BANKING AND MONETARY DEVELOPMENTS IN MAY 1960

Mr. Roger ✓
Mr. Billington
Mr. Kneese

Bank credit. Total loans and investments at all commercial banks declined slightly in May, usually a month of little change. Total loans rose moderately further, \$600 million, while holdings of U. S. Government securities declined by about the same amount. Holdings of other securities also declined somewhat further. During the month the Treasury raised \$300 million in cash by offering new bills in excess of weekly maturities.

At city banks, loan growth in May was less than in the same month of other years of rising economic activity but at banks outside leading cities it was comparable with earlier years. Reductions in holdings of U. S. Government securities were smaller than usual at city banks but larger than usual at other banks.

So far this year, total credit at all commercial banks has declined about \$3.5 billion, over half again as much as in any other recent year. While the reduction in holdings of U. S. Government securities was somewhat smaller than in 1955, 1956, or 1959, loan growth was only one-third to one-half as large. This smaller loan growth reflected a reduction in loans at city banks in contrast with increases in other recent years. At banks outside leading cities, however, loan growth was larger than in the comparable periods of earlier years.

Business loans (excluding loans to finance companies and other financial businesses) increased \$300 million in May, considerably less than in May 1959 but within the 1955 and 1956 range of increases. So far in 1960, business loans have increased around as much as in the comparable period of 1955 and 1959, but much less than in 1956. Relatively sharp expansion occurred in these loans in February and March, when inventory borrowing by metals manufacturers was heavy, but subsequently growth moderated.

Loans to manufacturers of metals and metal products increased moderately in May after declining during most of April. Loans to trade concerns continued to expand at a record rate in May. Net loan repayments by food processors, and commodity dealers, were about the usual seasonal volume.

Consumer loans at all commercial banks are estimated to have increased \$300 million in May, somewhat more than usual for this month. So far in 1960, growth has been less than in 1959 but comparable with 1956 and 1955.

Real estate loans at all commercial banks increased slightly further in May as a continued small decline at city banks probably was more than offset by growth at other banks. So far this year, expansion in these loans has been much less than usual. Security loans declined somewhat in

Not for publication

May, but on balance have increased slightly since March following a sharp reduction early in the year.

Deposit ratios. The ratio of total loans to total deposits at all commercial banks, after declining in April, rose to a new postwar peak of 56.9 per cent in May. Ratios increased at all classes of member banks. They were at peak levels at reserve city and country banks but at central reserve city banks in New York and Chicago they were still slightly below the March highs.

Deposits and currency. Seasonally adjusted demand deposit and currency holdings of businesses and individuals declined \$1.8 billion in May, bringing the total decline so far this year to \$2.6 billion. At the end of May, the seasonally adjusted money supply was about 2 per cent below the year-ago level. The May decline was associated with an unusually sharp build-up in U. S. Government deposits which rose \$2.4 billion compared with an average increase over the past five years of only \$700 million. Treasury tax receipts in May were much larger than expected and expenditures were slightly less. An offset to the money supply decline can be expected later as Treasury deposits are drawn down to the usual operating levels and the funds are shifted back into private deposits.

Time deposits at commercial banks increased moderately further in May. So far this year, growth has been about the same as in 1955 and 1956 but less than half as much as in 1959. At mutual savings banks, deposit growth has been considerably less than usual so far in 1960.

Deposit turnover. The seasonally adjusted annual rate of demand deposit turnover at banks outside New York and other financial centers increased to 26.3 times in May from 26.1 in April (revised), but it is still slightly below the level in February. The May rate was over 7 per cent above that of May a year ago.

Liquid assets held by the public. Liquid assets held by the public showed little change in April after expanding by about two billion dollars in the first quarter of this year, as shown in Table 7.

For the convenience of users, back data for Table 7 on a monthly basis beginning with 1946 are attached to the end of this review. These data include unadjusted figures as well as the seasonally adjusted series, and also provide seasonal adjustment factors for each of the components for 1959 and 1960. Annual averages of seasonally adjusted data beginning with 1946 appear on page 18.

