THE EMPLOYMENT SITUATION: MAY 1975

Joblessness continued to increase in May, with the Nation's unemployment rate rising to 9.2 percent, while total employment expanded for the second straight month, it was reported today by the Bureau of Labor Statistics of the U. S. Department of Labor. The unemployment rate, which had been 8.9 percent in April, has climbed steadily since last August and was double the October 1973 pre-recession low.

Total employment (as measured by the monthly survey of households) rose by 320,000 in May, with nearly all of the increase in the agricultural sector. With unemployment also rising, the labor force increased by 680,000, following strong advances in both March and April. Over the last 3 months, the labor force has risen by 1.4 million, accounting for two-thirds of the growth since May a year ago.

Total nonagricultural payroll employment (as measured by the monthly survey of establishments), at 76.4 million in May, has risen very slightly in the last 2 months. This represented a clear departure from the record of large monthly declines that totaled 2.5 million between last October and March.

Unemployment

Unemployment rose by 360,000 in May to 8.5 million, seasonally adjusted, about the same as the average increase in the previous 2 months. Since August 1974, when the strong upsurge in unemployment began, the jobless count has risen by 3.6 million. Job loss accounted for a large portion of the May unemployment rise; however, both new entrants and reentrants to the labor force registered sizeable increases in joblessness as well. Since last August, the number of job losers has risen by 2.9 million, accounting for four-fifths of the total increase in joblessness. (See tables A-1 and A-5.)

Almost all of the May jobless rise occurred among men 25 years and over and female teenagers, as most of the other age-sex groups showed little or no change. For example, the jobless rate among adult women was unchanged for the second straight month, at 8.6 percent. The adult male increase was also reflected in rising unemployment among all household heads and married men, whose jobless rates climbed to 6.3 percent and

5.8 percent, respectively. Among the racial groups, the jobless rate for white workers rose to 8.5 percent in May, while the rate for black workers (Negro and other races) held about steady at 14.7 percent. (See tables A-2 and A-6.)

Increases in unemployment were concentrated in construction, finance and service, and government. The rise in joblessness was particularly sharp in the construction industry; at an alltime recorded high of 21.8 percent, the unemployment rate in this industry was more than double the rate of a year earlier. (See table A-2.)

The unemployment rate of workers covered by State unemployment insurance programs reached 7.0 percent in May but remained below post-World War II record levels. The number of workers claiming regular State unemployment insurance benefits, at 4.7 million, represented 55 percent of the jobless total, compared with 45 percent a year ago.

The number of long-term unemployed--those jobless for 15 weeks or longer--rose by 240,000 to a level of more than 2.6 million in May; those who were seeking work for 6 months or more exceeded the 1 million mark for the first time since 1958. The average (mean) duration of unemployment continued to move upward, reaching 13.4 weeks in May, the highest level in over 10 years. Since last November, the average duration of unemployment has increased by 3.6 weeks, and the number jobless for 15 weeks or more has risen by 1.5 million. (See table A-4.)

Total Employment and Civilian Labor Force

Total employment increased for the second month in a row, rising by 320,000 to 84.4 million, seasonally adjusted. (See table A-1.) Since March, employment has expanded by 550,000, after registering 6 consecutive monthly declines that totaled 2.6 million. Adult males accounted for more than two-thirds of the April-May job gain-

After showing little movement from last October to February, the civilian labor force rose for the third consecutive month, increasing by 680,000 to 92.9 million in May. All of this increase came among adult males and teenagers. (See table A-1.)

The civilian labor force participation rate—the proportion of the civilian population either working or looking for work—surged to a high of 61.6 percent in May, up from 61.2 percent in the previous month. Labor force participation rates were higher for both adult men (80.8 percent) and teenagers (55.7 percent), whereas the rate for

adult women (45.9 percent) was about unchanged.

Industry Payroll Employment

Total nonagricultural payroll employment has moved up slightly in the last 2 months to 76.4 million, seasonally adjusted. The proportion of industries posting employment gains from April to May, at 54 percent, continued its ascent from the recession low of 17 percent in February. May was the first month since last August in which more than half of the 172 industries in the diffusion index registered employment gains. (See tables B-1 and B-6.)

After posting substantial job cutbacks over the September-March period, the employment declines in manufacturing have abated, as the job total held about steady at 18.1 million in May. Small gains in the nondurable goods sector, principally in textiles and apparel, were countered by declines in several of the durable goods industries, particularly machinery. Since May a year ago, employment in manufacturing has been reduced by more than 2 million jobs, two-thirds of which occurred in the durable goods industries.

