

February 11, 1991

### MONEY STOCK REVISIONS

The attached historical data on the money stock reflect revisions from the annual benchmark and seasonal factor review, as well as minor revisions to the method of computing seasonal factors. Monthly data for most items are shown from 1959 to 1990, and weekly figures for M1 and its components are shown from 1975 to 1990. Weekly figures for M2 and M3 are shown only for the period 1981 to 1990, although weekly data for some individual components of these broader aggregates are shown for earlier years as well. Weekly data are based on reporting weeks ended on Monday to correspond with the reporting cycle under contemporaneous reserve requirements. No data prior to 1975 have been constructed on a week-ended Monday basis.

Data for the monetary aggregates have been benchmarked using call reports through June 1990 and other sources. These benchmark revisions boosted growth rates of all three monetary aggregates by about 1/4 point over 1990 but had only minor effects on the quarterly pattern of growth within the year. Also, estimates of deposits at institutions that do not file deposits reports were revised from 1984 to 1990, resulting in minor changes to annual growth rates of the monetary aggregates back to 1984.

Seasonal factors for the monetary aggregates continued to be estimated by the X-11 ARIMA procedure. Beginning with January 1990, the deposits components of the monetary aggregates--OCDs, savings deposits, MMDAs, small time deposits, and large time deposits--have each been adjusted with seasonal factors computed from data aggregated over banks and thrifts. The previous procedure had been to seasonally adjust the deposit components at banks and thrifts separately, and add the adjusted bank and thrift series to create seasonally adjusted deposit totals. This remains the procedure used for computing seasonal factors applied to deposits data up to December 1989. The new procedure is applied to data after that month because (1) transfers of deposits from thrifts to banks have distorted bank and thrift deposit data individually more than their sum, and (2) staff analysis reveals that the seasonal patterns of nontransactions deposits at banks and thrifts became more similar in the 1980s than they had been in earlier years. Under the new procedure, the same seasonal factors are applied beginning in January 1990 to both the commercial bank and thrift components of the following series: MMDAs, other savings deposits, small time deposits, and large time deposits. With OCDs, where seasonal patterns show more differences between banks and thrifts, commercial bank data are seasonally adjusted directly, and seasonally adjusted thrift OCDs are computed as a residual between the seasonally adjusted bank OCD series and seasonally adjusted total OCDs.

Overall, revisions to seasonal factors had little effect on the broad pattern of growth during 1990. For M1 and M2, the new seasonal factors shift growth into the second quarter of 1990, while M3 growth is boosted in the fourth quarter and slightly reduced over the balance of the year.

Computer tapes and floppy diskettes containing these historical data on the money stock are available from the National Technical Information Service, U.S. Department of Commerce, 5285 Port Royal Road, Springfield, Virginia 22161, telephone (703) 487-4807. These monthly historical data for M1, M2, M3, and total nonfinancial debt also are available from the Economic Bulletin Board of the U.S. Commerce Department. Call (202) 377-1986 for information on how to access the Commerce bulletin board.
