditures for the repairs of this building during the year amounted to \$50,510.39.

NEW HAVEN, CONN., CUSTOM-HOUSE.

By the act of June 23, 1874, an appropriation of \$20,000 was made for the repair and remodeling of this building. The condition of the building, however, was such that the amount of the appropriation was inadequate to place the building in proper condition. A contract, however, was made for the repairs of the first and second stories within the amount of the appropriation, and the repairs and alterations being quite as necessary in the third story, supplementary contracts have been made for that portion of the building, payment to be made from the general appropriation for repairs and preservation of public buildings; and new heating apparatus has been supplied therefor.

NEWPORT, R. I., CUSTOM-HOUSE.

The interior of this building having been destroyed by fire on January 21, 1875, temporary provision was made for the accommodation of the customs-officers and the Post-Office Department, and an appropriation of \$11,131.93 having been obtained for the repairs of the building and the construction of a store-house, immediately upon the same becoming available work, was commenced and pushed rapidly to completion and the store-house constructed. The work has been done within the amount appropriated therefor.

Extensive repairs have also been made upon the following buildings: United States custom-houses at Bath, Me.; Cleveland and Cincinnati, Ohio; Machias, Me.; Milwaukee, Wis.; New York, N. Y.; Philadelphia, Pa.; Portsmonth, N. H.; Pittsburgh, Pa.; Suspension Bridge, N. Y.; Saint Louis, Mo.; Saint Augustine, Fla.

United States court houses at Baltimore, Md.; Boston, Mass.; Phila-

delphia, Pa., and Springfield, Ill.

Appraisers' stores at Philadelphia, subtreasury, assay office, and old post-office buildings at New York City, and the branch mint at New Orleans.

Extensive repairs are in progress on the following buildings, viz.: United States custom-houses at Providence, R. I.; Richmond, Va.; Savannah, Ga., and Wheeling, W. Va.

SALES RECOMMENDED.

The following property should be sold, not being longer required for public service, and its care being a source of expense to the Government:

Old Government lots at Astoria, Oreg., Bermuda Hundred, Va., and the Bridewell lot at Chicago, this last having been obtained in exchange for the old custom-house property in Chicago; the branch mint at Charlotte, N. C., marine hospitals at New Orleans, La., Natchez, Miss., and San Francisco, Cal., the first of which was sold during the past year, but the purchaser having failed to meet the terms of sale, forfeited a deposit of \$10,000. I have also to recommend the sale of the old postoffice at New York, the new building being now occupied, and No. 23 Pine street, which is rented as a restaurant, and is in such a dilapidated condition that it cannot be properly repaired. I have also to recommend that the proceeds of the sale of these two buildings may be authorized to be used as a fund for the purchase of a site for a custom-house

in that city.

The demands of the public service require that this building should be commenced without further delay. The present custom-house building never having been intended for the use to which it is now put, is extremely ill-arranged for the purpose, badly lighted, and entirely too small for the accommodation of the customs department, part of which is located in adjoining buildings and part in buildings situated at a very inconvenient distance from the center of business; and large rents are annually paid for this accommodation, poorly suited to the proper transaction of the public business. I am informed by the collector and other customs officers at New York that the expense of collecting the revenue is greatly increased by the necessity of transporting goods to the appraisers' stores, which are located more than two miles from the custom house, and the difficulty of this transportation during the winter months, when the streets are obstructed with snow, is very great; and it has been during this transfer that many of the frauds have been committed which have been most difficult of detection, and by which the Government has sustained heavy losses. The yearly rent paid for the necessary additional accommodation of this department of the publie service amounts to \$143,000; beside which, \$10,000 is annually paid for repairs, which amounts to nothing more than an improvement of private property by the Government.

The present condition of the assay-office in New York City will necessitate the speedy erection of a more suitable building for this branch of I have conferred with the Director of the Mint, who agrees with me in the opinion that a less central location for this building would be equally well adapted to the proper transaction of the work which is carried on in refining the precious metals, and that the injury to surrounding property through the action of the acid fumes connected therewith is so detrimental that it should have weight with the Government in its selection of a proper site for these works. The iron-work of the building in question has become so injured and weakened that, notwithstanding efforts have been made to render it as secure as possible, it is in a very dangerous condition. It is also of insufficient capacity, is ill-arranged, and ill-lighted. A new building, located in a less central position, should be commenced at once, so constructed as to be burglar and fire proof, and that part of the building particularly devoted to the refining should be built of such materials as will suffer no deterioration from the processes employed. On the completion of the new

building the old building and site would realize by sale a sum more than sufficient to defray the expense of purchasing a site and crecting thereon

a suitable building.

Upon my entry into this Office there were in process of execution contracts for cutting granite for the superstructures of several of the largest buildings now being constructed under the supervision of the Treasury Department. These contracts, known as the percentage contracts, provide for the payment to the contractors of the actual cost of all labor and materials used in the work of cutting, dressing, and boxing the stone, increased by 15 per cent. of the same. While there are advantages in this system of executing this very important branch of the service, I am persuaded that it is founded in a mistaken principle, and that so long as the profits to contractors are in proportion to the extent of the expense of their work, the Department will find great difficulty in keeping the cost of the same within reasonable limits.

In view of the fact that nearly one third of all the appropriations made by Congress for the construction of public buildings under this Department is expended in cutting the stone for these buildings, much attention has been given to the stone-cutting, with a view to reducing as far as possible its cost, and while this branch of the work is believed to be still too expensive, yet I am gratified with the results thus far. A new form for reporting the monthly operations at the various quarries has been prepared and adopted; also a new system of exhibiting the various kinds and quantities of cutting upon each stone, with the cost of the same, by means of which the Department will at all times be able to determine whether or not the cost is being kept within the estimate for the same, and also to make comparisons as to the expense of similar work under different contracts. A more vigilant system of keeping the time of mechanics and laborers and the expenditure of materials has been introduced upon all these works, from which good results are expected. There has also been a reduction in the grade of cutting on all the elevated portions of buildings, both on the plain and ornamental work. This alone affords a very great reduction in the cost, without in any degree diminishing the effectiveness of the design, as it is well known that the delicacy with which the material of a building is treated must be diminished in a proportionate ratio as the parts are farther removed from the eye. In fact, an elaboration of the detail-work and fineness of cutting are possible which very greatly detract from the vigor of the result. By judicious superintendence and frequent inspection of the work done under these contracts, it is believed that they may be executed with a fair regard to the interests of the Government.

I desire particularly to invite your attention to a subject which presented itself to me very shortly after my entering upon the duties of this Office. I refer to the manner in which designs are prepared for the public buildings erected under the Treasury Department. These designs have heretofore been made by the Supervising Architect, and have been so made up to the present time, but the very strong reasons which present themselves against this practice have convinced me that it should be remedied as speedily as may be. I have given much thought to this subject, and while I am not now prepared to present for your consideration any specific plan by which the radical defects of this method of procedure in designing the public buildings throughout the country may be remedied, the vital point of any system which may be adopted must be to remove the power from the Supervising Architect to make designs, and restrict his duties to those simply of a supervisory nature. I will,

as concisely as possible, state what reasons have led me to form my opinions in regard thereto.

Experience has shown that it is difficult, if not impossible, to separate the office of the Supervising Architect from political control to a greater or less degree, and thus it is possible that the incumbent may be, both by nature and want of proper study and experience, totally unfit to fulfill this most responsible duty, and the country is liable thereby to be burdened by structures utterly lacking in those architectural qualities which should be found in the works of a great nation. The stamp of inefficiency so imprinted in the national architecture is not of a nature soon to pass away, for not only will it remain itself a monument to a vicious system, but its teachings for evil can never be fully estimated. But should this evil be escaped, there remain yet The immense amount of routine work which occupies the attention of the Supervising Architect, the varied nature of the duties which devolve upon him, and the fact that he is at no time free from interruption, leave him no opportunity for the proper study of the designs which he is required to make. This work is done under all the disadvantages of want of time, want of quiet, and almost entire preoccupation with other matters, which must always result in work of an imperfect and unsatisfactory character. Architecture is an art, and, like all arts, he who practices it successfully must give himself up to it without restraint. No good work has ever been done without severe study, and the artist must be able to throw himself unreservedly into the contemplation of the problem. And, furthermore, the objects for which the buildings erected in this Office are constructed are, with very slight exceptions, so nearly alike, that the difficulty, the impossibility, of endowing them with variety and individuality must be apparent. These points are, in my opinion, beyond dispute, and I cannot, therefore, allow this opportunity to pass without invoking your aid to remedy this state of things. I owe it, first, to myself, for I am before the people to be judged, as other men of my profession are who do not labor under the same difficulties as myself, and if my works fail of that artistic merit which the public have a right to expect, the blame is laid upon me, and not to the false system under which I work, and where it belongs. I owe it, further, to the profession of architecture, whose members have a right to their share in the honor of increasing the dignity and beauty of the art in this country, and whose work must do infinitely more to this end than the endeavors of any one man, be he ever so gifted. And, lastly, I owe it to the public, whose money I am placed here to watch, that it be faithfully and wisely expended, and that the best results attainable from it are achieved. I fail to do my whole duty in this if I remain inactive in this direction; for by some other system than that now obtaining, much better, more artistic and worthy work can be done.

Since entering upon the duties of this Office the force employed has been reorganized, and some important changes have been made, and with good results to the proper prosecution of the public business; and I cannot speak with too high commendation of the faithfulness, energy, and ability of the gentlemen forming my corps of assistants. I would here offer them my thanks for the valuable aid which they have given me in carrying out the works intrusted to my care. While required by the regulations of the Office to work an hour longer in the day than other employés of this Department, amounting in the aggregate to forty-five days a year, they have willingly given their evenings to the Office when the exigencies of the public service required this at their hands, and that without extra compensation. And finally, to you, sir,

I would tender my hearty thanks for the sympathy and support which I have found extended to me from the first day of entering upon my duties here, and for the wise counsel with which you have at all times assisted me. In taking charge of an office the responsibility of which is so great, and which requires such care and assiduity in the proper performance of the duties connected with it, and under circumstances, as you know, of considerable embarrassment, your aid and counsel have added greatly to any success which may have attended my labors, and have greatly increased the pleasure with which my duties have been performed.

I am, sir, very respectfully, your oredient servant,

WM. A. POTTER, Supervising Architect.

Hon. B. H. Bristow, Secretary of the Treasury.

APPENDIX A.

LETTER OF THE SECRETARY OF THE TREASURY APPOINTING COMMISSIONERS TO INSPECT THE UNITED STATES CUSTOM-HOUSE UNDER CONSTRUCTION IN THE CITY OF CHICAGO, ILL., AND REPORTS OF PREVIOUS COMMISSIONS AND PAPERS RELATIVE THERETO, TOGETHER WITH CON-TRACTS FOR SUPPLYING STONE, &c., FOR THE BUILDING.

> TREASURY DEPARTMENT, Office of the Secretary, August 24, 1875.

GENTLEMEN: You are hereby appointed commissioners for the purpose hereinafter indicated.

On the 21st of December, 1871, an act was passed by the Congress of the United States making provision for the purchase of ground and the erection thereon in the city of Chicago, Ill., of a fire-proof building suitable for the accommodation of the custom-house, subtreasury, post-office, United States courts, pension and internal revenue offices, and for that purpose an appropriation was made of two million dollars, to be expended under the direction of the Secretary of the Treasury. By said act the Secretary is required to cause proper plans and estimates to be made, so that no expenditures should be made or authorized for the completion of said building, including the cost of the site, exceeding two million dollars. Under that act, and others supplementary thereto, a site in the city has been obtained by purchase, with the title secured to the Government of the United States, and considerable progress has been made in the construction of a large edifice.

At this stage in the progress of the work it is alleged that defects have been discov-

ered in the foundation of the building and in the stone used in the superstructure.

For the purpose of ascertaining whether these allegations were true or false, a commission composed of three gentlemen, Messrs. William Sooy Smith, George B. Post, and O. W. Norcross, was appointed to examine into the condition of the building, and, after examination, they submitted a report in writing, the conclusions of which are substantially as follows, viz:

1st. That the foundation is too weak to sustain the great weight of the building

when completed, and that dangerous settlement under this weight would occur.

2d. That to make the foundation secure could only be accomplished by a very large expenditure of time and money.

3d. That the stone used in the construction of the edifice was wholly unfit for that

4th. That, if the foundations were perfect, the character of the construction and materials is such that the edifice would not deserve to stand.

Upon the receipt of this report, the Secretary of the Treasury, on the 24th of June last, referred the same to the Supervising Architect of the Treasury, with this indorsement:

"In view of the facts reported by the commission to examine the Chicago customhouse, and of the opinions expressed in the report, I do not deem it expedient to proceed further with the work of construction; nor does it appear to me proper to tear. down the work already constructed, and thus destroy at least a part of the evidence of the alleged defects, without giving Congress an opportunity to cause to be made a further examination of the foundations and superstructure, should it see proper to do Besides, it is by no means clear that there is authority of law for using the unexpended balance of appropriation in taking down and removing the unfinished build-The Supervising Architect is, therefore, directed to take such steps as may be necessary to protect and preserve the building in its present condition, to the end that the matter may be submitted to Congress for such further legislative directions as to that body may seem proper."

Such an indorsement was at that time regarded as not only proper, but, in view of the report of the commission, the only one consistent with the highest considerations

of official duty. A copy of that report will be laid before you.

Subsequent to that date, at the instance of the mayor and council of the city of Chicago, and with the permission of the Treasury Department, another investigation into the condition of the building was made by gentlemen designated for that purpose by the condition of the building was made by gentlemen designated for that purpose by the mayor, and who, upon the completion of their labors, made a report, arriving at conclusions different from those of the former commission. A copy of the report of these gentlemen—Messrs. John M. Van Osdel, E. Burling, W. W. Boyington, O. L. Wheelock, A. Bauer, E. L. Chesbrough, and J. T. Egan—will also be laid before you. Copies of the plans, specifications, and estimates of said building, and such documents as you may wish to examine, in the possession of the Department, will be also fur-

Recognizing the need of an early completion of this very important public work, not only to the Government of the United States but to the prosperity and business interests of the city of Chicago, and at the same time recognizing the responsibility resting upon this Department, and the paramount duty to prevent the sacrifice of a large sum of public money upon a work which may not possibly be safely completed, it has been determined to confide to you the view of these conflicting reports, as a basis of action for this Department or for information to Congress, and that your investigations may

be full and accurate, your attention is invited to the following points:

1st. To the nature and condition of the foundation of the building, this being of first and paramount importance; and that by all such tests and appliances in mechanics and engineering as may be advisable and necessary, you will ascertain and report whether it be of the proper level, on firm ground, and of adequate strength in all respects to support the building proposed to be erected on it; and if not, how and in what way, and at what probable cost, the defects of the foundation may be relieved.

2d. The nature and quality of the stone out of which the edifice is being constructed, whether it has the durability, strength, and other qualities desirable for such a struc-

3d. To the indications shown of the sufficiency or otherwise of the stone and other

materials in so much of the structure as has been accomplished.

4th. Whether any changes in the plans, or the material to be used in the construction of the building, should be made; and if so, what; and an estimate of the probable cost of such changes, adding such suggestions as will give practical effect to the conclusions you may reach in connection with the whole matter thus confided to you.

Entertaining confidence in your intelligence, impartiality, and qualifications to discharge these duties, it is hoped that you will, as a commission, effect an organization, and proceed at once to the city of Chicago, and patiently and thoroughly investigate the matters hereby confided to you, informing yourselves by all such means as you may deem proper to adopt, as well as by your own personal examination; and with the hope that your conclusions, whatever they may be, shall vindicate the public interests, and satisfy the judgments of all those interested in their maintenance,

I am, very respectfully,

B. H. BRISTOW, Secretary.

General James H. Wilson, Civil Engineer, New York City. General W. B. FRANKLIN, Civil Engineer, Hartford, Conn. JOHN MCARTHUR, Jr., Esq., Architect, Philadelphia. Dobbins, Esq., Builder, Philadelphia, Pa.

REPORT.

Washington, D. C., June 15, 1875.

Sir: The commissioners appointed "to examine and report upon the condition of the United States custom-house in course of construction at Chicago, Ill.," and to report "if, in their opinion, it is practicable to continue said construction," met at the site of the building on the 2d day of June, 1875, and carefully examined the condition of the building, the materials of which it is constructed, and the nature of the strata underlying the site. A test-pile was driven, borings were made, the sustaining-power of the stratum upon which the concrete foundations rest was tested, levels were taken, and the building was carefully examined. Serious cracks were discovered in the walls and movements in the stone-work, which have caused, in various places, openings of joints, settlements of voussior of arches, fracture of lintels, crimping of vertical joints, and spawling of stones in the jambs of openings. The building appeared to have settled, and, on examination, the concrete foundation was found badly cracked.

The location of the borings is shown on Drawing A, and the nature of the materials passed through is shown by the sections of the substrata underlying each front of the building, constructed from these borings, and also shown on Drawing A. The detailed report of the borings is herewith submitted.

Drawing B shows the levels taken under the direction of the commission-June 9, 1875.

Table I shows the levels and the movements that have taken place since the sill course was laid.

Assuming that this course and the iron columns in the interior of the building were set as shown on the plans of the building, and that no movement has taken place in these columns upon which comparatively slight weights rest, (as this course was necessitated by the want of any records of levels, if any were taken, of the sill course when it was laid, and while it is possible that stones were not set with exact accuracy upon the same level, and a slight movement of the columns may have taken place,) the table is believed to be sufficiently correct to afford valuable information. The weights of every portion of the building as it now stands, also the weights of each portion of the building when completed, according to the plans, were carefully computed.

These weights and the area of the stone footing courses sustaining them are shown

on Drawing C.

Table II is a record of the pile-driving, and Table III shows result of the tests of the

bearing capacity of the stratum upon which the foundatious rest.

It will be seen from Drawing A and from the report of the borings made that below the filling or made ground there is a stratum of loamy clay of variable thickness. This clay was uncovered at many places, and found so soft that it could be readily cut and removed with a spade, which could be forced into it to its full length by a workman without difficulty. It contains decaying vegetable matter. Below this clay, throughout about one-third $(\frac{1}{3})$ of the area covered by the building, there is a deposit of mud, varying in depth, as shown by the borings and sections, from three (3) to fourteen (14) feet. This mud is so soft that the weight of one man is sufficient to force an auger one-and-a-half (1½) inches in diameter through it, after overcoming the resistance from friction on the rod passing through five-and-a-balf (5½) feet of loamy clay. Without this friction it is believed that the auger and rod would have sunk through the mud to the bottom by their own weight. This mud was semi-fluid and equally soft wherever found.

Underlying the mud there is a stratum of clay which, at the depths shown by the table and sections, varies from twelve to thirty-two (12 to 32) feet; it is stiff and firm, and so far as the samples brought up indicate, free from admixture of vegetable matter. It was not deemed necessary by the commission to bore through this stratum, but from the borings previously made it appears that it extended to a depth of at least fifty (50) feet.

The city engineer of Chicago, Mr. E. S. Chesbrough, whose valuable services were kindly tendered to the commission by the mayor of the city, informed the commission that this lower stratum of clay has an undulating surface, and that the depressions in the surface are in many places filled with mud or quicksand, this mud or quicksand being overlaid by the loamy clay passed through by the borings. This statement was corroborated by Messrs. Van Osdel and Boyington, architects of high standing and long experience in Chicago.

The borings and sections show the presence of two of these mud deposits under the building—the first extending along nearly the entire Jacksou-street front and one-half the Clark-street front of the building; the second underlies the northwest corner. On the removal of the concrete at a point just inside the exterior walls at the northwest corner of the building, the material upon which the concrete rested was found so soft that two men forced the auger down to a depth of ten (10) feet, by their weight alone, without difficulty.

The worst movements of the walls have taken place over these mud-deposits, and it seems wonderful that the walls, even with their present weight, stand at all on such insecure foundations.

The thickness of the clay-crust under the concrete, and overlying the mud, varies from 11 feet to 6 feet only, as shown by the borings and sections.

The tests of the sustaining power of the loamy clay upon which the concrete rests

reveal the fact that it begins to yield under a pressure of from 3,600 pounds to 3,804 pounds per square foot, the maximum resistance being obtained where the surrounding materials were compressed by walls. If this pressure upon the adjacent areas were increased and more widely distributed, the resistance offered by each square foot would doubtless be increased. It is, therefore, not assumed that the maximum resistance to the pressure of the walls offered by the areas adjacent to their center lines may not exceed the measure here given, but the yielding of the soil under this pressure is sufficient to indicate that, even without the presence of mud-holes, it would be extremely hazardous to rely upon this soft clay to resist the weights of the heaviest parts of the building when completed, amounting to four tons per square foot of the area of the concrete-foundations.

The commissioners also find that it is customary to consider the ground in the vicinity as capable of sustaining a weight varying from one to two tons per square foot; but with this weight a uniform settlement is expected and usually provided for. During the experiments made, the weights were gradually increased to six tons per square foot; and the total settlement under this weight, in seventeen hours, was 4.19 inches. This settlement seems to be due both to compression and displacement of the clay tested. It continued after the first yielding took place without any further increase of the weight, but time did not permit the commission to establish the ultimate settlement for a given load.

The test-pile was driven in a hole that had been dug to a depth of 12 feet below the surface, and within 2 feet of another pile that had been previously driven. It penetrated to a depth of 36 feet 7½ inches, or 48 feet 7½ inches below the surface of the ground, and 36 feet 1½ inches below the bottom of the concrete. At this depth the sustaining power of the pile, by the rule commonly employed, would be twenty tons.

A full statement of this pile-driving is herewith submitted.

The foundations of the building, as shown by plans and as ascertained by the examination, is a bed of concrete, varying in width with the thickness of the walls, and about 2 feet wider than the footing-courses, and of varying thicknesses from 2 feet 6 inches to 4 feet. Where porches occur, the concrete appeared to be spread to the requisite distance beyond the footing-course on one side, and on one side only, though not so shown on the plans. As the angle of fracture of good concrete under pressure of a wall is 45°, it should project beyond the footing-courses on each side a distance equal to its thickness, or in this case from 2 feet 6 inches to 4 feet. But it does actually project beyond the footing-courses only about one foot. This error is not material, as it appears impracticable to spread the bearings sufficiently with concrete to provide the necessary resistance to sustain the weight of the completed structure at any reasonable cost. The quality of the concrete is good, but it was carelessly left without adequate protection from the effects of freezing during, last winter, from which cause, in combination with unequal settlements, the cracks in the concrete and walls have occurred.

On the concrete-foundations two courses of Joliet limestone are laid, which are of good quality and in good condition. From this point, all basement piers and walls and the entire outside of the building is of Buena Vista sandstone. The stones of basement walls and piers vary much in quality, having to all appearances been laid up with an inferior quality of stone, which is much decomposed and disintegrated in some in-Laminæ have in some cases scaled to a depth of a quarter of an inch from the surface, and over the entire surface, and on all visible sides of some stones. Above the basement the stone is in much the same condition, except that it is finely cut, and more care seems to have been taken in its selection; some of it is, however, disintegrated and scaling off in the same manner on all sides of the building. The stock used for the cut-stone work is found to vary in color from a light buff to almost black. An attempt has been made to render this aspect less apparent by painting the surface of many of the stones. The dark stones are impregnated with petroleum, which exudes from the stone, disfiguring its surface, and in some cases running over the face of the stone below. Spots of oxide of iron appear upon the surface of a large majority of the stones. Under atmospheric influences these spots have undergone a chemical change, becoming very much darker in color, and in some cases causing a bursting out of the stone. Certain stock was found to contain fossil impressions of a former vegetable growth, which impressions show on the surfaces as serious blemishes, and had been filled with an artificial cement. To hide these defects—possibly to prevent further disintegration—patches of the same stone have been so frequently inserted, that in prominent portions of the work the stones which have been set long enough to develop their inherent defects are very generally patched or marked for the patching.

As an illustration of this system of repairing defects and removing blemishes, a series of photographs of the ceilings of the principal porches is submitted with this report. As many as twenty-two patches have been counted in one of the stones photographed. These patches are inserted with wonderful accuracy, and are in some places clamped in with iron, but are generally held in position with shellac or some similar material. The failure of this cementing-material may at any time permit a patch to

drop out, and may cause serious accident. A photograph is submitted showing a patch weighing twenty-six pounds which has fallen from the sill of the west front. Spawls which have been broken from the stones were found to be fastened in their places with a similar glue. These were in some instances easily removed by inserting a knifeblade in the joints. The mortar used in the construction of the walls was found to be poor in quality, the sand being very fine and deficient in sharpness.

In order to determine if the defects noticed in the cut-stone work were inherent to the material, if the stock could have been selected from the quarry of proper quality. for so important and enduring a structure, the commission carefully examined the same material in the yard and cutting sheds and in buildings in Chicago. It thence proceeded to Cincinnati, where the same material has been for many years most extensively used, and noted the action of time and of its less severe climate upon the stone.

They find that the same defects exist in all cases to a greater or less degree, but in-nost cases to a far less extent than in the stock for the Chicago custom-house. While the commission were able to distinguish three separate laminæ that had peeled off from the same surface of the stone in the Chicago custom-house during the brief time since it has been laid, it is of the opinion that this rapid disintegration is due, in some degree, to the use of stone in the building before it was properly seasoned. Even with this seasoning, the observations made by the commission go to show that the disintegrating process will go on when the stone is exposed to moisture and freezing, and the time required for the large dark-colored stones to bleach out to a uniform color would be so great as to constitute an insuperable objection to its use.

The commission thence proceeded to the Buena Vista quarries. They found that the stone exists in a horizontal stratum, running into hills which have abrupt slopes. stone lies on a clay bed, and is covered with deep strata of earth, shale, and small beds of sandstone. The shale is impregnated with petroleum. The stone, for a certain distance from the outcrop, is light in color. Thence, for a limited distance, it is of the best quality that the quarry affords. Beyond this point it is impregnated with petroleum to a greater or less extent, and is of inferior quality. The examination made has led the commission to the opinion that, while the Buena Vista sandstone is a suitable and reasonably durable material for structures where stones of the usual dimensions are used, it is impracticable, at any reasonable expense, to secure a sufficient amount of the best stock in the large dimensions and quantities required by the design for the Chicago custom-house building.

The best examples prove, and it is admitted by those well acquainted with the nature of the stone, that if thoroughly wetted by absorption of moisture upon the ends, beds, or back, as in the case of the under side of projecting courses in which the pointing has become defective, and if placed in a damp situation, disintegration of the surface is inevitable.

The commission would state that every opportunity was afforded by Mr. Mueller, the contractor for the stone and the owner of the Buena Vista quarry, and all of his assistants, for a thorough examination of the stone and the quarries furnishing it.

The iron-work of the building, though drawn somewhat out of line by the settle-

ments that have occurred, is good.

A report of a chemical analysis, and a memorandum accompanying it, found in the Office of the Supervising Architect, is herewith submitted, from which it appears that such disastrous effects of moisture and freezing upon the stone used in the custom-house at Chicago as were observed by the commission were clearly predicted by the chemist who made the analysis of the stone when its selection for the building was under discussion. The correctness of this analysis, and of the inferences drawn from it, is further proved by the aralysis, with the addition of Brard's test, recently made by the same chemist, which is berewith submitted.

From the foregoing statement of the facts observed, the commission is driven, how-

ever reluctantly, to the following conclusions:

First. If no mud-holes had been found underlying the building at slight depths below its foundation, the clay upon which this foundation rests is too weak to sustain the great weight of the building when completed, and dangerous settlement under this weight would occur.

Second. Owing to the existence of these mud-holes of the depth and in the positions shown, the absolute failure of the building is rendered inevitable, unless means should be adopted to provide a firm foundation for the building, which could only be done by a very large expenditure of time and money.

Third. The stone used in the construction of the building having disintegrated rapidly already, being of various colors, and being patched, puttied, and painted, is totally unfit for the purpose.

Fourth. If the foundations were perfect, the character of the construction and materials of the building is such that it would not deserve to stand; so that any costly effort to make it good would be but added folly.

The commission therefore reports that it is of the opinion that it will be imprac-

ticable, unadvisable, and a waste of time and money to proceed further with the construction of the building.

In conclusion, the commission feels constrained to express its surprise that the means now used to reveal the dangerous character of the foundations and the defects of the stone of which the building is constructed were not employed before the building was commenced or the stone contracted for, and its still greater surprise that the dangers that were revealed by the partial examinations, made after the work was commenced, were entirely unheeded. Upon whom the grave responsibility rests for such neglect it is not the province of the commission, under its instruction, to inquire.

Very respectfully, your most obedient servants,

WM. SOOY SMITH, Civil Engineer. GEO. B. POST, Architect. ORLANDO W. NORCROSS, Builder.

Hon. B. H. Bristow, Sccretary of the Treasury.

THE CUSTOM-HOUSE—REPORT OF THE COMMISSION OF CITY ARCHITECTS—ELABORATE TESTS OF THE NATURE OF THE UNDERLYING SOIL—THE FOUNDATION FOUND ADEQUATE TO SUPPORT THE STRUCTURE—CAUSE OF THE SCALING OF THE STONE—THE CRACKS CLOSING UP—A VISIT TO THE BUENA VISTA QUARRIES—CONTINUANCE OF THE WORK RECOMMENDED.

The following is the report of the architectural commission appointed to investigate the new custom-house:

To the honorable the Mayor and Common Council of Chicago:

GENTLEMEN: Your committee appointed by his honor the mayor to make a thorough examination of the foundations of the custom-house, and to report to the council, in writing, whether, in their opinion, the said custom-house can be safely completed on its present foundation, beg leave to report that they have performed the duties imposed upon them in a careful and thorough manner. They have examined the building, its foundations, and the substrata underlying the same. At the request of the mayor, the committee have extended their investigation so as to include every point that has been raised in regard to the substantial character of the building. A delegation of the committee visited Cincinnati, where the Buena Vista stone has been for many years, and is now, extensively used for buildings of the best class. In their examination of the building every facility was given them by General Holman, the superintendent in charge of the work. By request, the Department at Washington furnished a tabular statement of the weight of the exterior walls of the building when completed. General William Sooy Smith kindly furnished a copy of the levels taken by a former commission, of which he was a member; also maps and sections of the substrata prepared by that commission.

Mr. Alexander Wolcott, our well-known county surveyor, was employed to make a survey of the building, and report how much, if any, the water-tables varied from a true horizontal plane. The north, south, and east fronts, including the four corners of the building, were found to be

PRACTICALLY LEVEL,

from the highest to the lowest point, being less than half an inch, and the four corners varying not more than one-eighth of an inch. These variations on so large a building cannot be detected without the aid of instruments, and may be taken as practically level. The foundations exhibit no uneasiness under the present level.

TWO TEST-PITS

were excavated, one of them 30 feet west of the southwest corner of the building. A firm stratum of clay was found on a level with the base of the concrete foundation. The stratum was 3 feet 6 inches thick. Underlying this is a stratum of soft blue clay 10 feet deep; then a firmer clay, the depth of which was not ascertained. The testpit at the northwest corner of the building reached the firm clay at the same depth as at the southwest corner. This firm stratum was found to be 9 feet deep at this point; then the soft-clay stratum 5 feet deep; then the firmer clay, the depth of which was not ascertained. The soft-clay stratum is uniform in density, and its consistency similar to modeler's clay. This stratum is denominated mud in a former report by the United States commission, as tested by borings with a sharp-pointed 1½-inch auger, which could be forced through the stratum with slight pressure, (and is so reported to the present commission by the same borer.) The commission caused test-borings to be made in front of the Pacific Hotel and Lakeside Building. These two heavy buildings

face the west front of the custom-house, about 120 feet distant. The soft-clay stratum was found at the south corner of the Pacific, but the north corner of the building appeared to have no soft-clay stratum under it. The weight of the building was ascertained to be two tons to the square foot of its foundations. The soft clay was found in front of the Lakeside Building, also underlying the Honore Block, facing the north front of the custom-house. None of these heavy buildings show any signs of unequal settlement or of any uneasiness on the foundations.

THE WEIGHT.

From the tabular statement furnished by the supervising architect, it appears that there are eighty piers in the circumscribing walls of the building, which, when completed, will load the foundations in the aggregate with 73,325,000 pounds; adding to this the weight of the footing-stones and bed of concrete, 8,307,000 pounds, making the total weight of the walls 81,692,000 pounds. This weight is carried on 16,614 square feet of concrete base, making an average weight of 4,917 pounds pressure on each square foot of the foundations, or 2½ tons nearly. But there are ten piers which press the foundations with weights varying from 5,000 to 6,000 pounds per square foot. It is practicable, at a moderate cost, to widen the bearing surface of the concrete under the heavier piers, so that the pressure will be equalized sufficiently to avoid any danger of unequal settlement hereafter. The committee tested

THE SUPPORTING CAPACITY

of the substrata in three different places about the building. The first test was made in the area of the south end of the Dearborn-street portico. A pit was opened through the concrete floor of the area, about 3 feet square, down to the substratum of clay on which the building rests. A foundation of 6-inch oak plank, 2 feet wide and 2 feet 4 inches long, covering an area of $4\frac{2}{3}$ square feet, was firmly bedded on the clay. A post of 12 by 12 inch timber was placed vertically on this foundation platform. A lever was formed by three 15-inch 'iron beams, 33 feet long, set edgewise, resting on an iron plate on top of the post. The fulcrum, 7 feet 3 inches from the post, rested under the end sill of the portico. The weight of the lever resting on the post gave a pressure of 11,032 pounds, the post and platform weighing 900 pounds; load on the foundation, 11,932 pounds, equal to 2,557 pounds on each square foot of the base. A depression of eleven-sixteenths inch took place. A load of 3,960 pounds was then placed upon the same at a distance of 27 fect 9 inches from the fulcrum, giving an additional pressure of 16,249 pounds, making the load 28,181 pounds, equal to 6,839 pounds on each square foot. This load caused an additional compression of seven-sixteenths inch, making a total settlement of $1\frac{1}{2}$ inches; the load remained forty-one hours without any further depression. An additional load was then placed on the lever of 2,640 pounds at 25 feet 9 inches from the fulcrum, adding 9,376 pounds, or a total weight of 37,557 pounds, equal to 8,048 pounds on each square foot of the foundation. The settlement under this additional load was three-eighths inch. This load remained three days without any further settlement.

The committee then selected for

THE SECOND EXPERIMENT

a position at the building 30 feet distant from the same. This spot has been reported as nearly in a stratum of "mnd" 14 feet deep. A pit was excavated 13 feet 3 inches deep, at which point the clay stratum was reached, being on a level with the bottom of the foundations of the building. A platform and post were arranged the same as in the first test, having the same area of 4^*_8 square fect on the clay stratum. A platform was constructed on the upper end of the post to receive the weight necessary for the test. The first load was 4,467 pounds, equal to 957 pounds per square foot. There was no perceptible settlement under the load. The weight was increased to 9,465 pounds, or 2,028 pounds per square foot, and in half an hour the depression was three-sixteenths inch. After standing fifteen hours the depression was three-thirty-seconds inch additional. The weights were then increased to 4,050 pounds per square foot, which, in two and a half hours, gave one-quarter inch further depression. Then a load of 28,871 pounds, equal to 6,186 pounds to the square foot, was placed on the pier. This weight gave an additional settlement of 1^*_3 inches, at which it remained stationary for forty-eight hours, making a total settlement of 1^*_4 inches.

A THIRD TEST

was made in front of the east portico about 20 feet east of the same. A pit was excavated to the clay stratum on a level with the foundations of the building. Three iron beams, weighing 1,666 pounds each, were placed vertically in the pit. A block of oak, 10 by 12 inches, was laid upon the clay, and the beam rested upon the block. This pressure equaled 1 ton per square foot. The block was pressed into the clay one-quarter inch in ten minutes. The block was then removed, and another, 5 by 12 inches, placed upon the already compressed clay. The pressure on this block equaled

2 tons per square foot. A depression of one-quarter inch took place; the block was taken out, and another, 5 by 8 inches, put in its place, giving a proportionate pressure of three tons per foot. The settlement of this block was fifteen-sixteenths inch, after

standing an hour and a half.

The next experiment was with a block 5 by 6 inches, representing 4 tons pressure to a foot. An additional settlement of nine-sixteenths inch took place, making the total compression, from first to last, 2 inches. Then the 5 by 6 inch block was placed upon the clay at a point that had not been compressed, and the weight being applied, it settled in fifteen minutes exactly 2 inches, being the sum of the preceding four experiments. The data obtained from the experiments would lead to the conclusion that the foundations, under their present load, have compressed the strata, and that there has been a settlement of the walls; also, that

A FURTHER COMPRESSION

will take place under the additional load required to complete the building. From the best evidence the committee could obtain, they believe that the past compression is about 1 inch, and that a further settlement of one-half or three-quarters inch will take place from the additional load that will be placed upon the walls. The present compression is uniform, and has worked no injury to the structure. The continuation of this work, in accordance with the plan, will load the piers unequally, therefore it will be necessary to equalize the weight upon the foundations.

will be necessary to equalize the weight upon the foundations.

The committee has further examined the substrata by drilling through the concrete floor in twenty different places, and, by pressing a ½-inch pointed steel rod down into the strata, find it very variable. In some places the rod was easily thrust downward from the bottom of the concrete, and in other places the efforts of five men could not force the rod down more than 2 feet; but, from the fact that the present weight of the building shows no unequal settlement on this variable resistance, it is presumed that

the additional weight required may be carried safely.

THE LARGE CRACK

observed in one of the interior walls was, in their opinion, caused by allowing the frost to pass under the wall, which caused its upheaval and consequent fracture. This crack was open at one time 1½ inches. When the frost retired the crack closed as tightly as possible. The closing of the fracture is proof that it was not caused by any settlement of the adjacent parts of the building, and is confirmed by the fact that the water-table remains as truly level as when first placed in position. The lifting of this has disturbed the vertical position of the stone pier against which it abntted. On the subsidence of the frost the pier resumed its original position very nearly, it being five-eighths of an inch in its entire height out of plumb, (its height is about 30 feet.)

All other parts of the building are

IN PERFECT ALIGNMENT.

There are also two small cracks in the interior walls of the building, which are attributable to the action of the frost and to the lateral thrust of the large derricks placed upon the second floor of the building. There are also slight indications of movement, such as gaping and cramping of the joints of the water-table of the west front, (where the superstructure is wanting,) which is clearly attributable to the action of the frost, as the joints have closed on the subsidence of the frost. The crack in the concrete running parallel to the west wall is attributable to the same cause. No transverse fractures of the concrete forming the foundations were found.

In regard to

THE CUT-STONE,

the commission is of the opinion that the large stones forming the ceilings of the porticoes, and a few others in different parts of the building, are inexcusably patched. They should be removed, and proper stones put in their places. As to the quality of the stone being used in this building, the committee can only judge from what was seen in the premises, and from such buildings as have been constructed from the same materials in this city. It appears that many of the stones in the base course of the superstructure, and in several of the basement piers, throw off

A THIN SCALE,

and this does not appear to be confined to what is supposed to be an inferior quality of stone, but takes place in stones supposed to be of the best quality. Upon careful examination it was found that stones that have an opportunity to season or become perfectly dry exhibit no signs of disintegration. The great number of stones piled around the building, prepared and ready for setting, are exposed to the air on all sides, and were not injured by the action of the frost of last winter, and none of these stones show any signs of scaling or disintegration, and not even in the delicately-sculptured work found in many of them. The lamination of the stones in the building occurs

42 P

principally in the center of the large blocks. The external angles of the same having become dry, have in no case deteriorated. The lamination appears in some cases in the internal angles of the stone-work where the stone has less opportunity to dry or become seasoned. Comparatively few stones placed in the work are of inferior quality. They can be removed, and proper stones put in their places without difficulty. It is believed by your committee that after the stones have become seasoned, no further lamination will take place other than what is common to all sandstones. For further information in regard to the qualities of this stone, or the qualities that may be obtained, the committee would refer to the report of the delegation sent to Cincinnati to examine this question, which report is appended hereto.

Your committee would further report that the concrete and the workmanship of the

building, including the cut-stone, are unexceptional.

IN CONCLUSION.

your committee would say that, in view of the tests and full examination given the premises, as detailed in the foregoing report, it is their opinion—
1st. That there is no evidence of weakness or instability in the present structure.

2d. That the foundations are sufficient, with the precautions suggested in this report,

to carry the load contemplated by the design. 3d. That the Buena Vista stone, carefully selected, will be as durable as any sand-

stone that can be obtained. The commission is of the opinion that work ou the building could be resumed, (with the precautions suggested.) and carried on to completion.

Respectfully submitted.

THE BUENA VISTA STONE.

The following is the report of the delegation appointed by the commission of local architects to visit the city of Cincinnati, and the Buena Vista quarries, for the purpose of examining the buildings and other works in which Buena Vista stone has been used, with a view of ascertaining its qualities as a building material; also, to ascertain whether the quarry is capable of yielding sufficient stone of required quality to complete the new custom-house:

The undersigned would respectfully report that they spent two days in their examination of the buildings in Cincinnati built of Buena Vista stone. Many of the buildings have been standing twenty-five to thirty years, and many others of more recent date. On close examination we found that very few stones had scaled or laminated. We say very few, because we found in many large fronts but one or two defective stones, and in none did the scaling or disintegration appear to be general. We were assured that the scaling or lamination takes place during the first or second year after the stones are placed in the walls. The scaling is so slight and so seldom that a glance at the buildings does not detect it, but on close examination shows that a few of the stones are defective.

