

March 1985

Money Stock Revisions

The attached historical data on the money stock reflect revisions to incorporate annual seasonal adjustment and benchmark changes. Monthly data are shown for the period from 1959 to 1984. Figures shown weekly are for the period from 1975 to 1984 and are based on weeks ended on Monday to correspond with the reporting cycle under contemporaneous reserve requirements. No data prior to 1975 have been constructed on the week-ended Monday basis.

Benchmark Revisions

Deposits have been benchmarked to recent call reports. In addition, new data sources have been used in estimating RPs and term Eurodollars. Other miscellaneous changes to various series also were made, reflecting the incorporation of new data and estimation methods.

Seasonal Revisions

Seasonal factors have been revised based on the X-11 ARIMA procedure adopted in 1982. Nontransactions M2 again has been seasonally adjusted as a whole--instead of being built up from seasonally adjusted savings and small time deposits--in order to reduce distortions caused by portfolio shifts arising from financial change in recent years, especially shifts to MMDAs in 1983. A similar procedure has been used to seasonally adjust the non-M2 portion of M3.

Computer Tapes

Computer tapes containing historical data on the money stock are available from the Banking Section, Division of Research and Statistics, Board of Governors of the Federal Reserve System, Washington, D.C. 20551.
