

February 1994

MONEY STOCK REVISIONS

The attached historical data on the money stock reflect revisions from the annual benchmark and seasonal factor review. Monthly data for most items are shown from 1959 to 1993, and weekly figures for M1 and its components are shown from 1975 to 1993. Weekly figures for M2 and M3 are shown only for the period from 1981 to 1993, although weekly data for some individual components of the broader aggregates are shown for earlier years as well. Weekly data are based on weeks ended on Monday to correspond with the reporting cycle under contemporaneous reserve requirements. No data prior to 1975 have been constructed on the week-ended Monday basis.

Data for the monetary aggregates have been benchmarked using call reports through September 1993 and other sources. The benchmark and seasonal revisions did not affect the annual growth rates of M1, M2, or M3 over 1993, and for earlier years annual growth rates of these aggregates were revised by no more than 0.2 percentage point.

The benchmark folded in historical data for several money market mutual funds that began reporting for the first time during 1993, and, based on new information from the Investment Company Institute, also reclassified some institutional money funds as retail money funds, moving them from non-M2 M3 into M2. These revisions were distributed over a number of years; by the fourth quarter of 1993, they raised the level of M2 by \$14 billion and the level of M3 by \$11 billion. The benchmark also incorporated new estimates of money funds' holdings of overnight RPs, which are netted out of the aggregates at both the M2 and M3 levels. These revisions, which extend back to 1975, shifted up the level of M2 by as much as \$5 billion and the level of M3 by as much as \$8 billion over the last decade. Numerous other, smaller revisions were also made to the aggregates.

The scope of the annual benchmark was somewhat smaller this year than in past years. Beginning in 1993, certain data series from Call reports have begun to be incorporated into the aggregates as soon as these reports become available. In previous years, these data were folded in only at the time of the annual benchmark.

Seasonal factors for the monetary aggregates have been revised using the X-11 ARIMA procedure applied to the benchmarked data through December 1993. The seasonal adjustment procedure used this year is identical to that employed for the past few years. The revisions to seasonal factors shifted some growth in each of the major aggregates from the second half to the first half of the year 1993.

The historical data are available on floppy diskette for a fee of \$25 per diskette from the Federal Reserve Board's Publications Section, Mail Stop 138, Board of Governors of the Federal Reserve System, Washington, D.C. 20551, (202) 452-3245. Historical monthly data for M1, M2, M3, and total nonfinancial debt are also available from the Economic Bulletin Board of the U.S. Commerce Department. Call (202) 482-1986 for information on how to access the Commerce bulletin board.