The architects, builders, and proprietors in Cincinnati are the persons best acquainted with this stone, and they continue to use it in all their buildings requiring stone-work, giving it the preference over any other stone. Mr. D. Siuton, a wealthy proprietor and an old resident of Cincinnati, has many magnificent buildings built of this stone. He is about to build a watch-tower for the use of the fire-department, and present it to This tower will cost \$50,000. He expects to leave it as a monument, and believes it will be enduring. It will be of Buena Vista stone. Mr. Sinton very kindly pointed out to us very many buildings built of this material, and gave us the dates or time of their erection. From our observation and the information given us, we are satisfied that the few defective surfaces of stones in the building originated from causes other than from any inherent defect in the stone itself. They may have been placed in the building iu an unseasoned condition, or the moisture from the brick-work placed against them may have caused the scaling of the surface. And, as no subsequent deterioration takes place after the first or second year, it would seem that it is not from any natural defect that such lamination occurs. We also examined the piers of the supension bridge at Cincinnati. They are of sandstone, and were obtained from several different quarries, many of them from the Buena Vista quarry. The contract did not require the stone to be of the best quality obtained at these quarries. Consequently, there are many stones used in these piers that would be rejected for first-class building

The piers below the roadway are rock-faced, and show very little disintegration. Above the roadway the stone is busn-nammered, and nero many have some were informed that the lamination took place soon after the piers were finished, and that for several years no fresh lamination bas taken place, and it is believed that the stone grows harder each succeeding year. The stone-cutters are very reluctant to use stone taken from old buildings to be worked over, on account of its excessive hard-

We spent one day in examination of the city ledge in the California quarry at Buena sta. The outer edge of the ledge for some 8 or 10 feet is of a buff color. All other parts appear to be of a gray or bluish tint, and occasionally of a darker color, owing to the presence of petroleum in the stratum. The quantities of stone that might be immediately obtained from the ledge already stripped would be more than sufficient to complete the custom-house. While at Cincinnati we visited Mr. Mueller's stone-yard, where we found over 100,000 feet of large blocks of stone said to have been quarried for our custom-house. The United States commission refused to visit this yard, where they could have seen a quantity of stone that would go far toward the amount required. to complete the building.

Respectfully submitted.

JOHN M. VAN OSDEL. A. BAUER.

REPORT OF COMMISSION APPOINTED BY THE SECRETARY OF THE TREASURY TO EXAMINE AND REPORT UPON THE CONDITION OF THE NEW CHICAGO CUSTOM-HOUSE, TOGETHER WITH INDORSEMENT OF THE SECRETARY THEREON, AND RECORD OF THE PROCEEDINGS OF SAID COMMISSION.

REPORT.

PHILADELPHIA, PA., September 23, 1875.

SIR: The undersigned, a board appointed by you on the 24th ultimo to investigate

the Chicago custom-house, make the following report:

They met at Chicago on the 3d instant, and immediately commenced the investiga-This consisted in a daily critical examination of the building and its foundations, as to their permanence and stability; the stone of which it has so far been constructed, as to its qualities, appearance, workmanship, apparent durability, &c.; in interviews with the members of the two commissions which had previously reported upon the building, and with persons who are and have been employes on the work, and citizens of the place—architects, surveyors, and builders, who, by long residence and experience, were considered by the commissioners to have such knowledge as would guide them in forming correct conclusions.

And the commissioners desire here to express their thanks to all with whom their duties have brought them in contact for the uniform frankness and kindness with which they have been treated in the course of the investigation, often at the sacrifice of valuable time, and feel particularly under obligations to Mr. Hannaford, present superintendent of the custom-house, and Mr. Holman, assistant, for the energy and ability with which they have carried out the requests of the board.

A journal of the proceedings of the board, and record of the testimony taken by it, and of its doings, have been made by the secretary, and accompany this report. You

are respectfully referred to them for detailed information.

With regard to the four points to which you direct their attention in the letter of appointment and instructions, the commission have arrived at the following conclu-

The ground upon which the foundation of the building rests was, by our direction, thoroughly tested by digging, boring, and applying known weights upon known areas, thus giving us, as we believe, a thorough knowledge of its nature, &c.

Your commission find that the building is underlaid throughout its whole extent with a compressible stratum, composed of a mixture of clay, sand, and water, varying in

thickness from twenty to twenty-five feet, below which is a hard blue clay

They are of the opinion, after much careful deliberation, that the foundation of the building should in the first instance have been carried to this hard blue clay either by piling or masonry, and that had this course been adopted there would never have been any question concerning the safety of the building. As it is, the building rests on a continuous mass of concrete, varying in thickness from three and a half to four feet, covering the whole area of the building except the central and corner spaces and some of the areas. The concrete is excellent, and distributes the pressure over an area

materially greater than that of the footing-stones of the piers, so that the pressure per square foot on the ground below will probably not be greater than 2,000 pounds. The result of the tests applied by the board shows that this ground will bear a pressure of 4,000 pounds per square foot without material disturbance.

Your commission are of the opinion, too, that the weight of the building can be much reduced, and recommend that such reduction be insisted upon most strenuously.

The commissioners therefore report that, in their opinion, the foundation of the building is not on firm ground, but that with the modifications already proposed, and the alterations of the foundations hereinafter mentioned, the defects in the foundation

may be remedied.

The absence of reliable bench-marks, and the consequent confusion in the levels prevented the board from determining whether the foundations vary from the original level; but a comparison of all the levels taken by the three boards convinces them that the building may be said to be really level in itself—the extreme difference of level in the four corners being less than one-half inch, while at three corners the levels only differ by .05 inch. The greater height of the west side as compared with that of the other three sides is due to an upheaval by frost, but on account of the absence of bench-marks, already mentioned, the board is unable to state positively whether there has been settlement or not. They are, however, of opinion, from the general appearance of the building, as well as from the general uniformity of level, that there has been so far no material settlement, although some settlement may be apprehended in the future progress of the building. If, however, the precautions suggested by the board be adopted, they are of the opinion that such settlement will be nearly uniform, and will not materially interfere with the stability of the building.

We therefore recommend that wherever there are voids in the concrete-foundation

We therefore recommend that wherever there are voids in the concrete-foundation inside the area-walls they be filled in with a uniform depth of four feet of concrete; that the concrete under the building be left undisturbed; and that the entire surface be covered with sufficient concrete to bring it to the level necessary to receive the flooring; and that all the necessary drainage and sewerage of the building be completed

as the additional concrete is laid.

Second. The nature and qualities of the stone of which the edifice is constructed—

whether it has the durability, strength, and other qualities desirable.

The board are of opinion, after a careful examination, that the stone is not that which they would have selected for such a building, had they been designated to make a selection, for cheaper and better stone could have been obtained. But on account of the fact that a large amount of money has already been expended in the purchase, cutting, and setting of the stone, three-fourths of the whole quantity necessary having been delivered and wrought; that it has, in this building and in such structures as the board have seen, the apparent durability of ordinary sandstones, and that its strength is sufficient for the purposes of the building, they do not think that any change should now be made in the stone.

Third. The indications shown of the sufficiency, or otherwise, of stone and other

materials so far.

The opinion of the board as to the sufficiency of the stone has been given in what has been said in their answer to the second point. As to the other materials, the brick is good and well laid; the concrete is well made and faithfully placed; and the ironwork is good and well fitted, though excessive in quantity.

Fourth. Whether any changes in the plans or the material to be used should be made,

and if so, what; and an estimate of the probable cost of such changes.

The board are of opinion that the pier on the corner of Clark and Adams streets and the two adjoining piers on Clark street should be taken down to the sill-course of the first story, their sides being out of plumb; that the stone coverings or roofs of the porticoes should be removed, and iron beams and brick arches substituted, and the ceilings finished on the under side with iron; that the stone-work on Clark street should be carried up to the level of the other work as soon as possible; and, in the further progress of the work, the walls should be kept as nearly level as practicable; that the dressing of the stone above the second floor, and wherever it may be practicable, be materially cheapened. That the Supervising Architect of the Treasury be requested to reduce the weight of the building above the second story, and to omit all stone-work above the line of the horizoutal cornices, which they believe can be made without injury to the architectural appearance of the building or its usefulness for the purposes of its erection. In reducing weights, the principle of equalizing the pressure per square foot on the footing-stones should be adopted. The board lay great stress upon this recommendation, and believe that the money saved by the proposed reduction of weight and cost of finish will much more than compensate for the expense which would be incurred by the additions recommended to be made to the foundation.

In answer to the direction to make such suggestions as will give practical effect to the conclusions at which they may arrive, they add to the recommendations made under

the first head, as follows:

That all stone now upon the ground, or yet to be delivered by the contractor, shall.

be rigidly inspected, and none placed in the building which do not come up to the requirements of the contract; and such stone now in place as have been patched in an unsightly or insecure manner, or which may have seriously disintegrated or broken, shall be replaced by stone which conform to the requirements of the contract. And the discolored stone now in the walls shall remain in the building until its completion, when such as have not bleached sufficiently shall be replaced, or refaced, by recutting or substitution. That the concrete-foundation shall be thoroughly secured against frost, and that no masonry-work be done after frost sets in or while it remains in the soil. That permanent bench-marks be immediately made, by driving one or more piles firmly to the blue clay in proper places, and that the superintendent be required to refer the levels of the building to these bench-marks at regular intervals of time, and keep a record of the results. That the waste of the main cornice of the first story be protected by a covering of sheet-copper or some other suitable appliance.

The board are also of opinion that the enormous cost of the stone-cutting is due in a

great degree to the mistaken principle on which this contract was made, in which the larger the outlay for labor, the greater the profit to the contractor.

Finally, our board are of the opinion that the suspension of the work on account of the apparently dangerous crack in the wall, and the general appearance of the building after its winter exposure, without due protection and care, was a necessary precaution for the protection of the interests of the Government; but we see no reason against the immediate resumption of the work in accordance with the suggestions herein

> W. B. FRANKLIN, Chairman. J. H. WILSON. JOHN MCARTHUR, JR. HENRY WHITESTONE. NATHANIEL J. BRADLEE. HENRY KENNEDY. R. J. DOBBINS.

Hon. B. H. Bristow, Secretary of the Treasury.

[Endorsement.]

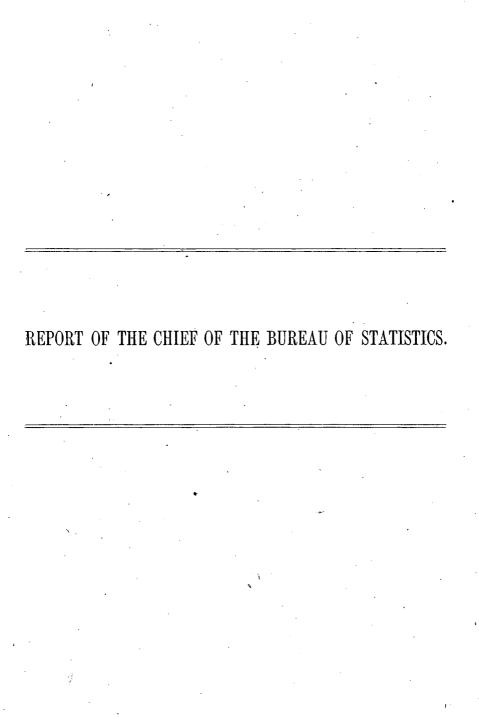

TREASURY DEPARTMENT, September 25, 1875.

Respectfully referred to the Supervising Architect of the Treasury, who is hereby directed to take measures for strengthening and completing the concrete-foundation, in accordance with the recommendation of this report. He is also directed to take down the parts of the building herein recommended, and proceed with the reconstruc-tion at once. He will bring the building as near as may be to a uniform level before hard-freezing weather, when he will suspend building work, and adopt such measures as may be necessary to protect the building thoroughly from exposure to the weather during the coming winter. Before resumption of work in the spring, the Supervising Architect will carefully revise the plans of the building, redistributing the weights, and lightening the structure as much as practicable, in accordance with the suggestions and recommendations contained in this report, and also reduce and cheapen the character of the stone-cutting on the superstructure. He will select for the superintendent of this building the most competent and trustwerthy man be can obtain and tendent of this building the most competent and trustworthy man he can obtain, and will charge him specially with seeing that all the contracts with reference to material are rigidly enforced, and that all material furnished is carefully inspected.

The Supervising Architect will also cause to be set a permanent bench-mark, from which levels shall be taken from time to time, as recommended in this report, and take whatever other steps he may find necessary to carry out the recommendations of

the report.

B. H. BRISTOW, Secretary.

THE CHIEF OF THE BUREAU OF STATISTICS.

TREASURY DEPARTMENT, BUREAU OF STATISTICS, November 23, 1875.

SIR: The chief of the Bureau of Statistics has the honor to submit the following report of its operations during the fiscal year ended June 30, 1875.

CLERICAL FORCE.

The clerical force of the Bureau at the close of the year, in addition to the chief clerk, Mr. E. B. Elliott, consisted of 29 male and 12 female clerks, who were employed as follows:

		Num	ber of c	lerks.
Divisions.	Names of chiefs.	Males.	Females.	Total.
Examination Compilation Tonnage and immigration Registry of merchant-marine Publication and miscellaneous Library and files Stationery, pay, property, copying, and miscellaneous Revisor Translator	I. W Ward	12 4 3 1 1 1	1 2 2 1 1 1 1	4 14 6 4 2 2 2 1

In addition to the clerks above designated, one assists the chief clerk, and one, a female clerk, has charge of the correspondence and postal arrangements and also performs a variety of miscellaneous work.

REDUCTION OF THE CLERICAL FORCE.

In last year's report the subject of the reduction of the clerical force of the Bureau, which was made in the first session of the Forty-third Congress, was considered, and a statement of the extent and cost of the clerical force of the Bureau since its establishment in September, 1866, submitted. The fact was exhibited that during the previous fifty-three months there had been a decrease in the monthly average of about eight in the number of employés and \$640 in salaries, although the work of the Bureau had gradually increased. While expressing regret at the diminution thus made, the undersigned then remarked:

Any reduction in the scope of its work, or diminution in the frequency of publication of important commercial statements, is deemed unadvisable, as such a curtailing of the work of the Bureau would necessarily impair its usefulness to the public. Indeed, the demands upon it are steadily in the direction of increased activity, necessi-

tating the cultivation of a more extended field of inquiry. The hope is, therefore, confidently entertained that a small increase in the present number of clerks will be authorized by Congress at the ensuing session, in order that the progress of the Bureau in the direction of increased efficiency may not be retarded.

WORK OF THE BUREAU.

The work performed in the several divisions has been indicated in former reports so far as it was possible without entering into minute detail, and any statement that might now be presented would be only a repetition of former reports. It is quite impossible, either in a tabular or other brief statement, to exhibit the extent of careful, patient, and accurate labor performed in the several divisions, especially in those of examination, compilation, and of the preparation and revision of statements for publication, or of statements in response to the calls for statistical information which the Bureau is constantly receiving from members of Congress and others, and which are specially numerous during the session of Congress. In furnishing such information the resources of the library and the services of the librarian and his assistant are of great importance in enabling the Bureau to respond with promptness to inquiries upon a great variety of subjects. A new and very minute catalogue of the books and pamphlets in the library is now in course of preparation.

PUBLICATIONS OF THE BUREAU.

Monthly reports.—The law establishing the Bureau provided that the director should "prepare and publish monthly reports of the exports and imports of the United States, including the quantities and values of goods warehoused or withdrawn from warehouse, and such other statistics relative to the trade and industry of the country as the Sec-

retary of the Treasury" might "consider expedient."

In accordance with this provision the undersigned, during the period of nearly six years in which the Bureau has been under his direction, has published monthly reports of the commerce and navigation of the United States, containing also a variety of miscellaneous statistics, of which reports from 2,500 to 3,000 copies have been distributed, monthly, among members of Congress, editors, political economists, the officers of boards of trade, and other persons to whom the information therein contained seemed likely to be useful. That they were extensively used and appreciated by those who received them, was indicated by the frequent notifications received from persons who from any cause failed to receive their numbers at the usual time and by the promptness with which the attention of the Bureau was called to any real or supposed error in the tables. Nor was their use confined to our own country, a few hundred copies having been transmitted to the United States legations and consulates and to leading statesmen and political economists in the principal foreign nations. Among those to whom the reports were furnished were some of the ablest contributors to the leading economical publications of Europe, especially those of Great Britain and France. And some of these writers have heretofore devoted much attention to the preparation of articles on the trade of the United States, for which the monthly reports supplied them with the requisite data.

Since the commencement of the current fiscal year, however, the monthly reports have been discontinued in obedience to the provisions of an act passed at the last session of Congress. The information which they formerly embodied will in future be consolidated into tri-monthly statements and published in reports which will be issued quarterly.

It may seem improper for the undersigned to offer an opinion in opposition to a change so recently made, (and which may be assumed to have received the careful consideration of Congress,) and he would hesitate to do so, did he not find his own views on the subject strongly confirmed by those of merchants, editors of leading commercial journals, and other persons whose position and experience give weight to their opinions. From many of such persons there have been received expressions of regret at the discontinuance of the monthly reports.*

The general desire for monthly data on the state of our foreign trade has been met in part by the issue to the newspaper press of summary statements of our exports and imports, a course which will be continued unless it be disapproved. Indeed, the tendency is in the direction of still more frequent publication of the trade statements, several appli-

cations(†) having recently been made for that purpose.

As the discontinuance of the monthly reports was probably decided upon with a view to increased economy in public expenditures, it is proper to remark that the only saving effected will be a small amount in the cost of printing, for in clerical labor there will not merely be no reduction, but a slight increase, owing to the necessity of consolidating into each quarterly statement the details of three monthly returns received from the various customs districts.

Annual report of commerce, immigration, and navigation.—The volume for the fiscal year ended June 30, 1875, was compiled and sent to press

at the usual period.

For many years prior to the adoption of the Revised Statutes, in 1875, the annual supply of 300 copies of the Report of the Chief of the Bureau of Statistics on Commerce and Navigation was authorized by law to be printed for the use of the Treasury Department. This provision of law was, for some cause unknown, (probably through inadvertence,) omitted from the Revised Statutes. Much difficulty has been experienced in securing copies for the use of the Department, application having to be made, for the volume for 1874, to individual Representatives and Senators for a portion of the supply to which they were each by law entitled. As the report is not stereotyped, and as it is therefore impossible to obtain additional copies after the type has been distributed, it became necessary that a requisition should be made for 200 copies of the report for the fiscal year 1875, in order to secure at least a partial supply.

Owing to the present considerable and increasing demand, at home and abroad, for this document, it is highly desirable that Congress annually provide for a supply, for the use of the Departments of the Treasury and of State, of not less than 1,000 copies. To supply our

"I beg leave to acknowledge the receipt of numbers of the monthly reports of the

Bureau of Statistics, completing my files.

† At a meeting of the Pork-Packers' Association of the United States, recently held in Saint Louis, the following resolution was presented by the committee on business and adopted:

^{*} Extract from a letter recently received from a well-known statistician:

[&]quot;I have found these reports as they have been issued the most valuable source of both the special official information I have required, and also of the more general statistics needed in the consideration of the revenue questions. They are more valuable than the British monthly reports, because of the form you have given them. I hope the suspension of their preparation will be but temporary, and that Congress will authorize their renewal at an early day."

† At a meeting of the Pork-Packers' Association of the United States, recently held

[&]quot;Resolved, That this convention recommend that the secretary of the association make application to the Secretary of the Treasury for weekly reports of the exports and imports of provisions from and into the principal ports of this country, in detail, and give the aggregate returns promptly to the public."

customs-officers alone, which is essential, will require from 200 to 300 copies. It is also essential that chambers of commerce, boards of trade, and other commercial bodies, as well as writers on commercial and economical affairs, be provided with copies, all of which have heretofore been supplied by the Bureau so far as it had the means, and they still rely upon it for future supply.

Giving in detail, as this annual does, the statistics of our trade with each foreign country and of each of our customs districts, it possesses great value, not merely to statesmen, legislators, and commercial men in this country, but to our ministers and consuls abroad, as well as to foreign statisticians and public officials, who are earnestly desirous of

an interchange of statistical publications.

The commercial interests of the country, therefore, imperatively demand that each United States legation and consulate be furnished with a copy of this annual. For like reasons, it is also in a high degree desirable that the applications for it, made to the Department of State by foreign governments, should be promptly honored. In comparison with the large cost of the composition of 1,060 pages of rule-and-figure work, the expense of paper, press-work, and covers for the additional number now urgently requested would be inconsiderable.

List of Merchant Vessels of the United States.—The seventh annual statement of "Vessels registered, enrolled, and licensed under the laws of the United States, designating the class, name, and place of registry," as well as the official number and signal-letters awarded to each vessel, was prepared and 2,000 copies published for distribution to the officers of customs, the masters of vessels engaged in the foreign trade, and the principal ship owners, as well as to the commanders of United States war vessels. The value of this list has been enhanced by the insertion therein of a carefully prepared "code-list," giving the signal-letters assigned to all sea-going vessels, arranged in their regular alphabetical order, without regard to the initial letter of the names of the vessels. Ship-masters can, by reference to it, obtain the name, tonnage, and home port of any vessel exhibiting her signals at sea. volume also includes a list of the vessels belonging to the revenuemarine, giving the date and place of building and the number of the officers and men; also a list of the vessels now belonging to the United States Navy, giving their name, rate, class, guns, tonnage, means of propulsion, and station of each.

SPECIAL REPORT ON IMMIGRATION.

During the past year copies of this report in the German and French languages were forwarded to the continent of Europe for distribution in the countries where these languages are spoken. The English edition being so nearly exhausted, it has only been possible to supply copies to individuals upon application to the Bureau. It being important that a supply of this edition be kept at each United States consulate in the United Kingdom, as has been heretofore done, the recommendation is repeated that there be printed from the stereotype plates three thousand copies of the Special Report on Immigration, which should contain also a map of the United States, for distribution in English speaking countries to intending emigrants.

The completion of the translation of this report into the Swedish language, and its transmission through you to Congress, was mentioned in last year's report. The recommendation for its publication and distribution in Scandinavian countries is hereby renewed and its importance

strongly nrged.

That the report under consideration has been highly appreciated, and has proved substantially useful in aiding intending emigrants to select with intelligence future homes, has been indicated in the reports and letters of United States consuls in Europe, and attested by others who were well qualified to form correct opinions on the subject. The eminent political economist M. Chevalier, in a long article on colonization in Algeria and in the United States, published some time ago in a Paris journal, calls particular attention to this report, and earnestly suggests the preparation of a similar work by the government of Algeria for circulation in France as a means of stimulating emigration to that colony, which he characterizes as "that magnificent dependency of France in Africa."

Of the object and character of this report M. Chevalier says:

This volume is intended to serve as a guide to the waves of population which are flowing into the northern portion of the new continent from the old, to let every one know what part of the 'immense territory of the Union, still unoccupied, is the best suited to his tastes and needs. * * * It is a complete repertory, prepared with scrupulous care; a valuable and safe guide.

From another source, though in the same country, a substantial recognition of the utility of the work has been recently received in the form of a medal and a diploma awarded to the undersigned by the International Geographical Congress held at Paris in August, 1875, which award was chiefly made for the report on immigration.

LABOR IN EUROPE AND AMERICA.

In the last and two previous reports of the Chief of the Bureau, the fact was mentioned that he had devoted much time and money, while in Europe in 1872, to investigations in regard to the cost of labor and subsistence and the conditions of the working classes, more especially in those countries which compete most actively with the United States. Owing to the pressure of official duties, and to consequent impaired health, the completion of his special report on this subject was considerably delayed, but this delay has enabled him to obtain, through correspondence with our consuls and others, fuller and more recent data, which will add materially to the value of the work. The report, embracing not only information in regard to European labor, but to that of the United States and British America, was finally completed during the past summer and submitted to you for transmission to Congress. The scope and object of the work are sufficiently indicated in the prefatory letter.

In regard to that portion of the report which relates to the United States, it may be proper to remark that the rates of wages and prices of provisions which are given in the tables are based upon data obtained in part through officers of internal revenue, and in part from the proprietors of industrial establishments and other employers of labor. many cases the circular of inquiries sent out by the Bureau failed to elicit replies from those to whom it was addressed, and the returns from some of the States were consequently so meager that the mean rates of wages and the mean cost of the leading articles of subsistence deduced therefrom could not be considered as marking the true average for the To remedy this defect in future editions, it is desirable that means should be provided to enable the Chief of the Bureau to make investigations on those subjects in the chief centers of manufacturing industry and in the principal agricultural districts of the country, by means of personal inquiry, as was done in some European countries, especially in Great Britain, Belgium, and Germany.

Although the preparation of the report under consideration was not formally enjoined by any act or resolution of Congress, yet it was undertaken in obedience to an urgent public demand, of which not the least important indication was found in the numerous applications made by members of Congress for such information as the work contains. Since its completion a few hundred copies have been sent to the principal newspapers and to persons likely to be interested in the subjects therein discussed. In the almost unanimous voice of the press, as well as in the appreciative acknowledgments received from prominent persons among the recipients of the volume, the undersigned finds gratifying evidence of the correctness of his convictions that the work would supply a public need which was urgently and widely felt.

The desire to obtain this book has been so general that a large number of copies, in sheets, have already been purchased by private publishers from the Congressional Printer, in accordance with the provisions of the act of June 25, 1864, and it is highly probable that the future demand for this report will equal that for the special report on immigration, of which about 8,000 copies, it is understood, were printed

at the expense of private parties.

STATISTICS OF DOMESTIC COMMERCE, TRANSPORTATION, ETC.

Extract from an act approved March 3, 1875.

It shall be the duty of the officer in charge of the Bureau of Statistics to gather, collate, and annually report to the Secretary of the Treasury, for transmission to Congress, statistics and facts relating to commerce with foreign nations and among the several States, the railroad systems of this and other countries, the construction and operation of railroads, the actual cost of such construction and operation of railroads, the actual cost of transporting freights and passengers on railroads and on canals, rivers, and other navigable waters of the United States, the charges imposed for such transportation of freight and passengers and the tonnage transported.

In accordance with the provisions of law above cited, a division was formed in this Bureau at the commencement of the current fiscal year for the purpose of carrying into effect the intentions of Congress in this regard. As, however, the present report relates to the work of the Bureau during the fiscal year ended June 30, 1875, it is only necessary to say that the work above indicated has been entered upon with vigor, that the statistics already gathered are extensive, and that a comprehensive report on the subject will be made to yon, for transmission to Congress, as early in the approaching session as the time necessarily required to collate so much material will permit.

In this connection, it may not be improper to state that, in the first and in nearly every subsequent report of the undersigned, attention was directed to the great importance of obtaining trustworthy information, not only in regard to the various industries of the United States, but to the quantities and values of merchandise and produce transported from and to the seaboard, and the fact deplored that there was no legislation under which it was possible to obtain the necessary data. The following paragraph, from his report for the year 1871, is a brief presentation of more extended remarks on the subject in the reports of other years:

Transportation of Products and Merchandise.

The movement of the crops toward the seaboard and of merchandise into the interior, whether by rail or by canal, lake, or river, would, if ascertained and published, afford information of great value. The officers of some of the great lines of railway are convinced of the public utility of such statistics, but, in the absence of compulsory legislation on the subject, do not regard it as compatible with their duty to stockholders to incur the expense which the employment of clerical services for this purpose would necessarily involve. Additional legislation will probably be necessary before full and satisfactory information in regard to this subject can be obtained.

The inability hitherto to obtain the information indicated was occasioned by two defects: first, the absence of compulsory legislation, as above mentioned; and, secondly, the lack of means to defray the ex-

pense of personal investigation.

This latter defect has, however, been remedied by the act of March 3, 1875, a portion of which is cited above, which appropriates a sufficient amount to secure so much of the information as is obtainable without further legislation.

DECLINE IN IMMIGRATION.

Immigration, which reached its culminating point in 1873, suffered a decline in the fiscal year 1874 to the extent of 146,464, and a further falling off of 85,841 in 1875, making a total decrease of 232,305 from the figures for 1873. This reflux in the tide of immigration is largely due to the general prostration of business in this country during the past two years, and the consequent diminution in the demand for labor. The indications of returning prosperity, however, especially in productive industry, give reason to hope that the demand for labor will soon regain its normal activity and the stream of immigration attain its usual volume.

The following comparative statements will exhibit the leading facts connected with immigration for several years past:

Table I.—Comparative statement of Immigration and Emigration for the five fiscal years from July 1, 1871, to June 30, 1875, inclusive.

TRADE WITH CANADA.

In the report of the undersigned for the fiscal year 1874, attention was directed to the fact that it was almost if not quite impossible to obtain full returns of our exports of merchandise to Canada.

As no legislation has since taken place with a view to remedy the legal defect therein pointed out, a portion of what was then submitted on the subject is here repeated:

Although the published statements of the Bureau in regard to the whole foreign trade of the country, and particularly of our exports by water, are nearly accurate, yet it has hitherto been found impracticable, if not impossible, to obtain full returns of merchandise exported to the provinces of Ontario and Quebec. The returns from several custom-houses on the Canadian border are necessarily defective, owing to the

want of legislation requiring persons exporting merchandise by land-conveyance to file full manifests of such merchandise and produce with the collector of the customsdistrict on the horder, across which the articles pass into the foreign country, as is now required in the case of all exports to foreign countries in vessels. The act of February 10, 1820, provides that—

"Before a clearance shall be granted for any vessel bound to a foreign place, the owners, shippers, or consignors of the cargo on board of such vessel shall deliver to the collector manifests of the cargo, or the parts thereof shipped by them respectively, and shall verify the same by oath or affirmation; and such manifests shall specify the kinds and quantities of the articles shipped by them respectively, and the value of the total quantity of each kind of articles; and such oath or affirmation shall state that such manifest contains a full, just, and true account of all articles laden on board of such vessel by the owners, shippers, or consignors, respectively, and that the values of such articles are truly stated according to their actual cost, or the values which they truly bear at the port and time of exportation."

It will be observed that the above stringent clause does not extend to railway-cars, which in 1820 were unknown, and, consequently, unspecified in the act above referred to, nor to other land-vehicles, which have long been used in the transportation of

merchandise across the Canadian border.

The defective character of these returns having long been known, the undersigned took occasion during the months of July and August, 1874, to more thoroughly investigate the cause, with a view to its removal, personally visiting the chief border-ports on both sides of the line, from Quebec to Chicago, consulting with our collectors and consuls, as well as with the Canadian authorities. Careful inquiry developed the fact that nearly all the produce and merchandise which are exported to Canada, of which full and correct returns are not made to this Bareau, cross the border at Saint Albans and Island Pond, in the customs-district of Vermont, and at Saspension Bridge, in the The customs-officers at those places do all that is possible, under district of Niagara. the present defective legislation, to obtain the kinds, quantities, and values of the arti-

cles transported in railway-carriages to ports in the provinces of Quebec and Ontario.

After consultation with the customs authorities of Canada in Quebec and Montreal, and also with consuls of the United States, the undersigned proceeded to Ottawa, where he made arrangements with the Commissioner of Customs of the Dominion for an interchange of the detailed statements of imports into each country from the other for the past fiscal year, and for a similar interchange of quarterly statements in future. This interchange will prove advantageous to Canada as well as to this country, for the reason that Canadian statements of exports to the United States are far less than our returns of *imports* show them to be; for it is evident that the imports into each from the other are the more accurate, because the customs-officers of both countries are constantly on the alert to see that no dutiable merchandise crosses the border without paying its prescribed impost.

From the detailed statements by provinces and ports, as well as by articles and values, prepared by the commissioner of customs of the dominion, the undersigned has been able to add to the stated value of articles embraced in the returns of collectors of customs of the districts of Vermont and Niagara, the official figures obtained from Canada, which figures are published in the statement of domestic exports contained

in the annual report on commerce and navigation.

During the fiscal year 1875 the total value of domestic merchandise and produce which were omitted in the returns of the custom-houses on the Canadian border amounted to \$15,660,218, as against \$11,424,566 in the year preceding. The export of specie in the same period amounted to \$2,070,746, as appeared by the statements of this Bureau, while the Canadian imports show but \$1,886,337. The former sum is, however, believed to be correct, inasmuch as the figures have been chiefly obtained from the agent of the express-company which conveyed the specie to Canada.

In consequence of the increased disparity between the figures given by the Dominion government and those returned to this Bureau, and of the circumstance that no legislation has been effected since the facts above recited were submitted, the undersigned took occasion, recently, to visit the principal officers and agents of the transportation-companies which convey merchandise from our principal cities and manufacturing

towns to the provinces of Quebec and Ontario.

It is proper to remark here that the fault does not wholly or even chiefly rest with the transportation companies, whose officers, on the contrary, during the consultations had with them, professed a willingness to aid the Bureau in the collection of accurate data in regard to our exports to Canada, but is due to the neglect of the shippers or consiguors of merchandise to furnish full information as to the kinds, quantities, and values of the articles shipped for exportation to Canada.

. It was hoped that some arrangement could be made by which correct information of this trade might be obtained in the absence of the legislation heretofore suggested. But while the officers above mentioned expressed their willingness to co-operate with the undersigned in carrying into effect the plan he proposed, it became apparent that difficulties would be encountered — difficulties which could only be overcome through legislation.

The subject is again respectfully submitted for your consideration, with the recommendation that it be brought to the attention of Congress for such legislation as may be deemed necessary—legislation which, while calculated to remedy the defect above indicated, will not place

unnecessary obstructions to freedom of commercial intercourse.

OTHER DEFECTIVE LEGISLATION.

Among other defects in existing laws, which render it difficult to obtain full and accurate statistics, may be mentioned those under which it is sought to collect and publish information pertaining to the following subjects:

I. The coastwise movements of vessels of the United States.

II. The products of the fisheries taken by American vessels and fishermen and brought into the United States.

III. The immigration into and emigration from the United States.

In regard to the above defects in legislation, the undersigned respectfully invites attention to his remarks thereon in his report for the fiscal year 1874; and also in reference to the destination of exports, the returns of which are not sufficiently accurate to enable the inquirer to trace commodities from their places of production to the places of consumption.

NUMBER AND TONNAGE OF VESSELS.

A statement showing the number of vessels and amount of tounage belonging to the different customs districts of the United States on the 30th of June, 1875, geographically classified, is appended to this report, (marked A,) and attention invited to the note in reference to unrigged vessels.

IMPORTS AND EXPORTS.

Detailed statements of imports into and of domestic and foreign exports from the United States during the fiscal year 1875, as compared with 1874, in which the increase and decrease are, respectively, indicated, are appended to this report, (marked B.)

Very respectfully, yours,

EDWARD YOUNG, Chief of Bureau.

Hon. Benjamin H. Bristow, Secretary of the Treasury.

Note.—It should be borne in mind that the above table purports to include all vessels belonging to the several ports specified, "without regard to the character of their marine papers." It includes, therefore, not merely vessels permanently documented at any specified port, but also vessels belonging at this port, though temporarily documented at other ports. It does not include, however, vessels belonging to other ports, but which are temporarily possessed of marine papers from the specified port. The amount of tonnage owned at each of the specified ports, as shown by this table, cannot, therefore, as a rule, be the same as the amount of tonnage (permanent and temporary) documented at such port.

APPENDIX B.

Comparative statement of Imports into the United States for the years ended, respectively, June 30, 1875 and 1874.

	Year ended	June 30, 1875.	Year ended	June 30, 1874.	1875 compar	ed with 1874.

REPORT

OF THE

COMMISSIONER OF INDIAN AFFAIRS.

DEPARTMENT OF THE INTERIOR, Washington, September 22, 1875.

SIR: In compliance with request contained in your letter of 8th instant, I have the honor to transmit herewith copy of letter, dated 21st instant, from the Commissioner of Indian Affairs, with accompanying statement of the liabilities of the United States to Indian tribes under treaty stipulations.

Very respectfully, your obedient servant,

B. R. COWEN,
Acting Secretary.

The Hon. SECRETARY OF THE TREASURY.

DEPARTMENT OF THE INTERIOR,
OFFICE OF INDIAN AFFAIRS,
Washington, D. C., September 21, 1875.

SIR: I have the honor to be in receipt, by reference from the Department, of a letter from the Hon. Secretary of the Treasury, dated the 8th instant, in which he asks to be furnished with a statement of the liabilities of the United States to Indian tribes under treaty-stipulations.

In compliance with said request, I have caused to be prepared, and herewith submit, the required statement.

Very respectfully, your obedient servant,

EDWD. P. SMITH, Commissioner.

The Hon. SECRETARY OF THE INTERIOR.

ABSTRACT REPORT

OF THE

SUPERINTENDENT UNITED STATES COAST SURVEY.

SIR: My detailed report for the year ending June 30, 1875, will give the limits, statistics, and other particulars of the work done in that year, under the following general heads, namely: Soundings in the Gulf of Maine; development of Jeffey's Bank; Cashe's Ledge, and Jeffrey's Ledge; and of dangers to navigation near Isles of Shoals; survey of the northwestern part of Mount Desert Island, and soundings in the adjacent waters; topography of the shores and hydrography of Eggemoggin Reach; survey of numerous islands near Isle au Haut, and in the eastern part of Penobscot Bay; and of the bay shore between Castine and Bucksport, Me.; soundings in Penobscot River near Winterport; tidal observations at North Haven, on the Fox Islands, Penobscot entrance; determination of height and of coefficient of refraction, near Camden, Me.; and of geographical points by triangulation in New Hampshire; tidal observations at Boston navy yard; hydrography westward of Monomoy Peninsula, including the vicinity of Chatham Roads; triangulation and topographical survey of Taunton River, Massachusetts, from Fall River to Somerset; special observations on currents and soundings in Providence Harbor and Seekonk River, for the use of harbor-commissioners; survey of the shores of Thames River, Connecticut, and soundings between the United States naval station and Norwich; topography of New Haven Harbor; determinations in position of light-houses at the east entrance of Long Island Sound; hydrography in that vicinity, and special examination for sailing courses into the harbors between Point Judith and New York; survey of Port Jefferson and soundings in the adjacent waters; triangulation near the boundary-line between Massachusetts and New York; latitude and azimuth determined at Cheever Station, near Port Henry, at Mount Merino, near Hudson, N. Y., and at Rouse's Point; shore line survey and hydrography of Lake Champlain extended from the "Four Brothers" southward to Whitehall, including detailed surveys of the vicinity of Crown Point and Ticonderoga; topography of the shores of Hackensack River, New Jersey; angular measurements at Beacon Hill and Weasel Mount; preliminaries for determining points in New Jersey; observations for deducing transverse curves of velocity in the waters of Hudson River, East River, and the main channel of New York Harbor; tidal observations at that port; soundings in West Bank Channel and near Southwest Spit in New York Bay; topography and hydrography of Great South Bay, Long Island, between Islip and Howell's Point; survey of the west side and soundings through Barnegat Bay, New Jersey; hydrography of the entrance and approaches to Little Egg Harbor; preliminaries for determining points in the eastern part of Pennsylvania; triangulation and soundings for light-rouse purposes in Delaware River at Liston's Tree, and near the mouth of the Schuylkill River; magnetic declinations, dip, and intensity

determined at the standard station in Washington City, D. C.; special topographical survey of Craney Island, Virginia, and soundings in the channel between it and the main shore; tidal observations at Fortress Monroe; survey and hydrography of James River, from Sloop Point upward to the vicinity of City Point, and of the Chickahominy from ship-yard upward to Forge Bridge; primary triangulation extended southward along the Blue Ridge to Fork Mount; reconnaissance from that station westward to the Kanawha; triangulation of Pamplico Sound, North Carolina, completed and connected with the primary base-line on Bodies Island; survey of the shores extended from Juniper Bay northward and eastward to the Roanoke Marshes; hydrography of the sound extended from Shoal Point southward, including Yesocking Bay; detailed survey of the coast of South Carolina, and soundings through the water-passages between Cape Roman and Sullivan's Island; preliminaries for tracing altered shore-line at Hunting Island, South Carolina; hydrography of Savannah River from the bar upward to the head of Elba Island: hydrography of the coast of Florida north and south of Saint Augustine; survey and soundings of the inland sea water channels south of Mosquito Inlet, including the head of Indian River; detailed survey of the Tortugas Islands, and hydrography of the harbor and reef; triangulation and topography of Tampa Bay, and hydrography of the bar and approaches; tidal observations continued at Saint Thomas, West Indies; topography and hydrography of the western coast of Florida between Pepper Keys and Ocilla River; hydrography of the vicinity of Cape San Blas, and of Saint Joseph's Bay; triangulation and reconnaissance westward and northward of the base-line near Atlanta, Ga.: latitude, azimuth, and magnetic elements determined at primary stations in that vicinity; preliminaries for determining points in the State of Kentucky; special shore-line survey and hydrography of the mouths of the Mississippi; observations on density, and relative to the volume of water-discharge; the bar and approaches to the delta sounded, and deep sea lines of sounding run in the Gulf of Mexico; topography of the Mississippi River above New Orleans; triangulation in Missouri extended westward from Saint Louis to the vicinity of Gasconade River; reconnaissance for intervisible stations near the Ohio River; measurement of base-line at Spring Green, Wis., preliminary to the determination of points in Wisconsin; and hydrography completed in San Antonio, Musquit, and Aransas Bays, Texas. On the Pacific coast a detailed survey of the coast of California, and development of the approaches and channels of Newport Bay, near Point Lausen; topography of Santa Cruz Island, and hydrography of its vicinity; triangulation across the Santa Barbara Channel from Gaviota Pass; hydrography of San Luis Obispo Bay, and development of dangers to navigation near Point San Luis; special topographical survey of Point Sur for the Light-House Board; tides and currents observed in San Francisco Bay; soundings between Yerba Buena and Oakland, and abreast of Saucelito; development of a shoal off the South Farallone; buoyage of Noonday Rock; inshore soundings completed between Cape Mendocino and Rocky Point; reconnaissance for intervisible stations from the Pacific coast across the Sierra Nevada Mountains to the vicinity of Austin, Nev.; triangulation and topography north and south of Ten Mile River, California, completing the detailed survey between Point Cabrillo and Shelter Cove: discovery and determination in position of a dangerous rock in the passage used by coasters between Blunt's Reef and Cape Mendocino; triangulation of the coast between Rocky Point and Klamath River, including the vicinity of Redding's Rock; inshore soundings extended

along the coast of California from False Klamath northward to Mack's Arch on the coast of Oregon; reconnaissance of the summit and region of Mount Shasta as a center for triangulation; topography of the shores of Columbia River, Oregon, extended from Oak Point to Smith's Island; tidal observations at Astoria; triangulation and topography of the coast from Point Adams south toward Nehalem River; detailed survey of the eastern shores of Duwamish Bay, Washington Territory, including the town of Seattle and part of Lake Union; tidal observations at Port Townshend, Washington Territory; surveys of harbors on the coast of Alaska, with determinations of latitude, azimuth, the magnetic elements, and observations for correcting errors in geographical positions as now appear on charts, and for the height of Mount Crillon, Mount Fairweather, Mount Saint Elias, and other permanent landmarks on the coast of Alaska.

