W. Willard Wirtz, Secretary

**USDL - 7472** 

FOR RELEASE: 12 Noon Friday, November 4, 1966

> U. S. Department of Labor BLS, 961 - 2634

## THE EMPLOYMENT SITUATION: OCTOBER 1966

The employment situation in October remained about the same as in recent months, the U. S. Department of Labor's Bureau of Labor Statistics reported today.

Highlights of the October figures are as follows:

from

1. Total employment rose by 500,000 to 74.7 million in October. After adjustment for usual seasonal developments, this figure was unchanged from September and up only slightly from June. Small reductions in agricultural employment and self employment were offset by a corresponding rise in the number of nonfarm wage and salary earners.

2. Nonagricultural employment stood at 70.4 million in October, up 2.2 million from a year ago. At 4.3 million in October, agricultural employment was down 600,000 from the previous October.

3. Payroll employment in construction was down 80,000 over the month. The decline was 30,000 more than seasonal, marking the fourth successive month of small declines.

4. The Negro unemployment rate, at 7.6 percent, was not significantly different from the 7.9 percent average of the May-September period. The unemployment rate for whites was 3.4 percent in October, equaling the average for the May-September period.

5. The over-all unemployment rate was 3.9 percent in October (seasonally adjusted), virtually unchanged from September. Unemployment, at 2.5 million in October, was at its lowest level since October 1957.

The Employment Situation Page 2 November 4, 1966

### Payroll Employment, Hours, and Earnings

Increases in wage and salary employment in retail trade, services, and State and local government accounted for the bulk of an over-all increase of 190,000 (seasonally adjusted) payroll jobs. The improvement offset a modest decline in September and left payroll employment nearly 400,000 above the June level. The rate of employment growth has slowed over the year, with quarter-to-quarter gains of 1 million in the first quarter, 800,000 in the second quarter, and 500,000 in the third quarter.

Employment in contract construction declined by 80,000 between September and October. The decline was 30,000 greater than seasonal. At 3.4 million, construction employment was virtually unchanged from a year earlier but was down nearly 200,000 (seasonally adjusted) from the March. peak. The unemployment rate for private wage and salary workers in construction, at 9 percent in September and October, was up from the 7 percent rate of June and July.

Manufacturing employment, which usually declines seasonally by 100,000 from September to October, fell by 25,000 to 19.5 million. As compared with October 1965, manufacturing employment was up 1 million, with the largest gains in electrical equipment (240,000), transportation equipment (175,000), and machinery (150,000).

The factory workweek edged down to 41.4 hours in October. A slight increase is usual in October; however, average hours had been at high levels most of the summer. Factory production workers<sup>1</sup> average hourly earnings rose 1 cent to \$2.75 in October. Their weekly earnings averaged \$113.85, a new high. Over the year, hourly earnings were up 11 cents and weekly earnings were up \$4.82.

### Unemployment

Total unemployment declined seasonally by 50,000 to 2.5 million. Over the year, unemployment was down 250,000, with the entire net decline among persons seeking full-time work. The unemployment rate for full-time workers was 3.4 percent in October, down from 3.8 percent a year earlier. The situation for part-time workers--the vast majority of whom are women and teenagers--was virtually unchanged over the year.

In October--the seasonal low month for unemployment, there were 840,000 unemployed adult men, all but 80,000 of them seeking full-time jobs. Of the 970,000 unemployed women, over one-fifth were seeking part-time employment. Approximately half of the 715,000 teenage jobseekers were in school and seeking only part-time work. The reduction of 250,000 in unemployment from October 1965 occurred among adult workers, with nearly 80 percent of the drop among men. The number of unemployed teenagers was not substantially reduced over the year, but the employment increase of 200,000 teenagers was large enough to more than absorb their labor force expansion. The Employment Situation Page 3 November 4, 1966

State insured unemployment, which normally shows little change at this time of year, edged down slightly between mid-September and mid-October to 752,000. The insured jobless rate (seasonally adjusted) was 2.1 percent in October, equal to the lowest rate for any month since the start of this series in January 1949.

Unemployment rates for men (2.4 percent), women (4.0 percent), and teenagers (11.9 percent) were not significantly changed over the month, or since the beginning of the year. However, the over-all rate was down from 4.3 percent in October 1965 to 3.9 percent in October 1966. About two-thirds of the improvement occurred among those out of work 15 weeks or longer.

#### Labor Force

The total labor force increased 1.8 million over the year to 80.5 million in October. The Armed Forces were up 500,000 to nearly 3.3 million, and the civilian labor force increase was 1.3 million.

The bulk of the civilian labor force increase (over 1 million) occurred among women, with small increases among teenagers (150,000) and men (only 100,000). These differences in trend reflect the comparative shortage of adult men; 97 percent of all men aged 25 to 54 are in the labor force, and only 2.1 percent are unemployed.

\* \* \* \* \*

This release presents and analyzes statistics from two major surveys. Data on labor force, total employment, and unemployment are derived from the sample survey of households conducted and tabulated by the Bureau of the Census for the Bureau of Labor Statistics. Statistics on industry employment, hours, and earnings are collected by State agencies from payroll records of employers and are tabulated by the Bureau of Labor Statistics. A description of the two surveys appears in the BLS publication Employment and Earnings and Monthly Report on the Labor Force.
