# BANKING AND MONETARY DEVELCOMENTS IN NOVEMBER 1964 

## - Research Library -

Seasonally adjusted commercial bank credit increased sharply in November following a sizable reduction in October. Nearly half of the rise was accounted for by increases in holdings of U. S. Government securities and in loans to Government security dealers associated in part with large Treasury financing operations. Other major loan categories and holdings of municipal and agency issues increased further. The seasonally adjusted money supply increased at a slightly slower rate than the average for the three previous months. Time deposits at commercial banks rose more rapidly than in other recent months, however, and U. S. Government deposits increased contraseasonally. Seasonally adjusted total and required reserves rose somewhat. Excess reserves averaged somewhat below member bank borrowings.

Bank credit. Seasonally adjusted loans and investments at all commercial banks increased $\$ 4.1$ billion in November following a $\$ 900 \mathrm{mil}-$ lion reduction in October. Expansion was substantial, especially in the second half of the month, at both weekly reporting banks and at outside banks. This was associated in part with the large volume and late-month timing of Treasury financing. Over the July-November period, total credit growth was at an annual rate of 8.1 per cent, the same as over the first half of the year and the full year 1963.

Holdings of U. S. Government securities increased \$1.4 billion in November. Banks were allotted about $\$ 1.5$ billion of the new 18 -month Treasury notes, issued November 15, whereas they held only about \$1 billion of the maturing issues; they were allotted practically all of the $\$ 1.5$ billion June tax bills issued November 24 (the day before the lastWednesday condition report) for which 50 per cent of the payment was permitted through credit to tax and loan accounts. At weekly reporting banks, these bill acquisitions slightly more than offset heavy sales early in the month. Banks continued to reduce their holdings of longterm U. S. Government bonds. Through November, holdings of U. S. Government securities at all commercial banks declined at an annual rate of about $1-1 / 2$ per cent compared with 5 per cent over the year 1963.

Holdings of municipal and agency issues increased $\$ 600$ million in November, about the same pace as the accelerated August-September rise, but twice as much as in October. The $10-1 / 2$ per cent growth rate through November, however, was only about half that in the year 1963.

Total loans increased $\$ 2.1$ billion in November, reflecting not only heavy borrowing by Government security dealers in connection with the Treasury financing but also relatively strong growth in most other major loan categories. Over the July-November period, total loans increased at an annual rate of 7.8 per cent or considerably below the first-half rate. Over the first 11 months of the year, however, the 11-1/2 per cent rate was the same as that for the full year 1963.

Business loans at all commercial banks, seasonally adjusted, increased $\$ 500$ million in November, following a $\$ 200$ million rise in October. Over the July-November period, the annual rate of growth was a little slower than earlier in the year and a little faster than over the full year 1963.

At city banks in November, loans to food processors and commodity dealers increased substantially further. This was in line with the accelerated pace that developed in late 1963 when these businesses relied more on direct bank financing instead of the customary partial use of acceptance financing. Also, in November, there was a much larger-than-usual rise in total business loans at the smaller banks in the weekly series which do not report an industrial breakdown, and bank holdings of acceptances rose substantially. On the other hand, expansion in loans to petroleum and chemicals companies, which had been rapid in September and October, slowed in November, and loans to metals companies showed only about the usual seasonal rise.

Seasonally adjusted security loans at all commercial banks increased $\$ 600$ million in November following a reduction of similar volume in October. Loans to nonbank financial institutions increased $\$ 200 \mathrm{mil}-$ lion in November following smaller than usual repayments in October. Real estate and consumer loans continued to show relatively substantial expansion.

Money supply, turnover, and time deposits. The seasonally adjusted money supply increased $\$ 500$ million in November, a little below the average monthly expansion of $\$ 600$ million in the three previous months. Substantial growth in the first half of the month was followed by a small decline in the second half when U. S. Government deposits rose more than usual. Over the August-November period following the June-July accelerated expansion, money supply increased at an annual rate of 4.6 per cent, a little faster than the 3.9 per cent annual rate over the first 7 months of 1964.

Turnover of demand deposits at 343 centers outside New York averaged 35.5 in November, the same as in October, and slightly below the April peak. Over the first 11 months of the year, turnover averaged 5.4 per cent above the corresponding months last year.

Seasonally adjusted time and savings deposits at all commercial banks increased $\$ 2$ billion in November, a record increase for this series. The annual rate of growth through November was 12.4 per cent compared with 14.7 per cent over the year 1963.