Progress in office work has been kept up to that of the field-work of the preceding season. Computations of the current geodetic, trignometrical, and tidal observations have been duly made, including the preparation of records and results for publication; tide-tables for the principal ports of the United States for the year 1876 have been published; the drawing of fifty four charts has been in progress, and of this number sixteen have been completed. Twenty-nine sketches of harbors on the coast of Alaska have been drawn for publication by lithography; eleven new copper-plate charts have been begun, thirty-eight have received additions by engraving, and eleven have been completed. An aggregate of fourteen thousand copies of charts has been issued in the course of the year. The first volume of the Coast Pilot for the Atlantic coast, giving sailing directions for harbors between Eastport and Boston, has been published, and a second edition, illustrated by charts, is in preparation. The second volume, comprising the coast from Boston to New York, is well advanced toward publication.

Respectfully submitted.

C. P. PATTERSON, Superintendent United States Coast Survey.

Hon. B. H. Bristow, Secretary of the Treasury. REPORT OF THE LIGHT-HOUSE BOARD.

46 F

Digitized for FRASER

REPORT

OF

THE UNITED STATES LIGHT-HOUSE BOARD.

TREASURY DEPARTMENT,
OFFICE OF THE LIGHT-HOUSE BOARD,
Washington, September 1, 1875.

Hon B. H. BRISTOW,

Secretary of the Treasury:

SIR: Since the date of our last annual report it has been the endeavor of the board, as in past years, to administer the affairs of the Light House Establishment with the greatest economy, consistent with a proper regard to the efficiency of a branch of the Government service so extensive and of such vast importance to the commerce, not only of our own country, but of the civilized world.

Besides the usual attention to the details of work by the officers of each district, many of the districts have been visited at various times during the year by members of the board itself, who have examined with care into the condition of the various aids to navigation, thus mak-

ing felt the direct influence and supervision of the board.

The aids to navigation which are in place, and completed, are in good, serviceable condition, meeting the wants of mariners, and, in most cases, work is progressing satisfactorily with those for which appropriations have been made, though in some instances delay has been occasioned by the difficulty of obtaining titles to suitable sites.

The detailed statements contained in the body of this report under the heads of the fourteen geographical districts into which the Light-House Establishment is divided, embrace the work which has been done since the last annual report, the constructions now in progress, those for which appropriations have been made, and those for which appropria-

tions are recommended to Congress.

During the year the board has, under the personal direction of its chairman, assisted from time to time by other members of the board, made an extensive and careful series of experiments with regard to the merits of the mineral-oils of this country for purposes of light-house illumination. In order to obtain a great variety of oils, the board on November 24, 1874, advertised in various newspapers, published in different parts of the United States, inviting manufacturers and dealers to furnish it with specimens of domestic mineral-oil for test as to their fitness for light-house purposes, and as soon as a sufficient quantity had been received, the investigation was begun, and has been continued, with results which lead to the belief that there can be had in this country an oil of suitable quality for light-house use, and perhaps at a cousiderable reduction in expense. For the purpose of comparing our mineral oils with those now coming into use abroad, the Trinity House authorities have been requested to send to the board a specimen of that used in lights under their control, the arrival of which is soon expected, when further experiments will be made. While with its present knowledge of the qualities of these oils the board proposes to put them into use at light-stations on the main-land, it would hesitate to endanger valuable property, and the lives of its employes, by placing them on board of light-ships, in structures standing in the water, or at other points from which the keepers could not escape in case of accident.

It was soon apparent that the use of mineral-oil would necessitate a change of lamps, and attention is now directed to the perfection of one which will produce the best results from this illuminant. It is thought that the lamps now used with lard-oil can be converted at no great expense, and successfully used with mineral-oil. Our experiments have shown that this oil can be more readily used in the smaller lamps, and it is proposed, as soon as suitable ones can be prepared, to put it into use at such stations of the fifth and sixth order as may be thought expedient, when, if it be found satisfactory, an attempt will be made to substitute it for lard-oil in lamps of the higher orders.

The board has also, through its appropriate committee, conducted an elaborate and extensive series of experiments with regard to sound, as applied to signals for warning the mariner of his approach to dauger in thick or foggy weather, when other guides are of little use. Even at this stage of our experiments its success has been most gratifying, and by pursuing these inquiries the board hopes to arrive at results not only valuable to science, but of practical importance in enabling it better to contend with one of the worst elements of danger which the mariner has to meet on our extended and dangerous coast.

The limits of this report will not permit a detailed statement of the many interesting experiments which have been made and are now in progress, both with mineral oil and with regard to sound signals, even if at the date at which it closes the series had been concluded. It is, however, the intention of the board to publish an appendix to this report, prepared by the chairman of its committee on experiments, which will give full information of the work done and conclusions reached.

By act of Congress approved June 23, 1874, the jurisdiction of the Light-House Board was extended over the Mississippi, Missouri, and Ohio Rivers, "for the establishment of such beacon-lights, day-beacons, and buoys as may be necessary for the use of vessels navigating those streams." The rivers were divided into two districts; officers were assigned to them, and steps were immediately taken for obtaining all possible information with regard to their waters, the nature of their obstructions, the necessity for suitable aids to navigation, and the kind and number of the aids required for the protection of commerce.

Examinations were made by the officers of the districts and by a special committee of the board designated for that purpose; the officers and pilots of the various steamboat-lines running upon the rivers were consulted, and no pains were spared to obtain information upon all points bearing on this novel and extensive field of labor which had so suddenly been assigned to the board.

A great diversity of opinion was found among the river men, many believing that no great benefit to commerce would be derived from an attempt to light and buoy the rivers, while others were sanguine as to the result.

In the course of the examination it was soon evident that structures of a permanent and expensive character would be entirely out of place, owing to the frequent shiftings of the channels, which necessitate a corresponding change in the location of the lights; and it was also apparent that owing to the short distances at which the lights must be seen, rarely

more than four miles, and usually not more than half that distance, powerful and costly lens apparatus would not be required. then taken to secure a substantial and inexpensive lens-lantern of sufficient power to show distinctly at the distances required upon those waters, and one that could be depended upon in all weather. of course only be reached by experiment, and as it was desirable to at least test the value of the system determined upon, before the close of navigation, a limited number of the best lauterns obtainable for the purpose were purchased at small expense, and on December 4, 1874, the first lights under the national jurisdiction, for the aid of navigation on the western rivers, were established upon the Jefferson Barracks dike, and at Twin Hollows, Mo. On the following day another light was placed at Perry's Towhead, and after a few days' delay, to determine by actual service the adaptability of the lanterns for the purpose, others were located at such points as personal observation and information received from pilots showed to be necessary between St. Louis, Mo., and Cairo, Ill. Immediately afterward, on December 21, 1874, the first light was placed on the Ohio River, and a few others were established on the same river before the close of navigation for the winter.

Early in January, 1875, navigation was closed by the ice between Cairo and St. Louis; and although only a month had passed since the first lanterns were placed, steamboat-owners, pilots, and masters united in bearing testimony to the great value of the lights; and the success of

the system was assured.

The stage of water had been most favorable for a practical test, and there remained no doubt of the efficiency and value of a completely

organized system.

During the time the rivers remained closed by ice the lamps were not lighted, and no expense was incurred for their care. This time was occupied with experiments upon lanterns of various kinds, several being constructed expressly for our use, the object being to obtain, at moderate cost, a portable lantern, readily handled, which would show a steady bright light during the severest storms. Modifications and adaptations were made as found necessary, and the lanteru now in use was finally selected, and the experience of the past season has proved it to be well. adapted to secure the results desired. All the lanterns on these rivers are supplied with mineral oil. As soon as navigation opened in the spring the work of examining the channels and placing lights in these two river-districts was begun again, and it has been vigorously prosecuted, until we have now in position on the Mississippi, Missouri, and Ohio Rivers 280 fixed and floating lights, together with a limited number of buoys. An additional number both of lights and of buoys will be required, and the appropriation for their maintenance must necessarily be increased.

In this connection it may be well to state that there are upon these rivers 1,100 steamboats, with a tonnage of 258,000 tons; 832 licensed barges of 179,000 tons; coal barges and other craft of 750,000 tons, making a total tonnage upon these rivers of nearly 1,200,000 tons. The total value of cargoes carried is estimated in round numbers at \$400,000,000 per annum, and the coal sent to market by the Ohio River alone amounts to 4,000,000 tons yearly.

The necessity for lights on these waters is now unquestioned, the navigation being of the most intricate character. The "crossings" are very numerous, and at some of these, technically termed "blind crossings," where the banks show no diversity of outline, and where the channel is very narrow, the best pilots are frequently delayed and cannot always

At many points previous to the establishment of the lights the passage was never attempted on a dark night, but by means of the aids now in place the passages have been rendered practicable at The hidden obstructions are numberless, in many places leaving barely room for the passage of large and heavily laden steamers. No better evidence of the intricate and dangerous nature of the navigation of these rivers need be adduced than the fact that there are hundreds of consecutive miles of river where the wrecks average more than one No difficulty has been found in securing men to care for and attend the lights. They are selected from the people living on and owning property along the river, and they have been found, with few exceptions, to be trustworthy and alive to the demands of the service for which they are secured at small compensation. The fixed lights used are substantially-made lens-lanterns, which are suspended from an arm projecting from a post at an elevation of from 8 to 10 feet from the They are of most value during the season of low water, though they afford important aid at other times. At points where the channel is made very narrow by permanent obstructions, and the passage is dangerous, buoys have been placed as day-marks, to which floating lights are attached at night. This lighting of the western rivers being an enterprise of great magnitude, and also differing widely in its details from any work hitherto undertaken by the board, has received our most careful attention; and in our attempts to establish an efficient and inexpensive system we believe that we have been successful. In doing this the board has availed itself not only of the knowledge and experience of its members and officers, but of all information it could gain from persons familiar with the rivers and interested in the subject. Numerous testimonials have been received from officers and managers of different steamboat-lines, from boards of trade, and other commercial organizations, and from various persons interested in the navigation of these waters. bearing emphatic testimony to the value of the system and its great benefit to commerce. Experience will doubtless show changes and improvements to be necessary, and the board will make them from time to time as their need is developed.

By act approved March 3, 1873, an appropriation of \$50,000 was made for a light-ship for general service, and by act approved June 23, 1874, the same sum was appropriated for a light-ship for Winter Quarter Sheal, coast of Virginia. Both the vessels are now nearly completed. They are stronger, larger, and more seaworthy than any ever before built by the board, and each has a powerful steam fog-signal. As soon as these vessels are completed they will be placed upon stations where the need of such aids has long been felt. Measures have been taken to sell light-ship No. 18, she having been surveyed and found unworthy of repair. Several of the light-ships now in service are much decayed and need extensive repairs, which will be made as rapidly as circumstances will permit, but it is thought that two of them will be found, on examination, so far decayed as to be past renovation, and an appropriation for at least one new light-ship is earnestly recommended.

Several of the steam-tenders belonging to the establishment are old, inefficient, and worn out; vessels purchased from private parties to meet emergencies, low in the water, of little power, and unfit for the rough work of supplying stations, towing light-ships in all weathers, and caring for the buoyage of the districts. They are in constant need of repair, and are a never ending bill of expense to the establishment, costing more than efficient vessels built for the purpose, while able to do but a portion of the work required. A proper regard both for economy

and efficiency would dictate that these tenders be sold and their places supplied by vessels built for light-house work. The board has estimated for two new tenders for the Atlantic coast, to replace those unfit for service, and also for an additional tender for the Pacific coast, where the establishment now has but one for the entire service, from the Mexican frontier to British Columbia. It is simply impossible for one tender to do the work required on a line of such extent, being about 1,500 miles, and this necessitates the frequent chartering, at high rates, of private vessels, for transporting material and supplies, and meeting emergencies, which often causes expensive and vexatious delays in carrying on necessary work.

The board, in preparing its general estimates for the support of the existing and authorized aids to navigation, has, with the exception of the estimates for the salaries of light-keepers, and for the maintenance of lights on the Mississippi, Missouri, and Ohio Rivers, made no increase upon the amounts asked for last year. It has made as close a calculation of expenses, based upon probable prices and quantities, as is possible so far in advance of the time when the appropriations will become available for use. For repairs and incidental expenses of light-houses, the board has estimated that \$350,000 will be required. This amount is the same as that asked for last year, and which experience has shown to be-

necessary.

For expense of fog-signals, \$50,000 will be required. This amount:

was appropriated last year.

For the salaries of light-keepers the estimate is \$594,600, an increase of \$9,600 over that for last year. This is owing to the additional number of keepers required by the erection of new light-houses. There are in actual employment, and required for new lights already appropriated for 991 light-keepers; the average pay authorized by law is \$600 per This does not include the light-keepers upon annum for each keeper. the western rivers-280 in number.

For supplies of light-houses the estimate is \$400,000, the same that

was asked for last year.

For the expenses of light-ships the estimate is \$240,000, the same as last year. This amount, it is thought, will be sufficient, although the number of light-ships ou stations has been increased by two, that on the wreck of the steamer Scotland, entrance to New York Harbor, and that on Winter Quarter Shoal, off the coast of Virginia.

For expenses of buoyage the estimate is \$350,000, an amount which it is hoped will be sufficient, notwithstanding the greater number of buoys

yearly required as aids to navigation.

For maintenance of lights on the western rivers the estimate is \$150,000, an increase of \$25,000 upon the amount asked for last year. This estimate is thought quite small in view of the number of lights now placed and yet to be placed on these waters; and it may be found necessary, in paying the salaries of the keepers of these lights, to use money from the general appropriation for salaries of light-keepers.

The board cannot too strongly urge the appropriation for the light at: American Shoal, Florida Reefs. Upon the establishment of this lighthouse, together with the one now building on Fowey Rocks, but one more will be needed to complete a system of lights for this dangerous coast, . which was commenced in the early days of the board, and which will render the navigation in this vicinity comparatively safe. The board has not submitted estimates for all the lights that, in its opinion,. are necessary to render navigation safe, but having in view the neces-sity for economy in the expenditures of the Government, has made the estimates for special works smaller than for many years before. All those works that, in the opinion of the board, can be delayed for a time without manifest detriment to the service, though they will have to be built at no distant day, have been left out, in order that the aggregate of the estimates may be placed at the lowest practicable figure.

The board has to lament the loss, by death, of one of its officers, Commander W. N. Allen, United States Navy, inspector of the first lighthouse district, who died at Portland, Me., on February 18, 1875. The death of this officer has deprived the Light-House Establishment and the country, of the services of one who was universally recognized as a man of ability, who was conscientious and energetic in the discharge of his duties.

It is thought that the time has now come when it is proper to supply light-houses, particularly those at isolated points, with a limited quantity of reading-matter. By so doing, keepers will be made happier and more contented with their lot, and less desirous of absenting themselves from their posts. If the Government will provide for the keeping of books at light-stations as other light-house property is kept, and also provide a small number of books as a nucleus, it is believed the quantity will be swelled at individual stations, from private sources, to respectable dimen-Libraries are supplied to the light-houses of England and France, and it is said that they exert the happiest influence upon the personnel of the service. Our establishment should do as much. The board has therefore inserted in its estimate for supplies the words "books for light-stations," and if they are allowed to remain and the board is thus authorized, it will supply to the more prominent and more isolated stations a few books during the year, if it finds that it can do so without trenching upon the funds needed to purchase the usual articles of supply.

CONDITION AND OPERATIONS OF THE LIGHT-HOUSE ESTABLISHMENT DURING THE FISCAL YEAR 1874-'75.

Light-houses, light-ships, fog-signals, day-beacons, and buoys belonging to the United States Light-House Establishment on the 1st July, 1875.

North Cut beacon, Milwankee	On the north pier, at the harbor of Milwaukee, Wis.	January 31, 1875,		
Yaquina	On the north point of the entrance to Yaquina Bay, Oregon.	October 1, 1874.		

Operations and condition of the light-house establishment during the year.

FIRST DISTRICT.

The first district extends from the northeastern boundary of the United States (Maine) to and including Hampton Harbor, N. H., and includes all aids to navigation on the coasts of Maine and New Hampshire.

Inspector.—Commander W. N. Allen, United States Navy, until his

death, February 18, 1875; Commander Henry F. Picking, United States Navy, present inspector.

Engineer.—Lieut. Col. James C. Duane, Corps of Engineers, Brevet

Brigadier-General United States Army.

In this district there are:

Light-houses	52
Light-ships	
Fog-signals operated by steam or hot-air engines	8
Day or unlighted beacons	68
Buoys actually in position	
Spare buoys, for relief and supply losses	251
Tender (steamer) Myrtle, for construction and repairs, also used in second district,	
and tender Iris, (inspector's tender)	2
Tender (steam-launch) Marie, for construction and repairs	1
Tender, (sail,) schooner Wave, for repairs, also used in second district	1

The following numbers which precede the names of stations correspond to those of the "Light-house List of the Atlantic, Gulf, and Pacific Coasts of the United States," issued January 1, 1875.

LIGHT-HOUSES.

4. Avery's Rock, Machias Bay, Maine.—An appropriation of \$15,000 was made by act approved June 23, 1874, for building a light house and fog-signal at this point. Measures were taken last year for the acquisition of the site, and, after some delay, a title and cession of jurisdiction were obtained. Work was commenced on the tower and dwelling early in the present year; but, owing to the roughness of the sea around this rock, some delay occurred in landing material. Considerable difficulty was experienced in preparing the rock, which is very uneven, to receive the foundation. The work, however, is now nearly completed, and the station will be ready for lighting in the course of the present season. A 1,200-pound bell, to be used as a fog-signal, has been placed at this station.

8. Narraguagus, on the west side of the entrance to Narraguagus Bay, Maine.—The dwelling at this station having become uninhabitable, a cottage for the keeper has been commenced, and will be finished in the

course of the present fall.

9. Petit Menan, on Petit Menan Island, Maine.—An appropriation of \$5,000 was made by act approved March 3, 1875, for repairs and additions to the tower and keeper's dwelling at this place. Arrangements are now being made for the prosecution of the work. In order to obtain an additional supply of fresh water for the steam fog-signal

at this station, water sheds and tanks have been erected.

13. Egg Rock, Frenchman's Bay, Maine.—An appropriation of \$15,000 was made by act approved June 23, 1874, for building a light-house and fog-signal at this place. After considerable delay in obtaining a title to the site, and cession of jurisdiction, measures were taken for the erection of the buildings. The situation of the rock is very similar to that of Avery's Rock, and the difficulty experienced in landing material much the same. The work was commenced in June. The iron-work is now completed and ready to be set in place. Nearly all the material has been landed, the foundation is laid, and the brick-work nearly fluished. The station will probably be ready for lighting November 1. A fog bell, similar to that placed at Avery's Rock, will be placed at this station.

14.—Baker's Island, off Mount Desert Island, and south of entrance to Frenchman's Bay, Maine.—The roof of the keeper's dwelling has been reshingled, and other general repairs have been made about the station.

23. Eagle Island Point, near the head of Isle au Haut Bay, Maine.—A frame boat-house has been erected. Owing to the dilapidated condition of the southern end of the keeper's dwelling the battens were removed, and replaced with new weather-boarding, and the dwelling painted. An extra cistern was also supplied.

27. Whitehead, entrance to west side of Muscle Ridge Channel, Penobscot Bay, Maine.—Repairs of a general character have been made at this

station, and a duplicate fog-signal established.

30. Indian Island, entrance to Rockport Harbor, Maine.—An appropriation of \$9,000 was made by act approved June 23, 1874, for re-establishing the light-house at Indian Island, Rockport Harbor, Maine. Upon an examination of the premises it was decided to renew the wood-work of the old one and a half-story brick dwelling, repair the walls and foundation, increase the accommodations by a frame addition 16 feet square, and erect a brick light-house tower, the light having formerly been exhibited from a lantern on the roof of the dwelling. This work was taken in hand soon after the appropriation was made, and on the 15th of January, 1875, it was completed, and the light exhibited.

32. Grindel's Point, north side of entrance to Gilkey's Harbor, Maine.—The light-house at this place was a one-and-a-half-story brick dwelling with a lantern on top, and was in such condition that it was deemed advisable to rebuild instead of attempting to repair it. A one-and a-half-story frame building for a keeper's dwelling, and a square brick-tower for the light, were therefore erected; the walls of the old house taken down to near the surface of the ground, and the roof lowered. The building thus changed will be used as a covered way between the dwelling and the tower, and for the storage of provisions, fuel, oil, and

supplies of various kinds.

37, 38. Monkegan, on Monkegan Island, Maine.—An appropriation of \$5,000 was made by act approved June 23, 1874, for a keeper's dwelling at this light-station. A one and a half story frame dwelling has been erected, and the covered way between the light-house tower and the dwelling rebuilt. The assistant's dwelling has been raised one foot, as well as partially renewed, and the brick underpinning topped out. The battens on the walls of the old house have been removed, and replaced with new weather boarding. A frame building for the reception of a duplicate fog signal has also been erected. The fog-signal at this station is not well located, it being impossible at the time the signal was established to secure a better site. It should be of a better class, and located on an adjoining hill. An appropriation of \$10,000 is asked for this purpose.

42. Hendrick's Head, on east side of mouth of Sheepscot River, Maine.—The light-house at this place is a one story rubble stone dwelling, with a lantern on the roof, and was erected in 1829. It is now in such an advanced state of dilapidation and decay that it has become uninhabitable, and new buildings are being erected, to be paid for from the general appro-

priation for repairs of light-houses.

44. Seguin, on Seguin Island, off the mouth of Kennebec River, Maine.—An appropriation of \$4,000 was made by act approved March 3, 1875, for repairs and additions to the tower and keeper's dwelling at this stastation. The work will be commenced as soon as practicable.

46, 47. Cape Elizabeth, entrance to Portland Harbor, Maine.—An appropriation of \$30,000 was made by act approved March 3, 1873, for rebuilding the western tower at this station. With the amount of this appropriation both the west and east towers have been rebuilt of cast iron, lined with brick, and the old rubble-stone towers taken down. A

second-class siren which had been constructed for purposes of experiment, after the experiments were completed, was established at this station, the work being paid for from the general appropriation for fogsignals. A duplicate should be erected at an early day, and the whistle sent to some other less important station. An appropriation of \$5,000 is therefore asked for this purpose.

49. Portland Breakwater, on the breakwater in Portland Harbor, Maine.—An appropriation of \$6,000 was made by act approved June 23, 1874, for a light house at this place. This light was established in 1855, and has been exhibited since that time from a temporary wooden building, which became decayed and unfit for further service. A cast-iron tower lined with brick has been erected on the end of the pier, from which the light is now exhibited, and the old structure has been removed.

Cape Neddick, (York Nubble,) near York Harbor, Maine.—An appropriation of \$15,000 was asked in the last annual report for a light-house on (York Nubble) Cape Neddick. The recommendation of last year is respectfully repeated.

55. Isle of Shoals, off Portsmouth, New Hampshire.—The old building in which the keepers now live at this station is so much decayed and in such a dilapidated condition that it is scarcely habitable. An appropriation of \$6,000 is respectfully asked, to build a new dwelling for the

keeper and his assistant.

Boat-landings at exposed outside stations.—In order to effect a landing with a loaded boat at many of the light and fog signal stations on the exposed coasts of Maine, New Hampshire, and Massachusetts, it has been found necessary to construct boat-landings or inclined planes of timber, extending from below low-water mark to a boat-house situated above the reach of the waves. These landings consist of timbers bolted and strapped to the rocks, and are expensive, as the work can only be executed during calm weather and at very low tides. They are also subject to rapid decay from their situation, and to destruction from the force of the waves and ice. They are, however, absolutely necessary to the landing of fuel and supplies for the maintenance of the lights and fog-signals, and as many of them now need renewing, an appropriation of \$10,000 is asked for building boat-landings at exposed stations on the coasts of Maine, New Hampshire, and Massachusetts.

REPAIRS.

At each of the following-named stations repairs and renovations more or less extensive have been made during the year:

1. Saint Croix, on Dochet's Island, Saint Croix River, Maine.

- 2. West Quoddy Head, western entrance to Passamaquoddy Bay, Maine.
 - 3. Little River, entrance to Little River Harbor, Maine.

5. Libby Island, Machias Bay, Maine.

- 6. Moose Peak, on Moose Peak Head, Maine.
- 7. Nash's Island, off the mouth of Pleasant River, Maine.
- 10. Prospect Harbor, on Prospect Harbor Point, Glasborough, Maine.
- 11. Winter Harbor, entrance to Winter Harbor, Maine.
- 12. Mount Desert, on Mount Desert Rock, Maine.
- 15. Bear Island, entrance to Southwest Harbor, Mount Desert, Maine.
- 16. Bass Harbor Head, entrance to Bass Harbor, Maine.
- 17, 18. Burnt Coat, entrance to Burnt Coat Harbor, Maine.

19. Eggemoggin, east entrance to Eggemoggin Reach, Maine.

20. Saddle back Ledge, Isle au Haute, Maine.

21. Heron's Neck, entrance to Carver's Harbor, Maine.

- 22. Deer Island Thoroughfare, west entrance to Deer Island Thoroughfare, Maine.
 - 24. Pumpkin Island, west entrance to Eggemoggin Reach, Maine.

25, 26. Matinicus Rock, entrance to Penobscot Bay, Maine.

28. Owl's Head, entrance to Rockland Harbor, Maine.

29. Brown's Head, west entrance to Fox Island Thoroughfare, Maine.

31. Negro Island, entrance to Camden Harbor, Maine. 33. Dice's Head, entrance to Castine Harbor, Maine.

- 34. Fort Point, entrance to Penobscot River, Maine.
- 35. Tenant's Harbor, entrance to Tenant's Harbor, Maine.
- 36. Marshall's Point, entrance to Herring Gut Harbor, Maine.
- 39. Franklin Island, entrance to George's River, Maine.
- 40. Pemaguid Point, entrance to John's Bay, Maine. 41. Burnt Island, entrance to Townsend's Harbor, Maine.
- 43. Pond Island, entrance to Kennebec River, Maine.

45. Halfway Rock, in Casco Bay, Maine.

48. Portland Head, entrance to Portland Harbor, Maine.

50. Wood Island, entrance to Saco River, Maine.

51. Goat Island, entrance to Cape Porpoise Harbor, Maine.

52. Boon Island, off York Harbor, Maine.

- 53. Whale's Back, entrance to Portsmouth Harbor, New Hampshire.
- 54. Portsmouth Harbor, entrance to Portsmouth Harbor, New Hampshire.

LIGHT-SHIPS.

There are no light-ships in the first district.

FOG-SIGNALS OPERATED BY STEAM OR HOT-AIR ENGINES.

West Quoddy Head. Ten inch steam whistle.

Petit Menan. Ten-inch steam-whistle.

Matinicus Rock. Twelve-inch steam-whistle. It is proposed to establish a duplicate at this station.

White Head. Teu-inch steam-whistle.

Monhegan, Manana Island, six-inch steam-whistle. A duplicate is to be established at this station.

Seguin. Ten-inch steam-whistle. A second-class siren has been erected

at this station during the past season.

Cape Elizabeth. Ten-inch steam-whistle. A second-class steam-siren has also been placed at this station during the past season as a duplicate for use in case of accident.

Portland Head. Second-class Daboll trumpet with a duplicate engine. These fog signals are in good condition.

DAY OR UNLIGHTED BEACONS.

Under the appropriation for "day-beacons in Maine and Massachusetts," approved March 3, 1873-74, the following day-beacons have been added to the list presented in the last annual report:

Stone's Island Ledge.—Machias Bay, Maine.

Jordan's Delight Ledge.—Narraguagus Bay, Maine.

Drunkard's Ledge.—Penobscot Bay, Maine.

Black Jack Rock.—Entrance to Kennebec River, Maine. Stone's Rock.—Off York Harbor, Maine.

At the above-named places, holes have been drilled in the rock, and iron spindles with distinguishing marks have been procured, and will be set when suitable opportunity offers.

South Breaker.—Off White Head, west entrance to Penobscot Bay, Maine. A hole was commenced in this rock last season, but, owing to the rough weather and heavy seas, the work had to be abandoned.

Iron spindles with proper day-marks have been established at the

following places during the past season:

Fessenden's Ledge.—Moose à bec Reach, Maine.

Trafton's Island Ledge.—Narraguagus Bay, Maine.

Clark's Rock.—Prospect Harbor, Maine.

Grindstone Ledge.—Winter Harbor, Maine.

South Bunker's Ledge.—Southwest entrance to Southwest Harbor, Mount Desert, Maine.

Harbor Island Ledge.—Entrance to Burnt Coat Harbor, Maine.

Pumpkin Island Ledge.—West entrance to Eggemoggin Reach, Maine.

Scrag Island Ledge.—Merchant's Row, Penobscot Bay, Maine.

Colby's Ledge.—Merchant's Row, Penobscot Bay, Maine.

Inner Ledge.—Isle au Haute Harbor, Maine.

Goose Rock.—East end of Fox Island Thoroughfare, Maine.

Iron Point Ledge.—Fox Island Thoroughfare, Maine.

West Mark Island Point.—Penobscot Bay, Maine.

Hypocrite Ledge.—Off Townsend Harbor, Maine.

The top of the spindles of the above named day-beacons are 32 feet above the rocks, which are out of water at about half tide. A number of spindles will be required during the ensuing year to replace those destroyed by ice, and to take the place of buoys at points where they can be set to advantage. An appropriation of \$10,000 is therefore asked for establishing day-beacons on the coasts of Maine, New Hampshire, and Massachusetts.

BUOYAGE.

The buoyage of this district is in as good order as the means at the disposal of the inspector will permit. New buoys have been placed to mark the following dangers, viz:

Black Rock, Swett's Point Reef, Fort Point Rock, and Bettie Allen's Point.—Spar-buoys to mark the approach to York River and Harbor, Maine.

Hog Island Ledge.—Spar-buoy, Casco Bay, Maine.

Point of Little Island.—Spar buoy to mark the approach to Sheepscot River, Maine.

James and Willie Ledge, North Point of Hurricane Island, and Middle Rock.—Spar-buoys to mark the approach to Hurricane Island, Maine.

Hooper's Island.—Spar-buoy to mark the approach to Herring Gut Harbor, Penobscot Bay, Maine.

Tupper's Ledge.—To mark the approach to Blue Hill Bay, Maine.

Myrtle Ledge.—Spar-buoy to mark the approach to Somes' Sound, Maine.

Abijah's Ledge, and Guptill's Ledge.—Spar-buoys to mark the channel into Winker and Mosquito Harbors, Maine.

Eaton's Ledge.—Spar-buoy to mark the approach to Sullivan Harbor, Maine.

Juniper's Ledge, and Middle Ledge.—Spar-buoys to mark the Seguin Passage, Maine.

Little River.—Spar buoy to mark the entrance to Little River Harbor,

Maine.

Spar-buoys used during the year to supply losses, 88; chains used, 418 fathoms; shackles used, 228; moorings used, 97.

TENDERS.

The steam-tenders Myrtle and Iris are in good condition. It is found impossible with the Iris, which alone is used for purposes of supply and inspection and for the buoyage of the district, to keep the great number of buoys on the exposed coast of Maine in as good order as is desirable, but every effort is made, and no assistance will be asked this year.

The schooner Wave is old and in poor condition, but as she is only used for carrying material for construction and can wait for proper

weather, she is still useful.

DEPOTS.

As stated in the last annual report, it became necessary to remove the buoy depot from its temporary location on the land belonging to the War Department at House Island, near Fort Scammel, Portland Harbor, Maine. A site was secured at Little Hog Island, in the same harbor, and a wharf 120 feet long by 90 feet wide built, with a bridge, 74 feet long and 20 feet wide, connecting it with the shore. Upon this wharf a buoy-house 70 feet by 30 has been built. Also a coal-house, 85 feet by 30; and a rail track laid for the covenient handling of buoys and sinkers. A cottage for the custodian and a large tank set up for supplying fresh water to the premises and to the light-house steamers has been erected.

SECOND DISTRICT.

The second light-house district extends from Hampton Harbor, New Hampshire, to include Gooseberry Point, extrance to Buzzard Bay, and embraces all the aids to navigation on the coast of Massachusetts.

Inspector.—Commander George H. Perkins, United States Navy. Engineer.—Lieut. Col. James C. Duane, Corps of Engineers, brevet

brigadier general, United States Army.

In this district there are-

Light-houses	61
Light-ships,	ç
Fog-signals operated by steam or hot-air engines	4
Day or unlighted beacons.	5.1
Buoys actually in position	511
Spare buoys for relief and to repair losses	217
Tenders (steam) Verbena and Daisy, inspector's tenders	

The following numbers, which precede the names of stations, correspond with those of the "Light-house List of the Atlantic, Gulf, and Pacific Coasts of the United States," issued January 1, 1875.

LIGHT-HOUSES.

56, 57. Newburyport Harbor, on Plum Island, entrance to Merrimac River, Massachusetts.—On account of the wearing away of the site by the abra-

sion of the sea and river, the front light has been moved to the eastward 340 feet. The seaward side of this building has been painted black, that it may be distinguished in day-time when in range with the white rear tower. The main or rear light has been moved in the same direction 455 feet, making the distance at present between the two towers 336 feet. The keeper's dwelling and outbuildings have also been placed 100 feet south of the main light-tower. No change has been made in the bearings or sailing directions.

64, 65. Cape Ann, on Thatcher's Island, off Cape Ann, Massachusetts.— In the attic of the principal keeper's house four rooms have been finished, to be used as sleeping-apartments. At this station there are five keepers living in two houses. As all the keepers have families, and as the station is an isolated one, having two towers with first-order lights, it is desirable that additional quarters should be provided. An appropriation of \$6,000 for additional quarters is therefore recommended. Material for rebuilding the boat-slip has been landed, and the work has already been commenced. One of the fog-signal houses has been moved 30 feet to the southward, reduced in height 6 feet, a stone foundation and cement floors laid. A duplicate fog-signal has been placed here, the expense of which has been paid from the general appropriation for fog-signals.

75. Minot's Ledge, entrance to Boston Bay, Massachusetts.—The interior of this tower has been repainted. The roof of the assistant keeper's dwelling at Gulf Island has been reshingled, new saddle boards put on,

and other repairs of a general nature made.

81. Duxbury Pier, entrance to Plymouth Harbor, Massachusetts.—The iron ladder for landing at this light-house, having been badly damaged by the ice last winter, has been repaired, and an additional quantity of

riprap placed around the base of the tower.

82. Race Point, on the northwesterly point of Cape Cod, Massachusetts.— The tower at this station was originally built of rubble-stone, laid in common lime mortar. The lime disappeared, and the tower became so leaky that it was necessary to cover it with shingles. The shingles are now rotten, as are also the wooden stairs inside, and the tower is so dilapidated that it is necessary to rebuild it. Extensive repairs are also required on the keeper's dwelling. An appropriation of \$8,000 is recommended for rebuilding the house and towe.

84. Long Point, on Long Point, entrance to Provincetown Harbor, Massachusetts.—An appropriation of \$13,000 was made by act approved June 23, 1874, for rebuilding the dwelling and tower and erecting a fogsignal at this station. A one-and a half story frame dwelling and a brick light tower, square in plan, have been erected during the past season, and the old buildings removed. A fog-bell tower has been erected near the north side of the light-house, and a bell, weighing about twelve hundred pounds, with a striking-machine, has been placed on it and put in operation.

89, 90, 91. Nausett Beach, on east side of Cape Cod, Massachusetts.—An appropriation of \$5,000 was made by an act approved March 3, 1875, for repairs and additions to the tower and keeper's dwelling at this station. Plans have been prepared, and the work will be taken in hand

at an early day.

East Chop, Martha's Vineyard, Massachusetts.—An appropriation of \$5,000 was made by act approved March 3, 1875, for establishing a light at this place, and negotiations have been entered into for the purpose of securing a site.

114. Nobsque Point, near Wood's Hole Harbor, Massachusetts.—Repairs

of a temporary nature were made on the buildings at this place last fall, but the station is now in a dilapidated condition, and should be rebuilt. A fog-bell tower has been erected, and a bell with striking-machinery placed on it and put in operation.

REPAIRS.

At each of the following named light-stations repairs and renovations, more or less extensive, have been made during the year:

58-59. Upper Harbor Beacons, Newburyport Harbor, Massachusetts.

60-61. Ipswich, entrance to Ipswich Harbor, Massachusetts.

62. Anisquam, entrance to Anisquam Harbor, Massachusetts.

63. Straitsmouth, on Straitsmouth Island, Cape Ann, Massachusetts. 66. Eastern Point, entrance to Gloucester Harbor, Massachusetts.

67. Ten-Pound Island, Gloucester Harbor, Massachusetts.

68-69. Baker's Island, entrance to Salem Harbor, Massachusetts.

70. Hospital Point, Beverly Harbor, Massachusetts.

- 71. Fort Pickering, Salem Harbor, Massachusetts.72. Derby's Wharf, Salem Harbor, Massachusetts.
- 73. Marblehead, entrance to Marblehead Harbor, Massachusetts.

74. Egg Rock, off Nahant, Massachusetts.

76. Boston Light, entrance to Boston Harbor, Massachusetts.

77. The Narrows, Boston Harbor, Massachusetts.

78. Long Island Head, Boston Harbor, Massachusetts.

79-80. Psymouth, entrance to Plymouth Harbor, Massachusetts.

83. Wood End, on Cape Cod, Massachusetts.

- 85. Mayo's Beach, head of Wellfleet Bay, Massachusetts.
- 86. Billingsgate Island, entrance to Wellfleet Bay, Massachusetts.
- 87. Sandy Neck, entrance to Barnstable Harbor, Massachusetts.

88. Cape Cod, Highlands of Truro, on Cape Cod, Massachusetts.

92-93. Chatham, on Cape Cod, Massachusetts.

- 95. Monomoy Point, southern extremity of Cape Cod, Massachusetts.
- 98. Nantucket, Great Point, on the northeast point of Nantucket Island, Massachusetts.
- 99. Sankaty Head, on the east side of Nantucket Island, Massachusetts.
 - 101. Gay Head, west entrance to Vineyard Sound, Massachusetts.
 - 102. Brant Point, entrance to Nantucket Harbor, Massachusetts.

103. Nantucket Range, Nantucket Harbor, Massachusetts.

- 104-105. Nantucket Cliff Beacons, on the beach northwest of Nantucket Harbor, Massachusetts.
 - 106. Bass River, entrance to Bass River, Massachusetts.
 - 107. Bishop and Clerks, in Vineyard Sound, Massachusetts.

108. Hyannis, Hyannis Harbor, Massachusetts.

- 110. Cape Poge, on the northeast point of Martha's Vineyard, Massachusetts.
 - 112. Edgartown, entrance to Edgartown Harbor, Massachusetts.
 - 113. Holmes's Hole, entrance to Holmes's Hole Harbor, Massachusetts.
 - 115. Tarpaulin Cove, entrance to Tarpaulin Cove, Massachusetts.
 - 118. Cuttyhunk, entrance to Buzzard's Bay, Massachusetts.
 - 119. Dumpling Rock, in Buzzard's Bay, Massachusetts.
 - 120. Clark's Point, entrance to New Bedford Harbor, Massachusetts.
 - 121. Palmer's Island, New Bedford Harbor, Massachusetts.
 - 122. Ned's Point, entrance to Mattapoisett Harbor, Massachusetts.
 - 123. Bird Island, entrance to Sippican Harbor, Massachusetts.
 - 124. Wing's Neck, entrance to Sandwich Harbor, Massachusetts.

