# FEDERAL RESERVE BANK of KANSAS CITY <br> DEC 261961 <br> - Research Library - 

## BANKING AND MONETARY DEVELOPMENTS IN NOVEMBER 1961

Total commercial bank credit increased moderately further in November. Loans and holdings of State, local, and other securities rose while holdings of U. S. Government securities declined. The seasonally adjusted daily average money supply declined somewhat between the second half of October and the second half of November, following sharp expansion in the previous two months; on a monthly average basis, however, it continued to rise. Seasonally adjusted time deposits showed further substantial growth. Total reserves and required reserves of member banks increased in November but less than in October. Free reserves rose.

Bank credit. Total credit at all commercial banks rose $\$ 800$ million further in November, somewhat more than the October rise. Total loans rose \$1 billion, more than twice as much as in November last year. Holdings of State, local, and other securities also increased, as redemptions of maturing New York City tax anticipation notes, usual in November, were more than offset by purchases of securities at other times in the month. Holdings of U. S. Government securities, however, declined on balance. Allotments of $\$ 360$ million of new bills in the auction of an $\$ 800$ million strip issue on November 15 were more than offset by prior and subsequent reductions. Most of the credit growth in November occurred at banks outside leading cities.

So far in 1961, total commercial bank credit has increased $\$ 10.7$ billion, more than twice as much as in the corresponding period last year and more than in any other recent year except for the record $\$ 13.4$ billion expansion of 1958. Loan growth of about $\$ 3$ billion this year has been twice that in the comparable months of 1958 and 1954, which also were years of combined recession and expansion, but far short of the $\$ 10$ billion increases in the expansion years of 1959 and 1955. Holdings of State, local, and other securities have increased slightly more so far in 1961 than in any other year. The $\$ 5$ billion increase in holdings of U 。S。Government securities so far this year, while smaller than in the comparable periods of 1958 and 1954, contrasts with declines in most other recent years. Total credit growth has been large so far this year both at weekly reporting banks in leading cities and at other banks. All this year's loan growth has been at banks outside leading cities; at city banks loans have declined slightly but less than in 1958 and 1954.

Business loans at all commercial banks increased $\$ 400$ million in November, somewhat less than in November of most other recent years. So far in 1961, the $\$ 400$ million growth in these loans compares with declines in the corresponding periods of 1958 and 1954, but with $\$ 1-5$ billion increases in other recent years.

Not for publication

In November, loans to food processors continued to increase about seasonally, and those to commodity dealers also rose about seasonally after expanding somewhat less than usual in other recent months. Loans to trade concerns showed a further seasonal rise and then turned down late in the month, as is usual when holiday buying picks up. Loans to textile concerns continued to decline seasonally and those to metals manufacturers dropped slightly further.

Security loans declined slightly in November. Loans to U.S. Government security dealers rose to an unusually high level at midmonth associated with Treasury financing operations but subsequently declined sharply. Loans to brokers and dealers for purchasing and carrying securities other than those of U. S. Government rose somewhat further in November. So far this year security loans have shown little change where usually they decline on balance.

Loans to nonbank financial businesses increased $\$ 200$ million in November, mainly in loans to financial institutions other than sales finance companies. Part of the recent rise in loans to these institutions, however, reflects loan reclassification at weekly reporting banks, presumably out of business loans. So far this year, loans to all nonbank financial institutions have declined $\$ 800$ million, about the same as in the corresponding 1960 period.

Real estate loans continued to expand in November. So far this year the $\$ 1.6$ billion growth has been comparable with increases in the corresponding periods of 1958 and 1954 but well below the record 1955 and 1959 expansions. Consumer loans at all commercial banks were unchanged in November. So far this year, they have increased $\$ 300$ million (exclusive of the Sears' borrowing). In the January-November 1958 and 1954 periods, consumer loans had declined slightly; in 1959 they had shown a record increase of almost $\$ 3$ billion.

Deposit ratios. The ratio of total loans to total deposits at all commercial banks increased slightly to 54.7 per cent in November, following declines in the two preceding months. The ratio of U. S. Government securities maturing within one year to total deposits declined slightly to 11.4 per cent in October, but still remains close to the recent peak of 12.2 per cent in July. (Data for November not yet available.)