These data show that total liquid assets held by the public have increased at a fairly steady pace throughout the postwar period. They have not expanded as fast as gross national product, however, and excess liquidity accumulated during the War has gradually been absorbed. The ratio of liquid assets to GNP has declined from 111 per cent in 1946 to 80 per cent in 1959,

Not for publication

with only slight interruptions in the depression years 1949, 1954, and 1958, when GNP temporarily fell off. Two-thirds of the \$147 billion postwar expansion in liquid assets has been in personal-type savings, of which about half represents an increase in savings and loan shares. Growth in the money supply and in holdings of short-term Governments have accounted for approximately one-fourth and one-eighth of the total, respectively.

Bank reserves. Net borrowed reserves of all member banks averaged \$40 million in May compared with \$200 million in April. By late May, however, the reserve position of member banks had shifted to a small amount of free reserves and they continued to show free reserves in early June. In December 1959, net borrowed reserves had averaged \$425 million. Borrowings declined to \$500 million in May and excess reserves rose to \$460 million. Reserve positions were easier at all classes of banks in May than in April except at country banks where free reserves, which have been declining since January, dropped further.

During May, on a daily average basis, reserves were supplied principally by an increase of \$330 million in Federal Reserve holdings of U. S. Government securities. Foreign operations and reductions in currency and Reserve Bank float drained a small volume of funds. Required reserves increased \$80 million but this reflected, on a monthly average, the carryover of the substantial growth in the second half of April associated with Treasury financing. During most of May, required reserves declined.

Discount rate. Effective June 3, with the approval of the Board of Governors, the Federal Reserve Banks of Philadelphia and San Francisco reduced their discount rates from 4 per cent to 3-1/2 per cent. By mid-June all other Banks had also lowered the rate.

Mutual saving and other	- 0.1	2/	- 0.1	2/	2/	- 0.1
Gold stock and foreign deposits at F. R. Banks	- 0.1	- 0.2	- 0.4	+ 0.3	+ 0.1	2/
Other factors	- 0.4	- 0.6	- 0.2	- 0.4	2/	- 0.4

1/ Seasonally adjusted data are for last Wednesday throughout; unadjusted data are for last Wednesday except in case of June and December call dates, when available.

2/ Less than \$50 million.

3/ Total includes foreign loans on gold, holdings of bankers' acceptances at the Federal Reserve, and loans to foreign banks; changes in these items are generally relatively small. Even if there were no changes in other items, changes at commercial banks exclude all interbank loans, domestic and foreign, while total loans exclude only those to domestic banks. In addition there is some lack of synchronization in reporting asset and liability items used in computing "loans net".

p Preliminary. 1/ Data for demand and time deposits adjusted and currency outside banks are as of the last Wednesday of month. 2/ Includes savings deposits in the Postal Savings System. 3/ Prior to 1955 data are Board estimates based on monthly figures of inflow of new savings and withdrawals of savings capital compiled by the Federal Home Loan Bank Board. 4/ Includes all types of savings bonds held by investors other than banks and U. S. Government agencies and trust funds. 5/ Includes all marketable securities maturing within one year (adjusted to include partially tax exempt securities twelve months prior to first call date) and, prior to 1956, nonmarketable Treasury savings notes with maturities up to 24 months; figures include holdings of insurance companies, brokers and dealers, State and local Governments, nonbank corporations, corporate pension fund, nonprofit institutions, foreign accounts, and individuals. 6/ See reverse side of sheet.

6/ Gross national product estimates are available quarterly and annually only. For 1950 - 1958 ratios are for last quarter of year; for 1959 and 1960, for each quarter of year. Data for total liquid assets used in computing these ratios are quarterly averages for four dates: each month of the current quarter and the last month of the preceding quarter.

p Preliminary

1/ Seasonally adjusted series begins in 1946 and is available only for last Wednesday of the month. 2/ At commercial, savings, and Federal Reserve Banks. 3/ As a result of inclusion of a national bank in Hawaii, demand deposits adjusted increased about \$100 million and time deposits at commercial banks about \$100 million. 4/ As a result of inclusion of all banks in Hawaii, demand deposits adjusted increased about \$200 million and time deposits at commercial banks about \$200 million. On balance in 1959, as a result of structure changes, demand deposits adjusted increased \$400 million, time deposits at commercial banks increased \$700 million, and time deposits at mutual savings banks declined \$300 million. 5/ Demand deposits were reduced about \$400 million as a result of a technical change under Regulation D amending the definition of such deposits.

r Revised. 1/ Total credit increased over \$400 million in January as a result of bank structure changes.