LIGHT-SHIPS.

The cold weather during the past winter has been unequaled for many years, causing serious damage to the floating aids to navigation on

this part of the coast.

All the light-ships in the district, with the exception of South Shoal, were swept from their stations during the movements of the large ice-floes, and carried about by the tides at will, at times being threatened with entire destruction. Fortunately none were lost, although all were

more or less injured, losing copper anchors, chains, &c.

96. Nantucket New South Shoals No. 1, 21 miles south-southeast from the Island of Nantucket, Massachusetts.—This light-ship was the only one in the district which was not carried from her station by the ice. She was taken into New Bedford about the middle of June for repairs, and light-ship No. 9 was placed upon the station temporarily. The estimated cost of repairs required, including a new boat and 30 fathoms of chain, is \$3,450.

90. Pollock Rip, No. 2, off Chatham, Massachusetts.—This ship was swept from her station by the ice during the past winter, and requires slight repair. She is one of the most important on our coast, as she marks the narrow channel connecting Vineyard and Nantucket Sounds with the open ocean to the eastward, and through which passes all the immense coasting trade of that section of the country. It is proposed at an early day to replace the present ship by light-ship No. 40, an entirely new and larger vessel, having on board a powerful steam fogsignal, which will supply a much felt want.

92. Shovelful, No. 3, on Shovelful Shoal, off Chatham, Massachusetts.—This vessel was carried from her station by the ice, on February 14, and was taken over a shoal with but four feet of water upon it, dragging her moorings after her. The copper was stripped from her bottom, but

otherwise the damage was slight.

93. Handkerchief, No. 4, on Handkerchief Shoal, in Nantucket Sound. Massachusetts.—This vessel was swept from her station by the movement of the ice, and, being in danger of going upon the shoals, which would probably have resulted in her loss, her master slipped her moorings and went to sea. She was off her station for twelve days before it was found practicable to replace her. She lost her anchor and ninety fathoms of chain-cable, and it cost \$1,000 for the services of a steamer to replace her upon her station.

105. Cross Rip, No. 5, off Cross Rip Shoal, Nantucket Sound, Massachusetts.—This vessel was also dragged from her station by the ice, but

sustained no serious damage.

107. Succonnessett, No. 6, between Succonnessett and Eldridge Shoals, Nantucket Sound, Massachusetts.—This vessel lost an anchor and chain, and was carried from her position by the movement of the ice. She

sustained some damage, but none of great importance.

112. Vineyard Sound, No. 7, off Sow and Pigs Rocks, western entrance to Vineyard Sound, Massachusetts.—This vessel, which was dragged from her station by the large moving fields of ice, sustained no considerable damage. It is proposed to place upon this station, which marks the western entrace to Vineyard Sound, light-ship No. 39, soon to be completed, which has a powerful fog signal on board.

113. Hen and Chickens, No. 8, western side of entrance to Buzzard's Bay, Massachusetts.—This vessel was also moved by the ice, but she was promptly returned to her station, having sustained but slight damage.

All the light ships in this district are being put in complete order as

rapidly as the means at the disposal of the inspector will permit; and, as much of the work is done by the crews of the light ships and tender, it will be done at small expense.

FOG-SIGNALS OPERATED BY STEAM OR HOT-AIR ENGINES.

Cane Ann.—Twelve-inch steam-whistle. Boston light.—First-class Daboll trumpet. Race Point.—Twelve-inch steam-whistle. Cape Cod.—First-class Daboll trumpet.

DAY OR UNLIGHTED BEACONS.

South Pier, Newburyport Harbor, Massachusetts.—Wooden crib filled with stones.

North Pier, Newburyport Harbor, Massachusetts.—Wooden crib filled with stones.

Black Rocks, Newburyport Harbor, Massachusetts.—Stone pier, with wooden pyramid at top.

Point Neck Rocks, entrance to Essex Harbor, Massachusetts.—Iron spindle, with ball at top.

Lane's Point, Annisquam Harbor, Massachusetts.—Square wooden bea-

Lobster Rock, Annisquam Harbor, Massachusetts.—Square granite bea-

Dry Salvages, off Cape Ann, Massachusetts.—Wooden tripod.

Londoner, off Thatcher's Island, Massachusetts.—Iron spindle, with cage at top.

Five Pound Island Beacon, Gloucester Harbor, Massachusetts.—Granite base, with iron spindle, and ball at top.

Harbor Rock Beacon, Gloucester Harbor, Massachusetts.—Iron spindle, with ball, and cage at top.

Black Rock, Gloucester Harbor, Massachusetts.—Iron spindle, with cage at top.

Lobster Rock, Beverly Harbor, Massachusetts.—Stone, with wooden spindle.

Ram's Horn Beacon, entrance to Beverly Harbor, Massachusetts.—Square granite, wooden mast, cage at top.

Monument Bar, entrance to Beverly Harbor, Massachusetts.—Square granite, wooden mast, cage at top.

Abbott's Monument, entrance to Salem Harbor, Massachusetts.-Square

granite, wooden spindle, cask at top.

Little Haste, entrance to Salem Harbor, Massachusetts.—Wooden mast, cask at top.

Halfway Rock, off Marblehead, Massachusetts.—Granite beacon, broken down.

Bowditch Beacon, entrance to Salem Harbor, Massachusetts.—Granite triangular pyramid, wooden spindle, and cage at top.

Hardy's Rock, entrance to Salem Harbor, Massachusetts.—Wooden spindle, with two triangles at top.

Great Aqua Vitæ, entrance to Salem Harbor, Massachusetts.—Granite, wooden spindle, and cage at top.

Little Aqua Vita, entrunce to Salem Harbor, Massachusetts.—Granite, wooden spindle, and cage at top.

Marblehead Rock, entrance to Marblehead Harbor, Massachusetts.—Granite cone, wooden spindle.

Cat Island, entrance to Salem Harbor, Massachusetts.—Wooden spindle with cask at top.

Half tide Rock, entrance to Swampscot Harbor, Massachusetts.—Iron

° spiudle, cask at top.

Pig Rocks, Boston Bay, Massachusetts.—Granite pyramid, with wooden spindle and cage at top.

Sunken Island Boston, Bay, Massachusetts.—Granite base, with wooden spindle, and cage at top.

Bird Island, Boston Bay, Massachusetts.—Iron spindle, cage at top.

Deer Island Point, Boston Bay, Massachusetts.—Square granite pyramid.

Great Fawn Bar, Boston Bay, Massachusetts.—Square granite base and granite cone, with iron spindle, and cage at top.

Nix's Mate, Boston Harbor, Massachusetts.—Square granite base, with

octagonal wooden pyramid on top.

Spit Beacon, Boston Bay, Massachusetts.—Square granite pyramid. False Spit, Boston Bay, Massachusetts.—Granite base, with iron spindle,

and cage at top.

Point Alderton, Boston Bay, Massachusetts.—Square granite pyramid, with cone at top.

Harding's Ledge, Boston Bay, Massachusetts.—Iron spindle, with wheel

South Beacon, entrance to Scituate Harbor, Massachusetts.—Iron spindle, with two lozenges. North Beacon, entrance to Scituate Harbor, Massachusetts.—Iron spindle,

with two rounds.

Hogshead Beacon, Plymouth Harbor, Massachusetts.—Iron spindle, with arm, cask, and cage at top.

Breakwater Beacon, Plymouth Harbor, Massachusetts.—Square granite

base, with wooden spindle, and cage at top.

Duxbury Pier, Plymouth Harbor, Massachusetts.—Square granite base, with granite post on top.

Egg Island Rock, entrance to Wellfleet Harbor, Massachusetts.—Wooden

spindle, with cask at top.

Billingsgate Shoal, entrance to Wellfleet Bay, Massachusetts.—Owing to the washing away of the island, the rebuilding of the beacon has been abandoned, and a buoy substituted.

Breakwater, entrance to Bass River, Massachusetts.—Unfinished.

Sunken Pier, entrance to Bass River, Massachusetts.—Wooden spindle, with cask at top.

Breakwater, entrance to Hyannis Harbor, Massachusetts.—Wooden spindle, four arms, and cask at top. stands on east end of breakwater.

Great Rock, west of Point Gammon, Vineyard Sound, Massachusetts.— Iron spindle, cage at top.

Collicr's Ledge, Centreville Harbor, Vineyard Sound, Massachusetts.—

Granite base, black spindle, ball and vane. Lone Rock, entrance to Wood's Hole, Massachusetts.—Iron spindle, cage

at top.

Spindle Rock, entrance to Edgartown Harbor, Massachusetts.—Iron spindle, with a cask at top, surmounted by spindle and vane.

Cormorant Bocks, entrance to Mattapoisett Harbor, Buzzard's Bay, Massachusetts.—Iron spindle, with cage at top.

Range Beacon, entrance Fair Haven Harbor, Massachusetts.—A triangular pyramid of iron.

Egg Island, entrance New Bedford Harbor, Massachusetts.—A granite cone, with an iron spindle and vaue at the top.

Old Cock, north side of entrance to Buzzard's Bay, Massachusetts.—Iron

spindle, cage at top.

Under the appropriation for "day-beacons in Maine and Massachusetts, 1873-74," operations have been carried on during the past,

year at the following named places:

Monument Bar Beacon, on south side of entrance to Beverly Harbor, Massachusetts.—The granite-crib day-beacon at this place has been rebuilt, and filled in with stone nearly to the top. It is pyramidal in form, 17 feet high, 12 feet square at the base, and 3 feet at the top, and is surmounted by a mast and cage, painted black.

Little Haste Beacon, on south side of entrance to Salem Harbor, Massachusetts.—A wooden mast, 35 feet high by 8 inches diameter, has been

erected in place of one recently carried away, and painted black.

Great Aqua Vitæ Beacon, Salem Harbor entrance, Massachusetts.—A wooden mast, 22 feet high and 7 inches diameter, with a cage at the top 3 feet high and 26 inches square, has been erected in place of one recently carried away. All painted black.

Little Aqua Vitæ Beacon, Salem Harbor entrance, Massachusetts.—A wooden mast, 25 feet high and 73 inches diameter, with two prongs at top, and all painted red, has been erected in place of one recently carried

away.

Bird Island Beacon, Boston Harbor, Massachusetts.—A 7-inch hole, 19 inches deep, has been made in the center stone, and the latter banded with iron; the iron spindle raised and reset; a wooden cage, 4 feet diameter by 8 feet high, made and placed at the top of the spindle, the iron braces repaired, and the cage, spindle, and braces repainted red.

False Spit Beacon, Boston Harbor, Massachusetts.—A 7 inch bole, 20 inches deep, has been made in the center stone, and the latter banded with iron, the iron spindle raised and reset, a wooden cage made, 4 feet diameter by 8 feet high, and placed at the top of the spindle, a new brace made, and the iron-work, spindle, and cage repainted red.

Collier's Ledge, Centreville Harbor, Vineyard Sound, Massachusetts.—The day beacon at this place has been rebuilt. It is conical in form, 12 feet diameter at the base, 5 feet at the top, and 18 feet in height, with a wooden staff at the top, surmounted by an open-work ball and vane.

BUOYS.

The buoyage of this district is now in excellent condition. During the past winter most of the buoys were swept from their positions by the ice, and 62, with their appendages, were lost. The others were promptly returned to their stations, and the places of the missing ones supplied by spare buoys on hand for that purpose.

TENDERS.

The steam-tenders Daisy and Verbena have had constant employment, much of it of the roughest kind, and now both of them require extensive repairs. The Daisy is too small to do the work efficiently; and if caught at sea in bad weather, as she is liable at any time to be, is not safe. She should be sold, and her place supplied by a larger and more efficient vessel.

DEPOTS.

The buoys and material at Gulf Island have mostly been removed to Lovell's Island, where we now have excellent facilities for the handling and storage of buoys, chains, anchors, fuel, and stores of all kinds. The depot at Wood's Hole for the southern part of the district is in good condition. During the present season the Light House Board, desiring to do all in its power for the advancement of science, has tendered to the United States Commissioner of Fish and Fisheries the use of the portion of the depots grounds and buildings not at present required for light house work for the purpose of carrying on his investigations, which offer has been accepted, and the investigations at that place are now going on, but without expense to the Light House Establishment.

THIRD DISTRICT.

The third district extends from Gooseberry Point, Massachusetts, to include Squam Inlet, New Jersey, and embraces all the aids to navigation on the sea and sound coasts of Rhode Island, Connecticut, and New York, Narragansett and New York Bays, Providence and Hudson Rivers, Whitehall Narrows, and Lake Champlain.

Inspector.—Commodore Stephen D. Trenchard, United States Navy. Engineer.—Col. 1. C. Woodruff, Corps of Engineers, brevet brigadier

general, United States Army.
In this district there are—

The builts district object are—	
Light-houses.	119
Light-ships	9
Day or unlighted beacons	39
Fog-signals operated by steam or hot-air engines	
Buoys actually in position.	
Buoys for relief and to supply losses	
Steam-tenders for supply and for inspection, Putnam and Cactus	
Steam-tender for engineer purposes, Mistletoe	
Supply-steamer for supplying the light-houses of the Atlantic and Gulf coasts,	-
Fern	. 1
,	

The numbers preceding the names of stations correspond with the "Light house List of the Atlantic, Gulf. and Pacific Coasts and the Northern and Northwestern Lakes of the United States," issued January 1, 1875.

LIGHT-HOUSES.

126. Beaver Tail, entrance to Narragansett Bay, Rhode Island.—During the year all the plate-glass of the lantern was reset, and the two caloric engines of the fog-signal thoroughly overhauled. The mouth piece of the fog-signal trumpet was broken during the latter part of the year, and a new one was fitted. The station is now in good order. The fog-signal was in operation during the year 623 hours.

130. Dutch Island, Narragansett Bay, Rhode Island.—Repairs of a general nature are required at this station, which it is estimated will cost

\$1,500. These will be made as soon as practicable.

— Castle Hill fog-signal, entrance to Newport Harbor, Rhode Island.— An appropriation of \$10,000 was made by act approved March 3, 1875, for the erection of a fog-signal at this place. An examination of the site was made by direction of the board, but the purchase has not been consummated, as the owners of the property where it is proposed to erect the signal have, within the past year, erected spacious mansions for summer residences, and are opposed to the erection of a signal on their land, which must, of necessity, be at their very doors, and in their opinion would depreciate the value of their property. It seems quite probable that no proper site can be procured in this locality, except by condemnation, under the laws of the State of Rhode Island, and even in

this case the valuation of the land would undoubtedly be far beyond the sum appropriated for the fog signal, and thus the object of the appropriation would be defeated. No other site in the vicinity can be occupied to the same advantage, otherwise the board would ask that the act making the appropriation for this work be modified so as to allow the selection of a different site. There are no positions on either side of Castle Hill, seaward or landward, suitable for such a fog signal, and a selection could only be made of positions on the opposite shore, which would not answer the purpose. A fog-signal is very much needed at this point, but it is not probable that a site can be secured for any reasonable sum.

132. Muscle-Bed Shoals, Narragansett Bay, Rhode Island.—This station was seriously damaged by the ice during the past winter, and the rebuilding of the beacon becomes a necessity. The stone pier was moved some four feet by the force of the ice. The light and fog-signal have been continued since the damage, but require frequent adjustment to keep the apparatus in running order. The cost of rebuilding the beacon and protecting its base with rip-rap is \$6,000, for which an appropriation is recommended.

136. Conimicut entrance to Providence River, Rhode Island.—Early in March last a heavy field of floating ice moving down the Providence River, struck the pier and completely demolished the keeper's dwelling. There were present at the time the keeper and his son, both of whom narrowly escaped with their lives. The keeper lost all his furniture, valued at about \$319. It is recommended that an appropriation be made to re-imburse him to this amount. The destruction of the keeper's dwelling on the pier necessitated the re-occupation of the old house at Navat Point and the employment of an assistant keeper to insure a proper attendance to the light which is on the opposite side of the chan-The Nayat dwelling was enlarged and considerable repairs made to give accommodation to the keepers. The Conimicut light-station was originally a day-beacon, but was changed so that a light might be shown and a fog bell sounded. The tower resisted the shock of the ice, but much of the protection-stone at its base was carried away. not having sufficient superincumbent weight, was entirely destroyed. Temporary repairs to the station were made, and stone for protecting the base of the tower is now being placed, but the rebuilding of the pier of greater dimensions and greater stability is necessary. A proper pier and stone-dwelling thereupon it is estimated will cost \$30,000, which amount it is respectfully recommended shall be appropriated for that purpose.

137. Bullock's Point, Providence River, Rhode Island.—This station, originally built as a day-beacon, is about to be rebuilt on a larger scale, under an appropriation approved June 23, 1874. Plans and specifications have been approved and contracts entered into for enlarging the pier, and for the materials for the new dwelling house, &c., and the work

of getting out stone is already commenced.

140. Fuller's Rock, and-

141. Sassafras Point, Providence River, Rhode Island.—The purchase of a site for the erection of a dwelling for the keeper of these lights has not been made. The land in the vicinity is being much improved for business purposes, and there is a disinclination on the part of the owners to sell land for a keeper's dwelling, as they fear that the remainder will be depreciated in value. The appropriation of \$5,000, made by act approved June 23, 1874, is still available.

142. Point Judith, Rhode Island.—During the year the boiler of the

fog-signal has been duplicated, making the whole of the fog-signal apparatus now in duplicate. The repairs, besides the work required in housing and setting up the new boiler, have been quite extensive, including the patching, retubing, and putting in good condition the old boiler. The number of hours' duration of fog during which the signal was

sounded is 7761.

144. Block Island, (southeasterly,) Rhode Island.—This station was completed and the light first exhibited from the tower on February 1, 1875. There remains to be completed at the station some protection to the reservoir, to secure an adequate supply of water for the use of the fog-signal, and the fencing of the grounds. For this the funds of the special appropriation made by act approved June 23, 1874, are ample. The signal is in duplicate in all parts except the boiler. A duplicate boiler will be added as soon as practicable. The number of hours of fog during which the signal has been sounded is 801.

—. Block Island Breakwater, Rhode Island.—The temporary rangelights on the breakwater at this island, maintained by the Engineer Department of the Army during the construction of the breakwater, have become a necessity to navigation, and their maintenance should be transferred to the Light-House Establishment. New and permanent frames for exhibiting the lights should be built, and an estimate there-

for is submitted of \$900.

146. Montauk Point, Long Island, New York.—Some essential parts of the flashing apparatus at this station have been renewed. The lantern has been entirely reglazed, and the station painted. The fog-signal has been cleaned and repaired, and the station put in good order. The fog-signal was in operation 748 hours during the year.

147. Stonington Harbor, Connecticut.—General repairs have been made to this station during the year, under special appropriation therefor,

made by act approved June 23, 1874.

151. New London Harbor, Connecticut.—This station has undergone general repairs during the latter part of the year, and the buildings have been painted throughout. The fog-signal engines have been fitted with some new parts. The number of hours during which the signal was in operation during the year was 553.

153. Race Rock, Long Island Sound, New York.—The operations during the year have consisted in completing the concrete foundation for the pier, and the laying of the cut-stone courses of the pier and landing-wharf has been commenced. The contractor has not pushed this work.

during the year with the energy which its importance demands.

154. Little Gull Island, Long Island Sound.—A portion of the special appropriation made June 23, 1874, has been applied toward completing the landing. The past severe winter damaged the concrete decking of the pier, causing great loss of rain fall from the cisterns, and apprehensions were felt lest there should be a deficiency of water for the use of the fog-signals at the station. The damage will be repaired at an early day. The number of hours during which the fog-signal was in operation was 651.

159. Saybrook, mouth of Connecticut River, Connecticut.—A striking apparatus for the fog bell at this station has been put up during the year, and the bell hung in a better position. This station has under-

gone general repairs, and is now in good condition.

165. Faller's Island, Long Island Sound, Connecticut.—The recommendations made in the last annual report for a powerful fog-signal and for the protection of the bank, which is washing away by the abrasion of the sea, is renewed. On February 7th the steamer E. A. Wood-

ward, of Norwalk, from Providence for New York, ran aground on the reef north of the island. The fog-bell is wholly inadequate for the wants of navigation, and a steam-signal of the most approved pattern should be established. The estimated cost of protecting the site and establishing a steam fog signal is \$7,500, for which an appropriation is recommended.

168. Southwest Ledge, entrance to New Haven Harbor, Connecticut.— The operations under the contracts for building a light-house at this station have been confined to the completion of the foundation-tube, filled with concrete, and the commencement of the manufacture of the iron superstructure, which, it is feared, will be completed too late to be

erected this season.

171. Middle Ground, Stratford Shoals, Long Island Sound, New York.— The contract for the concrete foundation and stone pier was made too late in the last season to justify commencement of the work at that time. During the winter large accumulations of gravel were made within the The removal of this gravel became a necessity under the riprap ring. plan proposed for the foundation and pier, and for the stability of the structure. This caused delay in the commencement of the contractor's operations, who had collected material for concrete, and had received a quantity of the heavy pier stone from eastern quarries. It is expected that the laying of the concrete will be completed by the end of July, and the commencement of the courses of cut stone work of the pier will be made in August. Much of the first course of the pier has already been brought to the site, with the view of an early beginning, and large quantities of the other courses of cut stone have been shipped from the quarries, and are now stored at convenient distances from the work.

173. Bridgeport, entrance to Bridgeport Harbor, Connecticut.—The work of coping the granite breakwater, which protects this light-station, by heavy blocks of stone has been completed during the year by contract,

made under the appropriation of Congress therefor.

178. Lloyd's Harbor, north shore of Long Island, New York.—The protection of the site of this light-house from the abrasion of the sea by an enrockment of large stones has been completed during the year, and

general repairs made at the station.

— Cold Spring Harbor, north shore of Long Island, New York.—An appropriation of \$20,000 was made by act approved March 3, 1875, for building a light-house or range-lights. The purchase of land for sites of the range-lights proposed for marking the channel has not been made, because of objections by one of the owners of the land. In case the purchase be made, the lights cannot be erected during the present year, as cession of jurisdiction cannot be secured from the State of New York until some time subsequent to January next.

182. Stepping Stones, Long Island Sound, New York.—The operations at this station have been limited to the completion of the riprap foundation. A contract for the concrete foundation, granite pier, dwelling, and tower has been made, and the material for the work is being prepared. The sheltered position of the site will admit of the continuance of operations until late in the season, and it is thought that the contractor will fulfill his engagement to complete the work within the time required, namely, one year from the time of actual commencement.

183. Throgg's Neck, Long Island Sound, New York.—This station was in a dilapidated condition, and should have been rebuilt, as recommended, last year. In the absence of an appropriation for that purpose, how-

ever, repairs have been made during the present year, and are now in progress to put the building in a condition fit for habitation.

190-191. Highlands of Navesink, New Jersey.—The repairs and fencing authorized under the appropriation of June 23, 1874, have been completed, and the station is in good order, with the exception of the road-

way to the landing.

193. East Beacon, Sandy Hook, New Jersey.—The brush jetties for protecting the beach and station from the encroachments of the sea have fulfilled in a great measure the purpose intended. It is found that a more secure method of fortifying the ends is necessary by means of a few piles. A siren of improved pattern was purchased during the year and put up at this station. 'The number of hours during which the signal was in operation was 531.

194. West Beacon, Sandy Hook, New Jersey.—The rebuilding of the crib-work protection at this station and its extension, for which there is an appropriation of \$6,000, will be commenced as soon as a working party now at Sandy Hook, East Beacon, shall have finished work there.

204. Robbin's Reef, New York Harbor, New York.—New and improved parts have been fitted to the fog-bell striking machine, and general repairs and improvements have been made, for the greater comfort of the keeper, as well as the efficiency of the station. The board is now making experiments in the use of mineral oil at this station.

210. Stony Point, Hudson River, New York.—The fog-bell frame at this station is being changed, preparatory to erecting a striking machine in place of the old apparatus at the station, which was inefficient. The materials have all been ordered, and the changes will be made during

the month of August.

213. Rondout, Hudser, River, New York.—The dike on the north side of the entrance to Rollout Creek needs a light to prevent collision of passing vessels. Dure gethe construction of the dike it was lighted by the Engineer Department of the Army. Its maintenance should now devolve upon the Ligit-Honse Establishment. If the dike itself is substantial enough for the base of a frame support, it will cost but a small amount, estimated at \$1,600. If the light be built on a separate foundation of piles, behind the dike, which is preferable on account of security from passing vessels, the cost will not be less than \$3,200. An appropriation of the latter amount is asked to establish this light.

215. Hudson City, Hudson River, New York.—The structure has been completed during the year, and the light was first exhibited on Novem-

ber 1, 1874.

487. Split Rock, Lake Champlain, New York.—This station was in a dilapidated condition, and unfit for habitation. Some repairs have been made, but this is only a temporary expedient. There should be a new dwelling house, the estimated cost of which is \$6,000.

489, 490. Burlington Beacons, Burlington Breakwater, Vermont.—The dwelling-house for the keeper of these beacons has been completed. The two beacons have been moved to the extremities of the breakwater.

491. Colchester Reef, Lake Champlain, Vermont.—The enrockment for the protection of the foundation of this station has been completed during the present summer.

REPAIRS, ETC.

At each of the following stations in the third district, repairs, more or less extensive, have been made during the year:

126. Beaver Tail, Rhode Island.

- 128. Newport, Rhode Island.
- 129. Rose Island, Rhode Island.
- 130. Dutch Island, Rhode Island.
- 131. Poplar Point, Rhode Island.
- 132. Muscle Bed Shoal, Rhode Island.
- 133. Prudence Island, Rhode Island.
- 134. Bristol Ferry, Rhode Island.
- 135. Warwick, Rhode Island.
- 136. Conimicut, Rhode Island.
- Nyatt Point, Rhode Island.
- 137. Bullock's Point, Rhode Island. 139. Pumham Rock, Rhode Island.
- 142. Point Judith, Rhode Island.
- 143. Block Island, Rhode Island.
- 146. Montauk Point, New York.
- 147. Stonington, Connecticut.
- 149. Morgan's Point, Connecticut.
- 150. North Dumpling, Connecticut.
- 151. New London, Connecticut.
- 154. Little Gull Island, Connecticut.
- 156. Plum Island, Connecticut.
- 158. Cedar Island, New York.
- 159. Saybrook, Connecticut.
- 161. Brockway's Reach, Connecticut.
- 164. Horton's Point, New York.
- 165. Faulkner's Island, Connecticut.
- 166. New Haven Harbor, Connecticut.
- 167. New Haven Long Wharf, Connecticut.
- 169. Stratford Point, Connecticut.
- 172. Old Field Point, New York.
- 174. Black Rock, Connecticut.
- 175. Penfield Reef, Connecticut.
- 176. Norwalk Island, Connecticut.
- 177. Eaton's Neck, New York.
- 178. Lloyd's Harbor, New York.
- 179. Great Captain's Island, Connecticut.
- 180. Execution Rocks, New York.
- 181. Sand's Point, New York.
- 183. Throgg's Neck, New York.
- 184. North Brother Island, New York.
- 186. Great West Bay, New York.
- 187. Fire Island, New York.
- 190, 191. Highlands of Navesink, New Jersey.
- 192. Sandy Hook, New Jersey.
- 193. Sandy Hook, East Beacon, New Jersey.
- 195. Conover Beacon, New Jersey.
- 196. Chapel Hill, New Jersey.
- 197. Point Comfort, New Jersey.
- 198. Waackaack, New Jersey.
- 199. Elm Tree, New York.
- 200. New Dorp, New York.
- 201. Princess Bay, New York.
- 202. Fort La Fayette, New York.
- 203. Fort Tompkins, New York.
- 204. Robbins' Reef, New York.
- 205. Fort Columbus, New York.

- 206. Bergen Point, New Jersey.
- 208. Passaic, New Jersey.
- 210. Stony Point, New York.
- 214. Saugerties, New York. 216. Four-Mile Point, New York.
- 217. Coxsackie, New York. 218. Stuyvesant, New York.
- 220. New Baltimore Dyke, New York.
- 222. Coeyman's Bar, New York.
- 223. Roha Hook, New York.
- 225. Nine Mile Tree, New York.
- 226. Cow Island, New York. 229. Cross Over, New York.
- 230. Cuyler's Dyke, New York.
- 486. Barber's Point, New York.
- 487. Split Rock, New York.
- 488. Juniper Island, New York.
- 491. Colchester Reef, New York.
- 496. Point aux Roches, New York. 498. Windmill Point, New York.
- --. Light-House Depot, New York.

LIGHT-SHIPS.

125. Brenton's Reef, No. 11, off Brenton's Reef, entrance to Newport Harbor, Rhode Island.—Since the last report this vessel has received new casing for pumps, cast-iron whelps for windlass, and sundry other small matters. She is in need of extensive repairs, and will soon be taken off her station for that purpose. The estimated cost is about \$18,000. During the past winter she held her ground against masses of floating ice without a parallel in many years.

148. Eel Grass Shoal, No. 25, off Mystic, Connecticut, in Fisher's Island Sound.—This vessel has had no repairs since the date of last report. She is unsound, and too small for the service. The cost of necessary.

repairs is estimated at \$6,000.

152. Bartlett's Reef, No. 13, off New London, Connecticut, in Long Island Sound.—This vessel was carried from her station by the ice and was towed into New London. Her metal sheathing was repaired, sundry minor defects remedied, and the vessel was then returned to duty after an absence of twelve days. Some of her timbers are unsound, but she

is in a sufficiently good condition for another year's service.

163. Cornfield Point, No. 12, Long Island Sound, off the mouth of the Connecticut River.—This vessel has been thoroughly repaired, at a cost of \$16,488.33. She has been furnished with two mushroom-anchors and one hundred and eighty-five fathoms of chain. She was, during the winter, carried from her station by ice; and the cost of repairing her sheathing amounted to \$731.25. Total expenditure upon this vessel

during the year, \$19,523.72.

170. Stratford Shoal, No. 15, on Middle Ground, off Stratford Point, Long Island Sound.—This vessel was carried from her station by ice on February 9, and went ashore near Orient, Long Island. She was hauled off by the tenders Cactus and Mistletoe, and was towed to New London, where it was found that she had sustained no serious damage. Her metal, bonts, berth-deck, and pump-boxes were repaired, at a cost of \$301.91. The vessel, however, is much decayed, and to put her in good condition will cost \$15,000.

188. Sandy Hook Light-Ship, No. 16, off entrance to New York Bay, six miles from Sandy Hook and Highlands of Navesink Lights.—This vessel during the past year received a new deck; her top sides were recalked. and she was otherwise overhauled, at a cost of \$1,723.29. She is now in good condition, and, as heretofore, is creditably kept. Total expenditure upon this vessel, \$3,072.52.

Light-vessel No. 17.—This vessel, when on station temporarily at Stratford Shoal, was damaged by ice. She was repaired at a cost of \$1,609.51. She is now doing duty on Brenton's Reef, and is in a sound condition.

The total cost of her repairs during the year was \$3,826.76.

Light-vessel No. 20.—This vessel is now at the light-house depot, Staten Island. Considerable repairs are needed, the estimate for which is \$2,500.

189. Wreck of the "Scotland," Light-vessel No. 23, off Sandy Hook — This vessel was authorized by act of Congress, approved June 23, 1874, and an appropriation of \$40,000 was made for that purpose. As the vessel was much needed upon the station, and a considerable time must necessarily elapse before one could be built, an old vessel which had been used for a relief was placed there, and the light exhibited for the first time on the evening of September 10, 1874, giving great satisfaction to the coasting-vessels trading to and from New York. The old vessel now upon the station is in need of slight repairs, which it is estimated will cost \$2,500.

New light-vessel, No. 39.—This vessel, built under contract with David Carll, of City Island, N. Y., was successfully launched on June 5th. She is now at New London, receiving on board her boilers and the machinery for a fog-signal. She will, when completed, be placed upon

Sow and Pigs Reef, western entrance to Vineyard Sound.

FOG-SIGNALS OPERATED BY STEAM OR HOT-AIR ENGINES.

126. Beaver Tail, Rhode Island.—A first-class Daboll trumpet, operated by 24 inch Ericsson hot air engine, duplicated.

142. Point Judith, Rhode Island.—First class steam siren, duplicated.

144. Block Island light-station, southeasterly.—First-class steam-siren in daplicate.

146. Montauk Point, New York.—First-class Daboll trumpet, operated by 24-inch Ericsson hot-air engines, in duplicate.

151. New London, Connecticut.—Second-class Daboll trumpet, operated by 18-inch Ericsson caloric-engines, in duplicate.

154. Little Gull Island, New York.—Second class steam siren, in duplicate.

177. Eaton's Neck, New York.—Second-class steam siren, in duplicate. 180. Execution Rocks, New York.—Third-class Daboll trumpet, operated by 18-inch Ericsson hot-air engine, in duplicate.

193. Sandy Hook, (East Beacon,) New Jersey, entrance to New York

Bay.—First-class steam-siren, in duplicate.

----, New light-ship, No. 39.- The experiment of operating a steam fog-signal on board a light-ship will be tried in this vessel. The machinery for the purpose will be two boilers, a whistle-boiler, and an evaporating-boiler of locomotive tubular form, distillers, circulating and feed pumps, and horizontal non-condensing steam engine operating a whistle twelve inches in diameter. It is proposed to place her, when completed, which will be late in the autumn, at the western entrance

Vineyard Sound, to mark Sow and Pigs Rocks, where a fog signal is

much needed.

Duration of fog, characteristics of signal, and expenditure of stores at the fog-signal stations in the third district for the year ending June 30, 1875.

DAY OR UNLIGHTED BEACONS.

2. South Point of Rose Island, Narragansett Bay, Rhode Island.—This beacon, consisting of a granite structure and iron spindle and cage, was carried away by the ice during the past winter. As a temporary mark, an iron spindle and cage have been erected at the site.

It is estimated that it will cost, to rebuild the granite structure and surmounting spindle and cage. \$4,000. An appropriation is recom-

mended.

—. "Rhode's Folly," Pawcatuck Bay, Rhode Island.—A day beacon should be established at this place. The estimate of cost, \$2,500.

14. West or Wicopesset Rock, entrance to Fisher's Island Sound by Lord's Channel, northwest of East or Catumb Reef, two-thirds of a mile.—This spindle was carried away during the winter, and has been replaced by another spindle and cage work.

24. Sand's Spit, Sag Harbor, New York.—This beacon has been entirely

destroyed by ice during the past winter.

Measures have been taken for temporarily marking the spit by placing a large granite block on the riprap foundation of the old beacon, and placing in the block an iron spindle and cage-work. The cost of rebuilding the beacon on a granite pier and protecting the same by a proper enrockment is estimated at \$3,500, for which an appropriation is asked.

37. Success Rock, near Sand's Point.—This day-mark has been destroyed during the year by the ice. The spindle has been overthrown, splitting

the rock where it was pierced by the spindle.

A party has been engaged for some time in drilling a new hole in the rock, and it is expected the spindle will be replaced some time during the month of August.

BUOYAGE.

During the past winter, pavigation was much interrupted by the ice, which in extraordinary quantities filled the bays, harbors, and water-routes of travel. Perhaps in no preceding year were more buoys displaced than during the protracted cold weather of the past winter. But the constant employment of the steam tenders resulted in the recovery of

the greater number. The value of buoys and attachments lost was about \$9,000. In the majority of cases the buoys were found to have parted their chains or mooring loops, proving them to have been well moored, and that their displacement was the result of the resistless force of the moving fields of ice, sweeping down upon them with the full force of the tide. During the year there have been purchased, to supply losses, 270 iron buoys and their appendages, at a cost of \$59,996.21, the cost of buoy service in this district alone being \$69,884. There is now on hand a sufficient stock of buoys to supply all ordinary losses.

TENDERS.

The tenders in this district are i fair condition, and are sufficient to properly perform the work required.

DEPOTS.

Light-House Depot, Staten Island, New York .- The general work of repairs and grading of the grounds has been continued during the year. A duplicate engine for the use of the lamp shop has been put up during the year, and an additional building for its housing. The roadway outside the northern wall became so bad as to seriously impede travel for the teams, &c., having business with the depot. Repairs were therefore made to some extent. Additional facilities and improvements have been made in the testing-room of the lamp shop for experiments. the wharves, where urgently needed, have been made. At present the barrels of oil, when received, are placed on skids in the yard. This exposure causes loss of oil. The enlargements recommended would increase the room for storage, which is inadequate. Many articles of second hand, or condemned, or bulky nature, which are now put in store with the supplies, embarrassing the work going on there, might be stored in the oil-shed if enlarged as recommended. The water continues to come through the roof of the oil vault during rainy weather, and particularly when the frost leaves the ground in the spring. One of the storage-tanks has been repaired during the year. They are now all in good order.

In consequence of the improvements made upon the land adjoining the depot on the south, and the consequent changes to be made in the grading of portions of the depot-grounds, referred to in the last annual report, the recommendation then made for an appropriation of \$10,000 is

berein renewed.

The estimate for commencing the enlargement of the basin and for renovating the wharves, &c., and for a brick addition to the oil-shed, viz, \$50,000, is also renewed.

New London depot.—It is recommended that the passage way from Bank street to the water lot, purchased by the Light-House Establishment, at New London, Connecticut, and which is the right of way secured to the United States in connection with that purchase, be walled along the east side. The passage way should also be properly paved. The estimated cost of these improvements is \$3,000.

This depot, in view of its central position, and of the facilities it affords, is invaluable in its service to the district, and its enlargement is a matter of necessity; for frequently there are assembled there the three tenders, relief light ship, and two or three other vessels; besides this, the number of fog signals is constantly increasing, and a depot for fuel required

by them is here almost indispensable.

Lens-apparatus, &c., received at and delivered from light-house depot, Staten Island; also number of cases in which the lenses were received and delivered from July 1, 1874, to June 30, 1875.

FOURTH DISTRICT.

The fourth light-house district extends from Squam Inlet, New Jersey, to and including Metomkin Inlet, Virginia. It includes the seacoast of New Jersey below the highlands of Navesink, the bay coasts of

New Jersey and Delaware, the sea-coasts of Delaware and Maryland, and part of the sea-coast of Virginia.

Inspector.—Commander George B. White, United States Navy.

Engineer.—Lieut. Col. W. F. Raynolds, Corps of Engineers, brevet brigadier general, United States Army.

In this district there are:

Light-houses	20
Light-ships.	
Fog-signals operated by steam or hot-air engines	0
Day or unlighted beacons.	. 0
Buoys actually in position	113
Spare buoys for relief and to supply losses	142
Tenders (steam) for inspection, Violet	1
Tenders (steam) for construction and repairs, Rose	1

The numbers preceding the names of stations correspond with those of the "Light-house List of the Atlantic, Gulf, and Pacific Coasts of the United States," issued January 1, 1875.

231. Barnegat, sea-coast of New Jersey.—During the very cold weather of last winter, the mechanical lamps which had been in use at this station for many years became unserviceable, and their place was supplied by new lamps of the Funck pattern. Electric bells for calling the relief-

keeper have also been placed in position.

232. Tucker's Beach, entrance to Little Egg Harbor, New Jersey.—The tower at this station has been cement-washed, and the lantern painted. A boat and buoy house is now being built. The dwelling is a one-story brick building, outside dimensions 35 by 20 feet, and contains but two rooms besides the attic. The accommodations for the keepers are entirely inadequate, and a new one should be built. An appropriation of \$8,000 is asked for this purpose.

233. Absecum, sea-coast of New Jersey.—The semi-monthly measurements of the beach have been continued. No important changes have occurred. Electric bells for calling relief or assistance have been placed in the tower, and add greatly to the efficiency of the station. The front site has been raised to the city grade, and new curbing put down along

the sidewalk.

234. Hereford Inlet, northend of Five-mile Beach, coast of New Jersey.— On August 9, 1874, John March, the keeper of this station, was drowned by the capsizing of his boat, on returning from the main land to his station. Repairs only of a general nature have been made during

the past year.

237. Cape Henlopen, entrance to Delaware Bay, Delaware.—This tower has been repainted, new pumps for the cistern supplied, and workmen are now engaged in making repairs to the keeper's dwelling, and tower. The lantern is of the old style, and obscures a large quantity of light. It is the only one of this kind in the district. The light being a very important one, a lantern of the most modern construction should be supplied. An appropriation of \$8,000 is asked for that purpose.

238. Cape Henlopen Beacon, Cape Henlopen, Delaware.—Complaint having been made of the want of brilliancy of this light, a double-wick burner was placed in the apparatus with satisfactory results. The repairs authorized by act approved March 3, 1875, for this station, are now being made. An appropriation of \$12,000 was made by the same act for establishing a steam fog-signal here, which work is now in prog-

ress. It is proposed to place duplicate sirens at this station.

240. Mispillion Creek, Delaware Bay, Delaware.—At the date of the ast annua report designs were in preparation for additions to the pr

ent structure under an appropriation made by act approved June 23, 1874. This work has been completed. The keeper's dwelling has been entirely remodeled, four good rooms having been added, and a good brick cistern built. This site is subject to overflow by the tide, and can only be protected by a properly constructed dike, which would cost about \$4,000.