Money supply. The daily average money supply, seasonally adjusted, declined $\$ 500$ million between the second half of October and second half of November following growth of $\$ 2.4$ billion in the preceding two months. For the entire month of November, however, the money supply averaged $\$ 400$ million higher than in October. In late November, the money supply was about the same as the mid-1959 peak and over 2-1/2 per cent above the corresponding level a year ago. The end-of-month money supply series, which had also been increasing sharply earlier in the fall, declined $\$ 400$ million in November.

Time deposits at all commercial banks declined less than usual in November and on a seasonally adjusted basis showed a $\$ 1.1$ billion increase, somewhat more than in most other recent months. The usual pre-Thanksgiving withdrawals of Christmas savings were offset in large part by continued growth in other time deposits, both at city banks and at those outside.

Not for publication

The seasonally adjusted annual rate of demand deposit turnover at banks outside New York and other financial centers increased from 26.9 in October to 27.1 (preliminary) in November. Since midyear, turnover has averaged about $2-1 / 2$ per cent above the corresponding period of 1960 .

Bank reserves. Total reserves and required reserves of member banks increased further in November but less than in October. Free reserves averaged $\$ 510$ million compared with $\$ 440$ million in October, with excess reserves some = what higher and borrowings somewhat lower than in October. Reserve positions at central reserve and reserve city banks were about the same in November as in October but at country banks they were easier. The effective rate on Federal funds was frequently at 3 per cent in November-around the Election Day holiday, during the mid-month financing, and prior to the Thanksgiving holiday, Late in the month the rate declined and remained low during early Decemberoooften at 2 per cent or below.

During November, on a daily average basis, reserves were absorbed principally through a continued larger-than-usual currency drain of about $\$ 400$ million and a $\$ 150$ million reduction in gold stock, reflecting mainly a large sale of gold by the Treasury to the United Kingdom in the latter part of the month. Reserves were supplied through a $\$ 570$ million increase in System holdings of $U$. S. Government securities, largely outright purchases.

1/ Total loans (adjusted to exclude loans to banks); U. So Government securities maturing within one year estimated on basis of Treasury survey of ownership; and total deposits (adjusted to exclude cash items in process of collection).
2. Prior to 1951, data are on call basis and beginning in 1951, they are on maturity basis. On a call basis, data for 1951 and 1952 are 21.5 and 19.1 respectively.
3/ Data not strictly comparable with previous figures as one large country bank merged with a central reserve city bank.
4/ Includes merger with nonmember.
5/ Reserve city banks reclassified as country banks.

p Preliminary.
1/ Data for demand and time deposits adjusted and currency outside banks are as of last Wednesday of month, except that time deposits are as of June 30 and December 31 when call data for these dates were available. Demand deposits adjusted are total demand deposits less interbank and U. S. Government demand deposits and cash items reported as in process of collection. Time deposits adjusted are total time deposits less interbank and U. S. Government time deposits.
2/ Includes savings deposits in the Postal Savings System.
3 / Prior to 1955 data are Board estimates based on monthly figures of inflow of new sovings and withdrawals of savings capital compiled by the ?ederal Home Loan Bank Board.
4/ Includes all types of savir.js bonds held ky investors other than banks and U. S. Government agencies and trust funds.
5/ Beginning May 1953 includes all marketable securities maturing within one year (adjusted to include partially tax exempt securities 12 months prior to first call date) and, prior to 1956, nonmarketable Treasury savings notes with maturities up to 24 months; figures include holdings of insurance companies, brokers and dealers, State and local governments, nonbank corporations, corporate pension funds, non-profit institutions, foreign accounts, and individuals; prior to May 1953 includes securities callable within one year.
Gross national product estimates are available quarterly and annually only. For 1950-58 ratios are for last quarter of year; for 1959 and 1960, for each quarter of year. Data for total liquid assets used in computing these ratios are quarterly average for four dates: each month of the current quarter and the last month of the preceding quarter.
I/ Demand deposits adjusted (before seasonal adjustment) was increased by $\$ 400$ million and time deposits adjusted (before seasonal adjustment) was increased by $\$ 1.5$ billion due to the reclassification of deposits of foreign official institutions which formerly were grouped with interbank deposits and excluded from demand and time deposits adjusted.
