These statistics are tabulated from condition reports submitted by member banks following each official call, a minimum of three of which are required by law each year. The Comptroller of the Currency tabulates the national bank reports and publishes the results in the *Abstract of Reports of Condition of National Banks*. The Board of Governors of the Federal Reserve System tabulates the reports of State member banks and publishes the combined statistics of national and State member banks in the *Member Bank Call Report*.

Member banks are classified according to their reserve requirements as central reserve city banks, reserve city banks, or nonreserve city ("country") banks. A member bank that has an office in a central reserve city is classified as a central reserve city bank; a member bank that has an office in a reserve city, but not in a central reserve city, is classified as a reserve city bank; a member bank that does not have an office in a reserve or central reserve city is classified as a country bank. However, some banks in outlying sections of central reserve cities have permission to maintain the reserves required of reserve city banks or country banks; and some banks in outlying sections of reserve cities have permission to maintain the reserves required of country banks. Condition reports of member banks are tabulated in accordance with the reserve classifications of the banks. Since a member bank that has two or more offices, whether in the same city or in different cities, submits a consolidated condition report, the report is tabulated according to a single location (that of the bank's head office, unless it has a branch in a city where banks are subject to higher reserve requirements).

The comparability of figures for succeeding call dates is affected somewhat by changes in Federal Reserve membership, mergers, etc., and by changes in the reserve classification of cities or individual banks.

<sup>1</sup> Demand balances with banks in United States, except private banks and American branches of foreign banks, plus cash items in process of collection. The difference between the figures shown in this column and the figures shown against the corresponding captions under "Assets" is accounted for by an excess of allowable deductions over gross demand deposits at a number of banks.

<sup>2</sup> The figures shown in the "Total" column represent the reserve balances as reported by member banks from their own books. They differ from those shown by the Federal Reserve Banks' books because of a lack of synchronization of entries on the books of Federal Reserve Banks and member banks. In determining whether member banks' reserves meet requirements, the reserve balances shown by the books of the Federal Reserve Banks are used.

Reserves actually required on a given date are based on deposits at the opening of business on that day, which is the same as the close of business the preceding day. Therefore, the figures in the "Required" column represent the reserves required to be maintained on the business day following the call date. Pursuant to the provisions of law, the Board of Governors of the Federal Reserve System prescribed the following requirements for reserves to be maintained by each member bank which were in effect on that date: Time deposits—5% for all member banks; net demand deposits—20% for central reserve city banks, 18% for reserve city banks, and 12% for country banks.

The figures shown in the "Excess" column are the differences between reserve balances reported by member banks on the call date and the reserves required to be maintained on the first business day following the call date. They are, therefore, merely approximations of the reserve position of member banks.

<sup>3</sup> Banks are classified according to their reserve requirements and not necessarily according to location; see contents page for basis of classification of member banks.
