December 14, 1964.

OEC 16 1954 CAPITAL MARKET DEVELOPMENTS IN THE UNITED STATES

Corporate and municipal bond markets. Corporate security financing that week is expected to total \$50 million, appreciably less than in the last two week's although still above the low weekly volume in November. For the second week in succession, the new supply of State and local government bonds (\$304 million) will be substantial-about two-thirds larger than the weekly average over the past year. The \$150 State of California issue will be the largest municipal offering this week.

1/ Federal Reserve estimates based on published reports of issues sold and scheduled for offering; corporate rights offerings are included as of the date subscription rights expire.

The corporate bond market continued to strengthen last week, apparently reflecting the further dissipation of previous uncertainties about near-term monetary policy, as well as the prospective scarcity of new issues. Two large new offerings of lower investment grade corporate bonds sold out quickly and moved to small premiums in secondary market trading. Yields on other recently distributed issues also edged slightly lower.

Strength was also present in the municipal market last week as prices in general reached their 1964 highs in active trading. Yields on Moody's Aaa-rated seasoned bonds dropped to 3.01 per cent, their lowest level since late-May 1963. The \$106 million Massachusetts Port Authority sold out quickly, but unsold portions of the other new issues contributed to the rise in dealers' advertised inventories by \$38 million to \$586 million.

Stock prices. Common stock prices declined on balance last week. Although there was some recovery on Friday, the Standard and Poor's composite index of 500 stocks closed at 83.66 on December 11. This decline of 0.8 per cent from the week earlier level--the third successive week-to-week drop brought the cumulative loss, from the November 20 high, to slightly more than 3 per cent. Average daily trading volume rose by 0.1 million shares from the previous week to a 4.8 million-share level.

Mortgage yields and conventional mortgage terms. Yields on FHA-insured, 30-year, 5-1/4 per cent mortgages sold in the secondary market continued to average 5.45 per cent in November. This was the twenty-first month of virtual stability for this series. Over the period, the spread between this series and yields on new Aaa corporate bonds is indicated to have narrowed further, to less than 100 basis points compared with a recent high of about 150 basis points in May 1962.

Contract interest rates for conventional first mortgages on homes in November also remained at the reduced levels reached well over a year ago, based on reports from the Federal Housing Administration. For new home loans, such rates have averaged 5.80 per cent since April of last year; for existing home loans, they have--with one exception-been 5.85 per cent since May of last year.

In October, loan amounts for conventional home loans continued appreciably greater than at the same time in 1963, according to the Federal Home Loan Bank Board. This increase has reflected, in part, a further rise in purchase prices for homes and upgraded demands by home buyers this year. Competition by lenders for mortgages has remained

and the second s

quite active. Yet except for fees and charges, which were running below a year earlier, most other terms for loans on both new and existing homes in October were the same or only slightly more liberal than a year earlier.

More detailed information concerning recent capital market developments is presented in the attached exhibits.

Capital Markets Section, Division of Research and Statistics, Board of Governors of the Federal Reserve System.

Weekly rate shown is that in effect at end of period. Stock Exchange call loan rate is going rate on call loans secured by oustomers' stock exchange collateral at New York City banks. Prime rate is that charged by large banks on short-term loans to business borrowers of the highest credit

standing.

2/ Average of daily rates published by finance companies for directly placed paper for varying maturities in the 90-179 day range.

3/ Weekly average of daily effective rate, which is the rate for the heaviest volume of purchase and sale transactions as reported to the Federal Reserve Bank of New York.

Note:—Highs and lows are for individual series and may be on different dates for different series.

Digitized for FOR Pursads, high refers to widest, and low to narrowest.

- Meither mortiage nor bond yields take into account servicing costs which are much higher for mortiages than bonds. Generally, bonds apay interest semi-annually; mortiages, monthly. Mortiage yields, if computed as equivalent to a semi-annual interest investment, would be slightly higher than given in the table.
- table.

  Based on FHA-field-office opinions about average bid prices in the private secondary market for new-home mortgages for immediate delivery. Separate data available for 25-year and—begining July 1961—30-year mortgages with minimum downpayments, weighted by probable volume of transactions. Yields computed by FHA, assuming prepayment period of 12 years for 25-year mortgages and 15 years for 30-year mortgages. Over the period for which they can be compared, the movement of the two mortgage yield series has been similar. Dashed lines indicate periods of adjustment to changes in contractual interest rates.
- 3/ Based on FiA field office opinion on typical interest rates (rounded) on conventional first mortgages prevailing in the market areas of insuring office cities. Beginning with April 1960, rate relates only to new-home mortgages; prior to that date, rate related to both new as well as existing-home mortgages. Bashed line indicates this change in the series.
