

## S. DEPARTMENT OF OFFICE OF INFORMATION, WASHINGTON, D.C.

USDL - 11-418 Bureau of Labor Statistics (202) 961-2542 or 961-2531

EMBARGOED FOR RELEASE 11:30 A.M. (EDT) Friday, September 4, 1970

THE EMPLOYMENT SITUATION: AUGUST 1970

The Nation's unemployment rate was essentially unchanged in August, while employment declined on a seasonally adjusted basis, the U.S. Department of Labor's Bureau of Labor Statistics announced today.

The overall unemployment rate was 5.1 percent in August, compared with 5.0 percent in July. After rising sharply between December 1969 and May 1970, the unemployment rate has remained at about the same level. Jobless rates for most major groups in the labor force showed little or no change in August, although the rate for teenagers moved up sharply over the month.

Nonagricultural payroll employment declined by 90,000 in August, seasonally adjusted, the fourth monthly reduction in the last 5 months. The drop occurred almost entirely in manufacturing and construction; employment in the two industries has fallen by l. I million over the past year. Unemployment

The number of unemployed workers totaled 4.2 million in August, down 300,000 from July. The reduction was about in line with the usual July-August pattern, and thus after seasonal adjustment unemployment was not significantly changed from the July level.

Although unemployment rates for most major labor force groups were little changed in August, the jobless rate for teenagers increased significantly, from 13.9 to 15.9 percent; most of this rise occurred among white girls. This brought the teenage rate to its highest point since April 1965.

For adult women (20 years and over), the unemployment rate edged down in August, from 5.0 to 4.8 percent. The jobless rates for all adult men (3.7 percent) and married men (2.8 percent) were essentially

unchanged over the month. However, both rates have moved up since late 1969 and were at or near their highest levels in 5 years.

The unemployment rate for all full-time workers, at 4.7 percent, was unchanged in August. The rate for part-time workers edged up from 7.4 to 8.0 percent, the highest level since the series began in 1963. The August rise in the part-time rate reflected increased joblessness among teenagers. Over the year, however, the rate for full-time workers has increased much more rapidly than for part-time workers.

Jobless rates for both white (4.8 percent) and Negro workers (8.4 percent) were essentially unchanged in August. As a result, the ratio of Negroto-white joblessness remained below the 2-to-1 pattern that has prevailed for many years. August marked the tenth month out of the last 12 in which this has occurred.

Among the occupational groups, there was a substantial decline in the jobless rate for white-collar workers. After reaching its highest level in nearly 10 years in July, the rate dropped in August from 3.1 to 2.7 percent. Within this broad group, declines occurred among professional, managerial, and clerical workers, while the rate for sales workers was unchanged.

By way of contrast, jobless rates for blue-collar workers continued to rise in August, moving from 6.6 to 7.0 percent, due primarily to increased joblessness among operatives, whose rate rose to 7.9 percent. The rate for nonfarm laborers, at 10.2 percent, remained at the 10-percent level for the third straight month. Both rates were at 5-year highs.

The jobless rate for workers who were last employed in construction moved up to 12. 2 percent in August, the fourth consecutive month in which this rate has exceeded 10 percent. Unemployment rates were about unchanged over the month in most other major industry divisions.

The unemployment rate for workers covered by State unemployment insurance programs rose to 3.7 percent, a return to the June level following a drop in July. The August 1970 rate compares with a rate of 2.1 percent last August.

The number of persons unemployed 15 weeks or more reached 735,000 in August, nearly double the level of last August. However, the average (mean) duration of unemployment fell from 9.3 to 8.8 weeks (seasonally adjusted) as a result of the increased short-term joblessness among teenagers. Since August 1969, the average duration has risen by 1 week.

Over the year, total unemployment has increased by 1.4 million--735,000 adult men, 340,000 adult women, and 270,000 teenagers. Nearly two-thirds of the increase was among persons who lost their last jobs. Industry Payroll Employment

Nonagricultura, payroll employment, which usually rises between July and August, remained virtually unchanged this August at 70. 7 million. As a result, after seasonal adjustment, payroll employment was down 90,000 over the month, the fourth decline in the last 5 months. Large employment drops in manufacturing and construction and small declines in several other industries more than offset moderate increases in services and State and local government. The August reduction brought nonfarm payroll employment down to about the same level as last August.

