

**THE
BUDGET
OF THE UNITED STATES GOVERNMENT**

FISCAL YEAR 1972

A NOTE ON THE FORMAT OF THE BUDGET

Data relating to the budget for 1972 are published in a group of five documents:

The Budget of the United States Government, 1972, is presented in a compact volume containing the Budget Message of the President and summary information that presents to the Congress the President's budgetary recommendations. This volume contains the facts and figures that most users of the budget would normally need or desire.

The Budget of the United States Government, 1972—Appendix contains the text of appropriation estimates proposed for the consideration of Congress together with specific supporting information on the various appropriations and funds, as well as supplementary schedules required by law.

The Budget of the United States Government, 1972—District of Columbia contains the estimates for the municipal government of the District of Columbia.

The U.S. Budget in Brief, 1972, a pamphlet type of publication, is available for those who wish a more concise and less technical presentation than any of the foregoing three volumes.

The Special Analyses, Budget of the United States Government, 1972, contains 19 special analyses that are designed to highlight specified program areas or provide other significant presentations of Federal budget data.

Budget documents for fiscal year 1972 are available from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. (Paper covers only.)

1. *The Budget of the United States Government, 1972* (\$2.50).
2. *The Budget of the United States Government, 1972—Appendix* (\$8.50).
3. *The Budget of the United States Government, 1972—District of Columbia*.
4. *The U.S. Budget in Brief, 1972* (40 cents).
5. *Special Analyses, Budget of the United States Government, 1972* (\$1.50).

GENERAL NOTES

1. The estimates in the budget cover requirements under existing legislation and under legislation which is proposed for enactment by Congress.
2. Unless otherwise indicated, all references to years in this volume are to fiscal years ending June 30.
3. Details in the tables and charts may not add to the totals because of rounding.

PART I
THE BUDGET MESSAGE
OF THE
PRESIDENT

THE BUDGET DOLLAR

Fiscal Year 1972 Estimate

Where it comes from . . .

Where it goes . . .

* Excludes Interest Paid to Trust Funds

BUDGET MESSAGE OF THE PRESIDENT

To the Congress of the United States:

In the 1971 budget, America's priorities were quietly but dramatically reordered: For the first time in 20 years, we spent more to meet human needs than we spent on defense.

In 1972, we must increase our spending for defense in order to carry out the Nation's strategy for peace. Even with this increase, defense spending will drop from 36% of total spending in 1971 to 34% in 1972. Outlays for human resources programs, continuing to rise as a share of the total, will be 42% of total spending in 1972.

The 1972 budget has a historic identity of its own.

- *It provides a new balance of responsibility and power in America* by proposing the sharing of Federal revenues with States and communities on a grand scale—and in a way that will both alleviate the paralyzing fiscal crisis of State and local governments and enable citizens to have more of a say in the decisions that directly affect their lives.
- *It introduces a new fairness in American life*, with the development of national strategies to improve the health care of our citizens and to assure, with work incentives and requirements, an income floor for every family in this Nation.
- *It adopts the idea of a "full employment budget,"* in which spending does not exceed the revenues the economy could generate under the existing tax system at a time of full employment. In this way, the budget is used as a tool to promote orderly economic expansion, but the impact of the resulting actual deficit is in sharp contrast to the inflationary pressure created by the deficits of the late sixties, which were the result of excessive spending that went far beyond full employment revenues. *The full employment budget idea is in the nature of a self-fulfilling prophecy: By operating as if we were at full employment, we will help to bring about that full employment.*

The 1972 budget reaffirms the determination of the Federal Government to take an activist role in bringing about the kind of prosperity that has rarely existed in the American economy—a prosperity without war and without runaway inflation. In the 1972 budget, the Government accepts responsibility for creating the climate that will lead to steady economic growth with improving productivity and job stability.

Of course, our objective of prosperity without inflation cannot be achieved by budget policy alone. It also requires:

- the monetary policy adopted by the independent Federal Reserve System to provide fully for the growing needs of the economy; and
- increased restraint in wage and price decisions by labor and business—in their own and the Nation's interest and as a matter of common sense.

Only by working together can the budget, monetary policy, and common sense in the private sector make orderly expansion the order of the day.

The full employment 1972 budget—expansionary but not inflationary—does its full share to provide a defense strong enough to protect our national security, higher standards of income and care for the poor and the sick, a reorganized and responsive Federal structure, and the basis for a sound prosperity in a full generation of peace.

TOWARD A GROWING NONINFLATIONARY ECONOMY

Economic setting.—When I took office 2 years ago, rampant inflation was the Nation's principal economic problem.

This inflation was a direct result of the economic policies of the period 1966 to 1968, when we were mired in war in Vietnam, and when Federal spending rose sharply. Federal outlays were allowed to exceed full-employment revenues by \$6 billion in 1966, \$10 billion in 1967, and \$25 billion in 1968. Expansive monetary policy in the summer of 1968 helped upset the hoped-for stabilizing impact of an income tax surcharge. The effect of these actions was to turn the thermostat up in an economy that was already hot enough.

My administration acted promptly to move us out of that war and cool the superheated economy.

We controlled Federal spending in 1969 and achieved a budget surplus. Spending was restrained again in 1970. Independently, the Federal Reserve System maintained a monetary policy of restraint which increased in severity throughout calendar year 1969 and continued into early 1970.

The forces of inflation have been durable and persistent—and they remain strong. But their momentum was slowed in calendar year 1969 and early 1970. Excessive demand was eliminated as a source of inflationary pressure during this period. The turnaround of this inflationary trend permitted us to enter the second phase of our plan: to follow more expansive economic policies without losing ground in the battle against inflation.

Budget policy.—Last July, I set forth the budget policy of this administration:

“At times the economic situation permits—even calls for—a budget deficit. There is one basic guideline for the budget, however, which we should never violate: except in emergency conditions, expenditures must never be allowed to outrun the revenues that the tax system would produce at reasonably full employment. When the Federal government’s spending actions over an extended period push outlays sharply higher, increased tax rates or inflation inevitably follow.”

Full Employment Budget —Surplus or Deficit

The principle of holding outlays to revenues at full employment serves three necessary purposes:

- It imposes the discipline of an upper limit on spending, a discipline that is essential because the upward pressures on outlays are relentless.
- It permits Federal tax and spending programs to be planned and conducted in an orderly manner consistent with steady growth in the economy’s productive capacity.

- It helps achieve economic stability by automatically imposing restraint during periods of boom and providing stimulus during periods of slack.

The budget policy of this administration is to keep firm control over Federal spending. The outlay total of \$229.2 billion in 1972 is the sum of spending for programs that were scrutinized carefully to make certain that they would be managed effectively and efficiently, and that they are essential to carry out present laws or to achieve desirable changes in our national priorities.

If this careful scrutiny were not maintained—if we weaken in our resolve to control spending—we would risk permitting outlays to build up a momentum that will carry them beyond full employment receipts in the longer run, and we would risk losing the ability to restrain spending in times when a deficit is undesirable.

SUMMARY OF THE 1972 BUDGET

The budget that I propose for 1972 is consistent with the fiscal policy I announced 6 months ago.

THE BUDGET AT A GLANCE

[Fiscal years. In billions]

Description	1970 actual	1971 estimate	1972 estimate	
Budget receipts.....	\$193.7	\$194.2	\$217.6	
Budget outlays.....	196.6	212.8	229.2	
Actual deficit (—).....	—2.8	—18.6	—11.6	
Full-employment surplus.....	2.6	1.4	0.1	
Budget authority.....	213.0	236.3	249.0	
<hr/>				
	1969 actual			
Outstanding debt, end of year:				
Gross Federal debt.....	\$367.1	\$382.6	\$407.0	\$429.4
Debt held by the public.....	279.5	284.9	302.5	313.1
Outstanding Federal and federally assisted credit, end of year:				
Direct loans ¹	46.5	51.1	53.8	56.5
Guaranteed and insured loans ²	104.0	106.4	119.4	140.3
Direct loans by Government-sponsored agencies.....	27.0	37.6	45.4	53.2

¹ Including loans in expenditure account.

² Excluding loans held by Government or Government-sponsored agencies.

Budget receipts in 1972 are estimated to be \$217.6 billion, \$23.4 billion more than in 1971, but still below the \$229.3 billion of revenue that would be produced if the economy were operating at full employment throughout the year.

The estimates reflect a reduction in revenues of \$2.7 billion due to the new tax depreciation rules announced on January 11. These rules are part of our plan to expand the economy and help the Nation achieve full employment without inflation.

Budget outlays in 1972 are expected to be \$229.2 billion, an increase of \$16.4 billion over the previous year.

The increase in outlays will help move the economy toward higher employment and production. At the same time, outlays are being held to full employment receipts.

I am requesting *budget authority*—the right to make commitments to spend—of \$249.0 billion in 1972. Over \$170 billion of this total will require new action on the part of the Congress.

REVENUE SHARING: RETURNING POWER TO PEOPLE

During the 1960's, more governmental initiative and power shifted to Washington and away from elected officials in State and local governments. Towards the end of the decade it became apparent that, despite new programs and massive Federal expenditures, government at all levels was not working well.

When this administration took office, I directed that an intensive review of our governmental system be made. We found that State and local governments were breaking down under an incredible fiscal burden. We also found that the red tape involved in the narrow categorical grant system made it almost impossible for the Federal Government to be effective and responsive to the needs of individuals in different localities.

The financial squeeze on State and local governments is acute, and shows no sign of becoming less painful. These governments rely mainly on receipts from consumer and property taxes, which have not grown nearly as fast as the demand for State and local government services. As a result, combined State and local debt has increased by over 600% since 1948.

The Federal Government helped meet some of this demand by increasing its financial aid, largely through grant programs, which now accounts for 18% of State and local revenues.

The results of grant programs have been impressive in some cases. But the grant structure has become a haphazard collection of hundreds of separate programs, each with its own policies, its own requirements and procedures, and its own funding.

Such a complicated method of providing Federal assistance is not only inefficient, but it :

- restricts the freedom* of State and local governments to spend funds in accordance with their priorities ;
- is unresponsive* to the needs of specific local situations because the funds are distributed and regulated by guidelines that do not—perhaps cannot—sufficiently take account of differences among local communities ; and
- separates resources and responsibility*, because State and local governments have the responsibility for providing services, but, all too often, they do not have the money to provide those services. The Federal Government dominates the field of income taxation, and its redtape restricts the discretion of State and local governments over the services they provide.

Clearly, not enough authority over the use of resources for federally assisted programs is now lodged at the State and local level. More of the power—and the responsibility—for using federally collected funds must be given to elected officials in these governments.

The need for remedying this situation is urgent. The time for reform is now.

Local freedom of action.—I propose a revenue sharing plan to give State and local governments the money they need to deliver the services that can best be performed by government closest to the people.

This is how the new “freedom of action” plan will work :

In the first full year of the plan, \$16 billion will be directed to the States and localities, in a way that will enable them to decide as never before how that money will be spent.

Of this amount, \$5 billion will be in the form of *general revenue sharing*, without restrictions. This will all be “new” money, without matching requirements and with the decision on how it is to be used exclusively a State and local matter.

The remaining \$11 billion will be in the form of *special revenue sharing*, with the discretion on how it will be used within each of six broad subject areas strictly a State and local matter. These areas are :

- Urban community development,
- Rural community development,
- Education,
- Manpower training,
- Law enforcement, and
- Transportation.

The hobbling restrictions now on much of the Federal aid in these areas would be removed, along with matching requirements that presently

force localities to spend their own matching money on low-priority projects for fear of "losing" available Federal aid.

To emphasize the importance of the special revenue sharing funds, the change from the present tightly restrictive categorical grants to special revenue sharing in the six broad areas will be accompanied by an *increase* of \$709 million in the amounts budgeted for 1972 for Federal aid to States and localities. But even more important is the fact that these governments would have far greater freedom of action in deciding how money is to be spent within each of the six areas. For example, although the Federal Government would designate the total amount of special revenue sharing for education, the State or local area would decide how much is to be spent on new textbooks, new schools, equipment, or other matters of priority to it in the field of education.

In this way, both general and special revenue sharing will redirect the control of State and local decisions on \$16.1 billion to the States and localities affected most by those decisions. This is about half of Federal Government aid, excluding public assistance grants, to States and communities—a historic and massive reversal of the flow of power in America.

BUDGET AUTHORITY PROPOSED FOR REVENUE SHARING PLAN, FIRST FULL YEAR

Description	Billions
General revenue sharing.....	\$5.0
Special revenue sharing:	
Urban community development.....	2.0
Rural community development.....	1.0
Education.....	3.0
Manpower training.....	2.0
Law enforcement.....	0.5
Transportation.....	2.6
Total.....	16.1

We must make provision at the outset of this freedom of action plan for both growing State and local needs and growing State and local capacity to manage their affairs.

The new funds for general revenue sharing will grow in years to come because they will be tied to the Federal personal income tax base. As that tax base expands, more unrestricted money will flow to States and localities.

To help State and local governments develop greater capacity to plan and manage their own affairs, I will send to the Congress a planning-management assistance plan, which will provide \$100 million to help

these governments make their own long-range plans and enhance their capability for the efficient use of their growing revenues.

In essence, this is what revenue sharing will do :

- for the individual taxpayer*, it will provide a stronger voice in how his tax money is spent locally, new confidence in government that comes from more “citizen control,” and the hope that, in some States and localities, taxes may be reduced, or that the rising cost of government can be met without raising taxes;
- for State and local governments*, it will not only help meet the current financial crisis, but will also wipe out rigidities and delays in Federal aid and permit them to build their capacity to respond to local needs;
- for our federal system*, it will provide new strength by assigning services to the level of government best equipped to perform them; and
- for all our people*, it will provide a means of encouraging local diversity and experimentation within the framework of our great national purposes.

Of course, these revenue sharing proposals will not be the vehicle for any retreat from the Federal Government’s responsibility to ensure equal treatment and opportunity for all. The proposals I send to the Congress will include the safeguards against discrimination that now accompany all other Federal funds allocated to the States.

This massive revenue sharing proposal is central to my philosophy of giving people the opportunity to become more involved in the decisions that affect their lives. The magnitude of the problem calls for this kind of bold move; by acting decisively and without delay, we will strengthen our federal system and respond better to the needs of our people.

Welfare reform.—One of the first steps in our review of the federal system was to sort out those activities that are appropriate for the Federal Government from those that are best performed at the State and local level or in the private sector. We decided early on one primary Federal responsibility—providing, with a combination of work incentives and work requirements, an income floor for every American family.

We knew beforehand that the existing welfare system was in desperate need of reform. We also knew that the existing system imposes a crushing and growing financial burden on States.

My welfare reform proposals, described later in this message, are an integral part of our effort to give people the ability to make their own decisions, to build the capacity of State and local government, and to encourage more orderly national growth.

By building a floor under the income of every family everywhere in America with Federal funds, we provide each dependent family a new dignity, we help State and local governments finance what is now their fastest growing expenditure, and we remove one magnet that has already drawn too many persons to our congested cities.

In government operations, form should follow function. Just as revenue sharing decentralizes power to meet one need, welfare reform sets a basic national standard to meet a different need. The decision to centralize or decentralize should be based on which method best serves the larger purposes of 206 million Americans.

Revenue sharing and welfare reform are of a piece: the level of government best equipped to respond should respond in a way that raises standards and contributes to the sum of personal freedom and human dignity.

Federal Aid to State and Local Governments

RESTORING CONFIDENCE IN GOVERNMENT

In seeking ways to reform the federal system, I have paid particular attention to the ability of the executive branch of the Federal Government to produce the results intended by the Congress and the President.

In 1971, the Federal Government will employ almost 2,900,000 civilians, operate thousands of separate programs, and spend \$212.8 billion. Through its tax laws, credit activities, grant programs, and in other ways, the Government affects millions of people and influences the disposition of many more billions of dollars than it controls directly.

Toward the end of the sixties, there was mounting evidence that our Government was so complex, clumsy, and unresponsive, that it was becoming unable to meet the needs and priorities of the people or to use efficiently the funds entrusted to it.

This must not be permitted in America.

We have already taken actions to improve the organization and management of the Federal Government and, thereby, make it more efficient and responsive.

But we must do more. The Federal Government is not organized properly to deal with the Nation's most significant problems in the domestic area. Programs that should be joined together to achieve common goals are fragmented among different departments and agencies, impairing the capacity of government to respond effectively to urgent national needs. Modernization of that structure will restore vigor to our federal system, permitting a constructive partnership among Federal, State, and local governments.

In the next few months, I shall propose sweeping legislation to help achieve these goals by merging seven existing departments and several independent agencies into four departments:

- a Department of Natural Resources,
- a Department of Human Resources,
- a Department of Community Development, and
- a Department of Economic Development.

These new departments will match the domestic programs of the Federal Government with the objectives each is intended to fulfill:

- the balanced and constructive use and conservation of the land and other natural resources of the Nation;
- the development and well-being of individuals and families;
- the quality of urban and rural communities as places for people to work and live; and
- the maintenance and strengthening of the American economy.

To continue the modernization of the Federal Government, I will also ask an extension of the President's reorganization authority. We must seek to expand current efforts to shift operating responsibility for Federal programs out of Washington and closer to the people these programs are designed to serve.

To fulfill its responsibilities, the Federal Government must attract, develop, and retain capable career executives. We must have a more

effective manpower planning and utilization system. I shall propose legislation to establish a Federal Executive Service which will permit :

- more effective career executive search ;
- flexibility in the allocation and assignment of available talent ; and
- strengthened executive development programs and policies.

By improving the organization and management of government, we will make it more responsive to the needs of the people and the new priorities of the Nation.

REFORMING THE BUDGET PROCESS

Reform of the budget process is long overdue. Fifty years have passed since the Federal budget system currently in use was adopted. The system was a major step forward in 1921. Because of congressional inaction, it has become a travesty a half-century later.

Enactment of appropriations 6 months or more after the start of the fiscal year they are supposed to cover is evidence of a major weakness. I have sent two budgets to the Congress. In each, I have had to formulate budget proposals for the year ahead without knowing what the Congress would provide in its action on the prior year's budget, which was transmitted 11 months earlier. Even now, as this message is being written, action on last year's appropriations request for one department has not been completed.

I have, therefore, had to act on parts of the budget without knowing the totals that would result. This is an intolerable situation, but one that the Congress seems to accept as the normal way of doing business. It completes action on appropriation bills over a 10- to 12-month period without any goal or determination of the total expenditures that will result after the last bill is passed.

Excess in the number and detail of appropriations often diverts attention to minutiae. It also impairs the ability of agency heads to manage their agencies responsibly and economically.

The budget is our principal instrument for coordinated management of Federal programs and finances. Close cooperation between the executive and legislative branches is needed now to make the budget an efficient and effective instrument for this purpose. Therefore we must seek a more rational, orderly budget process. The people deserve one, and our Government, the largest fiscal unit in the free world, requires it.

Furthermore, Federal credit programs which the Congress has placed outside the budget—guaranteed and insured loans, or loans by federally sponsored enterprises—escape regular review by either the executive or the legislative branch. The evaluation of these extra-budgetary programs has not been fully consistent with budget

items. Their effects on fiscal policy have not been rigorously included in the overall budget process. And their effects on overall debt management are not coordinated well with the overall public debt policy. For these reasons, I will propose legislation to enable these credit programs to be reviewed and coordinated along with other Federal programs.

TOWARD A FULL GENERATION OF PEACE

Our goal is a full generation of peace in which all nations can focus their energies on improving the lives of their citizens.

To achieve this, we must continue to work in close cooperation with our allies, move from confrontation to negotiation with those with whom we differ, and—together with our allies—maintain enough military strength to deter aggression. Sufficient and effective programs of military and economic assistance to help our friends help themselves are an integral part of our program.

National security.—This Nation's strategy for peace will—as it must—be based upon a position of military strength. The purpose of this strength is to prevent war; and, to this end, we will negotiate with those whose vital interests and policies conflict with our own.

We are pursuing negotiations on strategic arms limitations, on Vietnam, on Berlin, and on the Middle East. These negotiations are difficult and often slow, but we have the stamina and commitment necessary to proceed with patience and purpose.

As we carry on negotiations, we couple them with other efforts to achieve the same goal. The Vietnamization program is an example, and we are making good progress. By this spring, our authorized troop strength will have been cut approximately in half since the time I took office, and we will continue to bring American troops home.

Supporting these efforts, the military forces of this Nation and its allies will provide the armed might necessary to deter aggression or to deal with it effectively where necessary. We expect our allies to do more in their own behalf, and, in the spirit of the Nixon doctrine, many are taking steps in that direction. But we must also do our share. The kind of partnership we seek to forge works both ways. We have a vital interest in peace and stability abroad and we plan to maintain the capabilities necessary to protect that interest.

Our withdrawals from Vietnam and the change in our general purpose force planning and strategy permit a smaller force structure than in the past. At the same time, the preoccupation with Vietnam has limited our ability to meet some of our military needs elsewhere, particularly in NATO. We must be certain that our military forces are combat-ready and properly equipped to fulfill their role in our

strategy for peace. In addition, we face formidable Soviet nuclear and conventional forces, including increased naval forces, and a further rise in the costs of our military equipment and personnel.

For these reasons, I am recommending an increase of \$6 billion in budget authority for military and military assistance programs. This Nation has the will and the resources to meet its vital national security needs. At a time when we are urging our allies to do more and when our potential adversaries may seek military advantage, I cannot in good conscience recommend less.

We often think of military strength primarily in terms of equipment and massive organizations. While these are important, attracting and holding able citizens in the Armed Forces is the key to an effective and efficient military force. The service of Americans in uniform is worthy of respect, and I am dedicated to the goal of making all such service voluntary. This budget, and subsequent legislation which I will recommend to the Congress, will make significant progress toward ending reliance on the draft.

Foreign assistance.—Our present foreign assistance programs were established for a world that has long since changed. I will propose legislation to adapt them to the conditions of the 1970's.

We must clearly distinguish the varied purposes of foreign aid—the security of the United States and friendly nations, the long-term development of lower income countries, and humanitarian needs—and make possible a realistic assessment of our progress toward each. In 1972, our assistance programs will:

- promote a strong partnership among nations and a vigorous leadership role for multilateral development institutions;
- recognize that other nations have a growing ability and responsibility to determine their own development priorities;
- continue security assistance at a higher level than in recent years in order to help friendly nations meet the responsibility for their own defense; and
- improve coordination of our humanitarian assistance efforts.

These changes will carry out a major theme of U.S. foreign policy—less direct U.S. involvement in the affairs of other nations, less potential for friction and resentment, and a stable world order more conducive to lasting peace.

MEETING HUMAN NEEDS

The proposals that I submit today are a major step forward in the reform of our Nation's efforts to meet the needs of its 206 million citizens. They will introduce a new fairness into American life by providing:

- a basic income floor under every family with children in this Nation;
- health care to help make needed services possible for all of our people when and where such services are required;
- better systems of support for education and manpower training; and
- continued progress in assuring the civil rights of all citizens, and in controlling crime.

Income strategy.—Last year was one of great promise for the long-term income security of American families. Some of that promise reached fruition in the reform of unemployment insurance and food stamp programs:

- Unemployment insurance was extended to 4.8 million additional Americans, including farmworkers and hospital workers, and special extended benefits were established to be triggered automatically by adverse economic conditions.
- Food stamp benefits were improved by establishing national eligibility standards, requiring family allotments large enough to purchase an adequate diet, providing free food stamps to the poorest recipients, and automatically raising benefits with increases in the cost of living.

However, much of that promise was left unrealized. As I have pointed out, in 1972 I will redouble my efforts to make essential and fundamental reforms in income maintenance programs. First, and foremost, I will seek:

- *Basic welfare reform.*—Last year I proposed that our archaic and demeaning welfare system be reformed. A landmark plan that would have accomplished this was approved by the House but did not come to a vote in the Senate.

The urgency of the need for welfare reform grows with every passing day. I have already stressed the need for early enactment of the Welfare Reform Act of 1971 by the 92d Congress.

This plan would remove the principal evils of the existing system by:

- setting national eligibility standards;
 - balancing strong training and work requirements with equally strong training and work incentives;
 - giving financial relief to the States; and
 - establishing a Federal floor under benefit payments for *all* needy families with children, including those with working fathers, for the first time.
- *Social security improvements.*—I will propose a significant reform of the social security system, providing *automatic* adjust-

ments for increases in the cost of living. Such an adjustment now calls for a 6% benefit, effective retroactively to January 1, 1971, to cover the cost of living increase since January 1, 1970. I will also propose increases in widows' pensions.

Beyond these basic reforms, I will seek to harmonize related income maintenance programs with the principles of our income strategy. This will include:

- reform of services provided to welfare recipients to encourage greater accountability and effectiveness in the use of funds, and to establish national standards for foster care, with new incentives for the adoption of handicapped children; and
- proposals to put railroad retirement funds on a financially sound basis.

Improving health care.—During the current session, I will send a message to the Congress that will set out a national health strategy for the seventies and propose significant changes in the Federal role in the Nation's system of health care.

This strategy will seek to expand preventive care, to train more doctors and other health personnel, and to achieve greater equity and efficiency in the delivery of health services. It will include a new health insurance program for all low-income families with children.

The budget reflects in a preliminary way the emphasis that this administration will place on health in 1971, with:

- an increase of \$100 million to accelerate greatly the search for a means of preventing and curing cancer;
- a vigorous effort to find a cure for sickle cell anemia;
- a \$95 million increase in Federal support for schools that train our Nation's health manpower; and
- a rational policy of using Federal resources to help bring the rapid increase in medical care costs under control.

The budget also provides for:

- a substantial improvement in the quality of medical care provided to veterans with service-connected injuries;
- expansion of services for mothers and children, Indians and Alaska natives, and women who cannot afford family planning services;
- expanded programs to combat drug abuse and alcoholism;
- emphasis on assuring purity of foods and drugs; and
- encouraging greater use of less costly services and facilities in delivering medical care.

Community safety and crime prevention.—My commitment to the reform and revitalization of our system of criminal justice is

supported by this budget. The budget proposes a 32% increase in outlays to improve law enforcement, to make our judicial system fairer and more efficient, and to raise the effectiveness of correction and rehabilitation. In this way, we will:

- step up the war on organized crime and the gambling operations that finance it;
- destroy major criminal systems that import and distribute narcotics and dangerous drugs;
- strengthen local law enforcement through the special revenue sharing fund for this purpose;
- continue the antihijacking campaign to protect the Nation's air travelers;
- expand our correctional improvement programs to develop more innovative correctional institutions, and improve probation, parole, and other community-based services; and
- develop, in cooperation with State and local governments, ways to provide more accurate information on law enforcement activities.

Outlays for Crime Reduction

Guaranteeing civil rights.—The ideals of our Nation require that the civil rights of *all* citizens be respected, regardless of race, sex, religion, or national origin.

My budget for 1972 proposes to strengthen our efforts to eliminate discrimination in private as well as Federal employment, in activities supported by Federal assistance to State and local governments and other recipients, in education, in housing, and in other aspects of society.

We will take these specific steps to improve the lives of all our people:

- increase by more than 50% our efforts to prevent employment discrimination by Federal contractors and other private employers;
- increase nearly threefold the Federal assistance to school districts that are desegregating;
- reorganize the field operations of the Equal Employment Opportunity Commission to make more effective efforts to halt discrimination in private employment;
- focus the activities of the Civil Service Commission to assure equal Federal employment opportunities for all our citizens, with special emphasis on opportunity for Spanish-surnamed Americans;
- serve 46 localities with conciliation assistance through the Community Relations Service;
- expand administration of the fair housing and equal opportunity laws to increase residential housing choices for all Americans; and
- increase by 15% funds to agencies to assure nondiscrimination by recipients in their use of Federal assistance.

Education and manpower training.—The education and manpower training programs proposed in this budget reflect my determination to find better ways to carry out Federal programs. Special revenue sharing is proposed for both of these vital areas. I will also submit major reform proposals to:

- reform Federal aid programs for higher education to increase their effectiveness;
- direct more funds to students from lower income working families;
- establish a National Institute of Education for research and development; and
- provide additional training opportunities and strong incentives under the Welfare Reform Act of 1971 for employable welfare recipients to undertake suitable employment or job training.

Research and development on social problems.—The Office of Economic Opportunity will emphasize its leadership role in research, development, and evaluation in social programs.

IMPROVING OUR ENVIRONMENT

The improvement and prudent use of our physical resources is vital to our Nation's prosperity and to the goal of helping all Americans enjoy a clean environment, adequate housing, and a better standard of living. In 1972, outlays to achieve these objectives will increase by \$2.4 billion to \$26.1 billion. The actions that I am proposing will:

- expand my administration's vigorous efforts to protect and enhance the quality of our environment and recreation resources;
- revitalize housing and community development programs; and
- increase Federal research and development efforts.

Environmental quality.—The primary responsibility for protecting and enhancing the environment lies with State and local governments, industry, and the public, but the Federal Government must—and will—provide vigorous leadership.

During the past year, this administration moved forcefully to exercise that leadership:

- Major Federal pollution control and abatement activities were consolidated in a new Environmental Protection Agency;
- The Council on Environmental Quality was given a major role within the Executive Office of the President to advise on environmental problems and on national policies to deal with them;
- New legislation to strengthen national efforts for reducing pollution was proposed to the Congress; and
- Funds for major environmental quality programs were increased significantly.

Pollution control and abatement programs will get even greater attention in the 1972 budget. Outlays will be increased by \$764 million. Budget authority will rise even more, by \$1.3 billion. The higher amounts will provide for:

- doubling grants for municipal waste treatment facilities;
- curbing pollution from Federal facilities;
- expanding EPA pollution control operations, including implementation of new air quality and solid waste legislation; and
- developing new pollution abatement techniques.

Legislation is again proposed to create the Environmental Financing Authority, which will assist communities that have difficulty in borrowing at reasonable rates to meet their share of the cost of water pollution control facilities.

I shall shortly propose, in a special message to the Congress, a series of further measures to control pollution and improve the quality of our environment.

Major Environmental Quality Programs

Recreation.—Greater opportunity for leisure is valued highly in America and, as a result, the demand for recreation facilities is growing. The 1972 budget proposes a substantial increase in grants to help State and local governments provide some of these facilities.

I am recommending that the Land and Water Conservation Fund be fully funded to provide:

- grants of \$280 million to help States and localities meet local recreation needs; and
- appropriations of \$100 million for Federal acquisition to preserve nationally significant natural and historic areas.

I propose that the urban open space program be more than doubled, to \$200 million, to provide more recreational areas in and near our cities.

Cultural activities.—I have again recommended that we double the appropriation for the National Foundation on the Arts and the Humanities, so that we can bring the benefits of these great cultural efforts to an increasing number of people throughout the country.

Housing.—The housing industry has already begun to lead our economic expansion. Fiscal and monetary actions taken in the past year have resulted in a significant easing of mortgage interest rates. Federal policy must help this industry meet the pent-up demand for housing.

The effectiveness of our housing programs will not be improved by merely continuing to increase Federal subsidies. The programs must be simplified and fitted into a rational framework. Inconsistencies must be removed, along with the obsolete rigidities in statutes that at times prevent programs from operating at all.

The administration will again propose legislation to carry out these badly needed reforms, which I urge the Congress to enact.

Community development.—I will also propose reform of the community development programs of the Department of Housing and Urban Development, and of certain economic development programs of the Departments of Agriculture and Commerce. Narrowly defined categorical grant programs in this field have frequently conflicted with local priorities and unnecessarily generated red tape.

With special urban and rural revenue sharing programs, we will permit localities to plan and carry out community development in accordance with their own needs.

Initial funding of the new urban program will begin at a level of \$1 billion for the second half of 1972, upon enactment of the necessary legislation. An additional \$2 billion appropriation is anticipated for 1973, when the program will be in effect for a full year. Rural development revenue sharing will be \$1 billion in the first full year.

Science and technology.—Science and technology can make major contributions to the public by developing creative solutions to a wide range of national problems that will help us all enjoy a better life. I am proposing in this budget a substantial expansion in outlays for federally supported research and development.

While a large portion of this increase is needed to strengthen our defense capabilities I am also recommending substantial increases in civilian areas to:

- make greater use of our scientific and engineering capabilities and resources to cope with major national problems such as pollution, crime, health, transportation, and other environmental and social problems;
- strengthen research essential to the advancement of our technology and economic productivity; and
- increase our investment in fundamental science which leads to the long-term progress of our society.

As an example of the concern of this administration for the use of science and technology in the public service, I am recommending

that the budget for the National Science Foundation be increased from \$506 million in 1971 to \$622 million in 1972. A significant portion of these added funds will be directed to research on pressing national problems.

THE LONGER VIEW

Federal budget decisions must be made with an awareness of their influence on the economy and on resource allocation in the future as well as the present.

Too often in the past, consideration of objectives and priorities focused only on Federal spending. Only immediate issues, rather than longer term goals, were considered. And this fact was ignored: when we increase the priority of some programs, the relative priority assigned to others must be reduced. In short, the sum of the resources allocated to the various functions—such as health, education, defense—cannot exceed the total resources that we command.

Looking to the future, we find that resources likely to be available to the Nation grow more rapidly than the expenditures required by existing commitments. But our freedom to use these resources will shrink as we approach each future year and make financial or program commitments in the interim. Thus, the allocation of each year's resources is largely a reflection of our past priorities.

As we make choices this year, we will be determining the use of our available resources and expenditures in future years.

The resource allocation questions that the Nation will answer—either explicitly or by default—are:

- Shall we increase the available margin by ending some existing commitments?
- Who should use the margin—the Federal Government, State and local governments, or private citizens?
- To what objectives should the available margin be applied?

In answering these questions, the Nation will be setting its priorities for the future.

