CAPITAL MARKET DEVELOPMENTS

AUG 21 1963 IN THE UNITED STATES FEDERAL FL.

Public security financing to obtain new capital was in fairly substantial volume last week but is expected to be light this week. Last week, ended August 16, a \$50 million corporate issue and two large State and local government bond issues with gross proceeds of \$128 million were sold. This week, ending August 23, subscription rights on a \$43 million corporate offering will expire and two State and local issues with par value of \$27 million are on the calendar for offering.

August 19, 1963.

Bond yields. Yields on most seasoned long-term bonds were stable again last week; Baa-rated State and local government bond yields, however, rose two basis points to 3.59 per cent.

Short- and intermediate-term interest rates. Treasury bill rates advanced further last week, rising six and four basis points, respectively, on 3-month and 6-month bills to 3.32 and 3.43 per cent, the highest levels since May 1960. Yields on 3-5 year Treasury obligations increased three basis points to 3.80 per cent, matching their high for the year. Reflecting the full effects of the change in advertised rates on directly-placed finance company paper the previous week, the average rate on such paper with 90-179 day maturity went up three basis points to 3.56 per cent, the highest level since May 1960. The average effective Federal funds rate declined 5 basis points to 3.45 per cent. Other rates were unchanged.

Mortgage yields and interest rates. Secondary market yields on 25-year 5-1/4 per cent, FHA-insured mortgages in July averaged 5.44 per cent. This was unchanged for the fourth consecutive month and, as in June, was 16 basis points below a year earlier.

Average rates for conventional first mortgages in July also continued at their spring levels, according to the Federal Housing Administration. The rate for loans to purchase new houses was 5.80 per cent; in the case of existing home loans, it was 5.85 per cent.

Stock market credit. Customer credit in the stock market rose \$91 million further during July to a record \$6.5 billion at the month-end. This level is \$1.6 billion, or 34 per cent, above the low of July 1962 and one-sixth above the previous peak of December 1961. All of the July increase was in bank losns to other than brokers and dealers for purchasing or carrying securities (excluding U. S. Governments) which rose \$94 million to a record \$1.6 billion at month-end. Customers' net debit balances (except on U. S. Government securities) fell \$3 million, the first such decline since last October.

Money borrowed by member firms of the New York Stock Exchange (except on U. S. Government securities) declined \$73 million, after seven consecutive month-to-month increases, while customers' free credit balances fell \$23 million further. More detailed information on stock market credit in June and July is shown in the following table.

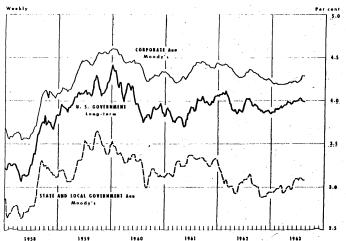

· · · · · · · · · · · · · · · · · · ·	End o	f Month	Change
	July	June	Ollalige
2 115

/ Revised			

Stock prices. Common stock prices advanced appreciably further last week in active trading. Prices, as measured by Standard & Poor's composite index of 500 common stocks, increased close to one- and one-half per cent to close at 71.49 on August 16. At Friday's closing level, prices were at the highest level since late December 1961 and less than two per cent below the early December 1961 peak. Trading volume averaged 4.6 million shares a day last week, 0.9 million shares above the average for the previous week and the highest weekly average since early June.

More detailed information concerning recent capital market developments is presented in the attached exhibits.

Capital Markets Section, Division of Research and Statistics, Board of Governors of the Federal Reserve System.

Neither mortgage nor bond yields take into account servicing costs which are much higher for mortgages than bonds. Generally, bonds pay interest semi-annually, mortgages, monthly. Mortgage yields, if computed as equivalent to a semi-annual interest investment, would be slightly higher than given in the

http://Afabondy. Holyestor Service. Monthly averages of daily data. See Emilbit A.

<sup>2/</sup> Based on FHA field-office opinions about average bid prices in the private secondary market for new-home mortgages for immediate delivery. Data relate only to 25-year mortgages with down payments of 10 per cent or more, weighted by probable volume of transactions. Yields computed by FRB, assuming 25-year mortgages are paid off in 12 years. Dashed lines indicate periods of adjustment to changes in the outractual interest rate.

3/ Based on FHA field office opinion on typical interest rates (rounded) on conventional first

mortgages prevailing in the market areas of insuring office cities. Beginning with April 1961, rate relates only to new-home mortgages; prior to that date, rate related to both new as well as Digitized existing home mortgages. Dashed line indicates this change in the series.

p/ Preliminary. e/ Estimated by Federal Reserve. n.a.--Not available.

These data differ from those in Exhibit H in that refunding issues, as well as new capital issues are included. Long-term securities are defined as those maturing in more than one year.

<sup>2/</sup> Includes securities offered in the United States by foreign governments and their political subdivisions and international organizations. Source: Securities and Exchange Commission.

<sup>3/</sup> Issues not guaranteed by the U. S. Government. Source: long-term, Securities and Exchange Commission; short-term, Treasury Department and Federal Reserve.

<sup>4/</sup> These data differ from those in Exhibit H and above in that they represent new offerings less retirements, whether from the proceeds of refunding issues or from

other funds. Data include only issues with original maturity of one year or less.

5/ Principally tax and bond anticipation notes, warrants or certificates and Public Housing Authority notes. In some instances PHA notes included may have a somewhat Digitize longer maturity than one year. Source: Bond Buyer and Federal Reserve.

*8/6	5.0	Austrian Investment Finance Corpnotes, maturing 1973no information available on takedown		

Note: For retrospective data on aggregate foreign corporate and government security offerings in the United States see Exhibits I and J. There is no simple relationship between the data shown in this Exhibit and that shown in Exhibits I and J because the latter includes privately placed securities in the period in which funds are actually takendown but only in the amount of takedown, while the placements shown in this exhibit are included when reported, frequently with little or no information concerning timing of takedowns. Full or partial takedowns may take place both prior and subsequent to the date a placement is reported.

\*-Included in table for first time.