—. Joe Flogger Shoal, Delaware Bay, Delaware.—The channel between Joe Flogger Shoal and Miah Maul Shoal is about 1½ miles broad, through which careful navigation is required at night, and a light on the lower end of the former would enable vessels to go through safely. There is a small bank, with 14 feet of water on it, southeast by compass, and distant about one mile from Joe Flogger Shoal, which can be removed for much less than it would cost to properly mark it. About seven miles above the lower end of Joe Flogger Shoal and on the opposite side of the chaunel is Cross Ledge Shoal, on which is now being constructed a light-house to take the place of the light-ship. It is suggested that when the light is established at Cross Ledge, authority be given the Light-House Board to place the light-ship near the lower end of Joe Flogger Shoal.

241. Brandywine Shoal, Delaware Bay.—The fog-bell-striking machinery has been repaired and adjusted, and additional motive-weight sup-This structure stands in the middle of Delaware Bay, and has to resist the action of large fields of moving ice. It is an iron screwpile structure, surrounded by additional piles, which serve as ice-break-It was built in 1849. The original number of fender-piles was 30, made of wrought iron, 5 inches in diameter, and screwed about 10 feet into the shoal, braced and tied together above water. In 1857 an onter row, consisting of 38 piles, was added, and a substantial wooden platform built over the entire space occupied by them. Since 1857, the structure has remained in substantially the same condition, without important repairs until the season of 1874, when the wooden platform was renewed. During the past winter, which was one of the most severe ever known, the down-stream pile of the ice-fender was broken off by the ice at flood-tide. The structure having stood eight years without the outer row of piles, it is not thought that the loss of one of them endangers its stability to such an extent as to cause apprehension for its safety. Iron piles, as a rule, are not suitable where they are subjected to the force of large masses of moving ice. In the case of this light house, the fender piles being only 5 inches in diameter, have necessarily become considerably weakened by rust. Ultimately the structure will doubtless require further additional protection, either by a renewal of the iron piles, or by a riprap of loose stone thrown in around them.

242. Maurice River, New Jersey.—This station has been supplied with new lamps and a new oil-house has been erected. A water tank and pump have been supplied, a small store-house and boat-house built, and supplied with blocks and rigging for hoisting the boat.

This work was done under the appropriation made by act approved

March 3, 1875, for general repairs at this station.

243. Egg Island, Delaware Bay, New Jersey.—This station is in need of slight repairs. The site is washing away, so that ordinary high tide comes within a few feet of the building. It should be protected with stone, or additional land purchased, the cost of which, together with repairs required, would be \$1,500, and an appropriation therefor is asked.

245. Cross Ledge, Delaware Bay, New Jersey.—Contract for the erection of the foundation-pier of this structure was entered into on the 8th of September, 1874, after having duly advertised for bids. Work was

water.

promptly commenced, and the contractor succeeded in getting in as much riprap and small stone as the estimate called for before the work was stopped by the ice. On resuming work in the spring, it was found that the sand around the site had been to a large extent washed away, and a very material settling of the riprap had taken place. This was anticipated, but the extent of it could not be foreseen. The only remedy was to go on putting in stone until stability was secured. This has been done, and the laying of cut stone has progressed to the completion of the second course. It is believed that the pier will be completed in time to place a temporary structure containing a light upon it this fall. The total amount of riprap and small stone placed in it up to this time is 175,856 cubic feet. The original estimate for this work was \$125,000, (see Report of Light-House Board for 1872,) of which amount but \$75,000 has been appropriated. It is expected that this amount will be sufficient to complete the pier. The superstructure will then have to be built. To do this and give additional protection to the site will require an appropriation of \$25,000, which is recommended. This is \$25,000 less than the original estimate.

246. Mahon's River, Delaware Bay, Delaware.—The site of this station having been almost entirely washed away, a new one was purchased, and the erection of a new structure was commenced under the appropriation made by act approved June 23, 1874. Work is now progressing satisfactorily, and the structure will be completed before the end of the season. The new site, while quite as good for the purpose of navigation, is much more accessible, and comparatively free from the action of the

247. Ship John Shoal, Delaware Bay, New Jersey.—Considerable delay in the commencement of this structure was caused by the difficulty of procuring title to the site and cession of jurisdiction by the State to the United States. These difficulties having been overcome, the erection of the light house was commenced during the latter part of August, and the iron caisson was sunk on the 28th of October, 1874. The caissou was filled with concrete, and a temporary structure placed upon it, from which a light was exhibited for the first time on the evening of the 29th of November of that year. The quantity of riprap placed around this structure was largely in excess of what was estimated as necessary. The past winter was one of great severity, and the structure was probably subjected to as severe a test as it will ever be again. This it passed The keepers, however, became alarmed for their through unharmed. personal safety, and abandoned their posts on the 18th of January, 1875. Owing to the quantity of ice in the Delaware, it was impossible to reach the work again until the 13th of March, when it was found unharmed, and the light was re-exhibited. This structure is a simple cast-iron cylinder, 24 feet in diameter, filled with concrete, and resting on the top of piles cut to a level of 22 feet below ordinary high tide. It is kept in place by its own weight and the riprap of loose stone placed around it. The keepers report that the vibration of the structure when struck by the ice was so great that they considered it unsafe. An additional quantity of riprap will be required, and a contract has been entered into for placing 2,000 tons additional, during the present season. The original estimate for this work was \$125,000, of which \$75,000 has been appro-It is proposed to place on top of it, as now finished, a keeper's dwelling and a lantern, both of cast iron. The floor of the dwelling will be about 15 feet above high-tide. To complete the structure will require an additional appropriation of \$25,000, which is \$25,000 less than the original estimate.

248. Cohansey, Delaware Bay, New Jersey.—As stated in the last annual report, the buildings at this station are in a dilapidated state, and should be rebuilt.

Liston's Tree ranges, Delaware Bay, Delaware.—By act approved March 3, 1875, an appropriation of \$55.000 was made for two sets of range-lights at or near Liston's Tree, Delaware Bay. As the proper location for these ranges could only be determined by a careful survey. the Superintendent of the Coast Survey was requested to make it. As soon as it is completed steps will be taken to procure sites and erect

the light houses at as early a day as practicable.

250. Reedy Island, Delaware Bay, Delaware.—The characteristic of this light was changed during the past year from fixed red to fixed white, varied by red flashes; a fixed white light being shown for sixty seconds, followed by five red flashes at intervals of twelve seconds. By act approved March 3, 1875, the appropriation made by previous act of Congress for rebuilding the keeper's dwelling at this station is made applicable to the construction of Liston's Tree ranges, and provides that when the Liston's Tree ranges are established, the light at Reedy Island shall be discontinued.

252. Bulkhead Shoal ranges, Delaware Bay.—At the date of the last annual report a survey had been made, and the location of the rangelights fixed; the necessary steps to secure title and cession of jurisdiction had been commenced. It was found, however, impossible to purchase the sites selected for these ranges at reasonable rates. Proceedings were therefore commenced in the superior court of Newcastle County, Delaware, to have the land condemned under the State laws, but the awards of the jury, in the several cases, were considered by the board as exorbitant, being largely in excess of the prices at which they had previously been offered by their owners, and were rejected, and orders were given to examine into the practicability of locating the lights at other points. It was ascertained that one of the ranges could be placed on the New Jersey shore, and negotiations were commenced for the purchase of sites. The ranges will now be located, one on the Delaware side, and the other on the New Jersev side of the river. Plans have been prepared, and as soon as the titles to the sites are secured, and cession of jurisdiction obtained, work will be prosecuted without An appropriation of \$8,000 for a light-house on or near the south end of Pea Patch Island was made by act approved March 3, 1873. The building of the Bulkhead ranges will render this light unnecessary. It is therefore suggested that the appropriation for Pea Patch Island be made available for expenditure on the Bulkhead ranges if necessary.

254. Fort Mifflin, Delaware River, Pennsylvania.—Additional riprap stone has been placed around this structure to replace that carried away by the ice during the past winter. The fourth-order lens taken from Reedy Island has been put in good order and placed at this station, and a Funck lamp supplied, the sixth-order lens formerly in use having been removed and sent to the depot at Staten Island. Additional rip-

rap will be required at this station during the present year.

Schuylkill ranges, Schuylkill River, Pennsylvania.—An appropriation of \$15,000 for range lights at the mouth of the Schuylkill River was made by act of Congress approved March 3, 1875. Surveys to determine the proper location have been made. Designs for the structures have been prepared and approved, and their erection is now in progress. They will be finished during the present season. The sites for structures fall on the reservation of League Island naval station, and authority has been obtained from the Secretary of the Navy for their occupation.

Cherry Island Flats, Delaware River.—There is a bad shoal at this point, with a narrow channel on either side. It should be marked by a light or lights, the exact positions of which can only be determined by a survey. It is recommended that an appropriation of \$50,000 be made for a light or lights to guide past this shoal.

REPAIRS.

At each of the following-named light stations repairs and renovations more or less extensive have been made since the last annual report:

No. 231. Barnegat, Barnegat Inlet, New Jersey.

No. 232. Tucker's Beach, Little Egg Harbor Inlet, New Jersey.

No. 233. Absecum, Absecum Inlet, New Jersey.

No. 236. Cape May, entrance to Delaware Bay, New Jersey.

No. 237. Cape Henlopen, entrance to Delaware Bay, Delaware.

No. 238. Cape Henlopen beacon, entrance to Delaware Bay, Delaware. No. 239. Delaware Breakwater, entrance to Delaware Bay, Delaware.

No. 240. Mispillion Creek, entrance to Mispillion Creek, Delaware Bay.

No. 241. Brandywine Shoal, Delaware Bay.

No. 242. Maurice River, entrance to Maurice River, New Jersey.

No. 243. Egg Island, Delaware Bay, New Jersey.

No. 248. Cohansey, entrance to Cohansey Creek, New Jersey.

No. 249. Bombay Hook, Delaware Bay, Delaware. No. 250. Reedy Island, Delaware Bay, Delaware.

No. 253. Christiana, entrance to Christiana River, Delaware.

No. 254. Fort Mifflin, Delaware River, Pennsylvania.

No. 555. Fenwick's Island, coast of Delaware, Delaware.

No. 257. Assateague, coast of Virginia, Virginia.

LIGHT SHIPS.

235. Five Fathom Bank light-ship No. 37, on Five Fathom Bank, off the capes of Delaware.—In July, 1874, this vessel was brought in for repairs, her place being temporarily supplied by light-ship No. 18, and she was thoroughly overhauled, caulked from her copper up, including decks, a new mast put in, and an extra strip of copper put on. She was hauled out, copper repaired where necessary, and placed in good condition in

every respect, at a cost of \$2,143.03.

244. Upper Middle or Cross Ledge light-ship No. 19, Delaware Bay.— Last August it was found that the mainmast of this vessel was very much decayed in the partners, and No. 18 was placed upon the station in her place. She was then brought to the depot and a new mast put in. Some repairs were made to her copper, and she resumed her station early in October. On January 14, 1875, she was driven from her station by heavy ice, and took refuge behind Delaware Breakwater. Notwithstanding the great importance of this vessel, she was unable to resume her station until March 26, having been off her station more than two months. On February 11 the ice in the breakwater broke up and dragged a large fleet of vessels at anchor there to sea, and among them the Cross Ledge light ship. She was carried about five miles to sea, when she was taken in tow by one of the Reading Coal and Iron Company's steamers, and brought in. On the 25th of March, the lower part of the bay became clear of ice, and the master promptly left the breakwater, under sail, and reached his station before the steamer sent to tow him arrived. This vessel is in need of extensive repairs.

It is expected that a light will be shown from the light-house now being built at Cross Ledge this season, when the services of this vessel will no longer be required at this place.

256. Winter Quarter Shoal light ship No. 24, off the coast of Virginia.— This ship was placed in position November 15th, 1874, and has been of great advantage to the coasting trade. She is moored in 11 fathoms of water, and in one of the most exposed positions on the Atlantic coast.

Light-ship No. 18.—Last summer this vessel was placed on the Five Fathom Bank Station while No. 37 was brought in and thoroughly overhauled. Later in the season, she relieved the Cross Ledge light-ship while some necessary repairs were made upon her. A thorough examination of this vessel has recently been made and she has been found unworthy of repair. Steps have been taken to sell her at auction and turn the proceeds into the Treasury.

Light-vessel No. 40 has been built at Wilmington, Delaware, under a contract with the Jackson & Sharp Company, made September 25, 1874, for \$39,200. She was launched April 20, 1875, and received from the contractors May 26, 1875. The boilers for steam fog-signal will be built and put in by Messrs. Hilles & Jones, of Wilmington, Delaware, under a contract dated March 3d, 1875, for \$5,850. The vessel will be completed and ready to go upon her station by the middle of August.

FOG-SIGNALS OPERATED BY STEAM OR HOT-AIR ENGINES.

There are no fog signals operated by steam or hot air engines in this district. That at Cape Henlopen, for which an appropriation has been made, is not yet completed.

BUOYAGE.

The following changes have been made in the buoyage of the district, viz:

A third-class black spar-buoy was placed at the mouth of the Schuyl-kill River to mark the turning-point for vessels bound up the river. Two third-class spars, one red and one black, were placed on either edge of Cherry Island Flats Shoal to mark the two channels. One second-class spar wreck-buoy was placed on the wreck of the schooner sunk in the main ship-channel near Dan Baker Shoal. One second-class canbuoy, painted green, with word "Wreck" upon it, was placed on the wreck of bark Cienfuegos, about two miles outside of Cape Henlopen, and directly in the track of southern bound steamers.

The Ship John Shoal buoy has been removed, the establishment of a light at this point rendering its longer continuance there unnecessary.

Last winter was very severe on the spar-buoys in Delaware Bay and River. Nearly all of them were so badly cut as to render them unfit for further use. Two first-class and two second-class iron buoys were carried to sea by the ice from the shoals off the capes of Delaware; but all save one second-class buoy were recovered and replaced by the tender Violet.

TENDERS.

The steam-tender Violet has been actively engaged during the past year. She is entirely too small for work on this exposed coast—taking supplies to light-vessels, towing them into position, attending outside buoys, transporting supplies to inlets and attending to buoys in them, or for purposes of inspection, which require her to go outside the capes of the Delaware. One of the light-ships is sixty miles from the capes, and the other eighteen, and there are five important buoyed inlets, besides fourteen sea buoys, other than the entrance buoys, which require constant attention and involve working outside. Should she be caught out by a heavy gale, it would be a matter of doubt if she could make a harbor, and the lives of her officers and men would be imperiled. Much valuable time is lost in waiting until the weather makes it safe for her to proceed with her work. It is recommended that a tender be built for this district, and an appropriation of \$50,000 for this purpose is respectfully asked.

DEPOTS.

A place at which buoys can be cleaned, repaired, and painted is required at some point near Cohansey light-station. A suitable piece of ground can be purchased near the light-house for a small sum, and it is recommended that an appropriation of \$1,000 be made for this purpose.

Chincoteague Inlet, Virginia.—A buoy-shed at this place to protect the buoys used in the inlet is very necessary, and an appropriation of \$1,000

to purchase a site and build a shed is recommended.

FIFTH DISTRICT.

The fifth light house district extends from Metomkin Inlet, Virginia, to include New River, North Carolina, and embraces part of the sea-coast of Virginia and North Carolina, Chesapeake Bay, sounds of North Carolina, and the James and Potomac Rivers.

Inspector.—Commander F. H. Baker, United States Navy, until June 10, 1875; Commander E. C. Merriman, United States Navy, present in-

spector.

Engineer.—Major Franklin Harwood, Corps of Engineers, brevet lieutenant-colonel, United States Army.

In this district there are-

Light-houses Light-ships	7 3
Fog-signals operated by steam or hot-air engines	
Day or unlighted beacons.	78
Buoys actually in position	
Spare buoys for relief and supply losses.	878
Tenders (steam) Heliotrope (buoy-tender) and Tulip, (for construction and re-	
pairs)	2
Tenders (sail) Maggie, (buoy-tender,) Pharos, and Spray, (for construction and	
repairs)	3

The numbers preceding the names of the stations correspond with the "Light-house List of the Atlantic, Gulf, and Pacific Coasts of the United States," issued January 1, 1875.

LIGHT-HOUSES.

260. Cape Henry, on the south side of the main entrance to Chesapeake Bay, Virginia.—As stated in the last annual report, the tower at this station is one of the oldest on the coast of the United States, and a new one should be built at the earliest day practicable. The keepers' dwelling is dilapidated and at too great a distance from the tower to insure proper

attendance. It is a frame building, and now more than thirty years old. It is too small for the number of keepers at the station, and affords poor protection from the weather in winter. An appropriation of \$75,000 for commencing a new tower and keepers' dwelling is recommended.

269. Jordan's Point, James River, Virginia.—By act approved March 3, 1875, an appropriation of \$2,000 was made for protecting the site and establishing a fog-bell. The exposed shore has been thoroughly protected by a dry-laid stone wall, 6 feet in thickness at the bottom, and backed with dry earth, adding slightly to the area of the grounds. A bell-tower has been built and a bell, struck by machinery, established. It is proposed to place a new lantern on the top of the present dwelling.

——. Dutch Gap Canal, James River, Virginia.—At the date of the last annual report work on these beacons had been temporarily suspended. In October work was resumed, and the station was ready for lighting in January, 1875. The structures consist of two frame beacons, each 27 feet high from base to focal plane, situated at the entrance of the canal on the port hand, ascending the river. The frame dwelling was built at the top of the hill, between the two beacons, and within easy distance of each. The buildings are of a substantial character. The lights of this station not being required to be of great brilliancy, it was determined to try small lanterns, burning mineral oil. These lights were first exhibited on June 10, and are found satisfactory.

270. Cherrystone, entrance to Cherrystone Inlet, Virginia.—The only work done at this station during the season has been repairs of a minor nature, and none are necessary except the establishment of a fog-bell rung by machinery. The present bell is rung by hand. It is proposed to do this work and pay for it from the general appropriation for fog-

signals.

The work of establishing this light-station, under the appropriation approved June 23, 1874, was commenced May 24. The structure is now nearly completed, and will be lighted on the 15th of August. It is a screw-pile light-house, square in plan, the keeper's dwelling being sur-

mounted by a lantern which contains the lens.

——. Solomon's Lump, in Kedge's Strait, between Tangier Sound and Chesapeake Bay, Virginia.—A site having been selected for the light-house to be built on Solomon's Lump, to take the place of the one at Fog Point, and plans having been prepared, the work was begun on the 21st of June, and is now in progress. The structure will be a screw-pile light-house, on five wronght-iron piles, square in plan, with a lantern surmounting the keeper's dwelling. It is expected that the light will be

exhibited during the present season.

288. Thomas's Point Shoal, mouth of South River, Chesapeake Bay, Maryland.—An additional appropriation of \$15,000 having been made by act approved March 3, 1875, for this light-house, the location of which is one of great exposure, the plans were prepared, and proposals for furnishing the iron-work were invited by public advertisement. This work is now progressing well, and it is expected that the structure will be finished during the present season. It is to be an iron-pile light-house, the foundation piles of which are to be of wrought iron, ten inches in diameter. The superstructure will be of wood, and serve as a keeper's dwelling. It will be surmounted by a lantern of the fourth order. When this light-house is finished, the light on Thomas's Point will be discontinued.

290. Sandy Point, west side of Chesapeake Bay, Maryland.—The light at this station, situated on the main land, is too far from the channel to be

efficient. The shoals make out from the point a distance of about one mile, and vessels drawing more than ten feet of water cannot approach within that distance of the light-house. The fog-bell at this station can seldom be heard on account of its distance from the channel. This light-house marks a turning point. A change in the location to the outer edge of the shoal and the establishment of an efficient fog-signal is recommended, and an appropriation of \$30,000 is asked for that purpose. A structure somewhat similar to that being built at Thomas's Point, it is believed, will answer the purpose.

291. Love Point, mouth of Chester River, Maryland.—After due advertisement for bids, contract was made with the lowest bidder for furnishing the riprap protection to this light-house, under the appropriation made by act approved June 23, 1874. Since this riprap has been placed, the light-house has stood the severe test of the winter of 1874–775 without damage or material displacement of the stone. It may now be con-

sidered secure.

292. Craighill Channel range beacons, mouth of Patapsco River, Maryland, upper or rear light.—Shortly after the date of the last annual report, work on this station was resumed, and in March of the present

year the structure was completed.

293. Craightll Channel range beacons, mouth of Patapsco River, Maryland, lower or front light.—The iron tubular foundation described in the last annual report was surmounted by a temporary structure until October of last season, when, the iron superstructure having been completed, it was placed in position. About 675 cubic yards additional of riprap was placed around the structure. The heavy ice of the past winter did no damage to this station, though the locality is one of great exposure.

295. Fort Carroll, on Fort Carroll, Patapsco River, Maryland.—The skeleton frame structure surmounting the keeper's dwelling on the parade of the fort having become so decayed as to endanger the safety of the keeper and his family, a new beacon was erected on the southwest salient, over the second tier of casemates. The lens and fog bell machine were removed into the new structure, and the light exhibited from it on the 5th of May, 1875. The chauge having been made, the old structure was removed, the roof of the keeper's house repaired, and the station

put in thorough order.

—. Mathias Point, Virginia, or Port Tobacco Flats, Maryland, Potomac River.—Under the orders of the board, the district officers made a careful examination of the Potomac River in this vicinity, with a view to determining the best location for this light-house. The board, after a careful consideration of their report, decided to locate the light-house on Port Tobacco Flats, and erect the day-beacon on the shoal off Mathias Point. The plans having been prepared, proposals for manufacturing the iron-work were called for by public advertisement, and awarded to the lowest bidder. The iron-work is now in process of construction, but will not be finished in time to erect the light-house at the site during the present season. This will be undertaken early in the spring.

· 311. Currituck Beach, sea-coast of North Carolina.—A full account of the foundation for this important structure is given in the last annual report, since which time the work has been prosecuted without intermission. The piles being driven for the foundation, they were inclosed by a coffer-dam, and the material inside excavated to a depth of about seven feet. The bottom around the piles was then well rammed with stone paving set edgewise, and the space between the heads of the piles filled in

with concrete. The work on the superstructure was then commenced, and has been in progress since that time. The tower is nearly finished, and it is expected that the light will be exhibited about December 1. The material for this structure has been delivered at the pier near Church's Island, in Currituck Sound, and thence towed in scows of light draught a distance of about ten miles to the light house wharf. The establishment of this light completes the chain from the mouth of Chesapeake Bay to Cape Hateras, and supplies a want long felt by commerce.

315. Hatteras Inlet, Pamlico Sound, North Carolina.—The material for this light house and a working force for its erection were shipped to the station early in July, 1874, and the erection of the structure immediately commenced. The work was finished in September and the light exhibited October 1, 1874. The light-house consists of a frame dwelling, square in plan, resting on a foundation of five solid wrought-iron piles, eight inches in diameter, which are screwed vertically into the shoal to a distance of about ten feet, the keeper's dwelling being surmounted by a lantern of the fourth order.

321. Neuse River, entrance to Neuse River, North Carolina.—The roof of this structure, which is a screw-pile light-house, was removed during the past season, a new one put on, and the station left in good order.

324. Roanoake Marshes, on the east side of the narrow channel connecting Pamlico and Croatan Sounds, North Carolina.—An appropriation of \$15,000 was made by act approved March 3, 1875, for rebuilding the light-house at this station. It was found upon examination that the soil upon which this light-house stands is very soft to a great depth, so that it may become necessary to select a new site in the vicinity. The iron work for the structure is now in hand, but owing to the difficulties of the site it is estimated that it will require \$5,000 additional to complete the structure, and it is recommended that an appropriation for this amount be made.

REPAIRS.

At each of the following-named stations there have been repairs and renovations more or less extensive during the year:

262. Old Point Comfort, entrance to Hampton Roads, Virginia. 263. Craney Island, near the mouth of Elizabeth River, Virginia.

264. Lambert's Point, Elizabeth River, Virginia.

266. White Shoal, James River, Virginia.

267. Point of Shoals, James River, Virginia. 268. Deep Water Shoals, James River, Virginia.

- 271. Black River, entrance to Black River, Virginia.
- 272. York Spit, entrance to York River, Virginia.

 274. Wolf Trap, east end of Wolf Trap Shoal, Chesapeake Bay, Virginia.
 - 275. Stingray Point, mouth of Rappahaunock River, Virginia.

276. Windmill Point, mouth of Rappahannock River, Virginia.

277. Watts Island, east side of Tangier Sound, Virginia.

278. James Island, entrance to Little Annamessex River, Maryland. 299. Somer's Cove, north side of Little Annamessex River, Maryland.

280. Smith's Point, mouth of Potomac River, Virginia.

- 283. Point Lookout, entrance to Potomac River, Maryland.
- 284. Hooper's Straits, abreast of entrance to Honga River, Maryland. 285. Cove Point, north of entrance to Patuxent River, Maryland.
- 286. Sharp's Island, off north end of Sharp's Island, Maryland.
- 287. Choptank River, opposite entrance to Choptank and Treadhaven Rivers, Maryland.

289. Greenbury Point, entrance to Severn River, Maryland.

296, 297. Hawkins Point, upper and lower lights, south side of Patapseo River, Maryland.

298. Leading Point, south side of Patapsco River, Maryland. 300. Pool's Island, off mouth of Gunpowder River, Maryland.

- 301. Turkey Point, at the head of Chesapeake Bay, Maryland. 302. Fishing Battery, entrance to Susquehanna River, Maryland.
- 303. Havre de Grace, south bank of Susquehanna River, Maryland.

304. Piney Point, east side of Potomac River, Maryland.

305 Blackistone's Island, north side of Potomac River, Maryland.

306. Lower Cedar Point, west side of Potomac River, Virginia.

307. Upper Cedar Point, opposite mouth of Tobacco River, Maryland. 308. Fort Washington, on wharf at Fort Washington, Maryland.

309. Jones's Point, west bank of Potomac River, Virginia.

310. Bowler's Rock, Rappahannock River, Virginia.

312. Body's Island, on Body's Island, coast of North Carolina.

313. Cape Hatteras, coast of North Carolina.

316. Ocracoke, entrance to Ocracoke Inlet, North Carolina.

- 317. Southwest Point Royal Shoal, on the southwest point of Royal Shoal, North Carolina.
- 318. Northwest Point Royal Shoal, on the northwest point of Royal Shoal, North Carolina.
- 319. Harbor Island, between Pamlico and Core Sounds, North Carolina.
- 320. Brant Island Shoal, southern part of Pamlico Sound, North Carolina.

322. Pamlico Point, entrance to Pamlico River, North Carolina.

- 323. Long Shoal, on the east point of Long Shoal, Pamlico Sound, North Carolina.
- 328. Roanoke River, near the mouth of Roanoke River, North Carolina.
- 329. Cape Lookout, near the extremity of Cape Lookout, North Carolina.

LIGHT-SHIPS.

There are no light-ships in this district.

FOG-SIGNALS OPERATED BY STEAM OR HOT-AIR.

There are no fog-signals operated by steam or hot-air engines in this district.

DAY OR UNLIGHTED BEACONS.

The number and positions of the day or unlighted beacons in the fifth district remain the same as in the last annual report. Under the appropriation made by act approved March 3, 1873, sites have been selected for three day-beacons in the Potomac River.

The plans have been prepared, and the material is now ready to be put in place. It is not expected, however, to commence work at the sites until spring. The structures are to be of iron, one of them being a castiron tube filled with concrete; the others are to be made of solid wroughtiron piles, braced and tied together, and surmounted by a cage.

BUOYS.

Much trouble is caused from the Maryland line northward by schooners and other vessels making fast to the buoys and dragging them from their positions, particularly in and about the Craighill and Brewerton channels and the approaches to Baltimore, there being no law in the State of Maryland, as in most of the seaboard States, making such conduct an offense to be punished by the courts.

The buoyage of the district in very extensive, and with the inferior vessels at the disposal of the inspector it is difficult to maintain it in proper condition. An efficient vessel for buoy service in much needed.

TENDERS.

The two steam tenders Heliotrope and Tulip employed in this district are old vessels purchased some years ago to supply a pressing need. They are of small size and little power, low in the water, and unseaworthy in rough weather. They are as expensive to maintain as suitable vessels would be, while constant delay is caused by their unfitness for the work they are expected to perform. The recommendation contained in the last annual report, that an appropriation of \$50,000 be made to build a tender for this district, is respectfully renewed.

DEPOTS.

Lazaretto Point, Patapsco River, Maryland.—At this depot a number of buoys, sinkers, &c., are kept for use as reliefs, and to supply losses in the channels leading to Baltimore and the upper part of the Chesapeake and tributaries. The recommendation in the following extract from the last annual report is renewed:

"The wharf at this depot is in need of considerable repairs, which should be made without unnecessary delay. It is too small for the purpose, and should be extended so that a supply of coal can be kept there. The depot is much in need of a blacksmith shop, which should be separate from the store-house, and in which small forging could be executed. The estimated cost of repairs to the wharf, and building a blacksmith-shop, is \$4,000, for which an appropriation is asked."

Portsmouth, Elizabeth River, Virginia.—At this depot are kept the principal supply of spare buoys and appurtenances, coal for the use of steam tenders and for light-house stations; also supplies to meet cases of emergency. Most of the spare buoys used in the district are made

here. This depot is in good condition.

Washington, Pamlico River, North Carolina.—The wharf requires filling in and grading between the wharf logs and the lot, and several fender piles in front to make it secure and prevent the tenders from over riding it during freshets. Belaying-posts are also required to be placed on the wharf.

This work is being done from time to time without expense by the

crew of the tender Maggie.

SIXTH DISTRICT.

The sixth district extends from New River Inlet, North Carolina, to and including Cape Canaveral light house, Florida, and embraces part of the coast of North Carolina, the coasts of South Carolina and Georgia, and part of the coast of Florida.

Inspector.—Commander Charles S. Norton, United States Navy, to December 31, 1874; Captain A. E. K. Benham, United States Navy,

present inspector.

Engineer.—Major Franklin Harwood, Corps of Engineers, brevet

lieutenant-colonel, United States Army, to February 11, 1875; Captain W. A. Jones, Corps of Engineers, United States Army, present engineer.

In this district there are—

Light-houses	34
Light-ships	5
Fog-signals operated by steam or hot-air engines	0
Day of unlighted beacons	48
Buoys actually in position	237
Spare buoys for relief and to supply losses	25
Tender (steam) Alanthus, buoy-tender	1
Tender (sail) Mignonette, used for constructions and repairs	
Steam-launch Crocus	1

The numbers preceding the names of the stations correspond with those given in the list of light-houses, lighted beacons, and floating lights of the Atlantic, Gulf, and Pacific coasts of the United States, published January 1, 1875.

LIGHT-HOUSES.

332, 333. Oak Island Range beacons, entrance to Cape Fear River, North Carolina.—An appropriation of \$4,000 was made by the act approved June 23, 1874, for building two new frame beacons to take the place of the present ones, and to secure a better range. A survey of the locality shows that the range can be moved to the eastward and give better water through the western or Oak Island channel; also that the rear light can be located in a position that will, with another light placed on Battery Island, serve the purpose of a range through the channel now being dredged on the westerly side of Cape Fear River, between Horseshoe Shoals and Marsh Island. The Bald Head channel has now 111 feet of water at ordinarily low tide, with a prospect of that depth being mainained, and even increased by further dredging operations, while Oak Island Channel is reported as shoaling. Steamers now use the latter but little, but it is considered important to maintain the Oak Island range for the present, as sailing vessels use the channel to find shelter between the bar and the rip off Fort Caswell. The board has ordered the work to be suspended until it is determined whether the changes in the channels now taking place are of a permanent nature.

335. Cape Romain, on Raccoon Key, seacoast of South Carolina.—At the

335. Cape Romain, on Raccoon Key, seacoast of South Carolina.—At the date of the last annual report, the deflection of this tower from the perpendicular, owing to the unequal settlement, was 27½ inches. Measurements have been carefully taken at short intervals since, to determine whether any further settlement has taken place. Within the past year no increase is perceptible, and the machinery of the lens has been running with perfect accuracy. Artesian well borings on the four sides of the tower, at a distance of 50 feet from the foundation, have been made in order to test the character of the soil, which was found to consist of alternate strata of sand, mud, clay, and shells. At a depth of 52 feet a solid bed of sand was reached.

336. Bull's Bay, north end of Bull's Island, South Carolina.—This station has received extensive repairs. The roof of the building has been stripped off, defective rafters replaced, and then reshingled. The cistern has been repaired, and the building and the station put in good order.

338. Morris Island, (main light,) on south end of Morris Island, South Carolina.—At the date of the last annual report, seventy-nine of the

foundation-piles had been driven. Owing to the unhealthiness of the climate at this station the work had to be suspended during the remainder of the summer. Operations were resumed in November, and the piling The piles were then cut off, three feet below the level of the completed. water, and capped with 12 by 12 inch timbers, forming the grillage. The space between the timbers, and for three feet below them, was filled in with concrete, which was extended two feet outside of the outer row of The base of the tower below the surface of the ground is composed of concrete, 8 feet thick, reduced by offset courses to a surface base of 36 feet in diameter. This has been completed, and is now ready for the brick superstructure. The metal-work of the tower, with the exception of a small portion lost by the sinking of a lighter, has been received at the station and stored ready for use. The missing portions are being duplicated by the contractor. Arrangements have been made for delivering the brick for the tower, and the work will be resumed in the autumn. It is expected to complete the tower during the spring of 1876.

— Fort Ripley, Charleston Harbor, South Carolina.—Some two years ago a day-beacon of large dimensions was established on this shoal, which lies between the South and the Folly Island, Channels, Charleston Harbor. The light on Castle Pinckney serves the purpose of guiding through the Folly Island Channel only, which is by no means as good as the other, and but little used. The two are separated by a middle ground, on which during the war a small fort was built. This fort has disappeared excepting the foundation, which is visible only at low water. A light-house at this point would serve to mark both channels, and enable the board to discontinue the light on Castle Pinckney. The estimated cost of a structure on screw-piles is \$15,000, and an appropriation is asked for this purpose. The light at Castle Pinckney to be discontinued when the one on Fort Ripley is completed.

344. Castle Pinckney, Charleston Harbor, South Carolina.—An appro-a priation of \$2,000 was made by act approved March 3, 1875, for rebuilding this beacon, which was damaged in a hurricane the year previous. Should the appropriation recommended for Fort Ripley be made, this light can be discontinued and the appropriation revert to the Treasury.

346. Hunting Island, on the north end of Hunting Island, South Caroling.—The work at this station, which at the date of the last annual report was suspended on account of the unhealthiness of the climate, was resumed again during the month of November, and prosecuted until the completion of the tower, early in June. The light was exhibited for the first time on July 1, 1875. A fresh water pond in the vicinity of the tower, which is supposed to have been the main cause of the unhealthiness of the station, has been drained for a distance of 2,000 feet. The ditches, however, will require plank revetment or drainpipes along that portion cut through sand hills. The ditch empties out on the beach through a flood-gate built into a timber-crib filled with stone, which forms the nucleus of a breakwater proposed to be built to protect the site. The seeds of the Eucalyptus globulus tree, said to neutralize the effects of malaria, have been planted on the margin of the pond, and in the vicinity of the site, as an experiment. appropriation of \$10,000 was made at the last session of Congress for building the keeper's dwelling and protecting the site. This work will be taken in hand during the present season. No further appropriation

348, 349. Daujuskie Island range beacons, on the northeast point of Daujuskie Island, South Carolina.—A boat-landing and boat-house

have been built at this station, from the general appropriation for

repairs.

350. Tybee, (main light,) on Tybee Island, entrance to Savannah River, Georgia.—This tower, the dangerous condition of which has been described in a former report, has recently exhibited further signs of instability. The tower has lately been carefully examined, and the measurements taken show that no departure from verticality has taken place. The cracks, however, have increased in number and extent, one of them being open $\frac{1}{2}$ inch on the inside, and several others from $\frac{3}{16}$ to $\frac{1}{4}$ inch, while on the outside the jambs and arches of all the windows are cracked, that of the third landing being $\frac{3}{6}$ inch, and the others being from $\frac{1}{8}$ to $\frac{3}{16}$ inch, opened. The cracks have been caulked in places, to show any further movement. This tower, which is one of the oldest on the coast of the United States, having been built in 1793, should be rebuilt, with the least practicable delay, and an appropriation of \$50,000 is asked to commence the work.

352. Tybee Knoll, Tybee Knoll Shoal, entrance to Savannah River, Georgia.—As stated in the last annual report, work on this structure was suspended, owing to the fact that a channel was being dredged in this vicinity, under the direction of the War Department, which would render the light-house in its proposed position useless. Examinations have since been made with a view to the establishment of range-lights to guide through the dredged channel. The board, however, is not prepared to submit an estimate for this work, but request that the appropriation made for Tybee Knoll be made available for range-lights.

355. Oyster Beds beacon, Savannah River, Georgia.—During the severe gale of September, 1874, the boat landing at this station was entirely destroyed, and the tower damaged by the débris of the wharf being dashed against it, tearing out portions of the masonry, and causing the tower to crack from top to bottom. The landing has been rebuilt, and the brick-work repaired; and it is proposed to place a talus of rip-rap around the base as an additional protection. The cost of these repairs was paid from the general appropriation for repairs of light-houses.

358. Sapelo beacon, Sapelo Island, Georgia.—This beacon, a skeleton frame structure, is old and infected with dry-rot. It is not practicable to repair it properly. Its condition is such that it is in danger of falling, and the recommendation made in the last annual report, that

\$2,500 be appropriated to rebuild it, is repeated.

361. Saint Simon's, on the south end of Saint Simon's Island, entrance to Saint Simon's Sound, Georgia.—The ponds in the vicinity of this station, which have made it so unhealthy as to be almost uninhabitable, have been effectually drained. The seeds of the Eucalyptus globulus tree have been planted at the station, and an acre of land fenced in for a garden for the keepers, which is now under cultivation. These improvements were paid for from the appropriation for repairs.

366. Amelia Island, front beacon, south range, on Amelia Island, Florida.—This beacon is old and decayed, and is in danger of being destroyed by an ordinary gale of wind. It has recently been braced up

to keep it from falling.

369. Saint Augustine, north end of Anastasia Island, Florida.—At the date of the last annual report this tower was nearly completed. The light was first exhibited October 15, 1874. During the ensuing month a flock of wild ducks flew against the lantern, breaking three panes of glass and slightly damaging the lens-apparatus. A wire screen has since been placed around the lantern. An appropriation of \$20,000 was made by the act approved June 23, 1874, for building

jetties to protect the site, and for the erection of a keeper's dwelling. A breakwater has been built, and the walls of the dwelling have been raised. The building has been roofed in, verandas built, and floor

laid. The work is now progressing and will soon be completed.

370. Cape Canaveral, on the northeast pitch of Cape Canaveral, Florida.—The keeper's dwelling at this station is an old frame structure, fitted up for the use of the principal keeper when the tower was first built. It was supposed that the rooms in the tower could be used by the assistants. This has been found impracticable, owing to the excessive heat of the climate, the tower being a cast-iron shell, merely lined with brick. The assistants have, therefore, been living in sheds fitted up by themselves. It is recommended that a permanent dwelling for three keepers be built at this station, and an appropriation of \$15,000 is recommended. It may be added that the great cost of building a keeper's dwelling at this station is owing to its inaccessibility.

REPAIRS.

At each of the following named stations repairs and renovations, more or less extensive, have been made during the year:

332, 333. Oak Island range lights, on Oak Island, North Carolina, 335. Cape Romain, on Raccoon Key, sea-coast of South Carolina.

339, 340. Morris Island range-lights, on Morris Island, South Carolina. 343. Fort Sumter, on Fort Sumter, Charleston Harbor, South Carolina. 344. Castle Pinckney, on Castle Pinckney, Charleston Harbor, South

Carolina.

350, 351. Tybee beacon, mouth of Savannah River, Georgia.

365. Amelia Island main light, on Amelia Island, Florida,

366. Amelia Island beacon, on Amelia Island, Florida. 367. Saint John's River, at mouth of Saint John's River, Florida.

LIGHT-SHIPS.

331. Frying Pan Shoal light-ship, No. 29, off Frying Pan Shoal, mouth of Cape Fear River, North Carolina.—This vessel, having been repaired, was placed on her present station June 21, 1875, relieving light-ship No. 34. She is now in good condition for three years' service.

337. Rattlesnake Shoal light-ship, No. 38, off Charleston, South Carolina.—This vessel is undergoing repairs at Charleston, and will resume her station as soon as they are completed. Light-ship No. 34, recently

upon Frying-Pan Shoals, is now on this station temporarily.

347. Martin's Industry light-ship, No. 32, off Port Royal, South Carolina.—This vessel was placed on her present station March 18, 1875, relieving light-ship No. 29. Prior to being sent there she was repaired

and put in good condition.

353. Tybee Knoll light-ship, No. 21, on Tybee Knoll, Savannah River, Georgia.—This vessel was placed on her station September 6, 1872. Her hull is quite rotten, but it is hoped, with slight repairs, it will last until range-lights are established to guide through the new channel which is being dredged through Tybee Knoll.

Light-ship No. 34.—This vessel is now, as stated, on Rattlesnake Shoal. She will require extensive repairs when she is relieved by

No. 38.

FOG-SIGNALS OPERATED BY STEAM OR HOT-AIR ENGINES.

There are none in this district.

49 F

DAY OR UNLIGHTED BEACONS.

