Revised Estimates of Capacity and Capacity Utilization

Brief Description and Charts	2
Summary Table	4

Tables: Capacity Utilization, Output, and Capacity Monthly, quarterly, and annual data

A. Manufacturing, Mining, and Utilities

Total industry, 1967-84	5
Manufacturing, 1948-84	6
<i>By stage of processing</i>	
Primary processing, 1948-84	8
Advanced processing, 1948-84	10
<i>By industry</i>	
Durable manufacturing, 1967-84	12
Stone, clay, glass, and concrete products, 1948-84	13
Primary metals, 1967-84	15
Iron and steel, subtotal, 1948-84	16
Nonferrous metals, subtotal, 1948-84	18
Fabricated metal products, 1948-84	20
Nonelectrical machinery, 1948-84	22
Electrical machinery, 1948-84	24
Motor vehicles and parts, 1948-84	26
Automobiles, 1977-84	28
Aerospace and miscellaneous transportation equipment, 1948-84	29
Instruments, 1948-84	31
Other durables, 1967-84	33
Nondurable manufacturing, 1967-84	34
Food and kindred products, 1948-84	35
Textile mill products, 1948-84	37
Paper and products, 1948-84	39
Chemicals and products, 1948-84	41
Petroleum products, 1948-84	43
Rubber and plastics products, 1948-84	45
Other nondurables, 1967-84	47
Total other (durables plus nondurables), 1948-66	48
Mining, 1967-84	49
Utilities, 1967-84	50
Electric utilities, 1967-84	51

B. Industrial Materials

Materials, total, 1967-84	52
Durable goods materials, 1967-84	53
Metal materials, 1967-84	54
Raw steel, 1967-84	55
Aluminum, 1967-84	56
Nondurable goods materials, 1967-84	57
Textile, paper, and chemical materials, 1967-84	58
Pulp and paper materials, 1967-84	59
Chemical materials, 1967-84	60
Energy materials, 1967-84	61

Revised estimates of capacity and capacity utilization

The Federal Reserve has developed new estimates of industrial capacity and capacity utilization for the period since 1967 in conjunction with the revision of the index of industrial production that has just been completed. These new estimates cover manufacturing, mining, and utilities and industrial materials.

Within manufacturing, three additional series are now published: (1) primary metals, a combination of the published series for iron and steel and nonferrous metals; (2) other durables, which covers lumber and products, furniture, miscellaneous manufacturing, and government owned and operated ordnance facilities; and (3) other nondurables, which covers tobacco products, apparel, printing and publishing, and leather and products.

In the interrelated system of industrial production and capacity indexes and utilization rates, each utilization rate, expressed in percentage form, is the ratio of an industrial production index to a related capacity index. The capacity indexes are developed from a variety of data and are designed specifically to be used in conjunction with the industrial production indexes; the capacity indexes parallel the industrial production indexes with respect to the names of series and groups, weights, and aggregation and linking procedures.