My preferences are clear. *One great objective of my administration is to increase the role of private citizens and State and local governments in allocating our national resources in accordance with individual and local needs. Another great objective is to set minimum standards to make certain that every American family in every locality is treated with a fairness that reflects the national conscience.*

Ours is not a regimented economy, nor will it be. Yet, we cannot ignore the influence of the budget on the economy and on the use of our national resources in the present and in the future. To do so is to take the chance that government spending will preempt resources that should be left to be used by private citizens or State and local governments.

In the last few decades, the Federal Government, disturbingly, has taken over the determination of how too many of the Nation's resources will be allocated. In spite of the Federal Government's domination, resources have not been appropriately allocated to overall national needs. Instead, they have been allocated by a process in which small additions were usually made in existing programs, and a few new categorical grant programs were created each year. These new grants were generally aimed at alleviating some narrow problem—without reference to the Nation's real need in that general problem area.

I have in this budget proposed the outlines of a new process for allocating funds according to national priorities.

Instead of continuing "more of the same" to more than a hundred narrow categorical grant programs, I have proposed replacing them with six *special* revenue sharing programs designed to deal with major national problems. These are problems that have different characteristics in different parts of the country. With these special revenue sharing funds, State and local governments can set their priorities within the national objective, design a solution fitted to their particular needs, and solve their problems locally.

The *general* revenue sharing program provides unrestricted funds to State and local governments to achieve our Nation's top domestic priority—the creation of a system of government that is effective and responsive to the needs of all of the American people. General revenue sharing will allow State and local governments to overcome their immediate fiscal crises and to come to grips with those problems that concern their citizens most.

The revenue sharing programs which I have proposed result from shared goals, provide federally shared revenues, and involve shared Federal-State-local responsibility for solving America's most important problems. Our system of government must be one of shared goals—shared revenues—shared responsibilities.

CONCLUSION

The 1972 budget befits a strong, free, compassionate, and enlightened Nation.

- It reverses the trend of the past decade toward Federal domination of the Nation's decisions, and begins to make government more responsive to the will of the people.
- It recognizes that a strong defense is vital to all our objectives, most of all to the attainment of peace.
- It provides the resources needed to meet the Nation's commitments at home, with a new standard of fairness to the poor and sick.

- It accepts the principle that budget policy, together with monetary policy and the active cooperation of the private sector, must be used to help achieve full employment in peacetime with relative price stability.

This budget expresses our fiscal program for the New American Revolution—a peaceful revolution in which power will be turned back to the people—in which government at all levels will be refreshed, renewed, and made truly responsive. This can be a revolution as profound, as far-reaching, as exciting, as that first revolution almost 200 years ago.

RICHARD NIXON.

JANUARY 29, 1971.

PART 2

REVENUE SHARING

REVENUE SHARING

The revenue sharing plan being proposed by the President is the cornerstone of his belief that we must revitalize the American system of government. The plan, with its general and special revenue sharing programs, will provide \$16.1 billion for State and local governments in a way that will:

- assign both revenues and management discretion to those levels of government closest to the problems;
- alleviate the fiscal problems of State and local governments by providing additional unrestricted revenues through *general* revenue sharing and by eliminating the present matching requirements of the categorical grants being absorbed into *special* revenue sharing; and
- make State and local elected officials responsible for and capable of dealing with their problems. This is good government and good sense.

State and local expenditures have increased faster than their tax revenues. From 1948 to 1969 total State and local expenditures increased from \$21 billion to \$119 billion. Total revenues rose from \$20 billion to \$98 billion. The property and consumer taxes on which these governments primarily rely generate revenues that do not grow as fast as the economy. Substantial increases in tax rates have therefore been necessary to raise the required revenues. State and local government debt has also risen rapidly during this period—from \$19 billion to \$135 billion, an increase of over 600%. In 1971, States and localities face a revenue gap of \$10 billion, despite generous Federal grants and more than 450 major tax increases which have been adopted in the past dozen years by State governments alone.

The Federal Government has attempted to respond to the fiscal problems of the State and local governments since the end of World War II. That response was a massive increase in Federal aid from \$2 billion in 1948 to \$24 billion in 1970, mainly in the form of specifically targeted grants. However, it is now evident that assistance in the form of categorical grants, even of great magnitude, has not removed State and local fiscal problems, and in some cases these problems have been aggravated.

At the same time, this form of assistance has had other profound effects on the nature of government at all levels. One unfortunate result is the proliferation of narrow, overlapping programs. Other results are program delay and uncertainty, restrictions on the authority and responsibility of governors and mayors, and the creation of nearly autonomous functional bureaucracies at each level of government. Some Federal grant programs, although addressed to problems of national interest, actually undermined the ability of State and local governments to deal with problems of local concern by distorting their allocation of funds through matching requirements.

REFORM THROUGH REVENUE SHARING

Revenue sharing is being proposed both as a fiscal aid and as a means of making State and local governments more responsive to the peoples' local needs. The President's revenue sharing proposal will have the following results:

1. *A more rational allocation of governmental responsibilities and functions.* The administration seeks to sort out those program responsibilities that are best handled at the national level and those where State and local governments should bear the major share of responsibility.

2. *State and local governments capable of producing results.* Increased Federal aid with sharply diminished federally imposed restrictions and categories, should enable responsible State and local officials to do a far better job.

3. *State and local governments can be held responsible by their constituents for producing results.* The fiscal crisis many States and local governments are now facing encourages them to "pass the buck." The revenue sharing programs will remove this option should there be any disposition to transfer responsibility to the Federal Government.

4. *A governmental system capable of being responsive to the needs of individuals in different localities.* Ultimately, reform in government comes down to a basic issue—the quality of American life for individual Americans. Nothing less than the ability of government to meet essential needs is at stake.

5. *A restoration of public confidence in our system of government.*

THE PRESIDENT'S PROPOSAL

In recognition of the problems and in acceptance of the fundamental responsibilities enumerated above, the President's proposal would provide for:

—sharing a portion of Federal revenues with State and local governments without any program or project restrictions. This

- general* revenue sharing would grow each year as the personal income tax base of the Federal Government grows;
- sharing additional Federal revenues for use by State and local governments in special broadly defined areas of national concern. This *special* revenue sharing would have no requirement of matching funds; and
- maintaining only those existing grant programs for which there is a clear, continuing national requirement.

This program recognizes the responsibility of State and local governments to provide public services which generate predominantly local benefits, and increases their capability to provide these services. As a corollary, it also recognizes an increased Federal responsibility to support research on innovative ways to provide local public services, as the benefits of such research are shared by the whole Nation. This budget increases Federal support for the following types of research activities:

- basic research and analysis of regional and local problems;
- experiments and demonstrations of innovative ways to provide local public services; and
- collection and distribution of information.

These research activities will support the revenue sharing plan by increasing our understanding of regional and local problems and by providing responsible State and local governments a richer menu of alternative ways to do their jobs.

At the same time, in order to increase the capacity of State and local governments to manage their own affairs and put the flexible funds provided under revenue sharing to effective use, the President is proposing a substantial reorientation and enlargement of the existing comprehensive planning program. The budget provides for a \$100 million planning-management program, making the funds available to State and local government units to upgrade and expand their administrative capabilities.

Of course, revenue sharing cannot be the vehicle for any weakening in governmental responsibilities to insure equal treatment and opportunities for all. The President's revenue sharing proposal will include the same safeguards against discrimination which now accompany all other Federal funds allocated to the States.

It is contemplated that the general, unrestricted, revenue sharing portion of the new plan would become effective on October 1, 1971; the special revenue sharing grants would go into effect by January 1, 1972. On a *first full-year basis*, appropriations and other budget au-

thority totaling \$16.1 billion would be devoted to the new revenue sharing system:

- Five billion dollars for *general* revenue sharing, which would be paid in equal quarterly installments to State and local governments starting in the fourth quarter of this calendar year; and
- Eleven billion dollars for *special* revenue sharing grants, which State and local governments would be able to spend in the broad functional area for which they are designated—transportation, education, urban and rural community development, manpower training, and law enforcement.

The general revenue sharing funds will be distributed primarily on the basis of the population of each State, with an equitable pass-through to local governments, while the special revenue sharing program funds will be distributed in various ways, depending upon what is appropriate for each broad program area.

BUDGET AUTHORITY PROPOSED FOR REVENUE SHARING PLAN, FIRST FULL YEAR

Description	Billions
General revenue sharing.....	\$5.0
Special revenue sharing:	
Urban community development.....	2.0
Rural community development.....	1.0
Education.....	3.0
Manpower training.....	2.0
Law enforcement.....	0.5
Transportation.....	2.6
Total.....	16.1

The resources for the new revenue sharing plan would come from revenues generated from the Federal personal income tax base and from the conversion of a set of narrower categorical grants into the new program. For 1972, the budget includes specific proposals totaling \$10.4 billion of budget authority (and corresponding outlays of \$9.5 billion) for the grants to be converted to special revenue sharing. Thus, an additional \$0.7 billion over and above the total raised by conversion of existing categorical grants into special revenue sharing, is being proposed for the first full year's budget authority of the special revenue-sharing grants. The outlay effect of this addition is estimated at \$0.5 billion.

Total aid to State and local governments will increase substantially. Since the entire plan is proposed to be in effect by January 1, 1972, its impact on the 1972 budget totals can be summarized as follows:

[In millions]		
	Budget authority	Outlays
General revenue sharing:		
First full year.....	\$5,000	\$5,000
Fiscal year 1972.....	3,750	3,750
Special revenue sharing:		
First full year.....	11,086	10,152
Specific amounts in 1972 budget for grants to be converted.....	10,377	9,611
Additional amounts to be proposed, full-year basis.....	709	541
Fiscal year 1972 requirement (approximately 50% of preceding line).....	356	269
Allowance in 1972 budget for additional revenue sharing from above:		
General.....	3,750	3,750
Special.....	356	269
Total.....	4,106	4,019

The total amounts shown at the end of the preceding table are the additional entries included in the various summary tables of the budget to conform the budget details to the total revenue sharing plan.

Descriptions of the individual special revenue sharing programs and the programs recommended for conversion to them are presented below. It is expected that all other grants proposed in the budget and not included in this list will be maintained through 1972. However, as conditions change, and as experience is gained, further changes can and should be considered.

Characteristically, the programs recommended for conversion to special revenue sharing programs deal with top priority national problems which have State and local solutions and benefits. In these areas, State and local governments are in a better position to design and carry out responsive and effective programs. Eliminating Federal administration of these programs will relieve State and local governments of the burden of unnecessary Federal redtape and review. This streamlining should ultimately result in significant reductions in costs at all levels of government. State or local governments, with the knowledge that funds—in an equivalent or, most commonly, a more generous amount—will now be available under the proposed special revenue sharing program, can decide for themselves whether or not specific activities carried on under the categorical grant programs should be continued.

In addition to all of the following special revenue sharing programs, the President's proposal calls for \$5 billion to be distributed to the States as general revenue sharing without restrictions.

Urban community development.—The 1972 budget proposes a substantial special revenue sharing program for community development in urban areas. It recognizes the Federal Government's responsibility to provide funds to deal with the problems of our cities in an amount which more than matches that previously made available for this purpose through categorical grants. It also recognizes that the form of these problems varies significantly from city to city, and that local officials familiar with the individual cities are in the best position to frame solutions to them.

The sources of funds for this special revenue sharing program are displayed in the following table. It is further proposed that the support of community action agencies (CAA's) be incorporated in the Urban Community Development program of special revenue sharing on a basis which allows CAA's a needed and appropriate transition period to full local control by January 1, 1973.

Description	Budget authority	Outlays
Items included in budget details for 1972:		
Department of Housing and Urban Development:		
Urban renewal.....	¹ \$800	\$1,300
Model Cities grants.....	² 70	450
Community development (special revenue sharing).....	1,000	150
Grants for basic water and sewer facilities.....	² 100	170
Rehabilitation loans.....	³ 50	36
Total, full-year basis and fiscal year 1972.....	2,020	2,106

¹ Estimated reservations financed by 1971 budget authority of \$200 million and 1972 budget authority of \$600 million.

² Estimated commitments financed by 1971 budget authority.

³ Estimated reservations financed by 1972 budget authority and repayments.

Rural community development.—Similarly, a special revenue sharing fund of \$1 billion would be available to develop our Nation's rural communities as determined by their responsible State and local governments. This fund would replace a set of present, unnecessarily restrictive, categorical grants and other cost-sharing arrangements directed toward this same general purpose.

There is a high degree of variation among geographic regions of the country in the character of rural migration and the economic and social conditions of rural America. Under this new program, funds will be distributed to States for use in rural areas. The development projects appropriate for each community will be determined by State and local governments according to the needs of that community. Through this combination of special revenue sharing, local initiative, and local decisionmaking, rural areas can strengthen rural enterprise, increase eco-

conomic opportunities for rural residents, and improve rural communities.

The table below shows the existing programs and new money which will make up the rural community special revenue sharing program. Rural community action agencies will be handled in the same way as their urban counterparts.

(In millions)

Description	Budget authority	Outlays
Items included in budget details for 1972:		
Department of Agriculture:		
Extension service.....	\$149	\$149
Rural environmental assistance (formerly agricultural conservation) program.....	140	150
Rural water and waste disposal facilities (grants).....	¹ 42	61
Forest Service grants for forestry assistance.....	21	21
Great Plains conservation program.....	11	11
Water bank program.....	10	10
Resource conservation and development program (grants).....	4	4
Tree planting assistance.....	1	1
Department of Commerce:		
Regional development programs (except Indians).....	38	21
Economic development assistance (except Indians).....	227	214
Appalachian Regional Commission.....	278	290
Subtotal.....	921	932
Additional amounts from general revenues:		
Full-year basis.....	79	43
Fiscal year 1972.....	(41)	(22)
Total, full-year basis.....	1,000	975
Total, fiscal year 1972.....	962	954

¹ Estimated obligations financed by 1971 budget authority.

Note.—Because of the special Federal relationship with American Indians, special provisions will be made for them.

Elementary and secondary education.—More than any other Federal activity, the school-aid programs of the Office of Education reflect the excesses of the categorical grant system. The present 75 titles or authorities result in over 100 separate grant programs. The maze of set-asides, special conditions, priorities, plans, and approvals for these grants is bewildering to States and local school districts alike. It leads to a condition in which full-time coordinators must be appointed in order to maintain and obtain information about Federal aid. Federal aid is often provided for needs and purposes which have already been addressed by State legislation, yet the States are unable to transfer or convert the funds to other purposes that are going unserved. While these statutes routinely purport to prohibit Federal “control” of education, they surely impede local control. Bookkeeping requirements

and "grantmanship" distract educators from the content and purpose of their important responsibilities to school children and to the public.

The administration proposes to draw together this wide array of overlapping and contradictory authorizations into a new special revenue sharing program for elementary and secondary education. This program will provide support for educational activities in broad areas where the Federal Government has developed strong interests in strengthening school programs over the years. These include vocational education, assistance to schools in areas affected by Federal activities, compensatory education for the disadvantaged, education of children afflicted by handicapping conditions, and general support. At the same time, the States would have discretion as to *how* they would accomplish each of these major purposes.

The table below shows the sources of funds for this program:

[In millions]		
Description	Budget authority	Outlays
Items included in budget details for 1972:		
Department of Agriculture:		
School lunch program (excluding assistance for needy children).....	\$175	\$171
Nonfood assistance (cafeteria equipment).....	16	16
State administrative expenses.....	2	1
Department of Health, Education, and Welfare:		
School assistance in federally affected areas.....	440	487
Elementary and secondary education:		
Title I—educationally deprived children.....	1,500	1,440
Title II—library services.....	80	73
Title III—supplementary services.....	143	142
Equipment and minor remodeling.....		39
Strengthening State agencies.....	33	27
Education for the handicapped.....	35	34
Vocational education.....	384	382
Subtotal.....	2,808	2,812
Additional amounts from general revenues:		
Full-year basis.....	192	188
Fiscal year 1972.....	(96)	(92)
Total, full-year basis.....	3,000	3,000
Total, fiscal year 1972.....	2,904	2,904

Manpower training.—A special revenue sharing program for manpower training expenditures by State and local governments is particularly appropriate. It is consistent with the administration's earlier proposal to reform the structure of Federal programs in this area. This is a service area in which there is a high degree of variation among geographic regions in the character of unemployment problems, in labor market conditions, and in job needs.

Under this program, funds will be distributed to State and local governments on the basis of factors such as the size of the local labor force, the incidence of unemployment, and the proportion of low-income families and individuals. State and local prime sponsors will be responsible for developing new manpower services, drawing upon existing services available from public employment offices, local educational institutions, and welfare programs.

The table below shows the amounts involved in this program:

(In millions)		
Description	Budget authority	Outlays
Items included in budget details for 1972:		
Department of Labor: Manpower training services.....	\$1,565	\$1,443
Subtotal.....	1,565	1,443
Additional amounts from general revenues:		
Full-year basis.....	435	307
Fiscal year 1972.....	(217)	(153)
Total, full-year basis.....	2,000	1,750
Total, fiscal year 1972.....	1,782	1,596

Law enforcement.—The Law Enforcement Assistance Act already provides broadly defined program support to States, with a portion of the allocated funds passed through on a mandatory basis to local government law enforcement agencies. Grants may be used in accordance with determinations of appropriate State agencies for a range of law enforcement and criminal justice improvements (courts, corrections, police, juvenile delinquency prevention and rehabilitation, addict treatment, public education, and statistics on crime). Funding proposed for this program in 1972 will increase over 1971 by \$108 million in budget authority and \$127 million in outlays.

(In millions)

Transportation.—A special revenue sharing fund of \$2.6 billion would be available to develop balanced transportation systems serving local urban and rural areas. State and local governments would have the responsibility for determining the allocation of these funds to achieve this objective as appropriate in each area. A pass-through provision in the sharing formula will assure that local governments receive an equitable share of this fund. Federal funding for the Interstate Highway System will be maintained separately until the completion of that program. The present categorical grants for each type of transportation have led to an inefficient combination of systems in many areas. The new transportation fund would contribute to the balanced transportation system we all need.

² Estimated obligations financed by budget authority of prior years and by \$15 million budget authority in 1972.

CONCLUSION

Revenue sharing:

- for the individual taxpayer*, will provide a stronger voice in how his tax money is spent locally, new confidence in government that comes from more “citizen control,” and the hope that in some States and localities taxes may be reduced, or that the rising cost of government can be met without raising taxes;
- for the State and local government*, will not only meet the current financial crisis, but will wipe out the rigidities and delays in Federal aid and build its capacity to respond to local needs;
- for our federal system*, will provide new strength by assigning services to the level of government best equipped to perform them; and
- for all our people*, will provide a means of encouraging local diversity and experimentation within the framework of our great national purposes.

This giant step of revenue sharing is central to the administration's philosophy of involving people more actively in the decisions that affect their lives. The magnitude of the problem calls for this kind of bold move; by acting decisively and without delay, we will strengthen our federal system and fulfill the needs of our people.

PART 3

PERSPECTIVES

BUDGET AUTHORITY

The Congress must provide budget authority, generally in the form of appropriations, before Federal agencies can commit the Government to spend or lend funds. A total of \$249 billion of budget authority is requested:

- new obligation authority of \$247 billion for spending; and
- lending authority of \$2 billion.

Of the total budget authority proposed for 1972, the Congress will have to act on \$170 billion. The remaining \$79 billion will become available under existing law without additional action by the Congress. Such authority consists mainly of trust fund programs (for which the receipts that finance the programs are generally appropriated automatically under existing law) and interest on the public debt (for which budget authority is automatically provided under a permanent appropriation).

BUDGET AUTHORITY

[Fiscal years. In billions]

Description	1970 actual	1971 estimate	1972 estimate
Available through current action by the Congress:			
Previously enacted	\$141.6	\$156.4	-----
Proposed in this budget	-----	-----	\$153.0
To be requested separately:			
For supplemental requirements under present law ¹	-----	7.9	3.0
Upon enactment of proposed legislation	-----	0.7	7.7
Allowances:			
Added amounts for revenue sharing	-----	-----	4.1
Pay increases (excluding Department of Defense)	-----	0.5	1.0
Contingencies	-----	0.5	1.2
 Subtotal, available through current action by the Congress	 141.6	 166.0	 170.2
 Available without current action by the Congress (permanent authorizations):			
Trust funds (existing law)	61.5	65.4	73.6
Interest on the public debt	19.3	20.8	21.2
Other	4.6	2.3	3.1
Deductions for offsetting receipts	-14.0	-18.2	-19.0
 Total budget authority	 213.0	 236.3	 249.0

¹ Includes pay increase for the Department of Defense.

Not all of the budget authority provided for 1972 will be fully obligated or spent in that year.

- Budget authority for some major procurement and construction programs covers the estimated full cost of various projects at the

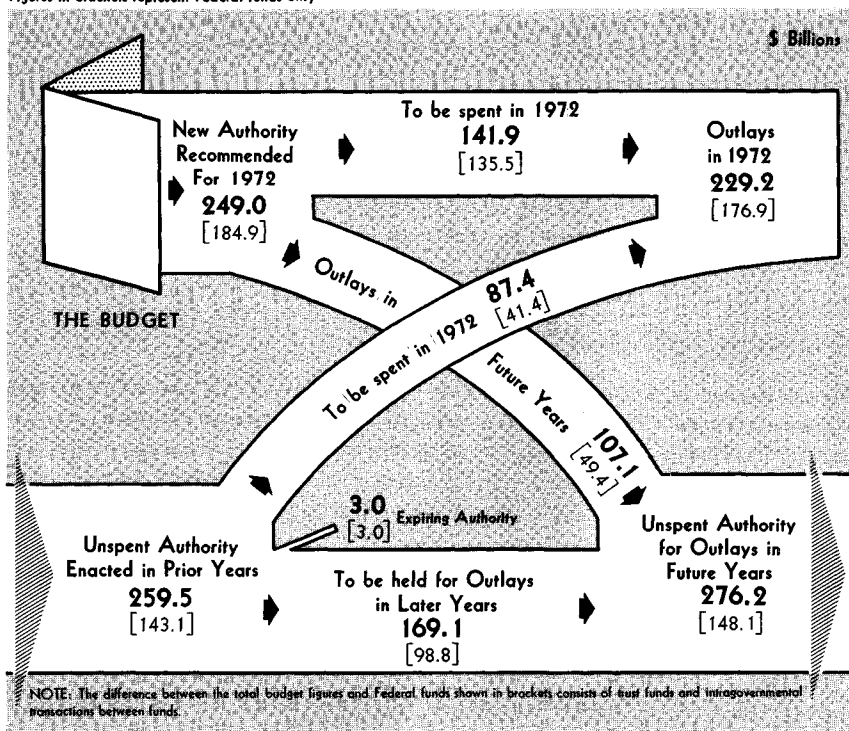

time they are started, even though the outlays take place over a number of years as the programs move toward completion.

- Budget authority for many loan and guarantee or insurance programs also provides financing for a period of years or represents a contingency backup in the event of defaults or other claims.
- Budget authority for trust funds represents mainly receipts collected under special taxes or payments from Federal funds, which are used as needed over a period of years for benefit payments and other outlays specified in the law.

As a result, there is always a substantial carryover of unspent budget authority from previous years, most of which is earmarked for specified purposes, and is not available for new program operations (see Special Analysis G, "Balances of Budget Authority").

1972 Budget - Relation of Budget Authority to Outlays

Figures in brackets represent Federal funds only

As shown in the chart above, \$87 billion of outlays in 1972, almost two-fifths of the total, will be made under budget authority enacted for earlier years. Conversely, about two-fifths of 1972 budget authority will not result in outlays until future years.

BUDGET FUNDS AND THE FEDERAL DEBT

The budget covers financial transactions of two principal kinds of funds: Federal funds and trust funds.

Federal funds are derived mainly from taxes and borrowing. Most of these are not dedicated to any specific Government purpose. Trust funds, on the other hand, are collected and used for specified purposes, such as the payment of social security and unemployment insurance benefits.

The budget combines the receipts and outlays for both types of funds, after deducting the transactions that flow between them. For this reason, it has been called the "unified budget". By and large, the budget measures the transactions of the Government with the public. As shown in the following table, the budget surplus or deficit is the principal determinant of the change in Federal debt held by the public.

BUDGET FINANCING AND CHANGE IN DEBT OUTSTANDING, 1970-72

[Fiscal years. In billions]

Trust funds investments.....	10.0	6.2	11.6
Change in gross Federal debt	15.5	24.4	22.4

*Less than \$50 million.

The expected deficit in 1972 will cause *Federal debt held by the public* to grow from \$302.5 billion at the end of 1971 to \$313.1 billion at the end of 1972. As the following charts show, however, the long-term trend of the ratio of debt held by the public to gross national product is down and the ratio of interest paid on debt held by the public to gross national product will remain relatively stable.

Federal Debt and Interest as a Percent of GNP

Gross Federal debt is the sum of debt held by the public and debt held within the Government, such as the investments in Treasury debt issues by the social security trust funds.

Some Government agencies are authorized to issue their own debt instruments to the public or to other Government agencies and funds. Such borrowing is part of the Federal debt. At the end of 1970, the outstanding debt of such agencies that was held by the public was \$10 billion. This amount is expected to decline to \$8.1 billion by the end of 1972.

Gross Federal debt will rise from \$382.6 billion on June 30, 1970, to an estimated \$429.4 billion on June 30, 1972. About \$18.6 billion, or approximately 40%, of this increase is in debt held by Federal agencies and trust funds, mainly reflecting the investment of trust fund surplus receipts in Treasury debt.

A general statutory debt limit covers almost all of the gross public debt issues, but most borrowing by Federal agencies other than the Treasury is excluded from the limit.

The concept *Federal debt subject to limitation* is roughly consistent with the administrative budget concept that was used until the 1969 budget. The administrative budget and the Federal funds part of the unified budget are also generally similar in concept. This is why changes in the Federal debt subject to limit are more closely related to the Federal funds surplus or deficit than to the unified budget surplus or deficit. This relationship is shown in the following table:

FEDERAL FUNDS FINANCING AND CHANGE IN DEBT SUBJECT TO LIMIT,
1970-72

[Fiscal years. In billions]

Description	1970 actual	1971 estimate	1972 estimate
Federal funds surplus (—) or deficit	\$13.1	\$25.5	\$23.1
Means of Federal funds financing other than debt:			
Increase (—) or decrease in deposit fund balances.....	—0.2	—0.4	—0.4
Seigniorage on coins (—).....	—0.3	—0.4	—0.6
Increase or decrease (—) in cash balances and other means of financing (net).....	1.1	—0.9	0.1
Total, means of financing other than debt	0.7	—1.7	—1.0
Increase or decrease (—) in Federal funds investment in Federal debt.....	0.1	0.6	0.2
Reclassification of investment in enterprises.....	1.6	-----	-----
Decrease or increase (—) in other Federal debt not subject to limit (net).....	1.0	0.5	1.2
Change in debt subject to limit	16.5	24.9	23.6

The Federal funds deficit in 1972 is estimated to be \$23.1 million, and the debt subject to limit is estimated to change by \$23.6 billion. The difference between the Federal funds deficit and the change in the debt subject to limit is reconciled in the table above.

A substantial part of Federal fund deficits—and, therefore, a substantial part of the growth in debt subject to limit—is associated with transactions between Federal funds and trust funds. These transactions are largely Federal fund payments to social insurance trust funds (such as the Federal Government's matching contribution for supplementary medical insurance, and interest paid on debt securities held by the trust funds). From 1960 through 1970, there was a cumulative Federal fund deficit of \$96 billion, more than \$50 billion of which was attributable to transactions with trust funds. Indeed, a

FEDERAL FUNDS RECEIPTS AND OUTLAYS

SELECTED ECONOMIES AND REFORMS IN THE 1972 BUDGET

The changing pattern of national needs sometimes renders Government programs obsolete. Some Federal programs should never have been started in the first place. All too often, however, *all* Federal activities continue unless vigorous efforts are made to curtail them.

There are other programs which, while not obsolete, have declined in importance relative to the conditions and priorities of today's world. These must be carefully scrutinized and adjusted each year to obtain the most efficient and effective use of Federal resources. Programs designed to attack the problems of the 1950's or 1960's can be expected to lose relevance as we move into the 1970's.

The 1972 budget incorporates the results of a diligent search to uncover inefficient, obsolete, or lower priority programs. Termination, reduction, or reform of such programs are being proposed, with estimated savings in outlays in 1972 of \$2.9 billion. On a full-year basis, and taking into account savings of a nonreoccurring nature, these proposals would yield \$3.7 billion—i.e., funds that can finance newer programs, or reduce the need for additional borrowing, or additional taxes.

A listing of the various proposals to secure economies are presented on subsequent pages. One major group of proposals requires the enactment or amendment of substantive legislation. If the necessary legislation is enacted, the total 1972 outlay savings would be \$1.9 billion. The largest item in this group is the sale of additional stockpile materials no longer required. Reforms in the Medicare and Medicaid programs would also result in significant net savings, as would the conversion of farm operating loans to an insured loan program.

Another group of proposals does not require substantive legislation, but could be accomplished through a combination of administrative and appropriation action. Implementation of these proposals would result in 1972 outlay savings of \$1.0 billion. Included are the termination and reduction of certain projects in both the Atomic Energy Commission and the National Aeronautics and Space Administration; and elimination of the special milk program of the Department of Agriculture, which is not focused on the needy.

The savings from a number of the proposals in the following listing have not been reflected in the 1972 budget totals. Nonetheless, the administration urges their approval with the same vigor as its other recommendations. Examples include the payment of duplicate burial benefits for deceased veterans and the sale of the Alaska railroad. Some of these actions have been repeatedly recommended to the Congress in earlier years, but without success. An additional \$0.4 billion saving in 1972 outlays could be realized from enactment of these proposals.

Other programs, not shown on the following table but discussed in Part 2, Revenue Sharing, will be folded into the new revenue sharing proposals.

**Less than \$100 thousand.

¹ Includes impact of both substantive changes in law and proposed 10% growth limit in appropriation bill.

CEILINGS ON FEDERAL OUTLAYS

In recent years, the Congress has imposed a limit on overall outlays for each fiscal year. For 1970 and 1971 essentially similar outlay limitations were established:

- A limitation base was fixed in an amount equal to the total outlays estimated in the last previous budget;
- This initial limitation is subsequently increased or decreased in the amount of congressionally approved changes to the outlays shown in the budget; and
- Further revisions in the limitation are made for increases in designated uncontrollable payments up to a specified amount.

Outlay ceiling for 1970.—The outlay ceiling for the 1970 budget was adjusted in the Second Supplemental Appropriation, 1970 (Public Law 91-305). The revised limitation base was established at the February 1970 outlay estimate, \$197.9 billion. The Congress approved changes from the February budget estimates which added nearly \$1.7 billion to the limitation base, including \$1.1 billion for civilian and military pay raises. Changes in uncontrollable outlays added a further \$230 million, bringing the total outlay ceiling to \$199.8 billion. Actual outlays totaled \$196.6 billion or \$3.2 billion below the adjusted legal ceiling.

Outlay ceiling for 1971.—Congress also enacted the 1971 outlay ceiling in the Second Supplemental Appropriation, 1970 (Public Law 91-305). The outlay ceiling for the year as a whole is now estimated at \$214.5 billion. This is \$1.7 billion above the present estimate of actual outlays, \$212.8 billion. The relationship between the legislated outlay ceiling and actual outlays is summarized in the following table.

RELATION OF 1971 OUTLAY CEILING TO CURRENT ESTIMATES

[In billions]

Initial congressional ceiling (February 1970 estimate).....	\$200.8
Net changes in estimates of uncontrollable items for which limitation is adjusted (increase of up to \$4.5 billion is allowed by law).....	4.0
Effect of congressional action relative to the February estimates:	
Action in 91st Congress, 2d session:	
Appropriation bills.....	1.7
Laws requiring supplemental appropriations in this session.....	2.2
Other actions and inaction.....	1.4
Anticipated additional action in 92d Congress, 1st session.....	4.4
Current estimate of 1971 outlay ceiling.....	214.5
Current estimate of actual outlays.....	212.8
Current estimate of ceiling in excess of outlays.....	1.7

Adjustments to the initial outlay limitation for 1971 are expected to total \$13.7 billion. Over one-half of these adjustments result from: (1) increases of \$4.0 billion in payments of social insurance trust funds, interest on the debt and other designated uncontrollable items, and (2) pay increases of \$3.2 billion over February 1970 estimates. Because the Congress did not enact postal rate increases proposed in the February 1970 budget, \$1.2 billion was added to outlays and to the outlay ceiling. Other significant increases are anticipated during the current congressional session for social security benefits, \$1.1 billion, and for public assistance grants, \$1.0 billion.

CHANGES IN ESTIMATED OUTLAYS, 1971

[In billions]

THE LONG-RANGE OUTLOOK

The Federal Government has a far-reaching impact on the overall allocation of economic resources. Furthermore, the effects of each year's decisions concerning the budget are felt for an extended period of time. Therefore, it is imperative that the budget be viewed in the context of the whole economy, and that budgetary policy be placed in long-range perspective.

Last year's budget document and Economic Report of the President emphasized the long-range implications of current decisions. The primary conclusion of that investigation was that—over the 1971–75 period—the margin between projected revenues and built-in outlays would not be sufficient to cover the cost of all the initiatives likely to be proposed.

This section develops a more extensive framework for examining our national priorities and the long-range implications of the budget.

Specifically, this section of the budget undertakes to:

- Present projections of Federal revenues and expenditures—under existing and proposed programs—and the estimated budget margin remaining for 1976;
- Review the role of the Federal budget in affecting resource allocation patterns;
- Present projections of total resources and their allocation, and the resource margin remaining for calendar 1975; and
- Outline the implications of alternative uses of the budget margin.

The fiscal outlook.—The budget margin is the potential Federal surplus, assuming current and proposed tax legislation and no new Federal initiatives beyond those contained in this budget.

