MONEY STOCK REVISIONS

Measures of the money stock and components have been revised to incorporate the results of the annual seasonal factor review. This release includes revised monthly and weekly seasonal factors, as well as comparisons of the revised monetary aggregates with previously published data.

Seasonally adjusted measures of the monetary aggregates and components incorporate revised seasonal factors, which were derived based on not-seasonally-adjusted data through December 2001. Monthly seasonal factors were estimated using the X-12-ARIMA procedure. The monthly and weekly seasonal factors were derived after excluding the estimated effects on the components of the monetary aggregates of the September 11, 2001 terrorist attacks. The revisions to seasonal factors lowered M2 and M3 growth rates in the first half of 2001 while raising them in the second half of the year.

Revised historical data will soon be available in printed form from the Monetary and Reserve Analysis Section, Mail Stop 72, Board of Governors of the Federal Reserve System, Washington, DC 20551, (202) 452-3062. Complete historical data are available each week through the Federal Reserve's web site (<http://www.federalreserve.gov/releases/>) with the H.6 statistical release. The data are also available through other electronic means, as described in the note following the footnotes to Table 1 of this release.

1. Growth rates for debt are based on periods beginning and ending one month earlier than for the monetary aggregates, namely, September 2001 to December 2001, June 2001 to December 2001, and December 2000 to December 2001, respectively.

Footnotes to Table 1:

- Consists of (1) currency outside the U.S. Treasury, Federal Reserve Banks, and the vaults of depository institutions; (2) travelers checks of nonbank issuers; (3) demand deposits at all commercial banks other than those due to depository institutions, the U.S. government, and foreign banks and official institutions, less cash items in the process of collection and Federal Reserve float; and (4) other checkable deposits (OCDs), consisting of negotiable order of withdrawal (NOW) and automatic transfer service (ATS) accounts at depository institutions, credit union share draft accounts and demand deposits at thrift institutions. Seasonally adjusted M1 is calculated by summing currency, travelers checks, demand deposits, and OCDs, each seasonally adjusted separately.
- Consists of M1 plus savings deposits (including money market deposit accounts), small-denomination time deposits (time deposits—including retail RPs—in amounts of less than \$100,000), and balances in retail money market mutual funds. Excludes individual retirement account (IRA) and Keogh balances at depository institutions and money market funds. Seasonally adjusted M2 is computed by summing savings deposits, small-denomination time deposits, and retail money fund balances, each seasonally adjusted separately, and adding this result to seasonally adjusted M1.
- Consists of M2 plus large-denomination time deposits (in amounts of \$100,000 or more), balances in institutional money funds, RP liabilities (overnight and term) issued by all depository institutions, and Eurodollars (overnight and term) held by U.S. residents at foreign branches of U.S. banks worldwide and at all banking offices in the United Kingdom and Canada. Excludes amounts held by depository institutions, the U.S. government, money funds, and foreign banks and official institutions. Seasonally adjusted M3 is calculated by summing large time deposits, institutional money fund balances, RP liabilities, and Eurodollars, each seasonally adjusted separately, and adding this result to seasonally adjusted M2.
- Debt: The debt aggregate is the outstanding credit market debt of the domestic nonfinancial sectors — the federal sector (U.S. government, not including government-sponsored enterprises or federally related mortgage pools) and the nonfederal sectors (state and local governments, households and nonprofit organizations, nonfinancial corporate and nonfarm noncorporate businesses, and farms). Nonfederal debt consists of mortgages, tax-exempt and corporate bonds, consumer credit, bank loans, commercial paper, and other loans. The data, which are derived from the Federal Reserve Board's flow of funds accounts, are break-adjusted (that is, discontinuities in the data have been smoothed into the series) and month-averaged (that is, the data have been derived by averaging adjacent month-end levels). The presentation of the debt data in this release differ, therefore, from the quarterly flow of funds statistics contained in the Federal Reserve Z.1 release. In that release, published levels of credit market debt are measured on a quarter-end basis and contain discontinuities.

Note: Current and historical H.6 data are available each week on the Federal Reserve Board's web site (<http://www.federalreserve.gov/>). Monthly data are available back to January 1959, and weekly data are available back to January 1975 for most series.
