February 1995

MONEY STOCK REVISIONS

The attached historical data on the money stock reflect revisions from the annual benchmark and seasonal factor review. Monthly data for most items are shown from 1959 to 1994, and weekly figures for M1 and its components are shown from 1975 to 1994. Weekly figures for M2 and M3 are shown only for the period from 1981 to 1994, although weekly data for some individual components of the broader aggregates are shown for earlier years as well. Weekly data are based on weeks ended on Monday to correspond with the reporting cycle under contemporaneous reserve requirements. No data prior to 1975 have been constructed on the week-ended Monday basis.

Data for the monetary aggregates have been benchmarked using call reports through September 1994 and other sources. The benchmark and seasonal review revisions did not affect the annual growth rate of M2 over 1994. However, they lowered the 1994 growth rate of M1 by 0.1 percentage point and raised the 1994 growth rate of M3 by 0.2 percentage point.

The benchmark incorporates historical data for a number of money market mutual funds that began reporting for the first time during 1994, raising the levels of M2 and M3 by amounts that cumulate to \$15 billion and \$22 billion, respectively, by late 1994. The benchmark also incorporates new estimates of large time deposits held by banks. (This item is one of several that are subtracted from gross large time deposits to measure the quantity of such time deposits held by the nonbank public.) As a result of the new estimates, this large time deposit netting item revised upward over the past thirteen years, by as much as \$14 billion in the mid-1980's, thereby reducing the level of M3 by the same amount.

The benchmark also incorporates new estimates of money funds' holdings of both RPs and Eurodollars, which are netted out of the aggregates at both the M2 and M3 levels. These revisions, which extend back to 1984, shifted up the level of M2 by as much as \$5 billion and the level of M3 by as much as \$8 billion over the last decade. The benchmark includes other revisions as well, such as the incorporation of deposits data taken from the call reports of banks and thrifts that do not report on one of the more detailed deposits reports.

Seasonal factors for the monetary aggregates have been revised, using the benchmarked data through December 1994. As in the past few years, the X-11 ARIMA procedure was used to derive monthly seasonal factors. Overall, the revisions to seasonal factors slightly shifted the growth of M1 and M3--but not of M2--from the second half to the first half of the year 1994.

The historical data are available on floppy diskette for a fee of \$25 per diskette from the Federal Reserve Board's Publications Section, Mail Stop 402, Board of Governors of the Federal Reserve System, Washington, D.C. 20551, (202) 452-3245. Historical monthly data for M1, M2, M3, and total nonfinancial debt are also available from the Economic Bulletin Board of the U.S. Commerce Department. Call (202) 482-1986 for information on how to access the Commerce bulletin board.