Last year the margin remaining in 1975 was projected at \$22 billion. During the ensuing year, many things have taken place to alter that projection. Additional inflation increased both projected revenues and outlays. Congress has passed some legislation that the President did not request and has not acted on some that he did propose. Additional initiatives are proposed in this budget. All the changes, taken together, reduce the \$22 billion margin to \$12 billion. The margin projected for 1976 is \$30 billion, the difference between projected revenues of \$315 billion and projected outlays of \$285 billion for existing and proposed programs.

Between 1972 and 1976, gross national product is expected to rise by some \$400 billion, to more than \$1.5 trillion. Potential output, in real terms, is projected to grow by 4.3% annually. This rate of growth will be exceeded during the early years as the current gap between real and potential GNP is closed. Finally, inflation, even though expected

Equals: margin ¹	12	18

¹ Because the margin is zero in 1972, the projected cumulative margin is \$12 billion in 1975 and \$30 billion in 1976.

to diminish during the coming year, will also add to the growth rate of nominal (i.e., current dollar) GNP.

The growth of nominal GNP will be associated with substantial increases in wages, other personal income, and corporate profits over the next 5 years. As a result, Federal receipts are estimated to increase by \$86 billion between 1972 and 1976 on a full-employment basis.

Budget outlays are expected to increase because of factors beyond governmental control. These factors include population growth and increases in costs, such as pay increases for Government workers. Outlays for programs such as social security, and veterans compensation and pensions are expected to rise because of growing numbers of eligible beneficiaries and changes in the cost of living. Under the assumptions used here, such built-in uncontrollable increases in existing programs will average about \$9 billion a year between 1972 and 1976, raising 1976 outlays for these programs by \$37 billion over their 1972 level. Termination, modification, and reform of existing programs, as proposed in this budget, will reduce outlays by almost \$4 billion a year when fully effective. The outlay projections reflect these reductions.

The \$30 billion projected to be available in 1976 must cover the 1976 costs of all initiatives begun in each of the 4 years from 1973 through 1976. Certainly it will be insufficient to cover all demands for further Government programs even without consideration of demands for further tax reduction or reduction of the public debt. This insufficiency becomes clearly evident when the rates of increase in

outlays for new programs are examined. If new programs with a first-year cost of \$3 billion were to be started in each of the years 1973 through 1976, then the 1976 margin would disappear. Moreover, relatively slight changes in economic assumptions could substantially affect the size of the potential 1976 surplus. The potential surplus is a slender reserve, and claims upon it will have to be carefully weighed in terms of our national priorities.

In deciding what shall be done with the \$30 billion budget margin that now seems possible for 1976, consideration must be given to the allocation of limited resources.

The role of the budget in resource allocation.—Together, the revenue and outlay sides of the budget reflect national priorities for stabilization, allocation, distribution, and efficiency.

- Stabilization policy seeks to create a balance between demand and available productive resources; achievement is measured by full employment and price stability.
- Allocation refers to the broad uses to which the resources are put and can be measured by the shares of GNP devoted to various functions, such as health, education, and business investment, or by the shares devoted to public versus private use.
- Distribution policy is concerned with the distribution of benefits from the use of resources and is measured by the distribution of income or resource use among the various groups within society (such as income or age groups).
- Efficiency refers to the specific manner in which resources are employed and can only be measured by the individual and social benefits or output produced per unit of resources employed (e.g., health output per health resource used or product per worker).

Each year, budget decisions influence the ways in which national resources will be used. The influence may be direct and identifiable. The Federal Government will purchase \$74 billion of goods and services for defense in 1972. Since the Government is the only purchaser for most defense goods, it determines the amount spent for this purpose.

Federal purchases for other uses, \$28 billion in 1972, also directly command resources. The net effect of these purchases is less certain, however, since Federal purchases may only substitute for private or State and local spending that might otherwise have taken place.

Categorical grants affect the allocation of resources among various functions by influencing the allocative processes of State and local governments. In 1970, State and local purchases of goods and services accounted for 12.4% of GNP; Federal grants constituted 18.4% of State and local government income, and matching requirements absorbed approximately an eighth of the remainder.

State and local governments can, however, use Federal funds as a substitute for their own revenues to provide basic services. That is, if a State or local government's expenditures and revenues are both growing, the grant may fund the expenditure growth for the designated function and the revenue growth may be used for other purposes. For example, State and local governments allocated 18.1% of their own revenues to streets and highways in 1955. By 1959, 3 years after the Federal Highway Act of 1956, they allocated only 13.5% of their own revenues to streets and highways. Thus, the increased Federal spending may have freed some State and local revenues for other purposes.

Federal transfer payments increase the purchasing power of the recipients. Programs such as social security, unemployment insurance, and veterans compensation give the individual recipient complete discretion to use the funds as he sees fit. Even so, resource allocation is affected to the extent that the expenditure patterns of recipients differ from the pattern of the average taxpayer. Federal categorical transfers—such as Medicare—influence private allocation decisions because they effectively lower the out-of-pocket costs to recipients for these services. As in the case of grants, however, it would be incorrect to assume that Federal outlays are identical to net additional purchases of these services. They may only substitute for private purchases that would otherwise have been made. For example, between 1960 and 1965—prior to the enactment of the Medicare and Medicaid programs—individuals steadily increased the percentage of their consumption expenditures allocated to medical care, from 5.9% to 6.5%. By 1969, this percentage (net of Medicare payments) had dropped to 6.2%.

The administration's proposals for revenue sharing and for welfare reform are major steps toward greater decentralization, moving decisionmaking from the Federal Government to State and local units of government and to individuals. Rather than restricting aid to State and local governments to federally specified purposes, or even specific projects, revenue sharing will provide funds to State and local governments that local officials can allocate according to the particular needs of their community. Instead of providing federally determined services to lower income groups, as present programs generally do, welfare reform will increase cash payments to the poor, giving them the freedom to spend the funds in accordance with their individual needs. Further, the elimination of matching-fund requirements in the President's revenue-sharing plan will enable State and local governments to provide necessary public services with less revenues. Thus, revenue sharing, while increasing Federal outlays, need not increase the share of GNP devoted to the public sector.

This analysis ignores the allocation effects of three important—but extremely complex—aspects of budget policy; namely, Federal credit programs, the tax structure, and programs (such as agricultural subsidies) whose effect is predominately on prices.

Projected resource allocation.—The section that follows contains projections of resource allocation patterns for calendar year 1975, in order to illustrate the ways in which budget decisions could affect these patterns. The projections are extrapolations of past trends and commitments and should not be taken as accurate forecasts of the future. They show, in some sense, the claims on resources that are likely to exist in 1975 with the current and proposed tax system and Federal programs. The projected resource margin is somewhat analogous to the projected budget margin presented earlier in this section. The resource margin should not be taken as an indication of resources that will be left unutilized if the budget margin is unspent. Rather, it is a rough approximation of the resources whose use will be influenced by the disposition of the budget margin.

For these purposes, GNP has been divided into eight functions: health, general government (which includes environmental protection, law enforcement, and government administration), housing investment, business investment (and net exports), education (and man-

power), basic necessities (which includes food, clothing, actual and imputed rent and household operations), transportation, and an "all other" category (which includes Government spending for defense, space, and international purposes and personal consumption expenditures for recreation, personal care and personal business). The appendix to chapter 3 of the 1971 Economic Report of the President contains a description of the functional classification. The two differences between the functions described there and in this section of the budget is that net exports and inventory investment are included in "business investment" and defense is included in "all other" in this document.

The allocation of GNP among these functions—in calendar years 1955 and 1969, and projected for 1975—is shown in the table above. The calendar years 1955 and 1969 are chosen because they were years of relatively full employment. The allocation of all private expenditures and of the total (consolidated) government budget for each function is also shown. The unallocated portion of GNP projected for calendar year 1975 is not allocated to either the private or public sectors of the economy. That division will ultimately depend, to a great extent, on the disposition of the projected budget margin.

The private, public, and Federal share of the total funds expended for each of the eight functions are shown in the table below. The computed public share of each function includes Government transfers as well as purchases. It should be noted, however, that these payments only absorb resources when the recipient uses them to purchase goods and services. Similarly, the Federal share includes Federal

¹ Total expenditures, less Government purchases and transfers received by individuals, as a percent of GNP for that function.

² Federal, State, and local purchases and transfers for each function as percent of GNP for that function.

³ Federal purchases, grants and transfers for each function as percent of GNP for that function.

⁴ Includes Medicare transfer payments.

⁵ Includes Veterans and Labor transfers for education and manpower.

⁶ Includes all other Government domestic transfer payments.

grants to State and local governments. (These are netted out in computing the total public shares to eliminate double counting.) In computing the public and Federal shares, all transfer payments, except Medicare and certain education transfers, were allocated to basic necessities and all grants, except general revenue sharing, were allocated to the designated function. The general revenue-sharing funds—unlike the special revenue-sharing funds—have not been allocated among the eight functions in the table although they were included in computing the total public and Federal shares of GNP. The Federal expenditures used for the 1975 projections shown in all the tables are projections of current programs and the initiatives proposed in this budget.

Increasing Federal or public support for any function does not necessarily imply increasing Federal or public control. For example, the increased public share of basic necessities is a result of increases in transfer payments from such programs as social security and welfare reform. Similarly, revenue-sharing expenditures are used to compute the Federal share of GNP even though the allocation decisions will be made at the State and local government level. The allocation of resources between the public and private sectors is shown below. (Note that the indirect public support, i.e., Government transfers, have been included in the public and Federal shares of each function in the table above.)

¹ Federal transfers and grants.

² State and local transfers

³ Total public purchases and transfers.

The direct Federal role in allocation decisions is expected to diminish sharply. On the other hand, although the ratio of total Federal expenditures to GNP will be reduced slightly, the percent of GNP represented by total public expenditures is likely to be maintained at approximately the 1969 level. Unless Government programs that are no longer required, or which are not worth the resources invested in them, are terminated, the share of total productive activity devoted to Government purposes at all levels will inevitably increase.

The share of GNP allocated to each function is measured in current (i.e., nominal) dollars. The alternative is to use constant dollars—that is, to deflate the current dollar figures by the increase in the implicit functional price deflators from some arbitrarily chosen base year. The use of current dollars means that each year's relative price is used to evaluate the resources used in that year. This is especially important in measuring the public versus private share. Because public goods and services are not evaluated in the market, prices for Government expenditures cannot be determined on the same basis as prices in the private sector. By an accounting convention, all Government pay increases are treated as price increases, implying no productivity growth in the public sector. Therefore, constant dollar figures tend to understate the relative resources used by the public sector.

The share of GNP allocated to health, general government, and investment in housing are expected to increase over the next 5 years.

The dramatic changes in the share of GNP, in relative prices, and in public support for *health* purposes make this function a good example of the concepts discussed in this section. Between 1955 and 1969, health's share of GNP increased by more than half, health-care prices rose more rapidly than overall prices, and the share of health services purchased with Government funds increased by more than two-thirds.

Because health resources (i.e., supply) cannot be quickly created, the rapid increase in demand tended to be translated into increases in prices and not solely into improving health care. Because third parties—Government and private insurers—have paid a large proportion of medical bills, the price increase did not work as it might have to slow the increase in the quantity demanded.

Studies by the National Center for Health Statistics indicate, however, that as the share of health services purchased with Government funds has increased, so has the amount of health services used by the poor. Thus, at this point in time, the primary effect of rapidly rising health expenditures may have been on the distribution of health services among income groups. The trends in relative shares and public support are projected to continue through calendar year 1975.

General government has been one of the growth industries of recent

years. The growth will continue in the future as emphasis on law enforcement, environmental quality, and State and local government operation leads to increased use of resources and upward adjustments of salary scales in these areas.

The *housing investment* function includes private investment for residential construction and public housing and community development efforts. These are expected to grow rapidly as the full-employment budget is kept in balance and monetary conditions continue to ease. Historically, housing has frequently been the residual sector which has expanded or diminished to accommodate the net change in all the sectors combined.

The share of GNP allocated to *business investment* is assumed to change little over the next 5 years unless this function receives a disproportionate share of the resource margin. This assumption is consistent with the assumed rate of economic growth that underlies all the projections in this long-range section.

The projections of expenditures for the *education* function (which includes manpower training) clearly indicate the influence of the Nation's changing demography. During the next decade, the relatively large number of children born in the early 1950's will be leaving school and entering the labor force. Between calendar years 1955 and 1969, while the proportion of the population in school rose from 22.9% to 29.1%, education's share of GNP increased by more than two-thirds to 6.3%. This was the most rapid increase of any of the eight functions.

Between calendar years 1969 and 1975, however, the changing age distribution of the total population will reverse the previous trend in the proportion going to school. The projection assumes that slackening demand will be felt in both resource use and the percentage increase in teachers' salaries vis-a-vis other State and local government employees. These factors, in conjunction with the new revenue-sharing proposals, should tend to reduce the local funds required for education.

The share of GNP allocated to basic necessities, transportation, and all other uses is also expected to decline over the 1969-75 period (unless the margin remaining is devoted primarily to these purposes).

The historical decline in the share of resources used to provide *basic necessities* is expected to continue despite some influences in the other direction. The primary cause for the relative decline is that families tend to spend a declining portion of increases in income on basic necessities and average per capita income is expected to increase. On the other hand, the increase in the public share of these expenditures, especially through welfare reform and food stamp programs, will tend to moderate the decline. This is another example of Government programs changing the distribution of resource use among income groups.

While *transportation* expenditures will increase in absolute terms, the share of GNP spent for transportation is expected to diminish. There are trends in both directions. The trend to two- and three-car families is not expected to continue at its recent pace. Also, the slower rate of price increase, relative to most other products, that has usually been characteristic of the automobile industry tends to reduce the relative amount of money needed to acquire a given level of transportation services. On the other hand, the number of young adults in the population will grow rapidly over the next 5 years, increasing the potential market. Another factor tending to moderate transportation's relative decline is the anticipated increase in public expenditures for this function.

The private portion of *all other* expenditures includes recreation, personal business, and foreign travel; spending for all of these is likely to increase more rapidly than GNP. On the other hand, public spending for defense, space, and international programs will decline as a share of GNP if little or none of the budget margin is used for these purposes.

Budget alternatives.—The projections for calendar year 1975 show 1.2% of GNP—about \$18 billion in nominal dollars—not allocated to any function or sector. This figure is about 85% of the potential Federal budget margin projected for that calendar year (the average of the fiscal 1975 and 1976 budget margins). Federal policies in the next 5 years will be influential in determining how the remaining 1.2% of GNP will actually be allocated in calendar year 1975—and who will be deciding upon its allocation among the various functions.

A number of extreme examples can be used to illustrate the likely effects of alternative ways of using the potential budget margin. It might be allocated to Federal purchases of independent goods, such as defense, which will have little impact on private expenditures. It might be allocated to certain types of complementary goods, such as airport construction, which could tend to encourage increased private expenditures for the same function (i.e., transportation), or to substitute goods, such as mass transit, which would tend to displace private spending for transportation. Thus, the effects of choosing one of these three alternatives would be reflected in the allocation of GNP among the eight functions previously defined.

The current revenue-sharing proposals already provide 0.4% of GNP to State and local governments. If the budget margin is used to expand general revenue sharing, then decisions made at the State and local government level would determine the allocation of 1.6% of GNP among the eight functions. If they were to allocate their increased resources to airport construction or mass transit, the effects might be similar to those of Federal programs in these areas.

States might use these Federal funds to reduce their taxes from what they would otherwise be. Another alternative would be to reduce Federal taxes by the amount of the budget margin. As a final example, if the margin were realized as such, and used to reduce the public debt, credit available to the private sector would increase, encouraging private spending. Each of the last three possibilities would return resources to the private sector and thereby let individuals make more of their own decisions and diminish the role of government.

These examples illustrate the point that future claims upon budgetary resources should be carefully weighed in terms of national priorities and the probable impact of proposed new programs on the allocation of the Nation's resources.

IMPROVED MANAGEMENT OF THE FEDERAL GOVERNMENT

The ultimate test of government is its service to the public. There is substantial evidence that the effectiveness of our programs has been impaired by obsolete organizational structures and cumbersome management systems. A comprehensive effort has been initiated to correct these deficiencies and to make Federal programs more responsive to the needs of the people they serve.

Structural reform.—The keystone of this program is structural reform. The Federal Government is not organized properly to deal with the Nation's most significant problems in the domestic area. Programs that should be joined together to achieve common goals are fragmented among different departments and agencies, impairing the capacity of government to respond effectively to urgent national needs. Modernization of that structure will restore vigor to our Federal system, permitting a constructive partnership among Federal, State, and local governments.

The first steps to improve the organization of the Federal Government and make it more relevant to the problems of the times have been taken.

- The Executive Office of the President has been reorganized, establishing
 - the Domestic Council, for review and planning of domestic policy;
 - the Office of Management and Budget, to improve program coordination, evaluation, management, personnel, and information systems throughout the Federal Government;
 - the Council on Environmental Quality to advise on measures required to preserve and enhance our environment;

- the Office of Telecommunication Policy, to coordinate our efforts in this vital area;
 - the Property Review Board, to insure that the public receives the full measure of value from all federally held lands; and
 - the Council on International Economic Policy, to coordinate and advise on matters of international economic policy.
- Responsibility for Federal pollution abatement programs and for pollution standards has been consolidated in a new Environmental Protection Agency;
 - Marine and atmospheric programs have been brought together in a new National Oceanic and Atmospheric Administration;
 - The Postal Service was established, taking the Post Office Department out of politics and permitting the greater flexibility necessary for improved management.

The next step in this program will be initiated with the introduction of sweeping legislation calling for the merger of seven existing departments and several independent agencies into four departments:

- a Department of Natural Resources to achieve a balanced and constructive use of the land and other natural resources of this Nation;
- a Department of Human Resources to achieve the development and well-being of individuals and families;
- a Department of Community Development to achieve a higher quality of life in urban and rural communities; and
- a Department of Economic Development to maintain and strengthen the American economy.

In order to achieve other improvements in Federal organization, extension of the President's reorganization authority will also be proposed.

Management systems.—Organization effectiveness does not flow automatically from structural reform. The ability of an organization to fulfill its basic mission depends upon the strength of its management. To meet the Federal Government's high level career personnel needs, a more effective manpower planning and utilization system is needed. Legislation will be proposed to establish a Federal Executive Service which will permit more effective career executive search, flexibility in the allocation and assignment of available talent, and strengthened executive development programs and policies.

Accurate, relevant, and timely information is also required for effective policymaking, program evaluation, and program management. Steps have been taken to improve information systems within the executive branch. For selected programs, periodic reports will be generated that mark program accomplishments and costs against

planned objectives. The reporting system on the distribution of Federal grants to other governmental units will be strengthened. An information system is being developed to assist in the evaluation of potential revenue and expenditure impacts of executive policy and legislative proposals.

Delivery systems.—The final and perhaps most important element in the President's efforts to correct deficiencies and make the Federal Government more responsive is the delivery system, getting the information and dollars to the recipient. Continued emphasis will be placed on reducing barriers to effective interaction between the the Federal Government and the public. The basis for better coordination of Federal domestic programs has been established with the creation of uniform boundaries and office locations for each of the 10 Federal regions. Regional councils, composed of regional directors of the major grantmaking agencies, now have the primary responsibility for coordinating the various programs. Measures to reduce the paperwork burdens placed on the public will be continued. The existing effort to provide State and local governments and the public with information on Federal assistance will be strengthened.

PART 4

REVENUES

71

REVENUES

This section of the budget describes the major sources of budget receipts, sets forth the economic assumptions on which the receipts estimates are based, and discusses the legislative proposals affecting them.

The detail of budget receipts by source is shown in table 12 in part 8. Proprietary receipts are identified in table 13, part 8, as are transactions between Federal agencies (interfund and intragovernmental transactions). These latter transactions are omitted from receipts and deducted from budget authority and outlays to avoid double counting. Thus, they do not affect the budget surplus or deficit.

SUMMARY

Total budget receipts in 1972 are estimated at \$217.6 billion, compared with \$194.2 billion in 1971, an increase of \$23.4 billion.

The anticipated expansion of economic activity and the corresponding growth of individual and corporate income are expected to provide increased budget revenues in 1972. Changes will also result from revisions in taxes scheduled under existing law, such as increased social security tax rates and tax reductions under the Tax Reform Act of 1969. In addition, estimated receipts for 1972 reflect:

- Proposed legislation to raise the taxable income base for the old-age, survivors, disability, and health insurance programs from \$7,800 to \$9,000 effective January 1, 1971, which will add \$2.8 billion to employment tax receipts in 1972;
- The recently announced revision in depreciation guidelines, with an estimated direct revenue loss of \$2.7 billion in 1972; and
- Proposed legislation to defer tax liability for certain corporations engaged in foreign trade.

Composition of budget receipts.—The Federal tax system relies predominantly on income taxes. In 1972:

- Income taxes paid by individuals and corporations are estimated at \$93.7 billion and \$36.7 billion, respectively. Combined receipts from these income taxes will account for 60% of total budget receipts;
- Social insurance taxes and contributions will produce an estimated \$57.6 billion, 26% of the total;
- Excise taxes imposed on various commodities and services are expected to provide \$17.5 billion in receipts, 8% of total budget receipts; and
- Other taxes and miscellaneous receipts will amount to an estimated \$12.1 billion, 6% of the total.

¹ Includes both Federal funds and trust funds.

ECONOMIC ASSUMPTIONS

Budget receipts reflect both tax laws and economic conditions. The underlying strength of our private economic system, together with the policies reflected in this budget and a complementary monetary policy, are expected to bring about the economic expansion shown by the figures in the table below.

ECONOMIC ASSUMPTIONS

[Calendar years. In billions of dollars.]

Description	1969 actual	1970 pre- liminary	1971 estimate
Gross national product.....	931	977	1,065
Personal income.....	749	801	868
Corporate profits before tax.....	91	82	98

Full-employment receipts.—The receipts that would be produced by existing and proposed tax laws if economic resources were fully employed are estimated to be \$214.2 billion in 1971 and \$229.3 billion in 1972. These estimates assume that corporate profits before taxes are 10.3% of current dollar GNP at full employment, that taxable personal income is 73.4% of full employment GNP, and that wages and salaries are 54.7% of full employment GNP.

CHANGES IN BUDGET RECEIPTS

The estimated changes in receipts resulting from projected levels of income and from already legislated and proposed tax changes are shown in the following table:

CHANGES IN BUDGET RECEIPTS

[In billions of dollars]

	1970 actual	1971 estimate	1972 estimate	Change, 1971 to 1972
Receipts under December 1970 tax rates, excluding income tax surcharge and Tax Reform Act of 1969

Deferred tax liability for certain corporations engaged in foreign trade.....			-.2	-.2
Other.....			+3	+3
Receipts including proposed legislation.....	193.7	193.7	220.3	+26.6
Other changes:				
Acceleration of certain tax payments by administrative regulation.....		+1.2		-1.2
Acceleration of depreciation writeoff by administrative regulation.....		-.7	-2.7	-2.0
Total receipts from existing and proposed legislation.....	193.7	194.2	217.6	+23.4

The estimated increase in budget receipts from 1970 to 1971 is \$0.5 billion. This relatively small increase is due mainly to the termination of the income tax surcharge on June 30, 1970. Whereas the surcharge added \$9.7 billion to 1970 receipts, it is expected to add

only \$1.2 billion to 1971 receipts, a difference of \$8.5 billion. Termination of the surcharge offsets the rise in receipts due to higher incomes, which was itself unusually small because of the economic slowdown.

Budget receipts in 1972 are estimated to rise by \$23.4 billion from 1971, chiefly because of the expected growth in personal and corporate income. Increases from this growth will be offset to some degree by the reductions under the reform and relief provisions of the recent Tax Reform Act and the administrative changes in the tax treatment of depreciation.

The proposed increase in the taxable wage base (from \$7,800 to \$9,000 per year) for social security payroll taxes will add \$0.1 billion to receipts in 1971 and \$2.8 billion in 1972. These increases will finance recommended improvements in social security benefits. In addition, social security receipts will rise by \$1.7 billion in 1971 and \$3.6 billion in 1972 as a result of the higher payroll taxes that went into effect on January 1, 1971.

RECEIPTS BY SOURCE

Individual income taxes.—Individual income tax receipts are estimated at \$93.7 billion in 1972, \$5.4 billion more than in 1971. The increase results from growth in personal taxable income, but is reduced substantially by forthcoming tax reductions enacted in the Tax Reform Act of 1969. Main sources of this tax relief for individuals, which take effect January 1, 1972, are:

- An increase in the personal exemption from \$650 to \$700;
- An increase in the standard deduction from 13% (up to \$1,500) to 14% (up to \$2,000);
- A decrease in the maximum tax on earned income from 60% to 50%; and
- Elimination of the phase-out of the low-income allowance.

Corporate income taxes.—Tax receipts from this source are estimated at \$36.7 billion in 1972, an increase of \$6.6 billion over the previous year. This reflects the rising corporate profits expected in calendar year 1971. Administrative action allowing accelerated write-off of business depreciation costs offsets some of the increase that otherwise would occur due to this growth, reducing 1971 receipts from this source by \$0.7 billion and 1972 receipts by \$2.0 billion.

Social insurance taxes and contributions.—Receipts from this source are expected to total \$57.6 billion in 1972, up by \$8.6 billion from 1971. Included in the total are social security and other payroll taxes, unemployment insurance taxes and deposits, Federal employee

retirement contributions, and payments by the elderly for supplementary medical insurance. The rise in collections reflects:

- An anticipated increase in the dollar volume of payrolls covered by the social security system and by other retirement and insurance programs;
- The increase in the combined employer-employee payroll tax from 9.6% to 10.4% effective January 1, 1971; and
- Proposed legislation to increase the present taxable earnings base from \$7,800 to \$9,000, effective January 1, 1971.

The increase in the contribution and benefit base—the annual earnings on which social security contributions are paid and the base for determining social security benefits—will restore the relationship between the base and general earnings levels that existed in the early 1950's. Since one of the goals of social security is the replacement, in part, of lost earnings, the proposed increase in the earnings base will prevent a relative deterioration of the benefits that would occur if the earnings base fell substantially below general earnings levels.

Excise taxes.—Excise taxes are levied on a variety of manufactured products, activities, and services. Receipts from these taxes in 1972 are estimated to rise by \$0.7 billion over 1971, to a total of \$17.5 billion. The recently enacted extension of current excise tax rates on automobiles and on telephone services to December 31, 1973, will provide \$0.6 billion in 1971 and \$1.9 billion in excise tax collections in 1972 that would not be forthcoming had scheduled rate reductions taken place.

User charges.—In many areas of Government activity, where special benefits accrue to specific individuals or groups, charges are imposed on users or specific beneficiaries to provide a more equitable sharing of the cost of these Government services. Receipts from this source in 1971 and 1972 have been increased by legislation enacted in the past session of Congress covering part of the costs of the planned major expansion of the national airways system and the airport development program.

Legislation will again be proposed for additional user charges in the field of transportation. For highway users, a 2-cent-per-gallon increase is recommended in the present 4-cent-per-gallon tax on diesel fuel. A change is also proposed in the present fixed-rate use tax on heavy trucks to a graduated scale based on weight.

Other receipts.—Estate and gift taxes, customs, and miscellaneous receipts are estimated to total \$12.1 billion in 1972. Estate and gift taxes are estimated to increase by \$1.6 billion to \$5.3 billion. Most of this increase is nonrecurring, representing the recently enacted speedup of estate tax collections.

PART 5

THE FEDERAL
PROGRAM BY FUNCTION

THE FEDERAL PROGRAM BY FUNCTION

This section discusses the Federal programs recommended for 1972 in terms of the functions or purposes they are intended to serve. The functional classification arranges Federal funding by mutually exclusive categories according to their principal purpose, regardless of the agency administering the program. Data are also presented on a functional basis in several summary tables in Part 8. The functional classification differs from those used in Part 2 of the separate volume of Special Analyses. There, a program may be placed in more than one category, depending upon the analytical purpose to be served.

SUMMARY

Total budget outlays in 1972 are estimated at \$229.2 billion, compared with \$196.6 billion in 1970 and \$212.8 billion in 1971. The 1972 total includes \$228.3 billion of expenditures and \$0.9 billion of net lending.

Major functions.—The distribution of 1972 budget outlays among major functions may be summarized as follows:

- National defense accounts for \$77.5 billion, or 33.8% of the total.
- Human resources programs—including education and manpower, health, income security, and veterans benefits and services—account for \$96.2 billion, or 42.0% of the total.
- Physical resources programs—including the agriculture and rural development, natural resources, commerce and transportation, and community development and housing—represent \$25.5 billion, or 11.1%.
- Interest amounts to \$19.7 billion, or 8.6 %.
- Programs in other functions—international affairs and finance, space research and technology, and general government—will account for \$12.2 billion, or 5.3% of total outlays.

Loan account.....	2,131	1,611	946	2,038

¹ Compares with budget authority for 1970 and 1971, as follows:

1970: Total, \$212,973 million (NOA, \$206,177 million; LA, \$6,796 million).

1971: Total, \$236,263 million (NOA, \$235,187 million; LA, \$1,076 million).

² Includes allowance for all-volunteer force and civilian and military pay increases for Department of Defense.

Allowances and adjustments.—In addition to outlays in functional categories, the budget includes several lump-sum allowances:

- \$4.0 billion for the proposed general and special revenue sharing program (this is over and above the \$9.5 billion included in the functional totals for grant programs to be converted to special revenue sharing);
- \$1.0 billion for pay raises for civilian agencies (the national defense total includes a comparable allowance of \$2.4 billion for military and civilian pay raises in the Defense Department); and
- \$1.0 billion for unforeseen contingencies and for programs on which detailed proposals have not yet been completely formulated.

Budget authority and outlay *totals* do not include the contributions the Government makes, as an employer, to retirement trust funds for Federal employees and interest received by trust funds on their investments in Federal debt securities. These amounts are included in each function and then deducted as lump sums to avoid double counting. The transactions occur solely within the Government accounts, and do not result in any flow of funds to or from the public. Since the same adjustments are made on the receipts side of the budget, the budget surplus or deficit is not affected.

BUDGET OUTLAY TRENDS 1945-72

The size and composition of budget outlays have changed substantially over the last 25 years.

1945-50.—The end of World War II brought a sharp decline in total budget outlays from \$95 billion (44% of gross national product), to \$43 billion in 1950 (16% of gross national product. Defense spending, which reached a peak of \$82 billion in 1945 dropped to \$13 billion within 2 years and remained at that level through 1950. Spending for human resource programs jumped from \$2.7 to \$14.0 billion. This reflected the sharp rise in veterans benefits, which reached \$8.8 billion in 1950 and accounted for over 20% of total outlays. Outlays for international assistance also increased during this period.

1950-55.—The Korean war caused a rapid rise in total Federal spending and a marked shift in its composition. Total outlays rose to 21% of gross national product in 1953 and then declined to 18% by 1955. Defense spending increased to more than \$50 billion in 1953, and then dropped to \$40 billion in 1955. As a result, defense rose from 30% of budget outlays in 1950 to a peak of 66% in 1953 and 1954. While the level of spending for human resource programs in 1955 was roughly the same as in 1950, the composition changed significantly. Veterans benefits declined nearly 50%, while income security payments doubled.

1955-60.—During this period budget outlays rose by 35%, a rate of increase slightly greater than that of the total economy. Defense spending increased \$6 billion (14%), while all other outlays were up \$18 billion (64%). Over half of the rise in nondefense spending was in human resources, largely income security. Outlays for commerce and transportation, mainly highways, rose by almost \$4 billion. In 1960, for the first time since 1951, defense spending accounted for less than half of total outlays. Human resources reached 27.6% of outlays, up from a low of 14.8% in 1953.

1960-65.—Budget outlays grew 28% during this period while gross national product rose 32%. Defense spending rose by \$7.7 billion from 1960 to 1964, but a \$4.0 billion reduction in 1965 held the increase over this period to only 8%. In contrast, all other outlays rose by

Total	95.2	43.1	68.5	92.2	118.4	196.6	229.2

* Less than \$50 million.

49%. The most notable change in this period was the nearly thirteen-fold increase in space research and technology, from \$0.4 billion to \$5.1 billion. Human resources spending rose by \$10 billion (39%), spearheaded by income security with a \$7.5 billion rise. Three-fifths of the \$4.4 billion rise in spending for physical resources was for commerce and transportation programs.

1965-70.—This period was marked by significant increases in both nondefense spending and, through 1968, defense spending. Total outlays, which increased by 66% between 1965 and 1970, rose from 18.1% of gross national product to 21.6% in 1968 and then dropped to 20.6% by 1970. Defense spending went up from \$49.6 billion in 1965 to \$81.2 billion in 1969 and declined to \$80.3 billion in 1970. Spending for human resources more than doubled—from \$35.4 billion to \$72.8 billion. Income security accounted for half of this increase and health for 30%, as it rose from \$1.7 billion to \$13.0 billion with the start of Medicare. Physical resource programs rose from \$14.5 billion to \$21.1

billion, while spending on space research and international affairs dropped by \$2.1 billion.

1970-72.—The 1971 and 1972 budgets reflect efforts to improve and reform Federal programs. Almost two-thirds of the increase in total spending between 1970 and 1972 is devoted to human resources, which are estimated to reach \$96.2 billion in 1972. Defense spending, which dropped to \$76.4 billion in 1971 is estimated to rise to \$77.5 billion in 1972. Spending on physical resources is estimated to total \$25.5 billion in 1972, \$4.4 billion above 1970. The 1972 budget also allocates additional outlays of over \$4 billion to initiate the proposed revenue-sharing program.

NATIONAL DEFENSE

The defense programs recommended in this budget are necessary to provide the military strength needed to assure our security. From our position of strength, we seek meaningful negotiations to achieve peace and to reduce or limit the need for military forces. It is essential to our policies and to the effectiveness and readiness of our military forces that budget authority and outlays for national defense programs increase.

