FEDERAL RESERVE BANK

OF RICHMOND

CAPITAL MARKET DEVELOPMENTS  
IN THE UNITED STATES

The volume of public security financing to obtain new capital was very substantial last week but is expected to be fairly light this week. During the week ending June 7, one corporation offered \$38 million in bonds to obtain new capital, two State and local government bond issues with par value of \$25 million were sold and the Federal Home Loan Banks offered \$460 million of 16-month bonds. This week, ending June 14, a \$20 million corporate issue is scheduled for offering and two State and local issues totaling \$32 million are on the calendar.

Bond yields. Yields on seasoned, long-term bonds either rose further or were stable last week. Yields on Aaa- and Baa-rated State and local government bonds rose six and five basis points, respectively, to 3.06 and 3.60 per cent, the highest levels since last August and October. U. S. Government bond yields edged up another basis point to 4.00 per cent, the highest average since August. Corporate bond yields were stable.

Yields on new corporate bonds, adjusted to an Aaa basis, were 4.23 per cent last week; because of special characteristics of the one issue on which last week's yield was based, however, it probably is not representative.

Short- and intermediate-term interest rates. Rates on 3-month and 6-month Treasury bills advanced two basis points further last week and, at 3.00 and 3.08 per cent, respectively, were at the highest level since late spring of 1960; yields on 3-5 year U. S. Government obligations rose four basis points further to 3.68 per cent, the highest level since early last August. The average rate on 90-179 day finance company paper rose six basis points from the revised rate of the previous week to 3.19 per cent as several companies increased their advertised rate by one-eighth of a percentage point to 3-1/4 per cent. The average effective Federal funds rate remained at 3.00 per cent. Other rates were unchanged.

Stock prices. Common stock prices, as measured by Standard and Poor's composite index of 500 stocks, edged off slightly last week to close at 70.41 on June 7. Trading was very active, averaging 5.5 million shares a day.

More detailed information concerning recent capital market developments is presented in the attached exhibits.

1/ Weekly rate shown is that in effect at end of period. Stock Exchange call loan rate is going rate on call loans secured by customers' stock exchange collateral at New York City banks. Prime rate is that charged by large banks on short-term loans to business borrowers of the highest credit standing.

2/ Average of daily rates published by finance companies for directly placed paper for varying maturities in the 90-179 day range.

3/ Weekly average of daily effective rate, which is the rate for the heaviest volume of purchase and sale transactions as reported to the Federal Reserve Bank of New York.

Note.—Highs and lows are for individual series and may be on different dates for different series. For spreads, High refers to widest, and low to narrowest.

1/ Standard and Poor's composite index of 500 common stocks, weekly closing prices, 1941-43=10. Monthly data are averages of daily figures rather than of Friday's only. Highs and lows are for Friday's data only.

2/ Standard and Poor's composite stock yield based on Wednesday data converted to weekly closing prices by Federal Reserve. Yields shown are for dates on which price index reached its high or low.

3/ Averages of daily trading volume on the New York Stock Exchange.

4/ End of month figures for member firms of the New York Stock Exchange which carry margin accounts; excludes balances secured by U. S. Government obligations.

5/ Wednesday figures for weekly reporting member banks. Excludes loans for purchasing or carrying U. S. Government securities. Prior to July 1, 1959, such loans are excluded only at banks in New York and Chicago. Weekly reporting banks account for about 70 per cent of loans to others. For further detail see Bulletin.

1/ Neither mortgage nor bond yields take into account servicing costs which are much higher for mortgages than bonds. Generally, bonds pay interest semi-annually; mortgages, monthly. Mortgage yields, if computed as equivalent to a semi-annual interest investment, would be slightly higher than given in the table.

2/ Based on FHA field-office opinions about average bid prices in the private secondary market for new-home mortgages for immediate delivery. Data relate only to 25-year mortgages with down payments of 10 per cent or more, weighted by probable volume of transactions. Yields computed by FRB, assuming 25-year mortgages are paid off in 12 years. Dashed lines indicate periods of adjustment to changes in the contractual interest rate.

3/ Based on FHA field office opinion on typical interest rates (rounded) on conventional first mortgages prevailing in the market areas of insuring office cities. Beginning with April 1961, rate relates only to new-home mortgages; prior to that date, rate related to both new as well as existing-home mortgages. Dashed line indicates this change in the series.

Note: Averages of offering yields on all new issues of publicly offered corporate bonds rated Aaa, Aa and A by Moody's Investors Service (except serial and convertible issues, offerings of natural gas pipeline and foreign companies, and bonds guaranteed by the Federal Government) weighted by size of offering. Before averaging, new offerings are adjusted to a composite Aaa basis by deducting from the actual offering yield the excess of the weekly average yield for seasoned bonds of the appropriate industry-quality group over the composite average for seasoned Aaa-rated bonds (Moody's). Averages considered unrepresentative because of special characteristics of the offerings included are denoted by an asterisk.

p/ Preliminary. e/ Estimated by Federal Reserve. n.a.--Not available.

1/ These data differ from those in Exhibit H in that refunding issues, as well as new capital issues are included. Long-term securities are defined as those maturing in more than one year.

2/ Includes securities offered in the United States by foreign governments and their political subdivisions and international organizations. Source: Securities and Exchange Commission.

3/ Issues not guaranteed by the U. S. Government. Source: long-term, Securities and Exchange Commission; short-term, Treasury Department and Federal Reserve.

4/ These data differ from those in Exhibit H and above in that they represent new offerings less retirements, whether from the proceeds of refunding issues or from other funds. Data include only issues with original maturity of one year or less.

5/ Principally tax and bond anticipation notes, warrants or certificates and Public Housing Authority notes. In some instances PHA notes included may have a somewhat longer maturity than one year. Source: Bond Buyer and Federal Reserve.

Note: For retrospective data on aggregate foreign corporate and government security offerings in the United States see Exhibits I and J. There is no simple relationship between the data shown in this Exhibit and that shown in Exhibits I and J because the latter includes privately placed securities in the period in which funds are actually takedown but only in the amount of takedown, while the placements shown in this exhibit are included when reported, frequently with little or no information concerning timing of takedowns. Full or partial takedowns may take place both prior and subsequent to the date a placement is reported. \*--Included in table for first time.
