statistical release

E.5 (First of a new series of data
to be released quarterly)

For immediate release

January 20, 1967

CAPACITY UTILIZATION IN MANUFACTURING Quarterly averages, seasonally adjusted

Year and quarter	Rate of capacity utilization (per cent)			Manufacturing output and capacity (1957-59=100)	
	Total manu- facturing	Primary processing industries	Advanced processing industries	Output	Capacity
1963 I	82	82	83	121.3	147
II	84	85	83	124.9	149
III	84	84	84	126.0	150
IV	84	84	84	127.2	151
1964 I	85	86	84	129.4	153
II	86	87	85	132.5	154
III	87	88	85	134.7	156
IV	87	89	85	135.9	157
1965 I	89	90	88	141.4	159
II	89	90	88	143.5	162
III	89	90	88	146.1	165
IV	89	89	89	148.9	167
1966 I p	91	91	91	154.5	170
II p	91	92	91	157.7	173
III p	91	91	91	159.8	176
IV p	90	89	91	161.1	179

NOTE. -- Based on data from Federal Reserve, McGraw-Hill Economics Department, and Department of Commerce. For description and back data, see Federal Reserve Bulletin, November 1966, pp. 1605-15. The output index for total manufacturing divided by the capacity index for total manufacturing may differ slightly from the utilization rate for total manufacturing shown in the table, partly because of rounding and partly because the utilization rate is calculated as a weighted average of utilization rates for primary processing industries and advanced processing industries.
