USDL - 8824

FOR RELEASE: 11:00 A.M.

Wednesday, July 10, 1968

U. S. Department of Labor BLS, 961-2634

## THE EMPLOYMENT SITUATION: JUNE 1968

Employment advanced in June but unemployment rose as the labor force expanded substantially, the U. S. Department of Labor's Bureau of Labor Statistics reported today. The unemployment rate moved up from 3.5 to 3.8 percent as a result of an increase in unemployment among teenagers and 20-24 year-olds.

## Unemployment

There were 3.6 million unemployed persons in June, an increase of 1.3 million from the May level. Unemployment normally moves up sharply in June; this year's rise, however, was 200,000 more than seasonally expected. With many young people entering the job market at the close of school, teenagers accounted for 1.0 million of the over-the-month rise in unemployment, while joblessness among 20-24 year-olds increased by 300,000.

After seasonal adjustment, the teenage unemployment rate increased from 12.6 percent in May to 13.6 percent in June; for 20-24 year-olds the rate rose from 5.3 to 6.5 percent. Most of the increase in the teenage rate took place among boys, whereas among 20-24 year-olds the rise was sharpest for girls.

The Employment Situation Page 2
July 10, 1968

For 16-19 and 20-24 year-olds combined, the labor force expanded by 2.9 million from May to June, exactly the same as last year's expansion. However, the May-to-June 1968 employment advance was 1.6 million, compared with 1.8 million a year earlier. Industries which normally absorb many of the young workers seeking jobs in June--agriculture, construction, and retail trade--showed less than the usual June employment pickups. Unemployment rates increased in all three of these industries over the month.

For adult workers and for full-time workers, unemployment showed little change over the month. The jobless rate for all workers aged 25 and over held steady at 2.2 percent in both May and June. For married men, the unemployment rate was 1.7 percent in June, up slightly over the month but down from 1.9 percent a year ago.

The total unemployment rate was up from 3.5 percent in April and May to 3.8 percent in June, the highest point since last November. The June rate was the same as the annual average for both 1966 and 1967 and was little changed from last June's rate (3.9 percent). Compared with a year earlier, unemployment declined sharply for adult men and women, but this drop was offset by an increase in youth joblessness.

The unemployment rate for nonwhite workers increased from 6.4 to 7.2 percent over the month, primarily reflecting a sharp rise in the unemployment rate for nonwhite youth. During the second quarter of 1968, the nonwhite rate averaged 6.8 percent compared to a white rate of 3.2 percent. Both rates were unchanged from the first quarter of 1968 and at their lowest point since the Korean period.

The State insured unemployment rate, which primarily relates to experienced adult workers, remained unchanged at 2.2 percent for the third consecutive month. Over the year, there were 140,000 fewer insured unemployed workers, and the rate declined 0.4 percentage point.

# Labor Force and Total Employment

The total civilian labor force increased by 2.6 million persons in June and topped the 80-million mark for the first time. Teenagers, as expected, accounted for nearly all of the increase.

Total employment, at 77.3 million in June, was up 1.3 million from May. A 500,000 increase in agricultural employment, which was slightly less than seasonally expected, accounted for a large part of the over-themonth rise.

The Employment Situation Page 3
July 10, 1968

Teenagers constituted most of the May-to-June rise in the number of workers employed part time for economic reasons. Approximately 600,000 of the employed 16-19 year-olds worked part time in June, although they wanted full-time employment.

# Industry Employment

Total nonfarm payroll employment rose 80,000 in June to 67.9 million (seasonally adjusted). All major industry divisions except construction and mining showed seasonally adjusted employment pickups. Gains of about 40,000 each took place in manufacturing, transportation and public utilities, services, and State and local government. These increases were partially offset by a seasonally adjusted decline of 80,000 in contract construction. Uncertainty about the availability of mortgage money and weakness in housing starts contributed to the decline in construction employment.

Most of the seasonally adjusted employment gain in manufacturing took place in the nondurable goods sector and was widespread among the individual industries. In durables, a decline of about 10,000 in primary metals employment resulted from a strike in the aluminum industry.

Over the year, the number of employees on nonagricultural payrolls rose by almost 2.1 million, a 3 percent gain. Service-producing industries accounted for four-fifths of the total increase. Employment growth over the year was about 6 1/2 percent in State and local government, 4 percent in services and finance, and about 3 1/2 percent in trade. Manufacturing employment increased about 2 percent over the year, while construction employment was up just over 1 percent.

#### Hours and Earnings

The workweek for manufacturing production workers held steady at 40.9 hours in June (seasonally adjusted), equal to the highest level of the last 17 months. For all rank and file workers on private payrolls, the workweek increased slightly to 37.9 hours (seasonally adjusted), as a result of increases in construction (0.4 hour) and trade (0.3 hour).

A one-cent rise in the average hourly earnings of all workers on private payrolls, together with an 0.4 hour increase, boosted their weekly earnings to \$108.20, up \$1.51 from May. Over the year, weekly earnings rose by \$6.47 (6 percent).

The Employment Situation Page 4
July 10, 1968

Average hourly earnings for factory production workers rose to \$3.00 for the first time. Over the year, hourly earnings increased 18 cents or 6 percent. At \$123.30, weekly earnings for manufacturing workers were up \$1.01 from May and \$8.81 from June 1967.

\* \* \* \* \*

This release presents and analyzes statistics from two major surveys. Data on labor force, total employment, and unemployment are derived from the sample surveys of households conducted and tabulated by the Bureau of the Census for the Bureau of Labor Statistics. Statistics on industry employment, hours, and earnings are collected by State agencies from payroll records of employers and are tabulated by the Bureau of Labor Statistics. A description of the two surveys appears in the BLS publication Employment and Earnings and Monthly Report on the Labor Force.

Data relate to production workers in mining and manufacturing: to construction workers in contract constructions and to nonsupervisory workers in wholesale and retail trade; finance, insurance, and real estate; transportation and public utilities; and services. These groups account for approximately four-lifths of the total employment on private nonagricultural psyrolls. Transportation and public utilities, and services are included in Total Private but are not shown separately in this table.

NOTE: Data for the 2 most recent months are preliminary.
