* For each item on the G.7 release that is affected by shifts of assets to IBFs, this table provides estimates of seasonally adjusted monthly average levels including amounts shifted from U.S. banking offices to IBFs. These adjusted levels are appropriate for measuring growth rates in loans and securities abstracting from the breaks in series resulting from the shifts of assets to IBFs. It may be noted that the amounts of adjustment in these estimates differ from the IBF shifts shown in footnote 5 of the regular G.7 tables. This difference arises from the process of seasonal adjustment and averaging over the month. The shift estimates in footnote 5 reflect not seasonally adjusted monthly averages of the cumulative amounts shifted from week to week. The break adjusted series shown above was derived by adding the IBF shifts before seasonal adjustment and then averaging seasonally adjusted data in the usual manner--i.e., averaging weekly data for domestically chartered banks and averaging last-Wednesday of month data for foreign-related institutions.