The largest over-the-month decline occurred in manufacturing, where employment fell by 75,000 (seasonally adjusted). Since last fall, factory employment has moved steadily downward and by August was 945,000 (or 4.6 percent) below last August. Over-the-month declines in manufacturing occurred in both the durable and nondurable goods industries. A 45,000 drop in durables took place largely in transportation equipment, electrical equipment, machinery, and instruments. In nondurable goods manufacturing, the August drop mainly reflected employment reductions in apparel and leather.

Employment in contract construction fell by 40,000 in August, seasonally adjusted. The decline would have been larger except for the net return to work of about 20,000 strikers. Over the year, employment in contract construction was down by 160,000, or about the same rate of decline as in manufacturing.

Payroll employment advanced in August in services and government by 25,000 each (seasonally adjusted). These gains were partly offset by declines in other service-producing industries--transportation and public utilities (15,000), trade (10,000), and finance, insurance, and real estate

(10,000). Until April of this year, employment increases in the service sector of the economy had been adequate to counter the sharp losses in goods-producing industries. Beginning in April, however, employment in the service sector has shown little or no growth.

## Hours of Work

The workweek for all rank-and-file workers on private nonfarm payrolls held steady in August at 37.3 hours, seasonally adjusted, remaining 0.2 hour above the May 1970 low.

The average workweek for manufacturing workers fell 0.2 hour in August to 39.9 hours (seasonally adjusted), after rising sharply in July (as revised). These fluctuations partly reflected the effects of the automobile model changeover. The factory workweek in August, however, was only slightly higher than the 9-year lows of May and June and was 0.7 hour below year-ago levels.

In the durable goods industries, the average workweek and overtime hours each edged down 0.1 hour in August. Weekly hours, however, were still 0.3 hour above their 1970 low reached in May; overtime hours remained in the 3.0-3.2 hours range of the last 7 months.

In nondurable goods, the average workweek fell 0.2 hour over the month, a return to the June level. Overtime also edged down 0.1 hour to its lowest level since June 1964.

## Earnings

Average hourly earnings of production and nonsupervisory workers on private payrolls edged up 1 cent in August to \$3.24. Compared with a year ago, average hourly earnings were up 18 cents, or 5.9 percent.

Average weekly earnings increased by 70 cents over the month to \$122.15, as declines in manufacturing and services were countered by gains in the other major industry divisions. Compared with August 1969, weekly earnings increased by \$5.56, or 4.8 percent.

Over the year ending in July 1970, average weekly earnings also rose by 4.8 percent; after adjustment for consumer price changes, however, earnings were down by 1.0 percent.

## Civilian Labor Force and Employment

The civilian labor force declined in August to 84.1 million. The drop was in line with usual July-August movements, however, and after seasonal

adjustment the labor force was little changed from July and was at about the same level as in the spring of this year. Over the year, the civilian labor force has risen by 1.6 million, with nearly three-fifths of the rise occurring among adult full-time workers, about evenly divided among men and women. The labor force growth among men reflected, in part, the entry into the civilian job market of returning veterans.

Total employment, at 79.9 million, declined slightly more than it usually does in August and after adjustment for seasonal factors inched down over the month by about 200,000. Compared with August 1969, total employment was up by only 250,000, with the increase occurring largely among part-time workers. Among full-time workers, employment gains for adult women were offset by declines among adult men and teenagers.

This release presents and analyzes statistics from two major surveys. Data on labor torce, total employment, and unemployment are derived from the sample surveys of households conducted and tabulated by the Bureau of the Census for the Bureau of Labor Statistics. Statistics on industry employment, hours, and earnings are collected by State agencies from payroll records of employers and are tabulated by the Bureau of Labor Statistics. A description of the two surveys appears in the BLS publication Employment and Earnings.

<sup>&</sup>lt;sup>1</sup>Data relate to production workers in mining and manufacturing: to construction workers in construction: and to nonsupervisory workers in transportation and public utilities; wholesale and retail trade; finance, insurance, and real estate; and services. These groups account for approximately four-fifths of the total employment on private nonagricultural payrolls.
