

SURVEY OF CURRENT BUSINESS WEEKLY SUPPLEMENT

UNITED STATES DEPARTMENT OF COMMERCE BUREAU OF FOREIGN AND DOMESTIC COMMERCE

WASHINGTON, D. C., FEBRUARY 19, 1942.

SUMMARY OF BUSINESS TRENDS

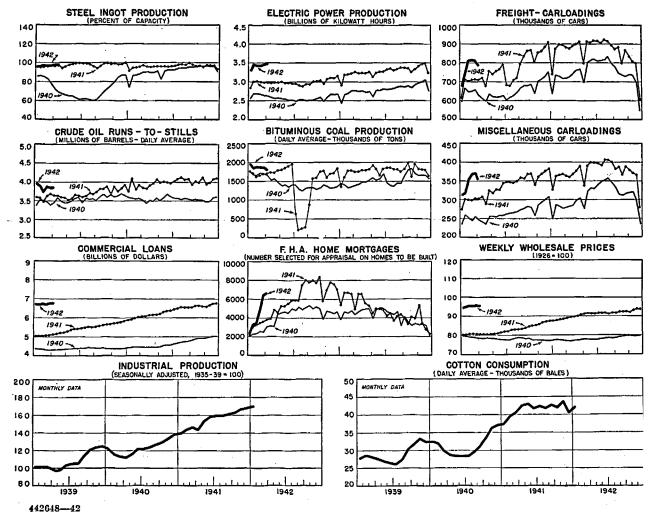

THE general price level continues to advance. For the week ended February 7, the Bureau of Labor Statistics' over-all index of wholesale prices stood at 95.7 (1926=100), up about 2 percent since the beginning of the year. From the outbreak of the war in September 1939 to date, wholesale prices have risen 27 percent, while the advance since February 1941 has been nearly 19 percent. The increase in the cost of living, of course, has been somewhat smaller; nevertheless, the 11 percent rise of the past 12 months is very substantial by any standard.

Farm products still lead the general price advance, having climbed an additional 5 percent since the end of December. The Government's farm program sought to raise these prices, and their upward movement has been sustained by heavy domestic demand and the large requirements for lend-lease shipment. Altogether, domestic agricultural prices stood 42 percent higher in the middle of February than a year earlier, while the wholesale prices of foodstuffs increased an average of 28 percent. Textile prices have risen some 24 percent in the same period, though only a part of this can be attributed to higher raw-material costs, led by a 91-percent increase in the cost of cotton. Of the cost-of-living components affected by the increased agricultural prices, food prices are up 19 percent in the January 1941-January 1942 period, while clothing costs have risen 15 percent. Retail prices of housefurnishings (influenced by increased excise taxes) have climbed about 18 percent, approximately the same as the wholesale price advance.

Among the various industrial commodities at wholesale, chemical prices rose 23 percent, building materials 10 percent, and metals 6 percent, in the 12 months ending with the middle of February. Chemical prices have continued to increase since the year end. On the other band, metal prices have remained relatively stable, the Office of Price Administration having been particularly successful in this regard. However, in an effort to encourage added production, high premium prices were recently granted producers of copper, lead, and zinc for all outputs beyond certain quotas.

Despite recent passage of the Price Control Act, it is clear that the general price advance in all likelihood will only be slowed over coming months. In the absence of a strong and aggressive fiscal check, the tremendous pressure on retail prices is being steadily increased as armament expenditures are stepped up and consumer incomes expand. Many prices will not be controlled by the Administrator. Moreover, agricultural prices have not yet reached permissible ceilings in a number of cases. Finally, upward revision of many existing ceilings will undoubtedly be forthcoming as a result of increased raw-material and wage costs.
