I/ The ratio of stocks to sales is obtained by dividing stocks at the end of the month by sales during the month and hence indicates the number of months' supply on hand at the end of the month in terms of sales for that month.

2/ The 1947-49 average of monthly sales and end-of-month stocks for each department is used as the base in computing sales and stocks indexes, respectively, for that department. For description of series, see pages 1146-49 of the November 1953 Federal Reserve <u>Bulletin</u>. A brochure containing back data for the departmental series for the period 1940-1952, inclusive, may be obtained from the Division of Administrative Services, Board of Governors of the Federal Reserve System, Washington 25, D. C.

3/ Data not available.

Note:--Based on reports from a group of large department stores located in various cities throughout the country. In 1960, sales and stocks at these stores accounted for about 45 per cent of estimated total department store sales and stocks. Not all stores report data for all of the departments shown; consequently, the sample for the individual departments is not so comprehensive as that for the total.
