

BANKING AND MONETARY DEVELOPMENTS IN FEBRUARY 1963

Total commercial bank credit increased much more in February than in other recent months. Total loans rose contraseasonally reflecting in part a sharp increase in security loans. Holdings of U. S. Government securities declined less than usual and holdings of other securities rose whereas they generally decline. The money supply increased slightly between the second half of January and the second half of February. Time and savings deposits at commercial banks rose less rapidly than in other recent months. U. S. Government deposits increased much more than usual. Total and required reserves declined in February as is usual. Free reserves were also reduced.

Bank credit. Total loans and investments at all commercial banks, seasonally adjusted, increased $\$ 3.4$ billion further in February. In January, credit growth had been only $\$ 1.2$ billion, considerably below the average $\$ 2$ billion monthly rise in late 1962. Total loans increased $\$ 2.1$ billion further in February; security loans increased sharply while other loan categories rose at about the same rates as in January. Holdings of U. S. Government securities declined less than usual and, on a seasonally adjusted basis, rose $\$ 800$ million. On February 6 , commercial banks were allotted about $\$ 420$ million of the $\$ 1$ billion June tax bills. Treasury financing had also occurred in February of several other recent years. On February 15, commercial banks exchanged maturing certificates and notes for $\$ 1.5$ billion of one-year certificates and $\$ 1.6$ billion of $5-1 / 2$ year bonds. Holdings of non-Government securities increased $\$ 500$ million on a seasonally adjusted basis in February reflecting in part purchases of Federal agency issues.

Business loans at all commercial banks, seasonally adjusted, increased only slightly in February. Growth in January had also been small fallowing a substantial expansion in the second half of 1962. At weekly reporting banks in leading cities, business loans increased \$270 million in February, about the same as in the comparable weeks of the three previous years. Loans to food processors declined and those to trade concerns rose about the same as in other Februaries. Loans to commodity dealers were about unchanged as in the comparable periods of the two past years. Loans to metals processors and to textile manufacturers increased seasonally following declines in January while those to public utilities declined further in February. Loans to "other manufacturing and mining" concerns continued to show substantial growth.

Seasonally adjusted security loans at all commercial banks increased $\$ 700$ million in February. At weekly reporting banks in leading cities, most of the increase was in loans to U. S. Government security dealers. These loans increased early in the month when payment was made for the new tax bills and books were open for the February 15 exchanges. Subsequently, they declined somewhat but rose sharply again at the end of the month in connection with the Treasury's advance refunding operations.

Consumer loans at all commercial banks, seasonally adjusted, increased $\$ 300$ million further in February, the same as in January, and more than in most other recent months. Growth in real estate loans continued substantial, although not quite as rapid as in the summer and fall of 1962. Loans to nonbank financial institutions increased further in February.

Money supply. The daily average money supply, seasonally adjusted, increased $\$ 200$ million between the second half of January and the second half of February. In late February, publicly-held deposits and currency were about 2 per cent above the year-ago level.

Average U. S. Government deposits increased $\$ 2.4$ billion between the second half of January and the second half of February, considerably more than in the comparable periods of most other recent years.

Seasonally adjusted time and savings deposits at all commercial banks increased $\$ 1.1$ billion between the second half of January and the second half of February, somewhat less rapidly than in other recent months. At weekly reporting banks in leading cities, the rate of increase in savings deposits declined slightly compared with the high January rate. Other time deposits of individuals, partnerships, and corporations continued to expand at about the January rate. Growth in deposits of States and political subdivisions slackened considerable, however.

The seasonally adjusted annual rate of turnover of demand deposits at banks in 343 centers outside New York declined slightly in February to 32.2 (preliminary) from 32.6 in January. Over the two months turnover averaged about 6 per cent above January and February last year.

Bank reserves. Total and required reserves of member banks declined in February as is usual. Excess reserves were about unchanged, however, averaging $\$ 475$ million. Member bank borrowings from the Federal Reserve increased to $\$ 175$ million from $\$ 100$ million in January. Free reserves accordingly declined to $\$ 300$ million from $\$ 385$ million, with most of the reduction at New York City banks and at country banks. The effective rate on Federal funds remained at 3 per cent during February.

