

February 22, 1977

HISTORICAL/MONEY STOCK/DATA

The money stock measures and related data have been revised to incorporate the latest benchmark adjustments for domestic nonmember banks and revised seasonal factors. Only very small adjustments were required to benchmark the money stock ( $M_1$  and  $M_2$  measures) to the June 1976 call report data for domestic nonmember banks. Nonmember bank demand deposits were increased by \$100 million in June and time deposits were reduced \$200 million. Seasonal factor revisions were also quite small.

Projected monthly and weekly seasonal factors for 1977 are shown on the next page. Historical monthly and weekly  $M_1$ ,  $M_2$ , and  $M_4$  data; monthly  $M_3$  and  $M_5$  data; and their components, seasonally adjusted and not seasonally adjusted, from 1959 to 1976 are shown on the attached tables. Definitions of money stock measures  $M_1$  through  $M_5$  are shown below:

$M_1$  = (1) Demand deposits at all commercial banks other than those due to domestic commercial banks and the U.S. Government, less cash items in the process of collection and F.R. float; (2) Foreign demand balances at F.R. banks; and (3) Currency outside the Treasury, F.R. banks and vaults of all commercial banks.

$M_2$  = In addition to currency and demand deposits, savings deposits, time deposits open account, and time certificates of deposit other than negotiable time certificates of deposit issued in denominations of \$100,000 or more by large weekly reporting commercial banks.

$M_3$  =  $M_2$  plus the average of the beginning and end of month deposits of mutual savings banks, savings and loan shares, and credit union shares.

$M_4$  =  $M_2$  plus negotiable time certificates of deposit issued in denominations of \$100,000 or more.

$M_5$  =  $M_3$  plus negotiable time certificates of deposit issued in denominations of \$100,000 or more.
