	FEDERAL RESERVE CAPITAL MARKET DEVELOPMENTS	
1	OF RICHMOND	
(I	ncluding Monthly Review of March Capital Markets	Developments

and February Changes in Savings and Loan Share Capital

The volume of public security financing to obtain new capital was in moderate volume last week, but is expected to be very substantial this week. During the week ending March 30, three corporate security offerings totaling \$135 million were sold and two State and Local government units offered bonds with a par volume of \$25 million. A \$300 million foreign government bond issue was also sold. This week, ending April 6, three corporate security issues, including the expiration of a rights offering, totaling \$161 million are scheduled and five State and local government bond issues aggregating \$122 million are on the calendar.

iond yields. Changes in yields on long-term bonds were mixed and minor last week. Yields on Aaa-rated State and local government bonds increased one basis point to 3.01 per cent, after two weeks at their lowest level since September 1960, while Baa-rated municipal yields declined a single basis point. Yields on Aaa-rated corporate bonds declined one basis point to another new low for the year, and yields on Baa-rated issues remained at their year's low, reached the previous week. Long-term U. S. Government bond yields declined one basis point further to a new low for the year of 3.96 per cent.

The average yield on new corporate bonds last week, adjusted to an Asa basis, was 4.22 per cent, an increase of a single basis point from the year's low set the previous week.

Short- and intermediate-term interest rates. Yields on 3-month and 6-month Treasury bills and on 3-5 year U. S. Government bonds increased 3, 2, and 1 basis points, respectively, last week. The major finance companies announced a one-eighth of a per cent increase from 3 per cent to 3-1/8 per cent in the advertised rate on their directly-placed finance company paper with 50-179 day maturity early last week, as a result the average rate on such paper increased 9 basis points to 3.09 per cent. The average rate on Federal funds declined 10 basis points to 2.85 per cent. Other short- and intermediate-term interest rates were unchanged.

Mortgage recordings. Mortgage recordings--on a seasonally adjusted three-month moving average basis--edged off in December from the advanced November rate. At \$2,763 million, the rate was still very near the record high reached in July of 1959 and 15 per cent above the low at the start of 1961.

Unadjusted data for January indicate that the volume of conventional loans, which in recent years had tended to drop sharply in January, declined further at the start of this year; at the same time.

Government-underwritten loans increased about seasonally. Partly reflecting these different seasonal influences, the volume of conventional loans dropped to 71 per cent of the combined total in January, compared with 76 per cent last December. The year earlier proportion, however, was 74 per cent.

Poor's composite index of 500 stocks, declined over one per cent last week, closing at 69.55 on March 30. Trading volume decreased to the lowest level thus far this year, averaging 3.0 million shares a day, a decline of 0.2 million from the previous week.

obtain new capital is expected to be very large this month while security sales by State and local governments will be in substantial volume.

nt last December. The year earlier proportion, monormal Stock prices. Common stock prices, as measured by Standard and mposite index of 500 stocks, declined over one per cent last sing at 69.55 on March 30. Trading volume decreased to the vel thus far this year, averaging 3.0 million shares a day, a f 0.2 million from the previous week. April security volume. Security financing by corporations to w capital is expected to be very large this month while security State and local governments will be in substantial volume. Corporate security financing is expected to total \$1.2 billion, larger than the revised March volume, but about \$1.0 billion the record April 1961 volume which, however, included a :965 T&T common stock offering. Large public security offerings in expected to total about \$265 million, including approximately ion for issues on which stockholders subscription rights expire. Sales of State and local government bonds are expected to aggregate 0 million in April, one-fourth more than the revised March total enth larger than in April of the two previous years. Included otal are about \$450 million in large offerings. <u>Capital markets in March</u>. Sales of securities to obtain new y corporations were in moderate volume in March while State and emment bond sales were moderately light. Long-term security financing by corporations in March totaled ion, one-ninth less than in February but one-eighth more than are for March of the past two years. Large nonconvertible bonds one-half larger than the revised March volume, but about \$1.0 billion less than the record April 1961 volume which, however, included a 1965 million AT&T cormon stock offering. Large public security offerings in April are expected to total about \$625 million, including approximately \$200 million for issues on which stockholders subscription rights expire.

about \$800 million in April, one-fourth more than the revised March total and one-tenth larger than in April of the two previous years. Included in this total are about \$450 million in large offerings.

capital by corporations were in moderate volume in March while State and local government bond sales were moderately light.

