

FEDERAL RESERVE

INDUSTRIAL PRODUCTION

G.12.3

For Immediate Release
May 15, 1975

Industrial production declined by an estimated .4 per cent in April, less than the March decline and substantially under the sharp drops of last winter. The index during April was 109.4 per cent of the 1967 average, and about 13 per cent below September of 1974. During April, an upturn in output of consumer goods was offset by further declines in business equipment, steel and other durable goods materials. (On a revised basis, the index declined by 1.3 per cent in March and 2.2 per cent in February).

Products. Consumer goods production rose 1 per cent in April reflecting mainly a 13 per cent increase in autos, and some gain in output of nondurable consumer goods. Auto assemblies were at a 6.3 million unit annual rate. Output exceeded sales and new car stocks rose by about 5 per cent; production increases earlier scheduled for the next few months are being scaled down. Output of business equipment, already down 11 per cent since last September, declined about 1-1/2 per cent further in April.

Materials. Production of industrial materials was reduced 1.4 per cent further in April. Durable materials such as basic metals and equipment parts experienced additional cutbacks in production as inventory liquidation continued. Raw steel output has been curtailed sharply further in early May. Production of nondurable materials had been cut by a fifth since last autumn, substantially reducing producers inventories, and output leveled off in April. Textile production, however, increased further.
