July 23, 1962

CAPITAL MARKET DEVELOPMENTS

OF NICHMOND The volume of public security financing to obtain new capital

MAS moderate last week but is expected to be substantial this week.

During the week ending July 20, two large corporate security issues totaling \$10 million were publicly offered and four State and local government bond issues with par value of \$93 million were sold. This week, ending July 27, two large corporate issues amounting to \$50 million are scheduled and four State and local issues totaling \$150 million are on the calendar. An additional \$25 million in bonds is expected to be offered by the Kingdom of Norway.

Bond yields. Changes in yields on seasoned, long-term bonds were mixed but minor last week. Yields on both Aaa-and Baa-rated corporate bonds declined a single basis point. Yields on U. S. Government bonds and on Aaa-rated State and local government bonds were unchanged, while yields on Baa-rated State and local government bonds rose 2 basis points.

Average yields on new corporate bonds, adjusted to an Aaa basis, were 4.26 per cent last week. At this level yields were 24 basis points above this year's low reached in mid-May.

Short-and intermediate-term interest rates. Yields on 3-month Treasury bills declined 2 basis points to 2.95 per cent last week after five consecutive weekly advances; yields on 6-month bills, however, continued to climb, rising 4 basis points to 3.13 per cent, their highest level since early June 1960. Yields on 3-5 year U. S. Government obligations increased for the fifth consecutive week, rising 2 basis points. The average effective rate on Federal funds rose 25 basis points from the revised level of the previous week to 2.95 per cent. Other short-and intermediate-term interest rates were unchanged.

Housing starts. Private housing starts (farm and nonfarm), which had advanced substantially through the previous three months, declined 11 per cent in June to a seasonally adjusted annual rate of 1.4 million units. This matched the average for the first six months of the year and it was also about the same as in June 1961, when starts were rising appreciably.

For the second quarter as a whole, including a 2 per cent downward revision of May data, the rate of starts averaged 1.5 million. While moderately below the peak reached in the second quarter of 1959, this was 16 per cent above the first quarter and about the same proportion about a year earlier.

Building permits in permit-issuing areas edged up slightly in June after seasonal adjustment; but the rise was from a reduced May rate and left the rate still below the peaks reached earlier this year.

Ligitized for FRASER

Both Government-underwritten and conventional starts declined in June. Conventional starts accounted for 77 per cent of total starts, a proportion only slightly below the very high share in the previous month as well as a year earlier.

Stock prices. Common stock prices declined somewhat last week in moderate trading. Prices, as measured by Standard and Poor's composite index of 500 stocks, declined almost 2 per cent on balance to close at 56.81 on July 20. Trading volume averaged 3.2 million shares a day, 1.4 million shares below the average for the previous week.

Stock market credit. Customer credit in the stock market declined sharply during June, decreasing \$4.70 million to a total of \$4.9 billion at the end of the month. Most of this decline was attributable to a record drop in customer debit balances (excluding those secured by U. S. Government securities which fell \$395 million to \$3.6 billion. Concomitant with the decline in common stock prices during the first half of this year, customer debit balances declined \$654 million below their December level. Bank loans to others than brokers and dealers for purchasing or carrying securities (except U. S. Government obligations) declined \$75 million during June to \$1.3 billion at the month-end.

Borrowings by New York Stock Exchange member firms (excluding borrowings on U. S. Government obligations) also declined very sharply during June, decreasing \$651 million to \$2.2 billion at the end of the month, \$821 million below their April high. Customer's free credit balances increased rather sharply, on the other hand, rising \$169 million to \$1.4 billion, their highest level in over a year. These and other data on stock market credit for May and June are shown in the following table.

	End of	month	Change

ceverioped by BLS. A dwelling unit is started when excavation begins; all units in an apartment structure are considered started at that time. FHA and VA starts are units started under commitments by these agencies to insure or guarantee the mortgages. As reported by FHA and VA, a unit is started when a field office receives the first compilance inspection report, which is made before footings are poured in some cases but normally after the foundations have been compileted. Caphart military housing units are excluded. Conventional starts are derived as a residual, although total and FHA and VA starts are not strictly comparable in concept or timing; they include both units financed Digitized for FRANER Total starts are Census estimates, which are not strictly comparable with old nonfarm scries ped by BLS. A dwelling unit is started when excavation begins; all units in an apartment