Program highlights.—Our strategic forces are the cornerstone of the free world's deterrent against nuclear attack and must always be sufficient for this crucial role. We seek a negotiated limit or reduction of strategic nuclear forces in the Strategic Arms Limitation Talks (SALT). But in the absence of an agreement, we must proceed with planned improvements to assure the effectiveness of our strategic forces in the face of a formidable Soviet capability.

Our general purpose forces, together with those of our allies, must be adequate to counter a major Warsaw Pact attack in Europe or a Chinese attack in Asia, to assist our allies against lesser threats in Asia and simultaneously to contend with a minor contingency anywhere. In addition to an adequate deterrent at the strategic and tactical nuclear level, we and our allies also need to maintain strong conventional capabilities. Together with our allies we intend to maintain and improve our NATO forces. Funds in this budget will assist our allies and friends assume a greater share of the burden for their own defense. Our general purpose forces will be kept modern, fully ready and trained to meet a range of contingencies.

Our national security strategy is already meeting its first tests. Initiatives for peace in South Vietnam have been combined with the Vietnamization program. This May, authorized troop levels in Vietnam will be approximately half the strength approved when this administration took office. Reductions in approved force levels have also been possible in Thailand, Korea, Japan, Okinawa, and the Philippines.

*Less than \$0.5 million.

¹ Compares with budget authority for 1970 and 1971, as follows:

1970: Total, \$76,689 million (NOA, \$76,689 million; LA, less than \$.05 million).

1971: Total, \$74,838 million (NOA, \$74,838 million; LA, less than \$.05 million).

² Entries net of offsetting receipts.³ Includes both Federal funds and trust funds.⁴ Excludes offsetting receipts which have been deducted by subfunction above: 1970, \$979 million; 1971, \$1,193 million; 1972, \$1,133 million.

Budget highlights.—Budget authority for military functions and military assistance will increase \$6 billion to support these policies. Outlays will increase a lesser amount due to longer leadtime procurements. These increases provide for:

- A high level of readiness and increased modernization for the general purpose and reserve forces;
- A continuing high level of military assistance;
- The improvement of our strategic forces;
- A more effective research and development effort; and,
- Progress toward an all-volunteer armed force.

Atomic Energy Commission outlays are estimated to increase \$43 million, to \$2.3 billion in 1972. These increases are partially offset by sales of \$920 million from the stockpile of strategic and critical materials.

Department of Defense.—This Nation's ability to pay the full cost of an adequate military program has never been questioned. Outlays for the military and military assistance programs will increase from \$74.5 billion in 1971 to \$76.0 billion in 1972. This increase will provide improvements essential for our national security. However, the resources required for our military programs will continue to decline as a percent of gross national product (GNP) and will require a smaller proportion of our total output in 1972 than in any year since 1950.

The military forces that support our new strategy for peace are being adjusted to reflect the needs of the 1970's. As shown in the

accompanying summary table, total strength will be reduced from 2.7 million men in 1971 to 2.5 million men in 1972; this is 0.2 million below the peacetime level in 1964.

SUMMARY OF ACTIVE MILITARY PERSONNEL AND FORCES

Description	Actual		Estimated

¹ The information shown above, together with other information in this part, constitutes the report required pursuant to subsection (d)(2) of section 412 of Public Law 86-149, 73 Stat. 322, as amended by section 509 of Public Law 91-441, 84 Stat. 913.

² The number of aircraft per squadron may vary.

In order for the forces planned for 1972 to perform their mission, they must be maintained at a high level of readiness, equipped with the most effective modern weapons and fully staffed with trained personnel. Increases are provided to improve operational readiness in such critical areas as NATO, to continue modernization of the Navy and to improve a number of selected systems. Special effort will also be devoted to increasing the effectiveness of the process through which weapons systems are developed, tested, and produced.

To attract and retain capable personnel will require improved compensation and benefits. In addition to amounts estimated for future pay increases in accord with the pay comparability principle, this budget provides funds to continue the transition to a volunteer force.

SUMMARY OF THE DEPARTMENT OF DEFENSE BUDGET PROGRAM

[In billions of dollars]

Total obligational authority.....	49.8	76.3	73.8	78.0

¹ Excludes Military Assistance and Foreign Military Sales programs.

Strategic forces.—The function of the strategic forces is to deter nuclear attack or to retaliate decisively should this fail. This capability is assured through three major strategic systems—intercontinental ballistic missiles (ICBM's), submarine-launched ballistic missiles (SLBM's), and strategic aircraft—each capable of surviving a first strike and inflicting unacceptable damage upon any aggressor. Together, these forces include: more than 1,000 Minuteman and Titan ICBM's; 656 SLBM's; and over 500 long-range manned aircraft. These forces are supported by an early warning system and extensive command and control systems to direct defensive and retaliatory forces.

To protect our present and future deterrent capability against an increasing threat, total obligational authority in the amount of \$7.6 billion is programed in 1972 for the strategic forces. These funds will:

- Continue the conversion of intercontinental and submarine-launched ballistic missile forces to the more capable Minuteman III and Poseidon systems;
- Carry forward a minimum phased deployment of the Safeguard ABM system;
- Proceed with the orderly development of a new manned strategic aircraft;
- Continue development of an advanced ballistic missile submarine system for the future; and
- Continue development of a survivable airborne warning and control system.

General purpose forces.—Our general purpose forces and those of our allies must be adequate to meet a variety of nuclear and conventional war situations below the level of strategic nuclear exchange. The withdrawal of forces from Vietnam, coupled with an intensive review of our overall manpower requirements and the application of the Nixon doctrine, allow us to fulfill the requirements of our strategy for peace with a smaller U.S. force than in recent years. Critical to our strategy are increases in the capabilities of our allies and in the readiness and fighting power of our forces.

The *land forces* retained in the active force structure will be increasingly tailored to meet a range of contingencies. Armored and mechanized infantry forces will be kept ready with our NATO commitments specifically in mind. Marine Corps divisions and Army airborne and airborne units will emphasize rapid response. Tank and antitank warfare capability have high priority in our modernization efforts. Other land force improvements include procurement of additional light observation aircraft, antiaircraft missiles, armor, bridge-launch vehicles, grenade launchers, tracked landing vehicles, and ammunition.

The naval ship construction program in 1971 and 1972 will be funded at its highest level since 1963 to speed the modernization of the fleet. Total obligational authority will be \$3.3 billion in 1972, about \$1.5 billion above the 1964–69 average program.

While we plan to continue improving capabilities of our *naval forces*, through procurement of five more high-speed nuclear attack submarines, one more nuclear guided missile frigate, and seven more antisubmarine destroyers—it is also necessary to explore new concepts

to meet the Navy's needs for the late 1970's and 1980's. In this connection, this budget will support:

- Experimentation with dual use of our aircraft carriers in both an attack and antisubmarine warfare role;
- Initial procurement for a force of high-speed patrol boats with surface-to-surface missile capability; and
- Exploration of concepts for a new class of smaller, faster escort ships.

The *tactical air forces* contribute to general purpose operations by providing air support for ground actions, suppressing hostile air activity, and attacking enemy installations and lines of communication. These forces are being substantially modernized. To provide for further modernization, development of the F-15 fighter and AX close air support systems for the Air Force will proceed, and procurement of the swing-wing F-14 fighter for the Navy and the vertical takeoff and landing AV-8A aircraft for the Marine Corps will be increased. Improvements in electronic warfare systems will receive increased emphasis in all tactical air force elements.

Guard and Reserve.—These forces are designed to augment the active forces in an emergency requiring a rapid and substantial increase in capability. This budget provides for increased readiness for our Guard and Reserve forces. New concepts in Reserve organization and training will be tried. High priority will be placed on better equipping and supporting these forces.

Research and development.—In order to improve the effectiveness and readiness of our general purpose and strategic forces, and to meet changing threats, greater emphasis will be placed on the development of new weapons, vehicles, and communications systems, and on keeping vital the technological base that is essential to our national security.

Continued emphasis in the strategic area is necessary to assure the future effectiveness of our forces and to provide flexibility in responding to developments arising from SALT negotiations.

Programs to improve the capability of our general purpose forces will include several new initiatives to meet threats to our security interests. In support of our land forces, additional emphasis will be given to improve the effectiveness and morale of the individual soldier, to develop more reliable and less vulnerable surveillance techniques, to improve the accuracy with which artillery can attack known targets, and to advance helicopter development for more flexible troop mobility

and logistic support. In the area of tactical air warfare, we will continue to make major improvements in our ability to attack surface targets accurately, suppress anti-aircraft defenses, and improve our capability to gain and maintain air superiority. For naval forces programs, we will emphasize new designs for ships and submarines, and improved antisubmarine warfare and fleet defense.

Effort to improve the efficiency of the R. & D. process will continue with new review procedures to insure that critical milestones are achieved during development and before systems are committed to production. Competitive prototype development of selected components and systems will be emphasized in order to better evaluate performance and design characteristics. Prototype examples include aircraft engine components, tactical sensor systems, the heavy lift helicopter, the AX close air support aircraft, and experimental surface effects ships.

Research and development is programed at \$6.1 billion in 1972, an increase of \$900 million over 1971.

Support of other nations.—Direct support by the Department of Defense for allied forces in Southeast Asia, a share of NATO costs, and the military personnel costs of the military assistance missions and advisory groups worldwide are accounted for separately from the military assistance grant and credit sales programs.

Military assistance.—Military assistance and sales programs supplement the efforts of other countries to provide for their own defense and ease the transition of our allies and friends to a position of greater self-reliance—a fundamental requirement for success of the Nixon doctrine. Accordingly, total obligational authority in 1971 and 1972 will be substantially higher than in 1970. (Additional discussion of these programs is contained in the International Affairs and Finance section.)

Atomic energy.—As indicated in the following table, outlays for AEC's program activities will decline by \$81 million in 1972. These reductions will be more than offset by a temporary decrease in AEC's retained revenues from uranium enrichment services to industry, resulting in a net outlay increase of \$43 million in 1972.

ATOMIC ENERGY COMMISSION

[In millions of dollars]

Program	1970 actual	1971 estimate	1972 estimate
Production of special nuclear materials.....	399	397	395
Military applications.....	1,133	1,153	1,123
Space applications.....	89	83	45
Central station nuclear power development.....	146	181	205
Other civilian applications.....	25	17	13
Research in the physical and biomedical sciences.....	491	494	456
Nuclear science and technology support.....	126	109	118
General support, including regulation.....	176	170	168
Total program outlays.....	2,585	2,604	2,523
Deductions for revenues and reimbursements from non-Federal sources for materials and services.....	-190	-329	-205
Intragovernmental advances and other adjustments.....	58	-----	-----
Net outlays.....	2,453	2,275	2,318

Nuclear materials.—AEC's long-term contracts for the procurement of raw uranium concentrates were fulfilled as of December 31, 1970. To meet the projected increase in demand for uranium enrichment services, AEC will purchase more electric power to operate the uranium enrichment plants at a higher level.

Reduction in military requirements for plutonium and other reactor products will result in closing two of the five operating plutonium production reactors, both at Hanford, Washington. The remaining reactors will be used to meet civilian as well as military needs. If military requirements increase, sufficient standby capacity is available.

Military applications.—AEC will continue to develop improved types of nuclear weapons at its weapons laboratories. AEC will also continue to develop improved designs of propulsion reactors for nuclear submarines and naval ships for use by the Navy in its shipbuilding program.

Civilian development and research.—High priority is being given to the development of an economic liquid-metal, fast-breeder power reactor. This technology is expected to make a major contribution in the long term to meet the rapidly growing energy needs of the Nation. Construction will proceed on a 200 billion electron volt proton accelerator at Batavia, Illinois, for basic research in high-energy physics.

Defense-related activities.—The combined outlays for defense-related activities of the civilian agencies, net of proprietary receipts from the public, are estimated at —\$805 million in 1972, compared with —\$333 million in 1971 due to an increase in offsetting receipts from the sale of stockpile commodities not required for national security.

Selective Service System outlays will increase slightly in 1972. An automated registrant information bank will be developed to reduce clerical activities and improve the System's capability to respond in an emergency to the need for military manpower. Legislation will be proposed to extend the Military Selective Service Act, establish a national call, eliminate student deferments, and bring about additional minor reforms.

INTERNATIONAL AFFAIRS AND FINANCE

New directions for foreign assistance—plus our own strength and willingness to negotiate differences with others—are the fundamentals of our strategy for world peace and progress.

Program highlights.—Our foreign assistance programs will undergo major reform in 1972. Legislation to give new directions to these programs and adapt them to changed world conditions will be proposed to the Congress. These new directions are based on the recognition that other nations have a growing capability to assume primary responsibility for their own defense and development.

An increasing share of development assistance to other nations will be provided through a multilateral framework. Bilateral aid will be restructured and placed on a sounder and a more businesslike basis. Two new U.S. organizations are proposed: an International Development Corporation for bilateral lending, and an International Development Institute for technical cooperation with less developed countries. These organizational changes will permit a major reduction of U.S. personnel overseas. Our military and supporting assistance programs will be reoriented and strengthened in a coordinated security assistance program in order to help friendly countries meet the responsibility for their own defense more effectively.

The State Department will administer supporting assistance. It will also coordinate humanitarian assistance, which includes our aid to refugees and victims of natural disasters. These efforts are financed from a number of sources including the Food for Peace program, the refugee assistance program and the President's Foreign Assistance Contingency Fund.

Budget highlights.—Outlays for international affairs and finance, excluding military assistance, will total \$4.0 billion in 1972, compared with \$3.6 billion in 1971. Budget authority recommended for 1972 is \$5.1 billion.

Economic and financial assistance.—The new foreign assistance structure will clearly distinguish security assistance, which is intended to help friendly countries defend themselves, and development assistance, which promotes long-term economic growth. Outlays for international development assistance will be \$1.5 billion, up from \$1.3 billion in 1971. Outlays for security assistance including military assistance, classified in the national defense function, will be \$1.7 billion in 1972, roughly the same as in 1971, but \$605 million higher than in 1970.

INTERNATIONAL AFFAIRS AND FINANCE

*Less than \$0.5 million.

¹ Compares with budget authority for 1970 and 1971, as follows:

1970: Total, \$3,568 million (NOA, \$3,568 million).

1971: Total, \$3,892 million (NOA, \$3,892 million).

² Outlays and budget authority for military assistance are classified in the national defense function. They are not included in the totals shown for international affairs and finance.³ Excludes trust funds. Net of offsetting receipts.⁴ Data for 1970 and 1971 are on a basis comparable to the new foreign assistance structure proposed for 1972.⁵ Includes both Federal funds and trust funds.

International security assistance.—Security assistance is designed to assist friendly countries as they increasingly take primary responsibility for their own internal security and national defense. It encourages them to mobilize their own men and resources rather than placing primary reliance on direct U.S. involvement. Recognizing that

the economies of some countries are not yet capable of supporting adequate defense forces, security assistance, which includes military and supporting economic assistance, helps these countries until they can develop the capacity to defend themselves without external financial aid.

INTERNATIONAL SECURITY ASSISTANCE

(In millions of dollars)

Assistance program	Budget authority			Outlays		
	1970 actual	1971 estimate	1972 estimate	1970 actual	1971 estimate	1972 estimate
Military assistance: ^{1 2}

Total security assistance..	792	1,943	1,908	1,078	1,679	1,683

¹ Military assistance is classified in the national defense function.² Excludes trust funds.³ Data for 1970 and 1971 are on a basis comparable to the new foreign assistance structure proposed for 1972.

Military assistance consists of grant military assistance and foreign military credit sales. (The costs of military assistance to Vietnam, Laos, and Thailand, and U.S. contributions to NATO, CENTO, and SEATO are carried separately in the Defense Department budget. See p. 89.) Grant military assistance supplements the efforts of countries least able to meet the financial costs of equipping and training their military forces. Budget authority for grant military assistance will be \$705 million in 1972. This compares with budget authority of \$350 million in 1970 and \$750 million in 1971, a year of transition to a higher level of military assistance made possible by enactment of substantial supplemental appropriations for this purpose.

As the economies of grant aid recipients improve, it becomes possible for these countries to shift from grant assistance to military credit sales. A total program level of \$582 million in credits is proposed for 1972. Budget authority of \$510 million will provide \$486 million in direct credits and \$24 million to guarantee an additional \$96 million of private loans.

Outlays for military assistance, including credit sales to Israel, will total \$1,025 million in 1972, compared with \$1,175 million in 1971 and \$593 million in 1970.

Supporting assistance provides aid to friendly countries that have especially heavy defense expenditures or face extraordinary economic or political problems. Budget authority for supporting assistance will increase from \$523 million in 1971 to \$778 million in 1972, primarily to help Vietnam and Cambodia.

Total development assistance	1,681	2,062	2,078	1,313	1,343	1,483

¹ Data for 1970 and 1971 are on a basis comparable to the new foreign assistance structure proposed for 1972.

International development assistance.—The growing capacity of the *international financial institutions*—the World Bank group and the regional development banks—to manage large lending programs will allow the United States and other contributing nations to channel an increasing share of their economic assistance through multilateral institutions. In order to carry out our international obligations, a request for supplemental 1971 appropriations will be made to include:

- \$487 million for the ordinary capital and for the fund for special operations of the Inter-American Development Bank;
- \$246 million for the U.S. share of the new capital subscription to the International Bank for Reconstruction and Development; and
- \$60 million for the special fund of the Asian Development Bank.

For 1972, additional U.S. contributions are proposed for the two regional banks and for the International Development Association, a World Bank affiliate:

- \$320 million for the International Development Association;
- \$500 million for the Inter-American Development Bank; and
- \$40 million for the Asian Development Bank.

Consideration is being given to U.S. contributions to the regional lending program for Africa and the International Finance Corporation, the private enterprise lending affiliate of the World Bank. Pending the outcome of current negotiations, the budget includes an additional \$35 million for these programs.

Budget authority for voluntary contributions to *international organizations* will be increased to \$168 million. The bulk of this assistance, \$100 million, will be for the U.N. Development Program, which finances and coordinates most U.N. technical assistance programs. Our contributions to this program will be matched by more than \$150 million of contributions from other donor governments.

Bilateral development lending will be provided through the proposed United States International Development Corporation. The Corporation will encourage borrower initiative and project quality, as measured by economic rate of return and contribution to overall development. A major portion of our bilateral lending will take place within a multilateral framework. Budget authority for development lending will increase from \$627 million in 1971 to \$655 million in 1972.

Bilateral technical cooperation will be administered by the proposed United States International Development Institute, which will mobilize scientific expertise and technology of private U.S. organizations to help solve specific development problems of lower income countries. Special emphasis will be placed on population planning

and research. Budget authority for technical cooperation in 1972 will be \$315 million, compared to \$354 million in 1971.

The Overseas Private Investment Corporation provides a broad range of services to U.S. private investors in less developed countries. The Corporation insures U.S. private investments against political and commercial risks, provides loans to mobilize private funds into key areas, disseminates information on investment opportunities, and finances development feasibility studies. Budget authority of \$25 million in 1972 will permit an expansion of investment insurance and guarantees. Receipts will exceed disbursements in 1972 by \$8 million.

The Inter-American Social Development Institute, with estimated outlays of \$7 million in 1972, will provide grant support for experimental activities in Latin America undertaken primarily by private nonprofit organizations.

The President's Foreign Assistance Contingency Fund will permit us to meet unforeseen circumstances requiring economic, military, or humanitarian assistance. Budget authority of \$100 million is requested for 1972.

Export-Import Bank.—The export promotion programs of the Bank will continue to play an important part in the Administration's efforts to achieve a more favorable balance of payments. Net lending by the Bank is expected to increase from \$248 million in 1971 to \$398 million in 1972. By 1972, about \$2.9 billion of U.S. exports will be insured by the Bank against political and commercial risks. The Bank's income, largely interest on loans, will exceed expenditures, primarily interest paid on the Bank's borrowings, by \$108 million in 1972. Legislation will be proposed to extend the life of the Bank and raise the statutory ceiling on the Bank's outstanding loans, guarantees, and insurance, to \$20.0 billion from the current level of \$13.5 billion.

CREDIT PROGRAMS—EXPORT-IMPORT BANK

[In millions of dollars]

Program or agency	1970 actual	1971 estimate	1972 estimate
Export-Import Bank:			
Commitments.....	(4,489)	(5,903)	(6,646)
Disbursements.....	1,569	1,738	1,852
Repayments.....	1,277	1,490	1,453
Net lending.....	292	248	398

Food for Peace.—The United States donates and sells agricultural commodities on favorable terms to friendly nations under the Agricultural Trade Development and Assistance Act (Public Law 480). This program combats hunger and malnutrition, promotes economic growth in developing nations, and develops and expands export markets for U.S. commodities. Outlays will decrease slightly from \$1,014 million in 1971 to \$962 million in 1972. The net cost of sales will constitute \$617 million of 1972 outlays, and donations \$345 million. More than half of the shipments under this program go to Korea, India, Indonesia, and Vietnam.

Foreign information and exchange activities.—Important mutual benefits flow from widened social, educational, and cultural contacts between the people of the United States and other countries. Educational and cultural exchange activities of the Department of State will continue to be broadened beyond academic groups to include businessmen, professionals, and others. Radio and television broadcasts, exhibits, motion pictures and publications, and other media used abroad by the United States Information Agency will continue in 1972 at about 1971 levels.

Conduct of foreign affairs.—The Department of State represents the United States throughout the world and has overall responsibility for assisting the President in foreign affairs. Increases in assessed contributions to international organizations and a special contribution for an expansion of the United Nations headquarters in New York will account for most of the \$32 million increase in the Department's outlays in 1972. The Arms Control and Disarmament Agency will concentrate on strategic arms limitation and other negotiations and supporting research.

SPACE RESEARCH AND TECHNOLOGY

Program highlights.—The 1972 budget provides for a balanced space program guided by three purposes—exploration, scientific knowledge, and practical applications. Despite decreased outlays in 1972, the budget will allow steady progress in exploiting the scientific return from continued exploration of the moon, extending man's capability to live and work in space, continuing unmanned exploration of the planets and the universe, and developing practical applications of space technology. Development will begin on the engine of a space shuttle in an effort to reduce substantially the cost of future space operations in earth orbit.

SPACE RESEARCH AND TECHNOLOGY

[In millions of dollars]

Program	Outlays			Recommended budget authority for 1972 ¹
	1970 actual	1971 estimate	1972 estimate	
Manned space flight:				
Lunar program.....	1,746	1,165	843	726
Earth orbital program.....	463	722	819	912
Space science and applications.....	656	631	727	890
Space technology.....	328	286	234	208
Aircraft technology.....	188	184	195	215
Supporting space activities ²	374	393	347	333
Deductions for offsetting receipts:				
Proprietary receipts from the public.....	—6	—13	—13	—13
Total.....	3,749	3,368	3,151	3,270

¹ Compares with budget authority for 1970 and 1971, as follows:

1970 total, \$3,746 million.
1971 total, \$3,297 million.

² Includes both Federal funds and trust funds.

Budget highlights.—New budget authority of \$3.3 billion is approximately the same as the 1971 level. Total outlays of \$3.2 billion are \$217 million less than in 1971. This decrease reflects a decline in spending for the Apollo manned lunar expeditions and reductions in space technology and supporting activities.

Manned space flight.—Completion of man's epic journeys to and from the moon under the Apollo program will provide important scientific data on the origins of the moon and the solar system. The next step in the manned exploration of space is Skylab, an experimental space station which will test man's ability to live and work in space

Space Research and Technology

for up to 56 days and perform experiments related to astronomy and to earth resources. The 1972 budget provides for proceeding with detailed design and development of the engine—the longest leadtime component—for a space shuttle. Shuttle airframe design is proceeding on an orderly step-by-step basis which may lead to continued detailed design or initiation of development of a specific design depending on the progress in studies now underway.

Space science and applications.—Work will start on the Grand Tour unmanned missions to explore the outer planets in the late 1970's. Funds are also provided for the 1975 Viking unmanned exploration of Mars, which will include a spacecraft to land on the surface of Mars and transmit scientific data back to earth. In addition, development will be initiated on a High Energy Astronomy Observatory to obtain space physics data and on the launch of an Earth Resources Technology Satellite to demonstrate practical applications of space technology in such areas as crop surveys and geological measurements.

Space and aircraft technology.—Work will continue on a variety of advanced research and technology programs in support of future space and aeronautics projects. The level of the long-term joint NASA/AEC nuclear rocket development program (NERVA) will be reduced in order to concentrate resources on specific space missions now envisaged for the 1970's. Development will be initiated on an advanced experimental short takeoff aircraft for improved short-haul transportation systems.

AGRICULTURE AND RURAL DEVELOPMENT

Agriculture and rural development programs enhance farm income through improved agricultural production and marketing and expanded exports; aid in the elimination of hunger and malnutrition; protect consumers by assuring the wholesomeness of meat, poultry, and eggs; and contribute to development of rural areas.

Program highlights.—The provisions of the Agricultural Act of 1970 and the recommendations in the 1972 budget will help maintain the ability of American agriculture to feed and clothe over 200 million people and provide reasonable incomes for farmers.

The new agricultural act provides the framework for satisfying three basic agricultural goals of the administration: (1) to protect and improve farm income; (2) to provide more flexibility for farmers in making their own farm operating decisions; and (3) to develop greater reliance on the marketplace, enabling producers to become less dependent on Government programs.

This budget provides for strengthened efforts to achieve an equitable distribution of Government services between urban and rural communities in areas such as housing, sewer and water facilities, and economic development. The proposed Rural Community Development Revenue Sharing program (described in part 2 of the budget) will make unrestricted funds available to promote the economic and social development of rural America. These new efforts, involving direct services and loans, as well as the special revenue-sharing funds, will further the goal of balanced national growth through revitalization of rural communities.

The key features of the agriculture and rural development programs for 1972 include:

- Controlling excess agricultural production while giving farmers more freedom of choice to produce as they wish;
- Providing needed capital for rural residents through greater reliance on loans at near-commercial interest rates; and
- Creating the Rural Community Development Revenue Sharing program.

Budget highlights.—Outlays for agriculture and rural development will be \$5.8 billion in 1972, an increase of \$542 million over the 1971 level. Part of the increase is accounted for by changes in the amount of loan assets held by the Government in connection with rural housing and agricultural credit programs. Although private participation in these loan programs will increase in 1972, the reduction in assets held by the Farmers Home Administration will be \$365 million less in 1972 than in 1971. This has the effect of increasing 1972 outlays by this amount.

¹ Compares with budget authority for 1970 and 1971, as follows:
 1970: Total, \$6,725 million (NOA, \$6,356 million; LA, \$370 million).
 1971: Total, \$5,172 million (NOA, \$4,804 million; LA, \$367 million).

² Includes both Federal funds and trust funds.

³ For greater detail see table on page 107.

Other major increases in 1972 outlays will be for farm income support, distribution of surplus agricultural commodities to school-

children and families, rural water and waste disposal grants, and meat, poultry and egg inspection. A significant reduction in outlays will result from proposed legislation to substitute insured loans for direct farm operating loans.

Farm income stabilization.—The Agricultural Act of 1970 will move toward a more market-oriented farm policy by authorizing:

- Freedom for the individual farmer to select the most profitable mix of crops on his land;
- Direct payments based on market prices rather than minimum price support levels; and
- A voluntary, rather than mandatory, cotton program.

The act also established an annual ceiling of \$55,000 per crop on payments to individual producers of upland cotton, wheat, and feed-grains.

¹ Excluding credit programs in the expenditure account.

As a result of increasing farm productivity and the decline in the number of farmworkers, output per man-hour in farming has tripled in the past 20 years. Over the years, Government programs designed to support farm income and to hold back increases in production have been more expensive and less attractive than proponents had visualized. The 1970 Agricultural Act, including the set-aside provision, will help farmers minimize production costs and achieve maximum sales—both at home and abroad—with less dependence on Government programs.

In 1972, outlays for price support programs are expected to be \$3.6 billion, an increase of \$421 million over 1971. Outlays for 1971 are substantially below earlier estimates as a result of the corn blight and increased demand for wheat and soybeans. Lower receipts, reflecting more normal marketing conditions, account for most of the increase in net outlays for 1972. However, outlays for both 1971 and 1972 are below the 1970 level.

The following table provides information on all Commodity Credit Corporation domestic and foreign operations. Food for Peace is discussed in the international affairs and finance section.

COMMODITY CREDIT CORPORATION OUTLAYS

Subtotal.....	937	1,014	962
Total outlays.....	4,777	4,294	4,653

The administration has taken steps to meet its commitment to eliminate hunger and malnutrition by expanding and improving family food assistance and child nutrition programs. Child nutrition and food stamp programs are discussed in the income security section of this budget. However, the surplus commodities provided to families and school children are an important part of the total food assistance effort. Although the number of families benefiting from direct distribution of commodities will decline as the food stamp program expands, the value of commodities received by each family will increase. Total outlays for direct commodity distribution to families and schools will also increase.

The Farmers Home Administration makes loans to farmers unable to obtain credit from private sources to finance farm operations and purchases of farms. Proposed legislation to shift from direct to insured farm operating loans will reduce 1972 outlays for this program by \$275 million, without decreasing the amount of credit available to farmers. Legislation will also be proposed to bring interest rates on farm ownership loans more in line with commercial loan rates. With the new legislation, farm ownership insured loans will increase by \$70 million to \$270 million in 1972.

Rural housing and public facilities.—The budget will continue to emphasize programs that help low- to moderate-income rural residents obtain housing. Loan levels for rural housing will increase by \$600 million in 1972. Loans for low- and moderate-income housing will help about 132,000 rural families acquire homes in 1972, 45,000 more than in 1971.

The following table shows the emphasis being given to publicly assisted housing compared to other loan programs of the Farmers Home Administration. Publicly-assisted housing commitments will increase from \$1,016 million in 1971 to \$1,616 million in 1972. The administration will continue its policy of making no commitments for publicly-assisted housing to individuals with above-moderate incomes.

The Government assists rural communities in developing sewer and water supply systems through grants and loans. Loans for this purpose will rise from \$160 million in 1971 to \$189 million in 1972. Outlays for grants will be \$61 million in 1972, an increase of \$23 million over 1971.

Outlays for rural electric and telephone loan programs will be \$354 million in 1972, down \$19 million from 1971. Rural electric borrowers successfully established a private electric bank, and it is anticipated that this bank will lend an additional \$50 million in 1972. Legislation has been proposed to establish a rural telephone bank of mixed, and eventually private, ownership. The proposed telephone bank will provide credit for rural telephone systems at

¹ Represents obligations of direct loans and approvals of insured loans.

rates competitive with commercial lending rates. Initial capitalization for the bank is provided in this budget.

Agricultural land and water resources.—In 1972, outlays for these programs will decrease by \$19 million. Over the years, the agricultural conservation cost-sharing program has helped stimulate crop production and has financed farm practices that should not need Federal support. The administration, therefore, has introduced changes to emphasize practices which provide greater environmental benefits at reduced Federal cost. Outlays for this program, which has been renamed the rural environmental assistance program, will be \$150 million in 1972.

Technical conservation services to farmers will continue at the 1971 level. Outlays for the newly enacted water bank will be \$10 million in 1972. Funds are also provided for planning 10 new resource conservation and development projects.

Research and other agricultural services.—Total outlays for research and other agricultural services will increase by \$39 million in 1972. Research and extension grants to the predominantly black land grant colleges will increase by \$4 million. Emphasis will continue on research to find ways to avoid the use of pesticides, and a trial program to manage the use of pesticides will be expanded.

Outlays for meat, poultry, and egg inspection will increase by \$13 million in 1972. Continuing increases in meat and poultry consumption, implementation of the Wholesome Meat and Poultry Acts, and funding the new egg products inspection program will require increased Federal inspection activities and assistance to States. The budget, however, does not include funds for Federal assumption of meat and poultry inspection at plants which produce for intrastate use. Separate appropriations will be requested on a State-by-State basis to support Federal operation of inspection systems in those States that fail to meet Federal inspection standards under the Wholesome Meat and Poultry Acts.

Pesticide regulation programs were transferred from the Department of Agriculture to the new Environmental Protection Agency in December 1970. Consolidation of related activities in the new environmental agency will advance the administration's efforts to control pollution and enhance the quality of both the rural and the urban environment.

NATURAL RESOURCES

The Federal Government's natural resources programs are designed to maintain a balance among several major objectives. Many unique resources, such as park lands and wilderness areas, must be preserved for the enjoyment and use of future generations. The Nation's resources must be developed and utilized prudently, in order to provide the fuels and raw materials required by our modern industrial economy. At the same time, it is vital that the environment be protected from the undesirable side-effects which often accompany resource development and use.

Program highlights.—Major Federal pollution control programs have been drawn together and given renewed emphasis in the Environmental Protection Agency. Budget requests for the new agency include a doubling of grants for waste treatment plant construction and increased funds for strengthening other water pollution control activities. Increased funds are also provided to strengthen programs dealing with other forms of pollution—air, solid wastes, pesticides, and radiation—which are discussed in other sections.

Changes in natural resources programs reflect the high priority which the administration gives to protecting and improving the quality of the environment, strengthening the State and local roles in our Federal system, and reforming Government programs.

Proposed legislation will allow greater flexibility in allocating grants for waste treatment plant construction and will increase the effectiveness of the program in reducing water pollution. Legislation will again be proposed to create a new Environmental Financing Authority which would assist communities that have difficulty in borrowing at reasonable rates to meet their share of the costs of water pollution control facilities. Additional efforts to reduce pollution include:

- A new program, begun in 1971, to require permits for the discharge of effluents into navigable streams;
- Increased funds to further reduce pollution at Federal facilities in 1972; and
- A program to dispose of Great Lakes harbor dredging wastes without adding to water pollution.

In order to provide additional recreation opportunities and assure preservation of unique natural and historic areas, the Land and Water Conservation Fund will be fully funded in 1972, with a substantially increased portion for recreation grants to the States, including a one-time amount of \$80 million from unused prior-year authorization.

