THE EMPLOYMENT SITUATION: APRIL 1996

Unemployment edged down in April, and nonfarm payroll employment was essentially unchanged, the Bureau of Labor Statistics of the U.S. Department of Labor reported today. The nations jobless rate was 5.4 percent in April, 0.2 percentage point lower than in March. The number of payroll jobs remained at 118.0 million in April. Factory employment continued to decline despite the return of auto workers who had been off payrolls in March because of a strike. Total employment, as measured by the household survey, also was about unchanged at 126.1 million.

Unemployment (Household Survey Data)

The number of unemployed persons fell by 238,000 to 7.3 million in April, and the unemployment rate edged down from 5.6 to 5.4 percent. The jobless rate has remained in a narrow range between 5.4 and 5.8 percent since October 1994. Unemployment rates for the major worker groups--adult men (4.8 percent), adult women (4.7 percent), teenagers (16.7 percent), whites (4.7 percent), blacks (10.5 percent), and Hispanics (9.7 percent)-were little changed from their March levels. (See tables A-1 and A-2.)

The number of newly unemployed persons (less than 5 weeks duration) as well as the number of reentrants (persons with work experience who had been out of the labor force prior to beginning their job search) declined in April. (See tables A-5 and A-6.)

Total Employment and the Labor Force (Household Survey Data)

Total employment, at 126.1 million in April, was essentially unchanged over the month, after rising by 1.2 million between December and March. Similarly, the proportion of the population age 16 years and over that was employed (the employment-population ratio), at 63.0 percent, was about the same as in March. About 4.5 million persons were working part time for economic reasons, also unchanged in April. (See tables A-1 and

The number of persons who held more than one job totaled 7.5 million (not seasonally adjusted) in April, about 200,000 fewer than a year earlier. These multiple jobholders made up 6.0 percent of all employed persons. (See table A-9.)

Both the number of persons in the civilian labor force (133.4 million) and the labor force participation rate (66.6 percent) fell slightly in April. (See table A-1.)

^{1/} Includes other industries, not shown separately.

p=preliminary.
 2/ Data relate to private production or nonsupervisory workers.
 N.A.= not available.

Persons Not in the Labor Force (Household Survey Data)

About 1.5 million persons (not seasonally adjusted) were marginally attached to the labor force in April--that is, they wanted and were available for work but had stopped looking for jobs sometime in the prior 12 months. The number of discouraged workers--persons who had stopped looking for work specifically because they believed no jobs were available to them--was 403,000 in April. Both figures were close to their levels of a year earlier. (See table A-9.)

Industry Payroll Employment (Establishment Survey Data)

Nonfarm payroll employment was essentially unchanged in April at 118.0 million, after seasonal adjustment. This followed employment growth that averaged 221,000 jobs per month in the first quarter of 1996. In April, small gains in the number of service-producing jobs just offset declines in goods-producing employment. (See table B-1.)

Construction employment fell by 53,000 in April, as hiring fell short of seasonal expectations. The effects of volatile weather continued to show up in the employment figures for construction. Spring hiring was held down in areas of the country where winter weather had been unusually favorable and workers were already on payrolls. In other areas, poor weather in the April survey reference period probably led to delays in spring construction activity. Since October, construction employment has expanded by an average of 15,000 jobs per month.

Manufacturing employment declined by 17,000 in April. This drop would have been even larger had it not been for the return of workers from strikes and directly related plant shutdowns in the motor vehicles and equipment industry. Since February, the month prior to the auto strike, factory employment has fallen by 78,000. In April, factory job declines generally were small but were widespread among both durable and nondurable goods industries. Long-term declines continued in textiles and apparel manufacturing. Employment in electrical and electronic equipment edged down for the second straight month, after showing steady increases for more than 2 years.

The services industry added only 20,000 jobs in April, after gaining an average of 125,000 jobs per month during the first quarter of 1996. Health services added 19,000 jobs over the month, and employment growth continued in computer and data processing services. Less hiring than normal in some seasonal industries, including amusement and recreation and help supply services, led to seasonally adjusted monthly declines. Employment in engineering and management services, which had been expanding by about 13,000 jobs per month for more than a year, was about unchanged in April.

Retail trade employment increased by 20,000 in April. Employment in eating and drinking places expanded by 32,000 over the month, and job growth continued in automotive dealers and in home furnishings stores, particularly those specializing in consumer electronics. By contrast, employment in general merchandise and food stores fell over the month, after increasing in February and March.