The following is a list of day or unlighted beacons in the sixth district:

Bald Head, mouth of Cape Fear River, North Carolina.—An old tower. The light was discontinued on the establishment of Frying Pan Shoals light ship.

Price's Creek, Cape Fear River, North Carolina.—Light discontinued

during the rebellion.

Orton's Point, Cape Fear River, North Carolina.—Light discontinued during the rebellion.

Fort Point, Georgetown, South Carolina.—Light discontinued during

the rebellion.

Cape Romaine, South Carolina.—Old tower, near present light-house. Fort Ripley, Charleston Harbor, South Carolina.—Iron screw-pile, with cage, inclosed with a wood pyramid with cage placed on the old site of the fort.

Battery light, White Point Garden, Charleston, South Carolina.—Iron

spindle. Light discontinued during the rebellion.

Oyster Rocks, Savannah River, Georgia, near Cockspur Island. Two

iron pile-beacons.

Savannah River day-marks.—Two wooden beacons on Long Island, two on Jones' Island, two on Elba Island, and one on Main Island, op-

posite Elba Island. Total, 7.

An appropriation of \$2,500 was made by act approved March 3, 1873, for day-beacons in Savannah River, Georgia. This appropriation was used to rebuild the beacons, making them 40 feet high, with a pyamidal inclosure of 10 feet, at a height of 25 feet from the ground, and cage on top.

The Oyster Rocks beacons have also been thoroughly examined, and painted, and two additional beacons prepared to mark the dredged channel through the obstructions as soon as the engineer in charge of

the harbor-improvements reports the channel clear.

Savannah City, Georgia.—Iron spindle. Light discontinued during the rebellion.

Saint John's River, Florida.—Old tower at the south entrance to Saint

John's River, Florida.

Twenty-five wooden piles planted along the Saint John's River, between its mouth and Jacksonville, in good condition. Thirty-two groups, and four single-pile-beacons are being driven between Jacksonville and Pilatka, but are not yet completed, and are not included in the number of day or unlighted beacons given in this report.

Cape Canaveral, Florida.—An old tower near the site of the present

light-house.

Saint Augustine, Florida.—An old tower and dwelling in front of the present light-house.

Accabee Flats, Ashley River, South Carolina.—Three wooden piles.

BUOYS.

The buoyage in this district is in good condition, although, owing to the necessity for withdrawing the tender Alanthus from the district for a considerable time to undergo much-needed repairs, the buoys have not been examined and removed as often as usual.

TENDERS.

The steam-tender Alanthus is now receiving a new boiler and being

generally overhauled. Upon the completion of these repairs she will be in a condition to render efficient service for several years.

DEPOTS.

The buoys and supplies are now stored at Fort Johnson, Charleston Harbor, belonging to the War Department, but the wharf is in such a dilapidated condition that it is comparatively useless, and is a dangerous place for the tenders to lie. The wharf will have to be entirely rebuilt, and as its location is not a desirable one for a depot, it is recommended that a site be procured in the city of Charleston, and the depot established there. An appropriation of \$10,000 is respectfully recommended for that purpose.

SEVENTH DISTRICT.

The seventh light-house district extends from Cape Canaveral, on the eastern coast of Florida, to the Perdido River, on the Gulf coast, and embraces all the aids to navigation within those limits.

Inspector.—Commander H. B. Seely, United States Navy.

Engineer.—Maj. Jared A. Smith, Corps of Engineers, United States Army.

In this district there are—

Light-houses Day or unlighted beacons	
Light-ships	0
Fog-signals operated by steam or hot-air engines. Buoys actually in position.	136
Spare buoys for relief and to supply losses	80
Tender (steam) Geranium	1

The numbers preceding the names of the stations correspond with those of the "List of light-houses and floating lights of the Atlantic, Gulf, and Pacific coasts of the United States," issued January 1, 1875.

LIGHT-HOUSES.

371. Jupiter Inlet, between Jupiter Inlet and Gilbert's Bar, Florida.—The dwelling has been carefully repaired throughout. A new kitchen, 14 by 16 feet, has been built. A new walk has been constructed from the keeper's dwelling to tower; the windows in the tower have been repaired and new wooden shutters made for them. The watch-room has been newly wainscoted. All the new wood-work has been painted, and the stone and plastered work whitewashed.

372. Cape Florida, Florida.—Although this station is to be discontinued when the new structure at Fowey Rocks is completed, it was necessary to make some repairs to keep the dwelling habitable until abandoned. The old piazza has been rebuilt, and new wooden gutters fitted to the keeper's dwelling for supplying the cistern. All the new wood-work has been painted and the cistern thoroughly repaired.

Fowey Rocks, Florida Reef, east coast of Florida.—The examinations which have been made to test the character of the reef have been pursued under great difficulties, as the weather during the entire season has been almost continuously rough, and until a foot-hold is secured by building a platform a party cannot work there when any sea is running. The engineer labored under great disadvantage in this work in not having a steam tender, the only one at his disposal, the Arbutus, being unfit for any extended use. It was with the greatest difficulty and de-

lay that a sailing-vessel could reach the spot in weather sufficiently calm to do any work. The rock composing the reef is harder than that further south and west, and it is believed will furnish a secure foundation for the kind of structure which has been decided upon. of jurisdiction has been obtained from the State of Florida over a circular area containing nearly four acres, the center being at the point selected as the site of the new work. It has been ascertained that Soldier Key, a small island of coral-rock about four miles distant, belongs to the United States, and in order that suitable buildings may be erected for use in construction, its reservation for light-house purposes has been obtained. Material has been purchased for the erection of a platform on the reef, and for a wharf and buildings at Soldier Key, and both are now well under way. No work could be undertaken until cession of jurisdiction was obtained, and after application had been made for this cession the matter was so long delayed that the season was consumed before it was possible to commence operations. The designs for an iron light-house are now well advanced. It is impossible to accurately estimate the expense of this structure, owing to the liabilities to accident at so exposed a location. The site being one of the most difficult on the Atlantic coast, an additional appropriation of \$25,000 is asked, to be used if necessary.

373. Carysfort Reef, sea coast of Florida.—It was intended to renew at least a portion of the lower series of iron braces, and to paint the entire structure, but the funds available for repairs being insufficient, this work was unavoidably delayed. This will be done during the ensuing year, an appropriation having been made for the repairs of iron

light-houses on the Florida coast.

375. Sombrero Key, near Coffin's Patches, and Sombrero Key, Florida Reef.—The boat hoisting apparatus has been repaired. The roof of the keeper's dwelling and outer surface of stair-tower have been scraped and painted, and some slight repairs have been made to the fixtures. The old iron water tanks have been removed. The whole structure needs scraping and painting, and the lower braces need attention. As funds are now available, this will be attended to as early as possible.

——. American Shoal, Florida Keys, Florida.—In the last annual report attention was called to the necessity for a light in the vicinity of Loo Key. American Shoal indicates more nearly the desired position, and the remarks made last year are respectfully repeated: "The navigation of this portion of the Gulf is always dangerous, particularly to vessels bound to the southward and westward, because of the strong and variable currents near the reef, causing many wrecks and much loss of property. A light on or in the vicinity of American Shoal, illuminating the now unlighted space between Sombrero and Sand Key lights, would be most useful to mariners, and is strongly recommended. An appropriation of \$100,000 is respectfully asked for commencing the work."

376. Sand Key, Florida.—The appropriation of \$20,000 for the construction of a new dwelling and tower nearly all remains available, the work having been unavoidably delayed. The designs for the new work require great care in order that the new parts may fit the old. They are now nearly complete. It is believed that the available funds may be sufficient, and that the work will be completed within the ensuing year.

379. Dry Tortugas, Loggerhead Key, sea coast of Florida.—At the date of the last annual report the tower was in such bad condition as to render it probable that a new tower would be required, and an appropriation of \$75,000 was made, March 3, 1875, for this purpose. In order to continue the light, repairs to the old tower were essential, as the

upper portion was considered unsafe in high winds. The old part, for a distance of 8 or 9 feet below the lantern, including watch room walls, has been entirely rebuilt, and the anchors of the lantern extended downward through the entire distance, without in any way interfering with the regular exhibition of the light. When it is remembered that the tower is about 150 feet high, the difficulty in making these repairs will be better appreciated. They were accomplished by cutting out the old masonry in narrow vertical sections, replacing each section entire before removing the next. The black portion of the tower has been painted, and the remainder whitewashed. The lens has been re-adjusted and secured in position. The walk in front of the keeper's dwelling has been cemented and the water-conductors to the cisterns repaired. cisterns have been cleaned and repaired, and wooden shutters for the tower-windows have been made, painted, and hung. It is proposed, during the coming season, to make a careful examination with a view to determining on plans for the foundation of a new tower.

380. Dry Tortugas Harbor, Garden Key, sea coast of Florida.—Although the tower and lantern at this station are in bad condition, work has been deferred until funds become available for transferring the light to a new tower on an adjacent bastion of Fort Jefferson. An appropriation of \$5,000 is now available for this purpose, and designs for the

work are being made.

381. Egmont, on Egmont Key, entrance to Tampa Bay, Florida.—The piazzas of the keeper's dwelling and all the windows have been thoroughly repaired. All the wood-work has been painted and the ceiling of the piazza has been whitewashed. The cistern has been repaired and strengthened. New steps have been made for the entrance to the tower. The windows of the tower have been repaired, wooden shutters made, and the tower painted.

383. Saint Mark's, entrance to Saint Mark's River, Florida.—This station

has been thoroughly repaired and put in good condition.

384. Dog Island, Saint George's Sound, Florida.—This station was destroyed in the hurricane of September, 1873. An appropriation of \$20,000 was made by the act of June 23, 1874, for its reconstruction, and nearly the entire amount remains available. This light can only serve a local commerce, of which, for several years, there has been little or none; and it is therefore recommended that the new work be indefinitely postponed.

380. Cape San Blas, near south point of Cape San Blas, Florida.—The base of the tower is very nearly at the same level as the sea, which is but little more than 150 feet distant, the shore being of shifting sand. In a violent hurricane it is feared the tower may be undermined; and it is not considered prudent to leave it unprotected. An appropriation of

\$5,000 is therefore asked for protecting the site.

387. Pensacola, entrance to Pensacola Bay, Florida.—During the year the tower has been twice struck by lightning, which each time melted the fixtures of the call-bell and broke several large holes in the brick masonry of the covered way between the keeper's dwelling and the tower, shivering windows and doing other damage. The second stroke occurred after the first damages were repaired, and with almost duplicate results. An examination showed the lightning rod to be defective. The repairs were again made, a new lightning rod was made and put up, and as an extra guard a heavy ground-wire was attached to the bell-fixtures. The station is now in good order.

388. Bar beacon, Pensacola Harbor, Florida.—The old beacon was in such bad order, and afforded so few facilities for managing the light, that

it could not be properly exhibited. A new beacon has therefore been built, consisting of an elevated building containing ample room for the oil, lamps, and service. It is thoroughly built, of yellow pine, and painted throughout. It is somewhat higher than the old beacon, but occupies the same site.

DAY OR UNLIGHTED BEACONS.

All the iron beacons on the Florida Reefs have been thoroughly scraped and twice painted, and each has received its distinctive color.

The following is a list of them:

Beacon P, on the Fowey Rocks. Beacon O, on Triumph Reef. Beacon N, on Long Reef.

Beacon M, on Ajax Reef.

Beacon L, on Pacific Reef. Beacon K, on Turtle Reef.

Beacon +, on reef in Turtle Harbor.

Beacon I, on the Elbow Reef.

Beacon H, on the Grecian Shoals.

Beacon G, on French Reef. Beacon F, on Pickle's Reef.

Beacon E, on Conch Reef.

Beacon D, on Crocker's Reef.

Beacon No. 7, on Tennessee Reef.

Beacon C, on Coffin's Patches.

Beacon No. 6, on Looe Key, (Reef.)

Beacon B, on American Shoal.

Beacon A, on Middle Sambo Reef.

Beacon No. 5, on shoal near East Channel.

Beacon No. 4, on Eastern Dry Rocks.

Beacon No. 3, on Middle Ground. Beacon No. 2, on Western Dry Rocks.

The beacon on Rebecca Shoal has not yet been replaced. priation of \$10,000 is now available for rebuilding it and repairing the others; and it is proposed to erect at an early day a substantial structure to mark this dangerous shoal.

Sea Horse Key beacon, Florida.—This beacon greatly needs extensive repairs, which could not be undertaken during the past year owing to lack of funds. With the exception of the foundation-piles, it should be entirely rebuilt. It is proposed to do this work, if possible, during the ensuing year, from the funds now available. The remaining beacons of the district are chiefly made of wooden piles and stakes, forming ranges and marking turning-points in intricate channels.

LIGHT-SHIPS.

There are no light-ships in this district.

FOG-SIGNALS OPERATED BY STEAM OR HOT-AIR ENGINES.

There are no fog-signals operated by steam or hot-air engines in this district.

BUOYAGE.

The buoyage of this district is in good condition.

TENDERS.

The Arbutus, a small steamer used in construction and repairs, being totally unfit for service in this district, and needing extensive repairs, which, when made, would still leave her an inefficient vessel, was sold at public auction, and the proceeds thereof were deposited in the Treasury. Plans and specifications have been prepared for a new steamer, to be built under the appropriation made by act approved March 3, 1875, and it is expected that work will be commenced on her in a short time. The Geranium, a small steamer, used by the inspector for supplying lightstations and attending to the buoyage of the district, needs extensive repairs, which will be made during the present season.

DEPOTS.

There are three buoy and coal depots in this district, one at Key West, one at Egmont Key, and one at Pensacola. The last named is on property belonging to the War Department. Each depot is small and of little consequence.

A suitable depot for the storage of buoys, supplies, and material of all kinds is greatly nedeed at Key West, and an appropriation of \$15,000 for the purchase of land and the erection of the necessary buildings is respectfully asked.

EIGHTH DISTRICT.

The eighth light-house district extends from the Perdido River, Florida, to the Rio Grande, Texas, and embraces the coasts of Alabama, Mississippi, Louisiana, and Texas.

Inspector.—Commander Robert Boyd, jr., United States Navy, until

December 31, 1874.

Commander C. M. Schoonmaker, United States Navy, present inspector.

Engineer.—Captain A. N. Damrell, Corps of Engineers, brevet-major,

United States Army.

In this district there are:

Light-houses.	
Day or unlighted beacons	
Fog-signals operated by steam or hot-air engines	3
Buoys actually in position.	
Spare buoys for relief and to supply losses	101
Tenders, (sail,) Magnolia and Pharos, used in construction and repairs	$\tilde{2}$

The numbers preceding the names of stations correspond with those of the "List of Light-houses and Floating-Lights on the Atlantic, Gulf, and Pacific Coasts of the United States," issued January 1, 1875.

LIGHT-HOUSES.

393. Horn Island, Mississippi Sound, Mississippi.—A fog-bell struck by machinery, which was authorized by act of June 23, 1874, has been

placed at this station.

396. Ship Island, Mississippi Sound, Mississippi.—The tower and keeper's dwelling at this station are in need of considerable repairs; the flooring-timbers have decayed and the lower floor of the dwelling has given way; the tower window-sash, and frames are old, leak badly, and should be replaced by new ones. The estimated cost of this work, which it is proposed to have done during the present season, is \$1,500.

402. West Rigolets, entrance to Lake Pontchartrain, Louisiana.—The boat-landing at this station, built some years ago, has fallen into decay and cannot be used. It should be replaced by a new one, and a walk should be built from the landing to the light-house. A small breakwater should also be constructed for the protection of the light-house, and a solid foundation made for the support of the two cisterns now at the station. An appropriation of \$2,000 is respectfully recommended for this purpose.

403. Point aux Herbes, Lake Pontchartrain, Louisiana.—Considerable delay was experienced in procuring title to the necessary land for the site of this light-house. This having been accomplished, the work was commenced during the month of February, 1875, and prosecuted until May 15, when it was found necessary to withdraw the working party because of the non-arrival of the iron-work. After an absence of eleven days, occupied in making repairs at the light-stations in the immediate vicinity, the party returned to the station, and work was resumed. The structure is now nearly completed, and the light will be ready for exhibition on the evening of August 1, 1875.

407. Tchefuncti River, Lake Pontchartrain, Louisiana.—An appropriation of \$3,500 having been made available by act of March 3, 1875, for the construction of a breakwater for the protection of this light-house, plans have been prepared, and the work will be undertaken and com-

pleted at an early day.

410. Pass à l'Outre, Mississippi River, Louisiana.—A new wharf and walk for landing coal for the supply of the steam fog-signal, and supplies for the light-house have been built, and the repairs to the buildings very nearly completed, an appropriation for that purpose having been made

by act approved March 3, 1875.

411. South Pass, Mississippi River, Louisiana.—A working party was sent to this station in May, when a new kitchen was erected, the dwelling painted, and some slight repairs made. The old landing at this station, being entirely decayed and liable to fall into the river at any moment, should be rebuilt. It is recommended that a new wharf and a walk 200 feet long to the light-house, be constructed, and the shingling of the roof of the dwelling and the sides of the tower be renewed throughout. An appropriation of \$4,000 is respectfully recommended for the purpose of building a new wharf and walk, and making the necessary repairs, to put the station in a proper state of efficiency.

412. Head of the Passes, Mississippi River, Louisiana.—A fog-bell struck by machinery has been placed in a suitable tower at this station, the work having been authorized by act of June 23, 1874. The dwelling-house, tower, and kitchen have been painted throughout and some slight repairs made. An appropriation of \$3,500 having been made available by act of March 3, 1875, for building a breakwater for the protection of this light house, plans have been prepared and the work will be taken

in hand at an early day.

414. Barrataria Bay, Louisiana.—A petition has been received from the owners and masters of the various vessels frequenting the waters of this bay, asking that the light at this station, which at present only illuminates 270 degrees, be so changed as to light the entire horizon. This change will be made to take effect on July 31, 1875.

415. Timbalier, entrance to Timbalier Bay, Louisiana.—An appropriation of \$15,000 having been made by act of June 23, 1874, for completing this light, a working-party was dispatched to the station in July,

1874, and operations were resumed, the light-house was completely finished in January, 1875, and lighted for the first time on the evening of the 26th of that month. The structure is a screw-pile iron tower, having the keeper's dwelling in the lower part, and an inclosed stairway from the dwelling to the lantern. The focal plane is 111 feet above the sea-level. The lens apparatus is of the second order, showing a fixed white light varied by red flashes.

416. Ship Shoal, Gulf of Mexico, off coast of Louisiana.—Arrangements having been made for the delivery of a quantity of granite blocks for the protection of this light, three cargoes were delivered at Fort Pickens, Fla., and will soon be removed to the site and placed in position.

417. Southwest Reef, entrance to Atchafalaya Bay, Louisiana.—The improvements mentioned in the last annual report, consisting of the establishment of a first-class steam fog-signal, and the raising of the tower from its foundation, have been completed. The light-house was detached from its foundation, the tower was raised ten feet, and four castiron columns inserted and bolted to the top of the four foundation-piles; the tower was then lowered into its place and bolted to the columns; the whole rigidly secured by a system of diagonal bracing. The fogsignal building rests on a foundation of four cast-iron hollow screw-piles, and is connected with the light-house by means of a covered passageway. The signal was put in operation on March 31, 1875.

418. Trinity Shoal, Gulf of Mexico, off the coast of Louisiana.—Since the destruction of the working-platform mentioned in the last annual report, no further work has been undertaken. The iron-work of the structure has been stored in a rough shed at Southwest Pass lighthouse. The board has under consideration the matter of resuming work

at this point.

419. Calcasieu, entrance to river and lake Calcasieu, Louisiana.—Several attempts have been made to purchase the land required at this point for light house purposes, but have failed, as the owners asked an exorbitant price. Information has been received that the channel across the bar has changed in such a manner as to render the establishment of a light on the east side of the river, as heretofore contemplated, of but little use. It is proposed to have an examination made of the locality for the

purpose of determining the correctness of this report.

431. Brazos Island, entrance to Brazos Santiago, Texas.—In September, 1874, this station was visited by a hurricane of unusual violence, during which the old wooden tower was completely swept away and everything at the station destroyed. This accident, unfortunately, was attended with the loss of the keeper's wife, who was undoubtedly killed when the tower fell. A frame structure has been erected near the site of the former light, and a small beacon light temporarily exhibited. An appropriation of \$25,000 is now available for the construction of a new light-house for this station. As soon as the proper site has been selected plans will be prepared and the work commenced.

REPAIRS.

At each of the following stations in the eighth district repairs more or less extensive have been made during the past year:

390. Mobile Point, Mobile Bay, Alabama.

389. Sand Island, entrance to Mobile Bay, Alabama.

392. Mobilé Harbor, Mobile Bay, Alabama.

400. Merrill's Shell-bank, Mississippi Sound, Mississippi.

402. West Rigolets, entrance to Lake Pontchartrain, Louisiana.

404. Port Pontchartrain, Lake Ponchartrain, Louisiana.

412. Head of the Passes, Mississippi River, Louisiana.

411. South Pass, Mississippi River, Louisiana.

LIGHT-SHIPS.

421. Galveston light-ship, inside of Galveston Bar, Texas.—She is a small vessel, and is now needing repairs, which will be made at an early day.

FOG-SIGNALS OPERATED BY STEAM OR HOT-AIR ENGINES.

Pass à l'Outre, mouth of Mississippi River, Louisiana.—A 12-inch steam-

whistle, in good condition.

Southwest Pass, mouth of Mississippi River, Louisiana.—A 12-inch steam-whistle, in good condition. Repairs have been made to the machinery and buildings connected therewith at each of the above stations.

Atchafalaya, entrance to Atchafalaya Bay, Louisiana.—A 12-inch steam-whistle; building erected and engine put in operation during the past year.

DAY OR UNLIGHTED BEACONS.

Range Beacon, Pass à l'Outre, Mississippi River.—Iron-pile beacon. Stake Island, Southwest Pass, Mississippi River.—Iron-pile beacon. Atchafalaya Bay, Louisiana.—Five iron-pile beacons, marking the

channel into the bay.

North Breaker Beacon, entrance to Galveston Bay, Texas.—Iron pile beacon.

BUOYS.

The buoyage of the district has been carefully cared for and is in good condition.

TENDERS.

The steam-tender Dandelion, employed under the inspector of the district in supplying and inspecting the stations and in caring for the buoyage, requires some repairs to hull and wood-work connected with her engines, and caulking; she will then be in good condition.

The Ivy, employed under the direction of the engineer of the district in transporting men and material for purposes of construction and repairs, is small, worn out, and unfitted for further service. She will be sold, and the proceeds turned into the Treasury.

DEPOTS.

Coal depot, Mobile Point, entrance to Mobile Bay.—The coal-platform

at this point is in fair condition.

Southwest Pass, Louisiana.—An appropriation of \$15,000 is now available for a light-house and buoy-depot at Southwest Pass, Louisiana, but it having been reported to the board that the water in the channel upon which it is proposed to locate this depot is steadily decreasing in depth, the channel gradually filling up, work will not be commenced until investigations have been made to determine the correctness of the report.

TENTH DISTRICT.

The tenth district extends from the mouth of Saint Regis River, New York, to include Grassy Island light-house, Detroit River, Michigan, and embraces all the aids to navigation on the American shores of Lakes Erie and Ontario, and Saint Lawrence River.

Inspector.—Commander Edward E. Potter, U. S. N.

Engineer.—Lieut. Col. C. E. Blunt, Corps of Engineers, brevet colonel-U. S. A.

In this district there are—

Light-houses	59
Day or unlighted beacons	
Light-ships	0
Fog-signals operated by steam or hot-air engines	0
Buoys actually in position	
Spare buoys for relief to supply losses	17
Tender Haze, steam-buoy tender and supply vessel	1

The numbers preceding the names of stations correspond with the Light house List of the Northern and Nortwestern Lakes, issued January 1, 1875.

LIGHT-HOUSES.

500. Crossover Island, Saint Lawrence River, New York.—Both the tower and dwelling are in a dilapidated condition. The tower is constantly settling, so that it is now difficult to keep the apparatus level and in working condition. The request for an appropriation of \$14,000 to rebuild this station, which was made in last year's and preceding

reports, is renewed.

501. Sister Island, Saint Lawrence River, New York.—The appropriation of \$700, made March 3, 1875, has been expended in constructing a retaining-wall of masonry, 67 feet in length, with earth filled in behind it to the general level, and protecting the northwest side of the dwelling and tower. The rough causeways of piles and boards on trestles, which have heretofore been the precarious mode of connection between the three islets, have been removed, and substantial dry-stone causeways, 230 feet long, substituted.

503. Rock Island, Saint Lawrence River, New York.—The recommend-

ation contained in the last two annual reports is renewed.

"The tower and dwelling are in a similar condition to that of Crossover Island. A new tower is imperatively necessary. The dwelling might be repaired, but it is not considered economical in the end to do so, as it would only be postponing the building of a new one a few years, and it would probably cost less to build tower and dwelling together now." An appropriation of \$14,000 is again recommended.

509. Oswego Pier-head, Lake Ontario, New York.—The lantern-frame of this beacon is of wood, with sash-bars nearly 10 inches wide, which almost obscure the light as vessels pass their line. These wooden bars or posts should be removed, and iron ones substituted. This change would involve new and larger glass and some modification of the lantern, but not entire rebuilding. It is proposed to have this work done

the coming season.

Thirty-Mile Point, Lake Ontario, New York.—An additional appropriation of \$5,000 for this new station was made March 3, 1875, and the construction is now going on under contract, the iron-work having been delivered by the contractors therefor. Ground was broken on April 28, 1875. Bad weather in May and June caused much delay in the progress of the work. The fence inclosing the lot, and the roadway and

bridge across Golden Hill Creek, were built in the fall of 1874. It is thought that the light can be exhibited at or soon after the opening of

navigation in 1876.

523. Dunkirk, Lake Erie, New York.—A temporary beacon was erected and lighted on the opening of navigation in 1875, as a substitute for the permanent light during the reconstruction of the station by means of the appropriation of \$15,000 made March 3, 1875. The old tower was then taken down, and ground was broken for the new tower and dwelling on June 16, 1875. The concrete foundation has been laid and masonry has been commenced. It is expected that the permanent light can be again exhibited on the opening of navigation in 1876.

524. Dunkirk Beacon, Lake Erie, New York.—This beacon is old and the wood-work much decayed. It is recommended that it be rebuilt,

and for this purpose an appropriation of \$5,000 is asked.

532. Conneaut, Lake Erie, Ohio.—An appropriation of \$4,000 was made June 23, 1874, for a new beacon ou the west pier, which has been built and was lighted on the opening of navigation in 1875. An elevated walk was also built. The old beacon on the east pier has been taken down.

533. Ashtabula, Lake Erie, Ohio.—The new beacon proposed for the end of the west pier of entrance has not yet been commenced, as the pier extension is not completed. It is hoped, however, that the beacon can be built and lighted by the opening of navigation in 1876. The present beacon on the east pier will then be taken down.

534. Grand River, Fairport, Lake Erie, Ohio.—There is no necessity for this light, a good beacon on the east pier head being ample for all wants of navigation, whether for lake, coast, or harbor purposes. It is

proposed to discontinue it.

535. Grand River, Fairport Beacon, Lake Erie, Ohio.—An appropriation of \$4,000 was made June 23, 1874, for a new beacon on the head of the east pier of entrance to the harbor. It has been built, and was lighted

at the opening of navigation in 1875.

537. Cleveland Beacon No. 1, Lake Erie, Ohio.—An appropriation of \$5,000 was made June 23, 1874, for a new beacon on the west pier of entrance of Cleveland Harbor. It was built during last winter, and lighted shortly after the opening of navigation in 1875. In front of and connected with the beacon a frame structure has been erected containing a fog-bell, which has also been in operation since the opening of navigation.

538. Cleveland Beacon No. 2, Lake Erie, Ohio.—The new beacon, with double lights, which is to be placed on the head of the east pier, in lieu of the present mast head double lights, has not yet been erected, in consequence of the non-completion of the repairs of the pier. It has lately been commenced, however, and it is expected that it will be lighted on September 1, 1875, when the mast-head lights will be discontinued.

539. Black River, Lake Erie, Ohio.—It is proposed to discontinue the shore-light at this station and establish a pier-head light on the west pier. The work has been commenced, and the new light will, it is ex-

pected, be exhibited before the close of navigation in 1875.

—. Sandusky beacons, Sandusky Bay, Lake Erie, Ohio.—The unexpended balance of the appropriation of June 23, 1874, for day-beacons in Sandusky Bay, was, by act of March 3, 1875, continued and made available for range lights at the same place, with the addition of a further sum of \$8,000. The total amount now available is not sufficient for the necessary constructions, and therefore a further appropriation of \$7,000 is asked. With the sum now available the cribs upon which the beacons

are to be erected will be constructed as soon as the title to the sites in Sandusky Bay can be obtained from the governor of Ohio.

548. Maumee outer-range beacon, (front,) Maumee Bay, Ohio.—An appropriation of \$2,000 was made March 3, 1875, for the protection of the shore in front of this beacon, which had been steadily wearing away under the action of the water. A substantial construction of timber and

rubble has just been completed.

-. Maumee day beacons, Maumee Bay, Ohio.—An appropriation of \$14,000 was made June 23, 1874, for two day beacons. The board has taken no steps to establish these beacons, as it is believed that for such an important lake port as Toledo range-lights will be required, which will be of service by night as well as by day. An examination of the locality has been made with a view to making estimates for range lights. It was found that two sets of range-lights will be required, the cost of which, including the necessary land and keepers' dwellings, is estimated at \$75,000. As an experiment, several clusters of piles have been driven on the lines of the channel now being dredged in Maumee Bay, and lanterns such as are used on the western rivers have been placed thereupon, the lights being maintained for the present by the dredging contractors. These temporary lights seem to give satisfaction, but the piles on which they stand will doubtless be carried away by the ice in It is recommended that the appropriation of \$14,000 for daybeacons be made available for the maintenance of similar lights, in order that their utility may be further tested.

REPAIRS.

Repairs and improvements, more or less extensive, have been made at each of the following-named stations in the tenth district during the year:

- 499. Ogdensburgh, Saint Lawrence River, New York.
- 450. Cross-over Island, Saint Lawrence River, New York.
- 501. Sister Islands, Saint Lawrence River, New York. 502. Sunken Rock, Saint Lawrence River, New York.
- 503. Rock Island, Saint Lawrence River, New York.
- 506. Horse Island, Lake Ontario, New York.
- 507. Stony Point, Lake Ontario, New York.
- 508. Oswego, Lake Ontario, New York.
- 510. Fair Haven, Lake Ontario, New York.
- 511. Big Sodus, (outer beacon,) Lake Ontario, New York.
- 512. Big Sodus, (inner beacon,) Lake Ontario, New York. 513. Big Sodus, Lake Ontario, New York.
- 514. Genesce, Lake Ontario, New York.
- 515. Genesee Beacon, Lake Ontario, New York.
- 516. Oak Orchard, Lake Ontario, New York.
- 517. Olcott, Lake Ontario, New York.
- 518. Fort Niagara, Lake Ontario, New York.
- 519. Horseshoe Reef, Buffalo, New York.
- 520. Buffalo Breakwater, Lake Erie, New York.
- 522. Buffalo, Lake Erie, New York.
- 523. Dunkirk, Lake Erie, New York.
- 524. Dunkirk Beacon, Lake Erie, New York.
- 525. Erie Harbor, Lake Erie, Pennsylvania.
- 526. Presque Isle beacon-ranges, Lake Erie, Pennsylvania.
- 531. Presque Isle, Lake Erie, Pennsylvania.
- 532. Conneaut, Lake Erie, Ohio.

536. Cleveland, Lake Erie, Ohio.

540. Vermillion, Lake Erie, Ohio.

541. Huron, Lake Erie, Ohio.542. Cedar Point, Lake Erie, Ohio.

543. Cedar Point beacon, Lake Erie, Ohio.

544. Marblehead, Lake Erie, Ohio.

546. West Sister, Lake Erie, Ohio. 547. Turtle Island, Lake Erie, Ohio.

548. Maumee Outer Range, Lake Erie, Ohio.

,550. Maumee Middle Range, Lake Erie, Ohio.

552. Maumee Inner Range, Lake Erie, Ohio.

554. Monroe, Lake Erie, Michigan.

555. Gibraltar, Detroit River, Michigan.

557. Mamajuda, Detroit River, Michigan.

558. Grassy Island, Detroit River, Michigan.

LIGHT-SHIPS.

There are no light-ships in this district. An appropriation of \$20,000 was made March 3, 1875, for maintaining a light-ship off the mouth of Detroit River, Michigan.

The government of the Dominion of Canada having recently established a light-ship near this point, it is thought that the one for which an appropriation was made will not be required and that the money may be allowed to revert to the Treasury.

FOG-SIGNALS OPERATED BY STEAM OR HOT-AIR ENGINES.

There are no fog-signals operated by steam or hot-air engines in this district.

DAY OR UNLIGHTED BEACONS.

Dunkirk Harbor, New York, in good condition.

BUOYAGE.

The buoyage of this district is in satisfactory condition and remains substantially as at the date of the last report, the only changes having been such as were incident to defining more accurately the dredged channels in Sandusky and Maumee Bays.

TENDER.

The steam-tender Haze has been employed in the necessary work of the district. She is old and in poor condition. An appropriation of \$30,000 was made by act approved March 3, 1875, for repairing this vessel. It is proposed to thoroughly repair her at the close of the working season.

ELEVENTH DISTRICT.

The eleventh district embraces all aids to navigation on the northern and northwestern lakes above Grassy Island light-station, Detroit River, and includes Lakes St. Clair, Huron, Michigan, and Superior, and the straits connecting them.

Inspector.—Commander William P. McCann, United States Navy. Engineer.—Maj. Godfrey Weitzel, Corps of Engineers, brevet majorgeneral, United States Army, for the entire district, excepting Lake Michigan; Maj. Henry M. Robert, Corps of Engineers, for Lake Michigan until May 4, 1875.

There are in this district-

Light-houses	110

The numbers preceding the names of stations correspond with the "Light-house List of the Northern and Northwestern Lakes," issued January 1, 1875.

LIGHT-HOUSES.

559. Windmill Point, entrance to Lake St. Clair, Michigan.—Congress, at its last session, appropriated \$18,000, for rebuilding the lighthouse at this point. The work was begun in the latter part of May, is now well advanced, and will be completed during the season.

561. St. Clair Flats Beacon, Lake St. Clair, Michigan.—This beacon and the crib which surrounds it, were rebuilt, an appropriation for the purpose having been made by act approved June 23, 1874. It is now in excellent condition. The heavy masses of ice of the past winter

did not disturb the crib in the least.

564. Fort Gratiot, Lake Huron, Michigan.—An appropriation having been made by act approved June 23, 1874, for building a keeper's dwelling at this station, the work was taken in hand, completed, and the house occupied last fall. This is the oldest and one of the most important stations in the district. It is a guide to the whole commerce of the lakes into St. Clair River. Over 33,000 vessels annually pass this station. The tower is old, and a new one will have to be constructed before long.

—. Light-house between Fort Gratiot and Point Aux Barques, Lake Huron.—The recommendation made in several annual reports to build a coast-light to divide the long distance of 75 miles between Point Aux Barques and Fort Gratiot is renewed. This light-house would be one of the coast-lights of the general system, and is not intended to serve any local interest. As nearly all of the commerce of the lakes passes along this coast, no argument seems necessary to show the importance and necessity of this light. It is therefore recommended that an appropriation of \$40,000 be made for the purpose.

Port Austin, Saginaw Bay, Michigan.—As stated in the last annual report, difficulties were encountered in getting a clear title to the site which had at first been selected for this station. An equally good site, about 200 feet to the eastward of the first one, has been found, and there is every prospect that a clear title for this can be had. As soon as this is done, the construction of this station will be begun. It is doubtful, however, if the work can be finished during the present

season.

566. Saginaw Bay, at the head of Saginaw Bay, and at the mouth of Saginaw River, Michigan.—An appropriation of \$23,000 was made by the act approved March 3, 1875, for the erection of range-lights to guide through the cut in the outer bar at the mouth of Saginaw River, and for the construction of a new dwelling for the keeper, and the act pro-

vided that the jurisdiction of the Light-House Board be extended so that it be lawful for the board to lease the necessary ground for the erection and maintenance of said light. Plans for the keeper's dwelling have been prepared, but no satisfactory arrangements have yet been made either for the purchase or leasing of the necessary sites for the rangelights, owing to the impossibility of concluding any reasonable bargain with the owners of land.

568. Tawas, (Ottawa,) Saginaw Bay, Lake Huron, Michigan.—An appropriation was made at the last session of Congress for the construction of a light-house on Ottawa Point, or for range-lights to guide into Tawas Bay, on the northwest shore of Saginaw Bay, in the State of Michigan. The board has decided to erect a light-house on the shoal to the southward of Tawas Point, in 4 feet of water. Some delay, however, will be experienced in procuring title to the site. As soon as that is done, and plans are prepared, the work will be taken in hand. As the locality is one of great exposure, an additional appropriation may be required to complete the work.

—. Thunder Bay River, Lake Huron, Michigan.—An appropriation of \$20,000 was made by act approved June 23, 1874, for a light at the mouth of Thunder Bay River. It was found, however, upon examination that a permanent structure at this place would be inexpedient, the piers being extended from time to time as the mouth of the river advances into the lake. The board therefore decided to display a temporary light for the present. Arrangements have been made to establish a

small light on a cluster of piles.

579. McGulpin's Point, Straits of Mackinac, Michigan.—A steam fogsignal of the most approved pattern is required for this station, the number of vessels passing through the straits and close to this lighthouse being very great. An appropriation of \$5,000 for the establish-

ment of a fog-signal is asked.

582. Skilligallee, (Isle aux Galets,) Lake Michigan.—An appropriation of \$5,000 was made during the last session of Congress for protecting the shore of this station, which had been washing away. The work will soon be taken in hand, and it is expected that it will be completed before fall. Under the appropriation made by act approved June 23, 1874, for erecting fog-signals on the northern and northwestern lakes, the board has decided to place at this station a steam-siren, a fog-signal of the most approved kind. This work, it is also expected, will be finished during the coming fall.

593. Père Marquette, Lake Michigan, Michigan.—The last four annual reports have urged an appropriation of \$5,000 for a keeper's dwelling at this point. It is much needed, and the recommendation is renewed. The dredging of the channel, to a width of 200 feet, will take the old house the keeper has been living in, which is not worth moving. No residence can be had within a half-mile, and that on the opposite side

of the river from the light.

596. White River, Lake Michigan, Michigan.—An appropriation of \$15,000 was made by act approved June 23, 1874, for building a new tower and keeper's dwelling at the mouth of White River, Michigan. Plans for the building have been approved, and steps taken to procure title to the necessary site for the structure. The title-papers are now in the hands of the Attorney-General of the United States for approval. It is believed that the buildings can be erected and the light exhibited during the present season.

601. Grand Haven pier head light, Lake Michigan, Michigan.—A fogsignal house has been built directly under the light, and the boiler set in position. A steam-siren is to be established at this station under the appropriation made by act approved June 23, 1874, for the erection of fog-signals on the northern and northwestern lakes. It is expected that the work will be completed, and the signal in operation, during the present season.

602. Holland (Black Lake) pier-head light, Lake Michigan, Michigan.—A new section of elevated walk, 550 feet in length, has been built at this station, and connected with the shore by 450 feet of plank walk laid on

top of the cribs.

608. Michigan City pier head light, Lake Michigan, Indiana.—The beacon and elevated walk have been removed from the east to the west

pier, and about 800 feet of new elevated walk built.

609. Calumet, Lake Michigan, Illinois.—A shore light in connection with the pier-head light at this place is not deemed necessary. It is therefore proposed to extinguish the former as soon as the beacon is built on the end of the pier, which will doubtless be done the present season.

612. Grosse Pointe, Lake Michigan, Illinois.—The shore in front of this light is washing away gradually, and should be protected. Au

appropriation of \$5,000 is needed for this purpose.

has been moved out 320 feet to the end of the pier, and 310 feet of ele-

vated walk has been built.

— . Racine Point, Lake Michigan, Wisconsin.—The recommendation contained in the last five annual reports that an appropriation be made to erect a lake-coast light at this point, is renewed, and an appropriation of \$40,000 is asked. The present light at Racine, which does not answer the purpose of a lake-coast light, will then be discontinued.

618. Milwaukee North Cut beacon, Lake Michigan, Wisconsin.—As there was a light maintained on the end of the pier, the inner light, called the North Cut beacon, was not deemed a necessary aid to navigation. It was therefore discontinued on July 31, 1875. A first-class steam fogsignal should be established at this station, and an appropriation of

\$5,000 is asked for this purpose.

625. Twin River Point, Lake Michigan, Wisconsin.—At the date of the last annual report the construction of this station was in progress. The buildings were completed in October last, but the illuminating apparatus did not arrive until some time afterward. The light was first exhib-

ited on the night of December 7, 1874.

629. Port du Mort, (Pilot Island,) entrance to Green Bay, Lake Michigan, Wisconsin.—Arrangements have been made to erect a steam-siren at this station under the appropriation for steam fog-signals on the northern and northwestern lakes. The work is now in progress, and, it is expected, will be finished during the present season.