During February, on a monthly average basis, reserves were absorbed principally through a reduction in float and through an increase in Treasury and other deposits at the Reserve Banks. Reserves were supplied mainly through currency inflow and through an increase of $\$ 345$ million in System holdings of U. S. Government securities.

1/ Total loans (adjusted to exclude loans to banks); U. S. Government securities maturing within one year estimated on basis of Treasury survey of ownership and total deposits (adjusted to exclude cash items in process of collection).
2/ Prior to 1951, data are on call basis and beginning in 1951, they are on maturity basis. On a call basis, data for 1951 and 1952 are 21.5 and 19.1 respectively.
NOTE: Comparability of figures affected by changes in Federal Reserve membership, mergers, etc.; by changes in the reserve classification of cities or individual banks, and by changes in items. Beginning August 1962, figures for both New York and the City of Chicago include banks formerly classified as central reserve city and three banks whose classification as reserve city is continued.

NOTE：This is a new series first shown in＂Banking and Monetary Developments＂for November 1962，and differs from the one itized for FRAgerviously shown in concept and coverage．Back figures available from Banking Section，Division of Research and http：／／fraser．stlouiStatigistics 。
Eederal Reserve Bank of St．Louis

1／Excludes holdings of the United States Government，Government agencies and trust funds，domestic commercial banks，and Federal Reserve Banks．Adjusted to avoid double counting whenever possible． All series adjusted for seasonal variation by the $X-9$ variant of Method II developed by the Bureau of the Census．

Data are for demand deposits adjusted and currency outside banks and are as of the last Wednesday of the month．In concept the figures agree with the daily average monty supply described in detail in the Federal Reserve Bulletin for August 1962，p．941，except that demand deposits held by mutual savings banks and by savings and loan associations have been deducted to avoid double counting． Demand deposits of commercial banks in Alaska and Hawaii are included beginning January 1959 and August 1959，respectively，except that one national bank in Alaska and one national bank in Hawaii were included in April 1954 and April 1959，respectively。 Demand deposits due to banks in United States possessions are included throughout．

3／Total time deposits at commercial banks except interbank，U．S．Treasurer ${ }^{\text {＇s }}$ open account，and postal savings redeposited in commercial banks．Data are as of the last Wednesday of month except June 30 and December 31 when call data for these dates were used when available．Time deposits of commercial banks in Alaska and Hawaii and time deposits due to banks in $U$ ．S．possessions are included as indicated for demand deposits in footnote 2 above．

4／Figures compiled by the Federal Savings and Loan Insurance Corporation except that prior to 1955 data are Board estimates based on monthly figures of inflow of new savings and withdrawal of savings capital compiled by the Federal Home Loan Bank Board．

5／Includes all types of savings bonds held by investors other than commercial and mutual savings banks and U．S．Government agencies and trust funds．Holdings of savings and loan associations are also excluded beginning in February 1960，the earliest date for which separate figures for these institutions are available．Figures are from data compiled by the U．S．Treasury Department．

6／Beginning December 1950 figures include Treasury marketable securities and Federal agency secur－ ities maturing within one year，except holdings of domestic commercial，mutual savings，and Federal Reserve Banks，Government agencies and trust funds，and beginning February 1960，savings and loan associations．Figures have been adjusted to include partially tax－exempt securities 12 months prior to first eall date，and，prior to 1956，nonmarketable Treasury savings notes with maturities up to 36 months．Prior to December 1950 figures for marketable issues include secur－ ities callable within one year．Figures represent par value and are from the U．S．Treasury Department＇s Survey of Ownership of U．S．Government Securities．

7／Gross national product figures are available quarterly and annually only。 Data for total liquid assets used in computing these ratios are quarterly averages calculated for four dates（each month of the current quarter and the last month of the preceding quarter）。