Other significant changes included in this budget are:

- Accelerated pilot plant research to develop economic processes for producing a low-pollution gas fuel from coal;
- Termination of purchases of helium for stockpiling; and
- Increased fees for grazing livestock on public land.

Loan account.....	3	4	14	9

¹ Compares with budget authority for 1970 and 1971, as follows:
1970: Total, \$3,195 million (NOA, \$3,192 million; LA, \$3 million).
1971: Total, \$6,172 million (NOA, \$6,165 million; LA, \$7 million).

² Includes both Federal funds and trust funds.

Budget highlights.—Gross outlays for natural resources programs (before deducting offsetting receipts) are estimated at \$5.5 billion in 1972, an increase of \$791 million over 1971. Increases for recreation programs (\$79 million) and water pollution control programs (\$597 million) account for 86% of this total increase.

Offsetting receipts from natural resources programs are expected to decrease by \$817 million to a total of \$1.3 billion. After deducting these receipts, outlays will total \$4.2 billion in 1972.

Water resources and power.—Outlays for water resources programs will total \$3.9 billion in 1972, compared with \$3.0 billion in 1971.

Water pollution abatement programs (Environmental Protection Agency).—The budget provides funds to implement the national commitment, announced last year, to construct municipal waste treatment facilities that will enable us to meet water quality standards. Proposed legislation would authorize appropriations of \$2 billion in 1972 and a total of \$6 billion for 1972 through 1974 for waste treatment grants. This amount will be adequate to meet the Federal share of the estimated \$12 billion needed for construction over this period.

The legislation will also reform procedures for allocating these grants in order to permit greater flexibility in the utilization of funds and allow a larger portion of the funds to go to States with the highest priority needs for pollution control. Outlays for grants to build waste treatment plants are expected to increase by \$578 million to a total of \$1 billion in 1972.

Other water quality programs of the Environmental Protection Agency are being increased by \$19 million. These increases are primarily for grants to improve State and local water quality programs, and for improved evaluation of the costs and benefits of alternative solutions to water pollution problems.

Water development programs.—Water development programs provide for the construction of projects that produce and transmit hydroelectric power, improve water supplies, control floods, prevent erosion, improve navigation, and provide water-related recreation facilities.

Funds for water development in 1972 will be sufficient to continue all projects now under construction. The budget also provides funds to start construction on several new water resources projects. Most of the projects added by the Congress to the 1971 budget are expected to be started in 1972. The funding and programing of new water

Water Pollution Control Programs

projects of the Corps of Engineers and Bureau of Reclamation are shown in the following table:

New construction starts	1970 actual	1971 estimate	1972 estimate
Number of projects funded.....	51	68	12
Number of projects programed for starting.....	21	73	43

Bureau of Reclamation outlays will increase by \$57 million to a 1972 level of \$385 million. These outlays will provide for operation and maintenance of existing projects, continuing construction of projects underway, and construction on projects being started in 1972.

Outlays by the Corps of Engineers will increase by \$99 million over 1971. Increased outlays for operation and maintenance of completed projects will be partly offset by other program reductions. A new program to insure that disposal of dredging wastes from Great Lakes harbors will not have adverse environmental effects will require \$41 million in 1972, and an increase of \$2 million will be required for increased regulation of discharges into navigable streams under the 1899 Refuse Act.

Power programs.—Outlays for power marketing and research on underground electric power transmission will increase by \$3 million. Funds are included for operation and maintenance of projects being completed in 1971 and 1972. Appropriation increases are also provided for construction of transmission facilities to integrate Corps of Engineers and Bureau of Reclamation power projects into the transmission systems and to increase transmission system reliability.

Outlays by the Tennessee Valley Authority will increase by \$83 million to a total of \$508 million in 1972. Of the total, 89% is for the power program.

Land management.—Public land and national forest programs preserve wildlife, scenic resources, and wilderness areas. At the same time, these programs yield forest products, livestock forage, water supplies, and minerals, and afford broad opportunities for recreation. Under land management programs, access roads and trails are constructed and the resources of the lands are protected from damage by fire, insects, disease, erosion, and improper use.

Land management outlays in 1972 will be \$830 million, a reduction of \$34 million below 1971. This decrease is due to unusually large outlays for fighting forest fires in 1971, which are partially offset by program increases in 1972. Increased funds are provided to protect the environment while assuring that timber production programs in 1972 do not fall below the 1971 level. Increases are also provided for accelerating pollution abatement at national forest facilities and for

reforestation, recreational use, wildlife habitat management, and soil and water management.

Fees for grazing livestock on public land will be increased in accordance with existing rules. These increases are based upon the policy that recipients of such special benefits should pay the fair market value of the benefits.

Mineral resources.—Mineral resources programs include research on conservation and development of coal and other minerals and fuels, research on low-pollution fuels, coordination of oil and gas activities, and the administration of the oil import program.

Mineral resources outlays will be \$105 million below the 1971 level. The budget reflects a decision by the Secretary of the Interior to terminate contract purchases of helium because of changes in the anticipated future supply and demand for helium. The one-time cost of termination is estimated to be \$42 million in 1971. Increases in 1972 are for: pilot plant programs to carry out research and development leading to production of low-pollution fuel by coal gasification; research in high-efficiency, low-pollution electrical generation by magnetohydrodynamic processes; and research in underground waste disposal and urban waste recycling.

Recreational resources.—Recreational resources programs (excluding urban recreation programs discussed on page 135) will total \$615 million in 1972, an increase of \$79 million over 1971. The Land and Water Conservation Fund appropriation of \$380 million, an increase of \$53 million over 1971, will be used to acquire Federal park lands and to make grants for acquisition and development of State and local parks and recreation facilities. These funds include a one-time amount of \$80 million for grants to States derived from the unused portion of the 1971 authorization. The remaining \$20 million will be retained to make further payments, if necessary, for the Redwood National Park lands. Outlays to acquire Federal park lands and for grants to assist in acquisition and development of State and local parks will increase in 1972 to \$265 million, an increase of \$40 million over 1971.

The appropriation for grants to States will be increased to \$280 million in order to strengthen the role of States and localities in meeting local recreation demands. The remaining Land and Water Conservation Fund appropriation for 1972, \$100 million, is for direct Federal acquisition of nationally significant natural and historic areas and for program administration. Newly authorized areas for which the budget provides initial funding in 1972 are Apostle Islands National

Lakeshore, Sleeping Bear Dunes National Lakeshore, Voyageurs National Park, the Chesapeake and Ohio Canal National Historic Park, the Gulf Islands National Seashore, and the Andersonville National Historic Site. Emphasis will also be placed on the acquisition of lands in older natural preservation areas and parks such as the Everglades National Park.

Other recreation programs include the construction and operation of Federal fish hatcheries, operation of national wildlife refuges, sport fishery and wildlife research, provision of fishery and wildlife technical assistance, management and protection of the national park system, construction and maintenance of park facilities, and preservation of historical properties. Outlays for these programs will increase by \$40 million in 1972.

Other natural resources programs.—Other natural resources programs include such activities as topographic surveys and mapping, geological and mineral resource surveys and mapping, and water resources investigations. Outlays for these programs will increase by \$10 million to a level of \$143 million in 1972. An increase of \$2 million will be used to process data obtained from the experimental earth resources technology satellite, now scheduled for launching in March 1972.

COMMERCE AND TRANSPORTATION

The Federal Government provides a wide range of services and facilities that contribute to the economic development of our Nation and the needs of its citizens. Commerce and transportation programs are designed to promote economic stability and growth by encouraging technological innovation, stimulating increased productivity, and providing aids to individual businessmen.

Program highlights.—In 1972, the budget proposes creation of special revenue-sharing programs for transportation and for urban and rural community development. These programs would consolidate existing grant programs and make additional funds available for State and local government programs in these areas.

This administration is moving steadily ahead with its program for developing a balanced transportation system. During the past year, legislation has been enacted that supports airway and airport development, merchant marine, public mass transit, railroad safety, railroad passenger service, and highway programs.

Legislation was also enacted in 1970 which makes possible the establishment of the United States Postal Service. A major objective of the reorganization is to apply business methods to the problems of modernizing the postal plant, keeping up with increasing mail volume, and improving postal efficiency.

The new National Oceanic and Atmospheric Administration will intensify research on our air and water environment and promote improved utilization and protection of the atmosphere and oceans.

The Department of Commerce will expand assistance to businesses suffering economic losses due to import competition.

Budget highlights.—Outlays for commerce and transportation programs will total \$10.9 billion in 1972, compared with \$11.4 billion in 1971. This decrease is attributable primarily to an anticipated postal rate increase.

Ground transportation.—Comprehensive and efficient urban transportation systems are essential to the revitalization of our cities. The administration is convinced that this objective is best realized by a new approach which combines key features of revenue sharing and direct Federal grants. This plan reflects the decision that selected transportation programs are best handled by the State and local governments, while others remain the responsibility of the Federal system.

¹ Compares with budget authority for 1970 and 1971 as follows:

1970: Total, \$12,256 million (NOA, \$11,928 million; LA, \$328 million).

1971: Total, \$26,195 million (NOA, \$25,613 million; LA, \$582 million).

² Includes both Federal funds and trust funds.³ For greater detail, see table on page 126.

Major steps will be taken in 1972 in the transition to the new assignment of program responsibilities. Four ongoing major grant programs, *urban mass transportation; all Federal-aid highways other than inter-*

state highways; State and community highway safety; and highway beautification will operate at the Federal level for the first 6 months of the year. Starting January 1, 1972, these programs will become a part of the transportation revenue-sharing program.

Direct urban mass transportation and highway programs retained at the Federal level include: urban mass transportation research, development, and demonstrations; interstate highway construction; forest and public lands highway construction; and highway research, development, and demonstrations of national concern. Programs to be continued directly by the Federal Government will provide for fast, safe, and efficient intercity ground transportation.

Legislation has been enacted extending the life of the highway trust fund for 5 more years and authorizing an additional \$9.9 billion for interstate highway construction and \$3.6 billion for other Federal highway programs.

As of October 1, 1970, 30,595 miles (72%) of the Interstate Highway System were open to traffic. The System, which ties together all sections of the country, is scheduled to be completed within the next 7 to 8 years and at that time will carry over 20% of all highway traffic.

Federal highway safety efforts will be greatly expanded with an attack on the problem of drunk drivers, who cause half of all fatal highway accidents. Priority will also be given to development of improved vehicle structures to protect occupants during crashes and to evaluation of the effectiveness of new lifesaving vehicle systems.

Under a new program to revitalize the Nation's passenger railroad service, the National Railroad Passenger Corporation will be established with responsibility for most of the Nation's intercity rail passenger service. \$40 million was appropriated in 1971 to establish the Corporation.

In the field of railroad safety, recently passed administration-sponsored legislation affords an opportunity to undertake significantly expanded programs of research, development, and enforcement, directed toward reducing railroad accidents.

Air transportation.—The Federal aviation program has been given new impetus by the Airport and Airway Development and Revenue Act of 1970. This act provides for increased aviation taxes and charges which will partially defray the costs of operating, maintaining, expanding, and modernizing the Federal airways system. The act also provides planning and construction grants to local airport authorities. Within 8 years the full costs of these programs will be borne by those who benefit directly—the users of airports and the airways system.

In 1972, the Federal Aviation Administration will spend \$1,516

Federal Aid to Transportation Percent of Program Allocated to Nonhighway Uses

million, an increase of \$169 million over 1971, for the airways system and for airport grants. Taxes from aviation users are expected to generate \$726 million to offset about half of these outlays. The 1972 airport program includes budget authority of \$15 million for planning and obligation of \$205 million for construction. This program will be funded to operate at the Federal level for the first 6 months of the year; starting January 1, 1972, it will become part of the special revenue sharing program for transportation.

Most of the new air traffic controllers and system maintenance technicians recruited during the past 3 years will have completed their training before the end of 1972. These new, fully trained employees will ease the heavy workload that has been placed on the existing personnel. Although the rate of growth of commercial air traffic passengers declined in 1970, total aircraft traffic continues to increase and further increases are anticipated in 1972 and 1973. In order to serve the increased aircraft traffic, about 1,500 new controllers and maintenance technicians will be hired by FAA during 1972.

Programs underway to automate the enroute and terminal portions of the air traffic control system will require budget authority of \$146 million in 1972. An additional \$104 million is provided to procure other facilities and equipment such as airport towers, radars, and electronic

instrument landing systems. The appropriation request of \$81 million for the airways research program includes \$65 million for development of an air traffic control system which will increase controller productivity and be expandable to meet the growing number of aircraft using the national airway system.

In response to a wave of air hijackings, the Department of Transportation has taken the lead in carrying out a vigorous program of antihijacking enforcement. This program uses specially trained personnel from several agencies, including the Justice and Treasury Departments. The program is designed to protect the Nation's air travelers and prevent interruptions to the Nation's air commerce. An increase in air ticket taxes will be proposed to fund this program.

The manufacture and assembly of two prototype supersonic transports will near completion in 1972. These two aircraft will be completed and flight tested during 1973. Federal funds will not be required after the flight testing since the experience gained from this program should enable the aviation industry to proceed to production of an economically efficient aircraft that will not create adverse environmental effects. Outlays for the SST program will be \$281 million in 1972.

Water transportation.—1972 will be a crucial year for the maritime program enacted last year. This program is designed to develop a modern, efficient merchant fleet over the next 10 years, a fleet capable of carrying a larger share of our foreign trade. The program will also reduce the dependence of the shipping industry upon Federal support for operating subsidies.

Merchant shipbuilding will take another step toward its full annual construction program with initiation of the Standard Merchant Ship program. Shipyard efficiency and economy will be evaluated in accordance with the productivity goals set in the Merchant Marine Act of 1970. Research and development programs will be expanded and focused on the objectives of the new shipbuilding program.

In order to meet new responsibilities imposed by the Water Pollution Control Act, the Coast Guard will initiate or increase activities in three areas of pollution control: surveillance and detection, containment, and cleanup of oil and hazardous materials spills. The act delegates to the Coast Guard responsibility for administering the Oil pollution fund which will be capitalized at \$20 million in 1971. This fund will be used to defray the costs of oil spill cleanup until damages are recovered from the responsible parties. The traditional roles of the Coast Guard in search and rescue, polar transportation, and aids to navigation will be enhanced by equipment and facility modernization

and the development of new and improved techniques. Average strength of the Coast Guard will be 38,310 in 1971 and 38,284 in 1972.

Federal funding for inland waterways is estimated to be in excess of \$250 million annually. Unlike highway and airport/airways users, waterways users bear no portion of the costs of the facilities and services provided for them. Therefore, in order to assure a more equitable distribution of the tax burden among transportation users and to move toward a more efficient allocation of transportation resources, legislation providing for the recovery of a portion of the costs of inland waterways will be submitted to the Congress.

Postal Service.—Under landmark postal legislation enacted in 1970, the Post Office Department will be replaced by the United States Postal Service. The new Postal Service will be an independent establishment of the executive branch, directed by a bipartisan 11-member Board of Governors.

A major objective of the reorganization is to enable the Postal Service to operate in a more businesslike manner. In order to modernize the postal plant, keep up with increasing mail volume and service demands, and improve postal efficiency, the Postal Service has authority to borrow up to \$10 billion, to establish its own personnel system, and to engage in collective bargaining with its employees.

Under the terms of the Postal Reorganization Act, all postal revenues are made permanently available to the Postal Service. Additional appropriations are authorized for expenses of transition, for a redefined public service subsidy, and for a temporary subsidy to defer postal rate increases for certain mailers. Estimates of the authorizations for subsidy payments permitted by the Postal Reorganization Act for 1972 total \$1,625 million. This amount includes substantial temporary subsidies to certain classes of mail in order to defer rate increases that would reflect mailers' proper share of postal costs. The appropriation requested is \$210 million less than authorized, because it is recommended that the relatively small rate increases for third-class mail, which consists primarily of commercial advertising material, not be deferred.

The budget estimates assume that rate increases will become effective by May 15, 1971, providing \$156 million in additional 1971 revenues and \$1,644 million in additional 1972 revenues.

Mail volume is expected to increase by 3.1% in 1972 to nearly 90 billion pieces of mail. This increase in mail volume, and capital investment required for modernization of facilities will increase Postal Service gross outlays from \$9.2 billion in 1971 to \$9.9 billion in 1972. Postal revenue is expected to increase from \$6.9 billion to \$8.6 billion, partly as a result of the expected rate increase.

SUMMARY OF POSTAL SERVICE PROGRAM

[In millions of dollars]

Item	1970 actual	1971 estimate	1972 estimate
Expenditures by activity:			
Services at small post offices	2,760	3,191	3,355
Window and collection services	211	244	257
Delivery services	623	714	755
Processing of mail	2,188	2,529	2,625
Transportation	789	828	878
Law enforcement	28	38	46
Research, development and engineering	42	61	95
Administration	549	534	605
Logistical postal support—capital investment	262	305	422
Logistical postal support—expense	627	783	896
Total expenditures	8,080	9,227	9,934
Financing:			
Receipts, existing rates	—6,570	—6,718	—6,957
Additional revenue from proposed rate increase	—156	—1,644
Outlays	1,510	2,353	1,333

Advancement of business.—In 1972 *export promotion* activities of the Commerce Department will be altered to make the business community more aware of the need to expand and diversify exports. The U.S. Travel Service will embark on a new travel promotion effort to help State and local governments develop programs to attract foreign visitors.

A continued decline in the workload associated with the 1970 census will result in a decrease of \$44 million in 1972 outlays for *economic and demographic statistics* programs. Efforts in 1972 will be devoted to expanding the coverage and scope of existing programs and improving the usefulness and quality of the data.

Outlays for research under physical environment programs will increase by \$39 million. These programs seek to achieve a better understanding of the ocean and atmosphere and to assure the rational conservation and use of our marine resources. In its first full year of existence, the new National Oceanic and Atmospheric Administration (NOAA) will focus its efforts on improved weather and river forecasts and warnings, weather modification, and preparation for the International Field Year for the Great Lakes.

Small business assistance loans will be increased by over 11% in 1972, primarily through the increased participation of private financial insti-

tutions. This program increase will provide financial assistance to an estimated 7,800 individuals desiring to establish new businesses in 1972, compared to 4,600 in 1970. A 27% increase in the minority enterprise program reflects the continuing emphasis on assistance to minority businessmen.

Under *other aids to business*, the Department of Commerce will undertake an enlarged program of financial aid to businesses adversely affected by foreign imports. This program, previously funded by the Small Business Administration, will involve an estimated \$200 million in loans in 1972, \$100 million of which will be direct loans by the Department of Commerce.

Regulation of business.—The budget will devote greater resources to *consumer protection* activities in 1972. The Federal Trade Commission will set up a number of Consumer Protection Coordinating Committees to coordinate Federal, State, and local consumer programs that help protect the public from fraudulent, deceptive, or unfair advertising and selling practices. In addition, the General Services Administration is creating a Consumer Information Center which will disseminate information about products, based on the experience of Federal procurement agencies.

Area and regional development.—The legislation authorizing area and regional development programs expires June 30, 1971. During the last decade these programs have performed many useful services and in many places have developed plans which will be useful in further economic development. This experience has also proved, however, that State and local governments are in a better position than the Federal Government to determine how their areas can best develop. Therefore, urban and rural community development revenue-sharing programs will be proposed to the Congress to replace the present programs.

The budget provides for increasing the Indian business development fund to encourage reservation improvement programs managed by Indians. These seed-money grants will assist Indians in the early stages of their own projects for range and forestry development, commercial enterprises, and other economic activities. The budget also includes funds to make initial payments in accordance with proposed legislation to provide for the final settlement of all land claims of Alaska natives.

COMMUNITY DEVELOPMENT AND HOUSING

The Federal Government's community development and housing programs have two primary objectives:

- To facilitate the workings of the housing industry in meeting the Nation's need for decent, safe, and sanitary housing for all Americans.
- To help local governments develop the resource and managerial capacity necessary to meet local problems.

In the past, programs to achieve these objectives—particularly the latter one—have consisted mainly of narrow grant, loan, and loan insurance programs. Rarely is the national interest—which lies in the strength and capacity of the system to carry out essential activities—served by such programs. Existing Federal programs frequently weaken the system by forcing localities to adjust their priorities to the availability of funds in narrow categorical grants. They also promote and support specialized, narrow interests at the local level that compete for the authority properly vested in elected officials.

Program highlights.—In 1972, the primary emphasis will be on reforming community development and housing programs to assure that they serve broad national objectives and meet State and local needs and priorities.

In the housing area, legislation again will be proposed to simplify the multitude of programs. The restructured programs will be designed to serve—rather than impede—the objective of providing decent, safe, and sanitary housing for all American families. To improve efficiency and equity, the administration will reform the subsidy programs to serve a wider range of incomes. Operation Breakthrough will continue to demonstrate the economic feasibility of high-volume housing production techniques.

In the community development area, major reforms are proposed to provide resources to localities in ways that strengthen the capacity of general purpose local governments to meet local needs. Resources will be channeled through a broad Community Development Special Revenue Sharing program (discussed also in Part 2 of the Budget) so that funds may be used in accordance with local needs and local priorities. Legislation to carry out this urgently needed reform will be proposed, to be partially funded in 1972 and fully effective in 1973. A second major reform involves establishment of a Community Development Planning and Management program, to help States and localities develop the capacity to manage their own resources effectively, as well as those made available under Federal programs.

*Less than \$0.5 million.

¹ Compares with budget authority for 1970 and 1971, as follows:
1970: Total, \$9,137 million (NOA, \$3,334 L.A., \$5,803 million).
1971: Total, \$4,372 million (NOA, \$4,254 L.A., \$118 million).² For greater detail, see table on page 132.

Budget highlights.—Outlays for community development and housing in 1972 will total \$4.5 billion, an increase of \$637 million over 1971. Most outlays for these programs represent the impact of commitments made in prior years. The largest increase is for contracts previously made for annual subsidy payments on low- and moderate-income housing. Outlays under these programs begin when homes are completed and occupied, and continue for the life of the mortgage.

Outlays in the budget year for these programs are determined almost completely by prior year decisions. Thus, the discussion that follows is primarily in terms of *program levels* or *new commitments*, which are the basis for current program decisions and will affect future budgets.

LOW- AND MODERATE-INCOME HOUSING

Total ².....	410	465	516

¹ Excludes rent supplements units in rental housing assistance projects.

² Excludes units funded by the Farmers Home Administration and discussed in the agriculture and rural development function.

Low- and moderate-income housing aids.—The Federal Government has supported the production of housing for low- and moderate-income families largely through long-term contracts to make assistance payments that reduce rents for tenants and monthly mortgage payments for homeowners.

There are now four programs in the Department of Housing and Urban Development that provide housing subsidies through periodic *housing payments* in accordance with long-term contracts. Legislation will be resubmitted to achieve major reforms of both subsidized and unsubsidized housing programs. The objective will be to simplify and consolidate these programs.

In 1972, commitments will be made to assist about 516,000 housing units, over 50,000 more than in 1971. For lower income families, Federal assistance is provided under the low-rent public housing program and the rent supplement program. In 1972, contracts will be approved to support a total of 111,000 homes under these two pro-

grams. The homeownership assistance and rental housing assistance programs aid moderate-income families, those with incomes too high for public housing, but not high enough to afford new standard housing. Under these programs, contracts are expected to support 385,000 homes in 1972, a major increase over the 326,000 approved in 1971.

Outlays under these four primary subsidized housing programs will continue to rise rapidly in 1972, reaching \$1.3 billion as a result of subsidy contracts approved in prior years. A total of 1,726,000 families will benefit from these payments in 1972.

Rehabilitation loans to homeowners or small businesses in urban renewal or other blighted areas will help bring over 7,000 properties up to acceptable standards. These commitments will be made during the first half of 1972. In the second half of the year, the program will be covered by the community development program, discussed later in this section.

Under the special assistance program of the Government National Mortgage Association (GNMA), commitments will continue to be made to purchase mortgages on housing built under the homeownership and rental assistance programs if builders or sponsors cannot obtain private commitments without paying excessive discounts. These commitments enable builders to proceed with plans, although it is expected that private financing will be available by the time the housing is completed. In the event that excessive discounts still prevail at that time, GNMA will purchase the mortgages and sell them to private investors at the necessary discount.

Maintenance of the housing mortgage market.—The production and sale of housing depends upon the existence of a smoothly functioning mortgage market. The Federal Government has played an increasingly important role in facilitating the operations of this market and seeing that an adequate supply of funds is available for housing production.

The primary method of assisting housing buyers and builders in competing for needed funds in the capital market is through insuring mortgages. Commitments to insure mortgages on 1.1 million homes and apartments and 455,000 property improvement loans are anticipated in 1972. Income from insurance fees and premiums and receipts from sales of acquired properties are expected to continue to exceed operating costs and payment of insurance claims. Net receipts will total \$176 million in 1972.

In order to convert mortgages into more attractive investments, GNMA guarantees mortgage-backed securities. Private financial institutions sell securities backed by mortgages and guaranteed by GNMA to other investors. Sales of these guaranteed securities are expected to total \$2.5 billion in 1972.

CREDIT PROGRAMS—COMMUNITY DEVELOPMENT AND HOUSING

¹ Excludes the following amounts of loans sold by FHA to GNMA: 1970, \$58 million; 1971, \$50 million.

Outlays for *fair housing and equal opportunity programs* are expected to increase in 1972 to \$9 million. This increase reflects the determination to carry out fully the fair housing provisions of the 1968 Civil Rights Act.

Under *Federal property insurance programs*, the Federal Government cooperates with private insurance companies to insure property against damage caused by floods or civil disorders. Under the flood insurance program, premiums are subsidized for existing construction. To discourage construction in unsafe locations, however, premiums on newly built structures must cover full actuarial cost. The civil disorder insurance program is expected to be in operation in 28 States in 1972. It will be made available in any State with a program that assures fair access to property insurance and will provide that the State government share excessive insurance losses. A new Federal insurance program covering losses from burglary and theft will start in 1972, upon completion of necessary surveys of insurance availability.

The *Federal Home Loan Bank System* facilitates the flow of mortgage money by regulating savings and loan associations and by insuring accounts in these associations. In addition, these associations may borrow from the 12 privately owned Federal home loan banks to expand mortgage lending or meet unexpected withdrawals. Under a new program authorized in 1971, the associations may borrow at lower interest rates in order to reduce the interest rate on mortgage loans. Outlays under this program are expected to total \$25 million in 1972. Revenues from insurance operations, primarily interest on investments, are expected to exceed insurance claims and other expenses by \$157 million in 1972.

Community planning, management and development.—As part of the overall domestic program reform, the administration will send to Congress two key reforms:

- A new planning-management grant; and
- Community Development Special Revenue Sharing.

These reforms, to be largely implemented during 1972 and fully effective in 1973, will replace the present system of many relatively narrow categorical grants with two new grant programs that will provide flexible funding for comprehensive community planning, management, and development programs.

The present *comprehensive planning program* will be replaced by a program designed to strengthen the executive and managerial capabilities of State and local governments. They are faced with the difficult task of preparing for future growth and development, while at the same time addressing the social and economic problems resulting from past growth. If State and local governments are to meet these challenges effectively, their management and decisionmaking

capability must be strengthened. While new legislation will be necessary to complete the shift, important elements of this change will be accomplished under existing law. Commitments under the present program will total \$100 million in 1972—double the level of 1971.

The second part of HUD's 1972 reform program will consist of legislation providing for *Community Development Special Revenue Sharing*. This new program will provide flexible grants totaling \$1 billion in the second half of 1972 to assist localities in carrying out community development programs that are designed at the local level to meet locally perceived needs and priorities. In the past, Federal assistance for community development has been provided through narrowly focused, rigidly defined categorical grants. These grants often distorted local priorities, forcing them to choose activities that fit into the funding patterns of Federal grant programs. The new Community Development Special Revenue-Sharing program will change this, offering a broad, flexible grant for a wide range of community development activities.

URBAN COMMUNITY DEVELOPMENT CONVERSION TO SPECIAL REVENUE SHARING

[In millions of dollars]

Program	Commitments or obligations		
	1970 actual	1971 estimate	1972 estimate
Model Cities.....	315	375	70
Urban renewal.....	978	1,029	800
Rehabilitation loans.....	42	50	50
Water and sewer grants.....	150	150	100
Community development special revenue sharing.....	-----	-----	1,000
Total.....	1,485	1,604	2,020

Major steps will be taken in 1972 in the transition to the new program. Four ongoing programs, *Model Cities*, *urban renewal*, *rehabilitation loans*, and *water and sewer facility grants* will be funded to operate for the first 6 months of the year. This will allow ample time for the new program to be enacted and funded before the older programs are terminated. The relationship of the programs is shown in the above table. During calendar year 1971, the Model Cities program will assist participating communities in the transition. Grants will be approved on a selective basis for activities that can be incorporated into local community development programs after January 1, 1972. In addition, the Model Cities program will undertake a series of experiments which

will include departures from current approaches in the administration of Federal grants. These "planned variations" will be carried out in a limited number of cities to test means of improving Federal and local capacity to respond to urban problems.

The urban renewal program will also be part of this transition. Assistance for new activities will be provided exclusively under the neighborhood development program, which has proven substantially more effective than the conventional approach and is much closer to the annual funding system planned for the new community development program. Urban renewal commitments for the first half of 1972 are expected to total \$800 million. On an annual rate basis, this is a substantial increase over the \$1.0 billion estimated for 1971.

It is further proposed that the support of community action agencies (CAA's) now funded through the Office of Economic Opportunity be incorporated in the Community Development Special Revenue-Sharing program on a basis which allows CAA's a needed and appropriate transition period to full local control by January 1, 1973.

Urban recreation.—HUD's *open space* program will be reformed and increased in 1972 with strong emphasis on smaller neighborhood parks in and around cities. These parks will thus serve the recreation needs of areas where the population is growing most rapidly.

Research.—The primary emphasis in urban research and technology in 1972 will be on completion of Operation Breakthrough, a concerted effort to develop new systems for providing the housing needed by a growing Nation. It will demonstrate how Government at all levels, working with the private sector, can encourage large volume housing production without sacrificing safety, environmental desirability, or other essential objectives. As Operation Breakthrough is brought to completion, other research programs will take on new importance. These programs are aimed at improving the physical and social aspects of the urban environment and at strengthening the institutional capabilities of State and local units of government. An appropriation of \$45 million is requested for research in 1972.

Office of Economic Opportunity.—The 1972 budget for the Office of Economic Opportunity (OEO) reflects a continuation of efforts begun

in 1969 to broaden the base of local support for community action and strengthen the agency's capacity to develop innovative approaches for solving the problems of the poor. Head Start, Follow Through, and manpower training funds previously channeled through OEO will now be appropriated to the Departments of Health, Education, and Welfare and Labor. Congress has already acted to accomplish these changes. Consistent with these actions, OEO's research and development is being increased in 1972 and emphasis will be placed on OEO's Government-wide responsibility for research and development in social program areas. Particular attention will be given in 1972 to experiments designed to test the effectiveness of private market mechanisms for delivering social services to the poor.

EDUCATION AND MANPOWER

Education and general science programs develop the intellectual skills of our people and further the expansion of scientific knowledge. Manpower programs develop occupational skills and provide employment opportunities for our workers. These programs account for 3.8% of the total Federal budget and provide services for millions of Americans.

Program highlights.—The 1972 budget for education, general science, and manpower reflects initiatives and reforms to increase the effectiveness of our investment in the Nation's human resources, broaden our knowledge, and provide for greater participation in program planning and management by State and local governments.

Education.—The administration will continue its efforts to reform education programs through proposals to:

- Adopt a new and expanded program of special revenue sharing with the States and localities for elementary and secondary education;
- Provide emergency school assistance to help meet the problems of desegregation and racially impacted districts;
- Establish a National Institute of Education to support educational research and experimentation and a National Foundation for Higher Education to promote innovation in colleges and universities;
- Reform higher education student aid programs to target aid to lower income students and increase loan opportunities for all students; and
- Focus greater attention on the growth and development of children from low-income families during their first 5 years of life.

General science.—Federal support of general science will be substantially expanded in 1972 for research efforts to:

- Develop the knowledge necessary to help solve major social and environmental problems;
- Advance our technology and economic productivity; and
- Improve our fundamental understanding of man and the universe.

Manpower.—The effectiveness and responsiveness of manpower programs in meeting national, community, and individual needs will be increased by reforms to:

- Shift responsibility for comprehensive manpower programs to State and local governments under a new and expanded proposal for special revenue sharing;

- Increase work and training programs to help welfare recipients obtain suitable employment;
- Expand computerized Job Bank systems to all major labor markets; and
- Improve occupational health and safety services.

¹ Compares with budget authority for 1970 and 1971, as follows:

1970: Total, \$7,307 million (NOA, \$7,289 million; LA, \$18 million).

1971: Total, \$8,628 million (NOA, \$8,647 million; LA, -\$19 million).

² Includes both Federal funds and trust funds.

