	TE CAPITAL	MARKET I	DEVELO D STAT	PMENTS ES			

(Including Review of Capital Markets in March)

Public security financing to obtain new capital was in fairly substantial volume last week, ended April 3, as two large corporate issues (including an expiring rights offer) totaling \$81 million, two large State and local government bond issues amounting to \$156 million and a \$25 million bond issue of the United Mexican States were sold. This week, ending April 10, new capital financing will be unusually large due to expiration of subscription rights on the \$1.2 billion American Telephone and Telegraph Company common stock offering; in addition one other large corporate issue for \$65 million is scheduled and four States and local issues with par value of \$145 million are on the calendar.

Bond yields. Changes in yields on seasoned, long-term bonds were mixed last weck. Yields on Aaa-rated corporate bonds rose another basis point to 4.40 per cent, the highest since early March 1962, while lower-grade corporate yields also edged up a basis point to 4.84 per cent. Yields on both Aaa and Baa rated State and local government bonds, on the other hand, fell two basis points to 3.14 and 3.56 per cent, respectively and yields on U. S. Government bonds were stable at 4.20 per cent.

<u>Short- and intermediate-term interest rates</u>. Yields on Treasury bills and on 3-5 year U. S. Government obligations declined last week. Rates on 3-month and 6-month bills dropped two and three basis points to 3.52 and 3.70 per cent, respectively; yields on intermediate-term Treasury obligation declined two basis points to 4.21 per cent. The major finance companies raised the advertised rate on their directly-placed paper with 120-179 day maturity from 3-7/8 to 4 per cent early last week; as a result the average rate on paper with 90-179 day maturity increased five basis points to 3.93 per cent. The average effective Federal funds rate rose to 3.50 per cent. Other rates were unchanged.

<u>FMMA secondary market operations</u>. Sales by the Federal National Mortgage Association from its secondary market portfolio declined again in February as FMMA activity this year continued to contrast sharply with the upsurge at this time in 1963. Sales this February were \$2.7 million: last February they totaled \$107.7 million and were still rising.

Value of purchases by FNMA declined to \$7.8 million in February and remained below the relatively reduced level of a year earlier. Offerings of mortgages for purchase by FNNA changed little

Stock prices. Common stock prices advanced last week in very active trading. Prices, as measured by Standard and Poor's composite index of 500 stocks, rose one-half per cent on balance to close at a record high of 79.94 on April 3. Trading volume averaged 5.9 million shares a day. up 0.6 million shares from the previous week.

Estimated April security volume. New capital security financing by both corporations and State and local governments in April will be in near record volume.

Corporate security financing to obtain new capital is expected to total \$2.1 billion in April, more than twice as large as both a month and a year earlier and only nominally less than the April 1961 record. As in April 1961, the principal reason for the unusually large volume is expiration of a giant American Telephone and Telegraph Company common stock rights offer; this year's issue (which has been available for subscription for about a month) is for \$1,225 million, compared with \$965 million in 1961.

Bond offerings of State and local governments are estimated at \$1.1 billion this month, over one-half larger than in March, onefourth greater than in April of the two previous years and only slightly less than the record February 1962 total. Large issues currently scheduled for sale this month have par value of \$668 million.

<u>Capital markets in March</u>. Security financing to obtain new capital by both corporations and State and local governments was in moderate volume in March. Yields on both new and seasoned bonds rose, however, as investor expectations of higher future interest rates strengthened. Market distribution of new offerings was poor early in the month, but improved as yields increased and dealers' inventories of unsold securities declined moderately.

New capital security financing of corporationsin March probably totaled \$875 million, one-fifth more than in February, but one-fourth smaller than a year earlier when private placements werc unusually large. Large issues sold publicly (including an expiring rights offer) had gross proceeds of \$335 million, consisting of \$296 million in nonconvertible bonds and \$38 million in common stocks.

Reflecting in part a belief that domestic interest rates would rise following increases in rates by several foreign central banks, yields on corporate bond yields rose during March. Yields on seasoned Aaa-rated corporate bonds were 4.40 per cent at month-end, five basis points higher then a month earlier and the highest since March 1962. New corporate bond yields, adjusted to an Aaa basis, rose to 4.46 per cent late in the month, 12 basis points more than at the end of February, and only four basis points below the early January high.

D<del>i</del>gitized for FRASER http://fraser.stlouisfed.org/ Federal Reserve Bank of St. Louis

-2-

The initial retail reception of several new issues offered early in the month was quite poor; underwriters, however, quickly terminated price restriction on these issues, and they were subsequently distributed to investors at prices providing yields 3-6 basis points above original offering. Most issues sold late in the month at higher yields were quickly distributed to investors and dealers' inventories of unsold securities were small at month-end.

Bond sales to obtain new capital by States and local governments totaled \$0.7 billion in March, slightly less than a month earlier and three-tenths less than in April 1963. In addition, about \$0.1 billion in bonds to refund outstanding securities were sold. Yields on Aaa-rated municipals rose 7 basis points during the month to 3.16 per cent, only 2 basis points below their hovember high. Investor demand for new issues was selective, but dealers cut prices on a number of older issues in their inventories sufficiently to raise yields 10 basis points or more, and a sizable volume of these were acquired by investors. Dealers' advertised inventories of unsold securities, consequently, dropped around \$100 million during the month to \$531 million.

Common stock prices advanced somewhat further during March in very active trading. Prices, as measured by Standard and Poor's composite index of 500 stocks, rose moderately further in early March to an all-time peak around mid-month, but eased off slightly on balance thereafter. Closing at 78.98 on March 31, prices were one and one-half per cent higher than a month earlier, but one-half per cent below their mid-month peak. Trading volume averaged a postwar record 5.4 million share a day.

More detailed information concerning recent capital market developments is presented in the attached exhibits.

Capital Markets Section, Division of Research and Statistics, Board of Governors of the Federal Reserve System.

p/ Preliminary. e/ Estimated by Federal Reserve. n.a.--Not available. 1/ These data differ from those in Exhibit H in that refunding issues, as well as new capital issues are included. Long-term securities are defined as those maturing in more than one year. 2/ Includes securities offered in the United States by foreign governments and their political subdivisions and international organizations. Source: Securities and Exchange Commission. 3/ Issues not guaranteed by the U. S. Government. Source: long-term, Securities and Exchange Commission; short-term, Treasury Department and Federal Reserve. 4/ These data differ from those in Exhibit H and above in that they represent new offerings less retirements, whether from the proceeds of refunding issues or from other funds. Data include only issues with original maturity of one year or less. 3/ Principally tax and bond anticipation notes, werrants or certificates and Public Housing Authority notes. In some instances PHA notes included may have a somewhat Tonger maturity than one year. Source: Bond Buyer and Federal Reserve. http://fraser.stlouisfed.org/

2/10	8.0	British American Construction Copromissory notes, maturing 1979no information available on takedown
2/10	4.0	British Assets Trust Ltd. (Scotland)5% notes, maturing 1981takedown in February
*4/1	, 12.5	C. Itoh & Co., Ltd6-1/2% convertible unsecured debentures, maturing 1984no information available on takedown.

Note: For retr.spective data on aggregate foreign corporate and government security offerings in the united States see Exhibits I and J. There is no simple relationship between the data shown in this Exhibit and that shown in Exhibits I and J because the latter includes privately placed securities in the period in which funds are actually takendown but only in the amount of takedown, while the placements shown in this exhibit are included when reported, frequently with little or no information concerning timing of takedowns. Full or partial takedowns may take place both #--Included in table for first time.
