## COMMENTARY

The Appendix of this issue includes a special set of annual and quarterly tables showing total farm debt owed to various farm lender groups. See page 32 for a list of these tables.

The Appendix also contains quarterly tables presenting new data from the May 1981 survey of terms of bank lending to farmers, which were issued shortly after publication of the April 1981 Quarterly Series Databook.

At the end of May, loans outstanding at PCAs were only 9 percent above a year earlier, which gives the impression that loan expansion has been relatively slow. This statistic, however, is depressed by the low or negative annualized loan growth rates experienced during May-November 1980. From December 1980 through March 1981, the seasonally-adjusted annual growth rate of PCA loans outstanding exceeded 20 percent. In April and May the growth rate was 14 percent (Table 211.2M). Thus, unless PCA lending activity this summer and fall repeats the unusual weakness of 1980, the 12-month increase will rise rapidly from its present level of 9 percent.

A similar, but less marked, situation is found in the Federal Land Bank lending record. Outstanding loans have increased at seasonally-adjusted annual rates exceeding 20 percent in each of the first five months of 1981, yet the year-over-year increase has fallen to 19 percent because of the relatively weaker growth rates experienced during the second half of 1980 (Table 221.2M).

In contrast to the rapid expansion of farm loans at the Farm Credit System so far in 1981, lending by life insurance companies remains in the doldrums it entered in 1980. The monthly data shown in Section 230 have not yet been revised by the compiling association, but newly available year-end data are shown in Appendix Tables 111A and 121A. Quarterly data for 1980-81 in Tables 111Q and 112Q have been arbitrarily adjusted to the new year-end level as a temporary measure until revisions are received.

Note that total farm debt as of January 1, 1981, is now estimated at \$174.5 billion, which is \$6 billion below the USDA's first preliminary estimate published last fall (Appendix, Table 111A, p. 33). Thus total farm debt is now estimated to have risen by 10.6 percent in 1980, real estate debt by 11.3 percent, and non-real-estate debt by 9.7 percent.

Non-real-estate farm loans at commercial banks totaled \$31.3 billion at the end of March, a decrease of \$0.3 billion during the first quarter, and up only 2.7 percent from a year earlier. During the second quarter, however, loans at the large weekly-reporting banks rose sharply from \$5.3 to \$5.9 billion (Table 301.1M). In addition, the survey of bank lending

#### COMMENTARY (continued from page 2)

to farmers made in the first week of May found lending activity at smaller banks much increased over the same week of 1980 or of 1979 (Appendix, Table 335Q, p. 41). Thus fragmentary data indicate that farm lending by banks has picked up. Reports from all banks as of June 30, which will either confirm or reject these indications, will begin to become available in early August.

Total lending activity at agricultural banks, however, has definitely exceeded that of the first half of 1980. Through June 17, total loans at agricultural banks are estimated to have risen by 4 percent since the beginning of the year, compared with a decrease of 1 percent in 1980 and an increase of 6 percent in 1979. But total deposits are estimated to have increased by 3 percent during this period of 1981, compared with no change in either of the last two years. Thus the average loan/deposit ratio at agricultural banks has risen only slightly so far this year, to a level of 61 percent, far below its cyclical peak of 68 percent in September 1979 (Appendix Table 3, pp. 44-45).

Early in May, farm loan interest rates at banks averaged 17.9 percent, the same as in February. At the end of March, large and money-market certificates of deposit comprised 34 percent of total resources of agricultural banks, and farm loan rates are reflecting the cost of these funds.

\* THE APPROXIMATE COMPOUNDED ANNUAL INTEREST RATE ON EACH LOAN IS CALCULATED FROM SURVEY DATA ON THE STATED RATE AND OTHER TERMS OF THE LOAN. IN COMPUTING THE AVERAGE OF THESE ESTIMATED EFFECTIVE RATES, EACH LOAN IS WEIGHTED BY ITS DOLLAR AMOUNT.

\*\* "LARGE BANKS" ARE BANKS IN SURVEY STRATA 1-3, CORRESPONDING APPROXIMATELY TO BANKS WITH OVER \$400 MILLION IN TOTAL ASSETS AS OF SEPTEMBER 1978.

FOR ADDITIONAL INFORMATION, SEE NOTES TO STATISTICAL RELEASE E.2, FEDERAL RESERVE BOARD.

Source: Federal Reserve Quarterly Survey of Terms of Bank Lending to Farmers.

1/ Percentage distribution of the total dollar amount of non-real-estate farm loans of \$1,000 or more made by insured commercial banks during the week covered by the survey, which is the first full business week of the month specified.

2/ The approximate compounded annual interest rate on each loan is calculated from survey data on the stated rate and other terms of the loan. In computing the average of these estimated effective rates, each loan is weighted by its dollar amount.

3/ "Large banks" are banks in survey strata 1-3, corresponding approximately to banks with over \$450 million in total assets as of December 1980.