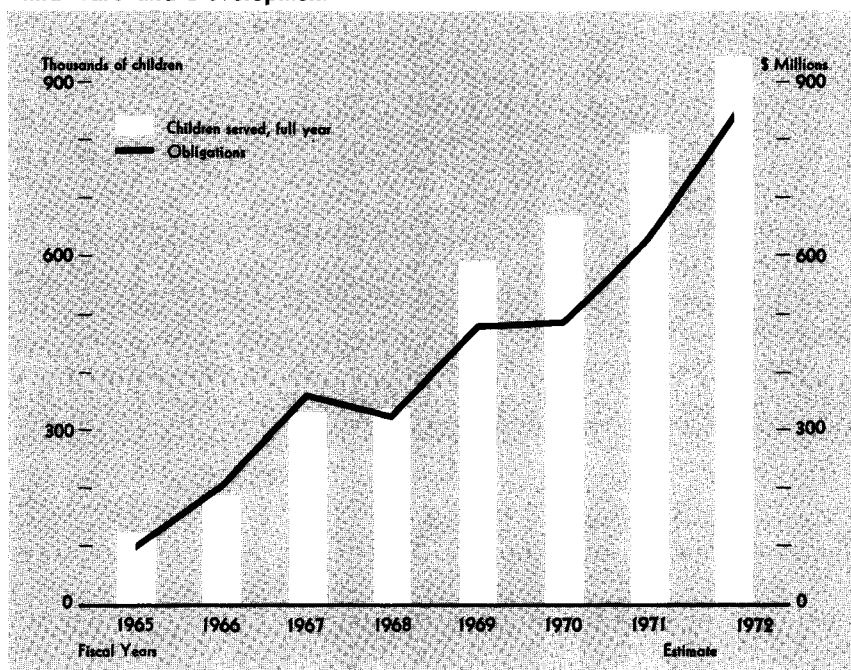

Budget highlights.—Outlays for education, general science, and manpower programs are estimated at \$8.8 billion in 1972, an increase of \$508 million over 1971.

EDUCATION

State and local governments have primary responsibility for education. Federal education programs promote equal educational opportunities and foster quality improvements at all levels of education.

Elementary and secondary education.—Outlays estimated at \$3.6 billion will support a variety of programs for preschool and elementary and secondary school students.

Child Care and Development

Early childhood development.—Head Start, a major element in the administration's emphasis on early childhood development, provides a variety of basic care and child development services to demonstrate techniques for maximizing the potential of children aged 3 to 5. In 1972, Head Start will give special attention to the children of persons eligible for assistance under the proposed welfare reform. Child care programs, provided in 1971 as a support service for the Work

Incentive Program, will be greatly expanded in 1972 to meet the needs of welfare recipients. Special efforts will be made to increase the number of child care facilities and improve the quality of home and neighborhood care.

Aid to school districts.—An important element of the administration's reform of Federal grant programs will be a proposal to adopt a new and expanded program of special revenue sharing for elementary and secondary education (see part 2). This proposal will draw together the wide array of overlapping and confusing authorities for categorical grants into four broad areas of national interest. These will include compensatory education for the disadvantaged, education of handicapped children, assistance to schools in areas impacted by Federal activities, vocational education, as well as flexible funds for the general support of education.

This proposal would become effective January 1, 1972, and would provide \$3 billion during the first full year, an increase of \$192 million in budget authority over the amounts requested for existing programs. The special revenue sharing proposal would retain the essential framework of national policy but give States a much wider degree of latitude as to how they would meet their own local problems. The proposal would also provide flexibility in moving funds from one broad purpose to another, enabling States to better respond to their priorities.

Budget authority totaling \$1.5 billion will be requested in 1971 and 1972 for project grants to local school districts that are desegregating under court order or attempting to overcome the educational disadvantages of racial isolation. Funds made available under the proposed Emergency School Assistance Act will be spent in succeeding years to allow for the careful development of programs to achieve these objectives.

Demonstration projects.—Outlays of \$136 million will support demonstration projects to improve the training, selection, and utilization of educational personnel. The Teacher Corps and the Career Opportunities Program will demonstrate new ways to prepare and use teachers in poverty-area schools. Other projects will introduce new approaches for retraining the school staffs to implement better educational techniques. Assistance totaling \$168 million for children from non-English speaking homes, the handicapped, and potential school dropouts will continue on a demonstration basis.

Higher education.—Federal higher education programs provide aid for students, the construction of facilities, and other higher education needs.

Student assistance.—Outlays for student assistance will total \$798 million, an increase of \$93 million over 1971. A basic revision of the existing student aid programs of the Office of Education will again be proposed to ensure that no qualified student who wants to go to college will be barred by lack of funds. Under this proposal, grants, work-study payments, and subsidized loans will be provided to lower income undergraduate students, with the amount of aid related to family income. An estimated 2.5 million students will receive benefits from this program. A National Student Loan Association will be recommended to provide loan capital to banks and colleges for loans to students at all income levels. Improved access to federally guaranteed loans will help almost 1 million undergraduate and graduate students to finance their education.

Construction of facilities.—Loans from the private sector will continue to be the major source of funds for the construction of college facilities. Federal interest-subsidy grants will, however, reduce the interest rates paid by colleges and universities on these loans. The college housing program of the Department of Housing and Urban Development will assist in the financing of dormitories and related facilities valued at \$300 million. Academic facilities valued at \$520 million, such as classrooms and laboratories, will be supported by the Office of Education's subsidized loan program.

Institutional and personnel development.—To spur reforms in higher education, a National Foundation for Higher Education, funded at \$100 million in budget authority, will be recommended under new legislation. An independent Federal agency, the Foundation will provide funds to colleges and universities that wish to experiment with new educational forms and techniques and assist in the development of national policy in higher education.

Continued attention will be given to meeting the special needs of predominantly black institutions. Increased funds will be made available from several Federal agencies, including the Office of Education and the National Science Foundation, to help these institutions improve their educational capability.

Operational grants to land grant colleges and fellowships for college teachers will be eliminated or reduced in 1972. This reflects a diminished need to support land grant institutions through specific categorical programs and the greater supply of teachers at the college level.

Vocational education.—Grants to States for vocational education will be included in the special revenue-sharing proposal for elementary

and secondary education. This will give the States much greater flexibility and responsibility in meeting their particular vocational education needs, while preserving an area of high national emphasis. Research and demonstration projects conducted by the Office of Education will be strengthened and improved in 1972 to develop better techniques for helping young people toward rewarding work careers. Working with industry, greater emphasis will also be placed on involving employers in career education programs.

Other education aids.—Institutions and programs which stimulate innovation in education and support cultural resources will receive increased support.

Outlays for a variety of *cultural activities* will total \$238 million in 1972. The budget provides \$70 million in budget authority, about double the 1971 level, for the National Foundation on the Arts and the Humanities. These funds will be used to assist cultural institutions and individual artists, support State arts councils, and carry forward knowledge and education in the humanities through a variety of institutions. The Corporation for Public Broadcasting will receive \$35 million in Federal payments which, with anticipated donations from non-Federal sources, will permit the Corporation to broaden its support of public television programs. Legislation will be proposed to provide an improved financing arrangement for the Corporation.

The Smithsonian Institution will support the design of a new National Air and Space Museum which is scheduled for completion for the 1976 bicentennial in the Nation's Capital.

Funds are provided for the proposed National Institute of Education. The Institute, an agency in the Department of Health, Education, and Welfare, will serve as the focal point for educational research and experimentation. Working with researchers, school officials, scientists, and others, it will help identify educational problems, develop programs to alleviate those problems, and assist school systems in applying the results of educational research and development.

GENERAL SCIENCE

National Science Foundation.—Budget authority for the National Science Foundation programs will be increased by approximately 23% in 1972, from \$506 million to \$622 million. In addition to the \$116 million increase in total funding, the budget reflects a shift in program emphasis toward greater support of research on specific problems and away from programs to expand general training and research capacity. This increase and program redirection will provide

National Science Foundation

an increase of \$170 million, or 56%, in budget authority for research programs. It will permit the Foundation to:

- Strengthen research efforts to help solve major problems such as pollution, health, transportation, and other urban, social and environmental problems;
- Initiate and expand basic and applied research essential to the advancement of our technology and economic productivity;
- Increase support for fundamental research, including important research which previously received support from other Federal agencies; and
- Improve the utilization of current scientific and engineering capabilities.

This greater research effort will be carried on throughout the country, as the talents of many individuals and organizations are tapped for these challenging research tasks. Many educational institutions which have been working towards the solution of problems on a local or regional basis are expected to contribute to these new research efforts.

MANPOWER

Federal manpower programs have a major role, along with fiscal and monetary policy, in advancing administration efforts to achieve economic growth with price stability by helping to increase worker skills and labor market efficiency.

Manpower training and employment services.—Manpower training and employment services enable workers and potential workers to become productive, self-sufficient members of the labor force by providing basic education, skill training, vocational counseling, job placement, and supportive services such as child care.

Manpower training programs.—The 1972 budget is based on two important proposals: a major reform of the present system of delivering manpower training services and a significant expansion in work and training programs for welfare recipients.

The administration will again propose major reforms in the structure and operation of Federal manpower training programs. Under this proposal, the present wide array of unrelated and narrowly targeted manpower programs will be pulled together under a single legislative authority in the Department of Labor (see part 2). The planning and administration of these programs will be decentralized to State and local governments to permit the development of comprehensive manpower programs more closely related to local conditions and individual needs.

This proposal is a key part of the administration's recommendations to create broad Federal grants that allow the recipient jurisdiction to identify their own priorities and make their own choices within major areas of national interest. Under the manpower reform proposal, a total of \$2 billion in budget authority would be provided during the first full year, an increase of \$435 million over the amount requested in 1972 under existing authorities. Funds will be distributed to State and local governments on the basis of such factors as local labor force size and the incidence of unemployment and poverty.

Complementing the administration's manpower reform legislation is the proposed reform of the welfare system. Beginning in 1973, Aid to Families with Dependent Children program will be replaced by an entirely new approach that ties into the Nation's manpower programs. Strong work incentives will be built into the benefit structure. Employable family heads, except mothers of preschool children, must undertake suitable employment or job training. Expanded training and

child care efforts will be provided to help recipients become self-supporting.

Outlays for the Work Incentive Program (WIN) will total \$231 million in 1972, a 58% increase over 1971, to provide a foundation for the expanded training effort contemplated under the welfare reforms. In 1972, 187,000 recipients of Aid to Families with Dependent Children will be enrolled in the program. An estimated 200,000 children will receive child care services in 1972 under the WIN program.

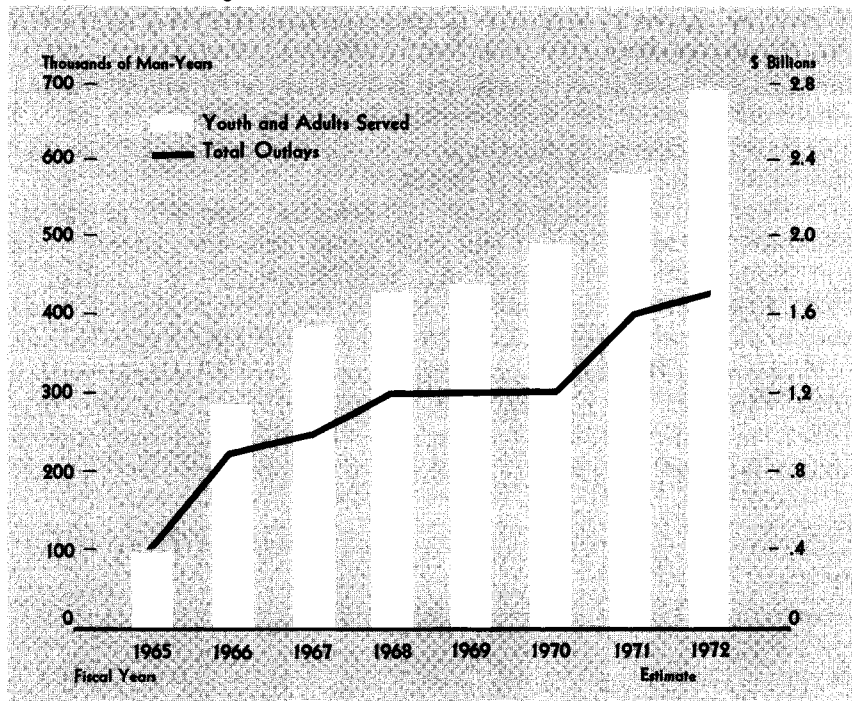

State and local governments will be able to provide manpower services to more than 1 million youths and adults through the combination of on-the-job training, institutional training, or work-support programs which they determine will best meet their communities needs.

On-the-job training programs reimburse employers for the additional costs of recruiting and training the unemployed, and for upgrading the skills of the underemployed. The reimbursable costs may include the provision of remedial education and other supportive services.

Institutional training programs, provide a wide range of vocational, prevocational, and remedial education services to unemployed youths and adults either in schools or in separate skill centers operated by States and localities.

Work support programs create jobs in the public sector, filling otherwise unmet needs. In 1972 adults will fill such jobs on a temporary

Manpower Training

basis, as they seek permanent, unsubsidized employment. In addition, disadvantaged high school students will have opportunities for part-time work during the school year or jobs in the summer, so that they may complete their education and better prepare themselves for the world of work.

Federal-State employment service.—By the end of 1972, employment service operations in all States will be strengthened through the use of computerized job banks to provide up-to-date listings of job vacancies. Development and testing of automated systems to match job vacancies and unemployed workers will be undertaken in 14 States. This research is particularly important as the forerunner of a nationwide system of computerized job matching.

Other manpower aids.—These programs address such vital concerns as equal employment opportunity, job safety, labor-management relations, wage garnishment, and statistical information. Outlays for these efforts to achieve equity and efficiency in the labor market will total \$308 million in 1972.

Greater attention will be given to labor-management relations in the Federal Government. Provision is made for additional workload stemming from a dramatic increase in union organizing.

The Occupational Safety and Health Act of 1970, passed after decades of effort, establishes a comprehensive program to reduce the frequency of injuries, diseases, and deaths. An estimated 57 million workers are covered by the act. In 1972, the Department of Labor and the Occupational Safety and Health Review Commission will be funded at \$25.3 million. Safety and health standards will be promulgated and a compliance and training program established. Funds will also be provided for planning and administration grants to States that choose to operate their own programs.

Outlays for enforcement and technological research under the Federal Coal Mine Health and Safety Act and the Federal Metal and Nonmetallic Mine Safety Act will increase by \$14 million in 1972. Research will be conducted on fire, explosion, and cave-in prevention, and on the reduction of dusts that cause respiratory diseases.

Programs of the Bureau of Labor Statistics will be strengthened in 1972. Work will be continued on revision of the Consumer Price Index, an essential tool for economic analysis, and programs to collect data on the construction industry will be expanded significantly.

HEALTH

During the 10 years from 1960 to 1970, total health expenditures increased from 5.3% of the Nation's gross national product to 7%. Total national outlays for health grew almost threefold, rising from \$26.4 to \$67.2 billion. The Federal share of national health outlays also increased rapidly, from 13% to 27%, due in large part to the Government's new role in helping pay the hospital and medical bills of the Nation's aged and poor.

These trends, which reflect the Nation's emphasis on health, have created both problems and opportunities for the future. They have caused medical care prices to rise twice as rapidly as the general price level, and overburdened a health system that cannot now provide services efficiently and equitably to all who need them. However, they have also provided the Federal Government the legal and financial leverage to encourage basic reforms of the Nation's health care system.

Program highlights.—An intensive administration review of existing health programs has led to the design of a new comprehensive health strategy for the 1970's. The basic principles underlying the design of the national health strategy are:

- *Prevention.*—Wherever possible the need for medical care must be eliminated by the avoidance of illness and injury through effective preventive measures;
- *Equity.*—No American family should be prevented from obtaining a reasonable and basic standard of medical care by inability to pay;
- *Efficiency.*—The productivity of the health system should be raised; shortages and maldistribution of health care resources must be overcome, so that improved health purchasing power leads to the delivery of needed services and brings medical cost inflation under reasonable control.

A legislative program embodying this strategy will be presented to the Congress in calendar 1971. Consistent with the administration's proposed welfare reform, the legislative program will include health protection to all poor families with children.

The administration's strategy also recognizes that the health of our citizens is improved through Federal action in other areas not normally considered as "health." For example, Federal efforts for better housing and expenditures under the proposed welfare reform also improve the health of our people. Likewise, the proposed revenue sharing program will provide additional funds that State and local governments can use for programs which contribute to the Nation's health. As part of

*Less than \$0.5 million.

¹ Includes programs of the Department of Health, Education, and Welfare, the Environmental Protection Agency and the Federal Employees Health Benefits program. Excludes several major health programs which are classified in other functional sections of the budget, notably those of the Veterans Administration, the Office of Economic Opportunity, and the Department of Defense. The health outlays for these programs are included in Special Analysis K, *Federal Health Programs*, published in a separate volume.

² Compares with budget authority for 1970 and 1971, as follows:

1970: Total, \$13,211 million (NOA, \$13,207 million; LA \$5 million).

1971: Total, \$17,013 million (NOA, \$17,003 million; LA \$10 million).

³ Entries net of offsetting receipts, except for \$15 million Medicare repayment to general fund in 1971.

⁴ Includes child welfare expenditures in 1970.

⁵ Excludes offsetting receipts which have been deducted by subfunction above: 1970, \$1,556 million; 1971, \$2,119 million; 1972, \$1,928 million.

the new strategy, the 1972 budget continues broad support for biomedical research in all areas. It includes \$100 million to launch an expanded effort to conquer cancer. The state of our knowledge about cancer offers high possibilities for the control of this dread disease. The budget acknowledges that opportunity and proposes a program to help realize it. The budget also proposes an intensive research effort to find a cure for sickle cell anemia.

In recognition of the Nation's need for increased health manpower, the budget includes \$95 million for a new initiative in the support of our health professions schools. New legislation will be transmitted in this area as part of the administration's health program.

Other administration programs of high priority in the field of health care contained in the budget are increased funding for: research on heart and lung disease, tooth decay, child health, and environmental contaminants; expanded efforts in family planning services and reproduction research, drug addiction and alcoholism; incentives for the development of health maintenance organizations; and additional funds for consumer protection activities, with special attention directed toward eliminating harmful foods.

National Health Expenditures Percentage Distribution

Budget highlights.—Federal outlays for health are estimated to rise \$1.1 billion over 1971, reaching a total of \$16.0 billion in 1972. Of this amount, \$2.4 billion or 15% will be spent on biomedical research, training health manpower, constructing health facilities and improving our health delivery system. Outlays for medical services are estimated at \$12.9 billion, and \$703 million will be spent on prevention and disease control programs.

Development of health resources.—In 1972, the administration's strategy will give high priority to development of the Nation's health resources to prevent health problems and to increase the capacity to assure each citizen access to needed health care.

Supporting biomedical research.—Federal outlays for biomedical research will rise to \$1,355 million in 1972 and constitute over 60% of all funds spent on health research in the United States. Cancer is the second most prevalent cause of death. Scientists believe we are now able to accelerate research on cancer with a high probability of success. The 1972 budget initiates a special \$100 million increase in research funds targeted on cancer research. The 1972 budget also provides for intensive research on sickle cell anemia. Additional research funds are provided for heart disease, tooth decay, and an expanded effort to increase knowledge of human reproduction and to improve the ability of parents to plan their families. Other major investigations will be directed toward lung diseases, the effect of environmental pollutants on health, understanding mental illness and drug addiction, and preventing the disabilities and diseases of infancy and early childhood.

Training health manpower.—The Federal Government has assumed a major responsibility for expanding the Nation's pool of medical, dental, nursing and other health related personnel and for providing financial support to the Nation's medical schools. The basic laws authorizing this support expire at the end of 1971. New legislation to be proposed in 1971 will give the Nation's health professions schools greater stability and flexibility in the use of Federal grant funds. In addition, the budget provides funds to promote efforts to shorten the curriculum, expand medical school enrollment, train primary care physicians, and increase utilization of physician assistants and other paramedical personnel—all designed to help meet the need for health manpower in scarcity areas. The 1972 budget includes a targeted increase of \$95 million for these new and important elements of the administration's health strategy.

Construction of health facilities.—Federal outlays for construction of health facilities will decline to \$280 million in 1972, \$11

million less than in 1971, reflecting recent changes in the Hill-Burton program. In 1972, this program will provide \$85 million in grants to encourage construction of health facilities which offer lower cost alternatives to hospitalization such as ambulatory care, rehabilitation, and mental health facilities. In addition, \$20 million in interest subsidies will be made available to support the new program of guaranteed and direct loans for construction and modernization of hospitals and other health facilities. By the end of 1972, a total of \$1 billion of guaranteed and subsidized loans will have been made.

Improving the organization and delivery of health services.—Consistent with the themes reflected throughout the 1972 health budget, the administration will emphasize basic reform to improve the efficiency of the health care delivery system.

The 1972 program will encourage experiments with and the use of Health Maintenance Organizations (HMO's) and other health care institutions which provide comprehensive health care services on a pre-

paid basis. Because these organizations provide services to an enrollee for an annual fee, they provide strong incentives to use health resources efficiently and to assure that the patient receives preventive care necessary to minimize acute illness and the high costs of hospitalization.

Other Federal programs working to improve the organization and delivery of health services will be directed toward more efficient use of health resources and continued experiments in the use of paramedical personnel. Closer working relationships are to be developed between the 55 regional medical programs and the State, territorial, and areawide health planning agencies. *Regional Medical Program* funds will be redirected to new efforts promoting regional cooperation in the use of health care technology, quality control and improved standards of care in hospitals, and the development of more efficient ways to organize providers of health care. An increase of \$6 million in outlays for *Comprehensive Health Planning* will permit expanded funding of 137 existing planning agencies and will finance the initial operation of 14 new agencies.

Providing or financing medical services.—Federal outlays to provide or finance hospital and medical services will rise by 8% in 1972, and will represent 81% of total Federal outlays for health. These funds will be spent primarily to provide medical services for the poor, the aged, and certain categories of Federal beneficiaries.

Medicare, Medicaid, and other medical care financing programs.—The 1972 *Medicare* program will pay an estimated 45% of the total hospital and medical bills for the 20 million persons in the Nation over 65 years of age. Medicare outlays are estimated to increase from \$8.3 billion in 1971 to \$9.0 billion in 1972. This increase reflects the continuing rise in medical care costs, growth in the number of individuals served and medical services utilized. In total, in 1972, approximately 4.6 million persons will receive hospitalization benefits and 9.4 million will be reimbursed for physician and other outpatient costs through Medicare.

Legislation is being proposed again in early 1971 to modify Medicare to stem sharply rising costs and encourage use of more efficient providers of service. This authority will be used to:

- Bar from the program hospitals, physicians, and other health care providers guilty of program abuses;
- Set reasonable limits on hospital charges;

- Facilitate serving Medicare and Medicaid beneficiaries through negotiated reimbursement arrangements with health maintenance organizations;
- Encourage Medicare patients and their physicians to use the most efficient medical services and facilities by adding a cost-sharing feature to hospitalization benefits; and
- Deny depreciation payments to medical facilities whose capital improvements are not in accord with community long-range planning.

To place the Medicare program on a sound actuarial basis, the proposed legislation also provides for an increase in the payroll tax rate allocated to the hospital insurance trust fund. This increase will be offset by an equivalent reduction in the OASDI tax rate. The increased allocation, coupled with the proposed rise in the covered wage base, will produce over \$4.3 billion of additional revenues to the Medicare system in 1972.

Cost-sharing legislation is also being introduced for Medicaid beneficiaries not receiving cash assistance. While the number of Medicaid recipients is expected to grow from 17 to 19 million, the Federal share of Medicaid outlays in 1972 is expected to increase by \$134 million or 4% over 1971—compared to an annual average increase of 14% in prior years.

Outlays for the *Maternal and Child Health Program* will increase to \$230 million in 1972. A major portion of these programs assist States and localities in providing comprehensive health services for low-income mothers and children. Emphasis will be placed on broadening the range of services available, increasing the number of beneficiaries receiving comprehensive medical care, and expanding training for pediatric nurses and physician assistants serving mothers and children.

Family planning services.—One of the most effective preventive health measures for reducing infant and maternal mortality and improving the physical and mental health of families is the provision of family planning services which enable families to decide the number and spacing of their children. To achieve the President's goal, stated in a message to the Congress on July 18, 1969, of providing family planning services by 1975 to all women who face financial or other barriers to receiving them, the 1972 budget will provide a program level of \$133 million for project grants. This is an increase of \$40 million over 1971. When these grants are fully operational, they should serve over 3 million women—60% of the target group.

Federal employee health benefits.—The Federal Government offers health insurance plans to its 2.6 million active and retired civilian employees and their 5 million dependents; these plans are financed by

premiums from Federal active and retired employees and by contributions from Federal agencies. Rising prices for medical care are responsible for an average increase in employee premiums of 17% in 1972. This rise is more than offset by an increase in the Federal contribution from 23% to 40% beginning in January 1971. Federal outlays for this program represent the difference between total premiums received and payments to the private insurance carriers.

Providing services in HEW medical facilities.—Outlays for health services to American Indians and Alaska natives, Public Health Service Commissioned Corps Personnel, and other Federal beneficiaries will be \$250 million in 1972. This figure includes funds to insure that beneficiaries currently served by the eight Public Health Service general hospitals will receive the care to which they are entitled, including care in community facilities or other Federal hospitals, at Federal expense. This policy includes consideration of the potential for converting the PHS direct care facilities to community use.

Outlays for the Indian Health Service will increase to \$152 million, as special impact programs in mental health, family planning, mater-

Infant mortality per 1,000 births	32.6	30.8	29.0	27.1

nal and child care, and the training of health aides are further expanded. Sanitation facilities for 8,000 new homes for Indians will also be provided. During 1972, \$2 million in overall improvement funds will be made available to St. Elizabeths Hospital in Washington, D.C., to increase its staff and to undertake closer worker relationships with the social and legal services provided by the District government.

Prevention and control of health problems.—A high priority of this administration is the expansion of the Nation's capacity to prevent the need for medical care. Outlays for community mental health and comprehensive health centers, narcotics and alcoholism treatment projects, environmental health, consumer protection, and other HEW programs aimed directly at preventing and controlling health problems, will increase by \$39 million to \$703 million in 1972.

Preventing and controlling diseases.—The 1972 budget proposes an intensified effort to combat drug abuse and alcoholism. An increase in obligations for community-based narcotic addiction and alcoholism projects from \$61 million in 1971 to \$78 million in 1972 will be provided by programs in the National Institute of Mental Health and in OEO. These programs will provide information on drug abuse; treatment, prevention and rehabilitation services for addicts; staffing of rehabilitation and treatment facilities; and manpower development programs. In addition, the Commission on Marihuana and Drug Abuse, which will be appointed in early calendar year 1971, will conduct a study of marihuana's legal status, its health effects, and the relationship between its use, crime, and the use of other drugs.

Increases in the 1972 budgets for Comprehensive Health Centers and Community Mental Health Centers will permit transfer to HEW of nine neighborhood health centers formerly funded by OEO and will provide new staffing grants for 42 centers that have previously received Federal grants for construction.

Controlling environmental problems.—Outlays by the new Environmental Protection Agency and the Department of Health, Education, and Welfare to prevent damage to the Nation's health from environmental hazards will equal \$200 million in 1972. These funds will support intensified efforts to deal with air pollution, solid wastes, pesticides, radiation, occupational health hazards, and the health effects of water pollution.

Primary emphasis will again be placed on the prevention and control of air pollution, with one of the principal objectives of the program being to set national air quality standards and to assist States in developing plans to attain those standards in air quality control regions. By the end of 1972, all of the Nation's urban population is

expected to live within the boundaries of these control regions. Efforts to develop a low-pollution automobile will be expanded. Current efforts to control nitrogen oxides emissions will be continued, and funds will be increased for a cost-sharing program with industry to develop and demonstrate sulfur oxides control technology.

Research efforts will also be increased to develop maximum acceptable radiation exposure standards for the general public from such electronic products as color televisions, microwave ovens, and X-ray equipment. The budget for the Environmental Protection Agency includes \$28 million for new environmental laboratory facilities.

Protecting the consumer.—The Food and Drug Administration's efforts to protect the consumer from dangerous or unhealthy foods and additives, drugs, chemicals, and household products will continue to receive emphasis in 1972. Nutritional quality and food safety will receive priority attention, including increased inspection of food manufacturers and research on food chemicals and drug residues in animals. A new research facility will be established to study the long-term health impact of chemicals in food and in the environment. More efficient handling of new drug applications will permit needed safe drugs to reach the consumer more quickly. An intensive effort will be undertaken to reevaluate drugs already on the market. Outlays for the FDA will increase by \$15 million to \$98 million in 1972.

INCOME SECURITY

Progress and reform are the distinguishing traits of the Nation's income security programs as we move into the 1970's. Significant changes were made in unemployment compensation and the food stamp program in calendar year 1970. It was a year of accomplishment, but also one of greater promise for the future.

The Congress advanced its consideration of welfare reform and social security improvements nearly to the point of enactment prior to adjournment. The year ahead will be devoted to sustaining this momentum to obtain the most important breakthrough in income security programs in a generation—enactment of welfare reform.

Income security programs account for one-quarter of the total Federal budget and influence the lives of millions. Social security benefits will reach 27 million people. Food stamps will aid 11 million poor, and welfare will be provided to more than 14 million.

Program highlights.—During calendar year 1970, income security programs were improved in terms of adequacy, equity, or basic structure.

- Unemployment insurance was extended to 4.8 million additional workers, and special benefits will be automatically triggered when warranted by economic conditions.
- The Food Stamp Program was greatly improved by providing national eligibility standards, sufficient family allotments to purchase a nutritionally adequate diet, and free food stamps to the poorest families.

Legislation has been proposed to reform the Nation's basic income security programs—welfare and social security.

Welfare reform will fundamentally recast welfare policy in the United States by:

- setting national eligibility standards;
- blending strong incentives and requirements for work and training;
- providing financial relief to the States; and
- establishing a Federal floor under benefit payments for *all* poor families with children, including for the first time those with working fathers—the working poor.

Social security benefits will be automatically adjusted in the future to keep pace with the cost of living, with the first installment being a 6% increase effective January 1, 1971.

Budget highlights.—Outlays for income security programs will reach \$60.7 billion in 1972, up 9% from the estimated 1971 level.

¹ Compares with budget authority for 1970 and 1971, as follows:

1970: Total, \$52,808 million (NOA, \$52,804 million; LA, \$4 million).

1971: Total, \$58,490 million (NOA, \$58,486 million; LA, \$4 million).

² Entries net of offsetting receipts.³ Includes both Federal funds and trust funds.⁴ Excludes offsetting receipts which have been deducted by subfunction above: 1970, \$1,074 million; 1971, \$1,110 million; 1972, \$1,333 million.

Recently, the annual increase in these programs has approached half or more of the normal growth in Federal revenues. Nearly 95% of these outlays are uncontrollable in the sense that they are determined by the number of eligible program beneficiaries.

The Federal Government plays the predominant role in all income maintenance efforts. Federal outlays for these purposes are estimated to constitute 5.5% of personal income. In 1970, Federal expenditures of roughly \$45 billion were supplemented by \$15 billion of State and local government funds, and \$13 billion from the private sector of the economy.

Retirement and social insurance.—Of the \$61 billion for income security, \$49 billion or 81% is for retirement and social insurance. These programs are designed to cushion the income loss suffered when earnings are interrupted or terminated by old age, disability, death, or temporary unemployment. The benefits are related to prior earnings and are financed principally by payroll taxes on employees and employers.

Income Security Outlays

The major outlays under the social security program are cash payments to old-age, survivors, and disability insurance beneficiaries. The estimated \$5.2 billion rise in outlays in 1971 and the 1972 rise of \$3.2 billion reflect a number of factors, including growth in the number of beneficiaries and higher benefits for recent retirees based on their higher lifetime earnings. The estimates also reflect the full-year cost of the 15% increase in benefits effective January 1970, a proposed additional increase of 6% effective January 1971, and proposed improvements to increase widow's benefits, liberalize the retirement test (earnings allowed without benefit reduction), and make other program modifications. Automatic adjustment of benefit levels is also proposed to keep pace with the cost of living.

Under existing law, the social security combined tax rate to finance cash benefits will rise from 8.4% to 9.2%. Under proposed legislation, the tax rate for cash benefits would remain at 8.4% since it will not be required for financing the old-age, survivors, and disability programs. Instead, the health insurance tax rate will be increased by an equivalent amount. The individual earnings subject to the tax is proposed to increase from \$7,800 to \$9,000 beginning January 1, 1971. This will produce additional receipts of \$125 million in 1971 and \$2.8 billion in 1972 for the combined OASDHI program although the shift in tax rate will result in a decrease in receipts of \$1.1 billion in 1971 and \$1.6 billion in 1972 for the cash benefit program (OASDI) alone. In the future, the level of taxable earnings will be increased automatically as total earnings in the economy rise. This will not only finance the automatic increases in benefits, but will permit the base for computing future social security benefits to reflect a greater proportion of a worker's total earnings.

Benefits are also paid to retired railroad workers and Federal civil servants under separate contributory systems. A special study of the railroad retirement funds has been launched to determine what steps are necessary to put the system on a sound financial basis.

Coal miners who were disabled by "black lung" disease, or their dependents, receive special benefits financed by the Federal Government until the States can launch effective workmen's compensation programs in these areas.

Public assistance.—The Federal Government provides cash assistance to those who have little or no other means of support—one-parent families with dependent children, the aged, blind, or the disabled. Food stamps are also available to these groups.

States match Federal payments to individuals; the percentage is determined by relative State income. The Federal share will amount to 57% of total program costs—an estimated \$6.6 billion in 1972.

¹ Average monthly or weekly data.² Does not include payments under proposed legislation.

These programs have experienced dramatic growth in recent years, largely due to an increase in Aid to Families with Dependent Children (AFDC). Federal outlays for public assistance grants increased 21% in 1970 and are expected to rise 37% in 1971 and 27% in 1972. Increases in AFDC for each of these years are expected to range between 25% and 32% according to present State estimates. By mid-1970, three States had already experienced a 50% increase in AFDC caseload, while 10 others saw increases of 30% or more over the preceding year.

Several factors account for such rapid growth. Benefit levels have been increased with the rising cost of living. Outreach efforts have been intensified and there appears to be less social stigma attached to receiving welfare than in earlier periods. Supreme Court decisions have nullified some State efforts to restrict eligibility. In addition, there is evidence of breakdown in traditional family patterns, with increases

Public Assistance Grants to States

in the proportion of divorced or separated women who are heads of households and unable to earn enough to provide for their children.

