

H.14

October 23, 1961

The volume of public security financing to obtain new capital was large last week and is expected to be substantial this week. Last week, ending October 20, four large corporate security issues, including the expiration of two rights offerings, aggregating \$115 million were sold and three State and local government bond issues for \$174 million were offered. This week, ending October 27, four corporations are scheduled to offer securities aggregating \$150 million, three State and local issues with par value of \$90 million are on the calendar, and the Government of New Zealand is expected to offer \$15 million in bonds.

Bond yields. Long-term U. S. Government and Aaa-rated State and local government bonds declined last week by 2 and 3 basis points, respectively, while yields on corporate and Baa-rated State and local government bonds were unchanged.

A new A-rated, 30-year first mortgage electric utility issue was offered to investors last week at 4.57 per cent, 33 basis points below the last comparable issue sold in early August and only 10 basis points below the low yield for the year on an issue sold in mid-February.

Short- and intermediate-term interest rates. Changes in yields on Treasury bills and 3-5 year U. S. Government obligations were mixed last week. Yields on 3-month Treasury bills and intermediate-term U. S. Government obligations declined 5 and one basis points, respectively, while yields on 6-month bills rose a single basis point. The average rate of interest on Federal funds declined 60 basis points to 2.15 per cent. Other short- and intermediate-term interest rates were unchanged.

Housing starts. Seasonally adjusted private housing starts rose 3 per cent in September after two consecutive months of decline, and, at an annual rate of 1,360,000, were back nearly to the June rate. In the third quarter as a whole, private starts were 5 per cent above the improved second quarter rate and (owing in part to a very sharp drop in September of 1960) 10 per cent above a year earlier. Combined FHA and VA starts were down about seasonally in September.

Stock market credit. Customer credit in the stock market changed little in September, totaling \$5.3 billion at the end of the month, the same as at the end of August. Customer debit balances, excluding those secured by U. S. Government obligations, increased \$19 million in September to \$3,991 million. Bank loans to other than brokers and dealers for purchasing and carrying securities other than U. S. Government obligations also probably increased slightly in September, although published weekly reporting member bank data show a decline of \$57 million during the month. This decline was more than

accounted for by loan reclassification in one Federal Reserve District which had the effect of reducing the total for such loans by over \$60 million.

Money borrowed by NYSE member firms declined moderately further in September for the third successive month. Customer free credit balances rose slightly for the second month in a row, but were still near the low for the year reached in July.

	End of month		Change
	Sept.	Aug.	
	(Millions of dollars)		
Customer credit			
Excluding U. S. Government securities - total	5,311	5,349	-38
Net debit balances	3,991	3,972	+19
Bank loans to "others"	1,320	1,377	-57
Net debit balances secured by U. S. Govt. securities	46	49	-3
Bank loans to "others" for purchasing or carrying U. S. Government securities	110	102	+8
Broker and dealer credit			
Money borrowed except on U. S. Government securities	2,666	2,679	-13
On customer collateral	2,388	2,363	+25
Money borrowed on U. S. Government securities	64	56	+8
Customers' net free credit balances	1,227	1,208	+19

Stock prices. Common stock prices, as measured by Standard and Poor's composite index of 500 stocks, increased moderately last week, reaching a new high of 68.48 on October 20. Average daily volume of trading also rose 0.2 million shares from the revised level of the previous week to 3.4 million shares.

More detailed information concerning recent capital market developments is presented in the attached exhibits.

1/ Weekly rate shown is that in effect at end of period. Discount rate is for Federal Reserve Bank of New York. Stock Exchange call loan rate is going rate on call loans secured by customers' stock exchange collateral at New York City banks. Prime rate is that charged by large banks on short-term loans to business borrowers of the highest credit standing.

2/ Market yield; weekly averages computed from daily closing bid prices. Series of 3-5 year issues consists of selected notes and bonds.

3/ Average of daily rates published by finance companies for directly placed paper for varying maturities in the 90-179 day range.

4/ Weekly average of daily effective rate, which is the rate for the heaviest volume of purchase and sale transactions as reported to the Federal Reserve Bank of New York.

Note:--Highs and lows are for individual series and may be on different dates for different series. For spreads, high refers to widest, and low to narrowest.

p/ Preliminary.

- 1/ Standard and Poor's composite index of 500 common stocks, weekly closing prices, 1941-43=10. Monthly data are averages of daily figures rather than of Friday's only. Highs and lows are for Friday's data only.
- 2/ Standard and Poor's composite stock yield based on Wednesday data converted to weekly closing prices by Federal Reserve. Yields shown are for dates on which price index reached its high or low.
- 3/ Averages of daily trading volume on the New York Stock Exchange.
- 4/ End of month figures for member firms of the New York Stock Exchange which carry margin accounts; excludes balances secured by U. S. Government obligations.
- 5/ Wednesday figures for weekly reporting member banks. Excludes loans for purchasing or carrying U. S. Government securities. Prior to July 1, 1959, such loans are excluded only at banks in New York and Chicago. Weekly reporting banks account for about 70 per cent of loans to others. For further detail see Bulletin.

- 1/ Total starts are Census estimates, which are not strictly comparable with old nonfarm series developed by BLS. A dwelling unit is started when excavation begins; all units in an apartment structure are considered started at that time. FHA and VA starts are units started under commitments by these agencies to insure or guarantee the mortgages. As reported by FHA and VA, a unit is started when a field office receives the first compliance inspection report, which is made before footings are poured in some cases but normally after the foundations have been completed. Capital military housing units are excluded. Conventional starts are derived as a residual, although total and FHA and VA starts are not strictly comparable in concept or timing; they include both units financed by conventional mortgages and units without mortgages.

6/ Preliminary.

1/ These data differ from those in Exhibit G in that refunding issues, as well as new capital issues, are included. Long-term securities are defined as those maturing in more than one year.

2/ Includes securities offered in the United States by foreign governments and their subdivisions and by international organizations. Source: Securities and Exchange Commission.

3/ Issues not guaranteed by the U. S. Government. Source: long-term, Securities and Exchange Commission; short-term, Treasury Department and Federal Reserve.

4/ These data differ from those in Exhibit G and above in that they represent new offerings less retirements, whether from the proceeds of refunding issues or from other funds. Data include only issues with original maturity of one year or less.

5/ Principally tax and bond anticipation notes, warrants or certificates and Public Housing Authority notes. In some instances FHA notes included may have a somewhat longer term than one year. Source: Bond Buyer and Federal Reserve.

- ^{1/} Covers only 30-year first mortgage bonds, as reported in Moody's Bond Survey. Except where indicated, the actual yield figure and the amount above seasoned yields are averages of offerings during the indicated period and of the differences between these new offering yields and yields on seasoned issues of similar quality for the same day. Average maturity for the seasoned issues varies from 26 to 28 years.
- ^{2/} Provides for a 5-year period during which issue may not be called for refunding at a lower coupon rate. Monthly averages so marked include one or more issues with such a provision. Other issues have no such provision.
