PART IV

ANNEXED BUDGETS

EXPLANATION OF ANNEXED BUDGETS

Part IV presents detailed schedules and explanatory statements on seven self-supporting Government agencies and programs which are outside the normal budget process. Like the budgets for the Legislative branch and The Judiciary, the annexed budgets have not been reviewed by the President but are presented in the amounts submitted by the agencies.

Three agencies (Banks for Cooperatives, Federal Intermediate Credit Banks, and the Federal Deposit Insurance Corporation) have been included in the Government-sponsored enterprise group in the computation of consolidated cash totals for some years, and the net totals for each have been displayed. However, data were reported only for certain debt and investment transactions, rather than for all of their activities, and the information was

obtained informally. The presentation of more complete annexed budgets does not change their handling in the totals.

The other four agencies and programs (Milk Marketing Administration, Comptroller of the Currency, Exchange Stabilization Fund, and the Board of Governors of the Federal Reserve System) are also not included in the administrative budget, and are included only in part in the deposit fund group within the trust fund totals. In part they are outside all traditional figures on Federal finances.

The material in this part is presented in the general format of similar material for public enterprise funds in part I. No appropriation language appears in part IV because action by the Congress is not required.

94 Applicable receipts.....	-13,604	-13,744	-14,129

¹ Administrative fund totals are comprised of 73 separate independent order accounts, plus in fiscal year 1966, 2 additional orders which were in effect for a portion of the fiscal year. The Marketing Service fund totals are comprised of 63 separate independent order accounts, plus in fiscal year 1966, 2 additional orders which were in effect for a portion of the fiscal year.

The Secretary of Agriculture is authorized by the Agricultural Marketing Agreement Act of 1937, as amended—under certain conditions—to issue Federal milk marketing orders establishing minimum prices which handlers are required to pay for milk purchased from producers.

Market administrators are responsible for carrying out locally the terms of specific marketing orders. Their operating expenses, partly financed by assessments on regulated handlers, and partly by deductions from producers, are reported in these schedules. These funds are collected locally, deposited in local banks, and disbursed directly by the market administrator.

Each milk order is administered locally by a market administrator who is appointed by the Secretary. His staff is employed directly by the market administrator.

The activities conducted in the local office are concerned primarily with monthly computations and public

announcement of class and uniform blend prices, associated butterfat differentials and with examination of handlers records and facilities to verify their reports and payments to producers and in checking weights and tests of producer milk.

The expenses of each local office are met from an administrative fund and a marketing service fund which are prescribed in each order. The administrative fund is derived from prorated handler assessments. The marketing service fund of the individual order provides for the expense of disseminating market information to producers who are not members of a qualified cooperative. It also provides for the verification of the weights, sampling and testing of milk from these producers. The cost of these services is borne by such producers.

The maximum rates for administrative assessment and for marketing services are set forth in each order and adjustments below these rates are made from time to time upon recommendations by the market administrator and approval of the Consumer and Marketing Service to provide reserves at about a 6-month operating level. Upon termination of any order, the statute provides for distributing the proceeds from net assets pro rata to contributing handlers or producers, as the case may be.

Milk sold by regulated handlers supplied about 104 million persons—60% of the total nonfarm population—during calendar year 1965.

The following table gives an indication of the growing role of Federal orders on the marketing of milk over the past few years.

	1961	1962	1963	1964	1965

¹ Balances of selected resources are identified on the statement of financial condition.

The Office of the Comptroller of the Currency, the administrator of national banks, was established by the National Currency Act of 1863 (12 U.S.C. 1 et seq., 12 Stat. 665). That act provided for the chartering and supervision of a banking system by this Federal agency.

The administrator of national banks is empowered by law to issue charters to new banking institutions which choose to operate under Federal law. Each approval or disapproval issues only upon a comprehensive field investigation which is subsequently subjected to thorough analysis by an expert staff of attorneys, economists, and experienced national bank examiners.

