## INDUSTRIAL PRODUCTION

G.12.3

For Immediate Release  
December 15, 1975

Industrial production increased by an estimated 0.2 per cent in November, about half the October gain. Although increases in output were fairly widespread during November, they generally were the smallest since the turnaround in the total index last spring. The index has now risen for seven consecutive months and at 116.8 per cent of the 1967 average was 6.3 per cent about the April low.

Products. Auto assemblies in November edged down slightly to an annual rate of 7.7 million units and schedules call for about the same production levels for December. Output of other durable consumer goods, which declined in October recovered in November. Production of nondurable goods edged up slightly further. Total output of business equipment has changed little since September and in November was only one and one-half per cent above the June-July low, and 12.5 per cent below last year's peak. Output of construction products increased but other intermediate products were unchanged.

Materials. Production of durable goods materials changed little as a small decline in steel was offset by increases in other metal materials. Output of nondurable goods materials rose slightly further as the earlier rapid increases in the textile, paper and chemical group slowed considerably in November.