Employment in the finance industry was up 12,000 in April and has grown by 78,000 since its low point in mid-1995. Job growth has been concentrated in mortgage banking and security and commodity brokerages.

The real estate industry added 4,000 jobs in April.

Transportation employment rose by 13,000 in April. Air transportation continued to show strength, increasing by 7,000 jobs. Employment also was up in trucking and warehousing, which has added 21,000 jobs thus far in 1996.

Weekly Hours (Establishment Survey Data)

The average workweek for production or nonsupervisory workers on private nonfarm payrolls fell by 0.2 hour in April, to 34.3 hours, seasonally adjusted. The factory workweek and overtime each edged up 0.1 hour--to 41.5 and 4.4 hours, respectively--as workers in motor vehicles and parts returned to work following strike-related shutdowns. (See table B-2.)

The index of aggregate weekly hours of private production or nonsupervisory workers on nonfarm payrolls declined by 0.5 percent over the month to 133.9 (1982=100), after seasonal adjustment. The manufacturing index increased by 0.2 percent to 104.9. (See table B-5.)

Hourly and Weekly Earnings (Establishment Survey Data)

Average hourly earnings of private production or nonsupervisory workers on nonfarm payrolls were up by 7 cents in April, after seasonal adjustment. Average weekly earnings were about unchanged at \$403.03. Over the year, average hourly earnings increased by 3.1 percent and average weekly earnings by 2.2 percent. (See table B-3.)

The Employment Situation for May 1996 is scheduled to be released on Friday, June 7, at 8:30~A.M.~(EDT).

Revisions in the Establishment Survey Data

The Employment Situation news release of May data will introduce revisions in the establishment-based series on nonfarm payroll employment, hours, and earnings to reflect the regular annual benchmark adjustments for March 1995 and updated seasonal adjustment factors. Unadjusted data from April 1994 forward are subject to revision.

BLS also will implement improved seasonal adjustment procedures for the nonfarm payroll employment, hours, and earnings series. The new seasonal adjustment procedures identify and control for the effects of varying time intervals between surveys (also known as the 4- vs. 5-week effect) and are based on X-12 ARIMA software newly developed by the Bureau of the Census. Historical seasonally adjusted data series from January 1988 forward will be revised to incorporate the new methodology. Further information on the planned change in the seasonal adjustment procedures is available upon request. (Contact Patricia Getz at 202-606-6521.)

1/ Not available.
NOTE: This range of alternative measures of labor underutilization replaces the U1-U7 range published in table A-7 of this release prior to 1994. Marginally attached workers are persons who currently are neither working nor looking for work but indicate that they want and are available for a job and have looked for work sometime in the recent past. Discouraged workers, a subset of the marginally attached, have given a job-market related reason for not currently looking for a job. Persons employed part time for economic reasons are those who want and are available for full-time work but have had to settle for a part-time schedule. For further information, see "BLS introduces new range of alternative unemployment measures," in the October 1995 issue of the Monthly Labor Review.

^{1/} Data refer to persons who have searched for work during the prior 12 months and
were available to take a job during the reference week.
2/ Includes thinks no work available, could not find work, lacks schooling or
training, employer thinks too young or old, and other types of discrimination.
3/ Includes those who did not actively look for work in the prior 4 weeks for such
reasons as child-care and transportation problems, as well as a small number for which
reason for nonparticipation was not determined.
4/ Includes persons who work part time on their primary job and full time on their
secondary job(s), not shown separately.

^{1/} These series are not published seasonally adjusted because the seasonal component, which is small relative to the trend-cycle and irregular components, cannot be separated with sufficient precision.

2/ This series is not suitable for seasonal adjustment

because it has very little irregular movement. Thus, the not seasonally adjusted series can be used for analysis of cyclical and long-term trends.

3/ Includes other industries, not shown separately.
p = preliminary.

^{1/} Data relate to production workers in mining and manufacturing; construction workers in construction; and nonsupervisory workers in transportation and public utilities; wholesale and retail trade; finance, insurance, and real estate; and services. These groups account for approximately four-fifths of the total employees on private nonfarm payrolls.

^{2/} These series are not published seasonally
adjusted since the seasonal component, which is small
relative to the trend-cycle and irregular
components, cannot be separated with sufficient
precision.
 p = preliminary.

^{1/} Based on seasonally adjusted data for 1-, 3-,
and 6-month spans and unadjusted data for the 12-month
span. Data are centered within the span.
p = preliminary.
NOTE: Figures are the percent of industries with

employment increasing plus one-half of the industries with unchanged employment, where 50 percent indicates an equal balance between industries with increasing and decreasing employment.