The operations of existing national banks are subject to the supervision of the Comptroller. A staff of over 1,200 national bank examiners conducts a detailed examination of the approximately 5,000 operating national banks on a regular basis. The end-product of these examinations is a determination of the financial condition of national banks, the soundness of their operations, and their compliance with applicable laws and regulations. In addition, the Comptroller must pass on all applications for mergers in which the resulting bank will be a national bank. He must also pass on applications by national banks for new branch offices.

In accordance with statute, the Comptroller of the Currency promulgates regulations and rulings for the guidance of national banks. All laws, regulations and rulings relating to national banks are published in the "Comptrollers Manual for National Banks" and the "Comptrollers Manual for Representatives in Trusts," both available in the Comptroller's Office. In addition, the Office's Department of Banking and Economic Research edits and publishes the quarterly "National Banking Review," a journal of banking and economic policy and practices.

For the purpose of stabilizing the exchange value of the dollar, the Secretary of the Treasury is authorized to enter into stabilization agreements, and to deal in gold and foreign exchange and other instruments of credit and securities. An exchange stabilization fund, with a capital of \$200 million (derived from the increment resulting from the reduction in the weight of the gold dollar which took place in 1934) is authorized by law for this purpose (31 U.S.C. 822a). All earnings and interest accruing are paid into this fund and are available for the purposes thereof, including expenses.

The principal sources of the fund's income have been the handling charge imposed on purchases and sales of gold for the account of the fund, profits on foreign exchange transactions, and interest on investments held by the fund. The income of the fund has consistently exceeded its expenses; the cumulative income of the fund from the time

TREASURY DEPARTMENT—Continued**EXCHANGE STABILIZATION FUND—Continued**

it began operations has been \$254.6 million and its expenses \$46.9 million, resulting in a net income as of June 30, 1966, of \$207.8 million.

It is not practicable to forecast the transactions of the fund in gold, foreign currencies, foreign investments, and the like. The budget schedules, therefore, are incomplete for all items other than operating expenses for 1967 and 1968. Administrative expenses will be more than covered by interest on investments in U.S. securities.

Liabilities of the fund include \$583 million borrowed by the Secretary from the International Monetary Fund.

¹ Balances of selected resources are identified on the statement of financial condition.

1. *Basic legislation.*—The Federal Reserve System operates under the provisions of the Act of December 23, 1913, known as the Federal Reserve Act (12 U.S.C. 221-522), as amended.

2. *Program.*—To carry out its responsibilities under the Act, the Board determines general monetary, credit, and operating policies for the System as a whole and formu-

lates the rules and regulations necessary to carry out the purposes of the Federal Reserve Act. The Board's principal duties consist of exerting an influence over credit conditions and supervising the Federal Reserve Banks and member banks.

3. *Financing.*—Under the provisions of section 10 of the Federal Reserve Act, the Board of Governors levies upon the Federal Reserve Banks, in proportion to their capital and surplus, an assessment sufficient to pay its estimated expenses. The Board, under the Act, determines and prescribes the manner in which its obligations are incurred and its expenses paid. Funds derived from the assessments are deposited in the Federal Reserve Bank of Richmond, and the Act provides that such funds "shall not be construed to be Government funds or appropriated moneys." No Government appropriation is required to support operations of the Board.

¹ Balances of selected resources are identified on the statement of financial condition.

The banks for cooperatives, of which there are 13, are under the general supervision of the Farm Credit Administration. They finance the operations of farmers' cooperatives. During 1966, the banks extended credit totaling \$1.6 billion. The funds to finance these loans are obtained from (1) sales of debentures to the public, (2) notes payable, and (3) their own capital. The debentures which the banks issue are not guaranteed by the U.S. Government either as to principal or interest. The banks' capital funds consist of capital stock owned by the U.S. Government, equities of borrowing cooperatives and retained earnings.

The Farm Credit Act of 1955 provides for eventual ownership of the banks by farmers' cooperatives and the retirement of the U.S. Government's investment. At the time the 1955 act was passed, the U.S. Government had an investment in the banks of \$150 million. By June 30, 1966, this investment had been reduced to \$41 million while the equities of borrowing cooperatives amounted to \$139 million. It is expected that additional repayments of Government capital of \$7,500 thousand and \$7,250 thousand will be made in 1967 and 1968, respectively. By June 30, 1966, four of the banks had completed the retirement of all Government capital.

