## Report on Foreign Holdings of U.S. Securities at End - June 2010

4/29/2011

The final results from the survey of foreign portfolio holdings of U.S. securities at end-June 2010 are released today on the U.S. Treasury web site at (<http://www.treasury.gov/resource-center/data-chart-center/tic/Pages/fpis.aspx>). A revised table on Major Foreign Holders of Treasury Securities, where estimates through end-February 2011 are based in part on survey data, is also released at (<http://www.treasury.gov/resource-center/data-chart-center/tic/Documents/mfh.txt>  ).

This annual survey was undertaken jointly by the U.S. Treasury, the Federal Reserve Bank of New York, and the Board of Governors of the Federal Reserve System. The next survey will be for end-June 2011 and preliminary data are expected to be released by February 28, 2012.

Complementary surveys measuring U.S. holdings of foreign securities are also carried out annually. Data from the most recent survey, reporting on securities held on year-end 2010, are currently being processed. Preliminary results are expected to be reported by August 31, 2011.

### Overall Results

The survey measured foreign holdings of U.S. securities as of June 30, 2010, to be \$10,691 billion, with \$2,814 billion held in U.S. equities, \$6,921 billion in U.S. long-term debt securities<sup>1</sup> (of which \$1,159 billion are holdings of asset-backed securities (ABS)<sup>2</sup> and \$5,763 billion are holdings of non-ABS securities), and \$956 billion held in U.S. short-term debt securities. The previous survey, conducted as of June 30, 2009, measured total foreign holdings of U.S. securities at \$9,641 billion, with holdings of \$2,252 billion in U.S. equities, \$6,240 billion in U.S. long-term debt securities, and \$1,149 billion in U.S. short-term debt securities (see Table 1).

1. Long-term debt securities have an *original* term-to-maturity of over one year.
2. Asset-backed securities are backed by pools of assets, such as pools of residential home mortgages or credit card receivables, which give the security owners claims against the cash flows generated by the underlying assets. Unlike most other debt securities, these securities generally repay both principal and interest on a regular basis, reducing the principal outstanding with each payment cycle.