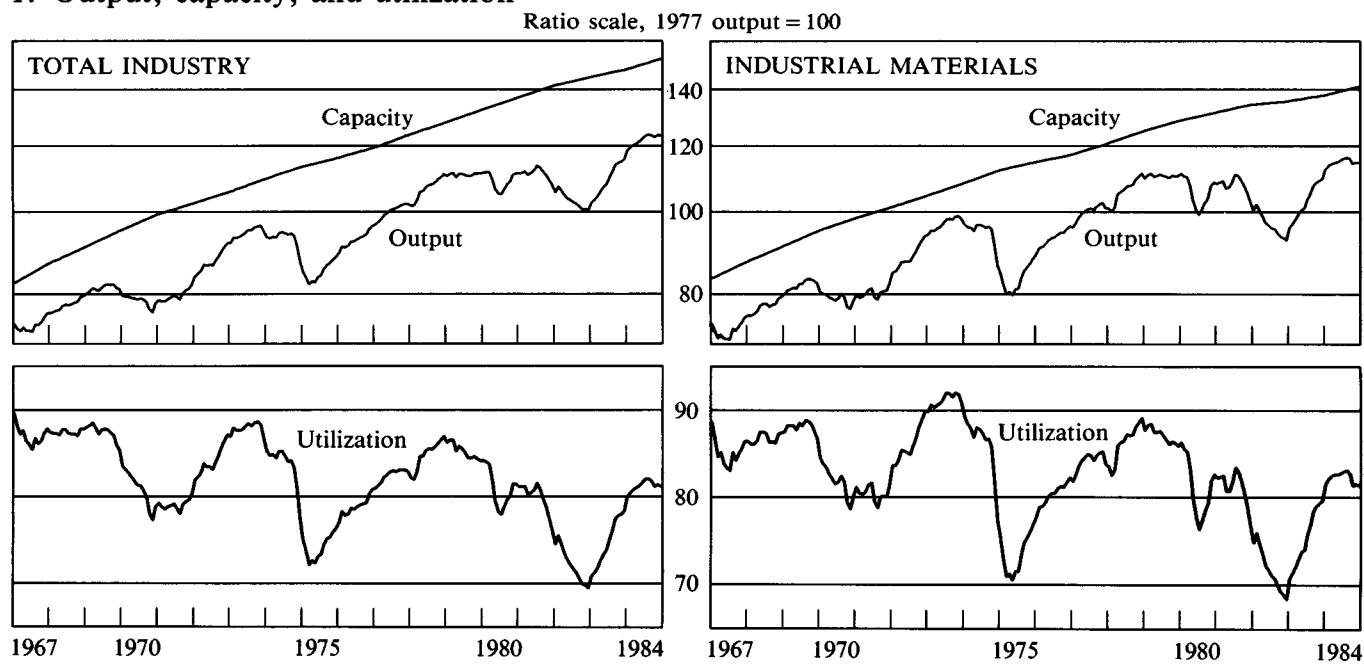

The output and capacity indexes have been revised in several ways. Both indexes are now expressed as percentages of output in 1977 (chart 1) instead of 1967 and consequently tend to have lower numerical values

than formerly. This rebasing does not, however, affect the derived utilization rates. Changes in these rates reflect not only the incorporation of more complete data, but also the introduction of new series, changes in the Standard Industrial Classification, and the updating of the value-added weights that are used to combine both the output and capacity indexes.

Capacity utilization rates in general have been revised slightly downward as a result of an upward revision in capacity relative to output. In December 1984 the overall rate for manufacturing, mining, and utilities was 81.1 percent, 0.1 percentage point down from the previous estimate. Over the whole 1967-84 period the capacity utilization rate averaged 81.7 percent compared with 82.0 percent previously (summary table). The new estimates, like the previous set, show that the early 1980s have been characterized by rates of utilization of industrial capacity that were below or at best equal to the 1967-84 average.

The new capacity indexes, like the old ones, grew more slowly after the oil embargo in late 1973 and slowed further after 1979, but the retardation after 1979 is not as severe as was previously shown. From December 1967 to December 1973, industrial capacity grew at an annual rate of 3.9 percent; it declined to a rate of 3.2 percent between December 1973 and December 1979; and then to 2.9 percent from December 1979 to December 1984. Although the revised rates of capacity growth for the 1967-73 and 1973-79 periods

1. Output, capacity, and utilization

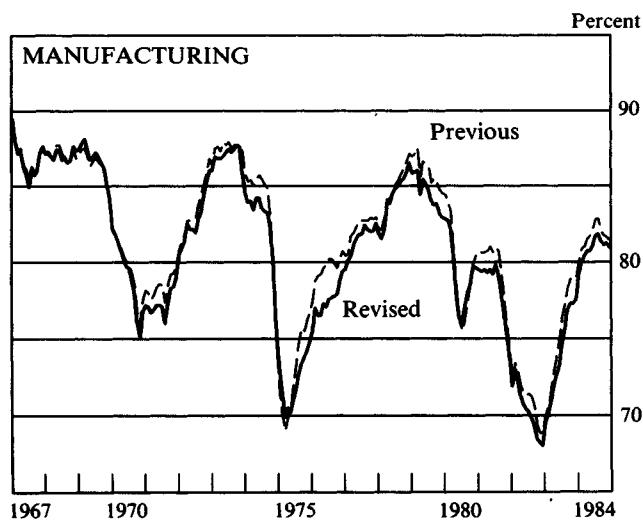

are nearly the same as the old estimates, the growth rate of 2.9 percent for the period since 1979 is about 0.5 percentage point higher than was previously estimated.

The downward revision of utilization is centered in durable manufacturing. The 1967-84 average utilization rate for durable manufacturing is 1.3 percentage points below the rate shown previously and the December 1984 rate for this group is down 2.7 percentage points. Within durable manufacturing, utilization rates were found to be substantially lower in December 1984 for producers of motor vehicles and parts and machinery, especially electrical machinery. The utilization rate for the latter series was revised downward nearly 11 percentage points in December 1984. Capacity growth in this industry, which includes the fast growing semiconductor and communications equipment industries, had been substantially underestimated for the 1981-84 period.