All expenses, including administrative costs, are paid from the banks' own resources and thus in no way do they affect the budget of the United States.

The Federal intermediate credit banks, of which there are 12, are under the general supervision of the Farm Credit Administration. They serve as banks of discount for agriculture, discounting agricultural and livestock paper for local financing institutions, such as production credit associations, agricultural credit corporations, live-

OTHER INDEPENDENT AGENCIES—Continued**FARM CREDIT ADMINISTRATION—Continued****FEDERAL INTERMEDIATE CREDIT BANKS—Continued**

stock loan companies, and commercial banks. They also provide the production credit associations with necessary supervision and services. During 1966, the banks extended credit totaling \$5.8 billion.

The banks' lending funds are obtained primarily from the sale of debentures to the public and from their own capital funds. The debentures are not guaranteed by the U.S. Government either as to principal or interest.

The banks were originally wholly owned Government corporations set up exclusively as banks of discount; however, pursuant to the Farm Credit Act of 1956, the banks became mixed-ownership corporations and were made responsible for supervising the production credit associations and assisting them to make sound credit available to farmers.

All of the capital stock of the Federal intermediate credit banks from organization in 1923 to December 31, 1956, was held by the U.S. Government. The 1956 act provided a long-range plan for the eventual ownership of the credit banks by the production credit associations and the gradual retirement of the Government's investment in the banks. However, because of the increased credit demands placed upon the Federal intermediate credit banks, it was necessary for the Government to invest additional capital in the banks in order to keep the debt-to-capital ratios within the then 10 to 1 maximum permitted by law. Public Law 89-237 enacted on October 4, 1965, increased the maximum debt to capital ratios of the credit banks to 12 to 1. As a result of this change, it is expected that the Government will not make any additional investments in the banks. At June 30, 1966, the U.S. Government's investment in the capital stock of the banks was \$126 million and that of private interests was \$78 million.

All expenses, including administrative costs, are paid from the banks' own resources and thus in no way affect the budget of the United States.

¹ No provision is made in this report for expenses which might be incurred by reason of additional bank closings after Oct. 31, 1966, because there is no sound basis for predicting which, if any, insured banks will close in the future.

² Balances of selected resources are identified in the statement of financial condition.

In order to protect depositors in insured banks, the Federal Deposit Insurance Corporation is authorized to insure such depositors in the maximum amount of \$10 thousand; effective October 16, 1966, this amount was increased to \$15 thousand; to examine all insured banks not members of the Federal Reserve System and, in certain situations for insurance purposes, to examine National and State chartered banks which are members of the Federal Reserve System; to participate in the regulation of mergers involving insured banks; and to promulgate and enforce rules and regulations relating to the supervision of insured banks, the withdrawal of deposit insurance, and other regulatory and supervisory matters consistent with its responsibility as insurer.

The income of the Corporation is derived principally from insurance assessments paid by insured banks and interest on investments in U.S. Government securities. No funds derived from taxes or Federal appropriations are allocated to or used by the Corporation. There is no capital stock outstanding. The Corporation is authorized to borrow from the U.S. Treasury and the Secretary of the Treasury is authorized and directed to loan to the Corporation, on such terms as may be fixed by the Corporation and the Secretary, not to exceed \$3 billion outstanding when, in the judgment of the Board of Directors of the Corporation, such funds are required for insurance purposes (see schedule in pt. I of the appendix). No borrowings under this authorization have been made to date and none are anticipated in 1967 or 1968.

The Deposit Insurance Fund, representing the accumulated net income of the Corporation, is reserved for the payment of insured deposits and for the payment of its operating and insurance expenses. The estimates shown for 1967 and 1968 in these statements make no provision for losses or expenses which might be incurred by reason of the closing of any bank after October 31, 1966 (the date on which these reports were prepared), because there is no basis for predicting which, if any, insured banks will close in the future.