Savings deposits at banks in leading cities continued to rise faster in November than in the corresponding weeks a year ago. In addition, total time and savings deposits at banks outside leading cities, where savings deposits account for about 70 per cent of the total, increased in November in contrast with declines in this month of previous
years. Other time deposits at city banks, however, declined somewhat in November as redemption of Christmas Club funds and a decline in outstanding CD's at banks outside New York and Chicago were offset only in part by a moderate expansion in foreign time deposits and in CD's at banks in New York and Chicago.

Bank reserves. Seasonally adjusted total and required reserves increased in November following small reductions in October. Excess reserves averaged $\$ 395$ million, $\$ 35$ million below the $\$ 430$ million average for borrowings. In the two previous months, free reserves had averaged close to $\$ 100$ million. Excess reserves dropped slightly in November while borrowings rose substantially. Reserves were supplied principally through Federal Reserve purchases of U. S. Government securities and absorbed through currency outflow.

Increase in discount rate and rates paid on time and savings deposits. Effective November 24, the Board of Governors approved actions by 5 Reserve Banks raising the discount rate from 3-1/2 per cent to 4 per cent. By November 30, the rate increase had become effective at all Reserve Banks.

Also effective November 24, the Board of Governors set the maximum rate on savings deposits at 4 per cent regardless of the time the funds are on deposit and raised the maximum rates on time deposits and certificates of deposit to 4 per cent for maturities of less than 90 days from the previous 1 per cent and to $4-1 / 2$ per cent for all longer maturities from the previous 4 per cent.

## p - Preliminary

1/ Structure changes in 1959, on balance through August, added almost $\$ 1$ billion total credit: $\$ 600$ million in $10 a n s ; \$ 300$ million in U . S. Government securities; and $\$ 100$ million in other securities. Real estate loans increased about $\$ 300$ million; business loans $\$ 100$ million; consumer loans $\$ 100$ million; and other loans $\$ 100$ million.
Ned--Data exclude interbank loans. Total loans are after and types of loans before deductions for vaulation reserves. Consumer and "other loans" are partly estimated for all dates. Other data are partly estimated on all but June and Decen.ber call dates. Beginning June 24 , 1959 , "business loans" and "all other loans" have revisきd to exclude loans to nonbank financial institutions.
r- Revised.

## Reribit 1 (Contimed)

1. Breludes holdings of the Taited States Goyerment, Government agercies and trust funds, domestic comercial baniks, and Federal leserve Banks. fijusted to aroid double counting venever possible. All series adjusted for seasonal variation by the $X-9$ variant of ifthod II developed by the Bureau of the Census.
2. Data are for demand deposits adjusted and currency outride banks and are as of the last Yedneaday of the month. In concept the figures agree with the daily arerase money suppiy described in detail
 sapiags banks and by savings and joan associations have been demetad to arcid deubie countiog. Demand deposits of commercial banks in Alaska and Eavait are included beginning Jannary 1059 ard August 1959, respectively, except that one national bank in diaska and one national bank in Havail were included in April 1954 and April 1959, respectively. Demand deposits due to banks in Jnited States possessions are included throughout.
3. Total tire deposits at comercial banks except interbank, J. S. Treasurer's open accourt, and postal savings redeposited in commercial banks. Datz are as of tine last ednesday of month except June 30 and December 31 when call data for these dates were used wher available. The deposits of comerciai banks in Alaska and Hawail and time deposits due to banks il U. S. possessions are included as indicated for demand deposits in footnote 2 above.
4. Figures compiled by the Federal Savings and Loan Insurance Corporation except. that frior to 1955 data are Board estimates based on monthly figrres of ioflow of new savings and withdrawal of saषings capital compiled by the Federal \#ome Lann Bank Eard.
5. Includes all types of savings bonds held by investors other thon comercial and untail savings banks and T. S. Covernment agencies and trust funds. Holdings of savings and loan associations are also excluded beginning in February 1960, the earliest linte for which separate figures for these institutions are available. Figures are from data compiled by the T. S. Treasury Department.
6. Beginaing December 1950 finures include Treasury marketable securities and Federal agency securities gaturing within one year, except holdings of domestic commercial, mitual savings, and Federal Eeserve Banks, Gorernment agencies and crust funds, and beginaing February 1960, savings and loan associations. Figures have been adjusted to include partially tax-exempt securities 12 months prior to first call date, and prior to 1956 , nonmarketable Treasury sarings notes with maturities up to 30 months. Prior to December 1950 figures for warketable issues include securities callable withir one jear. Figures represent par value and are from the D. S. Treasury Department's Survey of ownership of U. S. Government Securities.
7. Gross nattonal product figures-are available quarterly and anmally oniy. Data far total liquid assets used in computing these ratios are quarterly averages calculated for four dates (each month of the current quarter and the last month of the preceding quarter).
