For immediate release February 23, 1967

Debits, Demand Deposits, and Turnover At 233 Individual Centers

The attached publication is the first release in a new monthly series showing seasonally adjusted bank debits, deposits and deposit turnover for 233 selected Standard Metropolitan Statistical Areas (SMSA's) and other centers. The bank debits data are also published currently in the Board's monthly, "Bank Debits and Deposit Turnover" series (G.6). These deposit and turnover data for individual SMSA's have not been published previously.

Bank debits are an important indicator of current economic and financial developments and are one of the few statistics available on a local basis. Debits are charges to demand deposit (checking) accounts, mostly by checks drawn against the accounts, but they also include other direct charges such as for security purchases, utility bills and loan repayments. Debits data are shown as an annual rate and are adjusted for seasonal variation and for differences in the number of business days in each month. These adjustment procedures were discussed in detail in an article in the March 1965 Federal Reserve <u>Bulletin</u>.

Deposits data shown in the attached publication reflect the total amount of demand deposit (or checking account) balances of all individuals, partnerships, and corporations and of States and political subdivisions in commercial banks in the Areas covered as of the last business day of the month. These data are also adjusted for seasonal variation. All time deposits and demand deposit accounts of banks and of the U. S. Government are excluded.

Deposit turnover (or velocity) is generally regarded as a useful indicator of deposit activity. This measure is computed by dividing monthly debits on an annual rate basis by the average of deposits at the end of the previous month (beginning of the current month) and the end of the current month. The deposit turnover rate is not seasonally adjusted but computed from seasonally adjusted components.

Debits and deposits data for this series are reported on the basis of the actual location of respondent banks and/or branches rather than on the basis of the location of the head office as in most other related statistical series. The data are partly estimated but the estimated portion is quite small and represents deposits in smaller suburban banks or branches.

Standard Metropolitan Statistical Areas are those defined by the United States Bureau of the Budget and generally include large urban centers and one or more suburban counties. In the past few years the SMSA has become increasingly important as a geographical unit of statistical measure. For purposes of regional coverage a few reporting centers that are not SMSA's are included in the 233 Areas.

This release is being mailed on a sample basis to mailing lists maintained for other Board publications that provide regional statistical information of this nature. Persons desiring to receive this publication each month, should write to Publications Section, Division of Administrative Services, Board of Governors of the Federal Reserve System, Washington, D. C. 20551, and ask for the G.ll release, "Debits, Demand Deposits, and Turnover."