The administration's proposed welfare reform is an essential and unprecedented restructuring of the present welfare system. It places heavy emphasis on providing greater incentives for work, training, and self-sufficiency. The program will establish national eligibility standards and a Federal income floor of \$1,600 for a family of four. States will have to supplement these basic payments up to present payment levels or the poverty level, whichever is lower. A minimum monthly payment for the aged, blind, and disabled will be required. These changes are proposed to go into effect on July 1, 1972.

Beginning in 1973, payments will also be made to the working poor for the first time in our history—providing income supplementation to those who are employed full time but simply do not earn enough to support their families.

Welfare reform will require \$581 million in budget authority and \$502 million in outlays in 1972—primarily to lay detailed plans and establish the new administrative structures necessary to carry out the reform effectively.

¹ Includes Federal payments for intermediate care which will amount to \$179 million in 1970, \$325 million in 1971, and \$401 million in 1972. Total Federal, State, and local payments will be \$304 million in 1970, \$542 million in 1971, and \$674 million in 1972.

Extension and reform of the food stamp program were early efforts of this administration to alleviate hunger and malnutrition.

The Congress recently enacted many reforms proposed by the administration. The most important include:

- Sufficient food stamps to purchase a nutritionally adequate diet (currently \$106 a month for a family of four);
- Free food stamps for the poorest families; and
- Adjustment of benefits to match increases in the cost of living.

As a result, outlays for food stamps will increase by \$436 million in 1972 to \$2.0 billion. An estimated average of 11 million people will be aided. The program has also become an important element in the overall strategy to combat poverty, and will be closely integrated with the proposed welfare reform.

The expansion of the food stamp program, improvements in the direct distribution of commodities to needy families, and increased commodity support of the school lunch program have widened the opportunity for poor people to obtain an adequate diet. This makes it possible to terminate the relatively less effective special milk program. School breakfast, nonfood assistance, and nonschool food programs will be continued at the 1971 level. Improvements in commodity distribution to schools and needy families are discussed further in the section on agriculture and rural development.

Social and individual services.—During the 1960's, Congress authorized a series of services to public assistance recipients, hoping to combat rising dependency. The approach was open-ended: the Federal Government was authorized to defray 75% of any State spending to "strengthen family life" or assess the employment potential of family members.

Costs for these programs are mounting, with a 50% increase between 1970 and 1971. Because of this continuing rise in costs—uncontrollable under current law—and the unknown value of the services provided, this program is a prime candidate for reform. A 10% growth limit will be sought for the program, together with proposed legislation to fundamentally restructure social services to encourage better results and greater accountability in the use of funds. Services will be made voluntary and administered separately from cash assistance.

An additional \$151 million will be spent to enforce national standards in foster care and provide special incentives for the adoption of handicapped and other hard-to-place children. The reform will also include funds to strengthen the capability of Governors and local officials to implement policy in service programs.

Vocational rehabilitation enjoys a 50-year record of impressive success in restoring the mentally and physically disabled to effective functioning in our economic life. This year an additional \$26 million of project grants will be requested to help serve 45,000 disabled public assistance recipients. This will increase the number of rehabilitants on public assistance to 45,500, an increase of 6,000 over 1971. For the 28,000 public assistance clients rehabilitated in 1969, total monthly welfare payments were reduced from \$3 million per month at the time of acceptance, to \$1.5 million per month at the time they left the pro-

gram fully rehabilitated. A similar order of savings is anticipated for public assistance clients rehabilitated in 1972.

Special programs for the aging include a new effort to provide opportunities for 29,200 older Americans to engage in meaningful voluntary service. A White House Conference on the Aging will be held in calendar year 1971 to identify the special social and economic problems suffered by the elderly.

VETERANS BENEFITS AND SERVICES

Our Nation owes a special debt to the men and women who have served in the Armed Forces of their country—particularly those who are now returning from Vietnam.

Program highlights.—In 1972, special efforts will be made to improve medical care for veterans disabled as a result of military service. These efforts will:

- Raise average employment in veterans medical facilities by 4,547;
- Provide more hospital beds for intensive care and 154 new medical service units; and
- Modernize or replace five hospitals and activate three new hospitals.

Returning Vietnam veterans will also benefit from expanded re-adjustment and training programs. The number of GI bill trainees will rise by 172,000 to 1.8 million. Vocational rehabilitation programs will enable 34,000 disabled veterans to become more productive wage earners.

Budget highlights.—Total outlays for veterans programs will be \$10.6 billion in 1972, \$675 million higher than in 1971. This increase reflects higher outlays for education and training, compensation, pensions, and medical care. Approximately 65% of the total 1972 outlays provide income assistance in the form of compensation, pension, and life insurance payments.

Wherever possible, the additional cost of improvements should be offset by modifying or discontinuing obsolete policies and uneconomic programs. Therefore, legislation is recommended to: (1) obtain reimbursement from private insurers for general hospital care given by veterans hospitals to patients with non-service-connected ailments; (2) discontinue veterans compensation payments for cases of arrested TB; and (3) eliminate that portion of veterans cash burial payments that duplicates similar payments by other Federal agencies.

Income security for veterans.—Income security benefits provide financial help to veterans and their families when the disability or death of a breadwinner reduces their income.

Service-connected compensation.—Monthly compensation is paid to veterans for disability incurred or aggravated by military service. The amount depends on the severity of disability and the impairment of estimated earning power. Compensation also is paid to survivors of servicemen who died as a result of military service.

¹ Compares with budget authority for 1970 and 1971, as follows:
 1970: Total, \$8,780 million (NOA, \$8,602 million; LA, \$178 million).
 1971: Total, \$10,204 million (NOA, \$10,246 million; LA, -\$42 million).

² Includes both Federal funds and trust funds.

³ For greater detail see table on p. 171.

In 1972, compensation benefits of \$3.6 billion will assist 2.6 million veterans and survivors. An estimated 94,000 Vietnam veterans and survivors are expected to be added to the compensation rolls in 1972. A decline in beneficiaries from prior conflicts will offset about one-fourth of this increase.

Veterans Compensation and Pensions

Non-service-connected pensions.—Veterans may qualify for monthly pensions on the basis of financial need and total disability. Widows and surviving children may also qualify if their income is below levels specified by law. Pension rates were increased substantially in calendar year 1970 and further increases become effective in January 1971. Outlays for pensions in 1972—\$2.5 billion—will provide financial assistance to 2.3 million beneficiaries.

Life insurance.—The Veterans Administration and the Department of Defense cooperate to provide Servicemen's Group Life Insurance to protect the families of men now serving in the Armed Forces. This insurance is jointly administered and underwritten by the Veterans Administration and almost 600 private insurance companies. The Department of Defense pays claims in excess of mortality rates considered normal for civilian policyholders. Over 98% of all servicemen on active duty have taken insurance coverage under this program. Veterans can continue their coverage with these private companies after returning to civilian life.

The Veterans Administration also operates insurance programs for veterans of prior conflicts. Trust fund financing covers the largest two programs—U.S. Government Life Insurance and National Service

LIFE INSURANCE

¹ Funded under the Department of Defense, in the national defense function.

Life Insurance—which are primarily for veterans of World War I and World War II, respectively.

Veterans education, training, and rehabilitation.—The readjustment of the Vietnam-era veteran to civilian life is an important national concern. To help the returning veteran develop his full capabilities, assistance is provided under the GI bill for education, training, and vocational rehabilitation. Outlays for training of veterans and survivors will increase by \$267 million to \$2.0 billion in 1972—reflecting higher payment rates and anticipated increases in the number of trainees.

EDUCATION AND TRAINING

Veterans Readjustment Benefits — GI Bill

In 1972, 1,757,000 veterans are expected to receive benefits for education and on-the-job training programs, an increase of 169,000 veterans over 1971. Educational assistance is also offered to survivors of deceased veterans and to dependents of those who were totally disabled as a result of military service.

Veterans housing.—To assist veterans in purchasing homes, the Veterans Administration guarantees privately financed mortgages. This program has been supplemented by a direct loan program. Special efforts will be made to expand the capacity of the loan guarantee program to cover the credit needs of all eligible veterans—including an increase in personnel to help arrange financing in credit-short areas. The increased outreach efforts of the loan guarantee program and generally improved credit markets make it possible to terminate the direct loan program in 1971.

Net lending for housing credit programs is expected to decline in 1971, reflecting the increased sale of loans to private investors and the termination of the direct loan program.

Hospital and medical care for veterans.—Medical care is available to veterans in over 200 VA hospitals and clinics across the country. By law, all veterans with service-connected disabilities are assured of care. To the extent that available facilities and staff are not fully utilized by these veterans, hospital care is also provided for veterans with disabilities unrelated to service who are unable to pay for care. Patients with non-service-connected ailments occupy about 75% of total VA hospital beds. Many carry private health insurance. For the latter, legislation is proposed to have private insurers reimburse VA to the same extent that they reimburse other providers of hospital care.

A record 806,000 veterans will be treated in veterans hospitals in 1972. On an average day, this represents 79,000 veterans receiving such care. In addition, an estimated 7.1 million medical and dental outpatients visits will be made to VA clinics, an increase of 405,000 visits over 1971, and another 1.5 million visits will be made to private physicians and dentists at Federal expense.

Improvements will continue to be made in the quality of medical care. The 1972 program will feature:

- An increase of 4,547 in average employment;
- Activation of three new hospitals;
- Education and training of 53,000 medical personnel, an increase of nearly 2,000 over 1971;
- The addition of specialized medical services—primarily specialized units for the intensive care of spinal cord injury, heart and kidney diseases, emphysema, and the treatment of alcoholism and drug addiction;
- Outpatient and dental treatment for increasing numbers of Vietnam veterans;
- Increased usage of drugs, supplies, and appliances; and
- Upgrading of medical equipment and facilities.

These increases will make available to VA hospitals a greater range of medical specialties, strengthen affiliation with medical schools, and assist in attracting and holding topflight talent.

In addition to these improvements in quality, VA will better its matching of patients with the most appropriate and beneficial mode of care, and accelerate placement of patients in nursing homes, VA domiciliaries, and their own homes on an outpatient status. Besides enhancing patient welfare, these measures will shorten the average length of hospitalization—thus restraining hospital cost increases.

¹ Estimates based upon pay rates prevailing in December 1970.

Construction of hospital and nursing home facilities.—The 1972 budget provides a rise of \$31 million in budget authority for medical facilities from \$59 million in 1971 to \$90 million in 1972. The 1972 program will include the modernization or replacement of five hospitals at a cost of \$29 million. In addition, over \$18 million in budget

authority will be committed to major projects for intensive care, air conditioning, and medical education.

Other veterans benefits and services.—Continuing improvements will be made in counseling and assistance for servicemen still in the war zone, in military hospitals, and in separation centers. Some 71 veterans assistance centers and other VA-supported contact activities will supplement job counseling and employment activities of the Departments of Defense and Labor.

INTEREST

Interest costs, predominantly interest on the public debt, will rise by \$1.1 billion in 1971, and by another \$0.2 billion in 1972.

INTEREST ¹

[In millions of dollars]

Program or agency	Outlays			Recommended budget authority for 1972
	1970 actual	1971 estimate	1972 estimate	
Interest on the public debt ²	19,304	20,800	21,150	21,150
Interest on refunds of receipts.....	113	117	117	117
Interest on uninvested funds.....	6	7	6	6
Subtotal.....	19,423	20,924	21,273	21,273
Deductions for offsetting receipts:				
Interest received by Treasury:				
From other Government accounts.....	-783	-1,200	-1,272	-1,272
From the public.....	-327	-291	-314	-314
Total.....	18,312	19,433	19,687	19,687

¹ Excludes interest on debt issued by various agencies, which is included in the outlays of the function served.

² Includes interest paid on the public debt held by Government investment accounts.

Interest payments for both 1971 and 1972 reflect the recent reduction in interest rates on short-term securities, the sector of the market where the great bulk of Treasury refunding operations necessarily occurs. Assuming continuance of relatively low market rates of interest, refunding of maturing obligations bearing higher rates will provide savings that offset much of the increase that would otherwise occur in 1972 as a result of a larger debt level.

About \$1.6 billion of the estimated outlays for interest in 1972 will be offset by collections of interest by the Treasury Department. These collections come mainly from interest on loans to other Federal agencies to finance their lending and other business-type operations, and to a lesser extent, from interest collected directly from the public, including interest on loans to foreign governments.

Of the estimated net interest outlays of \$19.7 billion in 1972, \$5.3 billion will be paid to trust funds and other Government investment accounts on Government securities held by them. More than \$3.6 billion of the interest paid on obligations held by the Federal Reserve banks will be returned to Treasury as miscellaneous receipts through the deposit of excess earnings by such banks. Hence, the net impact on the 1972 budget of the interest paid on the Federal debt will be less than \$10.8 billion.

GENERAL GOVERNMENT

Effective law enforcement, an orderly and fair judicial system, and efficient administration of Government-wide personnel, property, and fiscal management functions are the objectives of general government programs.

Program highlights.—The 1972 budget for general government reflects this administration's program to improve the quality of American life by:

- Combating crimes over which the Federal Government has direct enforcement authority by a 13% increase in the resources of the FBI and the Bureau of Narcotics and Dangerous Drugs.
- Improving law enforcement at all levels of government by a 27% increase in grant funds to States and localities through the Law Enforcement Assistance Administration.
- Nearly doubling the Federal resources and efforts devoted to securing the civil rights of all our citizens.
- Urging that the Congress provide adequate resources and authorities for the District of Columbia to assure that its government can provide needed services to its residents and that the District will be a place of which all citizens can be proud.
- Initiating a new program to help State and local government to strengthen their personnel systems, thus improving their ability to effectively utilize the resources returned to them through revenue sharing.

The administration of our fiscal and tax operations will be made more efficient and effective. Emphasis on lease construction as the primary way to provide necessary public buildings not only will insure the most economic use of resources for this purpose, but also will place these properties used by the Federal Government on the local tax rolls so that they will bear their fair share of the cost of all community services required.

Budget highlights.—To accomplish these objectives, budget outlays for general government activities will total \$5.0 billion in 1972, \$589 million more than in 1971. Nearly \$461 million of this increase is for law enforcement and crime prevention, civil rights, and improvements in the tax administration and collection system.

Law enforcement and justice.—Increased emphasis will be placed on programs to provide better law enforcement, more prompt and efficient administration of justice, and more complete rehabili-

*Less than \$0.5 million.

¹ Compares with budget authority for 1970 and 1971, as follows:

1970: Total, \$3,617 million (NOA, \$3,529 million; LA, \$88 million).

1971: Total, \$4,730 million (NOA, \$4,680 million; LA, \$50 million).

² Includes both Federal funds and trust funds.³ Excludes payments to trust fund to arrest increase in unfunded liability of the retirement program (1970, \$230 million; 1971, \$510 million; 1972, \$714 million).

tation of criminal offenders. These programs will be undertaken both by the Federal Government directly, and by State and local governments with Federal financial and technical assistance. Outlays for law enforcement and justice will exceed \$1.4 billion in 1972, an increase of \$361 million over 1971, and \$811 million over 1970. (A special analysis of all Federal programs that contribute to the reduction of crime, including some programs not discussed in this section, can be found in the separate volume of the budget entitled "Special Analyses.")

Federal enforcement.—Increased pressure will be exerted against the forces of organized crime in this country. With the new authority and sanctions provided in the Organized Crime Control Act of 1970, Federal strike forces will coordinate efforts to rid our society of organized crime. FBI outlays will increase from \$286 million in 1971 to \$315 million in 1972. This will enable the FBI to mount a concentrated effort against large scale gambling activities, which provide a large source of the funds available to organized crime.

Through joint efforts of the Bureau of Narcotics and Dangerous Drugs, and the Bureau of Customs, particular emphasis will be given to destroying major criminal systems that import and distribute narcotics and dangerous drugs. These efforts will include intensified cooperation with other nations to suppress the illegal production and distribution of narcotics, improved detection methods, and increased Customs personnel at key ports of entry. Combined outlays of the Bureau of Customs and the Bureau of Narcotics and Dangerous Drugs will exceed \$218 million in 1972, an increase of 17% over 1971.

Outlays in 1972 for protection of judges and Federal buildings will increase by \$18 million, reaching a level of \$47 million. This will continue a program started in 1971 to strengthen protection of U.S. circuit and district judges, U.S. court facilities, and major Federal buildings.

Protection of major presidential and vice-presidential candidates during the 1972 campaign, commencing with the primaries, will require additional Secret Service agents, specialists, and support staff. Additional outlays of \$9 million are provided the Secret Service for this purpose.

Development of the consolidated Federal Law Enforcement Training Center is underway in Beltsville, Md. When completed, the Center will provide modern and comprehensive training programs for law enforcement personnel of 17 Federal investigative and police agencies. The Center will have a resident student capacity of 745 and will provide training for 8,700 students each year.

Law enforcement assistance.—The Law Enforcement Assistance Administration (LEAA) in the Department of Justice will provide

outlays of \$603 million in 1972, an increase of \$217 million over 1971, to assist State and local governments achieve a wide range of law enforcement improvements. The program provides broadly defined support to States with a portion of the funds passed through to local government law enforcement agencies. More than \$450 million of the grants will be used in accordance with determinations of the State agencies for a range of law enforcement and criminal justice improvements (courts, corrections, police, juvenile delinquency prevention and rehabilitation, addict treatment, public education and statistics on crime). Special emphasis will also be placed on problems of young offenders, with over \$45 million to be provided for juvenile delinquency prevention and correction. Over \$17 million will be spent to develop new methods and techniques to control crime, and to measure the extent and nature of crime across the Nation.

Correctional programs.—Major emphasis will continue to be placed on improving correctional systems at all levels of government. A new correctional improvement program of the Law Enforcement Assistance Administration will increase grants to State and local governments by \$47 million in 1972. Community-based corrections will be stressed, particularly the improvement of probation and parole services. At the Federal level, outlays for the Federal Prison System will exceed \$164 million in 1972. Facilities to provide improved community-based services, better institutional rehabilitation services, and more specialized treatment of certain classes of offenders will be stressed. New budget authority of \$19 million will be provided to construct a metropolitan correctional center in Chicago and to plan for five additional centers. New budget authority of \$36 million will be provided for construction of a new psychiatric research prison at Butner, N.C., and a youth correctional facility.

Civil rights.—In 1972, the Departments of Justice, Health, Education, and Welfare, and Labor, together with the Equal Employment Opportunity Commission and other agencies with significant civil rights responsibilities, will spend an estimated \$456 million, an increase of \$220 million over 1971, to improve the effectiveness of Federal efforts to secure equal opportunities for all citizens. Anti-discrimination efforts will be strengthened in all areas—Federal and private employment, Federal assistance programs, public education, and fair housing. School assistance to help meet the problem of desegregation is discussed in the Education and Manpower function.

The mechanisms available to the Federal Government for insuring equal employment opportunity will be strengthened. The Office of Federal Contract Compliance, responsible for administering the

Executive order which prohibits employment discrimination by Federal contractors, will double the number of industrial onsite compliance reviews in 1972. The ultimate goal is to achieve minority workforce levels in selected industries proportionate to the overall percentage of minority workers in each occupation in the labor market area. In the construction industry, the "Philadelphia Plan" concept—joint government, industry, and union agreements to train and employ minorities—will be extended to 102 cities by the end of next year. Such agreements have already been concluded in 21 cities.

An increase of \$7 million and the planned restructuring of the field activities in the Equal Employment Opportunity Commission will increase the effectiveness of this agency's efforts to eliminate discriminatory employment practices. The Department of Justice will increase its investigative and litigative support to all Federal equal opportunity programs. This increase includes additional resources to strengthen the Department's role of coordinating the Federal effort to assure nondiscrimination in Federal assistance programs. Additional resources will be provided to the Community Relations Service to augment its efforts to ease racial tensions by increasing the number of major urban centers serviced from 41 to 46. Additional resources will also be provided to increase from 12 to 26, the number of States with which joint Federal/State community relations programs will be conducted.

Central fiscal operations.—Outlays for the Internal Revenue Service are estimated at over \$1 billion, an increase of \$99 million over 1971. This amount will enable IRS to process 111.3 million tax returns, 2.7 million more than in 1971, and increase the number of tax returns audited by 11%. Improved audit is expected to yield additional revenues and encourage fuller taxpayer compliance with the tax laws. This budget provides initial staff and equipment for three new IRS service centers to process the growing number of tax returns forecast for 1972 and future years. Also, under recently enacted legislation, IRS now has responsibility for the control of explosives. This responsibility includes the licensing of explosives manufacturers, sellers, and users, and inspection of their facilities.

Increased arrivals of people and imports from abroad will require 1972 outlays of \$166 million for the Bureau of Customs, \$17 million more than in the previous year. This amount will also further the development of an automated merchandise processing system and intensify the antismuggling and narcotics enforcement program.

The Bureau of the Mint plans to produce 9.2 billion coins in 1972 or 500 million more than in the previous year. Production will include 200 million new Eisenhower dollars. The budget also includes funds

for the purchase of a tract of land for a new Denver Mint to be constructed in the mid-seventies.

Legislation is being proposed to extend the Renegotiation Act which expires on June 30, 1971. This extension will allow the Renegotiation Board to continue to recover excessive profits on Government procurement under defense and space programs.

General property and records management.—Economic analysis indicates that Federal leasing of buildings is, in most cases, less costly to the Nation than Federal ownership and would permit a more accurate measure of annual cost. In order to take better advantage of the lease alternative, legislation will be proposed to provide the General Services Administration greater flexibility with respect to planning and contracting for the acquisition of building space. Based on this legislation, a substantial increase in contracts for the acquisition of buildings to house Federal activities is projected for 1972, with increased emphasis on lease construction. An advantage of the lease alternative is that it will automatically reflect costs of property use and thus encourage flexible use of these resources by the Federal Government.

Construction projects to be funded directly by the Federal Government in 1972 are estimated to cost \$197 million, compared to \$265 million in 1971. The 1972 program will be supplemented by private construction of buildings leased to the Federal Government, thus providing for construction of much of the unfunded backlog of approved projects ready for award in 1972.

To carry out the President's directive that Federal property be used more effectively, funds are included in the budget for property surveys to determine which Federal properties can be put to better use or declared surplus. More than 115,000 acres have already been identified and may be available for better Federal use, donation to State and local governments, or sale to the private sector. In addition, nearly 3 million acres are to be surveyed by the General Services Administration to make additional land available for other purposes. Funds are also provided for screening excess military equipment and supplies, located in the United States, Southeast Asia, and other overseas locations and acquired at a cost of \$6.8 billion, which can be economically used by other Federal agencies or State and local governments.

National Capital region.—During 1972, the vital 98-mile rail rapid transit system necessary to provide congestion-free transportation to link the Capital City and surrounding areas will move significantly closer toward initial service. Continuing construction in the District will be augmented by initial construction in the suburban areas.

Federal payments to cover two-thirds of the net project cost for 1972 will total \$188 million.

In order to improve economic and social conditions in the Nation's Capital, legislation will be proposed to establish a District of Columbia development bank. The bank will draw primarily on private capital, combined with limited Treasury Department participation, to meet some of the economic problems of the District.

The Federal payment to the District represents an equitable share of the Nation's responsibility toward the costs of local District government. Although not earmarked for specific programs, the \$153 million payment proposed for 1972, an increase of 21% over the current authorization, will facilitate implementation of the District of Columbia Court Reform and Criminal Procedures Act of 1970. Full implementation of this act will provide speedier justice and more effective law enforcement in the District of Columbia.

The 1972 budget again proposes to finance the capital improvement program of the District of Columbia through the sale of local District of Columbia bonds rather than direct Treasury borrowing. This proposal is consistent with the objective of greater local autonomy for the District government.

To promote efficiency in the operations of the District of Columbia government, funds are included for the Commission on the Organization of the Government of the District of Columbia. The Commission will report its recommendations for improving the economy and efficiency of the District government to the President and the Congress.

The fiscal and program needs of the city will be set forth in more detail in a separate District of Columbia budget.

Central personnel management.—The budget includes \$5.2 million in outlays to begin a new program of grants to strengthen State and local personnel administration and to increase training opportunities for employees at these levels of government. This program will significantly enhance the capability of State and local governments to meet more effectively their increased responsibility as greater decisionmaking authority is returned to them by the Federal Government.

To promote more effective manpower utilization in the Federal service, the Civil Service Commission will spend approximately \$1 million for the Vietnam era veterans and displaced employees programs. The Vietnam era veterans program places veterans with limited skills in training programs with various Federal agencies. The displaced employees program redeploys qualified Federal employees when they are released from their present jobs because of reductions in force.

This budget also includes special allowances for the estimated cost of civilian and military pay increases provided for under recently

enacted legislation that authorizes the President to make pay adjustments on January 1, 1971, and each succeeding year thereafter, to establish comparability between Federal and private enterprise salary rates.

Legislative and judicial functions.—Outlays for the legislative functions of government will reach \$277 million in 1972, an increase of \$15 million. Outlays for the judicial functions, including the Supreme Court and lower Federal courts, will rise by \$24 million in 1972 to a total of \$173 million. Much of this increase is for the expansion and modernization of the Federal judiciary needed to cope with the increasingly heavy court workload.

Other general government.—Programs for the Trust Territory of the Pacific Islands provide for the improvement of educational and health levels; the development of water, power, sewage, and transportation facilities; and further economic development. Where feasible, the construction of facilities such as school buildings and roads is being carried out with designs and methods that use a maximum of local labor, providing income to the inhabitants of the territory and creating economic institutions which are needed in that developing economy. Outlays for these activities will total \$71 million in 1972, an increase of \$20 million over 1971.

Proposals will be transmitted for 1971 supplemental budget authority of \$13 million and 1972 budget authority of \$85 million for the Environmental Protection Agency. These proposals are for only part of the total EPA budget and will cover such requirements as implementing the 1970 Clean Air Act Amendments and the Resource Recovery Act of 1970, and for expanded programs which will be proposed in new legislation.

PART 6

THE FEDERAL PROGRAM
BY AGENCY AND ACCOUNT

ANALYSIS OF BUDGET AUTHORITY AND OUTLAYS BY AGENCY (in thousands of dollars)

This tabulation shows, for each appropriation and fund account, information on new obligational authority (NOA), loan authority (LA), expenditures (Exp.), and net lending (NL). Functional code numbers are shown for each account as a cross reference to tables 14 and 15 (pp. 540, 553) where the figures are summarized by functional classification. The NOA in this tabulation takes account of certain transfers between appropriations, and in the 1970 column includes, without separate identification, amounts provided by Public Law 91-305 for the pay raise authorized by Public Laws 91-231 and 90-207. Congressional action in the appropriation process occasionally is in the form of a limita-

tion on the use of a trust fund or other fund, or an appropriation to liquidate contract authority. Such items, which do not involve NOA or LA, are included here in parentheses, but are not added into the totals. NOA and LA items are current authorities except where otherwise indicated. Explanatory sentences relate primarily to NOA or LA, and usually to increases or decreases for 1972. Generally, sentences which relate only to expenditures and net lending are inclosed in parentheses. Types of funds and the deduct entries at the end of each chapter of this table are explained in Part 7, pages 508 through 513.

Total Federal funds Supreme Court of the United States.		NOA	3,548	4,214	5,013	799
		Exp.	3,386	4,105	5,009	904

1971 supplemental provides for increase in health benefits cost under Public Law 91-418. Increase provides for 27 additional permanent positions, hire of passenger vehicles, higher cost of printing and binding opinions and Supreme Court Reports, a "start-up" computer application in the handling of the Court's docket, additional costs of services, supplies and equipment, and for additional equipment. This account includes activities formerly funded in the Salaries, Printing and binding Supreme Court reports, Miscellaneous expenses, Automobile for the Chief Justice, and Books for the Supreme Court appropriation accounts.

Increase provides for higher salary costs, improved interior and exterior lighting, and modification in design of rostrum in courtroom.

^a Proposed for separate transmittal under existing legislation, other than pay supplemental.
^c Proposed for separate transmittal, wage-board supplemental.
^b Proposed for separate transmittal, civilian pay act supplemental.

Grants to States for public assistance:						
(Providing or financing medical services)-----652	NOA	2,594,696	3,109,685	3,827,619	167,477	1971 supplemental reflects change in State estimates. Increase in 1972 results from higher medical costs and an estimated increase of 2 million persons receiving Medicaid services. Proposed legislation will curtail overutilization of institutional inpatient care and place increased emphasis on ambulatory and preventive medical care.
	Exp.	2,726,845	3,143,623	3,827,619	133,539

It is proposed to increase the maximum taxable earnings base from \$7,800 to \$9,000 effective Jan. 1, 1971. In addition, to place the hospital insurance trust fund on a sound actuarial basis, there will be proposed an increase in the hospital insurance tax rate and an equivalent decrease in the OASDI rate. These changes will provide adequate financing for several improvements in the cash benefit program including a 6% across the board cost of living increase effective Jan. 1, 1971, and other improvements including automatic cost of living increases effective at later dates.

* Proposed for separate transmittal under proposed legislation.

† 1970 appropriations are shown net of amounts withdrawn in accordance with the provisions of sec. 410, Public Law 91-204.

This fund pays for medical services rendered to aged persons by hospitals, extended care facilities, and home health agencies. In order to maintain the hospital insurance trust fund on an actuarially sound basis, legislation will be proposed to increase the portion of the combined employer-employee payroll tax allocated to the hospital insurance trust fund and reduce by an equivalent amount the OASDI tax rate. Legislation is proposed and designed to solve the problem of rising medical costs, curtail overutilization of hospital services, and provide increased program control.

(Increased outlays in 1972 result from (1) growth in the number of aged, (2) greater use of facilities, and (3) higher costs in hospitals, extended care facilities, and home health agencies. Legislation will be proposed to institute a system of cost sharing by Medicare beneficiaries and encourage the use of lower cost extended care facilities and home health services as alternatives to hospitalization.)

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION						
Federal Funds						
General and special funds:						
Research and development:	NOA	2,992,954	2,555,000	2,517,700	—37,300	Requirements for the Apollo lunar exploration program are reduced due to the prior cancellation of Apollo 18 and 19. Other decreases result from reduction of the NERVA nuclear rocket program, reduction of supporting activities, and the completion of certain science and applications projects. These decreases are partially offset by increases for Skylab experimental space station, engine development for a space shuttle, Viking unmanned Mars lander, the outer planets Grand Tour program, and space applications projects.

THE BUDGET FOR FISCAL YEAR 1972

Account and functional code		1970 enacted	1971 estimate	1972 estimate	Increase or decrease (-)	Explanation
POSTAL SERVICE						
Federal Funds						
General and special funds:						
Payment to the Postal Service fund.....	NOA Exp. 505	-----	-----	1,471,722	1,471,722	Passage of the Postal Reorganization Act (Public Law 91-375) in August 1970 has resulted in several significant changes in postal finances.
		-----	-----	1,471,722	1,471,722	
Public enterprise funds:						
The Postal Service fund.....	505					<p>The Federal contribution to the Postal Service will not be an indefinite sum equal to the difference between the Postal Service's authorized program and its actual revenues, as was the case with the Post Office Department. Beginning in 1972, the Federal payment to the Postal Service will be a firm amount appropriated annually under the terms of the Postal Reorganization Act. The recommended appropriation for 1972 is \$1.472 million for subsidies and expenses of transition.</p> <p>The act provides \$10 billion of borrowing authority which the Postal Service can utilize, with certain limitations, for both capital investment and operating expenses. This \$10 billion appears as a one-time increase in budget authority in 1971.</p> <p>The Postal Service will submit its requests for adjustment of postage rates to the newly created Postal Rate Commission which is required by law to assure that postage revenues equal the costs of the Postal Service minus the subsidy appropriation.</p> <p>Gross outlays of the Postal Service in 1972 are estimated at \$9,934 million, an increase of \$707 million over 1971. Expected productivity improvements of 3.9% for clerks and 2% for city delivery carriers should help substantially in holding down gross operating cost increases. Receipts, which are netted against gross outlays, will increase in 1972 as a result of anticipated postage rate increases and a 3.1% increase in mail volume. As a result, total (net) outlays will decline \$1,020 million from the 1971 level to \$1,333 million in 1972.</p>
Authority to spend public debt receipts.	NOA	-----	10,000,000	-----	-12,734,677	
Appropriation (contribution to the postal fund) (indefinite).	NOA	1,757,518	1,643,728 ^ 4,800 ^ 1,086,149	-----	-----

The railroad retirement system combines social insurance and staff retirement for workers in the railroad industry. Increase in receipts results from two main factors: (1) the normal rise in average benefits under the existing program as newer retirees' benefits are computed on higher wage histories; and (2) the impact of new legislation: (a) under legislation enacted in 1971, taxes paid by employers under the supplemental annuity program were increased; also, increases in social security benefits enacted in 1970 resulted in a greater flow of funds to the Railroad Retirement account under the financial interchange, (b) legislation proposed for social security in fiscal year 1972 will increase the flow in the financial interchange still further.

Proposed legislation will also increase the payments of certain beneficiaries under the railroad retirement program because of special minimum guarantee provisions of the program.

The average number receiving monthly benefits in each year is as follows (in thousands):

	1970 actual	1971 estimate	1972 estimate
Retired individuals and their dependents.....	553	556	566
Disabled individuals and their dependents.....	95	94	93
Survivors of deceased workers.....	324	330	335
Supplemental annuities.....	63	80	93

^a Proposed for separate transmittal under proposed legislation.

^b Proposed for separate transmittal, civilian pay act supplemental.

PART 7

THE BUDGET SYSTEM
AND CONCEPTS

507

THE BUDGET SYSTEM AND CONCEPTS

The budget system of the U.S. Government is based upon a structure for financial administration which has as objectives the efficient management of programs in relation to the needs of the economy, and effective financial control.

COVERAGE OF THE BUDGET

Types of funds.—Agency activities are financed through Federal (Government-owned) funds and through trust funds, all of which are included in the budget.