\$800 million, one-ninth less than in February but one-eighth more than the average for March of the past two years. Large nonconvertible bonds offered during the month totaled \$330 million, more than in most other recent months.

Most corporate bond issues offered last month met with rayorable invester reception, were quickly distributed by the underwriter, and were bid small premiums after syndicate price agreements were terminated. Reflecting in part favorable bond markets, several negotiated issues originally scheduled for offering in mid-April were sold the last week of March. With most new issues quickly sold, the volume of securities still in underwriting syndicate at month-end was quite small.

Average yields on new corporate bond offerings, adjusted to an Aaa basis, reversed the generally upward trend that had prevailed since early last November, and declined 27 basis points during the month to 4.23 per cent, the lowest average for any month since July 1958. lields on seasoned issues also declined, with yields on Aaa-rated issues decreasing

Digitized for FRASE points to 4.38 per cent. http://fraser.stlouisfed.org/ Federal Reserve Bank of St. Louis

State and local governments sold bonds totaling %625 million during March, over one-third less than the very large February volume and 6 per cent less than the average for Narch of the two previous years. Dealer bidding for new issues continued to be fairly aggressive last month, but retail demand apparently became somewhat more selective. Dealers' advertized inventories of unsold securities declined \$200 million in the early part of the month but then increased by over \$100 during the remainder of the month when the bulk of the new issues were sold and demand became less receptive at prevailing yields. Inventories have also fluctuated quite widely in other recent months and there is some indication that a part of these have represented temporary withdrawals of offerings by dealers in anticipation of price appreciation rather than sharp changes in retail demand.

Yields on Aaa-rated State and local government bonds declined a net of 7 basis points during the month to 3.01 per cent, as an 8 basis point drup during the first two weeks of March was only slightly offset by a one basis point increase the last week of the month.

Common stock prices declined slightly on balance during March. Prices, as measured by Standard and Poor's composite index of 500 stocks, increase almost 2 per cent during the first half of the month but then declined slightly more during the second half to close at 69.55, somewhat below the end of February level. Trading was in only moderate volume during most of the month; average daily volume declined 0.4 million share to 3.1 million shares, the smallest volume since last July.

Savings flow to savings and loan associations and mutual savings banks in February. The net inflow of savings to both savings and loan associations and mutual savings banks was quite large in February, as shown in the following table and charts, despite the continued sharp rise in commercial bank time and savings deposits.

The net increase in share capital at savings and loan associations in February was \$575 million, 4 per cent more than a year earlier. After allowing for seasonal factors, the February inflow appeared to be considerably larger than the reduced January flow but slightly smaller than the advanced rate of late last year.

Mutual saving bank deposits increased \$150 million in February, one-fourth more than a year earlier. February deposit growth, after adjustment for seasonal variation, was about the same as the near-record January net flow and one-third more than the average for the fourth quarter of last year.

More detailed information concerning recent capital market developments is presented in the attached exhibits.

Whit new savings capital is derived as the difference between new savings capital and withdrawals. The unadjusted net new savings capital series differs from the net change in savings capital series shown in Echibit W because of statistical discrepancies between the flow series from which the former is derived and the balance sheet series from which the latter is computed. The totals of the scannally adjusted and unadjusted data for any 12-sonth period will not necessarily be identical because of the nature of the adjustment procedure. Sources-Pederal Savings and Long Insurance Corporation; seasonal adjustment procedure.

n.s. -- Not available.

1/ Total recordings data are estimates based on reports from about 450 areas and include mortgages of \$20,000 or less secured by nonfarm real estate, primarily residential properties. FiA-insured loans represent gross amount of insurance written, and VA-guaranteed loans the gross amount of loans closed. on 1-4 family houses. Conventional data are derived as a residual, although total recordings and VA

and FHA loans are not strictly comparable in concept or timing.

Note: Averages of offering yields on all new issues of publicly sold bonds rated Aaa, Aa and A by Moody's Investors Service (except serial, equipment trust and convertible issues, offerings of natural gas sipeline and foreign comcanies, and issues guaranteed by the Federal Government) weighted by size of issues. Yields on Aa- and A-rated bonds are first adjusted to an Aaa basis, using the comparable spreads in yields on seasoned bonds (Moody's averages). Averages reflect changes in industrial composition, type, maturity, and call provisions of new offerings, weekly averages considered unusually unreliable as indicators of interest rates on new issues because of the small number or special Digitizedates that here an asterisk.
