SECURITIES AND EXCHANGE COMMTSSION Washington, D.C.

STATISTICAL SERIES Release No. 371

## VOLUAE AND COMPOSITTON OF INDIVIDUALS' SAVING, JAN.-DARCH 1949

Individuals saved about $\$ 600$ million in liquid form during the first quarter of 1949, according to the quarterly estimates of liquid saving made public today by the Securities and Exchange Commission. 1/ This increase in individuals' noldings of liquid assets may be compared with a reduction of about $\$ 600$ million in the corresponding quarter of 1948 . In the fourth quarter of 1948 individuals added $\$ 1.9$ billion to their liquid assets.

Liquid saving comprises saving in the form of currency and bank deposits, in savings and loan associations, insurance and pension resarves, securities, and repayment of mortgage debt and other consumer debt. Saving in non-liquid forms, such as the purchase of new homes and new physical investment and inventory expansion by individuals, added substantialiy to individuals' assets in the lirst quarter of 1949, but it is estimated that saving in these forms did not equal that in the previous quarter.

As in the first quarter of 1948 individuals' holdings of currency and ank deposits fell off in the first quarter of 1949. This decline, or negative saving, amounted to $\$ 3.7$ billion. All other compenents making up the total showed some positive saving except for mortgage debt. Individuals equity in securities increased $\$ 2.1$ billion, in savings and loan associations $\$ 400$ million, in insurance and pension reserves $\$ 1.4$ billion, and consumer debt was reduced by $\$ 1.0$ billiun, reversing the trend of the last several years.

The $\$ 3.8$ billion drop in individuals' holdings of currency and bank deposits cluring the first quarter of 1949 was the result of a decline of 43.2 billion in demand deposits and a decline of $\$ 900$ aillion in currency, oliset in part by an increase of $\$ 400$ million in time and savings deposits.

Makins up the $\$ \mathbf{2}_{\mathbf{a}} 1$ oillion increase in indiviouals' noldings of securities were $\$ 700$ million in U. U . Savings bonas, $\$ 600$ million in other U.S. Governent securities, 400 aillion in state and local government securities, and $\$ 400$ million in corporate and other securities. The $\$ 700$ million increase in ü.s. savings uenus in the first quarter followed the pattern of the previous two years, with individuals coming in at the beginning of the year to purcnase their anmual alletments. Most of the increase was in Series E bonds. The $\$ 4 C C$ million increase in corporate and other securities was about evenly divided between stocks and bonds. While net issues of corporate bonds during the first quarter amounted to about $\$ 800$ million, about $\$ 600$ million was purchased by institutions, mainly insurance companies.

One of the more significant developments in the composition of individuals' saving in the first three months of this year was the $\$ 1.0$ billion net repayment of consumer debt. This debt reduction, the first since the first quarter of 1.945, was attributable in large part to seasonal factors and reflected substantial declines in charge accounts. Mortgage debt contimed to increase during the first quarter of 1949, approximately $\$ 500$ million, 2 lower rate than in the previous two years. At the same time new construction of homes amounted to about $\$ 1.5$ billion.

OI the remaining components of individuals' saving during the first quarter of $\mathbf{1} 949$, there was an increase of $\$ 900$ million in private life insurance, continuing at about the same quarterly rate as previousiy. The increase in government insurance funds, however, dropped sharply and amounted to $\$ 500$ million, the smallest quarter since 1942. This reflected larger payments for unemploynent compensetion in the first quarter of this year.

The above discussion of individuals' saving is based on data presented in the attached table.

2/ In this analysis individuals' saving includes unincorporated business saving of the types specified in the attached tabl.e. Corporate and government saving are not included. The change in individuals' equity in government insurance is, however, considered as part of individuals' saving.
