| 6-month money market certificates 2 2½ year and over variable ceiling certificates | 14,298 14,298 | 14,291 14,291 | 14,282 14,282 | 462 462 | 462 462 | 461 461 |
| Percent of offering institutions paying the ceiling rate during the survey period: | | | | | | |
| 2½ year and over variable ceiling certificates | 95.5 | 95.3 | 97.4 | 98. 5 | 100.0 | 95.1 |

^{1/} Estimates for April are based on data collected by the Federal Reserve and the FDIC from a stratified random sample of 510 commercial banks and 84 mutual savings banks.

^{2/} Money market certificates (MMCs) are nonnegotiable time deposits in denominations of \$10,000 or more with original maturities of exactly 26 weeks for which the maximum permissible rate of interest on new deposits is related to the discount yield on the most recently issued 6-month Treasury bill (auction average). See Table 1.16 in the Federal Reserve <u>Bulletin</u> for specific ceiling rates.

^{3/} This category includes all 4-year and over variable ceiling accounts having no legal minimum denomination issued between July 1 and December 31, 1979 and all such 2½ year and over variable ceiling accounts issued since January 1, 1980. See Table 1.16 in the Bulletin for specific ceiling rates.

Seasonally adjusted M1-B in 1981 is constructed by adding the following seasonally adjusted components: currency; the sum of demand deposits and other checkable deposits (apart from this year's accumulated trend growth) coming from demand deposits; other checkable deposits (apart from this year's accumulated trend growth) coming from savings deposits; and a relatively small accumulated trend growth, amounting to \$200 million per month in the first several months of the year. This trend growth represents the expansion in other checkable deposits (OCD) balances only from accounts already in existence at the end of 1980.

The share of not seasonally adjusted OCD growth apart from trend since the beginning of 1981 attributable to demand deposits is estimated to be: about 75 to 80 percent in January and 70 to 75 percent in February, March, and April. Thus, the share coming from savings accounts and other non-demand deposit sources is estimated to be: about 20 to 25 percent in January and 25 to 30 percent in February, March, and April. (Calculations of shift adjusted M-1B use the mid-points of these ranges).

These estimates are based on samples of depository institutions and households and econometric evidence. For commercial banks, samples of about 100 institutions, as well as econometric cross-section analysis of deposit flows at about 9000 institutions, indicate that the proportion of inflows to new NOW accounts coming from demand deposits was somewhat above 80 percent in January and somewhat below 80 percent in the following three months. Surveys of about 100 S&Ls indicate that the fraction of growth in OCDs at thrifts coming from sources outside these institutions was about 60 percent in January and about 65 percent in March; thus, if such funds coming from outside are distributed between demand deposit and non-demand deposit sources using the commercial bank fraction, around one-half of OCD inflows at thrifts can be presumed to come from demand deposits. An increase in the share of OCD inflows going to thrift institutions since early in the year has tended to lower the fraction of OCD growth shifted from demand deposits. Small-scale surveys of households conducted by the Survey Research Center of the University of Michigan confirm an overall fraction within the above-stated ranges.

In order to derive a seasonally adjusted M1-B measure that abstracts from shifts in 1981 into OCD from non-demand deposit sources, an estimate of seasonally adjusted inflows to OCD from these sources must be subtracted from M1-B. Such amounts are derived by multiplying the increase in OCD (not seasonally adjusted) in excess of trend in end-of-year OCD balances (not seasonally adjusted) by the mid-points of the ranges for the share coming from non-demand deposit sources; cumulative amounts are then seasonally adjusted by applying the seasonal factor for commercial bank savings deposits.

The shift adjusted procedure will be described in more detail in a forth-coming Federal Reserve Bulletin article.