Within manufacturing, the downward revisions of the operating rates for motor vehicles and machinery were accompanied by smaller downward revisions in the December 1984 rates for plants producing rubber and plastics products, paper and products, and textile mill products. The downward revisions of those series were offset to a considerable extent by upward revisions of other series. In December 1984, the rates for producers of both chemicals and products and petroleum products were revised upward more than 5 percentage points. Overall the revisions reduced the dispersion of rates among industries. Rates that were high in 1984 have been revised downward, and some that were relatively low have been revised upward.

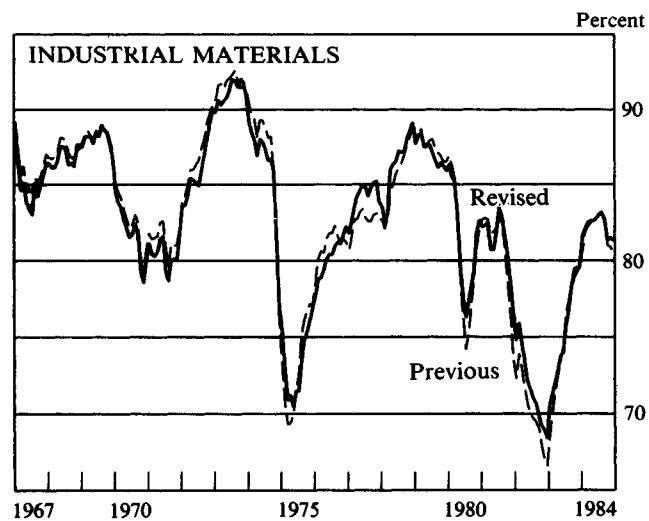

2. Capacity utilization rates—revised and previous

Outside manufacturing, the utilization rate for mining has been revised upward substantially. In part, this reflects the larger weight given crude oil extraction (primarily pumping, rather than drilling) with the introduction of 1977 weights. Also, the mining series have been reconstructed for the whole period beginning in 1967. In contrast to mining, the rates for utilities have been revised only slightly.

The utilization rate for industrial materials was revised upward by 0.9 percentage point in December 1984 to 81.3 percent in large part because of the upward revisions in mining and chemical materials. The rate for materials in late 1984 was very close to the total industry rate, and remained below its 1967-84 average (chart 2).

Capacity utilization, output, and capacity data for the years 1967-84 are included in the tables contained in this supplement. Also, rebased manufacturing data for the 1948-66 period are included even though utilization rates have not been revised for the period before 1967. Copies of the statistical release and this supplement are available from Publications Services, Board of Governors of the Federal Reserve System, Washington, D.C. 20551. The basic methods used in this revision are described in a booklet, *Federal Reserve Measures of Capacity and Capacity Utilization* (Board of Governors, February 1978). More up-to-date information may be found in an article "Revised Federal Reserve Measures of Capacity and Capacity Utilization," by Richard D. Raddock scheduled to appear in the *Federal Reserve Bulletin* this fall.

Summary Table

Capacity Utilization Series

Series	1977 proportion of total industrial production ¹	Rate (percent of capacity)

Pulp and paper materials	1.547	91.3	-2.5	97.3	-0.6	79.9	-6.4	93.7	-4.8
Chemical materials	4.461	80.9	-3.2	87.9	-3.4	63.3	-0.7	78.3	4.4
Energy materials	11.687	89.9	2.0	94.0	5.1	82.2	3.7	85.5	2.3

¹ The proportions are based on value added and are used to combine both the output and capacity indexes into groupings. The utilization rates are calculated by dividing output by capacity, for both individual series and groupings. Total industrial production covers mining, gas and electric utilities, and manufacturing.

² Primary processing, which incorporates many of the same manufacturing industries that are represented in materials, includes textile mill products; industrial chemicals; petroleum products; rubber and plastics products; lumber and products; stone, clay, and glass products; primary metals; and fabricated metal products.

³ Advanced processing includes foods; tobacco products; apparel products; printing and publishing; chemical products such as drugs and toiletries; leather and products; furniture and fixtures; machinery; transportation equipment; instruments; miscellaneous manufactures; and government owned and operated ordnance facilities.

⁴ Other durables includes lumber and products, furniture and fixtures, miscellaneous manufactures, and government owned and operated ordnance facilities.

⁵ Other nondurables includes tobacco products, apparel products, printing and publishing, and leather and products.

⁶ The materials grouping is composed of over 100 materials series found in the index of industrial production.

⁷ Grouping includes basic metal materials, consumer durable steel, and equipment steel.
