

SURVEY OF CURRENT BUSINESS WEEKLY SUPPLEMENT

UNITED STATES DEPARTMENT OF COMMERCE
BUREAU OF FOREIGN AND DOMESTIC COMMERCE

WASHINGTON, D. C., MARCH 7, 1940

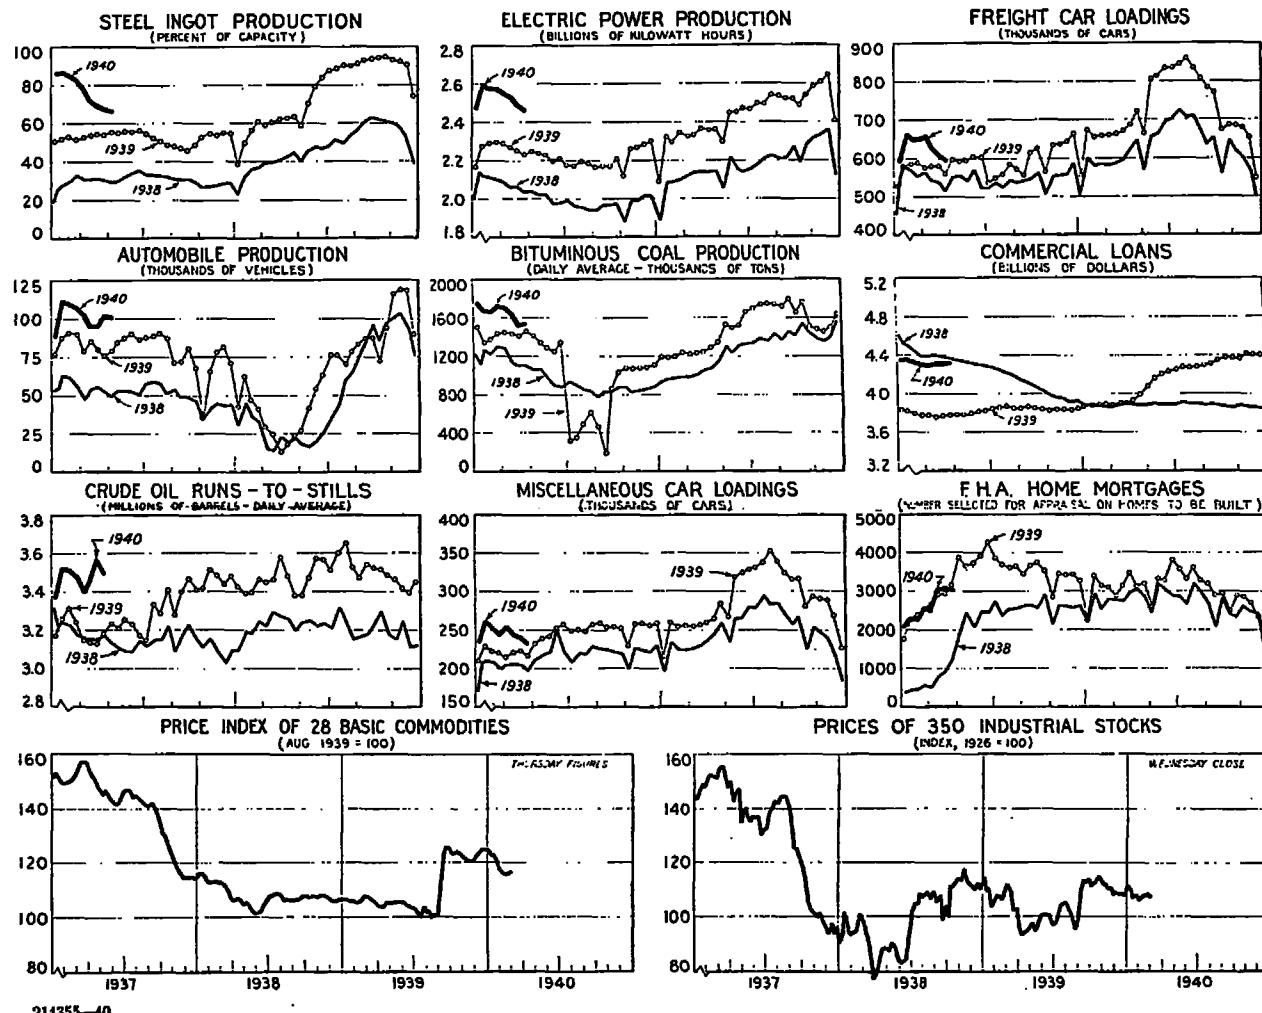

SUMMARY OF BUSINESS TRENDS

The contraseasonal decline in steel mill operations has continued though the rate of decrease has slackened recently. Ingots output dropped below 65 percent of capacity for the week ended March 9. This figure was no more than 5 percent above the end of August rate, and on the whole the output of semimanufactured materials at the end of February was but moderately higher than prior to the September spurt. Preliminary data suggest that cotton mills began to reduce operations during February from the remarkably high rate sustained in the preceding 6 months. Aside from the automobile industry, where output was at 100,000 units in the latter weeks of the month, the decline in output of the basic industries was rather general throughout February. Paper production has held above the pre-war position but paperboard output at the end of February was slightly below the August mark. It should be noted, however, that the movement of miscellaneous freight by the railroads was some 12 percent higher on a seasonally corrected basis than in August. The February movement of miscellaneous freight was about 10 percent higher than a year earlier, a gain in line with the comparative position of the general index of industrial production.

While there were some indications that the decline in industrial operations was slowing at the beginning of March and substantial purchasing of nonferrous metals had occurred, the general business situation was still lacking in visible expansionary forces of a strong nature. Although the retail trade situation shows considerable variation geographically, it is not improving in the aggregate on a national basis. Export demands have continued as a major source of support, but there are no definite indications of an increase of capital formation and the high level of inventory holdings has made for cautious domestic buying.

In contrast to the situation in the opening months of 1939, the construction industry currently does not afford the expansionary potentialities that last year had resulted from the placing of a record volume of public works contracts. Private residential building activity is showing no significant change from the early 1939 position. Actual contracts awarded for homes as well as the applications for Federal Housing Administration insured mortgages on new homes to be built, charted below, have merely been holding around the year earlier figures.