631. Poverty Island, entrance to Green Bay, Lake Michigan, Wisconsin.—
The dwelling and 31 feet of the tower were completed on August 1,
1874, and a temporary light was exhibited from the roof of the dwelling.
An appropriation of \$3,000 was made by act approved March 3, 1875, to
complete the tower. The work has been resumed, and it is expected
that the tower will be completed and a permanent light exhibited by
August 1, 1875.

643. Big Sable, Lake Superior, Michigan.—This station was completed

in August, 1874, and lighted on the 19th of that month.

— . Stannard's Rock, Lake Superior, Michigan.—A survey of this dangerous shoal was made under the appropriation made by act of March 3, 1873. The results of the survey proved that it is entirely practicable to build a light-house on it, the water varying from 10 to 12 teet in depth 50 F

on the approaches from three sides. A light-house should be built, and a fog-signal established. The rock lies in the track of all vessels running to the north side of the western portion of Lake Superior, and is an object of great concern, especially on dark nights and during the almost interminable fogs which prevail in this vicinity during the greater part of the season of navigation. The construction of this station will greatly benefit the large, growing, and valuable commerce of the Lake Superior region. This is the proper time to begin it, as it can be built now cheaper than at any future time, as the costly apparatus and machinery used in building the light-house at Spectacle Reef is now available, and is especially adapted to works of this nature. The rock is nearly 20 miles distant from the nearest land, and 40 miles from a suitable harbor; and as it will have to be placed in from 10 to 12 feet of water, it will require a structure of the most costly and substantial character. It is estimated that the cost will not be less than \$300,000, but no accurate estimate can be given in advance, on account of the liability to accidents and delay while the work is in progress. Large as this sum is, its outlay is fully warranted by the necessities of the navigation of the lakes, and it is recommended that an appropriation of \$200,000 be made to begin the work.

—. L'Anse, Lake Superior, Michigan.—Efforts have been made to secure a title to the site on several occasions, but thus far without success. It is recommended that the appropriation made by act approved March 3, 1873, which is still available, be so worded that the Light House Board may be authorized to erect the light-house anywhere in the near vicinity

that may be determined upon.

659. Eagle Harbor, Lake Superior, Michigan.—An appropriation of \$8,000 was made by act approved March 3, 1875, for re-establishing range-lights at Eagle Harbor, Lake Superior. Negotiations having in view the acquisition of title to the site for the light are now pending. If there is no delay in procuring a valid title, the lights will be exhibited before the close of the present season.

661. Portage Lake Ship Canal, Lake Superior, Michigan.—This station

was completed and lighted on the 20th of November, 1874.

663. Outer Island, Lake Superior, Wisconsin.—This station was completed and lighted on October 30, 1874. A steam fog-signal has been

erected, and was put in operation on November 5, 1874.

669. Isle Royale, Lake Superior, Michigan.—Work was begun on this station as soon as navigation opened in the spring. It will probably be completed and lighted by September 15, in this year. The light-house is located on Menagerie Island, the most easterly of the small islands form-

ing Siskiwit Bay, south side of Isle Royale.

—. Passage Island, Lake Superior, Michigan.—Congress, at its last session, made an appropriation of \$18,000 for establishing a light at this place, conditioned upon the building, by the government of the Dominion of Canada, of a light-house on Colchester Reef, to the eastward of the mouth of Detroit River. The board is not aware that any steps have yet been taken by the Canadian government to establish a light at that point, and therefore nothing has been done toward the erection of a light at Passage Island.

REPAIRS.

Repairs of greater or less extent have been made, or are in process of execution, at the following stations:

559. Windmill Point, entrance to Lake St. Clair, Michigan.

560. St. Clair Flats, Michgan.

- 561. St. Clair Flats beacon, Michigan.
- 563. St. Clair Flats Canal, Michigan.
- 564. Fort Gratiot, Lake Huron, Michigan.
- 565. Point aux Barques, Lake Huron, Michigan.
- 566. Saginaw Bay, Lake Huron, Michigan.
- 567. Charity Island, Saginaw Bay, Lake Huron, Michigan.
- 568. Tawas, on Ottawa Point, Saginaw Bay, Michigan. 571. Thunder Bay Island, Lake Huron, Michigan.
- 574. Presque Isle, Lake Huron, Michigan.
- 575. Spectacle Reef, entrance to the Straits of Mackinac, Lake Huron, Michigan.
 - 576. Detour, river Sault Ste. Marie, Lake Huron, Michigan.
 - 577. Bois Blanc, Straits of Mackinac, Michigan.
- 578. Cheboygan, near eastern entrance to the Straits of Mackinac, Michigan.
 - 579. McGulpin's Point, Straits of Mackinac, Michigan.
 - 580. St. Helena, Straits of Mackinac, Michigan.
- 581. Waugoshance, Straits of Mackinac, entrance to Lake Michigan, Michigan.
 - 582. Skilligallee, (He aux Galets,) Lake Michigan, Michigan.
 - 583. Beaver Island Harbor, Lake Michigan, Michigan.
 - 584. Beaver Island, Lake Michigan, Michigan.
 - 585. South Fox Island, Lake Michigan, Michigan.
 - 586. Grand Traverse, Grand Traverse Bay, Lake Michigan, Michigan.
 - 587. Mission Point, Grand Traverse Bay, Lake Michigan, Michigan.
 - 588. South Manitou, Lake Michigan, Michigan.
- 589. Point Betsey, (Point aux Becs Scies,) east side of Lake Michigan, Michigan.
 - 590. Frankfort pier head, Lake Michigan, Michigan.
 - 591. Manistee, Lake Michigan, Michigan.
 - 592. Grande Pointe au Sable, Lake Michigan, Michigan.
 - 593. Pere Marquette, Lake Michigan, Michigan.
 - 594. Pentwater, Lake Michigan, Michigan.
 - 595. Petite Pointe au Sable, Lake Michigan, Michigan. 597. White River pier-head, Lake Michigan, Michigan.
 - 598. Muskegon, Lake Michigan, Michigan.
 - 600. Grand Haven. Lake Michigan, Michigan.
 - 602. Holland, (Black Lake,) Lake Michigan, Michigan.
- 603. Kalamazoo, on the north side of the mouth of Kalamazoo River, Lake Michigan, Michigan.
 - 604. South Haven, Lake Michigan, Michigan.
 - 605. St. Joseph, Lake Michigan, Michigan.
 - 607. Michigan City, Lake Michigan, Indiana.
 - 608. Michigan City pier-head, Lake Michigan, Indiana.
 - 609. Calumet, Lake Michigan, Illinois.
 - 611. Chicago pier head, Lake Michigan, Illinois.
 - 612. Grosse Foint, Lake Michigan, Illinois.
 - 613. Waukegan, Little Fort River, Illinois.
 - 614. Kenosha, on Warrenton Island, Lake Michigan, Wisconsin.
 - 616. Racine, Lake Michigan, Wisconsin.
 - 617. Racine pier-head, Lake Michigan, Wisconsin.
 - 618. Milwaukee pier-head, Lake Michigan, Wisconsin.
 - 619. Milwaukee, (north point,) Lake Michigan, Wisconsin.
 - 620. Port Washington, Lake Michigan, Wisconsin.
 - 621. Sheboygan pier-head, Lake Michigan, Wisconsin.

622. Sheboygan, Lake Michigan, Wisconsin.

624. Manitowoc, Manitowoc River, Lake Michigan, Wisconsin.

626-27. Bailey's Harbor ranges, Lake Michigan, Wisconsin.

629. Port du Mort, Pilot Island, Green Bay, Lake Michigan, Michigan.

630. Pottawatomie, Rock Island, Green Bay, Lake Michigan, Michigan. 632. Point Peninsula, on the point between Little and Big Bays de Noquet, Lake Michigan, Michigan.

633. Escanaba, Little Bay de Noquet, Lake Michigan, Michigan.

634. Eagle Bluff, Green Bay, Lake Michigan, Wisconsin.

636. Green Island, Green Bay, Lake Michigan, Wisconsin.

638-39. Grassy Island ranges, Green Bay, Lake Michigan, Wisconsin. 641. Point Iroquois, White Fish Bay, Lake Superior, Michigan.

642. White Fish Point, Lake Superior, Michigan.

643. Big Sable, Lake Superior, Michigan.

644. Grand Island, Lake Superior, Michigan.

645. Grand Island Harbor, Lake Superior, Michigan.

646-47. Grand Island Harbor ranges, Lake Superior, Michigan.

648. Marquette, Lake Superior, Michigan.

649. Granite Island, Lake Superior, Michigan.

650. Huron Island, Lake Superior, Michigan.

651. Portage River, Keweenaw Bay, Lake Superior, Michigan.

652-653. Portage River ranges, Keweenaw Bay, Lake Superior, Michigan.

654. Manitou Island, Lake Superior, Michigan.

655. Gull Rock, Lake Superior, Michigan.

656. Copper Harbor, Lake Superior, Michigan.

660. Eagle River, Lake Superior, Michigan.

662. Ontonagon, Lake Superior, Michigan. 663. Outer Island, (Apostle group,) Lake Superior, Wisconsin.

664. Michigan Island, Lake Superior, Wisconsin.

665. La Pointe, Lake Superior, Wisconsin.

666. Raspberry Island, (Apostle group,) Lake Superior, Wisconsin.

667. Minnesota Point, mouth of Saint Louis River, Lake Superior, Minnesota.

668. Du Luth, Lake Superior, Minnesota.

670. Rock Harbor, Lake Superior, Michigan.

FOG-SIGNALS.

Since the last annual report three new fog-signals have been erected in this district, namely, at South Manitou Island, Lake Michigan, and Outer and Manitou Islands, Lake Superior. These, with the other six that existed in the district, seem to have given general satisfaction to the commerce of the lakes.

A steam siren has been ordered at each of the three following stations, namely: Grand Haven, Skilligallee, and Port du Mort, all in Lake Michigan. These are all in course of erection.

BUOYS.

The buoyage of this district has been carefully attended to during the year, and it is in conformity with the printed buoy list, and generally in good order. A complete set of new buoys for Saint Clair Flats was furnished and located in the spring, the old channel being used almost exclusively by vessels towing rafts, as difficulty is experienced in using the canal for that purpose when there is much wind or sea.

LIGHT-HOUSE DEPOT.

Detroit, Michigan.—Congress, at its last session, made an appropriation of \$10,000 to complete the work on this important depot. Work under this appropriation was begun in May. The new dock is nearly completed, and all the iron shutters and doors for the fire-proof storehouse are in place.

TWELFTH DISTRICT.

CALIFORNIA.

This district embraces all aids to navigation on the Pacific coast of the United States between the Mexican frontier and the southern boundary of Oregon, and includes the coast of California.

Inspector.—Commodore James H. Spotts, United States Navy, until December 1, 1874; Commander A. T. Snell, U. S. N., present inspector. Engineer.—Lieut. Col. R. S. Williamson, Corps of Engineers, United States Army.

In this district there are-

Light-houses and lighted beacons	21
Day or unlighted beacons	
Light-ships	0
Fog-signals operated by steam or hot-air engines	
Buoys actually in position	
Spare buoys for relief and supply losses	
Tender Shubrick, common to twelfth and thirteenth districts, used for inspector's and engineer's purposes	

The numbers preceding the names of stations correspond with those of the "Light-house List of the Atlantic, Gulf, and Pacific Coasts of the United States," issued January 1, 1875.

LIGHT-HOUSES.

433. Point Loma, entrance to San Diego Bay, sea coast of California.—Some slight repairs and renovations have been made at this station during the past year; but as the keeper's dwelling is in bad condition, considerable repairs are necessary. It is also proposed to fit up two rooms in a portion of the wood house for the better accommodation of the keepers. These repairs and changes will be made during September, as that is deemed the best time for doing the work.

434. Point Fermin, sea coast of California.—The light at this station was exhibited for the first time on the evening of December 15th, 1874. It is recommended that an appropriation of \$300 be made for the pur-

chase of additional land at this station.

435. Point Huenene, sea-coast of California.—The light at this station was exhibited for the first time on the evening of December 15, 1874. Plenty of water for irrigation is had from the artesian well on the reservation. It is important that a steam fog signal should be established here. The numerous passenger and other steamers, in going up and down the coast, pass inside Anacapa Islaud, and very near the coast, which here makes a considerable elbow. The land at this point is quite low, and is so for ten miles inland, so that it is difficult to see it if there is any fog. An appropriation of \$7,000 for the establishment of a first-class steam fog-signal at this place is recommended.

436. Santa Barbara, sea-coast of California.—Slight repairs have been

made t this station. The light-house reservation is separated from the nearest public road by land owned and occupied as an orchard by a private citizen. A road to the public highway is necessary. The owner offers to sell a piece of land sufficient for a right of way, at the rate of \$200 per acre, gold coin. This is not an exorbitant price; an appropriation of \$500 is therefore recommended.

437. Point Conception, sea coast of California.—The old dwelling at this station is in a bad condition, and the best plan is to pull it down, leaving the tower by itself, and to build for the accommodation of the keepers two more cottages similar to the one built last year. being a first-order light and having a steam fog-signal, four keepers are required. One corner of the house has settled, making a serious crack. As the tower is in the center of the house, the latter having been built around it, when the walls of the house are removed the tower will be isolated and complete in itself. An appropriation of \$12,000 is asked for the purpose of building the new dwellings. The tenure by which the Government holds 160 acres of land at this point has been a matter of correspondence during some years past. A. portion of this is of no value to the Government for light house purposes, and can be abandoned without detriment to the public service. Negotiations are now in progress having in view the settlement of dispute in this regard.

438. Piedras Blancas, sea coast of California.—The tower at this station was completed and the light put in operation on February 15th, 1875, the keepers being accommodated in the shanties built for use of the mechanics and laborers. Congress at its last session appropriated \$15,000 for completing the station and establishing a steam fog-signal. amount being deemed insufficient for the purpose, no work has been done under it. It is now necessary to erect the dwelling, as the shanties will not afford the necessary shelter during the rainy season. Plans for the structures have been made and the buildings will soon be com-In order that the fog-signal may be efficient, it will be necessary to blast off the highest point of Piedras Blancas rock, a rock that rises in the form of a seal, some distance from the main-land. But as the highest part of it is about 100 feet high, this will be attended with considerable expense. An appropriation of \$20,000 will be required for this purpose, and in the event of the appropriation not being made, it will be better to delay establishing the signal.

—. Point Sur, sea coast of California.—This dangerous point, on which the steamer Ventura was lost on April 20, 1875, has been surveyed during the present season. A steam fog-signal would be of as much value here as a light. The expense of establishing either will be heavy, owing to the difficulty of securing a proper site. Both a light and fog-signal will eventually be established at this point, but the

board does not ask an appropriation therefor this year.

439. Point Pinos, sea-coast of California.—Repairs and renovations have been made during the past year. Considerable repairs to the parapet-wall of the lantern are needed, and will be made during September.

443. Point Montara, sea-coast of California.—Having secured a good title to the land, the work of erecting a fog-signal structure and a keeper's dwelling was commenced in October last, and completed in February, 1875. The signal was put in operation on March 1, 1875. An abundant supply of water has been obtained from two sources—a creek running through the reservation, and from a spring near it southern border. Water from the creek is forced by a hydraulic ram to the

signal-house, where there is a reservoir holding 2,000 gallons. The sta-

tion is in good order.

444. Farallones Islands, off San Francisco, sea-coast of California.—
"The recommendations made in the last annual report are repeated. The dwelling at this station is very much out of repair, and is much too small for the wants of a first-order station. It was built in 1855, out of rock quarried on the island, and is very damp. A substantial wooden structure is needed, and an appropriation of \$15,000 is respectfully

asked for that purpose."

445. Point Bonita, sea coast of California.—From causes stated in the last annual report it became necessary to cut down the entire point on which the fog signal stood, about 25 feet. To do this the signal was stopped on October 1, 1874. The structures were torn down and the entire point graded off to a point 25 feet lower than the original founda-New structures were built and the signal resumed operation on January 1, 1875, the expense of the change being paid from the general appropriation for repairs and incidental expenses of fog-signals. signal is now upon a secure foundation. The light at Point Bonita is 306 feet above the sea. At this height the light is very frequently obscured by a light haze or fog, when at the steam fog signal there is no fog or haze. Pilots, steamship captains, and others frequently report passing Point Bonita without seeing the light, when the extremity of the point where the fog-signal is placed and the base of the bluff on which the light stands show plainly, the fog hanging above the water at a height of about 100 feet. A good light on this point is very necessary, it being at the entrance of San Francisco Bay and harbor, and an appropriation of \$25,000 is asked for moving the present Point Bonita light house to this point.

448. Yerba Buena Island, San Francisco Harbor, California.—The keeper's dwelling and tower have been completed, excepting the putting up of the lantern and illuminating apparatus. When the apparatus is received it will be immediately put in place on the tower. The lens formerly in use at Yaquina light-station, Oregon, will be used at this station, and the light can be exhibited on or about the 15th of September. Congress, at its last session, appropriated \$5,000 for establishing a steam fog signal at this station. The work was commenced in June, and is nearly completed. The signal will be put in Water is provided from a spring, near operation on the 1st of October. the buoy-depot, which has been cleaned out, enlarged, and curbed up. A double acting force pump is placed at this spring, and the water forced through iron pipes to a 10,000 gallon tank at the signal. This tank is made very strong and secure, and will last, under ordinary circumstances, at least twenty years. The supply of water at the spring is abundant.

449. East Brother Island, in the straits separating San Francisco and San Pablo Bays, California.—Extensive repairs are necessary to secure the wharf and tram-way, which were badly damaged by a violent gale and sea last spring. These repairs will be made during September.

450. Mare Island, Straits of Karquines, California.—Repairs have been made at this station, consisting of a strong stone sea-wall to protect the fog-bell tower. The foundation of this tower needs strengthening; this

work will be done as soon as practicable.

451. Point Reyes, sea coast of California.—Congress, at its last session, appropriated \$3,000 for enlarging and repairing the water shed at this station. This work has been done, and it is now thought that, with a rain-fall of eight inches a year, water enough for fog-signal purposes will be caught. The average rain-fall is three times that amount. Materials for

repairing and renovating the various structures at this station have

been purchased and sent there.

453. Cape Mendocino, sea-coast of California.—Funck lamps have been furnished to this station, and some general repairs have been made. The dwelling requires extensive repairs, which will cost about \$1,200. These repairs can be made to better advantage during September and October than at any other time. During the prevalence of the strong winds of summer it is almost impossible at times for any one to go from the dwelling to the tower, so great is the force of the wind.

454. Humboldt, sea coast of California.—Slight repairs have been made during the past year. Quite extensive repairs and renovations are necessary to the keeper's dwelling, and the wood shed is to be altered so

as to accommodate one assistant keeper and his family.

457. Crescent City, sea-coast of California.—This station is in a dilapidated condition, and should be rebuilt if the light is to be continued. The entire wood work of the keeper's stone dwelling must be removed. The ends of many of the lower floor timbers are entirely gone, and the floor is held up by shores. But the light itself is of little consequence. No vessel can enter Crescent City harbor at night, and no vessel bound up or down the coast can, with safety, run near enough to make the light. The rocks off Point St. George are one of the chief dangers to navigation on the coast. A first-order light should be placed there. When that is done the Crescent City station should be discontinued.

-. Point St. George, or vicinity, near Crescent City, sea-coast of California.—The recommendations in the last annual report are repeated: "This is one of the most important points for a sea-coast light on the The bluff point is about one hundred and thirty feet coast of California. high, with level land for some distance back of it. Off the point, extending some six or seven miles, is a very dangerous reef of rocks, quite a number of which show above water, and many are awash at low tide; others have from three to four fathoms of water on them. between the outlying rocks of this reef and Point St. George is quite wide, and is used by the coasting steamers and sailing-vessels. steamer Brother Jonathan was wrecked on this reef some years ago during a fog, and many lives were lost, among them General Wright and staff, with the families of himself and several of his staff. house and fog signal should be erected here. An appropriation of \$50,000 is asked to commence the work."

ROADWAYS TO LIGHT-STATIONS.

There are several light-stations on the Pacific coast which were established on reservations belonging to the Government, but which are surrounded by private property, through which the Light-House Board has no roadway. It is recommended that an appropriation of \$5,000 be made to enable the board to purchase land necessary for roadways at stations on the Pacific coast.

REPAIRS.

At each of the following-named light-stations repairs and renovations more or less extensive have been made during the year:

- 433. Point Loma.
- 436. Santa Barbara.
- 437. Point Conception.
- 439. Point Pinos.

- 440. Santa Cruz.
- 441. Año Nuevo.
- 442. Pigeon Point.
- 444. Farallones Island.
- 446. Fort Point.
- 447. Alcatraz Island.
- 450. Mare Island.
- 451. Point Reyes.
- 452. Point Arena. 453. Cape Mendocino.
- 454. Humboldt.
- 456. Trinidad Head.

LIGHT-SHIPS.

There are no light ships in this district.

FOG-SIGNALS OPERATED BY STEAM OR HOT AIR ENGINES.

Point Conception.—A 12-inch steam whistle. $A\tilde{n}o$ Nuevo Island.—A 12-inch steam-whistle. Pigeon Point.—A 12-inch steam whistle. Point Montara.—A 12-inch steam-whistle. Point Bonita.—A first-order steam-siren. East Brother Island.—A 12-inch steam-whistle. Point Reyes.—A 12-inch steam-whistle. Point Arena.—A 12-inch steam-whistle. Humboldt.—A 12-inch steam-whistle.

DAY OR UNLIGHTED BEACONS.

During the past year pile-beacous have been erected in this district at the following places:

To mark the channel in the bay of San Francisco, toward and entrance to Redwood Creek: Pile beacons, four in number.

To mark end of shoal north of Yerba Buena Island: Pile beacon,

To mark Berkley Rock, bay of San Francisco: Pile beacon, oue.

To mark Sonthampton shoal, bay of San Francisco: Pile beacons,

To mark the end of shoal between Straits of Karquines and Napa Creek: Pile beacon, one.

To mark Commission Rock off Mare Island, in Napa Creek, (since carried away:) Pile beacon, one.

To mark entrance to Petaluma Creek from San Pablo Bay: Pile beacons, four.

To mark channel toward Sacramento River through Suisun Bay: Pile beacous, three.

Anita Rock, Harbor of San Francisco, California.—This rock is a serious obstruction to navigation and should be marked by spindle. An appropriation of \$2,300 is asked for this purpose.

Commission Rock, Mare-Island Straits, California.—The day beacon to be erected on this rock will be commenced at once, and will probably be completed during the month of September 1875.

Fauntleroy Rock.—The spindle is now in place, and is much better valculated to withstand the storms than the previous one, being three feet higher and one inch thicker for six feet in length from the lower end.

To mark end of mud flat between mouths of Suisun Creek and Monteezuma Creek, Suisun Bay. Pile beacon, one.

BUOYS.

The buoyage of this district is good, except in San Diego Bay and at Humboldt Bar. The buoys in San Diego Bay are 3d class, and are too few in number. Several steamers have been ashore there, and masters are anxious that the buoys should be removed, and a proper number of pile beacons, similar to those in San Francisco Bay, be placed at such points as a careful examination of the bay shall show to be most desirable. This will be done at an early day. During the year there have been lost one 1st class buoy and three 3d class buoys, which with sinkers and chains lost, are estimated to have been worth \$3,800.

TENDER AND SUPPLY-VESSEL.

The Shubrick is the only light house vessel on the Pacific coast. The coast-line is nearly fitteen hundred miles in extent, and it is simply impossible for the Shubrick to do all the work required in both twelfth and thirteeuth districts.

There should be a tender for each district to enable the buoyage to be kept in good condition, and the work of the inspectors and engineers to be properly performed. An appropriation of \$100,000 for a steam-tender is asked.

DEPOTS.

There are two depots in this district, one at Yerba Buena Island, and the other at Fort Point. That at Yerba Buena is used as a buoy depot and for general supplies of light-houses. That at Fort Point has in it engineers' stores and lampists' tools.

THIRTEENTH DISTRICT.

This district embraces all aids to navigation on the Pacific coast of the United States north of the southern boundary of Oregon. It extends from the forty-first parallel of latitude to British Columbia, and includes the coasts of Oregon and of Washington Territory.

Inspector.—Commodore James H. Spotts, United States Navy, until December 26th, 1874. Lieutenant Commander Louis Kempff, United States Navy, present improtor.

States Navy, present inspector.

Engineer.—Major Nathaniel Michler, Corps of Engineers, brevet brigadier-general, United States Army.

There are in this district-

Light-houses	. 11
Day or unlighted beacons	
Light-ships	. 0
Fog-signals operated by steam or hot-air engines	. 3
Bnoys actually in position	
Spare buoys for relief, and to supply losses	
Tender, (steam.) Shubrick, used for inspection, supplies, and engineer's purposes	
common to twelfth and thirteenth districts	. 1

The following numbers, which precede the names of stations, correspond with those of the light house list of the Atlantic, Gulf, and Pacific coasts of the United States, issued January 1, 1875:

LIGHT-HOUSES.

459. Cape Arago, (Gregory,) sea coast of Oregon.—Some damage was done at this station by the gale of last November. This damage was repaired. Other repairs are needed, and will be attended to at an early day. The material for the same was landed at the locality on the last day of June; in consequence of severe storms it was not possible to do so previous to that date.

460. Cape Foulweather, (Yaquina Head,) sea-coast of Oregon.—At this station the two sides of the keeper's dwelling most exposed to severe rain and wind storms, and which leaked badly, have been covered with They will now be perfectly tight. The tower has been rustic siding. whitewashed, and the dwelling painted. Some work has been done by the keeper on the road between the station and Yaquina Bay. Many minor details have received attention. The entire station is now in excellent order.

-. Range-lights at Saint Helen's Bar, Columbia River, Oregon.—A set of range-lights for crossing Saint Helen's Bar are required. Their proper location is the same as those heretofore used during the operations of dredging under charge of the Engineer Department of the Army. The estimated cost is \$1,000, and an appropriation of that amount is asked

for this purpose.

461. Point Adams, south side of the entrance to the Columbia River, Oregon.—The light-house at this station has been completed. The structure is a low, square tower, rising from the keeper's dwelling, and is built of wood. The necessary building and the cistern for a 12-inch steam fog whistle have also been erected. The light was exhibited and the signal operated, both for the first time, on the night of the 15th of February. The grounds have been partially graded, cleared of heavy timber and brush, and a road constructed from the station to connect with one leading to the Government wharf at the military post at The only work still required is a cistern near the dwelling for the use of the keepers.

463. Shoalwater Bay, on Toke Point, entrance to Shoalwater Bay, Washington Territory.—The principal work at this station during the year was the construction of a fence around the dwelling for its protection against the drifting sand, and other arrangements for guarding

against the undermining of the building.

464. Cape Flattery, (Tatoosh Island,) entrance to Straits of Juan de Fuca, Washington Territory.—New buildings for the keepers have been

completed.

A new store house has been built, and a wooden tramway constructed from the fog-signal building, and store-house to the derrick by which material is raised from the landing on the beach to the top of the high rocky bluff. The old dwelling has been repaired and is now in good The new one is already occupied by the keepers, and is a convenient and substantial building. The steam fog-signal building has been widened 4 feet, and the roof changed by carrying the north hip 4 feet westwardly.

465. Ediz Hook, Straits of Juan de Fuca, Washington Territory.—The only work done at this locality consists in the erection of a substantial fence to inclose some few acres of ground for the benefit of the keepers, the repairing and relaying of the plank walk between the dwelling and

the boat house, and other slight repairs.

466. New Dungeness, Straits of Juan de Fuca, Washington Territory.— During the extremely cold weather in January the water in the pipes leading to the boiler of the fog-whistle was frozen and the pipes burst; the necessary repairs were made. The joints in the tower were repointed. A door was put in the upper part to prevent too great a draught of air in the lantern when that in the lantern-floor is opened. A wooden tramway was constructed, connecting the boat-house with the dwelling and fog-signal building, and a suitable hand-car provided.

467. Smith's or Blunt's Island, near the entrance to Puget Sound, Washington Territory.—A small brick eistern of the capacity of 5,000 gallons has been built. The old well has been cleaned out and lined with brick, a new platform having been placed over it. Pumps and pipes have been furnished for both eistern and well. The roof of the dwelling has been

painted

468. Admiralty Head, on Red Bluff, Whidby's Island, entrance to Puget Sound, Washington Territory.—At this station a hitherto unoccupied space in the attic of the dwelling has been inclosed and converted into a watch-room. The repairs made consist in covering with rustic siding the two sides of the building most affected by winter storms; and other slight matters needing attention.

—— Point no Point, Puget Sound, Washington Territory.—An appropriation of \$25,000 for building a light house at this point, or at such other point in Puget Sound as the Light-House Board may elect, was made by act approved March 3, 1873. No work has yet been done, as the

question of the proper site is still in abeyance.

REPAIRS.

Repairs more or less extensive have been made during the year at each of the following named stations:

458. Cape Blanco, Oregon.

459. Cape Arago, (Gregory,) Oregon.

460. Cape Foulweather, (Yaquina Head,) Oregon.

462. Cape Hancock, (Disappointment,) Washington Territory.

463. Toke Point, Washington Territory.

464. Cape Flattery, (Tatoosh Island,) Washington Territory.

465. Ediz Hook, Washington Territory. 466. New Dungeness, Washington Territory.

467. Smith's or Blunt's Island, Washington Territory.

468. Admiralty Head, Washington Territory.

LIGHT SHIPS.

There are no light ships in this district.

FOG SIGNALS OPERATED BY STEAM OR HOT-AIR ENGINES.

Cape Flattery.—A 12 inch whistle. New Dungeness.—A 12 inch whistle. Point Adams.—A 12 inch whistle. All in good condition.

DAY OR UNLIGHTED BEACONS.

The beacons of this district are 12 in number, located as follows, viz two on Sand Island, [range-beacons,] for service in entering and leaving the Columbia river. These beacons are structures of logs bolted together in the shape of a frustum of a pyramid.

Nine of the ten remaining beacons are simply single piles, driven to mark the channel of the Columbia River between Tongue Point and

Woody Island.

A beacon of the same kind is placed on Minor Island, in the Straits of Fuca.

These beacons have cross boards at the top, placed at right angles to each other.

BUOYS.

The general condition of the buoys and appurtenances in position in this district is good, and the buoys agree with the published list.

TENDERS.

The tender Shubrick is the only light-house vessel upon the entire Pacific coast. It is of the first importance that an additional light-house tender should be supplied as soon as possible.

The work required is constantly increasing, and under existing cir-

cumstances it is impossible to perform it properly.

DEPOT.

An appropriation of \$10,000, made by act approved March 3, 1875, for the establishment of a depot for buoys and supplies, is now available. The work will be taken in hand without unnecessary delay.

FOURTEENTH DISTRICT.

The fourteenth light-house district extends from Pittsburgh, Pa., to New Orleans, La., and embraces all the aids to navigation on the Ohio River and that part of the Mississippi River between the mouth of the Ohio and New Orleans.

Inspector.—Commander Joseph Fyffe, United States Navy, until June

1, 1875.

Lieut. Chas. H. Rockwell, United States Navy, present inspector. Engineer.—Maj. W. E. Merrill, Corps of Engineers, United States

In this district there are-

FIFTEENTH DISTRICT.

The fifteenth light-house district extends on the Mississippi from the head of navigation to Cairo, and on the Missouri from the head of navigation to its mouth, and embraces all the aids to navigation within these limits.

Inspector.—Commander R. R. Wallace, United States Navy.

Engineer.—Maj. Charles R. Suter, Corps of Engineers, United States Army.

In this district there are:

Lights	100
Buovs actually in position	12
Tender (steam) Alice	1

The following is a list of the lights in this district with their positions:

List of lights established in the fifteenth light-house district from date of organization, and in operation at the close of the year ending September 30, 1875.

In submitting this report it gives the board pleasure to state that every district of the extended coast of the United States is in good working condition, and has been constantly improved during the past year, and that no effort has been omitted to bring the light-house system of this country into as perfect a state as the circumstances will admit.

Respectfully submitted.

JOSEPH HENRY, Chairman.

J. G. WALKER,

Commander U. S. N., Naval Secretary.

PETER C. HAINS,

Major of Engineers, U. S. A., Engineer Secretary.

APPENDIX.

AN ACCOUNT OF THE INVESTIGATIONS OF THE LIGHT-HOUSE BOARD RELATIVE TO ILLUMINATING MATERIALS; BY THE CHAIRMAN OF THE COMMITTEE ON EXPERIMENTS.

It has been the policy of the Light-House Board since its first establishment not only to adopt the latest improvements which have been made in other countries, but also to add by original investigations to the sum of knowledge on aids to navigation. In accordance with this policy, the Board has endeavored to keep itself informed as to the progress of the light-house systems of other countries, and in the erection of new towers and the supply of new apparatus to adopt those improvements which have from actual experience been preferred; and, furthermore, the committee on experiments have devoted a portion of every year to investigations which might develop new facts tending to greater economy or efficiency in the various appliances by which the dangers of navigation are diminished.

At the commencement of the operations of the Light-House Board, in 1852, sperm-oil was generally employed; this was an excellent illuminant, but as its price continued to advance from year to year, it was thought proper to attempt the introduction of some other material. The first attempt of this kind was that of the introduction of colza-oil, which was generally used in the light-houses of Europe, and is extracted from the seed of a species of wild cabbage, known in this country as rape, and in France as colza. For this purpose a quantity of rape-seed was imported from France and distributed through the agricultural department of the Patent-Office to different parts of the country, with the hope that our farmers would be induced to attempt its cultivation.

Although the climate of the country appeared favorable to its growth, and special instructions were prepared and distributed by the Light-House Board for its culture, and the means of producing oil from it, yet the enterprise was not undertaken with any approximation to success, except in Wisconsin, where a manufactory of rape-seed oil was established by Col. C. S. Hamilton, formerly of the United States Army.

To this manufactory the Light-House Board gave special encouragement, and purchased at a liberal price all the oil that could be supplied; the quantity, however, which could be procured was but a small part of the illuminating material required for the annual consumption of the Light-House Establishment.

The price of the sperm still continuing to increase, the board employed Prof. J. H. Alexander, a chemist of Baltimore, to make a series of investigations on different oils, to ascertain a method of detecting adulterations in them. and to determine the relative economical value of different kinds of oil which might serve for use in light-houses.

In his report Mr. Alexander recommended, as a means of detecting adulterations in oil, a thermal test, which was based upon the amount of heat evolved by mixing a given quantity of the oil with sulphuric acid of a given specific gravity, and noting the rise of temperature as indicated by a standard thermometer in a unit of time. For using this method, it was proposed to ascertain by actual experiment the heat evolved by mixing pure oils with a given quantity of acid, and afterward oils adulterated with given quantities of lard or inferior oils. This ingenious suggestion was, however, never reduced to practice. The method was too refined; the difference of heat evolved was scarcely sufficient to be noted unless great precautions were taken to prevent loss by radiation and conduction, and consequently it could not be employed by ordinary inspectors. In regard to lard-oil, Mr. Alexander failed to employ the proper method of burning it, and consequently rated it very low on the scale of the economical value of light-house illuminants.

In this stage of the history of the subject we are presenting, the chairman of the committee on experiments commenced himself to investigate the qualities of different kinds of oil, and was soon led to direct his attention to the comparative value of sperm and lard oils. The experiments made by Mr. Alexander were with small lamps, and the comparison in this case, as will be shown, was much against the lard-oil.

The first experiment of the new series consisted in charging two small conical lamps of the capacity of about a half-pint, one with pure sperm and the other with lard-oil. These lamps were of single-rope wicks, each containing the same number of strands; they were lighted at the same time, and the photometrical power ascertained by the method of shadows. At first the two were nearly equal in brilliancy, but after burning about three hours the flame of the lard had declined in photometric power to about one-fifth of that of the flame of the sperm. The question then occurred as to the cause of this decline, and it was suggested that it might be due—first, to a greater specific gravity in the lard-oil, which would retard the ascent of it in the wick, after the level of the oil had been reduced by burning in the lamp; or, second, to a want of a sufficient attraction between the oil and the wick to furnish the requisite supply as the oil descended in the lamp; or, third, it might be due in part to the imperfect liquidity of the oil, which would also militate against its use in mechanical lamps.

The lard-oil was subjected to experiments in regard to each of these points

It was found, by the usual method of weighing equal quantities of the two fluids, that the specific gravity of the lard was greater than that of the sperm; and also by dipping two portions of the same wick into the two liquids, and noting the height to which each ascended in a given time, that the surface attraction of the sperm was greater than that of the lard, or, in other words, the ascensional power of sperm was much greater than that of lard at ordinary temperatures.

This method was also employed in obtaining the relative surface attraction of various other liquids; we say surface attraction instead of capillarity, because it was found in the course of these investigations that substances which had less capillarity—that is, less elevating power in a fine tube—had greater power in ascending in the meshes of a wick.

The relative fluidity of the different oils was obtained by filling in succession a pear-shaped vessel, with a narrow neck, of about the capacity of a piut, having a hole in the lowest part of the bottom of about a tenth of an inch in diameter. Such a vessel filled with any number of perfect liquids would be emptied in the same time, whatever their specific gravity.

The heavier the liquid the greater would be the power required to move it, but the motive power would be in proportion to the pressure, or, in other words, to the weight, and therefore all perfect liquids should issue from the same orifice with the same velocity. To test this proposition, eight fluid ounces of clean mercury and the same bulk of distilled water were allowed to run out of the vessel above mentioned; the time observed was the same within the nearest second. It was found, in repeating this experiment with sperm and lard, that the rapidity of the flow of the former exceeded considerably that of the latter; the ratio of time being 100 to 167.

The results thus far in these investigations were apparently against the use of lardoil; it was observed, however, that in the experiments on the flow of the two oils, a variation in the time occurred which could be only attributed to a variation in the temperature at which the experiments were made. In relation to this point the effect of an increase of the temperature above that of the atmosphere on the flowing of the two oils was observed. By this means the important fact was elicited that as the emperature was increased, the liquidity of the lard increased in a more rapid degree than that of the sperm, and that, at the temperature of about 250°, the liquidity of the former exceeded that of the latter.

A similar series of experiments was made in regard to the rapidity of ascent of the oil in the wick, and with a similar result. At about the temperature of that before mentioned, the ascensional power of the lard was greater than that of the sperm. These results were recognized as having an important bearing on the question of the

application of lard-oil as a light-house illuminant. It only required to be burned at a high temperature, and as this could be readily obtained in the case of larger lamps, there appeared to be no difficulty in its application.

The previous trials had been with small lamps, with single solid wicks, instead of the Fresnel lamp, with hollow burners. After these preliminary experiments, two lighthouses of the first order, separated only by a distance of 900 feet, at Cape Ann, Massachusetts, were selected as affording excellent facilities for trying, in actual burning, the correctness of the conclusions which had previously been arrived at. One of these light-houses was supplied with sperm and the other with lard oil, each lamp being so trimmed as to exhibit its greatest capacity. It was found by photometrical trial that the lamp supplied with lard exceeded in intensity that of the one furnished with sperm. The experiment was continued for several months, and the relative volume of the two materials carefully observed. The quantity of sperm burned during the continuance of the experiment was to that of lard as 100 is to 104.

The freezing temperature of lard-oil depends upon the temperature at which it was expelled by pressure from the animal tissues in which it was contained. It is higher, however, than the freezing temperature of sperm, on an average of from 3° to 4°, but this is a matter of no practical objection to the substitution of lard for sperm, since the heat evolved from an Argand lamp is, in cases where the draught passes through the reservoir, sufficient to keep the lard liquid even during the lowest external temperature. Indeed, the small difference in temperature in freezing of the two oils is a matter of little moment, in cases which frequently happen when the temperature of the atmosphere is below zero on the Fahrenheit scale. At such a temperature, both oils would become alike solid, unless some means were afforded for preventing the freezing.

The next step toward the introduction of lard-oil was the devising of a system by which it could be inspected, and the Board assured, before it was too late to remedy the evil, that the lard purchased was of a good quality. This was a matter of great importance, and involved no small degree of responsibility, since the contractor was entitled to his pay immediately after the acceptance of the oil, and while the quantity purchased amounted annually to nearly 100,000 gallons.

The conclusion was arrived at that it was impossible, from any single test that could be applied to small samples, to determine the quality of the oil as applicable to lighthouse purposes; and that in the present state of our knowledge as to its character the following tests are required to fully insure in all cases the required quality of the article:

- 1. Specific gravity at 60° F.
 - 2. Liquidity at different temperatures.
 - 3. Freedom from acids or alkalies.
 - 4. Resistance to freezing.
 - 5. Actual burning in fifth-order lamps for at least ten hours.
 - 6. Photometric power after burning one hour, and again after burning ten hours.
 - 7. The condition of the wick at the end of the burning.

These tests are of very nnequal value, and several of them might be dispensed with were others reduced to an absolute standard determined by the actual experience of burning in the light-houses.

The specific gravity of impure lard and of that which has been carefully refined differ but little, and hence, unless the experiment be made by means of a delicate balance, the indications will be of comparatively little value. Still, as a given sample might contain some foreign substance which is not usually mixed with this oil, the test with the hydrometer should not be omitted.

