## Factors Affecting Bank Reserves and <br> Condition Statement of F.R. Banks

H.4.1

For immediate release February 6, 1969
The average of daily figures of total reserves of member banks declined $\$ 180$ million to $\$ 27,386$ million. Required reserves declined $\$ 202$ million, reflecting the reduction in private deposits at menber banks two weeks earlier. Excess reserves remained about unchanged while member bank borrowings declined.

Only moderate changes occurred in factors affecting reserves in the latest statement week. Float declined seasonally and other F. R. accounts (net) increased, absorbing reserves. Reserves were provided through S stem Open Market operations, a decline in currency in circulation of about seasonal proportion, and reductions in Treasury deposits with Federal Reserve Banks.

Member bank borrowings declined to a level of $\$ 747$ million, near the average level of recent weeks. Borrowings exceeded excess reserves by $\$ 568$ million, compared to the revised figure of $\$ 735$ million for the previous week.