2/ Total credit increased about \$200 million as a result of bank structure changes. 3/ Total credit increased about \$300 million as a result of bank structure changes. Structure changes in 1959, on balance through August, added almost \$1 billion to total credit; \$600 million in loans; \$300 million in U. S. Government securities; and \$100 million in other securities. Real estate loans increased about \$300 million; business loans \$100 million; consumer loans, \$100 million; and other loans, \$100 million. Note: Data exclude interbank loans. Total loans are after and types of loans before deductions for valuation reserves. Consumer and "other loans" are partly estimated for all dates. Other data are partly estimated on all but June and December call dates. Beginning June 24, 1959, "business loans" and "all other loans" have been revised to exclude loans to nonbank financial institutions.

p Preliminary.

* Annual liquid asset figures are averages calculated for thirteen dates (each month of the current year and December of the preceding year) except 1946, which is based on data for the twelve months of that year only.

1/ Data for demand and time deposits adjusted and currency outside banks are as of the last Wednesday of month.

2/ Includes savings deposits in the Postal Savings System.

3/ Prior to 1955 data are Board estimates based on monthly figures of inflow of new savings and withdrawals of savings capital compiled by the Federal Home Loan Bank Board.

4/ Includes all types of savings bonds held by investors other than banks and U. S. Government agencies and trust funds.

5/ Includes all marketable securities maturing within one year (adjusted to include partially tax exempt securities twelve months prior to first call date) and, prior to 1956, nonmarketable Treasury savings notes with maturities up to 24 months; figures include holdings of insurance companies, brokers and dealers, State and local Governments, nonbank corporations, corporate pension funds, nonprofit institutions, foreign accounts, and individuals.

6/ Gross national product figures are available quarterly and annually only. Data for total liquid assets used in computing these ratios are annual averages (page 1) calculated for thirteen dates (each month in the current year and December of the preceding year) or quarterly averages (page 2ff.) calculated for four dates (each month of the current quarter and the last month of the preceding quarter.)

p Preliminary.

1/ Data for demand and time deposits adjusted and currency outside banks are as of the last Wednesday of month.

2/ Includes savings deposits in the Postal Savings System.

3/ Prior to 1955 data are Board estimates based on monthly figures of inflow of new savings and withdrawals of savings capital compiled by the Federal Home Loan Bank Board.

4/ Includes all types of savings bonds held by investors other than banks and U. S. Government agencies and trust funds.

5/ Includes all marketable securities maturing within one year (adjusted to include partially tax exempt securities twelve months prior to first call date) and, prior to 1956, nonmarketable Treasury savings notes with maturities up to 24 months; figures include holdings of insurance companies, brokers and dealers, State and local Governments, nonbank corporations, corporate pension funds, nonprofit institutions, foreign accounts, and individuals.

Seasonal Adjustment Factors for Liquid Assets Held by the Public,
by Type of Asset, 1959 and 1960 1/
(per cent)

	Demand deposits adjusted	Currency outside banks	Time deposits adjusted		Savings and loan shares	U. S. Government securities--	
			Commercial banks	Mutual savings banks <u>2/</u>		Savings bonds	Other securities maturing within 1 year
1959

1/ Seasonal factors for these series were derived on the Board's electronic computer using a program based on Julius Shiskin's original UNIVAC seasonal adjustment program. Because of space limitations, the seasonal factors for 1959 and 1960 only are shown. Factors for prior years for demand deposits adjusted and currency outside banks are published in the Federal Reserve Bulletin for February 1960, pp. 135-36. Seasonal factors for other series for 1946-1958 can be derived by dividing the unadjusted series by the seasonally adjusted series. For savings and loan shares, savings bonds, and U. S. Government securities maturing within 1 year, the seasonal factors are those derived from the computer without professional review or adjustment.

2/ Includes savings deposits in the Postal Savings System.

3/ The customary seasonal factor has been changed to reflect a special adjustment associated with the date on which the last Wednesday fell; see Federal Reserve Bulletin, February 1960, pp. 135-36.