Employment in contract construction continued to fall in May, but the 35,000 decline was accounted for by an increase in strike activity. Construction jobs have decreased by 630,000 over the past year.

An employment increase of 110,000 in the service-producing sector was the largest over-the-month gain for these industries since October; it was paced by increases in retail trade (35,000) and State and local government (55,000). Although service-producing employment has increased by 760,000 since last May, the bulk of the increase occurred during 1974; moreover, job gains in the State and local government sector accounted for almost all of this growth.

Hours of Work

The average workweek for all production or nonsupervisory workers on nonfarm payrolls was 36.0 hours in May, seasonally adjusted. (See table B-2.) Average weekly hours have held steady at this low level for the last 4 months after declining 0.7 hour between September and February.

The manufacturing workweek, at 39.0 hours, was unchanged from the previous month, following an increase from the recession low of 38.8 hours in February and March.

Factory overtime, however, remained at 2.3 hours for the fifth straight month. Since their April 1973 peaks, the factory workweek and overtime hours are down by 1.9 and 1.8 hours, respectively.

The aggregage man-hours of private production or nonsupervisory workers, at 106.1 (1967=100), rose by 0.4 percent in May. This reversed the rapid downward movement which began in October 1974. Over the past year, total man-hours have declined 6.6 percent. (See table B-5.) Factory man-hours, at 86.3 (1967=100), were unchanged in May after a 0.5-percent rise in April, the only increase over the last 12 months. Since May of last year, the manufacturing worker hours index has fallen 15.6 percent.

Hourly and Weekly Earnings

Average hourly earnings of production or nonsupervisory workers on private nonagricultural payrolls rose 0.4 percent in May and 7.2 percent from a year ago (seasonally adjusted). Average weekly earnings edged up 0.2 percent over the month. Since May 1974, weekly earnings have advanced by 5.1 percent.

Before adjustment for seasonality, average hourly earnings rose 3 cents in May to \$4.47 and were up 30 cents from a year ago. Average weekly earnings were \$160.47 in May, an increase of \$1.52 from April and \$7.85 from May of last year. (See table B-3.)
The Hourly Earnings Index

The Hourly Earnings Index--earnings adjusted for overtime in manufacturing, seasonality, and the effects of changes in the proportion of workers in high-wage and low-wage industries--was 169.8 (1967=100) in May, 0.6 percent higher than in April. The index was 8.8 percent above May a year ago. During the 12-month period ended in April, the Hourly Earnings Index in dollars of constant purchasing power declined 0.8 percent. (See table B-4.)

This release presents and analyzes statistics from two major surveys. Data on labor force, total employment, and unemployment are derived from the sample survey of households conducted and tabulated by the Bureau of the Census for the Bureau of Labor Statistics. Statistics on payroll employment, hours, and earnings are collected by State agencies from payroll records of employers and are tabulated by the Bureau of Labor Statistics. Unless otherwise indicated, data for both series relate to the week of the specified month containing the 12th day. A description of the two surveys appears in the BLS publication Employment and Earnings.

¹ Unemployment rate calculated as a percent of civilian labor force.

C=corrected

Insured unemployment under State program; unemployment rate calculated as a percent of average covered employment.

Man-hours lost by the unemployed and persons on part time for economic reasons as a percent of potentially available labor force man-hours.

Unemployment by occupation includes all experienced unemployed persons, whereas that by industry covers only unemployed wage and salary workers.

Includes mining, not shown separately.

Vietnam-era veterans are those who served after August 4, 1984.

Data relate to production workers in mining and manufacturing: to construction workers in contract construction and to nonsupervisory workers in transportation and public utilities; wholesale and retail trade; finance, insurance, and real estate; and services. These groups account for approximately four-fifths of the total employment on private nonagricultural payrolls. p=preliminary.

¹ See footnote 1, table B-2.

N.A. = not available. r = revised.p=preliminary.

NOTE: All series are in current dollars except where indicated. The index excludes effects of two types of changes that are unrelated to underlying wage-rate developments: Fluctuations in overtime premiums in manufacturing (the only sector for which overtime data are available) and the effects of changes in the proportion of workers in high-wage and low-wage industries.

Table B-5. Indexes of aggregate weekly man-hours of production or nonsupervisory workers¹ on private nonagricultural payrolls, by industry, seasonally adjusted
