DEPARTMENT STORE CREDIT - OCTOBER 1950

Instalment accounts receivable at department stores increased further in October but at a much slower rate than in the preceding three months. At the month-end this type of credit was approximately one and one-half times the amount outstanding on October 31 last year. Collections on instalment accounts were 5 per cent larger than in September but the ratio of collections to accounts receivable on the first of the month remained at 18 per cent. At this rate of repayment outstanding indebtedness would be liquidated in a somewhat shorter period than a year earlier.

Charge accounts outstanding on October 31 were 3 per cent larger than at the end of September and 13 per cent greater than on the corresponding date of 1949. Collections on charge accounts rose 10 per cent from September to October but the collection ratio, based on first-of-month accounts receivable, was unchanged at 51 per cent.

Total sales at department stores declined slightly in October when some increase is usual. Credit sales of both types were below the advanced levels of the third quarter. From September to October instalment sales declined 12 per cent and charge-account sales, 1 per cent. Both continued well above year-ago levels. The volume of cash sales showed little change from either the preceding month or the corresponding month of 1949.