In making this test, a cylindrical vessel containing the oil, of sufficient diameter to permit the hydrometer to float freely without hinderance from the sides, should be immersed in a vessel containing several gallons of water, which, when once reduced to 60° by the addition of ice-cold water, can, on account of the great specific heat of

water, be readily kept at that temperature by a slight addition of cold water from time to time, the whole being continually stirred. It is scarcely necessary to state that the vessel containing the oil must be so weighted at the bottom that it will stand erect in the cold bath in which the experiment is made.

Liquidity at different temperatures is a test of the same character as that of specific gravity; although the difference in degree of liquidity of different kinds of oil, such as sperm, whale, and lard, is very considerable, the difference between different samples of lard-oil is small. Still, this test, for a similar reason to that given for the specific gravity, should be applied.

The test for free acids and alkalies is easily made, and should in no case be omitted. A portion is put into beaker-glasses, with a slip of litmus-paper in one and a slip of tumeric-paper in the other, and suffered to remain immersed perhaps twenty-four hours; and at the end of that time, if one of these papers exhibits no redness and the other no brownness, the oil may be considered void of free acid and of alkali, both of which would lessen its value, the former tending to corrode the lamp and the latter interfering with its burning quality.

Resistance to freezing is an important test, but not as easily applied in the case of lard-oil as might at first be imagined. Lard-oil possesses the remarkable property of resisting the influence of a low temperature if suddenly applied, while it will freeze at a much higher temperature if the cold be continued for several hours.

For example, if a small portion of lard-oil be placed in a test-tube and submitted to a rapid diminution of temperature by being plunged in a freezing-mixture, it will remain liquid at a temperature or 19° or 20°, whereas it will congeal at a temperature of 40° if suffered to remain at that temperature for several hours.

The plan adopted for determining the freezing-point of different samples of oil at one operation consisted in making a series of small openings, or windows, closed with glass, in the side of a cylindrical wooden tub about $2\frac{1}{2}$ feet in diameter. Concentric within this tub was placed another cylindrical vessel, of smaller diameter, of zinc, filled with a freezing-mixture of salt and pounded ice. A series of small beaker-glasses, filled with the several samples of oil, were placed opposite the windows in the space between the two cylinders, each containing a thermometer which could be read through the window. The whole was then inclosed by a tightly-fitting cover, through which projected the handle of a crank by which the freezing-mixture could be stirred. The samples of the oil subjected to this cold-air bath gradually pass through the several stages of a diminution in limpidity and clearness to opacity and solidity, the time of each being noted.

The most reliable test is that of actual burning in a lamp of the fifth order, and the measurement of the photometrical power. The objection to the application of this test to the oil of every barrel is the large quantity of oil required and the amount of labor involved in the proper execution of the process. Thus, in testing 60,000 gallons contained in casks of forty gallous each, at least 500 gallons would be required. It is, therefore, evident that this test can only be applied to samples selected from a given lot, while the single barrels are proved to be of a similar character by the more simple tests.

Another method of insuring that all the casks of a given lot contain oil of the same quality, consists in taking a small equal portion from each of several casks and mingling them together; the quality of the compound being ascertained by the application of burning or the other tests.

The determination of the photometrical power is, in the present state of science, unless precaution is observed, a problem of some uncertainty. The difficulty is of two kinds, the first to find a photometer which shall give the ratio of the two lights, and, second, to find an invariable standard to which oil of the proper quality may always be referred. These difficulties, I think, can be sufficiently overcome for the practical purposes of the Light-House Board. The greater difficulty is that of obtaining a standard of reference. For this a sample of lard-oil manufactured by Mr.Alden,

of Boston, was at first employed, but this, itself, was found to be variable, and hence we were obliged to adopt some other standard. The one which has been finally adopted is English sperm candles, which burn with considerable uniformity at the rate of 120 grains per hour, or two grains per minute.

In regard to the investigation, the experiments were carried on under many difficulties. They were made at first in the engineer's office of the second light-house district in Boston, with such appliances as could be procured at the moment, with the assistance of Mr. William Goodwin, the acting light-house engineer, who took much interest in the subject and rendered efficient service.

In the erection of a new lamp-shop at the Staten Island depot, care was taken to make provision for a dark room in which the photometrical examinations could be made with more precision than had been obtained in the temporary apartments previously used. This room extends the whole length of the building, is about 80 feet long by 12 feet wide; the windows are closed by iron shutters to exclude the light; and the floor and all other parts are painted black, after being sauded to remove any glare which might exist.

In the first experiments on lard-oil the photometrical process employed was that of Rumford, which consists in ascertaining the relative intensity of two lights from their distances from a screen on which shadows of equal darkness are thrown by an intermediate body. In this case the relative intensities sought are indicated by the square of the distances in inches and parts of inches of each light from the screen on which the shadows are cast. But this method, which is used by the French manufacturers of apparatus, and is very simple in theory, does not admit of much accuracy.

The arrangement, therefore, known as Buusen's photometer, was introduced in its stead, and this, with some peculiar modifications, leaves nothing to be desired. This arrangement consists in placing two lights at the extremity of a scale so divided into distances that the relative intensity of the two flames may be immediately read off in terms of candle-power when a small intermediate movable screen is equally illuminated on both sides. This screen is usually formed of a piece of white pasteboard of about four inches square, fixed perpendicularly at right angles to the length of the scale, in a sliding frame, by which it can be brought nearer to or farther from one of the lights. In the center of this square is a circular hole of about half an inch in diameter, which is closed by a piece of thin paper, rendered translucent by a solution of spermaceti in oil of turpentine. This forms a spot which is darker than the other parts of the white screen, and is equally dark on both surfaces when the screen is receiving an equal quantity of light from each flame; the screen is moved backward and forward until this effect is produced, and the index will then point on the graduated scale to the number of the relative power of one of the lights in terms of the other.

The screen may also be made of thin paper, the whole of which is rendered translucent except a round spot in the center, of half an inch in diameter. If a light is placed before the screen on one side, the whole of the greased part will appear dark, on account of part of the light going through the translucent portion. If, now, another light be placed on the opposite side, an equal portion will be transmitted through the pellucid part, and the two surfaces will appear of like intensity when the two lights are equal, or when from their respective distances they throw equal amounts of light on the two faces of the screen.

In order that both sides may be seen at the same moment without moving the head, on one edge of the screen two mirrors, making with each other an angle of 90°, are placed so that the screen itself will bisect the angle.

For dividing the scale into parts related to each other as the square of their distances from a center, the following formula and table will furnish the means.

Let a be the length of the scale, and x the distance from the candle end to the movable screen; then a-x is the distance between the lamp end and the screen. Denote the degree of illumination on the candle and lamp sides of the screen by L and L' respectively. Let the intensity of the candle end equal one candle, while that of the

lamp is n candles. Then, since the illumination of the screen varies directly as the intensity and inversely as the square of the distance, we have the following proportion:

$$\mathbf{L}:\mathbf{L}'::rac{1}{x^2}:rac{n}{(a-x)^2},$$
 and when $\mathbf{L}=\mathbf{L}'$ we have $(a-x)^2=nx^2$ whence $x=rac{a}{1+\sqrt{n}}$

For convenience of using this formula it is best to change its form into x=a $\frac{\sqrt[n]{n}-1}{n-1}$

The following table has been computed by calling the length of the scale 100 and assigning successive integral values to n, from 1 to 100. The column A shows the value of x for each assumed value of n:

	I	dles.	A	of can- dles.	A	Number of can- dles.	Δ	Number of can- dles.	A

The standard adopted with which to compare all other lights is, as we have said, that of the London sperm candle, which, under ordinary conditious, burns 120 grains of sperm per hour.

If it burns more or less than this amount during the trial, a correction of a proportional amount is made in the results.

This standard, however, is too small for determining the power of large lamps, and for this purpose an intermediate standard is provisionally adopted. For example, in determining the power of a lamp of the first order, the power of a lamp of the fourth order is first obtained, and this is used as a comparison with the larger lamp.

In the case of the arrangement at the Staten Island depot, for photometrical measurements, three scales are employed, diverging from a center at which the lamp to be measured is temporarily placed; at the farther end of each scale is placed a sperm candle, to serve as the standard of comparison.

These scales are of different lengths, one being 100 inches in length, another 150 inches, and the third 200 inches; besides these, one of the scales is occasionally replaced by one of 700 inches in length, which is put up in sections.

As the semi-diameter of the burner of the lamp and that of the candle must be included in the length of the scale, a portion of the latter at each end is cut off. In adjusting the scales, therefore, to their places, the measurement must be taken from the middle of each scale; thus in the case of the one of 200 inches in length, the middle of it must be just 100 inches from the center of the lamp on one side, and 100 inches from the center of the candle on the other.

In making the examination, three observers simultaneously, one at each scale, take the photometric readings, and the mean of the three results is adopted as the candlepower of the light under examination.

In the examination of oil previous to purchase, as we have said before, a lamp of the fifth order is charged with the oil in question, and when in a state of equilibrium

of combustion it is subjected to the trial. For greater precision ten readings are taken on one side of the scale, and then the photometer is reversed and as many taken from the opposite side. In this way the mean of sixty readings, twenty on each scale, firmishes the data on which the character of the oil principally rests. As a means of simultaneously weighing the candles for checking the effects of their irregular burning, three balances are provided, each of which bears one of the candles in a socket supported by a metallic link, through which the scale-beam passes and is attached to the hook of the scale-pan below.

On the opposite scale-pan a series of grain weights are placed, which can be taken off without disturbing the equilibrium of the scale, by a pair of pincers; the interval of time during which a given grain weight is burned is marked by a watch. If the interval is equal to two grains for each minute, the candle is burning at its normal rate; if not, a correction is made by simple proportion, which is applied to the measurement previously obtained.

The lamps containing the oil for trial are lighted and triumed in an adjoining apartment. They are introduced into the dark room through a window closed with a sliding shutter. In order to prevent an overflow of oil at the burner by the oscillation of the liquid in the reservoir by the agitation of transfer, each lamp is placed on a small carriage moving on a railway, which, passing through the window, enables the lamp to be placed in its position with rapidity, and without the slightest disturbance of the equilibrium of the oil.

The temperature of the room is also noted, and, as far as possible, it is kept at a heat of not far from 70°. For this purpose, during warm weather the inspection may be made at night.

For reading the divisions on the scales in the dark room, a mirror is employed to throw the light of the lamp under inspection on the graduation.

To exclude all extraneous light, the three candles and the lamp to be tested are each surrounded by a cylindrical sheet-iron screen, painted black, through which a hole a little larger than the flame allows the light to pass along the scale to the photometer. The trial-lamps are those of the fifth order. Each is allowed to burn, after it has been lighted, an hour before being submitted to the photometrical measurement. If it gives a power less than 8 candles, the oil is rejected. If it passes that test, it is then allowed to burn undisturbed without being trimmed for 8 or 9 hours longer, and if it is found at the end of that time to exhibit no diminution in the brilliancy of the light it is considered worthy of adoption, especially if after this it continues to burn 4 or 5 hours with no perceptible diminution which can be detected with the naked eye. The best lard-oil will burn sixteen hours without trimming.

Each candle before the measurement commences is suffered to burn until it has assumed a perfect and uniform rate of consumption; it should be prevented from guttering by removing a portion of the melted spermaceti which may accumulate in the cup at the top of the candle beyond the power of the feeble incipient flame to consume, by absorbing it by one end of a strand of candle-wick cautiously introduced. If any portion of the spermaceti is suffered to run down the side of the candle and drop off below, the correction for variation in burning will be worthless.

All materials for the use of the Light-house establishment are purchased by contract in accordance with published specifications as regards quality and certain conditions. The award is given to the lowest bidder, provided he can offer trustworthy surety as to his ability to fulfill the contract. Preference is, however, given when bids are equal, or nearly so, to the bidder who is a manufacturer of the oil and not a mere vendor of the article. During the inspection permission is granted to the contractor to be present at the operation, in order that he may be assured that full justice is done him in the examination. After seeing the precision with which the photometric and other processes are conducted, he is generally fully satisfied as to the results obtained, even though his oil may have been rejected.

The oil is delivered in iron-bound casks, varying from 38 to 50 gallons. These are placed, previous to inspection, under a shed and arranged in different lots, each containing oil of the same quality. From different casks samples are taken in tin cauisters of a capacity of about half a gallon; each canister being marked with the number of the lot and the cask from which the oil was taken. Before the sample is drawn from the cask the oil within is thoroughly mixed by rolling the cask, or by stirring. The object of this is to obtain in the sample an average amount of solid matter which may be contained in the oil.

The purest lard-oil is that which is manufactured by submitting the solid leaf-lard to great pressure during the coldest period of winter. Oil of this quality is used for burning in small mechanical lamps; it gives a bright flame and does not incrust the wick. The Light-house lamps, however, being of a much larger size, and evolving a much greater amount of heat, can consume oil of a coarser character; and indeed, it has been found that oil containing a certain amount of solid matter, provided the latter is not too much in quantity to be consumed by the lamp, gives a higher illuminating power. On this account, before this fact was generally known in the trade, complaints were made of the Light-House Board giving the preference to oil which, in the market, would not be considered of the first quality.

The quantity of oil is estimated by weight, allowing 7.6 pounds per gallon. It is weighed in gross and afterward emptied into large tauks in an underground vault. The empty barrels are next weighed; the weight of these deducted gives the net weight of the oil.

Previous to the establishment of the general light house depot at Staten Island, from which all the supplies are now distributed, and the lamps and other light-house appliances are prepared for immediate use, the oil was received at various ports along the coast, in accordance with terms of the contract, and was stored until wanted for use in cellars hired for the purpose.

The Board, however, after the introduction of lard-oil, constructed a spacious underground receptacle capable of containing 50,000 gallons of oil, and retaining it during the whole year at a temperature not to exceed 65° Fahrenheit.

The underground vault contains 5 tanks, each of the capacity of ten thousand gallons. On each tank is a register, consisting of a glass tube so divided as to give the contents in hundreds of gallons. The oil is delivered in three installments: The first on the 1st of May, the second on the 10th of June, and the third on the 22d of July. The vault and tanks were constructed under the direction of General Poe while engineer secretary of the Board, who also took a lively interest in the introduction of lard-oil and in the preliminary experiments for determining its quality.

A photometer room was afterward fitted up in the Smithsonian Institution, in which a series of investigations were made in regard to the illuminating power of different oils, and in the same investigations established a series of experiments relative to their chemical employments. In these the chairman was assisted by Professor C. M. Wetherill, whose untimely loss the science of this country has been called to mourn. Among the investigations in the laboratory are the following relative to the expansions of different oils, intended to facilitate the purchase, the measurements being made at different temperatures. To obviate the necessity of the correction for temperature the oil is now purchased by weight. The following results may, however, be of value in the application of different oil to light-house purposes:

Temperature before mixing	66° 164°	-
Difference	980	
Refrigeration of the oils	9	

Refrigeration of the oils.

Those experimented upon were whale, sperm, refined lard, and crude lard.

FIRST EXPERIMENT.

At 30°.2 F., they were all sirupy; in the crude lard-oil, a yellowish solid began to separate.

At 26°.6 the sperm-oil began to solidify.

At 24°.8 the refined lard began to yield a white precipitate.

At 17°.6 the whale-oil was a thick sirup, without deposit. The crude lard-oil was quite hard. The pure lard-oil was not as hard as the crude lard-oil. The sperm-oil was not as hard as the pure lard-oil. These experiments performed in test-tubes.

SECOND EXPERIMENT.

Upon pure winter-pressed lard-oil, in a test-tube.

At 170.6 F., begins to deposit flakes of solid matter.

At 14.0 is quite thick.

At 10°.4 it is perfectly solid.

If, now, the temperature rises, a small portion of the oil remains solid until the temperature reaches 44°.6.

THIRD EXPERIMENT.

The oils were placed in large cylinders and exposed to a temperature of 24°.8 F., with the following results:

- 1. Crude lard-oil, much sediment.
- 2. Sperm-oil, ditto.
- 3. Pure refined lard-oil, a little sediment.
- 4. Winter-strained lard-oil, very little sediment.
- 5. Whale-oil, no sediment.

In the use of sperm-oil, it was found that the purer it could be obtained the better, and hence it was the custom to strain the oil through clean white saud previous to using it, and also the drippings. In the case of lard, however, it was found that removing all the solid matter diminished its photometric power.

All fatty oils absorb oxygen, which unites with them to form oxides of their combustible ingredients; oil, therefore, freely exposed to the air, must in time gradually diminish in its power of combustion. It should not, therefore, be open to the atmosphere when the oil is to be stored, but covered with a thin wooden plane, which floats upon the surface of the oil, and thus in a great measure excludes the air. The freezing of lard-oil does not appear to affect its quality.

Considerable difficulty was experienced in the introduction of lard-oil, on account of the objection to it on the part of the keepers; in some cases from the want of experience in using it, and in others from the interference of vendors of sperm oil. This difficulty, however, was obviated by a resolution of the board, by which any keeper that declared his inability to burn lard-oil should be requested to resign, since it had been abundantly proved that this oil, with proper management, could be made favorably to compete with sperm. Its introduction was a matter of great importance in an economical point of view; it saved the Government \$100,000 annually for several years.

Another important step in the introduction of lard-oil was that of furnishing a lamp which would burn it with the greatest perfection. This was due to the invention of Mr. Joseph Funck, foreman of the lamp-shop. As we have said, in order to burn lard-oil it is necessary it should be kept at a high temperature, and for this purpose the heat of the draught of the lamp was passed through the center of the reservoir.

Previous to the change in the illuminating material there had been used in the Light-House Establishment three classes of lamps, viz, the mechanical lamp for the first, second, and third orders, and the moderator and fountain lamps for the fourth, fifth, and sixth orders.

In the mechanical lamp the oil was placed in a reservoir below the burner, and pumped up by means of clock-work.

This apparatus is of a complicated character, and is subject to derangement. The valves must be renewed from time to time, and the clock-work cleaned. The proper performance of these operations is beyond the skill of an ordinary keeper, and requires the frequent aid of a trained lampist.

The moderator lamp is less complicated, and was invented to obviate the difficulties just mentioned. In this the oil is elevated by the descent of a heavy piston, and forced up through a small conical hole, the flow being regulated by the conical end of a wire, which is gradually withdrawn as the weight descends, so as to give a less-obstructed flow as the hydrostatic pressure of the oil increases. From this arrangement it takes its name of moderator lamp.

This apparatus, however, is liable to irregularity on account of derangement of the supplying-apparatus, the varying friction of the packing of the piston, as well as the change in the flow of the quantity of oil, owing to its less liquidity due to a diminution in temperature.

The reservoir of the fountain-lamp consists in an air-tight vessel, usually cylindrical, from the bottom of which descends a tube, terminating at the open end in a small cup, from which the burner is directly supplied with oil on the well-known principle of the bird fountain, this vessel being filled with oil by inverting it and pouring in the liquid through the open end of the tube. It is then re-inverted and the end of the tube inserted in the small cup below the level of the oil which it contains. The oil in the reservoir in this condition is supported by the pressure of the atmosphere on the surface of the oil in the cup. When this surface is lowered by burning, the end of the tube is opened, and a bubble of air passes up and an equal bulk of oil descends, and in this way a nearly constant level of oil is maintained. I say nearly constant because

the air which goes up is of some volume and in the act of passing up produces an oscillation which, in some degree, affects the steadiness of the burning of the flame.

There is, however, a greater defect in this lamp from the oscillations in the level when the reservoir has been exhausted of a considerable portion of its charge of oil. In this case the arrangement is one similar to an air thermometer with a large bulb, and is affected by a sudden draught produced by the opening and shutting of a door or the ordinary ventilation of the lantern. This was partly remedied by bending the tube, and thereby increasing the resistance to a sudden change in the level of the oil.

The improvement of Mr. Funck consisted in substituting for these lamps one of constant level, in which the oil is placed above the burner, and the flow of oil necessary for perfect combustion is regulated by a small floating piston, placed in an enlarged portion of the supply-tube, and carrying on its upper surface a conical projection which increases or diminishes the size of the supplying orifice in accordance with the rapidity of combustion. This lamp is not only free from the objections pertaining to the other lamps, but is less expensive and better adapted to the burning of lard-oil. It affords a freer combustion, and consequently a more intense light, though at the cost of a larger amount of the burning material.

In this lamp the heated air and products of combustion pass through a cylindrical opening in the reservoir, which is placed directly above the lamp, the opening in it forming as it were a prolongation of the chimney, thus not only preventing the oil from freezing in the coldest weather, but supplying it to the burner at the temperature best adapted for perfect combustion.

In regard to the comparative character of lard and colza oil, we may be allowed to print the following letter from Colonel Hamilton, the manufacturer of the latter oil, who was present at the trial to which he alludes:

"FOND DU LAC, May 16, 1868.

"Dear Commodore: I must confess my great disappointment at the result of the experiments at Staten Island. It is not really so much the failure of rape-seed oil, as the undeniable excellence of lard-oil as a burner. I fully believe that our rape-seed oil of this year is as good as any that was ever made in Europe, and I know it is far better than any we have ever before made.

"I am satisfied now, that for self-heating lamps, there is no oil that will bear comparison with lard, but I am equally satisfied that no colza oil will yield a better result than ours, under exactly the same tests. We have but one more experiment to make with colza; it is its extraction by chemical displacement. If this fails, we shall abandon the whole business. If all things are put together, I think the following statement will be allowed, to wit: Our colza oil is equal to any foreign colza. It is better than any we have heretofore made. It is better than sperm or any other burner, excepting only lard-oil.

"Our failure, then, is owing to the superior excellence of lard-oil, which, under the persistent investigation of the board, has been shown to be the best and cheapest safe illuminator available.

"The Board are entitled to great credit in producing this result. It will be remembered that but a few years since lard-oil was pronounced unsuitable for light-house purposes, but the perseverance of the Board has brought out the fact that it is much the best and cheapest oil, and that the expenses of lighting the coasts and harbors has been thereby greatly reduced. Surely the country at large should acknowledged this, and give due credit to the Board. We have endeavored to do with colza what the Board have effected with lard-oil, and we have been unsuccessful both for ourselves and the light-house interest. The undertaking has been no source of profit to us, and had the capital and time that have been devoted to colza been used in our other branch of manufacture, (linseed oil,) it would at least have re-imbursed us with a fair remunerative return. As regards the oil we have offered, we have hoped the Board would take it. I do not think we can improve upon the quality, and it is the last we shall venture

to offer to the acceptance of the board, for we shall henceforth abandon the manufacture, except for local wants.

"We are grateful to each member of the board for the interest they have always shown in our undertaking, and for their uniform kindness and courtesy. Accept, my dear Commodore, for yourself and your associates in the board, my warmest thanks for your many kind expressions of interest, and believe me, truly and gratefully, yours,

"C. S. HAMILTON.

"Com. A. A. HARWOOD,

"United States Navy, Secretary Light-House Board, Washington, D. C."

From the date of the introduction of lard-oil in 1865-'66, and '67, until the end of 1873, when the attention of the board was again directed to the study of mineral oil, continual improvements were made in the processes of the preservation and inspection, and also in the lamps and other appliances for its application, and nothing further as a light-house illuminant was required. It is therefore with regret on account of the increased price of the article, due in some degree to the reputation as a burning material given it by the board itself, that we are urged to substitute for it a less reliable but a much more economical material.

At the time lard-oil was introduced a series of experiments was made on the comparative value of the different petroleum oils used in this country. They were, however, all considered too dangerous to be intrusted to the ordinary keepers of the light-stations of our coast. Since the date, however, of these investigations improvements have been made in the manufacture of these oils, by which a much greater range has been obtained in the temperature at which they give off an explosive vapor. During the last two years, therefore, a new series of investigations has been made relative to these illuminating agents, of which we propose in the succeeding pages to give a brief account.

The crude petroleums of the Pennsylvania oil region are of a greenish or yellowish appearance, and have a specific gravity of 45° to 49° Beaumé, at a temperature of 60° Fahrenheit. Some are so volatile as to evaporate rapidly at the ordinary temperature of the air, rendering it daugerous to approach an open cask of crude petroleum with a flame; others are much less volatile, requiring a temperature of from 200° to 300° Fahrenheit te evaporize them. The volatility of the hydro-carbons is intimately connected with their specific gravity. They become heavier as the volatile ingredients are driven off by heat. The inflammability of the oils is also connected with their volatility and the specific gravity. The light volatile oils ignite, as we have said, on the approach of a burning match at ordinary temperatures, while the heavier require a higher temperature for ignition. The process of manufacturing these oils consists in separating them from each other as they occur in the crude oil of the springs by what is called fractional distillation; for this purpose the crude oil is placed in an iron still provided with a worm of the same metal submerged in a tank of water for cooling it; the still is then gradually heated; the first product that passes over is gaseous at ordinary temperatures, and can only be condensed into a liquid form by cooling the worm with ice, or by compressing the gas with an air-pump into a strong receiver. After all the vapor is given off at the temperature, say at 90°, the temperature of the liquid in the still is raised, a liquid is produced which exhales in vapor at a higher temperature and is of greater density-and so on a series of liquids are produced, each of which requires to be heated to a higher degree before taking fire on the approach of a lighted match-these more volatile vapors are heavier than atmospheric air, and when suffered to escape from the cask containing them in a separate state will flow along the surface of the floor of a room, and reaching a distant fire-place will ignite, and burning backward to the reservoir will set fire to the oil from which they emanated.

Many serious accidents have occurred in this way, by the firing of a canister containing petroleum oil which has been left open, although at a distance in some cases of from 20 to 30 feet from a lighted fire. Another source of danger from the lighted oils from which the more volatile vapors arise results from the fact that these vapors when

mixed with a certain portion of atmospheric air explode on the approach of a flame with extreme violence. When the proportions of vapor and air are equal no explosion takes place; but when they are in the ratio of 10 parts of the vapor in volume to 100 parts of air the explosion is most violent; when the quantity of air or of petroleum vapor is increased or diminished the explosion is less violent until ope or other becomes excessive, when the vapor kindles without explosion, as is the case with ordinary street gas when issuing from the burner.

A notable case of the explosive quality of a mixture of petroleum vapor and air occurred in connection with the light-house service in 1864, on Lake Michigan. The keeper in one of the light-houses of this district substituted on his own responsibility an ordinary kerosene lamp of tinned iron, for the usual lard-oil lamp. This gave a good light and required no trimming during the night; it burned well for several nights; and the keeper congratulated himself on the success of what he considered a very important experiment. Unfortunately, however, on the last morning that the lamp was used, he attempted to put it out in the usual way by blowing the air from his lungs down the chimney, when an explosion took place, which scattered the oil in a burning state over the deck of the tower and also on his clothes; in his fright he ran down the stairs of the tower, and had scarcely reached the ground when a violent explosion was heard above, which blew off the whole lantern and broke the lenticular apparatus.

The explanation of these two explosions is not difficult. The burning of the oil during the night left a space void of the liquid in the reservoir of the lamp, which was filled with air and vapor which happened on this occasion to be near the explosive proportions; on blowing air down the chimney it mingled with the vapor furnishing the quantity necessary for the violent combination, and consequently the explosion occurred which broke the lamp. The second explosion was caused by the ascent of the vapor from the burning oil on the deck, and took place when the quantity exhaled amounted to a tenth part of the volume of air present. The two then suddenly rushed into combination, producing the effects that we have mentioned.

Under favorable circumstances this lamp lighted with kerosene might have burned silently for several weeks, but in accordance with the doctrine of chances, time enough being given, an explosion was inevitable. Facts of this kind in connection with the difficulty experienced in burning mineral oil in light-house lamps induced the Light-House Board to adopt lard-oil.

Various experiments have, however, been made from time to time by the Light-House Board with a view to the introduction of petroleum as an illuminating material, as soon as oil could be obtained in this country of a suitable character, lard-oil having advanced in price to such a degree as to render this change desirable in an economical point of view. In the mean time various experiments had been made in France and England for the purpose of introducing mineral-oil as a light-house illuminant, but it was not until 1873 or 1874 that the result was entirely satisfactory.

The process of manufacturing the oil has been very much improved in this country of late years, and there are now several companies which profess to produce oil entirely safe, and otherwise suitable for light-house purposes.

In view of further experiments with mineral-oil, an advertisement was inserted in the papers, in 1874, requesting manufacturers to send samples of their oils to be tested at the light-house depot at Staten Island, and in accordance with this a number of specimens were received and submitted to examination.

The first test to which the oils thus furnished were submitted was that of flashing, that is, the determination of the temperature at which the oil gives off a vapor which will flash into a flame on the approach of a small taper, or, in other words, which indicates the rise of a vapor which, mixed with atmospheric air, will tend to produce an explosion. The flashing temperature differs, however, from that at which the liquid takes fire as a whole. This will be understood if we suppose that two liquids

 $52 ext{ } extbf{F}$

have been mixed together, a light and a heavy one; the flash in this case will be due to the vapor from the lighter mixture, while the burning is due to the temperature at which the compound is fired. To make this flashing test requires considerable precantions. First, the oil to be tried is gradually heated by a spirit-lamp in a water-bath, a sensitive thermometer being suspended in the oil with the bulb slightly below the surface; the heat of the water is very slowly increased by removing from time to time the spiritlamp from under the basin of the water-bath which contains the oil, and the point of flashing is obtained by passing over the surface of the oil a small flame until the first indication of flash is observed. The flame should not be so large as to heat the surface, and is best produced by a very small jet of gas from a glass tube drawn nearly to a point and counceted with the gas-pipe of the house by a tube of Iudia-rubber, the quantity of gas being regulated by a stop-cock, so that the flame is a mere pencil of light about a quarter of an inch in length and a twentieth iu diameter. The basin which contains the oil is about four inches in diameter, and is sometimes covered with a plate of thin glass, the thermometer passing through an aperture in this cover, and a larger hole being left open in the same for inserting the pencil of the flame. The basin containing the oil is sometimes left entirely open, the cover being discarded, but we do not think this as safe a method as the other. Great caution must be taken in raising the temperature very gradually, so that every part of the liquid may have the same heat and the thermometer truly indicate the temperature. If the rise of the temperature be very sudden, the thermometer will not respond, and the real flashing temperature will be higher than that which is indicated.

The next test is that of firing of the mass of the liquid, which is sometimes 10 or 12 degrees higher-than that of the flashing temperature, but generally the two are very near each other.

The next test is the determination of the specific gravity. This was obtained by weighing, in a glass flask with a narrow neck, an equal quantity of distilled water and of the oil in question; the ratio of the two, reduced to water as unity, gave the specific gravity required. To facilitate the operation, a flask, containing just 1,000 grains of distilled water, was balanced by a permanent weight. The scales were tested by double weighing. The first series of weighing was made at the temperature of 74°, that of the apartment in which the experiment was conducted; but oil and other substances change their bulk, and consequently their specific gravity, with a change of temperature. It is therefore necessary, in order that results may be compared, that the experiments be all made at the same temperature, or reduced to a standard temperature. The temperature formerly adopted in England for specific gravity is 62° Fahr.; but in the case of petroleum, the temperature of 60° has been adopted in this country and England. In the first series of experiments made with the oils in question, the weighing was conducted at a temperature of 74°, as we have said, namely, that of the atmosphere at the time. A series of experiments at a lower temperature was afterward made, in order to obtain a correction by which to reduce the specific gravity first obtained to that of a temperature of 60°; but as each oil exhibits a different rate of expansion by heat, the process became very laborious. Experiments were therefore made to determine the correctness of obtaining the specific gravity of the oils by means of a hydrometer. This was found to differ from that obtained by weighing within one per cent., and was therefore concluded to be sufficiently accurate for practical purposes.

To obtain the specific gravity of the oils by means of a hydrometer, a vessel containing, say, 10 gallons of water, of a depth of about 14 inches, is provided, into this are introduced several glass cylinders to contain the oil, and into these cylinders the hydrometers are plunged, the level of the oil being so far above the water that the under contact of the surface of the liquid with the scale may be observed. Before inserting the glass cylinders containing the oils into this water-bath, the liquid is brought, by mixing ice-water with it, to the temperature of 60°, at which temperature it may be kept for a long time, on account of the large quantity of the liquid and the great specific heat of the water. A change of temperature may be prevented by occasionally

adding a small quantity of ice-cold water, care being taken to mingle the mixture by stirring. By this process may be obtained the specific gravity at 60° of a large number of samples in a comparatively short time. In this country and England the density or relative weight of petroleum oils is generally expressed in terms of the arbitrary scale of Beaumé's, instead of that of the specific gravity. The following table gives the equivalent of the Beaumé's scale in terms of specific gravity:

Degrees.	Specific gravity.	Degrees.	Specific gravity.	Degrees.	Specific gravity.	Degrees.	Specific gravity.
10	1. 000	23	. 918	36	. 849	49	. 789
11	0. 993	24	. 913	37	. 844	50	. 785
12	. 986	25	. 907	38	. 839	51	. 781
13	. 980	26	. 901	39	, 834	52	.777
14	. 973	27	. 896	40	. 830	53	. 773
15	. 967	28	. 890	41	. 825	54	. 768
16	. 960	29	. 885	42	. 820	55	. 764

21	. 930	34	. 859	47	. 798	60	. 745
22	. 924	35	. 854	48	. 794		

Beaumé's hydrometer for liquids lighter than water.

Another test to which the mineral oil was subjected was that of a reduction of temperature. For this purpose the samples were placed in an air-bath reduced to the temperature of 25°. At this temperature several of the oils exhibited a thickened condition, especially those of the higher fire-test. The apparatus used for this purpose was the same as that previously described as employed in the case of lard-oil.

The next test to which the oil was subjected was that of its liquidity. This test is of some importance in regard to lamps in which the oil is pumped up by machinery, and also as to the solid matter in the oil. It therefore gives a characteristic of the oil which with others serves to determine its degree of impurity. For this purpose the same method was employed as that described for determining the liquidity of lard-oil.

The liquidity exhibited by this process was very different in different oils.

All the experiments on the flowing of the oils were made at the temperature of the air, which was from 72° to 74°. In this case, as with lard, a marked difference was ound in the time of flowing at different temperatures, and hence for comparison the experiments should be made at a standard temperature.

Another experiment was made to ascertain whether oils of higher flashing test gave off a vapor at the ordinary temperature of the atmosphere; for example, at about 70°.

For this purpose a barometer tube of about 33 inches in length, and an interior diameter of one-half of an inch, was filled with warm mercury inverted in a basin of the

The finger was then placed under the open mouth of the tube in the basin and the tube slowly inverted so as gradually to pass the vacuum through the whole length of the column, and thus to gather up any particles of air that might adhere to the side of the tube; this left a space when the inverted tube was held vertically of about three inches of the open end of the tube unfilled with mercury; this being refilled, the finger applied to the open end and the tube again replaced with the open end downward in the basin, the vacuum produced by this process was nearly as perfect as if the mercury had been boiled in the tube, or the latter filled with the metal in a vacuum.

After this, a small quantity of oil to be tested was drawn into a small glass syringe, the curved point of which being introduced beneath the open mouth of the tube under the surface of the mercury, a small quantity of the liquid was injected into the column; this rapidly rose by its levity to the top, and there a portion of it flashed into vapor, as was evident by the depression of the mercurial column.

From this experiment it is evident that kerosene, even of a high flashing temperature, does give off vapor at ordinary temperatures. It is, however, of so feeble tension that it does not appear capable of producing explosion unless considerable time be allowed for its accumulation. It might not be apparent that although vapor was given off in a vacuum, as in this case, that it would be given off under the full pressure of the atmosphere; but it has been shown by the experiments of Mr. Dalton and others, that vapors diffuse themselves in a space filled with atmospheric air with the same elasticity and quantity as in a vacuum, time only being required to produce the effect in the atmosphere.

The oils were also examined as to the remains of any free acid which they might contain, by simply immersing in each sample a slip of litmus paper, which was suffered to remain in the liquid for twenty four hours; under this test several of the samples exhibited a redness, denoting the presence of an acid which might corrode the metal of the lamps, also indicating the want of a thorough washing of the oil by an alkaline water.

Another experiment, which was exhibited to us by one of the proprietors of the oil which has a flashing test of about 140°, consisted in lighting a lamp-wick charged with the oil and plunging it into a vessel filled with the same. The oil did not take fire, although the combustion of the wick was vigorous, and, indeed, the flame was put out when the wick was plunged beneath the surface of the oil. This experiment, which is frequently exhibited to the public, tends to give a sense of safety in the use of mineral oil which is at least in some degree fallacious.

To illustrate this the following experiments were made: First a slip of cotton cloth, about 6 inches wide and 2 feet long, was saturated with oil having a flashing test of 140°, and suspended vertically from a ring-stand; a lighted match was then applied to the middle of the length of the slip, when it instantly took fire, and burned with a fierceuess which was truly appalling.

After this two pieces of cloth, one of cotton and the other of woolen, were saturated with petroleum and placed flat on two pieces of tinned iron to protect the floor. On each of these was then dropped an ordinary friction match in a state of ignition. They both broke instantly into flames, which soon entirely consumed the cloth, although but little air could obtain access to its under side, and notwithstanding the good conducting power of the tinned iron.

In a similar experiment made with the same cloth saturated with lard-oil the cloth did not take fire when a lighted match was dropped upon it.

Two cotton cloths the same size were saturated, one with lard-oil, the other with petroleum, and lighted at the same time. The petroleum cloth was consumed in one minute twenty-three seconds; the lard cloth in five minutes.

To render these experiments more strikingly applicable to cases of accident which might occur in a light-house, a piece of cotton cloth about 2 feet square, which had been used to wipe the table on which kerosene had been spilled, was crumpled up into the condition of an ordinary dish-cloth and thrown into a corner of the room. When a lighted match was dropped on this it instantly took fire and burned with a fierceness truly alarming.

These experiments are important in establishing the fact that oils which are commonly sold as entirely free from danger are not really so. They may be safe from explosions at ordinary temperatures, and in this respect are to be preferred to the lighter oils; but when spread over a large surface they burn with greater intensity, even, as we have seen, on a surface of ice. Indeed, the results are so striking it might be well to repeat them in the presence of every light-house keeper, in order to impress him with an idea of the danger which might be apprehended in spilling the oil over his clothes or in carelessly dropping his matches on cloths which had been used in cleaning the apparatus.

Among the peculiar properties of mineral oil is its great surface-attraction or power of adhering and spreading on other surfaces, as well as ascending wicks to a much greater altitude than other oils. This property is recognized by the housekeeper who

finds the exterior of the lamp covered with a film of oil shortly after it has been subjected to a thorough cleansing. It rises along the interior surface of the lamp and spreads over the outside. On account of this property it can be freely burned in lamps of which the fountain is at a considerable distance below the flame, and in which no overflow is required to produce a brilliant combustion.

A series of experiments was next made with regard to the burning qualities of mineral oils of different densities, from which it was inferred that the lighter oils in lamps of the fourth order gave a greater amount of illumination than the heavier oils, and, furthermore, that the latter charge the wick more than the former, from which it would appear that, in using mineral oil, while safety should be the prominent consideration on the one hand, in the choice of the material, regard must be had on the other to the illuminating power.

In regard to the relative photometric power of lamps of the same order charged with mineral and with lard oil, all the experiments we have yet made on this point tend to the conclusion that in smaller lamps with the more volatile oils a greater photometric power is obtained than with the same lamp when charged with lard-oil; but with the larger lamps the reverse is the case, the lard giving greater power burned in these lamps than the mineral oil.

. An unexpected difficulty arose in the course of the investigations for the introduction of mineral oils on account of the form of the flame. While a lamp with a constricted chimney, like that used in the German student-lamp, gave the greatest photometrical power, it was found that the shape of the flame did not correspond with the arrangement of the lens-apparatus, a large portion of the light being thrown upward toward the sky and another toward the earth. It was only after a series of trials with chimneys of different forms and button-deflectors, that a flame of the best shape was obtained. To compare these flames in actual use, they were placed in succession in a light-house, with a lens of the fourth order, and the photometrical power determined at different distances, from a mile to ten miles in extent, by interposing between the eye and the light a series of thin colored glasses, until the light was totally extinguished. It was found in these experiments that some of the flames that had an appearance of greater brilliancy near by failed to produce comparatively the same effect at a greater distance. Having settled upon the form of the flame to be used in lamps of the lower orders, arrangements have been made for the introduction of mineral oils into all the stations in the third district, at which lights of the fourth and smaller orders are at present in use. The substitution of mineral for lard oil, however, is a matter of no small difficulty, and requires to be made with great precaution. An entire change in all the lamps is required; the several parts of the apparatus which in the case of lard-oil lamps were united by soft-solder must now be joined with spelter.

The importance of this was evinced by an accident which happened in the photometric room in the case of a lamp of the fourth order under trial; the heat unsoldered an air-tube and let down the oil from the reservoir on the flame, which produced so ficree a combustion that it would have set fire to the building had it not been of fire-proof materials.

The gradual introduction, however, of mineral oil will be made as rapidly as experience indicates the best and safest mode of employing it. It has already been adopted in the smaller lamps for lighting the Mississippi and its principal tributaries. The substitution, however, is not on account of the superior quality of this oil in comparison with lard, since we think the latter as an illuminating material is inferior to no other at present in use, but simply on account of the comparative cost of the two materials.

The comparative cost of the two materials will be definitely ascertained after we have determined the best form of lamps to be used. Experiments thus far have been principally confined to the lower orders of lamps.

I.—REPORT OF THE SECRETARY OF THE TREASURY.