The *Federal funds* are of four types. The *general* fund is credited with receipts not earmarked by law, and is charged with payments from such revenues and from general borrowing. *Special* funds contain Federal receipts earmarked for specific purposes, other than carrying out a cycle of operations. *Public enterprise* (revolving) funds finance a cycle of operations in which outlays generate receipts, primarily from the public. *Intragovernmental revolving and management* funds facilitate financing operations within and between Government agencies.

Trust funds are established to account for receipts which are held in a fiduciary capacity by the Government for use in carrying out specific purposes and programs. Within the category of trust funds there is a special subcategory of *trust revolving* funds which carry on a cycle of business-type operations.

Agencies and programs.—The budget covers all agencies and programs administered by the Federal Government, no matter how funded. Mixed-ownership (Government-private) and nonstock Government corporations are included as trust revolving funds. Privately owned corporations, even though Government-sponsored—such as the Federal land banks and Federal home loan banks—are excluded from the totals, as is the Board of Governors of the Federal Reserve System. These are presented as “annexed budgets.” The budget for the municipal government of the District of Columbia is also excluded.

Current expense and capital outlay.—The budget embraces spending for both current operating costs and capital outlays such as the purchase of lands, structures, and equipment. It also includes capital outlays in the form of lending and the purchase of investments.

However, it excludes from obligations and outlays the acquisition of securities issued by either the Treasury Department or other Federal agencies.

THE SPENDING-LENDING DISTINCTION

Financial information in the unified budget is presented in terms of an *expenditure account* and a *loan account*, in order to focus attention on the difference in impact between *expenditures* which add directly to the income of the recipient, and *loans* which the borrower must repay, and which give the lender (the Government) a financial asset.

Transactions in the loan account are limited to those affecting the principal amount of loans outstanding and, in a few cases, the unamortized premium or discount where the loan is in the form of a mortgage purchase. Administrative and operating expenses, interest, writeoffs of loans, and other costs and revenues are counted in the expenditure account. Therefore, loan *disbursements* equal checks issued to make loans, less writeoffs and losses, and plus recoveries of loans previously written off. Loan *repayments* equal collections on the principal of loans.

The loan account *excludes* (and the expenditure account includes) lending programs which lack the characteristics of a normal loan program (for example, the nonrecourse loans of the Commodity Credit Corporation, those loans where repayment is contingent upon some future happening, such as the discovery of minerals, and foreign loans not on commercial terms).

BUDGET AUTHORITY AND RELATED TRANSACTIONS

Budget authority.—Government agencies are permitted to enter into obligations, requiring either immediate or future payment of money, only when they have been granted authority to do so by law. The amounts thus authorized by Congress are called budget authority. The portion of budget authority being requested for the expenditure account is called *new obligational authority* (NOA). The portion which is for the loan account is called *loan authority* (LA).

Budget authority controls the *obligations* to be incurred, and for most accounts the amount of the authority is related to the obligations expected to be incurred during the year. In some cases—especially construction (other than water resource projects), research, and procurement—budget authority is requested and granted to finance the full cost of each project at the time it is started, regardless of when obligations are expected to be incurred, and the expected time of completion.

Budget authority usually takes the form of *appropriations* which permit obligations to be incurred and payments to be made. Some

budget authority is in the form of *contract authority* which permits obligations, but requires an appropriation "to liquidate" in order to permit payment of the obligations. There is also *authority to spend debt receipts*; such budget authority permits the use of borrowed money to incur obligations and make payments. Where such authority pertains to use of Treasury borrowing, it is authority to spend *public debt receipts*; authority to borrow directly from private enterprise or from a Government-administered fund available for investment, is authority to spend *agency debt receipts*.

When budget authority is made available by Congress for a specific period of time, any part which is not used for obligations during that period expires, and cannot be used later. However, *reappropriations* are congressional actions to continue availability of unused balances which would otherwise expire, and they are counted as budget authority.

Congress sometimes enacts a *rescission* of budget authority previously granted but still unused. Such rescissions are offset against new budget authority in arriving at the total of budget authority for each year.

Most authority to obligate funds is granted year by year (*current authority*). Under certain laws, some budget authority in Federal funds and most budget authority in the trust funds becomes available from time to time without further action by Congress (*permanent authority*).

The amount of budget authority is usually named specifically in the act of Congress which makes it available (*definite authority*). In a few cases the amount is left indefinite to be determined by subsequent circumstances (*indefinite authority*); examples are the appropriation for interest on the public debt, and the trust fund appropriation equal to receipts under the Federal Insurance Contributions Act for social security.

Most appropriations for current operations are made available for obligation only within the year (*1-year appropriations*). Some are for a specified longer period (*multiple-year appropriations*). Others, including most of those for construction, some for research, and nearly all trust fund appropriations are made available until expended (*no-year appropriations*), and therefore remain available for obligation until the objectives have been completed.

Obligations incurred.—Following the enactment of budget authority, *obligations* are incurred by Government agencies. Such obligations include the currently accruing liabilities for salaries and wages, certain contractual services, and interest; entering into contracts for purchase

of supplies and equipment, construction, and land; entering into contracts to make loans; and other commitments requiring the payment of money.

Outlays.—Obligations generally are liquidated by the issuance of checks or the disbursement of cash; such payments are called *outlays*. In some cases, in lieu of issuing checks, obligations are liquidated (and outlays occur) by the maturing of interest coupons in the case of some bonds, or by the issuance of bonds or notes (or increases in the redemption value of bonds outstanding).

Outlays during any fiscal year may be payments of obligations incurred in prior years or in the same year. Such outlays therefore flow in part from unexpended balances of prior year budget authority and in part from budget authority provided for the year in which the money is spent.

Outlays in the loan account, net of writeoffs and losses, and after offsets for repayments, are defined as *net lending* (NL). All remaining outlays relate to the expenditure account and are called *expenditures* (Exp.).

Balances of authority.—Not all budget authority enacted for a fiscal year is obligated and paid out in the same year. In the case of salaries and wages, 1 to 3 weeks elapse between the time of obligation and the time of payment. In the case of major procurement and construction, up to several years may elapse. Amounts which have been obligated, and the balances of budget authority to cover such obligations, are always carried forward until the subsequent payment of such obligations. Such amounts are known as *obligated balances*.

In addition, amounts may also be carried forward in multiple-year or no-year accounts which are still available for obligation. These are *unobligated balances*. Therefore, a change in the amount of budget authority for a given year does not necessarily result in a similar change either in the obligations incurred or the budget outlays in that same year. A change in budget authority in any 1 year may have an effect on obligations over 2 or more years, and may affect budget outlays for even a longer period.

Allocations between agencies.—In some cases, one or more agencies may share in the administration of a program for which appropriations are made to another agency or to the President. This is made possible, in the accounts, by the establishment of allocations from the "parent" account. Such allocations are included with the parent account in the *Budget* (without separate identification) and

in the *Budget Appendix* (where the total obligations thereunder of each participating agency are identified separately).

REVENUES

In general.—Revenues represent collections acknowledged by a depository or an accountable disbursing officer during the year. Revenues are classified into two types:

- *Budget receipts*, which are compared with outlays in determining the budget surplus or deficit.
- *Offsetting receipts*, which are deducted from spending and lending in determining outlays. A corresponding offset is made in totaling budget authority and in arriving at *net* obligations incurred.

Budget receipts.—The fundamental concept of budget receipts is one of collections from the public, resulting from the exercise of the Government's sovereign or *governmental* powers. These primarily consist of tax revenues, but also include revenues from court fines, regulatory requirements for licenses, war reparations (in applicable years), and the like. Gifts and contributions (as distinguished from payments for services or cost-sharing deposits by State and local governments) are also counted as budget receipts.

Offsetting receipts.—Offsetting receipts occur in four circumstances:

Certain funds.—For three types of funds—public enterprise, intragovernmental, and trust revolving funds—outlays are regularly stated net of receipts.

Reimbursements and refunds.—Some incidental sums received are by law treated as reimbursements to appropriations; these are netted in determining outlays from such appropriations. Most appropriation reimbursements are transactions within the Government, though some are from the public. The collection of refunds, representing a return of previous erroneous expenditures, is also usually offset against outlays of the account involved.

Proprietary receipts from the public.—Receipts which arise out of the *proprietary* activities of the Government and which are placed in the general fund, special funds, or trust funds—that is, interest, sale of property and products, charges for nonregulatory services, rents and royalties, etc.—are not counted as budget receipts, but are offset against outlays in total for each agency and for each function. They are offset against new obligational authority in the same amounts. Loan repayments are also offset against loan disbursements, but at the level of the specific program in the case of the loan account.

Intrabudgetary transactions.—Certain payments between funds are accounted for as outlays of one fund and as receipts of another in financial statements that relate to the individual funds. When all funds are consolidated into a single total in the budget, the duplication involved in the intrabudgetary transactions must be eliminated. This is generally done by deducting the amounts involved from both the outlays and the budget authority for the agency receiving the payment. However, in a few cases where the payment is in the nature of a transfer of receipts, the deduction is made instead from the figures for the agency making the payment.¹ Intrabudgetary transactions which are from one Federal fund to another or from one trust fund to another are called *interfund*; those which are from a Federal fund to a trust fund or vice versa are called *intragovernmental*.

OTHER TRANSACTIONS

Borrowing and repayments.—The proceeds from borrowing are not receipts. Repayments of borrowing are not expenditures. These rules are applied whether the borrowing is by the Treasury in the form of public debt, or by individual agencies in the form of agency debt. The sale of certificates representing participation in the ownership of a pool of loans under the Participation Sales Act of 1966 or under comparable circumstances is considered to be borrowing. So is the incurrence of other firm long-term liabilities, such as the issuance of mortgages on military family housing. However, borrowing from another fund (like the corresponding investment by the lending fund) is an intrabudgetary transaction and does not enter into the totals of borrowing from the public.

Proceeds of seigniorage.—Seigniorage is the difference between the monetary value of coins and their cost, including the manufacturing expense. The seigniorage on coins, arising from the exercise of the Government's monetary powers, differs from receipts coming from the public, since there is no corresponding payment on the part of another party. Therefore, seigniorage is excluded from receipts and treated, like borrowing, as a means of financing a budget deficit, or as a supplementary amount to be applied (to reduce debt or to increase the cash in Treasury) in the years of a budget surplus.

Liabilities in deposit fund accounts.—Accounts outside the budget, known as deposit funds, are established to record certain unearned income and certain unpaid liabilities, including savings

¹ In two situations the intrabudgetary transactions are not deducted from the figures of any agency or function, but appear as special deduct lines in computing total outlays and budget authority for the Government as a whole. One of these consists of the agencies' payments as employers into trust funds for retirement of employees. The other consists of the interest receipts of the trust funds.

accounts for military personnel, State and local income taxes withheld from Federal employees' salaries, and payroll deductions for the purchase of savings bonds by civilian employees of the Government.

Exchange of cash.—The Government's deposits with the International Monetary Fund (IMF) are considered similar to cash assets. Therefore the movement of money between the IMF and the Treasury Department is not in itself considered a receipt or expenditure, borrowing or lending.

Obligations to international lending organizations.—Debt instruments issued (in lieu of checks) in payment of subscriptions to international lending organizations are not considered borrowing or an expenditure, but remain a part of the obligated balances until they are cashed—at which time they become an expenditure. These differ only in form, and not in substance, from open-book balances for unpaid obligations.

BASIS FOR BUDGET FIGURES

In general.—Receipts and repayments reflect collections. Outlays are stated in terms of checks issued (including cash paid in lieu of checks, and, on the rare occasions when it happens, debt issued in lieu of checks). The accrual basis is generally used for interest on the public debt; in the case of bonds and notes where interest expense of the Government is reflected in periodic changes in redemption value, the interest expenditure is counted when the redemption value changes.

Data for 1970.—The 1970 column of this budget discloses the actual transactions and balances for that year, as recorded in agency accounts, and as summarized in the central financial reports prepared by the Treasury Department.

Data for 1971.—The figures for 1971 include budget authority actually made available by Congress, and estimates of the budget outcome for the year as a whole, taking account of action up to the time the budget schedules were prepared. Congress has, by now (January 1971), acted on most appropriations and other budget authority for 1971, except for one regular appropriation bill—the one for transportation and related agencies. However, additional supplemental appropriations are estimated to be required in certain cases. Where the word “enacted” is used with reference to 1971, as in tables 4 and 5, the amounts represent budget authority already voted by Congress or, in the case of the agencies in the one bill still pending, they represent a revised estimate of requirements based on congressional action to date. The enacted sums include the amounts

likely to be available in the case of indefinite appropriations. Where the word "estimate" is used, the amounts include needed supplementals as well as budget authority which has been enacted. Certain standard footnotes are used in part 6 of the *Budget* to distinguish the status of the several proposed items for 1971.

Data for 1972.—This budget is complete as to the estimates for 1972, except for specified reductions suggested for uneconomic or outmoded programs—the effects of which are not reflected in the budget totals. The *Budget Appendix* generally includes the proposed appropriation language for the various items identified in the budget. However, in some instances—mainly in cases of needed supplementals for unforeseen program costs and appropriations to finance proposed new legislation—estimates are included in the budget tables without being accompanied by proposed appropriation language. In such cases, formal transmittal of the proposed text of the appropriation language (or other proposal) will be made separately. In certain tables of the budget these items for separate transmittal and the related outlays are identified in separate columns, or by special footnotes. Where there is no separate identification, the estimate for 1972 includes both the amounts formally proposed herein and the amounts planned for separate transmittal.

Special allowances.—Lump-sum allowances are included in the tables to cover possible additional supplemental proposals which may be required for 1971 and 1972. The need for such supplementals may arise from requirements not now foreseen for existing programs, or from the enactment of legislation not specifically provided for in the budgets of the agencies concerned. Lump-sum allowances are also included to cover the estimated cost of pay increases for governmental personnel—those approved in January 1971, and those anticipated for January 1972. One of the allowances is for the Department of Defense (included in its figures), and one is for the rest of the Government. These increases cannot be reflected in the various program appropriation requests since the applicable amounts have not been determined. Another allowance covers the additional cost of proposed legislation providing for revenue sharing.

THE BUDGET CYCLE

The "budget cycle" is a continuous process in which there are four identifiable phases: (1) executive formulation and submission; (2) congressional authorization and appropriation; (3) budget execution and control; and (4) audit. Each of these phases interrelates and overlaps with the others.

Executive formulation and transmittal.—The President's transmission of his budget proposals to the Congress early in each calendar year climaxes many months of planning and analysis throughout the executive branch. Formulation of the 1972 budget, which covers the fiscal year beginning July 1, 1971 and ending June 30, 1972, began in the spring of 1970.

During the period when a budget is being formulated in the executive branch, there is a continuous exchange of information, proposals, evaluations, and policy determinations among the President, the Office of Management and Budget, and the various Government agencies.

In the spring, each agency evaluates its programs, identifies policy issues, and makes budgetary projections, giving attention both to important modifications and innovations in its programs, and to alternative long-range program plans. After review in the agency and by the Office of Management and Budget, preliminary plans are presented to the President for his consideration. At about the same time, the President receives projections of the economic outlook and revenue estimates prepared jointly by the Treasury Department, the Council of Economic Advisers, and the Office of Management and Budget.

Following a review of both sets of projections, the President establishes general budget and fiscal policy guidelines for the fiscal year which will begin about 12 months later. Tentative policy determinations and outlay ceilings are then given to the agencies as guidelines for the preparation of their budgets.

Individual agency budgets are reviewed in detail by the Office of Management and Budget throughout the fall and early winter, and are presented to the President for decision. Overall fiscal policy problems—relating to total budget receipts and outlays—are also reviewed again. Thus, the budget process involves the consideration simultaneously of individual program levels, and of total outlays and receipts in relation to the condition of the national economy. The budget reflects the results of both these considerations.

Congressional authorization and appropriation.—Congressional review starts when the President sends his budget to the Congress. The Congress can change programs, eliminate them, or add programs not requested by the President. It can increase or decrease the amounts recommended by the President to finance existing and proposed new programs. It also acts upon legislation determining taxes and other means of raising revenues.

The Congress does not normally vote on outlays directly, but rather upon budget authority. Under the traditional procedures, the Congress first enacts legislation which authorizes an agency to

carry out a particular program and, in many cases, sets a limit on the amount that can subsequently be considered, under its rules, for appropriation for the program. Many programs are authorized for a specified number of years, or even indefinitely; other programs, such as atomic energy, space exploration, defense procurement, and some construction programs, require annual authorizing legislation.

The granting of budget authority usually is a separate subsequent action. In most cases, budget authority becomes available each year only as voted by the Congress. However, in some cases, the Congress has voted "permanent" budget authority, under which funds become available annually without further congressional action. Most trust fund appropriations are "permanent," as is the appropriation to pay interest on the public debt.

Congressional consideration of requests for changes in revenue laws and for appropriations follows an established pattern. They are considered first in the House of Representatives. The Ways and Means Committee reviews proposed revenue measures; the Appropriations Committee, through its 13 subcommittees, studies the proposals for appropriations and examines in detail each agency's performance. Each committee then recommends the action to be taken by the House of Representatives.

As parts of the budget are approved by the House, the appropriation or tax bills are forwarded to the Senate, where a similar process is followed. In case of disagreement between the two Houses of Congress, a conference committee (consisting of Members of both bodies) meets to resolve the issues. The conference report is returned to both Houses for approval, and the measure is then transmitted to the President, in the form of an appropriation or tax bill, for his approval or veto.

Budget execution and control.—Once approved, the budget becomes the basis for the program operations of each agency during the fiscal year.

Central control over most of the budget authority made available to the executive branch is maintained through a system of "apportioning" the authority. Under the law and delegation by the President, the Director of the Office of Management and Budget distributes appropriations and other budget authority to each agency by time periods (usually quarterly), or by activities. Obligations may not be incurred in excess of the amount apportioned. The objective of the apportionment system is to plan the effective and orderly use of available authority and—for annual appropriations—to prevent the need for requesting additional or supplemental authority where possible.

It is, of course, necessary to insure flexibility if circumstances change. If developments indicate that an agency will not require all the authority made available, "reserves" are established by the Office of Management and Budget to withhold amounts not needed. Such reserves may be released subsequently, if necessary, but only for the purposes of the appropriation. On the other hand, changes in laws or other factors may indicate the need for more authority, and supplemental requests may have to be made of the Congress.

Another form of central control that has been employed in budget execution is a statutory Government-wide limitation imposed by the Congress on outlays. To effectively operate within such an overall limitation, the Office of Management and Budget: (1) establishes outlay ceilings for individual agencies which are not to be exceeded; and (2) requires each agency to prepare and maintain a financial plan to monitor outlays, and to control obligations so as to permit effective adherence to the outlay ceiling imposed. In this situation also, "reserves" may be established to control the use of available funds within the prescribed limits.

Audit.—This is the "final" step in the budget process. The individual agencies are responsible for assuring—through their own review and control systems—that the obligations they incur and the resulting outlays are in accordance with the provisions of the authorizing and appropriating legislation. The Office of Management and Budget reviews substantive and financial reports and keeps abreast of agency progress in attainment of program objectives. In addition, the General Accounting Office conducts a continuing program of examination and evaluation of Government activities and their administration, with particular attention to aspects which appear to be in need of improvement. Its findings and recommendations for corrective action are made to the President, to the Congress, and to the agencies concerned.

PART 8

SUMMARY TABLES

519

EXPLANATORY NOTE RELATING TO THE SUMMARY TABLES

Types of tables.—This part of the budget consists of tables as follows:

- Tables 1 through 11 are short summary tables of the budget, often only one page each.
- Tables 12 through 15 provide greater detail in support of data in the first three tables.
- Tables 16 through 21 are historical in nature, giving data, for earlier years, comparable to those in the first tables, and also giving information on the national income accounts and the gross national product over a longer period.

Concepts followed.—The concepts used in the current and historical tables are discussed in part 7 of this budget.

Other sources of data.—The Special Analyses volume, part 1, presents a series of data covering Government finances and operations as a whole. These include, for example:

- Special Analysis A—which compares budget totals with the Federal sector of the national income accounts.
- Special Analysis B—which provides a breakdown of selected data between Federal funds and trust funds.
- Special Analysis D—which focuses on the distinction between outlays that are of an investment or “capital” nature and outlays for operating or “current” purposes.
- Special Analysis H—which presents information on civilian employment in the executive branch.

Table 1. BUDGET SUMMARY (in millions of dollars)

Description	1970 actual	1971 estimate	1972 estimate
Budget authority (largely appropriations):			
Available through current action by Congress:			
Previously enacted	141,592	156,418	170,162
Proposed in this budget	85,373	9,553	97,796
Available without current action by Congress	—13,992	88,524	—18,994
Deductions for offsetting receipts ¹	—13,992	—18,233	—18,994
Total budget authority	212,973	236,263	248,965
Receipts, expenditures, and net lending:			
Expenditure account:			
Receipts	193,743	194,193	217,593
Expenditures (excludes net lending)	194,456	211,143	228,286
Expenditure account deficit	714	16,951	10,693
Loan account:			
Loan disbursements	8,313	8,807	9,440
Loan repayments	6,182	7,196	8,494
Net lending	2,131	1,611	946
Total budget:			
Receipts	193,743	194,193	217,593
Outlays (expenditures and net lending)	196,588	212,755	229,232
Budget deficit	2,845	18,562	11,639
Budget financing:			
Net borrowing from the public	3,814	17,600	10,600
Other means of financing	—969	962	1,039
Total budget financing	2,845	18,562	11,639
	1969 actual		
Outstanding debt, end of year:			
Gross Federal debt	367,144	382,603	407,033
Held by the public	279,483	284,880	302,480

MEMORANDUM

Outstanding loans, end of year:

Direct loans:				
Loan account	29,484	31,615	33,226	34,172
Expenditure account	17,042	19,463	20,564	22,299
Guaranteed and insured loans ²	³ 104,014	106,382	119,449	140,300
Government-sponsored agency loans ⁴	27,024	37,584	45,370	53,233

¹ These consist of interfund and intragovernmental transactions and proprietary receipts from the public.

² Excluding loans held by Government and Government-sponsored enterprises.

³ Includes \$1.6 billion of certificates of interest as reclassified agency debt (Commodity Credit Corporation, Agriculture) July 1, 1969.

⁴ Excluding Federal Reserve banks.

Table 2. BUDGET RECEIPTS, OUTLAYS, AND BUDGET AUTHORITY
(in millions of dollars)

Description	1970 actual	1971 estimate	1972 estimate
Receipts by source:			
Individual income taxes	90,412	88,300	93,700
Corporation income taxes	32,829	30,100	36,700
Social insurance taxes and contributions:			
Employment taxes and contributions	39,133	42,297	50,225
Unemployment insurance	3,464	3,604	4,183
Contributions for other insurance and retirement	2,701	3,072	3,151
Excise taxes	15,705	16,800	17,500
Estate and gift taxes	3,644	3,730	5,300
Customs duties	2,430	2,490	2,700
Miscellaneous receipts	3,424	3,800	4,134
Total receipts	193,743	194,193	217,593
Outlays by function:			
National defense ¹	80,295	76,443	77,512
International affairs and finance	3,570	3,586	4,032
Space research and technology	3,749	3,368	3,151
Agriculture and rural development	6,201	5,262	5,804
Natural resources	2,480	2,636	4,243
Commerce and transportation	9,310	11,442	10,937

* Less than \$500 thousand.

¹ Includes allowance for all-volunteer force and civilian and military pay increases for Department of Defense.² Includes outlays related to supplementals proposed in this budget.

Table 6. RELATION OF BUDGET AUTHORITY TO OUTLAYS
(in millions of dollars)

Description	1970 actual	1971 estimate	1972 estimate
<i>Budget authority available through current action by Congress:</i>			
Enacted or transmitted herein:			
Appropriations ¹	134,377	135,839	151,748
Authority to spend debt receipts.....	5,751	13,843	447
Contract authority.....	1,461	6,110	620
Reappropriations and reauthorizations.....	4	626	229
Transmitted separately:			
Appropriations ¹	-----	9,511	16,831
Authority to spend debt receipts.....	-----	42	288
Total budget authority available through current action by Congress (table 4).....	141,592	165,971	170,162
<i>Budget authority available without current action by Congress (permanent authorizations):</i>			
Appropriations ¹	77,086	83,079	90,110
Authority to spend debt receipts.....	501	76	290
Contract authority.....	7,787	5,370	7,396
<i>Deductions for offsetting receipts (table 13):</i>			
Interfund and intragovernmental transactions.....	-10,178	-12,959	-13,688
Proprietary receipts from the public.....	-3,814	-5,273	-5,306
Total budget authority for the year (table 3).....	212,973	236,263	248,965
<i>Unobligated balances and adjustments:</i>			
Unobligated balances:			
Brought forward at start of year (table 9).....	141,730	156,449	171,541
Written off (rescinded, lapsed, etc.).....	-3,972	-2,464	-3,327
Carried forward at end of year (table 9).....	-156,449	-171,541	-179,493
<i>Application of new authority to prior obligations:</i>			
Budget authority of year, obligated previously.....	-1,594	-2,227	-2,577
Budget authority of subsequent year, obligated currently.....	2,227	2,577	2,877
Obligations incurred, net (table 8).....	194,915	219,057	237,986
<i>Obligated balances:</i>			
Brought forward at start of year, funded (table 9).....	83,755	81,662	87,967
Adjustments in expired accounts.....	-425	2	4
Deficiency in expired accounts.....	-----	-14	-----
Deficiency appropriations.....	19	16	-----
Carried forward at end of year:			
Funded (table 9).....	-81,662	-87,967	-96,726
Unfunded.....	-14	-----	-----
Outlays (expenditures and net lending).....	196,588	212,755	229,232

MEMORANDUM

Federal funds included above:

Budget authority available through current action by Congress.....	140,724	163,396	165,595
Budget authority for the year.....	161,519	181,754	184,878
Obligations incurred ²	153,440	170,191	185,012
Outlays (expenditures and net lending) ²	156,301	164,665	176,857

¹ Excludes appropriations to liquidate contract authority:

	1970 actual	1971 estimate	1972 estimate
Transmitted separately.....	-----	\$355	-----
All other.....	\$7,962	8,129	\$7,932

² Amounts are net of interfund and intragovernmental transactions and proprietary receipts from the public.

Table 7. CONTROLLABILITY OF BUDGET OUTLAYS (in billions of dollars)

	1970 actual	1971 estimate	1972 estimate
Relatively uncontrollable outlays under present law:			
Open-ended programs and fixed costs:			
Social insurance trust funds:			
Social security trust funds	30.3	34.4	35.9
Medicare trust funds	7.1	8.3	9.4
Unemployment trust funds	3.6	6.0	5.2
Retirement and other trust funds	4.2	4.9	5.3

Agency debt.....	—2,846	—2,553	—2,069	—1,726
Total, Federal debt held by the public.....	279,483	284,880	302,480	313,080

Table 10. BUDGET FINANCING AND OUTSTANDING DEBT
(in millions of dollars)—Continued
DEBT SUBJECT TO PUBLIC DEBT LIMIT, END OF YEAR

	1969 actual	1970 actual	1971 estimate	1972 estimate
Public debt (issued by Treasury) ³	352,895	370,094	396,020	419,576
Notes issued by Treasury to International Monetary Fund (not in debt above)	825	825	825	825
Agency and District of Columbia debt subject to general limit on public debt	3,847	3,137	1,953	1,951
Portion of public debt not subject to limit (—)	—636	—631	—430	—430
Total, debt subject to public debt limit ³	356,932	373,425	398,368	421,922

¹ These transactions consist of: (a) the collections resulting from redemption of securities owned by Government-administered funds which had been issued by 2 formerly mixed-ownership enterprises, now privately owned (treated as extraordinary, as a continuation of the policy adopted at the time of conversion in 1969, that the elimination of such enterprises from the budget would not be included in budget results), and (b) the charges resulting from the reclassification, in 1970, of certificates of interest issued by the Commodity Credit Corporation, from their status as an evidence of the sale of assets to status as debt of the Corporation. The amounts, classified by enterprise, are as follows, in millions:

	1970		1971	1972	After 1972
	Debt	Other			
Enterprises converted to private ownership:					
Federal National Mortgage Association		350	100	--	4
Federal intermediate credit banks		18	---	--	-
Conversion of asset sales to debt: Com-					
modity Credit Corporation	—1,583	---	---	--	-
Total	—1,583	368	100	--	4

² Includes military payment certificates, accrued interest (less unamortized discount) on public debt; and as an offset, certain collections in transit.

³ The applicable limitations are: Apr. 7, 1969 to June 30, 1970, \$377 billion; and July 1, 1970 to June 30, 1971, \$395 billion, after which the permanent limit of \$380 billion becomes effective. Legislation is needed to change the limitation.

MEMORANDUM

Federal funds.....	143,158	139,137	153,720
Trust funds.....	59,362	66,165	75,490
Intragovernmental transactions.....	-8,778	-11,109	-11,617

* Less than \$500 thousand.

¹ Deposits by States are State payroll taxes that cover the benefit part of the program. Federal unemployment tax receipts cover administrative costs at both the Federal and State level. Railroad unemployment tax receipts cover both the benefits and administrative costs of the program for the railroads.

² Represents employer and employee contributions to the civil service retirement and disability fund for covered employees of Government-sponsored, privately owned enterprises and the District of Columbia municipal government.

³ Includes both Federal and trust funds. Trust fund amounts in miscellaneous receipts are: 1970, \$17 million; 1971, \$22 million; 1972, \$20 million.

Note.—Estimates for 1971 and 1972 include effects of proposed legislation.

Table 16. BUDGET RECEIPTS, OUTLAYS, FINANCING, AND DEBT, 1962-1972 (in millions of dollars)

Description	Actual									Estimate	
	1962	1963	1964	1965	1966	1967	1968	1969	1970	1971	1972
Receipts, expenditures, and net lending:											
Expenditure account:											
Receipts	99,676	106,560	112,662	116,833	130,856	149,552	153,671	187,784	193,743	194,193	217,593
Expenditures (excludes net lending)	104,462	111,456	118,039	117,181	130,820	153,201	172,802	183,072	194,456	211,143	228,286
Expenditure account surplus or deficit (—)	—4,786	—4,896	—5,377	—347	36	—3,649	—19,131	4,712	—714	—16,951	—10,693
Loan account:											
Loan disbursements	9,621	9,646	10,237	10,911	14,628	17,676	20,327	13,117	8,313	8,807	9,440
Loan repayments	7,271	9,791	9,693	9,662	10,796	12,623	14,297	11,640	6,182	7,196	8,494
Net lending	2,351	—145	545	1,249	3,832	5,053	6,030	1,476	2,131	1,611	946
Total budget:											
Receipts	99,676	106,560	112,662	116,833	130,856	149,552	153,671	187,784	193,743	194,193	217,593
Outlays (expenditures and net lending)	106,813	111,311	118,584	118,430	134,652	158,254	178,833	184,548	196,588	212,755	229,232
Budget surplus or deficit (—)	—7,137	—4,751	—5,922	—1,596	—3,796	—8,702	—25,161	3,236	—2,845	—18,562	—11,639
Budget financing:											
Net borrowing from the public or repayment of borrowing (—)	9,769	6,088	3,092	4,061	3,076	2,838	23,100	—1,044	3,814	17,600	10,600
Other means of financing	—2,632	—1,337	2,830	—2,465	720	5,863	2,061	—2,192	—969	962	1,039
Total means of financing	7,137	4,751	5,922	1,596	3,796	8,702	25,161	1,044	2,845	18,562	11,639
Outstanding debt, end of year:											
Gross Federal debt	303,291	310,807	316,763	323,154	329,474	341,348	369,769	367,144	382,603	407,033	429,400
Held by the public	248,373	254,461	257,553	261,614	264,690	267,529	290,629	279,483	284,880	302,480	313,080

¹ Excludes changes due to reclassification and to conversion of mixed-ownership enterprises to private ownership. See footnotes to table 9 in the 1971 budget and table 10 in the 1972 budget.

Table 17. BUDGET RECEIPTS BY SOURCE, 1962-1972 (in millions of dollars)

Source	Actual									Estimate	
	1962	1963	1964	1965	1966	1967	1968	1969	1970	1971	1972
Individual income taxes.....	45,571	47,588	48,697	48,792	55,446	61,526	68,726	87,249	90,412	88,300	93,700
Corporation income taxes.....	20,523	21,579	23,493	25,461	30,073	33,971	28,665	36,678	32,829	30,100	36,700
Social insurance taxes and contributions (trust funds):											
Employment taxes and contributions:											
Old-age and survivors insurance.....	11,267	13,117	15,242	15,567	17,556	22,197	22,265	25,484	29,396	30,618	35,523
Disability insurance.....	1,004	1,058	1,124	1,156	1,530	2,204	2,651	3,469	4,063	4,162	4,264
Hospital insurance.....					893	2,645	3,493	4,398	4,755	6,511	9,401
Railroad retirement.....	564	572	593	636	683	776	814	885	919	1,006	1,037
Total employment taxes and contributions.....	12,835	14,746	16,959	17,359	20,662	27,823	29,224	34,236	39,133	42,297	50,225
Unemployment insurance.....	3,337	4,112	4,045	3,819	3,777	3,659	3,346	3,328	3,464	3,604	4,183
Contributions for other insurance and retirement:											
Supplementary medical insurance.....						647	698	903	936	1,255	1,347
Employees' retirement—employee contributions.....	863	932	993	1,065	1,111	1,201	1,334	1,426	1,735	1,785	1,770
Other retirement contributions.....	12	13	15	16	18	19	20	24	29	31	34
Total contributions for other insurance and re- tirement.....	875	946	1,008	1,081	1,129	1,867	2,052	2,353	2,701	3,072	3,151
Total social insurance taxes and contributions....	17,046	19,804	22,012	22,258	25,567	33,349	34,622	39,918	45,298	48,973	57,559

See footnote at end of table.
